

Black-capped Vireo (*Vireo atricapillus*) (0/0/1)

1991 — one female, 27 April, Long Point, *Haldimand-Norfolk* (Julian R. Hough) - photo on file.
 Another amazing record, and another new species for Ontario and Canada. The Black-capped Vireo is a short distance migrant and considered endangered in its restricted North American breeding range in Oklahoma and southwest Texas, so to find one in a mistnet at Long Point was incredible. For a full description and discussion of the occurrence see Hough (1991).

Yellow-throated Warbler (*Dendroica dominica*) (17/39/4)

1991 — one, *albiflora*, 14 April, Port Stanley, *Elgin* (Anne and Marvin Smout).
 — one adult, *albiflora*, 14 May, Old Cut, Long Point, *Haldimand-Norfolk* (Julian R. Hough) - photo on file.
 — one adult, 18 May, Wheatley P.P., *Kent* (Thomas Hurst; found by John Lisek).
 — one adult, 27 September, Scarborough, *Metropolitan Toronto* (Mark Pearson).

Figure 10: A Yellow-throated Warbler banded at Old Cut, Long Point, *Haldimand-Norfolk* on 14 May 1991. Photo by Julian Hough.

Kirtland's Warbler (*Dendroica kirtlandii*) (7/4/1)

1991 — one adult, 22 May, Leslie Street Spit, *Metropolitan Toronto* (Martin McNicholl).

Swainson's Warbler (*Limnethlypis swainsonii*) (1/0/1)

1991 — one adult male, 25-28 May, Long Point, *Haldimand-Norfolk* (James M. Holdsworth, Jon McCracken, Ron Ridout; found by Denys Gardiner) - photos on file.
 This unusually cooperative singing male was a "lifer" for many enthusiastic birders, and an Ontario bird for most who saw it.

Figure 11: Male Swainson's Warbler banded at Long Point, *Haldimand-Norfolk*, seen and heard by many, from 25-28 May 1991.
 Photo by Ron Ridout.

Northern Cardinal (*Cardinalis cardinalis*) North Only (1/14/2)

1990/91 — one adult male, 22 December - 10 May, Chapleau, *Sudbury* (Con Schmidt) - photo on file.
 1991 — one adult male, 19 April, Giesmeyer Twp., *Cochrane* (Dan Paleczny; found by Suzanne and Jake Paleczny).
 — two (pair), 11 May, Kirkland Lake, *Timiskaming* (Lloyd Tamam; found by Vic Nielson).

A series of milder winters may be helping the Northern Cardinal consolidate its northerly range expansion. There have been at least four birds reported from various locations in the north of Ontario each year for the last three years.

Blue Grosbeak (*Guiraca caerulea*) (7/14/3)

1991 — one male, 8 May, Wyevale, *Simcoe* (Bill Zufelt; found by Peter Hough) - photo on file.
 — one female, 12 May, Long Point, *Haldimand-Norfolk* (Michael Richardson) - photo on file.
 — one first spring male, 19, 20 May, Kopegaron Woods, Wheatley, *Essex* (Graham P. Cateley, John and Victoria Cateley, Diane Hasselmayer) - photos on file.

An interesting and very well-documented selection of differing individuals of this sometimes misidentified species.
