

Department of Defense Partners in Flight

Fact Sheet #11
October 2015

Department of Defense Partners in Flight Program

Mission

To conserve migratory and resident birds and their habitats on Department of Defense lands.

The Strategic Plan and other resources can be found at www.dodpif.org

DoD PIF Mission-Sensitive Priority Bird Species

Minimizing Future Listings of Bird Species to Protect and Sustain the Military Mission

The DoD Partners in Flight Program has identified nearly 100 bird species that occur on DoD lands and are at risk of becoming listed as threatened or endangered under the federal Endangered Species Act if current populations trends continue. The purpose of this list is to help DoD resource managers better prioritize monitoring and management efforts on those species (and their habitats) having the highest potential to impact the military mission should they become Federally listed. A secondary focus was on those species with significant conservation concern on DoD lands.

To determine what migratory bird species are of highest “concern” to the Department of Defense, each DoD Partners in Flight Working Group member was tasked in 2008 with providing a list of their “Top 10” species of concern within their area of responsibility (exclusive of Federally-listed species). DoD representatives from all regions (Southeast, Northeast, Midwest, West, Alaska, and Hawaii), representing all military service branches, provided the initial input. Installation managers on Oah’u, Kauai’i and Hawai’i were queried for Hawaiian priority species. After two annual meetings of the DoD Partners in Flight Working Group and numerous reviewed iterations of the list, a final list was generated for use as a baseline for making better decisions about how to focus future DoD avian monitoring efforts. All bird species on the USFWS 2010 Candidate Notice of Review list known to occur on DoD lands are included.

In addition to helping prioritize monitoring programs and National Environmental Policy Act (NEPA) documents, the final list will be used

*Red-headed Woodpecker is one of the species identified by DoD PIF as mission-sensitive for Department of Defense lands.

as a basis to evaluate proposals for funding from the Legacy Resource Management Program and guide the development of conservation measures to support Executive Order 13186 (*Responsibilities of Federal Agencies To Protect Migratory Birds*), the associated Memorandum of Understanding, and the Final Migratory Bird (“Readiness”) Rule. BirdLife Caribbean also reviewed the list and identified Important Bird Areas in the Caribbean where these species over-winter.
