(3) The BOR will clearly identify its "judgement calls" where they may differ from the judgements of others involved.

D. Report.

(1) The final report shall be concurred in by a majority of BOR members, and be signed by those concurring members. Any member that disagrees with the findings and recommendations of the Board, will submit a minority report. The final report(s) shall be submitted within thirty (30) days of impanelment to the convening authority (Regional Director.)

(2) The final report of the BOR is an internal document to be considered by management for the purpose of reviewing all use of force incidents and determining appropriate action. As such, the report does not constitute or contain an official position of the Service.

/sgd/ Denise E. Sheehan, Assistant Director – Budget, Planning and Human Resources
for DIRECTOR

Date: November 22, 2005

INTERNAL ASSESSMENT PLAN

OPNAV M-5090.1 Chapter 18

NAVAL AIR STATION OCEANA-

DOCUMENT TITLE:

Naval Air Station Oceana Internal Assessment Plan

CONTENTS:
See Table of Contents

DOCUMENT OWNER: NAVFAC MIDLANT ENVIRONMENTAL MANAGEMENT COORDINATOR	AUTHORIZED BY: NAVAL AIR STATION OCEANA INSTALLATION ENVIRONMENTAL PROGRAM DIRECTOR 2/27/2017 X Terry N Chamberlain Terry Chamberlain

REV NO.	EFFECTIVE DATE	DESCRIPTION OF REVISION
A	6/30/04	Original Issue
B	3/5/08	Complete revision (update of roles and responsibilities and assessment areas)
C	10/26/12	Complete revision
D	12/20/13	Update of Hazardous Waste section, and Appendices A, B, and C
E	12/22/14	Annual Review & Update
F	2/1/2016	Annual Review and Update

TABLE OF CONTENTS

A. INTRODUCTION

Chapter 18 of OPNAV M-5090.1 requires all Navy shore installations to prepare an Internal Assessment Plan (IAP) describing "how a comprehensive internal compliance assessment will be accomplished across the facility over the course of a year."

This IAP meets the requirements in Chapter 18 by:

- Describing Public Works Department (PWD) Naval Air Station Oceana (NASO) approach to executing the internal assessments;
- Identifying internal assessment roles and responsibilities;
- Identifying the frequencies of inspections and compliance evaluations conducted by PWD NASO Environmental staff and tenant command personnel; and
- Identifying PWD NASO process/practice inventory.

The IAP focuses on the environmental management of each of the following media areas:

- Air Emissions
- Cultural Resources
- Environmental Management
- Hazardous Materials
- Hazardous Waste
- Natural Resources
- Pesticide
- Petroleum Oils and Lubricants (POL)
- Solid Waste
- Storage Tank
- Wastewater
- Storm Water
- Water Quality
- Other (NEPA, Noise, CERCLA, Program Management, Waste Munitions, and EMS)
- Toxic (PCBs, Asbestos, Radon, and Lead-Based Paint)

Each media section presented in Section C of this IAP describes the plans, procedures, requirements, and responsibilities for each media covered under the Internal Assessment process for NASO, Dam Neck Annex, Dare County, and Fentress Air Field. Environmental programs at each location are overseen and managed by the NAVFAC Mid-Atlantic, PWD NASO. Henceforth in this document, the term “PWD NASO” will refer to the four installations.

Each media section identifies specific actions and plans to properly assess each media and includes a description for how the media is to be managed, a list of specific tasks for installation personnel to perform, a list of specific tasks the media manager will perform, frequency of each inspection/audit, and assigned responsibilities.

All scheduled Tier 1 (where applicable) inspections and Tier 2 oversight inspections conducted by PWD NASO Environmental Protection Specialists (EPS) are recorded through

EMSWeb. Building locations, areas, environmental equipment and checklists are maintained in EMSWeb. Appendix A of this document references the list of EPS environmental checklists maintained in EMSWeb. Audit/Inspection schedules for Tier 1 and Tier 2 inspections define the equipment/areas being inspected and the frequency of the inspection. Appendix B of this document references the list of Tier 1 and Tier 2 inspection schedules that are maintained in EMSWeb. For a full list of equipment and areas being inspected, please refer to EMSWeb. Results of inspections, assigned root causes for deficiencies, and the status of Plans of Action & Milestones (POA&M) for corrective actions and process improvement are all tracked in EMSWeb.

All Tier 3 internal comprehensive evaluations of compliance assessment conducted by PWD NASO Environmental Media Managers (MM) are recorded through EMSWeb. Appendix A of this document references the list of Navy ListBuilder checklists available in EMSWeb that may be used to conduct the Tier 3 assessments. Tier 3 assessment schedules built under PWD NASO in EMSWeb should cover the following areas:

- Air Emissions
- Cultural Resources
- Hazardous Waste
- Natural Resources
- NEPA
- P2/ Pest Management/Toxics
- POL
- Storage Tanks
- Wastewater
- Storm Water
- Water Quality

Since the EMS that covers PWD NASO is a regional EMS, the internal conformance audit will be located at the Hampton Roads Regional level.

During the 4th quarter of each calendar year, the PWD NASO EMS Coordinator will document the completion of all Internal Assessments conducted by PWD NASO environmental media managers in an Internal Assessment Document (IAD). The IAD will provide the results of internal assessments and include identified deficiency numbers, status of assigned root cause(s), and status of Plans of Action & Milestones (POA&M) for corrective actions and process improvements. All of the previous information will be recorded and managed throughout the year in EMSWeb.

B. ROLES AND RESPONSIBILITIES

Installation Commanding Officer (CO)

1. Ensure the IAP is developed and implemented within all PWD NASO Departments and tenant commands and that it addresses all facilities and processes within the fence line.
2. Ensure the IAP is reviewed and updated at least annually.

PWD NASO Installation Environmental Program Director (IEPD)

1. Provide oversight to environmental media managers and Installation EPS to ensure that inspections and compliance evaluations are conducted in accordance with the IAP.
2. Review internal assessment activities within each environmental media area to ensure that internal assessment requirements and objectives are being met.
3. Communicate with the installation CO regarding plans, status, and results of the internal assessment.
4. Provide a liaison to PWD NASO Departments and tenant commands, as appropriate, on internal assessment issues.

PWD NASO Environmental Protection Specialists (EPS)

1. Provide environmental oversight, coordination, and training to all PWD NASO Departments and tenant command process owners.
2. Conduct inspections/compliance evaluations of all pertinent processes according to the schedule delineated in the IAP Inspection Summary
3. Lead Environmental Protection Specialists (LEPS) will coordinate with installation staff and Media Managers (MM) to ensure that equipment lists, inspections assignments and locations are reviewed and up-to-date each quarter, and ensure inspections are being entered into EMSWeb.

PWD NASO EMS Coordinator

1. During the 4th quarter of each calendar year the EMS Program Manager will document the completion of all Internal Assessments conducted by the Media Managers and process owners in a compiled Internal Assessment Document (IAD).

PWD NASO Environmental Media Managers (MM)

1. Identify permit/regulatory required inspections and inform the LEPS.
2. Provide environmental oversight, coordination, and training to PWD NASO Departments and tenant command process owners as requested by the Installation Environmental Director or EPS.
2. When required, provide process owners with point-of-use checklists to facilitate inspections.
3. Periodically review and revise checklists.
4. Conduct inspections/compliance evaluations of all pertinent processes according to the schedule delineated in the IAP Inspection Summary

5. Utilizing the US Navy Listbuilder generated / validated environmental media checklist, conduct an annual internal ECE.
6. Coordinate efforts with process owners to identify root causes of all deficiencies deemed significant and develop corrective actions and process improvements to address root causes.
7. If necessary, identify and coordinate funding requests for corrective actions and process improvements.
8. Coordinate with installation staff (including IEPDs and Lead EPS's) to ensure that equipment lists are reviewed and up-to-date each quarter, and ensure inspections are being entered into EMSWeb.
9. Assist the EMS Program Manager by annually reviewing and updating this document and the inspection requirements to ensure continuous improvement within the Environmental Management System (EMS) at PWD NASO.
10. During the 4th quarter of each calendar year environmental media managers will document the completion of all Internal Assessments in media chapters compiled in the Internal Assessment Document (IAD).

PWD NASO Process Owners

1. Assist Environmental Media Managers and EPS with inspection and monitoring identified in the IAP Inspection Summary.
2. When appropriate and feasible, correct identified deficiencies immediately.
3. Contact Environmental media managers regarding identified deficiencies and corrective actions taken.
4. Support media managers in problem-solving and root-cause identification activities.

Facilities Engineering Command

1. If necessary, identify and coordinate funding requests for Station corrective actions and process improvements.
2. Provide oversight and assistance to PWD NASO Environmental Media Managers on the development and implementation of their IAP.

C. MEDIA SUMMARIES

AIR EMISSIONS

I. MEDIA OVERVIEW

Operations and processes that have a potential to emit to the outdoor air are regulated by the Environmental Protection Agency (EPA) under the Clean Air Act (CAA). The federal regulations are found in the Code of Federal Regulations (CFR). The Virginia Department of Environmental Quality (VDEQ) regulations incorporate EPA regulations and can add additional requirements. Regulations are typically written to pertain to specific industrial processes, and applicability can depend on the size of the facility and type of air permit that covers the facility. Typical records required by air permits include:

- Types and amounts of fuel burned at generators and boilers
- Monthly amounts of materials used at blast and/or paint booths
- Periodic visible emission checks at steam plants, generators, wood shops, and blast booths
- Periodic compliance checks of solvent parts washers and gasoline vapor recovery systems
- Records to demonstrate compliance with ozone depleting substance regulations
- Records to demonstrate compliance with asbestos regulations (see Toxics section).

NAS Oceana has a Title V air permit. The Title V permit outlines all applicable EPA and Virginia regulatory requirements covering air emission units within these areas. There are also individual air permits for construction/operation of significant operations, but these requirements are included in the Title V permit.

Dam Neck has a facility-wide State Operating air permit listing all air emission units at the facility, along with required recordkeeping for those units. Dam Neck must also comply with Federal regulations for internal combustion engines, boilers, ozone depleting substances, and asbestos, even though they are not specifically referenced in the facility-wide permit.

NALF Fentress has an exemption letter issued by the Virginia Department of Environmental Quality. The total emissions from all the regulated operations and processes are below the levels requiring a permit.

For a full list of permits, please refer to Appendix C of this document.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH

Compliance with Federal, State, and individual permit required inspections will be assessed primarily by the EPS via site inspections, with management review by the Media Manager annually. The EPS will obtain assistance from the air media manager for compliance issues that are not routine in nature.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS

NAS Oceana Environmental Protection Specialist staff makes site visits to numerous environmental assets. EMSWeb is being used at Oceana and Dam Neck to keep track of all inspections and internal assessments. Refer to EMSWeb for a list of the inspections currently conducted by the Oceana EV staff and internal assessments that have been conducted by the MM staff. Type of sites/assets inspected under the Air program include but are not limited to:

- Combustion equipment, including boilers and generators
- Paint booths & painting operations
- Paint gun washers
- Blast booths, glove boxes, and blasting operations, including pier-side vessel maintenance
- Parts washers (solvent cleaning)
- Woodworking equipment
- Refrigerant recovery and service to air conditioning and refrigeration equipment
- Fuel dispensing, including loading and unloading of bulk petroleum products

C. PRACTICE OWNER/OPERATOR TASKS

- Keep operating records as required by air permit and directed by media manager and/or EPS

D. EPS TASKS

- Conduct quarterly compliance oversight inspections through EMSWeb.
- Provide corrective action and on-the-spot training to practice owners/operators
- Request Media Manager intervention or support as needed.

E. MEDIA MANAGER TASKS

- Ensure corrective actions are initiated for findings identified during compliance inspections
- Review inspection findings by the Installation Environmental staff monthly to determine if intervention or additional support is needed.
- Develop a POAM for open findings exceeding 90 days.
- Review this document annually and update as needed.
- Interface with any outside agency, such as regulators.
- Ensure recordkeeping systems are in place to demonstrate compliance with air permit requirements.
- Conduct internal audits of the Air program through EMSWeb annually.

CULTURAL RESOURCES

I. MEDIA OVERVIEW

Historic properties and areas of archaeological sensitivity and archaeological sites have been identified at Naval Air Station Oceana and its special areas. The historic properties identified are listed below:

Naval Air Station Oceana:

- Bell House Historic Property (privatized)
- 53 Archaeological Sites
- Areas of Archaeological Potential

Naval Auxiliary Landing Field Fentress:

- 21 Archaeological Sites
- Areas of Archaeological Potential

Dam Neck Annex:

- Surface-Launched Guided Missile Training School Historic District including 3 historic buildings as contributing resources (potentially eligible, under further evaluation)
- 14 Archaeological Sites

Due to the presence of historic properties, Naval Air Station Oceana is required to comply with the various federal laws, Executive Orders, DoD policies and Navy policies governing cultural resources management. The National Historic Preservation Act of 1966, as amended, (NHPA) is the primary piece of federal historic preservation legislation that guides the cultural resources program for Naval Air Station Oceana. Specifically, Sections 106 and 110 of the NHPA, provide specific requirements that Naval Air Station Oceana must meet in planning for and implementing a project and in managing and utilizing historic properties in its ownership or under its jurisdiction. Under the NHPA, when a proposed project has the potential to effect a historic property, Naval Air Station Oceana is required to consult with the State Historic Preservation Officer (Virginia Department of Historic Resources), and, as appropriate the Advisory Council on Historic Preservation, federally-recognized Native American Indian tribes, and other interested parties. This consultation process is typically referred to as the Section 106 review process. A project cannot be awarded until the Section 106 review process is complete.

Naval Air Station Oceana and Naval Auxiliary Landing Field Fentress are covered under a Regional Programmatic Agreement for the Navy's Historic Buildings in Hampton Roads (RPA). The RPA was executed in November 1999 between the Commander, Navy Region, Mid-Atlantic, the Virginia State Historic Preservation Officer and the Advisory Council on Historic Preservation. The RPA is still in effect and streamlines the Section 106 review process as it relates to historic buildings and historic districts. The RPA does not include actions affecting archaeological resources or those actions pertaining to Bell House Historic

Property, which was privatized in 2005. Dam Neck Annex is not covered by this RPA at this time.

The Cultural Resources Program for all Navy installations in Hampton Roads including Naval Air Station Oceana and its special areas is regionally managed through the NAVFAC MIDLANT Environmental Business Line. An Integrated Cultural Resources Management Plan (ICRMP) has been completed in November 2013 to assist in the management of CR throughout the Hampton Roads area installations. Naval Air Station Oceana is included in the ICRMP. This Plan was prepared pursuant to Department of Defense Instruction (DoDI) 4715.16 (18 September 2008), Secretary of the Navy Instruction 4500.35, Chief of Naval Operations Instruction 5090.1C (30 October 2007, replaces 5090.1B), and in compliance with the National Historic Preservation Act (NHPA) of 1966, as amended; the National Environmental Policy Act of 1969 (NEPA); Executive Order No. 11593 (Protection and Enhancement of the Cultural Environment); and Executive Order No. 13287 (Preserve America). The annual update to the ICRMP is currently underway and expects to be completed September 2016.

Section II identifies key activities conducted by the NAVFAC MIDLANT Cultural Resources media manager such as reviewing proposed projects, preparation of CR correspondence to the Virginia State Historic Preservation Officer; review of CR reports and studies, provide cultural resources training to Navy personnel, and communication with PWD-Oceana and Hampton Roads IPT personnel.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH

Compliance with cultural resources requirements are geared towards conservation, preservation, management and enhancement of historic properties as directed by the multitudes of laws, regulations and policies. In general, cultural resources laws and regulations do not lend themselves well to specific location inspections, but dictate an inspection of the overall management of the installation and its historic properties.

The Cultural Resources program will be annually reviewed to ensure the proper management of historic properties. The annual review will include the following:

- Review of the proper documentation associated with the Section 106 review processes including correspondence letters and executed MOAs;
- Review of the ICRMP and planned updates;
- Review of recently completed architectural surveys and archaeological investigations and any Section 110 actions; and
- If appropriate, periodic site visits to construction sites to ensure conditions or stipulations of a Section 106 consultation are complete with project implementation.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS: N/A

C. PRACTICE OWNER TASKS: N/A

D. PWD-OCEANA INSTALLATION TASKS: N/A

E. NAVFAC MIDLANT MEDIA MANAGER TASKS: N/A

- Conduct internal audits of the Cultural Resources program through EMSWeb annually.
- As received, review each submitted environmental checklists to identify cultural resources concerns and requirements and to determine the required consultation.
- Prepare cultural resources related correspondence and ensure cultural resources consultations and the Section 106 and Section 110 review process is completed for each required project before project award.
- As appropriate, work with the Facilities Planning Department, FEAD and HR IPT during the design and construction phrases of projects to ensure the protection of historic properties.
- As appropriate, perform periodic site visits to construction or work sites to ensure conditions or stipulations of a Section 106 consultation are being implemented;
- Ensure annually that the appropriate cultural resources documentation has been completed for each received project, and it is in the Cultural Resources file.
- Ensure annually the ICRMP is reviewed and updated as necessary.
- Ensure annually review recently completed cultural resources surveys and work with the Facilities Planning Department to identify areas requiring further survey in the upcoming 3 years;
- Ensure annually that the Facilities Planning Department personnel have received Cultural Resources training and are integrating cultural resources management early in the planning process.
- Obtain necessary funding and support to correct identified discrepancies, including the preparation of EPR exhibits when needed.

HAZARDOUS MATERIALS

I. MEDIA OVERVIEW

Hazardous Materials (HM) are not managed through the PWD NASO Environmental Division. The environmental department has a hand in overseeing HM from a perspective of reviewing resident commands requested HM for inclusion on 'Authorized Use Lists' and EPCRA 312 & 313 reporting. Additionally, environmental staff ensures any outdoor storage of HM in industrial areas are done so with the appropriate use of Best Management Practices (BMPs) to minimize polluted storm water runoff.

The Installation Safety office covers Hazardous Material Control & Management (HMC&M). Safety Office support includes respective workplace inspection (annual workplace inspections required by OSHA-more frequent in high hazard areas), program evaluation, personnel education and training, reviewing Safety Data Sheets (SDS) prior to purchase and addition to activity AUL, promote the use of Consolidated Hazardous Material Reutilization and

Inventory Management (CHRIMP) and Hazardous Waste Minimization (HAZMIN) center, and developing instructions. Perform periodic review of supported activity AUL to eliminate unnecessary HM and substitute less hazardous products where feasible. IC responsibilities are outlined in OPNAVINST 5100.23G. Governing instructions are OSHA 29CFR1910.106 and 29CFR1910.1200, OPNAVINST 5100.23G. Under this program, activities are provided HMC&M training via Enterprise Safety Applications Management Systems (ESAMS) website. Safety professionals are trained in Introduction to Hazardous Material (Ashore), course A-493-0031 at Naval Occupational Safety and Health, and Environmental Training Center (NAVOSHENVTRACEN) prior to inspections or SDS reviews.

II. INSPECTIONS/OVERSIGHT EVALUATIONS:

A. APPROACH

The only inspections performed through the environmental department are Storm Water Pollution Prevention inspections at industrial sites with outdoor storage. Annual Site Compliance Evaluations are also performed at these sites.

Environmental Practice Inventories (EPIs) are performed at several industrial sites with HM storage where AUL lists are requested for assistance in EPCRA reporting.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

See EMSWeb for list of sites where stormwater inspections are performed and see EPCRA Manager for a list of EPI sites.

C. PRACTICE OWNER/OPERATOR TASKS:

- Secure latest copy of AUL from FLC.
- Submit appropriate paperwork to HAZMIN Center for new items to be added to the AUL.
- Ensure Hazardous Materials are stored in accordance with requirements.

D. PWD NASO ENVIRONMENTAL PROTECTION SPECIALISTS TASKS:

- Conduct SWPPP inspections to oversee that HM are stored outdoors with appropriate BMPs in place.
- Assist in updating EPIs

E. NAVFAC MIDLANT MEDIA MANAGER (MM) TASKS:

EPCRA:

- Review AUL requests
- Conduct some site visits to update EPIs

HAZARDOUS WASTE

I. MEDIA OVERVIEW

The management and disposal of Hazardous Waste (HW) is regulated by the Environmental Protection Agency (EPA) under the Resource Conservation and Recovery Act (RCRA). The Virginia Department of Environmental Quality (VDEQ) regulations incorporate EPA regulations and can add additional requirements.

Each base and its associated annexes are identified by their EPA ID# and managed according to their designated generator status (i.e. Large Quantity (LQG), Small Quantity (SQG), and Conditionally Exempt Small Quantity Generator (CESQG)). Generator status is determined by the amount of HW generated per month which is subject to change based on operations.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH

To ensure compliance with Federal, State and Navy regulations, site generators will conduct weekly inspections of their Hazardous Waste < 90 / 180 Day Accumulation Areas (HWAA) and Environmental Protection Specialists (EPS) will conduct quarterly inspections, or more frequently if requested by the Hazardous Waste Program Manager. In addition to periodic inspections, annual internal audits will be performed by Regional Hazardous Waste Program Managers. External audits will be performed on a triannual basis by HW Compliance staff from other Facility Engineering Commands (FECs). Regulations associated with Hazardous Waste management are dependent upon Generator status.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS

EMSWeb is being used at all Hampton Roads installations to record and track all inspections and internal assessments. Refer to EMSWeb for a list of inspections currently conducted by the Public Works Department (PWD) staff and internal assessments that have been conducted by the Media Managers.

Types of sites/assets inspected under the Hazardous Waste program include but are not limited to:

- Hazardous Waste Satellite Accumulation Areas (SAA)
- Hazardous Waste < 90 /180 Day Accumulation Areas (HWAA). Whether the site is designated as a < 90 or <180 day site is dependent on the installations generator status.
- Universal Waste Accumulation Areas (UWAA)

C. PRACTICE OWNERS TASKS

- Conduct inspections of the HWAAs, SAA's and UWAA's and all other locations where it is either known or anticipated that hazardous waste may be generated.
- Record and file inspections in the form of completed checklists and applicable notes for <90/180 Day HWAAs every seven days. Maintain files for 3 years.
- Promptly resolve issues requiring correction, at the lowest level possible, and follow up with appropriate training and subsequent inspections, as needed.
- Report non-corrected compliance findings of inspections to the Hazardous Waste Media Manager as soon as possible.
- Ensure personnel hazardous waste training to perform assigned duties is kept current.

D. ENVIRONMENTAL PROTECTION SPECIALISTS TASKS

- Conduct quarterly inspections of the HWAAs. More frequent inspections may be required if requested by the Hazardous Waste Program Manager.
- Conduct quarterly inspections of all hazardous waste satellite and universal accumulation areas and all other locations where it is either known or anticipated that hazardous waste may be generated. More frequent inspections may be required if requested by the Hazardous Waste Program Manager.
- Record and file quarterly inspections in the form of completed checklists, EMSWEB checklists, and applicable notes. Maintain files for 3 years.
- Review findings provided by the practice owners to determine if intervention or support is needed.
- Provide corrective action / on-the-spot training to practice owners, as needed, to ensure that practice owners are aware of the requirements.

E. NAVFAC MIDLANT MEDIA MANAGER TASKS

- Ensure corrective actions are initiated for findings identified during compliance inspections
- Review inspection findings by the Installation Environmental staff monthly to determine if intervention or additional support is needed.
- Develop a POAM for open findings exceeding 90 days.
- Annually prepare EPRs covering all aspects of the hazardous waste program.
- Ensure personal hazardous waste training is sufficient to perform assigned duties and kept current.
- Prepare biennial report to capture hazardous waste generation at all large quantity generators.
- Review this document annually and update as needed.
- Escort any outside agency, such as regulators, to the appropriate locations.
- Annually review the HW generation records and discuss potential pollution prevention initiatives with the P2 Media Manager.
- Conduct annual internal audits of the Hazardous Waste program through EMSWeb.
- Provide corrective action / on-the-spot training to practice owners, as needed, to ensure that practice owners are aware of the requirements.

NATURAL RESOURCES

I. MEDIA OVERVIEW

The Natural Resources (NR) Program for NASO, NASO DNA, and NALFF properties is managed in accordance with applicable federal, state, and local government regulatory requirements and DoD, Navy and Installation Policies/Instructions and Standard Operating Procedures (SOPs). How the installation's NRs are managed is dictated in the Integrated Natural Resources Management Plan (INRMP) that is assigned to the installation. There are two INRMPs for NASO: NASO & NALFF INRMP and NASO DNA INRMP.

These INRMPs outline conservation efforts and establishes procedures to ensure compliance with related environmental laws and regulations during INRMP implementation over the five-year duration of the plan. Development of these INRMPs included input from state and federal stakeholders in addition to cross coordination with other appropriate Navy programs. As required under the Sikes Act Improvement Act (SAIA), these INRMPs reflect mutual agreement of agencies concerned with the conservation, protection, and management of fish and wildlife resources, including the USFWS, NOAA NMFS, and the VDGIF. These INRMPs provide the direction for natural resources management at Naval Air Station (NAS) Oceana (NASO), Naval Auxiliary Landing Field (NALF) Fentress (NALFF), and NASO Dam Neck Annex (DNA) (collectively referred to as the Installation); however, it does not replace or affect any federal laws, or state responsibility and authority for protecting fish and wildlife resources. There are several agriculture outlease areas that are managed for natural resources and are covered by the NASO & NALFF INRMP. These INRMPs cover a five-year period, but as ecosystems are dynamic and Installation requirements are subject to frequent modification, natural resources management must be flexible. To accommodate these changes, these INRMPs are reviewed and updated annually by Installation personnel and revised and reapproved after five years in coordination with USFWS, NOAA NMFS, and VDGIF. The Installation Appointed NR Manager (NRM) has the responsibility of maintaining the currency of this document.

These INRMPs integrate all aspects of NR management, including the various components of the Environmental Compliance Programs, Environmental Restoration Program (ERP), and Cultural Resources Program, as well as the management of sensitive species, wetlands, watershed and floodplain protection, wildlife, grounds maintenance, pest management, and outdoor recreation, with the current military mission. In accordance with the SAIA and OPNAVINST M- 5090.1, these plans provide for:

- fish and wildlife management, land management, forest management, and fish- and wildlife-oriented recreation;
- fish and wildlife habitat protection and enhancement;
- wetland protection, enhancement, and restoration;
- integration of, and consistency among, the various activities conducted under the plan;
- establishment of specific natural resources management objectives and time frames for proposed actions;
- sustained use by the public of natural resources to the extent such use is consistent with the needs of fish and wildlife management and subject to Installation safety and security requirements;

- enforcement of natural resources laws and regulations; and
- no net loss in the capability of military lands to support the military mission of the Installation.

A current list of applicable laws, regulations and policies associated with the NR management on the installation is available in the installation INRMPs, maintained by the NRM.

II. INSPECTION/OVERSIGHT EVALUATIONS

A. APPROACH

To ensure compliance with applicable laws, regulations and policies the INRMP identifies multiple actions geared towards conservation, preservation, and enhancement of the natural environment. Natural resources laws and regulations do not lend themselves well to specific location inspections, but dictate an inspection of the overall land management of the facility and the surrounding ecosystem, community, and/or watershed.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

Reference the current installation INRMPs, maintained by the installation NRM.

C. PRACTICE OWNER TASKS:

Reference the current installation INRMPs, maintained by the installation NRM.

D. PWD NASO NATURAL RESOURCE SPECIALIST TASKS:

Reference the current installation INRMPs, maintained by the installation NRM.

E. NAVFAC MIDLANT MEDIA MANAGER TASKS:

Reference the current installation INRMPs, maintained by the installation NRM.

PEST MANAGEMENT

I. **MEDIA OVERVIEW**

Pesticide operations at the installations covered under this IAP will be conducted in accordance with the installation Integrated Pest Management Plan.

The majority of the pest control services at PWD NASO are provided by the NAVFAC MIDLANT Regional Environmental Services (EV Services) pest control shop under the Environmental Services Performance Work Statement (PWS). The pest control shop is located in building 613 at the Dam Neck Annex. Contract pest control companies also provide pest control to some NEX facilities. Vegetation management is provided by NAS

Oceana's Natural Resources Section, MWR personnel, and the grounds maintenance contractor. The PWS requires that terminal buildings and facilities be kept pest-free.

All industrial and grounds pest control work will be performed by DoD or Virginia-certified commercial applicators. Certification must be in the categories of the work performed.

Pesticide applications will be recorded using approved NAVFAC Online Pesticide Reporting System (NOPRS). Data files will be submitted to Applied Biology, NAVFACLANT, at least monthly.

All pesticides shall be approved by Applied Biology, NAVFAC LANT prior to use. These materials will be stored in accordance with their EPA-approved labels.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH

Compliance inspections will be conducted regularly following periodic schedule. The O&M Contractor shall perform its own regular inspections as required by the contract. The Pesticide Program Media Manager will conduct annual review of documentation.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS

1. **Navy Exchange (NEX)**
   The NEX sells pesticides to private consumers. Responsibilities include:
   - Ensure that pesticides for retail sale are safely displayed on shelves;
   - Properly dispose of pesticides and containers if the product has exceeded its shelf life or the EPA registration has been cancelled;
   - Ensure that store employees are properly trained on the emergency procedures in the event of a spill; and
   - Maintain and make available on request Material Safety Data Sheets for pesticides that are stocked.

2. **Commissary**
   Veterinary technicians from the U.S. Army Veterinary Detachment are responsible for quality assurance and food inspection of the Commissary and all messing facility and retail sale foods on Base. Responsibilities include:
   - Ensure that pesticides for retail sale are safely displayed on shelves;
   - Ensure delivered food products are free from pest infestation;
   - Ensure proper sanitation and hygiene to prevent pest problems;
   - Ensure control of pests that occur in the Commissary;
   - Report pest infestations that require professional pest management services;
   - Conduct surveillance for pests which damage, destroy and contaminate food stored in the Commissary and installation facilities.

C. CONTRACT PEST MANAGEMENT SERVICE PROVIDER (PMSP) TASKS:

Contract PMSPs at PWD NASO are required to be certified as commercial pesticide applicators by the State of Virginia. Unlicensed individuals are not allowed to apply pesticides on Base.

- Conduct pest management operations in accordance with the contract specifications;
- Comply with all DoD, federal, state and local pest management regulations;
- Report pesticide usage to the IPMC on a monthly basis; and
- Cooperate fully with and communicate all pest management issues and requirements via the contract PAR.

D. CONTRACT GROUNDS MAINTENANCE TASKS:

Grounds contractors that apply herbicides or pesticides are required to be certified as commercial pesticide applicators by the State of Virginia. Unlicensed individuals are not allowed to apply pesticides on base.

- Comply with all DoD, federal, state and local pest management regulations;
- Vegetation control on right-of-way, road sides, utilities, and ditches.
- Report pesticide usage on a monthly basis; and
- Cooperate fully with and communicate all pest management issues and requirements via the contract PAR.

E. ALL INSTALLATION PERSONNEL TASKS:

- Apply appropriate sanitary and pest exclusionary practices to prevent pest infestations;
- Attempt to control minor pest infestations through mechanical or other means before requesting a PMSP; and
- Coordinate and cooperate fully with PMSPs in scheduling pest management and preparing the areas for pesticide treatment.
- Be enrolled in the Self-help program and keep annual training current.

F. INTEGRATED PEST MANAGEMENT COORDINATOR TASKS:

- **IPMP Maintenance** – Once the Integrated Pest management Plan (IPMP) has been developed and implemented, it must be reviewed annually and updated as necessary. The installation Integrated Pest Management Coordinator (IPMC) is responsible for maintaining the IPMP.
- **Internal Review** – An internal review of the pest management program is conducted annually by the IPMC in coordination with the Pest Management Service Providers (PMSPs) and other functional area Points of Contact (POC). The review should include updating contract information, applicator certifications, pesticides and pest management operations to be used on the installation, and updating pesticide use records. An Internal Assessment Plan (IAP) for the pesticide program should be used by the IPMC as a tool to review compliance issues during the internal review. A

sample IAP can be found in Appendix I and other compliance self-assessments can be found in Appendix D of the installation IPMP.

- **Off-site Review –** The IPMC may request a review by a NAVFAC LANT Applied Biology Professional Pest Management Consultant (PPMC) for review of regulatory requirements, reporting and pesticide approval procedures.
- **On-site Review** – An on-site review of the entire pest management program shall be performed by the NAVFAC LANT Applied Biology PPMC at least every 3 years to ensure compliance with the IPMP. The review may be performed more frequently if extensive program problems exist.
- **IPMP Rewrite** – The IPMP shall be rewritten every 5 years to reflect new contracts, personnel, pest management practices, and regulatory changes.

G. PESTICIDES INTERNAL ASSESSMENT SUMMARY

Table 1-1: PEST MANAGEMENT PROGRAM REQUIREMENTS – NASO, Dam Neck Annex, Fentress

Requirement	Description	Reference	Responsibility
PLANNING	Review and revise the Integrated Pest Management Plan annually.	OPNAV 6250.4C Series; DoDINST 4150.07	IPMC
RECORDING	Record all pest management operations conducted on the Base after each operation.	OPNAV 6250.4C Series; DoDINST 4150.07	All pesticide applicators
MAINTAINING	Maintain records of all pest management operations conducted on Base on-site indefinitely	OPNAV 6250.4C Series; DoDINST 4150.07	IPMC in coordination with PMPARs
REPORTING	Compile and report all pest management operations to NAVFAC Atlantic Applied Biology monthly.	OPNAV 6250.4C Series; DoDINST 4150.07	IPMC in coordination with PMPARs
PESTICIDE APPLICATOR QUALIFICATION	Ensure that all personnel applying pesticides on installations have current DoD pesticide applicator certification if in-house or state commercial applicator certification if contracted.	OPNAV 6250.4C Series; DoDINST 4150.07	IPMC in coordination with PMPARs
COMPLIANCE	Ensure that all program elements are in compliance with all Federal regulations. The Base is also encouraged to comply with County and State regulations.	OPNAV 6250.4C Series; DoDINST 4150.07	IPMC in coordination with PMPARs
PESTICIDE APPROVAL	Compile and submit list of new pesticides to NAVFAC Atlantic Applied Biology for approval for use on the Base.	OPNAV 6250.4C Series; DoDINST 4150.07	IPMC in coordination with PMPARs
CONTRACT REVIEW	Review pest management contract specifications for compliance with the Integrated Pest Management Plan and submit to NAVFAC Atlantic Applied Biology for final review and approval prior to advertising.	OPNAV 6250.4C Series; DoDINST 4150.07	Facilities Support Contracts, PMPARs

PETROLEUM OIL AND LUBRICANTS (POL) / STORAGE TANKS

I. MEDIA OVERVIEW

Storage tanks are federally regulated by 40 CFR 112 – Oil Pollution Prevention, also known as the Spill Prevention, Control and Countermeasures (SPCC) rule. 40 CFR 112 dictates requirements for Storage Tank compliance and the development and implementation of facility SPCC Plans. In addition, some aboveground storage tanks (ASTs) with a capacity greater than 660 gallons are regulated by the Virginia Department of Environmental Quality (VADEQ) 9 VAC 25-91-10 – Facility and Aboveground Storage Tank Regulation. Underground storage tanks (USTs) are regulated by the federal government in 40 CFR 280 and 281, and by the Commonwealth of Virginia in 9 VAC 25-580. Storage tank systems are also required to comply with National Fire Protection Association requirements and any applicable local fire codes.

Compliance inspections of ASTs and portable containers are performed in accordance with the most recent version of the "STANDARD OPERATING PROCEDURE (SOP) FOR ABOVEGROUND STORAGE TANKS (AST) AND CONTAINERS GREATER THAN OR EQUAL TO 55-GALLONS OF PETROLEUM, OIL, OR LUBRICANT (POL) STORAGE CAPACITY FOR CNIC NAVAL INSTALLATIONS WITHIN HAMPTON ROADS VIRGINIA", and the inspection checklists included in this AST SOP. The AST SOP also describes applicable training, record keeping, tank installation/closure notification, and spill notification requirements. Regulations associated with Storage Tank management are dependent upon several factors, such as capacity, contents, intended use, etc.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH:

Internal Assessments will be conducted through continuous inspections by the practice owners. Compliance with Federal, State, and individual permit requirements will be assessed primarily by the Environmental Protection Specialist (EPS) quarterly via site inspections, with management review by the Petroleum Tank Media Manager (MM) annually. The EPS will obtain assistance from the tank media manager for compliance issues that are not routine in nature.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

EMSWeb is being used at PWD NASO to keep track of all required inspections and internal assessments. Because inspection sites change on a routine basis, they were not listed in this plan. Refer to EMSWeb for a list of the inspections currently conducted by the PWD staff and internal assessments that have been conducted by the Petroleum Tank MMs. Type of sites/assets inspected under the POL/Storage Tank program includes but are not limited to:

- Aboveground Storage Tanks (ASTs)

- Portable Containers
- Underground Storage Tanks (USTs)

Additionally, fuel storage tanks are recorded in the tanks database maintained by NAVFAC MIDLANT MM.

C. PROCESS OWNER TASKS:

- Receive applicable training on storage tank inspections from Program Manager or via ECATTS as described in the AST SOP.
- Perform daily/weekly and/or monthly visual inspections of applicable installation storage tanks as described in the AST SOP
- For storage tanks with open top secondary containment, maintain berm discharge log
- Maintain inspection records for 5 years

D. PWD NASO ENVIRONMENTAL PROTECTION SPECIALIST TASKS:

- Receive training on Storage Tank inspections from Program Manager or via ECATTS as described in the AST SOP
- Perform quarterly compliance inspections of installation Storage Tanks
- Maintain inspection records for 5 years if process owner does not maintain the records at the site of the tank.
- Document inspection findings in EMS Web
- Ensure inspections assigned to process owners are performed.

E. NAVFAC MIDLANT MEDIA MANAGER TASKS:

- Continuously maintain and update installation SPCC Plan
- Ensure completion of review and evaluation of the Spill Prevention Control and Countermeasures (SPCC) Plan every five years, and annual updates to include Professional Engineer (PE) signature for technical amendments.
- Work with other POL/Storage Tank program MMs to assure Hampton Roads AST SOP is updated to reflect current regulatory requirements.
- Ensure corrective actions are initiated for findings identified during compliance inspections
- Review inspection findings by the Installation Environmental staff monthly to determine if intervention or additional support is needed.
- Develop a POAM for open findings exceeding 90 days.
- Review findings provided by the Installation Environmental staff to determine if intervention or support is needed
- Facilitate and coordinate VADEQ and EPA installation inspections with the IEPD.
- Ensure that compliance inspections are performed on schedule by EPS's and Process Owners
- Ensure corrective actions are initiated for findings identified during compliance inspections
- Ensure compliance with regulatory requirements is included in the annual budget to support all aspects of the Storage Tank program on a continuous basis

- Ensure tenant's Storage Tank inspection training is sufficient to perform assigned duties and is kept current
- Ensure completion of formal annual review and update of the Facility Response Plan (FRP). .
- Submit registrations and notifications to the Virginia Department of Environmental Quality (VDEQ)
- Reconcile the Navy and VDEQ tank databases every 5 years.
- Ensure that Daily, Weekly and Monthly Inspections for ASTs are being performed.
- Ensure that Annual Periodic Inspections for all ASTs are being performed.
- Ensure that Annual Gauge Calibrations for ASTs subject to VDEQ regulations are being performed. Ensure the satisfactory completion of Formal External Inspections for ASTs.
- Ensure that initial formal internal inspections are performed within 5 years after the date of installation.
- All ASTs subject to VDEQ regulations shall undergo an external re-inspection every 5 years after initial formal external inspection has been conducted.
- Ensure the satisfactory completion of the Formal Internal Inspections for ASTs as required by the Steel Tank Institute (STI) and VDEQ.
- Ensure the satisfactory completion of Tank Leak Tests for ASTs as required by the Steel Tank Institute (STI).
- Ensure the satisfactory completion of Piping Pressure Testing Certifications for ASTs prior to being placed into service and every 5 years thereafter.
- Ensure the satisfactory completion of Secondary Containment Evaluations or Certifications for ASTs prior to being placed into service and every 10 years thereafter.
- Review maintenance logs for repair issues and compliance, including tank integrity and pipe testing.
- Update tank database as needed.
- Ensure the satisfactory commencement and completion of ASTs/USTs closure procedures.
- Ensure availability and maintenance of records for regulated USTs which include documentation of operation of corrosion protection equipment, documentation of UST system repairs, release detection compliance reports (print outs from Automatic Tank Gauging Systems), results of the site investigation conducted at permanent closure, and operator's training documentation.
- Ensure availability and maintenance of records for ASTs which includes records relating to all required measurements and inventory of oil at the facility; records of required tank/pipe testing; records of spill events and other discharges of oil from the facility; supporting documentation for developed contingency plans; and operator's training documentation.

SOLID WASTE

I. MEDIA OVERVIEW

The Solid Waste program is managed through the NAVFAC MIDLANT. It consists of solid waste disposal and recycling. In accordance with Executive Order 13693, NASO strives to meet solid waste reduction goals. The solid waste generated by the installation will be monitored with respect to the waste disposed versus waste recycled on the installation. Appropriate lines of communication will be established to receive information on volumes and costs associated with solid waste. When a recycling program has been established on the installation, evaluation of the cost per ton to recycle in relation to the cost of disposal will be conducted. For cost information, concerning solid waste, the Regional Solid Waste Director will be contacted for information.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH:

PWD NASO will be assessed through regular audits and field inspections for evaluating the financial, administrative, and operational program areas of the NAS Oceana ISWMP.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

PWD NASO is presently part of the Storefront recycling operation. As such it operates under the cognizance of the Mid-Atlantic Regional ISWMP. The recycling manager dictates all management practices for the ISWMP.

Locations to be assessed include:

- Solid waste dumpsters
- Recycling points

C. PWD OCEANA RECYCLING SPECIALIST TASKS:

- Complete monthly inspections and forward information to the media manager

D. ISWMP REGIONAL OPERATIONS MANAGER TASKS:

- Establish a recycling program on the installation, and achieve the annual percent waste reduction goals established by the Regional Environmental Management System Cross-Functional Team.
- Conduct Semi-Annual compliance assessments of PWD Oceana's ISWMP.

E. ISWMP INTERNAL ASSESSMENT SUMMARY:

PROGRAM	PRACTICE	INSPECTION FREQUENCY PLANNED	INSPECTION RESPONSIBILITY	COMPLIANCE EVALUATION FREQUENCY	COMPLIANCE EVALUATION RESPONSIBILITY
Recycling	Identify Quantity and Cost of Waste Disposal	Quarterly	NAS Oceana Recycling Specialist	Semi-Annually	Regional ISWMP Operations Manager
	Identify Material Composition of Waste Dumpsters	Quarterly	NAS Oceana Recycling Specialist	Semi-Annually	Regional ISWMP Operations Manager

F. RECYCLING SITE-SPECIFIC COMPLIANCE QUESTIONS

1. Is high-grade office paper separated, collected, and recycled?
2. Is non-contaminated corrugated cardboard collected and recycled?
3. Are separated recyclable materials contained or bundled to avoid spillage?
4. Are separated recyclable materials stored so they do not pose a fire, health, or safety hazard, or provide food/harborage for pests?
5. Are separated recyclable materials collected frequently enough to avoid pest attraction/breeding or any other nuisances?
6. If equipment is used to compact, collect, or transport recyclable materials, is the equipment constructed and operated to minimize health and safety hazards?

STORMWATER (INDUSTRIAL & NON-INDUSTRIAL)

I. MEDIA OVERVIEW

Industrial Stormwater:
NASO has an individual Virginia Pollutant Discharge Elimination System (VPDES) industrial activity stormwater discharge permit issued by the Virginia Department of Environmental Quality (VDEQ) that regulates industrial processes that discharge into State Waters which includes Waters of the US. Dam Neck Annex has a general VPDES industrial activity stormwater discharge permit. Both permits require installations to develop and implement a Stormwater Pollution Prevention Plan (SWPPP) which identifies potential pollutants and describes best management practices that will be used to reduce the discharge of pollutants from stormwater runoff.

There is no stormwater permit for Fentress and stormwater inspections are not required.

Non-Industrial Stormwater:
Both NASO and Dam Neck Annex are regulated under the Virginia Stormwater Management Program (VSMP) General Permit for Discharges of Stormwater from Small Municipal Separate Storm Sewer Systems (MS4).

In Virginia the Department of Environmental Quality (DEQ) has been delegated by the Environmental Protection Agency (EPA) as the regulatory authority for the Municipal Separate Storm Sewer System (MS4) permit program. DEQ is responsible for ensuring that the regulated community in Virginia complies with the Virginia Stormwater Management Program (VSMP) permit regulations, which encompass stormwater discharges associated with non-industrial practices and regulated construction activities. Phase I or Phase II MS4 permit coverage is issued to the operators of stormwater systems that meet specific criteria under the Clean Water Act (CWA) for being labeled a regulated MS4. Unless specifically waived by the regulatory authority, federal facilities located within an "urbanized area" as defined by the latest decennial Census are considered regulated operators and are required to receive covered under the Phase II MS4 General Permit. In the Hampton Roads region naval installations that meet the regulated operator criteria currently receive consolidated coverage from DEQ under the VSMP Phase II MS4 General Permit.

As a regulated MS4 permittee, Command Navy Region Mid-Atlantic (CNRMA) must ensure implementation of a stormwater program to reduce the discharge of pollutants to the "maximum extent practicable", protect local water quality, and satisfy that appropriate water quality requirements of the Clean Water Act. In accordance with the conditions of the Phase II MS4 General Permit, a regional MS4 Stormwater Program Plan has been developed which identifies the 6 minimum control measures (MCM) undertaken on a regional level to meet permit requirements. The six minimum control measures required to be addressed under the Phase II MS4 General Permit are:

- Public Education and Outreach
- Public Involvement and Participation
- Illicit Discharge Detection and Elimination
- Construction Site Runoff Control
- Post Construction Runoff Control
- Good Housekeeping & Pollution Prevention

The MS4 Stormwater Program Plan specifies the implementation schedule and the roles and responsibilities for all best management practices to be employed to address each MCM of the General Permit. The Phase II MS4 Program Media Manager is responsible for ensuring that the regional MS4 stormwater program conforms to the roles and responsibilities identified in the approved MS4 Program Plan. DEQ is responsible for the approval of the MS4 Program Plan to ensure it complies with the requirements of the VSMP Phase II MS4 General Permit.

The VSMP Phase II MS4 General Permit includes reporting requirements which specify that an annual report will be completed and submitted to the regulatory authority by October 1 of each year. The annual report must document efforts undertaken by the permittee during the reportable permit cycle to comply with the approved program plan and permit requirements. The Phase II MS4 Program Media Manager is responsible for completion and submission of the MS4 program annual reports to the regulatory authority. DEQ is responsible for the regulatory review of the MS4 Program annual reports to ensure program efforts are in compliance with permit requirements.

For a more detailed and complete list of roles and responsibilities, please refer to the MS4 Stormwater Program Plan.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH:

NAS Oceana's Virginia Pollutant Discharge Elimination System (VPDES) Permit and Dam Neck Annex's VPDES Permit both regulate industrial processes that discharge into State Waters which includes Waters of the US. Under these VPDES Permits:

- PWD Environmental will perform regular inspections of the installation's oil water separators (OWS) and associated valves that discharge to the storm system, as well as compliance oversight inspections of the tenant operations.
- PWD Environmental will perform BMP inspections of areas prescribed in the SWPPPas required.

For the MS4 Permit Program, post construction stormwater BMPs are inspected regularly by the NAVFAC MIDLANT MM. Additionally, regulated land disturbing activities are inspected to ensure compliance with the MS4 Permit and the Virginia Stormwater and Erosion & Sediment Control Regulations.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS

The Stormwater Programs will be assessed to ensure compliance with applicable regulatory requirements. In addition, Stormwater best management practices will be assessed at designated locations. Work practices at all other locations where material storage areas are exposed to storm water will be assessed to ensure that pollutants are not discharged to State Waters.

EMSWeb is being used at PWD NASO to keep track of all inspections and internal assessments. Because inspections change on a routine basis, they were not listed in this plan. Refer to EMSWeb for a list of the inspections currently conducted by the PWD staff and internal assessments that have been conducted by the MM staff.

Please refer to the VPDES Permit, the installation's Stormwater Pollution Prevention Plan (SWPPP) and EMSWeb for an updated summary of stormwater internal assessment summary.

C. PWD NASO ENVIRONMENTAL PROTECTION SPECIALIST TASKS

- Inspect OWSs and valves associated with OWSs as required.
- Record and file inspections as required by the SWPPP. Maintain files per regulatory requirements.
- Promptly resolve routine issues which require correction, at the lowest level possible, and follow up with appropriate training and subsequent inspections as needed.

- Report findings of all inspections to the NAVFAC MIDLANT Water Program Manager as necessary to coordinate correction of non-routine deficiencies and provide POA&M updates quarterly to show all deficiencies.
- Ensure tenants and practice owners are receiving annual SWPPP training.
- Work with tenants to ensure required inspections and necessary corrective actions are completed within 30 days per the Permit. Conduct follow up inspections as needed and document corrections.

D. NAVFAC MIDLANT MEDIA MANAGER TASKS

- Prepare Discharge Monitoring Reports (DMR), as required by submission to the Department of Environmental Quality (DEQ).
- Maintain rain gauge log of daily rainfall totals.
- Ensure corrective actions are initiated for findings identified during compliance inspections
- Review inspection findings by the Installation Environmental staff monthly to determine if intervention or additional support is needed.
- Develop a POAM for open findings exceeding 90 days.
- Facilitate VPDES VADEQ installation inspections.
- Coordinate and hold SWPPP Committee Meetings as required.
- Ensure that the annual site compliance evaluation is completed by Permit-specified deadline.
- Conduct annual review of the SWPPP and modify/update plan as required.
- Update outfall sampling plan and stormwater drainage maps as necessary.
- Ensure Illicit Discharge Studies and corrective actions are initiated according to Permit requirements.
- Ensure Permit requirements are included in the annual budget to support all aspects of the VPDES Program on a continuous basis.
- Review sampling results verify compliance with the VPDES Permit.
- Ensure that the VPDES Permit reapplication is submitted within the required time frame.

E. INTEGRATED PRODUCT TEAM (IPT)/OIL RECOVERY TECHNICIAN TASKS

- Quarterly inspect pretreatment devices and perform maintenance as necessary.

WASTEWATER

I. MEDIA OVERVIEW

NAS Oceana's and Dam Neck Annex's Industrial Wastewater Discharge Permits (HRSD Permits) regulate industrial processes that discharge into the sanitary sewer systems at each respective installation.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH:

NAS Oceana discharges an approximated average of 570,000 gpd of sanitary sewage to a local municipal authority, Hampton Roads Sanitation District (HRSD). The HRSD permit requires regular monitoring sampling and regulates industrial wastewater discharges at the facility.

- NAVFAC MIDLANT Environmental PWD will perform regular inspections of the installation's oil water separators (OWS) and associated sediment traps and valves that discharge to the sanitary sewer system.
- NAVFAC MIDLANT Utilities will perform weekly inspections of Pump Station SD-600.
- NAVFAC MIDLANT Utilities will perform annual meter certification of Pump Station SD-600 and provide report to Media Manager for regulatory submittal.

NAS Oceana, Dam Neck Annex discharges an approximated average of 236,000 gpd of sanitary sewage to a local municipal authority. The sanitary sewage discharge permit requires regular monitoring sampling and regulates industrial wastewater discharges at the facility.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS

The Wastewater Programs will be assessed to ensure compliance with applicable regulatory requirements. EMSWeb is being used at PWD NASO to keep track of all inspections and internal assessments. Because inspections change on a routine basis, they were not listed in this plan. Refer to EMSWeb for a list of the inspections currently conducted by the PWD staff and internal assessments that have been conducted by the MM staff.

Please refer to the HRSD Permits, the installation's Pretreatment Device Management Plans (PDMP) and EMSWeb for an updated summary of wastewater internal assessment summary.

C. PWD NASO ENVIRONMENTAL PROTECTION SPECIALIST TASKS (NASO and DN):

- Perform regular inspections of the installation's oil water separators (OWS) and associated sediment traps and valves that discharge to the sanitary sewer system.
- Inspect all other Pretreatment Devices including Neutralization Tank, Pulper, Sediment Traps, etc. as required.
- Record and file inspections as required by the HRSD Permits. Maintain files for a minimum of 3 years.
- Promptly resolve routine issues which require correction, at the lowest level possible, and follow up with appropriate training and subsequent inspections as needed.
- Report findings of all inspections to the NAVFAC MIDLANT Water Program Manager as necessary to coordinate correction of non-routine deficiencies and provide POAM updates quarterly to show all deficiencies.

D. NAVFAC MIDLANT MEDIA MANAGER TASKS (NASO and DN):

- Prepare reports to include meter readings and monitoring results, as required by submission to HRSD.
- Ensure corrective actions are initiated for findings identified during compliance inspections.
- Review inspection findings by the Installation Environmental staff monthly to determine if intervention or additional support is needed.
- Develop a POAM for open findings exceeding 90 days.
- Facilitate HRSD installation inspections.
- Modify/update PDMPs where needed.
- Ensure Permit requirements are included in the annual budget to support all aspects of the Wastewater Program on a continuous basis.
- Review sampling results verify compliance with the HRSD Permits.
- Ensure that the HRSD Permit reapplications are submitted within the required time frames.
- Provide training to tenant commands on prohibited discharges, where necessary.
- Ensure the following reports are completed and submitted to HRSD by the permit specified deadlines: Meter Certifications, Inflow and Infiltration Updates, Sampling Schedules.

E. INTEGRATED PRODUCT TEAM (IPT)/OIL RECOVERY TECHNICIAN TASKS (NASO and DN):

- Quarterly inspect pretreatment devices and perform maintenance as necessary.

F. NAVFAC MIDLANT UTILITIES TASKS (NASO and DN):

- Perform weekly inspections of Pump Stations SD-600, 612, 259, and 374.
- Collect monthly meter readings from Pump Stations SD-600, 612, 259, and 374. Provide meter readings by 5th of following month for regulatory submittal by the 10th of the month.
- Perform annual meter certification of Pump Stations 612, 259, and 374 and provide reports to Media Manager for regulatory submittal.

III. MEDIA OVERVIEW

NALF Fentress has an onsite Navy owned and operated wastewater treatment plant. Installation has a DEQ Virginia Pollution Abatement (VPA) Permit that governs the spray application of treated domestic wastewater onto neighboring Navy owned, agricultural leased fields. Under this permit, NAVFAC Utilities will:

- Operate and maintain the wastewater treatment plant and components of the spray application system.
- Comply with VPA Permit and Nutrient Management Plan requirements.

A. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

The Wastewater Program will be assessed to ensure compliance with Federal, State and local permit requirements. Please refer to EMSWeb for an updated internal assessment summary.

B. NAVFAC UTILITIES TASKS (FENTRESS):

- Maintain Class IV wastewater operator licensures.
- Inspect components of wastewater treatment plant system.
- Record and file inspections. Maintain files per regulatory requirements.
- Promptly resolve routine issues which require correction, at the lowest level possible, and follow up with appropriate training and subsequent inspections as needed.
- Report findings of all inspections to the NAVFAC MIDLANT Water Program Manager as necessary to coordinate correction of non-routine deficiencies and provide POAM updates quarterly to show all deficiencies.
- Maintain Operations and Maintenance Manual and update as necessary. Notify NAVFAC MIDLANT Water Program Manager if any revisions or updates are required.
- Complete sampling requirements required by permit.
- Notify NAVFAC MIDLANT Water Program Manager if there are any bypasses or upsets of the plant.

C. NAVFAC MIDLANT MEDIA MANAGER TASKS (FENTRESS):

- Review findings provided by the installation to determine if intervention or support is needed.
- Review and confirm accuracy of all operating records and monitoring data provided by NAVFAC Utilities on a monthly basis.
- Prepare VPA Monitoring Reports, as required by submission to the Department of Environmental Quality (DEQ) on a monthly and annual basis.
- Facilitate VPA VADEQ installation inspections.
- Ensure Permit requirements are included in the annual budget to support all aspects of the VPA Program on a continuous basis.
- Review sampling results verify compliance with the VPA Permit
- Ensure that the VPA Permit reapplication is submitted within the required time frame.
- Ensure that the Nutrient Management Plan is updated every three years and submitted to VADEQ.
- Report any updates to the Operations and Maintenance Manual and/or Nutrient Management Plan to VADEQ.
- Report any bypasses or upsets of the plant to VADEQ.

POTABLE WATER

I. MEDIA OVERVIEW

The Safe Drinking Water Act (SDWA) exists to ensure the quality of drinking water supplied by public water systems. Compliance with the SDWA at this installation requires a combination of monitoring and recurring certifications (inspections). The potable water media manager is ultimately responsible for the monitoring requirements of the SDWA. The NAVFAC MIDLANT Certification Management Department is responsible for maintaining and certifying cross connection and of backflow prevention equipment. Additionally, the NAVFAC MIDLANT Utilities Department is responsible for overall operation and maintenance of the water system.

The NAS Oceana water distribution system serves a population of approximately 7,900 customers. Average daily demand is 300,000 gallons per day. The Virginia Department of Health regulates the water system as a Class V waterworks (permit #3810430) and it is categorized as a Community Water System according the SDWA criteria.

All water is supplying the water system is purchased from the City of Norfolk through two interconnections with the City of Virginia Beach, thus classifying the system as a consecutive system. One interconnection is located on Laskin Road near Interstate 264, and the second interconnection is located on London Bridge Road near the back gate. Water is fed into a 1,000,000-gallon ground level tank and re-pumped into the Oceana distribution system where pressure is maintained between 50 and 62 psi. There are two potable elevated towers, one ground level storage tank, and 42 miles of distribution piping that redistribute water on the base.

In summary, the water system at NASO consists of the following components:

- 2 water pump stations
- 1 potable ground level reservoir
- 3 potable elevated storage tanks
- 350 fire hydrants
- 850 valves
- 160 meters
- 42 miles of potable water line
    - 69% cast iron
    - 29% ductile iron
    - 2% PVC

The Dam Neck Annex water distribution system serves a population of approximately 3,000 customers. Average daily consumption at the installation is approximately 200,000 gallons per day. Water is provided for both domestic and fire protection uses. A separate fire protection system is located within the boundaries of the SPECWAR compound at the north end of the base.

The Virginia Department of Health regulates the water system as a Class V waterworks (permit # 3810195) and it is categorized as a Community Water System according the SDWA criteria. All water supplying the water system is purchased from the City of Norfolk through three metered connections with the City of Virginia Beach, thus classifying the system as a consecutive system. A wheeling fee is paid to the City of Virginia Beach to deliver water from the City of Norfolk to Dam Neck.

In summary, the water system consists of the following components:

- 3 water pump stations
- 1 potable elevated storage tank
- 129 fire hydrants
- 400 valves
- 10 miles of potable water line
  - 65% cast iron
  - 6% ductile iron
  - 5% asbestos cement
  - 24% PVC

The NALF Fentress potable water system serves a population of approximately 40 customers. Daily consumption at the installation averages around 3,500 gallons per day. Water is provided only for domestic uses. A separate non-potable system is maintained for fire protection. There are two shallow groundwater supply wells and a water treatment plant serving the installation. The treatment plant employs conventional treatment for iron and manganese removal, softening, disinfection, and corrosion control. The capacity for the plant is 10,800 gallons per day. The potable distribution system consists of around 1,000 feet of small diameter copper piping. The groundwater wells feed into a 5,000 gallon raw water storage tank. Treated potable water is stored in a 1,000 gallon hydro-pneumatic tank located at the water treatment plant.

The Virginia Department of Health regulates the water system (permit # 3550615) and it is categorized as a Non-Transient Non Community Water System according the SDWA criteria.

In summary, the water system consists of the following components:

- 1 water treatment plant
- 2 groundwater supply wells
- 1 raw water storage tank
- 1 potable hydro-pneumatic tank
- 3 valves
- Approximately 1,000 feet of small diameter copper piping

For a full list of permits, please refer to Appendix C of this document.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH: N/A

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

Required potable water routine monitoring/ certification programs:

- Bacteriological Monitoring (Total Coliform and E.Coli)
- Lead and Copper Monitoring
- Disinfectants, and Disinfection By Products Monitoring
- Lead In Priority Area Testing
- Asbestos Monitoring
- Backflow Prevention Testing and Certification
- Nitrate and Nitrite (Fentress Only)

C. NAVFAC MIDLANT UTILITIES TASKS (PRACTICE OWNER/OPERATOR):

- Ensuring that the budget for SDWA compliance is adequate.
- Overall operation and maintenance of water system
- Maintenance of appropriate operator licenses

D. PWD NASO ENVIRONMENTAL PROTECTION SPECIALIS TASKS: N/A

E. NAVFAC MIDLANT MEDIA MANAGER TASKS:

- Develop and update SDWA compliance sampling plans as necessary and submit these plans to the Virginia Department of Health for approval.
- Ensure that all compliance samples and operational records are reported on time and recorded appropriately.
- Ensure public notifications are distributed to consumers, as necessary.
- Produce and distribute Annual Water Quality Report (also known as Consumer Confidence Report)
- Ensure local, state, and Federal rules/regulations, U.S. Navy policy, executive orders, and instructions are followed.
- Coordinate sanitary survey inspections with VDH and address corrective actions in coordination with NAVFAC Utilities and NAVFAC Certification Management Division, as applicable Address and document water quality complaints in coordination with NAVFAC Utilities, NAVFAC Facilities, and Installation Preventive Medicine Officer
- Conduct internal audits annually and document findings, Plan of Action and Milestones, and corrective actions in EMSWeb .

F. NAVFAC MIDLANT CERTIFICATION MANAGEMENT DEPARTMENT TASKS:

- Find and eliminate existing cross-connections and prevent new cross-connections.

- When cross-connections cannot be eliminated, install, inspect, and test backflow preventers.
- Keep an inventory of all existing backflow preventers.
- Certify all backflow preventers as required by the regulatory agency. If there is no regulatory requirement, then all backflow preventers should be certified at least once every 6 months for high hazards and once every 12 months for low hazards by a certified inspector.
- Repair or replace defective backflow preventers. Retain cross connection and backflow preventer inspection and maintenance records for at least 5 years.

OTHER

NEPA

I. MEDIA OVERVIEW

The National Environmental Policy Act (NEPA) of 1970 requires that the Federal Government assess all proposed actions for potential impacts to the environment. It does not advocate environmental preservation at all costs, but simply to determine potential environmental impacts and to consider them alongside the technical and economic considerations that are inherent factors in Federal decision making.

At the Commander Navy Region Mid-Atlantic Hampton Roads area installations, the NEPA determination process begins with the submittal of an Environmental Checklist (EC) and multimedia review by installation media specific environmental experts. The EC helps to determine what level of NEPA needs to be completed prior to implementation of the proposed action. This EC is typically done very early in the planning process. A signed and completed EC determines whether the action will require NEPA documentation, can be performed under a Record of Categorical Exclusion (aka RCE or CATEX) or not, or if an Environmental Assessment (EA) needs to be completed, which will help determine if there is a Finding of No Significant Impact (FONSI) or if an Environmental Impact Statement (EIS) needs to be issued. The Navy has 45 agency-specific actions they have determined will normally have no significant individual or cumulative effect on the quality of the human environment. If a project is determined to fit into one of the actions that requires the preparation of an RCE document, the RCE is prepared by Facilities Planning Department staff and signed by the installation Commanding Officer, or an individual to whom such authority is delegated, prior to any work being performed. Currently, the CO can delegate signature authority for RCE documentation to the Public Works Officer (PWO), without further sub-delegation, per CNRMA CATEX guidance dated 27 August 2012. If an EA is required, any decisions that are made must have concurrence and signature by the Commander, Navy Region Mid-Atlantic.

II INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH:

The NEPA program will be reviewed annually to ensure that proper documentation is in place for proposed projects and/or activities. The purpose of these reviews is not to duplicate the efforts of others, but to confirm and support actions and recommendations resulting from these efforts. These reviews will be conducted for all projects or activities which may affect the environment.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS: N/A

C. PRACTICE OWNER TASKS:

- Practice Owners are responsible for the preparing the draft Record of Categorical Exclusion, securing the necessary signature to complete the RCE, and returning the signed RCE to the Facilities Planning Department within 21 days of RCE completion.
- For NEPA determinations to be valid, Practice Owners are responsible for incorporating environmental checklist comments into plans, specifications, and construction contracts so that they are complied with.

D. PWD NASO ENVIRONMENTAL PROTECTION SPECIALIST TASKS:

The EPS may request guidance from the Facilities Planning Department on project or activity NEPA compliance and may recommend the submission of environmental checklists.

E. NAVFAC MIDLANT MEDIA MANAGER TASKS:

- As requested, coordinate with the Facilities Planning Department (FPD) to provide guidance on the proper submission of NEPA environmental checklists.
- As received, coordinate each submitted environmental checklist with Media Manager/Subject Matter Experts to identify environmental issues/requirements/concerns and to determine the level of National Environmental Policy Act (NEPA) documentation required (Record of Categorical Exclusion (CATEX), Environmental Assessment (EA), or Environmental Impact Statement (EIS).
- Weekly, provide the FPD with updates on environmental checklist status indicating the need for external agency consultations that could impact project costs and scheduling.
- Once all comments have been received from Media Manager/Subject Matter Experts, ensure that completed environmental checklists are returned to the Facilities Planning Department (and/or other submitting personnel) in a timely manner (ideally, within three days).
- Annually, ensure that NEPA documentation contains the appropriate justification for Records of Categorical Exclusion (RCE or CATEX), Environmental Assessments (EA), or Environmental Impact Statements (EIS). In coordination with the FPD, ensure that completed NEPA environmental checklists and signed Records of Categorical Exclusion are contained in project files (uploaded into the EMSWeb as

part of the documentation and storage of the Administrative Record) and Environmental Assessments or Environmental Impact Statements are contained in project files (uploaded into the OPNAV N45 Environmental Planning Library). As requested, ensure that Facilities Planning Department personnel receive training on the NEPA process and in the proper preparation of NEPA documentation (ECs, RCEs, etc.).

- Ensure annually that all completed EA projects have been issued a Finding of No Significant Impact (FONSI) and that a Notice of Award (NOA) has been published in a local newspaper.
- Annually, ensure that all EIS projects have been issued a signed Record of Decision (ROD) and that a Notice of Availability (NOA) has been published in a local newspaper.
- Annually, conduct internal audits of the NEPA program.

NOISE

I. MEDIA OVERVIEW

The Environmental Department does not manage or participate in overseeing a Noise pollution program.

Installation Safety Office participates in overseeing a HEARING CONSERVATION & NOISE ABATEMENT program. BUMED centrally manages the hearing conservation program. Commanding Officers of shore activities are required to institute a hearing conservation program where a potential noise hazard has been identified by Industrial Hygiene (IH). This includes requirements such as providing medical evaluations IAW IH survey, labeling noise hazardous equipment/areas, and training. The governing instructions are OSHA 29CFR1910.95, OPNAVINST 5100.23G.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH:

Safety office's support includes respective evaluation, inspection (annual workplace inspections required by OSHA. More frequent in high hazard areas), Industrial Hygiene survey coordination (under BUMED performs noise measurements), education and training, and developing activity instructions if requested. The safety office receives a copy of the IH survey and utilizes for inspections and references.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

No environmental inspections or assessments are performed through the Environmental Department for this program.

C. PRACTICE OWNER TASKS:

OPNAVINST 5100.23G requires safety offices to maintain documentation of workplace inspections and training. The medical department maintains employees' health record with audiogram results. The medical department also retains all noise measurement data as well as audiometric records and information.

D. PWD NASO INSTALLATION TASKS: N/A

E. NAVFAC MIDLANT MEDIA MANAGER TASKS: N/A

CERCLA/ENVIRONMENTAL RESTORATION

I. MEDIA OVERVIEW

The primary governmental entities involved in the cleanup of past contamination on any DON installation are DON, U.S. EPA, and the respective state. DON is responsible for the execution of its ER Program; however it does so with guidance from the Office of the Secretary of Defense (OSD). The Department of the Navy Environmental Restoration (NERP) Manual (August 2006) defines and summarizes the organizational responsibilities of the participants involved in the successful implementation of the ER Program. Specifically related to the Internal Assessment Program, the NERP Chapter 2 defines the actions for components of DON in the execution of its ER Program. The actions of the Commander, Navy Installations Command (CNIC), includes those for the Area Environmental Coordinator/Regional Environmental Coordinator and those provided by the individual facilities under the roles prescribes for the Installation Commanding Officer/Commanding General. As the DON's real estate and construction agent, NAVFAC is responsible for the acquisition, construction, operation and maintenance, and when no longer needed, disposal of the Navy's shore infrastructure. As such, NAVFAC manages and executes the DON's ER Program by providing management of the ER program and its execution at the project levels, and provides environmental engineering technical support, contracting and legal support, and coordinates with other DON components regarding ER actions. The NERP Chapter 2 defines the specific ER program execution action for the elements of NAVFAC, specifically for NAVFAC (Headquarters), NAVFAC Commands (FACs), NAVFAC Facilities Engineering Commands (FECs) including the roles and responsibilities of the Remedial Project Manager, Contracting Officer (KO), Contract Specialist, Resident Officer In Charge of Construction (ROICC), Contracting Officer Representative (COR), and Contractor Support for the ER Program.

II INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH:

Inspections and assessments of these programs are managed solely by the remedial project managers with assistance of contractors.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

POL Remediation Program

- There are 9 sites located at PWD NASO that are managed under the POL Remediation Program. Operation and Management reporting regarding these sites is conducted via a Small Business contract. Monitoring wells at these sites are typically gauged and monitored monthly. Free Product Recovery Reports are submitted to VDEQ on a quarterly schedule for each site in the Program. A variety of free product recovery methods are used to move active sites to closure in conjunction with VDEQ requirements. These methods are as simple as free product recovery by hand bailing to a variety of complex mechanical systems.

C. PRACTICE OWNER TASKS: N/A

D. PWD NASO ENVIRONMENTAL PROTECTION SPECIALIST TASKS: N/A

E. NAVFAC MIDLANT MEDIA/PROGRAM MANAGER TASKS:

Tasks of the ER Program Manager:

- Oversee the contractors for management of active sites
- Conduct internal audit of the Environmental Restoration program annually.
- Ensure the timely execution of the ER program
- Develop and prepare scopes of work & Government estimates
- Evaluates contractors proposals and work
- Leads in pre-proposal meetings and/or negotiations
- Provides program information (schedules, correspondence, project descriptions, justification, status reports)
- Serves as the Contracting Officer's Representative
- Responsible for maintaining relationships with, and routinely meeting with Federal and State regulators and enforcement agencies to discuss environmental standards and actions
- Serves on Restoration Advisory Boards (RABs)
- Represents the Navy at Public meetings
- Supports NAVFAC ER program goals, execution and requirements
- Ensures NORM database is kept up to date and accurate (site data, cost to complete, risk ranking, project schedules thru 2040)

Tasks of the POL Restoration Program Manager:

- Oversee the contractors for management of active sites
- Conduct annual internal assessments
- Manage the groundwater remediation permits
- Submit Discharge Monitoring Reports (DMRs) where appropriate and other required submittals to state regulator

WASTE MUNITIONS

I. MEDIA OVERVIEW

The EPA and the Virginia Department of Environmental Quality (VDEQ) regulate the management and disposal of Waste Military Munitions (WMM) through the hazardous waste regulations. Naval Air Station Oceana and Dam Neck Annex do not typically generate WMM, however in the event that WMM are generated, it will be managed in a <90-day Hazardous Waste Accumulation Area (HWAA) or Satellite Accumulation Area (SAA) in accordance with the installation's Explosive Hazardous Waste Management Plan. At no time are WMM stored in a Naval Air Station Oceana or Dam Neck Annex Universal Waste Accumulation Area.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

Please refer to the Hazardous Waste Section of this Internal Assessment Plan for detailed Inspections/Oversight Evaluations on HWAA's and SAA's.

ENVIRONMENTAL MANAGEMENT SYSTEM

I. MEDIA OVERVIEW

CNRMA Hampton Roads Environmental Management System is implemented within the Hampton Roads Area for all installations, commands, tenants, and contractors. The EMS covers all regulated and other activities, products, and services with a focus on mission-supported activities that may impact the environment, covering media and program areas as defined in pertinent Federal, state, and local regulatory and DoD and U.S. Navy policy requirements.

It is the goal of management, as outlined in the Environmental Policy, that protection of the environment be enhanced by minimizing environmental impacts associated with mission-supporting activities in a sustainable, cost-effective and technically feasible manner. The Environmental Policy commits to:

- Continual improvement of environmental performance;
- Compliance with all applicable environmental legislative, regulatory, policy and other requirements;
- Ensuring implementation of pollution prevention measures and waste minimization programs; and
- Setting, reviewing, and achieving environmental objectives and targets through Plan-of-Action and Milestones, (POAMs) to reduce risk to the environment and mission.

The overall intent of the environmental policy for the Installation Commander is summarized and communicated to personnel at their installation with the acronym "CARE":

- **C - C**omply with all the rules
- **A - A**lways improve
- **R - R**educe waste
- **E - E**liminate pollution

The NASO Commanding Officer has established an EMS Policy Statement endorsed through signature which indicates his commitment to the program. The Policy will be reviewed and assessed within 3 months of a new Installation Commanding Officer taking command.

P2 is incorporated into EMS objectives, targets, and POA&Ms. Environmental Practice Inventories (EPIs) are conducted in order to document current work practices and communicate with other media managers as needed to document potential pollution opportunities.

An internal evaluation of both conformance and compliance is performed at each Navy EMS Appropriate Facility within the Hampton Roads area of CNRMA at least annually. Internal audits are critical to the effectiveness of an EMS and to the continual improvement cycle. Failure to properly conduct a comprehensive internal evaluation of conformance/compliance, document the findings, and use the findings for each facility's management review can result in a breakdown of the EMS and an inability to re-declare EMS conformance. Through document and records review, interviews with Installation personnel, and on-site observations, the Internal EMS/Compliance Audits should determine:

- If the CNRMA-HR Regional EMS, as documented in these EMPs and the EMS Description Document, conforms with Navy and CNRMA-EMS criteria;
- If the CNRMA-HR Regional EMS is implemented and maintained in accordance with these EMPs and the EMS Description Document;
- If the compliance posture of each Installation within the Hampton Roads area of CNRMA is in accordance with all applicable Federal, state and local laws and regulations, as well as Navy policy.

II INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH: Tier III Internal Compliance Audits are conducted during the first three quarters of the fiscal year. The annual Tier III Internal Conformance Audit is typically conducted during the 4th quarter of the fiscal year. The annual Tier III Internal Conformance Audit typically consists of site visits and interviews with personnel at both the Installation and the Environmental CORE. The execution of the Tier III Internal Conformance Audit is held until the 4th quarter so that a root cause analysis can be performed on the Tier II and III compliance findings to show where issues within the management system exist.

EPIs have been established at several locations throughout the NAS Oceana area of responsibility that conduct industrial activities. The goal is to update these inventories on an annual basis. Typically, a summer student workforce is used to accomplish this with the assistance of MM and EPSs.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

Planning and conducting the Internal EMS and Compliance Audits proceed as defined in *CNRMA-HR EMS EMP 13 Monitoring and Measurement and Evaluation of Compliance* and *CNRMA-HR Regional EMS EMP-16, Internal Audits.*

A tracking list of the EPIs is maintained on the EVBL shared drive by the Environmental Compliance section and indicates the completion status.

C. PRACTICE OWNER (HAMPTON ROADS EMS COORDINATOR) TASKS:

Compile recommended changes to the Policy Statement and present to the Regional & Installation Command Staff and Environmental Installation Program Director annually or more frequently as required. Disseminate outreach material regarding the environmental policy statement and related awareness materials through various channels to all CNRMA personnel; including Installation Departments, Tenants, and Contractors.

- Document internal conformance audit and corresponding findings in EMSWeb.
- Maintain all records associated with the Internal Audit.
- Coordinate with EQMB for review, comment, and approval of the Audit Report.
- Coordinate with the responsible parties to develop POA&Ms to address non-conformances identified in the Audit Report, in accordance with procedures established in the *CNRMA-HR Region EMS EMP-14, Non-Compliance, Non-Conformance and Corrective and Preventive Action.*
- Maintain all EMS audit documentation for consideration and inclusion in the annual Management Review.

D. PWD NASO INSTALLATION TASKS:

EIPD Tasks:

- Provide briefing on Policy Statement, including roles and responsibilities within the CNRMA EMS, to new Installation Commander and have new statement signed.
- Document briefing with new Installation Commander and forward to the HR EMS Coordinator.
- Annually review the Environmental Policy with the Installation Commander and make changes as necessary.
- Provide copy of the Policy Statement and any other pertinent EMS documents to the Installation Commanders.
- Review the Internal EMS Audit Report and POA&M.
- Take action, as appropriate, to address identified non-conformities/non-compliance findings.

EPS Tasks:

- Support the Environmental Installation Program Director in disseminating outreach material regarding the environmental policy statement and related awareness materials to all CNRMA personnel; including Installation Departments, Tenants, and Contractors.
- Recommend to the HR EMS Coordinator changes to the Policy and ensure it remains suitable to the CNRMA mission and the EMS goals.
- Support the audit team in providing necessary documentation to effectively perform internal audit.
- Assist in conducting annual updates of the EPIs.

E. NAVFAC MIDLANT MEDIA MANAGER (MM) TASKS:

- Support the HR EMS Coordinator in disseminating outreach material regarding the environmental policy statement and related awareness materials to all base personnel; including Installation Departments, Tenants, and Contractors.
- Recommend to the HR EMS Coordinator changes to the Policy to ensure it remains suitable to the CNRMA mission and EMS goals. Support the HR EMS Coordinator in collecting compliance data and documenting audit findings in EMSWeb, in accordance with procedures established in the *CNRMA-HR Region EMS EMP-14, Non-Compliance, Non-Conformance and Corrective and Preventive Action.*
- Coordinate with all other Media Managers and installation personnel to assess compliance issues, P2 opportunities, and progress toward any required reduction goals.
- Establish new EPIs when deemed necessary.
- Review EPI Reports to determine if intervention or support is needed.
- Conduct EPIs as requested or as follow-up or assistance to the installation.
- Conduct internal audits of the media programs annually through EMSWeb.

EMERCENCY PLANNING AND COMMUNITY RIGHT TO KNOW ACT

I. MEDIA OVERVIEW

The Navy is required to report Emergency Planning and Community Right to Know Act (EPCRA) information under Executive Order 12856 and Federal Requirements with Right-to-Know Laws. EPCRA guiding documents include Executive Orders 13693, 40 CFR 355 through 372, and DoD guidance document, "**Consolidated EPCRA Policy for DOD Installations, Munitions, Activities, and Operational Ranges.**" The EPCRA program is intended to encourage and support emergency planning at the state and local levels and provide information about potential chemical hazards to the public. The required annual reports for EPCRA include EPCRA section 311, 312, and 313 reports. Additionally, letters to the Local Emergency Planning Committee (LEPC) should be reviewed to ensure they are current.

II INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH:

EPCRA uses a building block approach where each report builds on information submitted with the previous report. The level of detail and amount of information submitted increases with each report. EPCRA section 312 (commonly called Tier II reports) reporting is essentially an inventory and annual report of quantities of hazardous materials and extremely hazardous substances stored that exceed pre-determined thresholds. EPCRA Section 313 reports (commonly called Toxic Release Inventory (TRI report) document the releases of toxic materials into the environment over pre-determined thresholds. As such, only annual internal assessments are required.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

NAVFACMIDLANT EPCRA MM will conduct oversight and program modifications as required. Locations to be assessed include anywhere that Hazardous Material is used and/or stored.

C. PRACTICE OWNER/OPERATOR TASKS: N/A

D. PWD NASO ENVIRONMENTAL PROTECTION SPECIALIST TASKS:

- Assist the EPCRA Program MM by collecting data to support EPCRA Tier II reporting with the Environmental Practice Inventories
- Assist in updating Environmental Practice Inventories

E. NAVFAC MIDLANT MEDIA MANAGER TASKS:

- Prepare threshold determinations for EPCRA Sections 312 and 313
- Compiling EPCRA section 312 Tier II reports (if required) and issue reports to State Emergency Response Council (SERC) and to applicable Local Emergency Planning Committees (LEPCs).
- Compiling EPCRA section 313 TRI reports (if required) and issuing to the Environmental Protection Agency (EPA).
- Make recommendations to identify and implement potential P2 opportunities that will reduce the TRI reporting requirements.
- Conduct internal audits, document findings, Plan of Action and Milestones, and corrective actions in EMSWeb annually.

TOXICS (ASBESTOS, PCB, LEAD-BASED PAINT, RADON)

I. MEDIA OVERVIEW

Toxics regulations cover a range of environmental issues, including asbestos, PCBs, Radon, and Lead-Based Paint.

Asbestos

Asbestos is regulated under the EPA Clean Air Act, OSHA safety regulations, and Virginia Solid Waste regulations. The key environmental regulatory requirements for asbestos are:

- Surveys of facilities for asbestos prior to demolition
- Regulatory notifications prior to facility demolition or asbestos abatement
- Utilization of proper work practices during demolition/renovation to minimize asbestos release to the air
- Proper disposal of asbestos containing materials

Compliance with Federal and State asbestos regulations relies on the contracting office responsible for the project. The EPS is not generally involved in these projects. The Asbestos Program Manager (APM) located in the Region Public Works Department or a designated installation APM provides guidance to the contracting offices and handles compliance issues as needed. Facility personnel seeking to conduct renovations, demolitions, or disturbance of questionable asbestos materials must contact the APM and NAS Oceana Safety Office at 433-2211 to request asbestos removal or pick-up. A MAXIMO request should be initiated that includes sampling of unknown material.

PCBs

PCBs are regulated under TSCA, Toxic Substances Control Act; 40 CFR Part 761. The key requirements are:

- Determining appropriate cleanup levels (for example, the type of PCB waste or the intended use of the brownfields site).
- Verifying that the cleanup standard has been met and for establishing deed restrictions (where necessary).
- Determining the options available for disposing of PCB wastes.
- Investigating covering/capping PCB-contaminated areas, waste storage, waste container marking, manifesting and recordkeeping requirements.

Lead-Based Paint

Lead Based Paint is regulated under EPA via 40 CFR Part 745. The key requirements are:

- Firms performing renovation, repair, and painting projects that disturb lead-based paint in pre-1978 homes, child care facilities and schools must be certified by EPA
- Firms that they use certified renovators must use renovators who are trained by EPA-approved training providers to follow lead-safe work practices.
- Contractors must use lead-safe work practices and follow three simple procedures, contain the work area, minimize dust and clean up thoroughly.

Radon

Radon is regulated under 40 CFR Parts 141 and 142 of the SDWA (Safe Drinking Water Act), OSHA 29 Part 1910.1096 (worker exposure), and EPA Guidance for Indoor Air Quality. The key requirements are:

- The Safe Drinking Water Act directs the EPA to
  - propose and finalize a maximum contaminant level (MCL) for radon in drinking water. The proposed level is 300 picoCuries per Liter (pCi/L).
  - make available an alternative approach: a higher alternative maximum contaminant level (AMCL – 4000 pCi/L) accompanied by a multimedia mitigation (MMM) program to address radon risks in indoor air.
- Radon is of most concern if the drinking water comes from an underground source.
- The residential indoor air recommended action level is 4 pCi/L. This screening level is also approved by the US Surgeon General. The source of Radon in indoor air is from soil under the house.
- The OSHA worker exposure limit is 100 pCi/L.

II. INSPECTIONS/OVERSIGHT EVALUATIONS

A. APPROACH:

All asbestos abatement and removal is performed by qualified contractor personnel or by NAVFAC MIDLANT Environmental Services Code OPHE13 Asbestos Insulators. The only involvement for other departments within NAVFAC MIDLANT is for incidental disposal not handled by contractor or NAVFAC MIDLANT personnel.

Facility personnel seeking to conduct renovations, demolitions, or disturbance of questionable asbestos materials must contact the Safety Office at 433-3307. A MAXIMO request should be initiated that includes sampling of unknown material. Work practices at all locations where it is either known or anticipated that asbestos may be encountered will be assessed to ensure that asbestos materials are not being improperly handled or disposed. Facilities under minor renovation, such as self-help projects, should also be assessed.

All transformers, capacitors and any other equipment containing PCBs have been removed from installations in the Hampton Roads area. There may be some light ballasts that contain PCBs but these will be removed on a case-by-case basis. As such, there is no need for a continuous inspection program at either installation.

Lead-based paint is addressed on an as identified basis to ensure proper management and disposal of waste. Worker safety is addressed by Industrial Hygiene. Lead-based paint issues as they relate to housing and child care facilities are the responsibility of facilities and the PPV managing partner.

Radon testing performed in the late 1980's did not indicate elevated levels of radon. Radon should be tested for during new building construction and building renovations

which may impact ventilation. Testing and mitigation is the responsibility of facilities and should be included in project scopes.

B. INVENTORY OF BUSINESS AND MANAGEMENT PRACTICES, ASSETS, AND LOCATIONS:

For Asbestos, buildings are assessed as renovations, demolition, and/or construction projects arise. CAA regulations also require asbestos surveys be completed and submitted to EPA/VDEQ prior to building demolition.

C. PRACTICE OWNER TASKS:

D. PWD NASO ENVIRONMENTAL PROTECTION SPECIALIST TASKS:

- Ensure that projects are properly conducted by contacting WAHE-50 above, if any renovation, demolition, or disturbances of suspect asbestos containing materials are observed during routine multi-media inspections, in accordance with CNRMA INST 11011.12A 08 May 2009.
- Environmental Protection Specialist should ensure that the Regional Safety Office has reviewed "work permit" for possible asbestos.

E. NAVFAC MIDLANT MEDIA MANAGER TASKS:

- Comply with applicable regulatory reporting requirements.
- Review this document annually and update as needed.

F. SITE-SPECIFIC COMPLIANCE CHECKLIST QUESTIONS FOR ASBESTOS MANAGEMENT WHEN REQUIRED

1. Does the installation have a listing of all "in-house" abatement personnel and current certificate of training?
2. Has a notification been submitted to the regulatory authority for the project being performed, or is it covered under the annual notification?
3. Are there signs in the area warning personnel that Asbestos hazards are present?
4. Has an enclosure or other means (glove bag) of segregation been utilized to contain any airborne asbestos? Is there a constant negative pressure on the enclosure while work is being performed?
5. Are asbestos workers removing asbestos contaminated clothing before leaving the work area?
6. Has all water in the area been collected for proper disposal?
7. Is all asbestos containing material (ACM) wetted with amended water before removal?
8. Is all ACM removed from the work area in double bags that have been "goose neck" tied?
9. Are the bags labeled with the contents and the facility address?
10. Does the supervisor of the asbestos workers keep a log identifying personnel performing the work and tasks that have been completed?

APPENDIX A

PWD NASO
INTERNAL INSPECTION CHECKLISTS

LIST OF EPS INTERNAL INSPECTION CHECKLISTS

Checklist Template Name	Installation	Media
EPS-DAMNECK-QTRLY-TANK	Dam Neck Annex	Above Ground Storage Tanks
EPS-DAMNECK-QUARTERLY AST OVERSIGHT	Dam Neck Annex	Above Ground Storage Tanks

APPENDIX D

LIST OF ACRONYMS

ACRONYM LIST

ACM – Asbestos Containing Material
APM – Asbestos Program Manager
AST – Aboveground Storage Tank
BMP – Best Management Practice
CBU - Construction Battalion Unit
CDC - Child Development Center
CEA – Classification Exception Area
CERCLA – Comprehensive Environmental Response, Compensation, and Liability Act
CHRIMP - Consolidated Hazardous Material Reutilization and Inventory Management Program
CNRMA - Commander Navy Region Mid-Atlantic
CNIC - Commander Naval Installations Command
CO - Commanding Officer
CWS - Community Water System
DMM – Discarded Military Munitions
DRMO - Defense Reutilization and Marketing Office
NAVFAC MIDLANT – Naval Facilities Engineering Command Mid-Atlantic
ECE – Environmental Compliance Evaluation
EMS - Environmental Management System
EPA - Environmental Protection Agency
EPS – Environmental Protection Specialist
EPCRA – Environmental Protection and Community Right-to-Know Act
EQA – Environmental Quality Assessment
FEAD – Facilities Engineering Acquisition Division (Public Works Division)
FSC - Facilities Support Contracts
FRP – Facility Response Plan
HM – Hazardous Materials
HW - Hazardous Waste
IAD – Internal Assessment Documentation
IAP – Internal Assessment Plan
ICP – Integrated Contingency Plan
ICRMP – Integrated Cultural Resources Management Plan
INRMP - Integrated Natural Resources Management Plan
IH - Industrial Hygiene
IR – Installation Restoration
LBP - Lead Based Paint
LEPC – Local Emergency Planning Commission
LEPS – Lead Environmental Protection Specialist
MM – Media Manager
MSDS - Material Safety Data Sheet
MEC – Munitions and Explosives of Concern
MWR - Morale, Welfare, and Recreation
NEPA – National Environmental Policy Act
NESHAP – National Emission Standards for Hazardous Air Pollutants
OBDA - Over Bank Disposal Area

ACRONYM LIST

ODS - Ozone Depleting Substance
OU – Operable Unit
P2ADS - Pollution Prevention Annual Data Summaries
POC - Point of Contact
PPV - Public/Private Venture
PWD - Public Works Department
QAE - Quality Assurance Evaluator
QRP - Qualified Recycling Program
RCRA – Resource Conservation & Recovery Act
ROD – Record of Decision
SAA – Satellite Accumulation Area
SASDA - Spent Acid Storage and Disposal Area
SERC – State Emergency Response Commission
SPCC – Spill Prevention, Control, and Countermeasure
SWMP - Solid Waste Management Plan
SWPPP – Storm Water Pollution Prevention Plan
TSCA - Toxic Substances Control Act
TSDF – Treatment, Storage, and Disposal Facility
UST – Underground Storage Tank
UWAA – Universal Waste Accumulation Area
VDCR – Virginia Department of Conservation and Recreation
VDEQ – Virginia Department of Environmental Quality
VPDES – Virginia Pollutant Discharge Elimination System
XO – Executive Officer

Appendix G

Flora and Fauna Lists

Enclosure 1 **Flora of NASO and NALFF**
Enclosure 2 **Fauna of NASO and NALFF**
Enclosure 3 **Potential Essential Fish Habitat (EFH) Species for NASO**
Enclosure 4 **Species of Greatest Conservation Need for the Mid-Atlantic Coastal Plain**
Enclosure 5 **Virginia Natural Heritage Resources List of Rare Plants**
Enclosure 6 **Virginia Natural Heritage List of Rare Animals**

Enclosure 1. Flora of NASO and NALFF

Flora of NASO and NALFF												
Scientific Name	**Common Name**	**Origin[1]**	**Forests**	**Early Successional**	**Freshwater Wetlands**	**Developed Areas**	**Status**	**Rank[2]**	**Date of Last Observation**	**Installation**		
										NASO	**NALFF**	**BOTH**
Trees												
Acer negundo	Box elder	N	X		X	X						
Acer rubrum	Red maple	N	X		X	X			2012-2013			X
Acer saccharinum	Silver maple	N				X						
Ailanthus altissima	Tree-of-heaven	I	X	X		X			2012-2013			X
Albizia julibrissin	Silk tree	I	X		X	X						
Amelanchier canadensis	Canadian serviceberry	N			X	X						
Asimina triloba	Pawpaw	N	X		X	X						
Betula nigra	River birch	N	X		X							
Broussonetia papyrifera	Paper mulberry	I	X			X						
Carpinus caroliniana	American hornbeam	N	X			X						
Carya aquatica	Water hickory	N	X		X							
Carya cordiformis	Bitternut hickory	N	X									
Castanea mollissima	Chinese chestnut	I	X			X						
Celtis laevigata	Sugarberry	N	X			X						
Celtis occidentalis	Common hackberry	N	X		X							
Chamaecyparis thyoides	Atlantic white cedar	N	X									
Chionanthus virginicus	Fringetree	N	X									
Cornus florida	Flowering dogwood	N	X									
Diospyros virginiana	Persimmon	N	X	X					2012-2013		X	
Fagus grandifolia	American beach	N	X			X			2012-2013		X	

Flora of NASO and NALFF												
Scientific Name	**Common Name**	**Origin[1]**	**Forests**	**Early Successional**	**Freshwater Wetlands**	**Developed Areas**	**Status**	**Rank[2]**	**Date of Last Observation**	**Installation**		
										NASO	**NALFF**	**BOTH**
Fraxinus pennsylvanica	Green ash	N	X			X						
Ilex cassine	Dahoon	N	X		X							
Ilex opaca	American holly	N	X		X	X						
Juglans nigra	Black walnut	N	X									
Juniperus virginiana	Eastern red cedar	N	X	X		X						
Kalmia latifolia	Mountain laurel	N							2012-2013			X
Liriodendron tulipifera	Tuliptree	N							2012-2013			X
Liquidambar styraciflua	Sweet gum	N	X		X	X			2012-2013			X
Liriodendron tulipifera	Yellow poplar	N	X			X						
Magnolia virginiana	Sweet bay	N	X		X							
Morus alba	White mulberry	I							2012-2013			X
Nyssa aquatica	Water tupelo	N	X		X							
Nyssa sylvatica	Black gum	N	X		X	X						
Ostrya virginiana	Hophornbeam	N	X		X							
Oxydendrum arboreum	Sourwood	N	X									
Paulownia tomentosa	Princess tree	I	X			X			2012-2013			X
Persea borbonia	Red bay	N	X		X							
Phyllostachus aurea	Golden bamboo	I							2012-2013			X
Pinus echinata	Shortleaf pine	N	X			X						
Pinus palustris	Longleaf pine	N	X					G5, S1	2012-2013	X		
Pinus taeda	Loblolly pine	N	X		X	X			2012-2013	X		
Pinus virginiana	Virginia pine	N	X									
Platanus occidentalis	American sycamore	N	X			X						

Flora of NASO and NALFF												
Scientific Name	**Common Name**	**Origin[1]**	**Forests**	**Early Successional**	**Freshwater Wetlands**	**Developed Areas**	**Status**	**Rank[2]**	**Date of Last Observation**	**Installation**		
										NASO	**NALFF**	**BOTH**
Populus alba	White poplar	I										
Populus deltoides	Eastern cottonwood	N	X			X						
Prunus serotina	Black cherry	N	X			X			2012-2013			X
Pyrus calleryana	Callery pear	I							2012-2013	X		
Quercus alba	White oak	N	X		X	X			2012-2013			X
Quercus falcata	Southern red oak	N	X			X						
Quercus laurifolia	Laurel oak	N	X			X						
Quercus lyrata	Overcup oak	N	X									
Quercus michauxii	Swamp chestnut oak	N	X		X				2012-2013	X		
Quercus nigra	Water oak	N	X		X	X						
Quercus pagodifolia	Cherrybark oak	N	X		X							
Quercus phellos	Willow oak	N	X		X	X						
Quercus rubra	Northern red oak	N	X			X			2012-2013			X
Quercus stellata	Post oak	N	X									
Quercus velutina	Black oak	N	X									
Quercus virginiana	Live oak	N	X			X						
Salix nigra	Black willow	N	X		X	X						
Taxodium distichum	Bald cypress	N	X		X	X			2012-2013	X		
Ulmus alata	Winged elm	N	X		X							
Ulmus americana	American elm	N	X		X							
Ulmus pumila	Siberian elm	I				X						
Ulmus rubra	Slippery elm	N	X									
Shrubs and Woody Vines												
Ampelopsis brevipedunculata	Porcelain berry	I							2012-2013			X
Baccharis halimifolia	Eastern baccharis	N	X		X							

Flora of NASO and NALFF												
Scientific Name	**Common Name**	**Origin[1]**	**Forests**	**Early Successional**	**Freshwater Wetlands**	**Developed Areas**	**Status**	**Rank[2]**	**Date of Last Observation**	**Installation**		
										NASO	**NALFF**	**BOTH**
Berchemia scandens	Alabama supplejack	N	X		X							
Callicarpa americana	American beautyberry	N	X									
Campsis radicans	Trumpet creeper	N	X		X	X						
Cephalanthus occidentalis	Common buttonbush	N							2012-2013	X		
Clethra alnifolia	Coastal sweet pepper-bush	N			X							
Elaeagnus pungens	Thorny elaeagnus	I							2012-2013			X
Elaeagnus umbellate	Autumn olive	I							2012-2013	X		
Eubotrys racemosa	Swamp doghobble	N	X		X							
Euonymus americanus	Bursting-heart	N	X		X	X						
Gelsemium sempervirens	Evening trumpetflower	N	X		X	X						
Hedera helix	English ivy	I							2012-2013			X
Humulus japonicas	Japanese hops	I							2012-2013	X		
Ilex glabra	Inkberry	N	X		X							
Ilex verticillata	Common winterberry	N	X		X							
Ligustrum japonica	Japanese privet	I							2012-2013	X		
Ligustrum obtusifolium	Border privet	I							2012-2013	X		
Ligsustrum sinense	Chinese privet	I							2012-2013			X
Ligustrum vulgare	European privet	I	X		X	X						
Lonicera japonica	Japanese honeysuckle	I	X			X			2012-2013			X
Lonicera sempervirens	Trumpet honeysuckle	N	X			X						
Lyonia ligustrina	Maleberry	N	X		X							

Flora of NASO and NALFF

										NASO	**NALFF**	**BOTH**
Arctium minus	Lesser burdock	I	X			X						
Arundinaria gigantea	Giant cane	N	X	X	X				2012-2013			X
Asclepias syriaca	Common milkweed	N			X							
Asplenium platyneuron	Ebony spleenwort	N	X									
Athyrium filix-femina spp. *asplenioides*	Asplenium lady fern	N										
Barbarea vulgaris	Garden yellow rocket	I		X	X							
Boehmeria cylindrica	Smallspike false nettle	N	X		X							
Brassica nigra	Black mustard	I		X								
Bromus sp.	Brome	N/I							2012-2013	X		
Capsella bursa-pastoris	Sheperd's purse	I		X		X						
Cardamine hirsuta	Hairy bitter cress	I				X						
Carex complanata	Hirsute sedge	N		X								
Carex lurida	Shallow sedge	N			X							
Carex sp.	Sedge	N							2012-2013	X		
Cenchrus spinifex	Coastal sandbur	N		X		X						
Centaurea cyanus	Garden cornflower	I		X		X						
Cerastium vulgatum	Mouse-ear chickweed	I		X		X						
Chamaecrista fasciculata	Partridgepea	N		X		X						
Chamaesyce maculata	Spotted sandmat	N	X									
Chenopodium album	Lambsquarters	N/I		X		X						
Cicuta maculata	Spotted water hemlock	N			X							

Flora of NASO and NALFF

										NASO	**NALFF**	**BOTH**
Diodia teres	Poor Joe	N		X		X						
Diodia virginiana	Virginia buttonweed	N			X	X			2012-2013	X		
Drosera intermedia	Spoonleaf sundew	N							2001	X		
Dryopteris celsa	Log fern	N			X							
Dryopteris intermedia	Intermediate wood fern	N	X									
Duchesnea indica	Indian strawberry	I				X						
Echinochloa crus-galli	Barnyard grass	I		X		X						
Echinochloa walteri	Coast cockspur grass	N			X							
Eleocharis baldwinii	Baldwin's spikerush	N						G4G5, S2	2012-2013	X		
Eleocharis microcarpa	Small-fruit spikerush	N			X				2012-2013	X		
Eleocharis vivipara	Viviparous spikerush	N						G5, S1	2012-2013	X		
Eleusine indica	Indian goosegrass	I		X		X						
Elymus repens	Quackgrass	I		X		X						
Epifagus virginiana	Beech-drops	N	X			X						
Erigeron annuus	Eastern daisy fleabane	N	X			X						
Erigeron strigosus	Prairie fleabane	N	X		X							
Eryngium yuccifolium	Button eryngo	N		X		X						
Eupatoriadelphus maculatus	Spotted joe-pye weed	N			X							
Eupatorium album	White thoroughwort	N		X								
Eupatorium capillifolium	Dogfennel	N		X					2012-2013	X		
Eupatorium hyssopifolium	Hyssopleaf thoroughwort	N		X		X						

Flora of NASO and NALFF												
Scientific Name	**Common Name**	**Origin[1]**	**Forests**	**Early Successional**	**Freshwater Wetlands**	**Developed Areas**	**Status**	**Rank[2]**	**Date of Last Observation**	**Installation**		
										NASO	**NALFF**	**BOTH**
Eupatorium rotundifolium	Roundleaf thoroughwort	N		X								
Euphorbia corollata	Flowering spurge	N	X									
Geranium carolinianum	Carolina geranium	N		X		X						
Glechoma hederacea	Ground ivy	I	X	X		X			2012-2013			X
Goodyera pubescens	Downy rattlesnake plantain	N	X									
Helenium amarum	Sneezeweed	N	X	X	X							
Helianthus angustifolius	Swamp sunflower	N			X							
Heterantherea multiflora	Mud plaintain	N						G4, S1	2012-2013	X		
Hibiscus moscheutos	Crimsoneyed rose mallow	N			X							
Hydrocotyle umbellata	Manyflower marshpennywort	N			X							
Hypericum hypericoides	St. Andrew's cross	N	X			X						
Hypericum mutilum	Dwarf St. Johnswort	N			X	X						
Ilex vomitoria	Yaupon	N							2001	X		
Impatiens capensis	Jewel-weed	N			X							
Ipomoea hederacea	Ivy-leaf morning glory	I		X		X						
Ipomoea purpurea	Common morning glory	I		X		X						
Juncus biflorus	Bog rush	N			X							
Juncus diffusissimus	Slimpod rush	N							2012-2013	X		
Juncus effusus	Common rush	N			X				2012-2013	X		
Juncus repens	Lesser creeping rush	N			X							
Juncus scirpoides	Needlepod rush	N			X							

Flora of NASO and NALFF												
Scientific Name	**Common Name**	**Origin[1]**	**Forests**	**Early Successional**	**Freshwater Wetlands**	**Developed Areas**	**Status**	**Rank[2]**	**Date of Last Observation**	**Installation**

Juncus tenuis	Poverty rush	N			X							
Kummerowia striata	Japanese clover	I		X		X						
Lactuca serriola	Prickly lettuce	I		X		X						
Lamium amplexicaule	Henbit deadnettle	I		X		X						
Lechea maritima var. *maritima*	Beach pinweed	N							2001	X		
Lepidium virginicum	Poor-man's peppergrass	I		X		X						
Lespedeza bicolor	Shrubby bushclover	I							2012-2013	X		
Lespedeza cuneata	Chinese lespedeza	I							2012-2013			X
Liatris acidota	Sharp blazing star	N			X							
Liriope spicata	Creeping liriope	I							2012-2013	X		
Listera australis	Southern twayblade	N	X						1989	X		
Lobelia cardinalis	Cardinal flower	N			X							
Ludwigia alternifolia	Seedbox	N	X		X	X						
Ludwigia brevipes	Long beach seedbox							G2G3, S2	2012-2013	X		
Ludwigia palustri	Marsh seedbox	N			X							
Medicago lupulina	Black medic	I	X	X	X	X						
Microstegium vimineum	Japanases stilt grass	I							2012-2013			X
Mimosa sp.	Sensitive plant	N/I							2012-2013			X
Miscanthus sinensis	Chinese silvergrass	I							2012-2013	X		
Mitchella repens	Partridge berry	N										
Mollugo verticillata	Green carpet-weed	N	X	X		X						
Muhlenbergia expansa	Cut-over muhly	N			X							
Muhlenbergia schreberi	Nimble-will	N	X	X	X							

Flora of NASO and NALFF												
Scientific Name	**Common Name**	**Origin[1]**	**Forests**	**Early Successional**	**Freshwater Wetlands**	**Developed Areas**	**Status**	**Rank[2]**	**Date of Last Observation**	**Installation**		
										NASO	**NALFF**	**BOTH**
Murdannia keisak	Asian spiderwort	I							2012-2013	X		
Onoclea sensibilis	Sensitive fern	N	X		X							
Osmunda cinnamomea	Cinnamon fern	N	X		X							
Osmunda regalis	Royal fern	N	X		X							
Oxalis stricta	Common yellow oxalis	N	X	X		X						
Panicum anceps	Beaked panic grass	N	X		X							
Panicum dichotomiflorum	Fall panic grass	N	X	X	X	X						
Panicum virgatum	Switchgrass	N	X	X	X							
Paspalum dilatatum	Dallisgrass	I			X							
Paspalum floridanum	Florida paspalum	N			X							
Phoradendron leucarpum	Oak mistletoe	N	X									
Phragmites australis	Common reed	I							2012-2013			X
Phytolacca americana	American pokeweed	N		X		X						
Pityopsis graminifolia	Narrowleaf silkgrass	N				X						
Plantago aristata	Largebracted plantain	N		X		X						
Plantago lanceolata	Narrowleaf plantain	I		X		X						
Plantago major	Common plantain	I			X							
Plantago spp.	Plantains	N/I							2012-2013	X		
Poa annua	Annual bluegrass	I		X		X						
Polygonum convolvulus	Black bindweed	I		X		X						
Polygonum erectum	Erect knotweed	N		X		X						

Flora of NASO and NALFF												
Scientific Name	**Common Name**	**Origin[1]**	**Forests**	**Early Successional**	**Freshwater Wetlands**	**Developed Areas**	**Status**	**Rank[2]**	**Date of Last Observation**	**Installation**		
										NASO	**NALFF**	**BOTH**
Polygonum hydropiperoides	Swamp smartweed	N			X	X						
Polygonum pensylvanicum	Pennsylvania smartweed	N			X	X						
Polygonum persicaria	Spotted lady's thumb	I			X							
Polygonum sp.	Knotweed	N/I							2012-2013	X		
Portulaca oleracea	Little hogweed	I		X		X						
Proserpinaca palustris	Marsh mermaid-weed	N			X				2012-2013	X		
Prunella vulgaris	Common selfheal	N	X	X		X						
Pteridium aquilinum	Western bracken fern	N	X	X	X							
Rhexia mariana	Maryland meadow-beauty	N			X							
Rhynchosia difformis	Doubleform snoutbean	N		X		X						
Rhynchospora globularis	Globe beaksedge	N			X							
Rudbeckia hirta	Black-eyed Susan	N		X		X						
Rumex crispus	Curly dock	I		X		X						
Rumex obtusifolius	Bitter dock	I		X	X							
Rumex sp.	Dock	I							2012-2013	X		
Saccharum giganteum	Sugarcane plumegrass	N							2012-2013	X		
Saururus cernuus	Lizard's tail	N			X							
Schedonorus arundinaceus	Tall fescue	I	X	X		X			2012-2013	X		
Scirpus cyperinus	Wool grass	N			X							
Schizachyrium scoparium	Little bluestem	N							2012-2013	X		
Scutellaria integrifolia	Helmet flower	N			X							

Flora of NASO and NALFF												
Scientific Name	**Common Name**	**Origin[1]**	**Forests**	**Early Successional**	**Freshwater Wetlands**	**Developed Areas**	**Status**	**Rank[2]**	**Date of Last Observation**	**Installation**		
										NASO	**NALFF**	**BOTH**
Setaria pumila	Yellow foxtail	I		X		X			2012-2013	X		
Setaria viridis	Green bristle grass	I		X		X			2012-2013	X		
Sida spinosa	Prickly fanpetals	N		X								
Sinapis arvensis var. *arvensis*	Wild mustard	I				X						
Sisyrinchium angustifolium	Narrow blue-eyed grass	N		X		X						
Solanum carolinense	Carolina horse nettle	N		X		X						
Solidago spp.	Goldenrod	N		X		X						
Sonchus arvensis	Field sow thistle	I		X		X						
Sorghastrum nutans	Indian grass	N		X								
Sorghum halepense	Johnson grass	I		X		X			2012-2013			X
Sporobolus junceus	Pineywoods dropseed	N	X									
Sporobolus poiretii	Smutgrass	N		X		X						
Stellaria media	Common chickweed	I		X		X						
Symphyotrichum spp.	Aster	N							2012-2013	X		
Taraxacum officinale	Common dandelion	N/I		X		X						
Thelypteris noveboracensis	New York fern	N	X									
Thelypteris palustris	Eastern marsh fern	N	X		X							
Thlaspi arvense	Field penny-cress	I		X		X						
Tipularia discolor	Crippled cranefly	N	X									
Triadenum virginicum	Virginia marsh St. Johnswort	N	X		X							
Trifolium repens	White clover	I		X		X						
Typha angustifolia	Narrow-leaf cattail	N/I			X							
Typha sp.	Cattail	N/I							2012-2013	X		

Flora of NASO and NALFF

Enclosure 2. Fauna of NASO and NALFF

Mammals Known to Occur at NASO and NALFF									
Species	**Common Name**	**Origin**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
							NASO	**NALFF**	**BOTH**
Order Marsupialia	**Marsupials**								
Didelphis virginiana	Virginia opossum					2012-2013		X	
Order Insectivora	**Insectivores**								
Blarina carolinensis	Southern short-tailed shrew					2012-2013			X
Cryptotis parva	Least shrew								
Scalopus aquaticus	Eastern mole								
Sorex longirostris longirostris	Southeastern shrew					2012-2013		X	
Order Chiroptera	**Bats**								
Corynorhinus rafinesquii macrotis	Rafinesque's big-eared bat			E	G3G4T?, S2	2012-2013		X	
Epesicus fuscus	Big brown bat					2012-2013			X
Lasionycteris noctivagans	Silver-haired bat				G5, SUB/S4N				
Lasiurus borealis	Eastern red bat					2012-2013		X	
Lasiurus cinereus	Hoary bat				G5, SUB/S3N	2002			
Myotis austroriparus	Southeastern myotis				G3G4, S2	2012-2013			X
Myotis lucifugus	Little brown myotis					2001	X		
Nyctieius humeralis	Evening bat					2012-2013		X	
Perimyotis subflavus	Tri-colored bat				G3, S3	2012-2013			X
Order Rodentia	**Rodents**								
Castor canadensis	North American beaver								X
Microtus pennsylvanicus	Meadow vole					2012-2013	X		
Microtus pinetorum	Pine vole								
Mus musculus	House mouse					2012-2013		X	

Mammals Known to Occur at NASO and NALFF									
Species	**Common Name**	**Origin**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
							NASO	**NALFF**	**BOTH**
Myocastor coypus	Nutria								
Ondatra zibethica	Common muskrat								
Oryzomis palustris	Marsh rice rat								
Peromyscus leucopus	White-footed mouse					2001	X		
Rattus norvegicus	Norway rat								
Reithrodontomys humulis	Eastern harvest mouse					2012-2013	X		
Sciurus carolinensis	Eastern gray squirrel								
Sigmodon hispidus	Hispid cotton rat								
Synaptomys cooperi helaletes	Southern bog lemming				G5T3, S3	2013	X		
Order Lagomorpha	**Lagomorphs**								
Sylvilagus floridana	Eastern cottontail rabbit								
Order Carnivora	**Carnivores**								
Canis latrans	Coyote					2013			
Lontra canadensis	North American river otter								X
Lynx rufus	Bobcat								
Procyon lotor	Common raccoon								
Urocyon cinereoargenteus	Gray fox								
Ursus americanus	Black bear					2012-2013		X	
Vulpes vulpes	Red fox								
Order Artiodactyla	**Ungulates**								
Odocoileus virginianus	Whitetail deer					2012-2013			X

Mammals Known to Occur at NASO and NALFF									
Species	**Common Name**	**Origin**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
							NASO	**NALFF**	**BOTH**

[1] SE = State Endangered

[2] G3 = Vulnerable, G4 = Apparently Secure, G5 = Secure, G_T_ = Signifies the rank of a subspecies (e.g., G5T1 would apply to subspecies if the species is demonstrably secure globally (G5) but the subspecies warrants a rank of T1, critically imperiled), T? = Rank of subspecies is uncertain, S1 = Critically Imperiled, S2 = Imperiled, S3 = Vulnerable, S4 = Apparently Secure, SU = Possibly rare, but status uncertain and more data needed, S_B/S_N = Breeding and nonbreeding status of an animal in Virginia, when they differ

Birds Known to Occur at NASO and NALFF										
Scientific Name	**Common Name**	**Origin**	**Occurrence**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
								NASO	**NALFF**	**BOTH**
Order Accipitriformes										
Accipiter cooperii	Cooper's hawk		Uncommon resident	Forest						
Accipiter striatus	Sharp-shinned hawk		Common resident	Forest						
Buteo jamaicensis	Red-tailed hawk		Common resident	Throughout		G5, S3B/S3N	2013			X
Buteo lineatus	Red-shouldered hawk		Common resident	Forest						
Buteo platypterus	Broad-winged hawk		Spring and summer resident	Forest						
Cathartes aura	Turkey vulture		Common resident	Throughout			2015			X
Circus cyaneus	Northern harrier		Common winter resident	Open field						
Coragyps atratus	Black vulture					G5, S1S2B/S3N	2015			X
Haliaeetus leucocephalus	Bald eagle				BCC	G5, S3S4B/S3S4N	2013			X
Order Anseriformes										
Aix sponsa	Wood duck		Resident							
Anas americana	American wigeon						2001	X		
Anas platyrhynchos	Mallard		Resident				2001	X		
Aythya collaris	Ring-necked duck						2001	X		
Branta bernicla	Brant		Winter resident	Pond, open field						
Branta canadensis	Canada goose		Resident	Pond, open field			2001	X		
Chen caerulescens	Snow goose									
Cygnus columbianus	Tundra swan									

Birds Known to Occur at NASO and NALFF										
Scientific Name	**Common Name**	**Origin**	**Occurrence**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
								NASO	**NALFF**	**BOTH**
Lophodytes cucullatus	Hooded merganser						2001	X		
Order Apodiformes										
Archilochus colubris	Ruby-throated hummingbird		Common summer resident	Forest						
Chaetura pelagica	Chimney swift		Spring and summer resident	Rural and urban areas						
Order Caprimulgiformes										
Antrostomus carolinensis	Chuck-will's-widow		Spring and summer resident	Forest	BCC	G5	2001	X		
Chordeiles minor	Common nighthawk									
Gallinago delicata	Wilson’s snipe									
Order Charadriiformes										
Actitis macularius	Spotted sandpiper					G5, S2B	2001			X
Bartramia longicauda	Upland sandpiper				BCC, ST	G5, S1B				
Calidris minutilla	Least sandpiper									
Charadrius vociferous	Killdeer		Common resident	Open land						
Chroicocephalus philadelphia	Bonaparte’s gull						2001	X		
Larus argentatus	Herring gull		Abundant resident	Wetland, throughout			2001	X		
Larus delawarensis	Ring-billed gull		Abundant summer resident	Wetland						
Leucophaeus atricilla	Laughing gull		Common resident	Seacoasts, bays, estuaries						
Pluvialis squatarola	Black-bellied plover									

Birds Known to Occur at NASO and NALFF										
Scientific Name	**Common Name**	**Origin**	**Occurrence**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
								NASO	**NALFF**	**BOTH**
Scolopax minor	American woodcock		Uncommon resident	Wetland forest						
Tringa melanoleuca	Greater yellowlegs		Spring and early summer resident	Lakes, ponds, marshes						
Order Ciconiiformes										
Ardea alba	Great egret		Summer resident	Marsh			2001			X
Ardea herodias	Great blue heron		Resident	Marsh, wetland		G5, S2S3B/S3N	2001	X		
Bubulcus ibis	Cattle egret		Uncommon summer resident	Open field		G5, S3B/S5N	2013			X
Butroides virescens	Green-backed heron		Summer resident	Marsh, wetland			2001	X		
Order Columbiformes										
Columba livia	Rock pigeon		Common non-native resident	Throughout						
Zenaida macroura	Mourning dove		Common resident	Throughout			2001			X
Order Coraciiformes										
Ceryle alcyon	Belted kingfisher		Common summer resident	Open edge, marsh, wetland						
Order Cuculiformes										
Coccyzus americanus	Yellow-billed cuckoo		Common summer resident	Forest			2001			X
Coccyzus erythropthalmus	Black-billed cuckoo		Spring and summer resident	Forest edge and open woodlands						
Order Falconiformes										
Falco sparverius	American kestrel		Common resident	Open field	BCC	G5	2013			X

Birds Known to Occur at NASO and NALFF										
Scientific Name	**Common Name**	**Origin**	**Occurrence**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
								NASO	**NALFF**	**BOTH**
Pandion haliaetus	Osprey		Common summer resident	Seacoasts, bays, estuaries						
Order Galliformes										
Colinus virginianus	Northern bobwhite		Abundant resident	Open field, young woods			2001			X
Meleagris gallopavo	Wild turkey									
Order Gruiformes										
Fulica americana	American coot		Spring and summer resident	Lakes, ponds, marshes		G5, S1B/S5N				
Order Passeriformes										
Agelaius phoeniceus	Red-winged blackbird		Common resident	Marsh			2001			X
Ammodramus savannarum	Grasshopper sparrow									
Bombycilla cedrorum	Cedar waxwing									
Cardinalis cardinalis	Northern cardinal		Common resident	Throughout			2001			X
Carduelis tristis	American goldfinch		Common resident	Old field						
Carpodacus mexicanus	House finch		Common resident	Throughout						
Catharus fuscescens	Veery									
Catharus minimus	Gray-cheeked thrush									
Catharus ustulatus	Swainson’s thrush					G5, S1B				

Birds Known to Occur at NASO and NALFF										
Scientific Name	**Common Name**	**Origin**	**Occurrence**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
								NASO	**NALFF**	**BOTH**
Contopus virens	Eastern wood-pewee									
Corvus brachyrhynchos	American crow		Abundant resident	Throughout			2001			X
Corvus ossifragus	Fish crow		Common resident	Marsh			2001	X		
Cyanocitta cristata	Blue jay		Abundant resident	Throughout			2001			X
Dumetella carolinensis	Gray catbird		Common resident	Throughout						
Empidonax virescens	Acadian flycatcher		Common summer resident	Forest, clearing			2001	X		
Eremophila alpestris	Horned lark									
Geothlypis trichas	Common yellowthroat		Common resident	Brush, open land			2001			X
Helmitheros vermivorum	Worm-eating warbler				BCC	G5				
Hirundo rustica	Barn swallow		Abundant summer resident	Barn, bridge, building			2001			X
Hylocichla mustelina	Wood thrush		Common resident	Forest			2001			X
Icteria virens	Yellow-breasted chat		Uncommon summer resident	Forest edge			2001	X		
Icteria spurius	Orchard oriole		Common spring and summer resident	Farms and open woodlands						
Junco hyemalis	Dark-eyed junco		Abundant winter resident	Throughout						
Melospiza melodia	Song sparrow		Common resident	Open field						
Mimus polyglottos	Northern mockingbird		Common resident	Throughout						

Birds Known to Occur at NASO and NALFF										
Scientific Name	**Common Name**	**Origin**	**Occurrence**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
								NASO	**NALFF**	**BOTH**
Mniotilta varia	Black-and-white warbler									
Molothrus ater	Brown-headed cowbird		Common resident	Throughout						
Myiarchus crinitus	Great crested flycatcher		Common summer resident	Forest			2001			X
Oporornis formosus	Kentucky warbler		Uncommon summer migrant	Wetland and upland forest	BCC	G5				
Parkesia noveboracensis	Northern waterthrush					G5, S1B				
Parus bicolor	Tufted titmouse		Common resident	Forest, open areas			2001			X
Passer domesticus	House sparrow		Abundant resident	Throughout						
Passerculus sandwichensis	Savannah sparrow					G5, S3S4B/S4N				
Passerina caerulea	Blue grosbeck									
Passerina cyanea	Indigo bunting		Common summer resident	Open field			2001			X
Pipilo erythrophthalmus	Eastern towhee		Common spring and summer resident	Forest			2001			X
Piranga olivacea	Scarlet tanager		Common summer resident	Forest						
Piranga rubra	Summer tanager		Uncommon summer resident	Forest						
Poecile carolinensis	Carolina chickadee		Common resident	Forest			2001	X		
Polioptila caerulea	Blue-gray gnatcatcher		Common summer resident	Forest						
Pooecetes gramineus	Vesper sparrow									

Birds Known to Occur at NASO and NALFF										
Scientific Name	**Common Name**	**Origin**	**Occurrence**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
								NASO	**NALFF**	**BOTH**
Progne subis	Purple martin		Common summer resident	Open area						
Protonotaria citrea	Prothonotary warbler		Uncommon summer resident	Forest	BCC	G5	2001			X
Quiscalus quiscula	Common grackle		Common resident	Throughout						
Seiurus aurocapillus	Ovenbird		Common summer resident	Forest			2001			X
Seiurus motacilla	Louisiana waterthrush		Uncommon summer migrant	Wetland and upland forest						
Setophaga caerulescens	Black-throated blue warbler									
Steophaga coronata	Yellow-rumped warbler		Common winter migrant	Forest			2001	X		
Setophaga discolor	Prairie warbler									
Setophaga dominica	Yellow-throated warbler									
Setophaga petechia	Yellow warbler									
Setophaga pinus	Pine warbler		Common summer resident	Pine forest			2001	X		
Setophaga ruticilla	American redstart		Spring and summer resident	Forest						
Sialis sialis	Eastern bluebird		Common resident	Open field, woods edge			2001	X		
Sitta canadensis	Red-breasted nuthatch		Uncommon winter resident	Forest		G5, S2B/S4N				
Sitta carolinensis	White-breasted nuthatch		Uncommon winter resident	Forest						
Spizella passerina	Chipping sparrow									
Spizella pusilla	Field sparrow		Common resident	Open field			2001	X		

Birds Known to Occur at NASO and NALFF										
Scientific Name	**Common Name**	**Origin**	**Occurrence**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
								NASO	**NALFF**	**BOTH**
Sturnella magna	Eastern meadowlark		Uncommon resident	Old field			2001			X
Sturnus vulgaris	European starling		Abundant non-native resident	Throughout						
Tachycineta bicolor	Tree swallow									
Thryothorus ludovicianus	Carolina wren		Common resident	Forest			2001			X
Toxostoma rufum	Brown thrasher		Common resident	Forest			2001	X		
Troglodytes aedon	House wren									
Turdus migratorius	American robin		Abundant resident	Throughout			2001			X
Tyrannus tyrannus	Eastern kingbird		Common resident	Open field						
Vireo flavifrons	Yellow-throated vireo		Uncommon summer resident	Forested wetland			2001	X		
Vireo griseus	White-eyed vireo		Common summer resident	Forest			2001	X		
Vireo olivaceous	Red-eyed vireo		Common summer resident	Forest						
Wilsonia citrina	Hooded warbler		Uncommon summer resident	Forest						
Zonotrichia albicollis	White-throated sparrow		Common winter resident	Throughout			2001	X		
Order Pelecaniformes										
Eudocimus albus	White ibis					G5, S1B				
Nycticorax nycticorax	Black-crowned night-heron					G5, S3B/S3N	2001	X		
Plegadis falcinellus	Glossy ibis					G5, S2B/S1N				

Birds Known to Occur at NASO and NALFF										
Scientific Name	**Common Name**	**Origin**	**Occurrence**	**Habitat**	**Status[1]**	**Rank[2]**	**Date of Last Observation**	**Installation**		
								NASO	**NALFF**	**BOTH**
Order Piciformes										
Colaptes auratus	Northern flicker		Common resident	Forest			2001			X
Dryocopus pileatus	Pileated woodpecker		Uncommon resident	Mature forest			2001			X
Melanerpes carolinus	Red-bellied woodpecker		Common resident	Forest			2001	X		
Picoides pubescens	Downy woodpecker		Common resident	Forest			2001	X		
Picoides villosus	Hairy woodpecker		Common resident	Forest			2001	X		
Order Podicipediformes										
Podilymbus podiceps	Pied-billed grebe		Winter resident	Open water		G5, S1S2B/S4N				
Order Strigiformes										
Bubo virginianus	Great horned owl		Common resident	Forest			2001	X		
Otus asio	Eastern screech owl		Common resident	Forest						
Strix varia	Barred owl		Common resident	Wetland forest						
Order Suliformes										
Phalacrocorax auritus	Double-crested cormorant						2001	X		

Notes: Common and scientific names were verified using the Cornell University Lab of Ornithology All About Birds Database (Cornell University 2013).

[1] BCC = Birds of Conservation Concern (USFWS 2008). The Installation is located in Bird Conservation Regions 27 (Southeastern Coastal Plain) and 30 (New England/Mid-Atlantic Coast).

[2] G5 = Secure, S1 = Critically Imperiled, S2 = Imperiled, S3 = Vulnerable, S4 = Apparently Secure, S5 = Secure, S_B = Breeding status of an animal in Virginia; these species typically inhabit Virginia only during the breeding season, S_B/S_N = Breeding and nonbreeding status of an animal in Virginia, when they differ

Summary of Essential Fish Habitat (EFH) Designations

10° x 10° Square Coordinates:

Boundary	North	East	South	West
Coordinate	36° 50.0° N	75° 50.0° W	36° 40.0° N	76° 00.0° W

Square Description (i.e. habitat, landmarks, coastline markers): Waters within the Atlantic Ocean within the square affecting North Bay, Shipps Bay, and southern Virginia Beach. These waters affect the following: Muddy Creek, Porpoise Pt., and northern Long I., and affect Virginia Beach from Rudee Inlet on the north, south past Sandbridge Beach, VA., to east of half way down Long I., just north of the Wash Flats.

Species	Eggs	Larvae	Juveniles	Adults
Atlantic cod (Gadus morhua)				
haddock (Melanogrammus aeglefinus)				
pollock (Pollachius virens)				
whiting (Merluccius bilinearis)				
red hake (Urophycis chuss)	X	X	X	
witch flounder (Glyptocephalus cynoglossus)	X			
winter flounder (Pseudopleuronectes americanus)

Enclosure 4. Species of Greatest Conservation Need for the Mid-Atlantic Coastal Plain

This page intentionally left blank.

4.3. The Species of Greatest Conservation Need: Coastal Plain

Of the 235 species of greatest conservation need that occur in the Coastal Plain, 23 (10%) are in Tier I, 35 (15%) are in Tier II, 39 (17%) are in Tier III, and 138 (59%) are in Tier IV (Table 4.2).

Table 4.23. The species of greatest conservation need in Virginia's Coastal Plain.

Common Name	Scientific Name
Tier I	
Fishes	
Shortnose sturgeon	*Acipenser brevirostrum*
Blackbanded sunfish	*Enneacanthus chaetodon*
Bridle shiner	*Notropis bifrenatus*
Roanoke logperch	*Percina rex*
Amphibians	
None	
Reptiles	
Loggerhead turtle[1]	*Caretta caretta*
Wood turtle	*Glyptemys insculpta*
Chicken turtle	*Deirochelys reticularia*
Birds	
Bachman's sparrow	*Aimophila aestivalis*
Henslow's sparrow	*Ammodramus henslowii*
Piping plover	*Charadrius melodus*
Wilson's plover	*Charadrius wilsonia*
Wayne's black-throated green warbler	*Dendroica virens waynei*
Peregrine falcon	*Falco peregrinus*
Loggerhead shrike	*Lanius ludovicianus*
Black rail	*Laterallus jamaicensis*
Red-cockaded woodpecker	*Picoides borealis*
Gull-billed tern	*Sterna nilotica*
Mammals	
Eastern big-eared bat	*Corynorhinus rafinesquii macrotis*
Terrestrial Insects	
Arogos skipper	*Atrytone arogos arogos*
American burying beetle	*Nicrophorus americanus*
Other Terrestrial Invertebrates	
None	
Aquatic Mollusks	
None	
Crustaceans	

Common Name	Scientific Name
Phreatic isopod	*Caecidotea phreatica*
Lancaster County amphipod	*Crangonyx baculispina*
Northern Virginia well amphipod	*Stygobromus phreaticus*
Aquatic Insects	
None	
Other Aquatic Invertebrates	
None	
Tier II	
Fishes	
Atlantic sturgeon	*Acipenser oxyrhynchus*
Roanoke bass	*Ambloplites cavifrons*
Amphibians	
Mabee's salamander	*Ambystoma mabeei*
Tiger salamander	*Ambystoma tigrinum*
Oak toad	*Bufo quercicus*
Barking treefrog	*Hyla gratiosa*
Reptiles	
Canebrake rattlesnake	*Crotalus horridus*
Northern diamond-backed terrapin	*Malaclemys terrapin*
Eastern glass lizard	*Ophisaurus ventralis*
Birds	
Saltmarsh sharp-tailed sparrow	*Ammodramus caudacutus*
American black duck	*Anas rubripes*
American bittern	*Botaurus lentiginosus*
Cerulean warbler	*Dendroica cerulea*
Little blue heron	*Egretta caerulea*
American oystercatcher	*Haematopus palliatus*
Bald eagle	*Haliaeetus leucocephalus*
Swainson's warbler	*Limnothlypis swainsonii*
Yellow-crowned night-heron	*Nyctanassa violacea*
King rail	*Rallus elegans*
Black skimmer	*Rynchops niger*
Least tern	*Sterna antillarum*
Royal tern	*Sterna maxima*
Mammals	
Delmarva fox squirrel	*Sciurus niger cinereus*
Terrestrial Insects	
Precious underwing	*Catocala pretiosa pretiosa*
Northeastern beach tiger beetle	*Cicindela dorsalis dorsalis*

Common Name	Scientific Name
Rare skipper	*Problema bulenta*
Other Terrestrial Invertebrates	
Snowhill ambersnail	*Catinella hubrichti*
Hanging Rock threetooth	*Triodopsis pendula*
Aquatic Mollusks	
Dwarf wedgemussel	*Alasmidonta heterodon*
Green floater	*Lasmigona subviridis*
Crustaceans	
Dismal Swamp isopod	*Caecidotea attenuatus*
Rock Creek groundwater amphipod	*Stygobromus kenki*
Aquatic Insects	
Spieth's great speckled olive mayfly	*Siphloplecton costalense*
Other Aquatic Invertebrates	
Holsinger's groundwater planarian	*Sphalloplana holsingeri*
Bigger's groundwater planarian	*Sphalloplana subtilis*
Tier III	
Fishes	
Steelcolor shiner	*Cyprinella whipplei*
Amphibians	
Dwarf waterdog	*Necturus punctatus*
Carpenter frog	*Rana virgatipes*
Lesser siren	*Siren intermedia*
Reptiles	
Spotted turtle	*Clemmys guttata*
Glossy crayfish snake	*Regina rigida rigida*
Eastern box turtle	*Terrapene carolina*
Birds	
Nelson's sharp-tailed sparrow (winter)	*Ammodramus nelsoni*
Redhead (winter)	*Aythya americana*
Brant (winter)	*Branta bernicla*
Northern harrier	*Circus cyaneus*
Sedge wren (winter)	*Cistothorus platensis*
Tricolored heron	*Egretta tricolor*
Least bittern	*Ixobrychus exilis*
Black-crowned night-heron	*Nycticorax nycticorax*
Glossy ibis	*Plegadis falcinellus*
Common tern	*Sterna hirundo*
Barn owl	*Tyto alba pratincola*

Common Name	Scientific Name
Mammals	
Pungo white-footed mouse	*Peromyscus leucopus easti*
Southeastern fox squirrel	*Sciurus niger niger*
Terrestrial Insects	
Dusky roadside-skipper	*Amblyscirtes alternata*
Little metalmark	*Calephelis virginiensis*
Hessel's hairstreak	*Callophrys hesseli*
Dismal Swamp green stink bug	*Chlorochroa dismalia*
Dukes' skipper	*Euphyes dukesi*
Palatka skipper	*Euphyes pilatka*
Brimley's assassin bug	*Pnirontis brimleyi*
Sandpit alydid bug	*Stachyocnemus apicalis*
Other Terrestrial Invertebrates	
A millipede	*Pseudopolydesmus paludicolous*
Aquatic Mollusks	
Yellow lance	*Elliptio lanceolata*
Yellow lampmussel	*Lampsilis cariosa*
Chesapeake ambersnail	*Oxyloma subeffusum*
Crustaceans	
Chowanoke crayfish	*Orconectes virginiensis*
Tidewater interstitial amphipod	*Stygobromus araeus*
Tidewater amphipod	*Stygobromus indentatus*
Aquatic Insects	
Swamp forestfly	*Prostoia hallasi*
Coppery emerald	*Somatochlora georgiana*
Other Aquatic Invertebrates	
None	
Tier IV	
Fishes	
Mud sunfish	*Acantharcus pomotis*
Alewife	*Alosa pseudoharengus*
American shad	*Alosa sapidissima*
American eel	*Anguilla rostrata*
Swampfish	*Chologaster cornuta*
Banded sunfish	*Enneacanthus obesus*
Lake chubsucker	*Erimyzon sucetta*
Lined topminnow	*Fundulus lineolatus*
Least brook lamprey	*Lampetra aepyptera*
American brook lamprey	*Lampetra appendix*

Common Name	Scientific Name
Ironcolor shiner	*Notropis chalybaeus*
Logperch	*Percina caprodes*
Trout-perch	*Percopsis omiscomaycus*
Amphibians	
New Jersey chorus frog	*Pseudacris feriarum kalmi*
Striped southern chorus frog	*Pseudacris nigrita nigrita*
Little grass frog	*Pseudacris ocularis*
Eastern mud salamander	*Pseudotriton montanus*
Eastern spadefoot	*Scaphiopus holbrookii*
Greater siren	*Siren lacertina*
Many-lined salamander	*Stereochilus marginatus*
Reptiles	
Scarletsnake	*Cemophora coccinea*
Mudsnake	*Farancia abacura*
Rainbow snake	*Farancia erytrogramma*
Eastern hog-nosed snake	*Heterodon platirhinos*
Eastern slender glass lizard	*Ophisaurus attenuatus*
Queen snake	*Regina septemvittata*
Southeastern crowned snake	*Tantilla coronata*
Common ribbonsnake	*Thamnophis sauritus*
Yellowbellied slider	*Trachemys scripta scripta*
Birds	
Seaside sparrow	*Ammodramus maritimus*
Grasshopper sparrow	*Ammodramus savannarum*
Greater scaup (winter)	*Aythya marila*
Green heron	*Butorides striatus*
Dunlin (winter)	*Calidris alpina*
Red knot (winter)	*Calidris canutus*
Purple sandpiper (winter)	*Calidris maritima*
Chuck-will's-widow	*Caprimulgus carolinensis*
Whip-poor-will	*Caprimulgus vociferus*
Bicknell's thrush (migrant)	*Catharus bicknelli*
Chimney swift	*Chaetura pelagica*
Marsh wren	*Cistothorus palustris*
Yellow-billed cuckoo	*Coccyzus americanus*
Northern bobwhite	*Colinus virginianus*
Eastern wood-pewee	*Contopus virens*
Yellow rail (migrant)	*Coturnicops noveboracensis*
Prairie warbler	*Dendroica discolor*
Yellow warbler	*Dendroica petechia*
Gray catbird	*Dumetella carolinensis*
Willow flycatcher	*Empidonax traillii*
Rusty blackbird (winter)	*Euphagus carolinus*
Worm-eating warbler	*Helmitheros vermivorus*

Common Name	Scientific Name
Wood thrush	*Hylocichla mustelina*
Yellow-breasted chat	*Icteria virens*
Short-billed dowitcher (migrant)	*Limnodromus griseus*
Marbled godwit (migrant)	*Limosa fedoa*
Hudsonian godwit (migrant)	*Limosa haemastica*
Black-and-white warbler	*Mniotilta varia*
Whimbrel (migrant)	*Numenius phaeopus*
Kentucky warbler	*Oporornis formosus*
Northern parula	*Parula americana*
Rose-breasted grosbeak	*Pheuctitus ludovicianus*
Eastern towhee	*Pipilo erythrophthalmus*
Scarlet tanager	*Piranga olivacea*
Black-bellied plover (winter)	*Pluvialis squatarola*
Horned grebe (winter)	*Podiceps auritus*
Prothonotary warbler	*Protonotaria citrea*
Virginia rail	*Rallus limicola*
Clapper rail	*Rallus longirostris*
American woodcock	*Scolopax minor*
Ovenbird	*Seiurus aurocapillus*
Louisiana waterthrush	*Seiurus motacilla*
Brown-headed nuthatch	*Sitta pusilla*
Field sparrow	*Spizella pusilla*
Northern rough-winged swallow	*Stelgidopteryx serripennis*
Roseate tern (migrant)	*Sterna dougallii*
Forster's tern	*Sterna forsteri*
Eastern meadowlark	*Sturnella magna*
Brown thrasher	*Toxostoma rufum*
Eastern kingbird	*Tyrannus tyrannus*
Yellow-throated vireo	*Vireo flavifrons*
Mammals	
Least weasel	*Mustela nivalis*
Southeastern myotis	*Myotis austroriparius*
Cotton mouse	*Peromyscus gossypinus*
Dismal Swamp southeastern shrew	*Sorex longirostris fisheri*
Appalachian cottontail	*Sylvilagus obscurus*
Marsh rabbit	*Sylvilagus palustris*
Southern bog lemming	*Synaptomys cooperi*
Terrestrial Insects	
Barrens dagger moth	*Acronicta albarufa*
A cane moth	*Argillophora furcilla*
Frosted elfin	*Callophrys irus*
Orange-bellied tiger beetle	*Cicindela abdominalis*
Spectral tiger beetle	*Cicindela lepida*
A tiger beetle	*Cicindela limbalis*
Pink-streak moth	*Faronta rubripennis*

Common Name	Scientific Name
A cane moth	*Franclemontia interrogans*
A shield bug	*Galgupha denudata*
Buchholz's gray moth	*Hypomecis buchholzaria*
Lemmer's pinion moth	*Lithophane lemmeri*
Bronze copper	*Lycaena hyllus*
Yucca giant-skipper	*Megathymus yuccae*
A noctuid moth	*Meropleon titan*
A turtle bug	*Oncozygia clavicornis*
Long dash	*Polites mystic*
Southern Ptichodis moth	*Ptichodis bistrigata*
Yellow-edged Pygarctia moth	*Pygarctia abdominalis*
Other Terrestrial Invertebrates	
Slim snaggletooth	*Gastrocopta pellucida*
Fine-ribbed striate	*Striatura milium*
Pinhole threetooth	*Triodopsis messana*
Palmetto vertigo	*Vertigo oralis*
Swamp vertigo	*Vertigo teskeyae*
Aquatic Mollusks	
Triangle floater	*Alasmidonta undulata*
Alewife floater	*Anodonta implicata*
Carolina lance mussel	*Elliptio angustata*
Carolina slabshell mussel	*Elliptio congaraea*
Northern lance mussel	*Elliptio fisheriana*
Oblong ancylid	*Ferrissia parallelus*
Tidewater mucket	*Leptodea ochracea*
Eastern pondmussel	*Ligumia nasuta*
Ridged lioplax	*Lioplax subcarinata*
Sharp sprite	*Promenetus exacuous*
Creeper	*Strophitus undulatus*
Florida pondhorn	*Uniomerus caroliniana*
Crustaceans	
Ohio River shrimp	*Macrobrachium ohione*
Aquatic Insects	
Blackwater bluet	*Enallagma weewa*
Robust baskettail	*Epitheca spinosa*
Drake's water scorpion	*Ranatra drakei*
Treetop emerald	*Somatochlora provocans*
Laura's clubtail	*Stylurus laurae*
Other Aquatic Invertebrates	
None	

[1] Loggerhead turtle *Caretta caretta* is included in Section 4.4, since its habitat within Virginia is terrestrial (nesting beaches).

Department of Conservation & Recreation
CONSERVING VIRGINIA'S NATURAL AND RECREATIONAL RESOURCES

November 2016. 59 pages plus appendices

.

INTRODUCTION

The Virginia Department of Conservation and Recreation's Division of Natural Heritage (DCR-DNH) was established to protect Virginia's Natural Heritage Resources. These Resources are defined in the Virginia Natural Area Preserves Act of 1989 (Section 10.1-209 through 217, *Code of Virginia*), as the habitat of rare, threatened, and endangered plant and animal species; exemplary natural communities, habitats, and ecosystems; and other natural features of the Commonwealth. DCR-DNH is the state's only comprehensive program for conservation of our natural heritage and includes an intensive statewide biological inventory, field surveys, electronic and manual database management, environmental review capabilities, and natural area protection and stewardship. Through such a comprehensive operation, the Division identifies Natural Heritage Resources which are in need of conservation attention while creating an efficient means of evaluating the impacts of economic growth.

To achieve this protection, DCR-DNH maintains lists of the most significant elements of our natural diversity. These lists focus the Division's inventory on the Natural Heritage Resources most likely to be lost without conservation action in the near future. Most importantly, these lists are not only useful for DCR-DNH, but can be used by other agencies, organizations, and individuals to guide protection and development decision-making. In formulating these lists, the Division uses information from previous studies, museum records, the observations and opinions of experts, DCR-DNH staff scientists, and field inventories.

The first list included in this report is the Rare Vascular Plant List. This list contains information on the legal and biological status of Virginia's rarest known native vascular plant taxa, **628** in all. This list includes all plants believed to be sufficiently rare or threatened to merit an inventory of their status and locations.

The second list included in this report is the Vascular Plant Watchlist. This list contains information on the legal and biological status of **230** additional taxa that are decidedly uncommon in Virginia but not scarce enough to merit inclusion on the Rare Vascular Plant List. Plants on this list are monitored to determine general population trends. If a species or variety on this list is found to be rare or threatened, it is placed on the Rare Vascular Plant List.

The third list included in this report is the Review List (Taxa of Uncertain Status). These taxa lack numerical ranks, indicating that they are poorly known from a taxonomic and distributional standpoint. Although some of these taxa may prove to be conservation targets, more field and herbarium data are needed to assess their distinctiveness and degree of rarity in Virginia. There are **72** taxa in this category.

The fourth list included in this report is the Rare Non-Vascular Plant List. This list contains information on the legal and biological status of **95** taxa thought to be rare in the state of Virginia. The lichens, liverworts, and mosses listed herein represent an attempt at designating imperiled species within this often-neglected group. The list is currently small compared to the vascular plant lists because the taxonomy and distributions of non-vascular plants are generally poorly known in Virginia at this time (with some exceptions).

Natural Heritage Resource lists are necessarily dynamic and are revised annually, with updates occurring as data become available. Such revisions assure the most current knowledge of the status of Virginia's plants. Taxa are added to the list when it is determined that they have become rare or threatened to such an extent that their continued existence in Virginia is in jeopardy. Plants are deleted from the list when data indicate they are common and do not warrant priority conservation efforts.

If you have information which could refine this list, please contact DCR-DNH staff botanist John Townsend at (804) 225-4855 (email: john.townsend@dcr.virginia.gov) or by mailing the Rare Species Sighting Form found at the end of this document.

All plants which are officially protected by federal or state endangered species acts are included in these lists. The Office of Plant Protection within the Virginia Department of Agriculture and Consumer Services (VDACS) has regulatory responsibility for the listing and protection of Virginia's endangered and threatened plants and insects under the Virginia Endangered Plant and Insect Species Act, as amended (Section 3.1 -1020 through 1030, *Code of Virginia*). The Act provides for the official listing and recovery of endangered and threatened plant and insect species in Virginia. The Act also establishes a permit system for collection of listed species. As of 2013, there were 26 state-listed plant species. A memorandum of agreement between DCR-DNH and VDACS facilitates data transfer between agencies and allows for DCR-DNH to nominate species for listing by VDACS.

Federally listed species are protected by the Endangered Species Act of 1973, as amended. The U.S. Department of the Interior's Fish and Wildlife Service administers the Act, listing and protecting federally endangered and threatened species. As of 2015, there were 16 plant species federally listed as endangered or threatened which occur or formerly occurred in Virginia.

The Virginia Department of Conservation and Recreation, Virginia Department of Agriculture and Consumer Services, and U. S. Fish and Wildlife Service work cooperatively to insure the continued survival of Virginia's diverse flora and other elements of natural diversity. The Division of Natural Heritage also works closely with other state and federal agencies, local governments, conservation organizations, and other organizations and individuals to seek adequate protection of Virginia's natural heritage.

FORMAT OF LISTS

Lists for each category (vascular plant lists, liverwort list, etc.) are alphabetized by scientific name. Each list has an identical format which presents six fields: scientific name, common name, global rank, state rank, federal status, and state status. To help interpret the list, a brief explanation of each field may be found on the following page.

Column 1. Scientific name:
Nomenclature for vascular plants almost exclusively follows Weakley, A.S., J.C. Ludwig, and J.F. Townsend, 2012. *Flora of Virginia*. Bland Crowder, ed. Foundation of the Flora of Virginia Project, Inc., Richmond. Fort Worth: Botanical Research Institute of Texas Press. A line is provided below the scientific name to provide synonyms when other names are used in popular botanical references.

Nomenclature for lichens follows Esslinger, T.L. 2014. A cumulative checklist for the lichen-forming, lichenicolous and allied fungi of the continental United States and Canada. North Dakota State University: http://www.ndsu.edu/pubweb/~esslinge/chcklst/chcklst7.htm (First Posted 1 December 1997, Most Recent Version (#19) 23 March 2014), Fargo, North Dakota.

Nomenclature for liverworts follows the Field Museum taxonomy module, located at:
http://emuweb.fieldmuseum.org/botany/taxonomic.php?_ga=1.125124173.613149090.1423754725

Nomenclature for mosses follows volumes 27 and 28 of Flora of North America, North of Mexico (Bryophytes, Part 1 and Part 2).

Column 2. Common name:
A common name is provided for the convenience of the user. Common names for plants follow the *Flora of Virginia*.

Column 3. Global rank:
Global ranks are assigned by a consensus of the network of natural heritage programs, scientific experts, and The Nature Conservancy to designate a rarity rank based on the range-wide status of a species or variety. This system was developed by The Nature Conservancy and is widely used by other agencies and organizations as the best available scientific and objective assessment of a taxon's rarity and level of threat to its existence. The ranks are assigned after considering a suite of factors, including number of occurrences, number of individuals, and severity of threats.

G1 = **Critically Imperiled** - At very high risk of extinction due to extreme rarity (often 5 or fewer populations), very steep declines, or other factors.

G2 = **Imperiled** - At high risk of extinction due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors.

G3 = **Vulnerable** - At moderate risk of extinction due to a restricted range, relatively few populations (often 80 or fewer), recent and widespread declines, or other factors.

G4 = **Apparently Secure** - Uncommon but not rare; some cause for long-term concern due to declines or other factors.

G5 = **Secure** – Common, widespread and abundant.

GH = **Possibly Extinct** - Missing; known from only historical occurrences but still some hope of rediscovery.

GX = **Presumed Extinct** - Not located despite intensive searches and virtually no likelihood of rediscovery.

GU = **Unrankable** - Currently unrankable due to lack of information or due to substantially conflicting information about status or trends. Whenever possible, the most likely rank is assigned and the question mark qualifier is added (e.g., G2?) to express uncertainty, or a range rank (e.g., G2G3) is used to delineate the range of uncertainty.

G_? = **Inexact Numeric Rank** - Denotes inexact numeric rank (e.g., G3?).

G_Q = **Questionable taxonomy** - Taxonomic distinctiveness of this entity at the current level is questionable; resolution of this uncertainty may result in change from a species to a subspecies or hybrid, or the inclusion of this taxon in another taxon, with the resulting taxon having a lower conservation priority (e.g., G3Q).

G_T_ = **Infraspecific Taxa** - Signifies the rank of a subspecies or variety. For example, the rank G5T1 would be assigned to a very rare and localized variety of an otherwise widespread and common taxon.

GNR = **Unranked** – Global rank not yet assessed.

GNA = **Not applicable** – A conservation status rank is not applicable because the species is not a suitable target for conservation activities.

Column 4. State rank:
State ranks are assigned in a manner similar to that described for global ranks, but consider only those factors within the political boundaries of Virginia. For example, whereas a plant which is endemic to Virginia (found nowhere else) will have the same global and state ranks, a plant which may be common in the northeastern United States, but only known from a few occurrences in Virginia will have different global and state ranks. By comparing the global and state ranks, the status, rarity, and the urgency of conservation needs can be ascertained.

S1 = Critically Imperiled - At very high risk of extirpation from the state due to extreme rarity (often 5 or fewer populations), very steep declines, or other factors.

S2 = Imperiled - At high risk of extirpation from the state due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors.

S3 = **Vulnerable** - At moderate risk of extirpation from the state due to a restricted range, relatively few populations (often 80 or fewer), recent and widespread declines, or other factors.

S4 = Apparently Secure - Uncommon but not rare; some cause for long-term concern due to declines or other factors.

S5 = Secure – Common, widespread and abundant.

SH = Possibly Extirpated - Known only from historical occurrences but still some hope of rediscovery.

SX = **Presumed Extirpated** - Not located despite intensive searches and virtually no likelihood of rediscovery.

SU = **Unrankable** - Currently unrankable due to lack of information or due to substantially conflicting information about status or trends.

S_? = **Inexact Numeric Rank** - Denotes inexact numeric rank (e.g., S3?).

SNR = **Unranked** – State conservation status not yet assessed.

SNA = **Not Applicable** - A conservation status rank is not applicable because the species is not a suitable target for conservation activities.

Column 5. Federal Status:
Federal Status is determined by the U. S. Fish and Wildlife Service. This includes all species and varieties which are listed as endangered or threatened by the U. S. government and receive protection under the federal Endangered Species Act. The list also notes those taxa which are proposed for listing or are candidates for listing.

LE = **Listed Endangered** - A taxon is threatened with extinction throughout all or a significant portion of its range.

LT = **Listed Threatened** - A taxon is likely to become endangered in the foreseeable future.

PE = **Proposed Endangered** - A taxon is proposed for listing as endangered.

PT = **Proposed Threatened** - A taxon is proposed for listing as threatened.

C = **Candidate** - There is enough available information to propose the taxon for listing, but listing is "precluded by other pending proposals of higher priority". The U.S. Fish and Wildlife Service is "directed to make prompt use of the emergency listing if the well-being of any such species is at significant risk."

_* = An * following the status denotes that the species or variety is possibly extinct.

Column 6. State Status:
State status indicates those plants which are listed as state endangered or threatened under the authority of the Virginia Department of Agriculture and Consumer Services.

LE = **Listed Endangered**

LT = **Listed Threatened**

PE = **Proposed Endangered**

PT = **Proposed Threatened**

C = **Candidate for listing as threatened or endangered**

ACKNOWLEDGEMENTS

If not for the hard work of many biologists, these plant lists could not accurately reflect our current understanding of the Virginia flora. On the staff of the Division of Natural Heritage, Allen Belden, Gary Fleming, Chris Ludwig, Nancy Van Alstine, Karen Patterson, Kristin Taverna, Irvine Wilson, and Darren Loomis have provided many comments to refine the content of the lists. In addition to Heritage staff, members of the Virginia Botanical Associates have contributed greatly to our understanding of the Virginia flora via the continuously updated Digital Atlas of the Virginia Flora and through numerous personal communications.

Other individuals who have contributed include Rodney Bartgis, Stan Bentley, Jessica Bier, Jay Bolin, George Buchholz, Byron Carmean, Chris Clampitt, Jane Collins, Virginia Crouch, Steve Croy, Allison Cusick, Doug DeBerry,Tom Dierauf, Mike Donahue, Cris Fleming, Cecil Frost, Chris Frye, Charles Garratt, Mary Geil, Holly Grubbs, P.J. Harmon, Jessie Harris, Elaine Haug, John Hayden, Mike Hayslett, Frank Hirst, Hal Horwitz, Charles Horn, Fred Huber, Miles Johnson, Larry Klotz, John Knox, Ron Lance, Mike Lane, Chris Lea, Richard LeBlond, Mike Lipford, Greg Lipscomb, Marion Blois Lobstein, Steve Martin, Bill McAvoy, Bob McCartney, Robert McComb, Kent Minichiello, Marcia Minichiello, Bill Moorhead, Larry Morse, Lytton Musselman, Alan Neumann, Jesse Overcash, Jim Perry, Jeremy Poirier, Tom Rawinski, Garrie Rouse, Ernie Schuyler, Cindy Schulz, Perry Scott, Phil Sheridan, Rod Simmons, Rob Simpson, Bruce Sorrie, Nicky Staunton, Mark Strong, John Tate, Barry Truitt, Craig Tumer, Leonard J. Uttal, Brian van Eerden, Dick Weigand, Troy Weldy, Tom Wieboldt, Meegan Wallace, Alan Weakley, Chuck Williams, and Joan Wright.

***Cuscuta polygonorum* Engelm.**	**Smartweed Dodder**	**G5**	**S1**		
***Cuscuta rostrata* Shuttlw. ex Engelm. & Gray**	**Beaked Dodder**	**G4**	**S1S2**		
***Cuthbertia graminea* Small** syn: *Tradescantia rosea* Vent. var. *graminea* (Small) E.S. Anderson & Woods syn: *Callisia graminea* (Small) G. Tucker	**Grasslike Roselings**	**G5**	**S1**		
***Cyperus acuminatus* Torr. & Hook. ex Torr.**	**Short-point flatsedge**	**G5**	**S1**		
***Cyperus dentatus* Torr.**	**Toothed Flatsedge**	**G4**	**S1**		
***Cyperus diandrus* Torr.**	**Umbrella Flatsedge**	**G5**	**S1**		
***Cyperus granitophilus* McVaugh**	**Granite Flatsedge**	**G3G4Q**	**S1**		
***Cyperus houghtonii* Torr.**	**Houghton's Flatsedge**	**G4?**	**SH**		
***Cyperus odoratus* L. var. *engelmannii* (Steud.) R. Carter**	**Slender Sand Sedge**	**G5T4Q**	**S1**		
***Cyperus plukenetii* Fern.**	**Plukenet's Flatsedge**	**G5**	**S2**		
***Cypripedium candidum* Muhl. ex Willd.**	**Small White Lady's-slipper**	**G4**	**S1**		
***Cypripedium kentuckiense* C.F. Reed**	**Kentucky Lady's-slipper**	**G3**	**S1**		
***Cypripedium reginae* Walt.**	**Showy Lady's-slipper**	**G4G5**	**S1**		
***Cystopteris tennesseensis* Shaver**	**Tennessee Bladder Fern**	**G5**	**S1**		
***Dasistoma macrophyllum* (Nutt.) Raf.**	**Mullein Foxglove**	**G4**	**S1**		
***Deschampsia cespitosa* (L.) Beauv.**	**Tufted Hairgrass**	**G5**	**S1**		
***Desmodium canadense* (L.) DC.**	**Showy Tick-trefoil**	**G5**	**S1**		
Desmodium cuspidatum* (Muhl. *ex* Willd.) DC. ex Loud. var. *cuspidatum	**Toothed Tick-trefoil**	**G5T5?**	**S2**		
***Desmodium ochroleucum* M.A. Curtis ex Canby**	**Cream-flowered Tick-trefoil**	**G2**	**SH**		
***Desmodium sessilifolium* (Torr.) Torr. & Gray**	**Sessile-leaf Tick-trefoil**	**G5**	**S2**		
***Desmodium strictum* (Pursh) DC.**	**Pineland Tick-trefoil**	**G4**	**S2**		
***Desmodium tenuifolium* Torr. & Gray**	**Slim-leaf Tick-trefoil**	**G4**	**S1**		
***Diamorpha smallii* Britt. ex Small** syn: *Sedum smallii* (Britton ex Small) Ahles	**Small's Stonecrop**	**G4**	**S1**		
***Dichanthelium caerulescens* (Hack. ex Hitchc.) Correll** syn: *Panicum caerulescens* Hack ex A.S. Hitchc. Under *D. dichotomum* (L.) Gould var. *dichotomum* in Kartesz (1999)	**Blue Panic Grass**	**G2G3**	**S1**		
***Dichanthelium consanguineum* (Kunth) Gould & C. A. Clark** syn: *Panicum consanguineum* Kunth	**Blood Panic Grass**	**G5**	**S1S2**		
***Dichanthelium cryptanthum* (Ashe) LeBlond** syn: *Panicum scabriusculum* (Ell.) Gould & Clark var. *cryptanthum* (Ashe) Gleason	**Hidden-flowered Panic Grass**	**G3G4Q**	**S1**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Dichanthelium curtifolium* (Nash) LeBlond** syn: *Dichanthelium ensifolium* (Baldw. ex Ell.) Gould ssp. *curtifolium* (Nash) Freckmann & LeLong	**Short-leaved Witchgrass**	**GNR**	**S1**		
Dichanthelium ovale* (Ell.) Gould & C. A. Clark var. *ovale syn: *Panicum ovale* Ell. var. *ovale*	**Oval-flowered Panic Grass**	**G5T5**	**S1?**		
Dichanthelium strigosum* (Muhl. ex Ell.) Freckmann var. *strigosum syn: *Panicum strigosum* Muhl. ex Ell. var. *strigosum*	**Rough-hair Panic Grass**	**G5T5**	**SH**		
***Didiplis diandra* (Nutt. ex DC.) Wood** syn: *Peplis diandra* Nutt. ex DC.	**Water-purslane**	**G5**	**S1**		
***Digitaria cognata* (J.A. Schultes) Pilger** syn: *Leptoloma cognata* (J.A. Schultes) Chase	**Fall Witch Grass**	**G5**	**S1**		
***Digitaria serotina* (Walt.) Michx.**	**Dwarf Crabgrass**	**G5?**	**S1**		
***Drymocallis arguta* (Pursh) Rydberg** syn: *Potentilla arguta* Pursh	**Tall Cinquefoil**	**G5**	**S1**		
Dryopteris clintoniana (D.C. Eaton) Dowell	**Clinton's Wood Fern**	**G5**	**SH**		
***Echinacea laevigata* (C.L. Boynt. & Beadle) Blake**	**Smooth Coneflower**	**G2G3**	**S2**	**LE**	**LT**
***Echinocystis lobata* (Michx.) Torr. & Gray**	**Wild Cucumber**	**G5**	**SH**		
***Echinodorus tenellus* (Mart.) Buch.** syn: *Echinodorus parvulus* Engelm.	**Dwarf Burhead**	**G5?**	**S1**		
***Elatine minima* (Nutt.) Fisch. & C.A. Mey.**	**Small Waterwort**	**G5**	**S1**		
***Eleocharis baldwinii* (Torr.) Chapman**	**Baldwin's Spikerush**	**G4G5**	**S1**		
***Eleocharis bifida* S.G. Smith**	**Glades Spikerush**	**G3G4**	**S1**		
Eleocharis compressa* Sullivant var. *compressa	**Flattened Spikerush**	**G4TNR**	**S2**		
***Eleocharis elliptica* Kunth**	**Elliptic Spikerush**	**G5**	**S1**		
***Eleocharis equisetoides* (Ell.) Torr.**	**Horsetail Spikerush**	**G4**	**S1**		
***Eleocharis intermedia* J.A. Schultes**	**Matted Spikerush**	**G5**	**S1**		
***Eleocharis melanocarpa* Torr.**	**Black-fruited Spikerush**	**G4**	**S2**		
***Eleocharis radicans* (A. Dietr.) Kunth**	**Rooted Spikerush**	**G5**	**SH**		
***Eleocharis robbinsii* Oakes**	**Robbins' Spikerush**	**G4G5**	**S1**		
***Eleocharis tricostata* Torr.**	**Three-angled Spikerush**	**G4**	**S1**		
***Eleocharis uniglumis* (Link) Schultes** formerly listed as *Eleocharis halophila*	**One-scale Spikerush**	**G5**	**S1**		
***Eleocharis vivipara* Link**	**Viviparous Spikerush**	**G5**	**S1**		
***Eleocharis wolfii* (Gray) Gray ex Britt.**	**Wolf's Spikerush**	**G3G5**	**S1**		
Elymus canadensis* L. var. *canadensis	**Nodding Wild Rye**	**G5TNR**	**S1**		
Elymus trachycaulus* (Link) Gould ex Shinners ssp. *trachycaulus syn: *Agropyron trachycaulum* (Link) Malte ex H.F. Lewis	**Slender Wheatgrass**	**G5T5**	**S1**		
***Enemion biternatum* Raf.** syn: *Isopyrum biternatum* (Raf.) Torr. & Gray	**False Rue-anemone**	**G5**	**S1**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
Epilobium ciliatum* Raf. ssp. *ciliatum	**American Willow-herb**	**G5T5**	**S1**		
***Epilobium leptophyllum* Raf.**	**Bog Willow-herb**	**G5**	**S2S3**		
***Equisetum fluviatile* L.**	**Water Horsetail**	**G5**	**S1**		
***Equisetum sylvaticum* L.**	**Woodland Horsetail**	**G5**	**S1**		
***Erigeron vernus* (L.) Torr. & Gray**	**White-top Fleabane**	**G5**	**S2**		
***Eriocaulon aquaticum* (Hill) Druce**	**Seven-angled Pipewort**	**G5**	**S1**		
Eriocaulon decangulare* L. var. *decangulare	**Ten-angled Pipewort**	**G5T5?**	**S2**		
***Eriocaulon parkeri* B.L. Robins.**	**Parker's Pipewort**	**G3**	**S2**		
***Eryngium integrifolium* Walt.**	**Blue-flower Eryngo**	**G5**	**S1**		
Eryngium yuccifolium* Michx. var. *yuccifolium	**Northern Rattlesnake-master**	**G5T5**	**S2**		
Erysimum capitatum* (Dougl. ex Hook.) Greene var. *capitatum	**Western Wallflower**	**G5T5**	**S2**		
All Virginia *E. capitatum* is var. *capitatum*					
***Erythronium albidum* Nutt.**	**White Trout Lily**	**G5**	**S2**		
***Eupatorium linearifolium* Walter**	**Narrow-leaf Bushy Thoroughwort**	**G5**	**SH**		
***Eupatorium maritimum* E.E. Schilling**	**A Eupatorium**	**G2?**	**S1**		
Newly named taxon, formerly lumped with *Eupatorium anomalum* Nash					
***Euphorbia bombensis* Jacquin**	**Southern Seaside Spurge**	**G4G5**	**S2**		
syn: *Chamaesyce bombensis* (Jacquin) Dugand					
***Euphorbia exserta* (Small) Coker**	**Maroon Sandhills Spurge**	**G4?**	**S1**		
***Euphorbia purpurea* (Raf.) Fern.**	**Glade Spurge**	**G3**	**S2**		
***Eurybia radula* (Ait.) Nesom**	**Low Rough Aster**	**G5**	**S1**		
syn: *Aster radula Ait.*					
***Eurybia surculosa* (Michx) Nesom**	**Creeping Aster**	**G4G5**	**S1S2**		
syn: *Aster surculosus Michx.*					
Eutrochium maculatum* (L.) E.E. Lamont var. *maculatum	**Spotted Joe-pye-weed**	**G5T5**	**S1**		
syn: *Eupatorium maculatum* L. var. *maculatum*					
***Filipendula rubra* (Hill) B.L. Robins.**	**Queen-of-the-Prairie**	**G4G5**	**S2**		
***Fimbristylis perpusilla* Harper *ex* Small & Britt.**	**Harper's Fimbry**	**G2**	**S1**		**LE**
Fimbristylis puberula* (Michx.) Vahl var. *puberula	**Hairy Fimbry**	**G5T5**	**S1**		
Under *F. spadicea* (L.) Vahl. in Radford et al. (1968)					
Under *F. caroliniana* (Lam.) Fern. in Fernald (1950)					
All Virginia *F. puberula* is var. *puberula*					
***Fleischmannia incarnata* (Walt.) King & H.E. Robins.**	**Pink Thoroughwort**	**G5**	**S2**		
syn: *Eupatorium incarnatum* Walter					

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Fragaria vesca* L. var. *americana* (Porter) Staudt** All native *F. vesca* is var. *americana*	**Woodland Strawberry**	**G5T5**	**S1**		
***Fuirena breviseta* (Coville) Coville** Under *F. squarrosa* Michx. in Radford et al. (1968)	**Short-bristled Umbrella-sedge**	**G5**	**SH**		
***Gaylussacia brachycera* (Michx.) Gray**	**Box Huckleberry**	**G3**	**S1**		
***Gentiana autumnalis* L.**	**Pine Barren Gentian**	**G3**	**S1**		
***Gentianella quinquefolia* (L.) Small var. *occidentalis* Gray**	**Western Stiff Gentian**	**G5T4T5**	**S1**		
***Gentianopsis crinita* (Froel.) Ma**	**Greater Fringed Gentian**	**G5**	**S1**		
***Geum aleppicum* Jacq.**	**Yellow Avens**	**G5**	**SH**		
***Geum laciniatum* Murr.**	**Rough Avens**	**G5**	**S1**		
***Gillenia stipulata* (Muhl. ex Willd.) Nutt.** syn: *Porteranthus stipulatus* (Muhl. ex Willd.) Britt.	**American ipecac**	**G5**	**S1**		
Glyceria grandis* S. Wats. var. *grandis	**American Mannagrass**	**G5T5**	**S1**		
***Glyceria laxa* (Scribn.) Scribn.**	**Northern Mannagrass**	**G5**	**S1**		
***Gnaphalium uliginosum* L.**	**Low Cudweed**	**G5**	**S1**		
***Goodyera repens* (L.) R. Br. ex Ait. f.**	**Dwarf Rattlesnake-plantain**	**G5**	**S1**		
***Gratiola ramosa* Walt.**	**Branched Hedge-hyssop**	**G4G5**	**S1**		
***Harperella nodosa* Rose** syn: *Ptilimnium nodosum* (Rose) Mathias	**Harperella**	**G2**	**S1**	**LE**	**LE**
***Helenium brevifolium* (Nutt.) Wood**	**Short-leaf Sneezeweed**	**G4**	**S2**		
***Helenium virginicum* Blake**	**Virginia Sneezeweed**	**G3**	**S2**	**LT**	**LE**
Helianthus occidentalis* Riddell ssp. *occidentalis	**Western Sunflower**	**G5T5**	**S1**		
Heliotropium curassavicum* L. var. *curassivicum	**Seaside Heliotrope**	**G5T5**	**S1**		
***Helonias bullata* L.**	**Swamp-pink**	**G3**	**S2S3**	**LT**	**LE**
***Heteranthera multiflora* (Griseb.) Horn**	**Mud Plantain**	**G4**	**S1**		
***Heuchera alba* Rydb.**	**White Alumroot**	**G2Q**	**S1**		
***Heuchera caroliniana* (Rosendahl, Butters & Lakela) E. Wells**	**Carolina Alumroot**	**G3**	**S1**		
***Hexastylis contracta* Blomquist**	**Mountain Heartleaf**	**G3**	**S1**		
***Honckenya peploides* (L.) Ehrh. ssp. *robusta* (Fern.) Hulten** syn: *Honkenya peploides* (L.) Ehrh. syn: *Arenaria peploides* L. var. *robusta* Fern.	**Sea-beach Sandwort**	**G5T5**	**SH**		
Hordeum jubatum* L. ssp. *jubatum Only native Virginia occurrences are monitored	**Foxtail Barley**	**G5T5**	**S1**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Houstonia canadensis* Willd. ex Roemer & J.A. Schultes** syn: *Hedyotis canadensis* (Willd. ex Roemer & J.A. Schultes) Fosberg	**Canada Bluets**	**G4G5**	**S2**		
***Houstonia montana* Small** syn: *Houstonia purpurea* L. var. *montana* (Small) Terrell	**Roan Mountain Bluet**	**G2**	**S1**	**LE**	
Houstonia nigricans* (Lam.) Fernald var. *nigricans syn: *Hedyotis nigricans* (Lam.) Fosberg	**Glade Bluets**	**G5T5**	**S1**		
***Huperzia appressa* (Desvaux) A. Löve & D. Löve** syn: *Huperzia appalachiana* Beitel & Mickel Includes apparent hybrids between *H. appressa* and *H. lucidula*	**Appalachian Fir Clubmoss**	**G5**	**S2**		
***Huperzia porophila* (Lloyd & Underwood) Holub** syn: *Lycopodium porophilum* Lloyd & Underwood	**Rock Clubmoss**	**G4**	**S1**		
***Hydrocotyle bonariensis* Comm. ex Lam.**	**Coastal Water-pennywort**	**G5**	**S2**		
***Hypericum adpressum* Raf. ex W. Bart.**	**Bog St. John's-wort**	**G3**	**S1**		
***Hypericum boreale* (Britt.) Bickn.**	**Northern St. John's-wort**	**G5**	**S2**		
***Hypericum densiflorum* Pursh var. *interior* (Small) Sorrie & Weakley**	**Interior Bushy St. John's-wort**	**G5TNR**	**S1**		
***Hypericum denticulatum* Walt.** Does not include *H. virgatum* (=*H. denticulatum var. acutifolium* Ell.)	**Coppery St. John's-wort**	**G5**	**S1**		
***Hypericum ellipticum* Hook.**	**Pale St. John's-wort**	**G5**	**S1**		
***Hypericum fraseri* Spach** syn: *Triadenum fraseri* (Spach) Gleason	**Fraser's Marsh St. John's-wort**	**G5**	**S2**		
***Hypericum lloydii* (Svenson) P. Adams**	**Sandhill St.-John's-wort**	**G4?**	**SH**		
***Hypericum setosum* L.**	**Hairy St. John's-wort**	**G4G5**	**S1S2**		
***Hypericum tubulosum* Walt.** syn: *Triadenum tubulosum* (Walt.) Gleason	**Lesser Marsh St. John's-wort**	**G4?**	**S2**		
***Hypoxis sessilis* L.** Includes *H. longii* Fern.	**Glossy-seed Yellow Stargrass**	**G4**	**SH**		
***Ilex collina* Alexander** syn: *Nemopanthus collinus* (Alexander) R. Clark	**Long-stalked Holly**	**G3**	**S1**		**LE**
***Ilex coriacea* (Pursh) Chapman**	**Big Gallberry**	**G5**	**S1**		
***Iliamna corei* Sherff**	**Peters Mountain Mallow**	**G1**	**S1**	**LE**	**LE**

***Spiranthes ochroleuca* (Rydb.) Rydb.**	**Yellow Nodding Ladies'-tresses**	**G4**	**S2**		
Sporobolus compositus* (Poir.) Merr. var. *compositus syn: *S. asper* (Beauv.) Kunth, All Virginia *S. compositus* is var. *compositus*	**Tall Dropseed**	**G5T5**	**S2**		
***Sporobolus heterolepis* (Gray) Gray**	**Prairie Dropseed**	**G5**	**S1**		
***Sporobolus junceus* (Beauv.) Kunth**	**Purple Dropseed**	**G5**	**S1**		
***Sporobolus neglectus* Nash**	**Small Dropseed**	**G5**	**S1**		
***Sporobolus ozarkanus* Fernald**	**Ozark Dropseed**	**G5?**	**S1**		
***Stachys appalachiana* D.B. Poindexter & J.B. Nelson**	**Appalachian Hedge-Nettle**	**GNR**	**S1**		
***Stachys arenicola* Britt.** Given as *S. palustris* L. in Harvill et al. (1992)	**Hairy Hedge-nettle**	**G4?**	**S1**		
***Stachys aspera* Michx.** syn: *S. hyssopifolia* Michx. var. *ambigua* Gray	**Rough Hedge-nettle**	**G4?**	**S2**		
***Stachys eplingii* J. Nelson**	**Epling's Hedge-nettle**	**G5**	**S1**		
***Stachys matthewsii* G.P. Fleming, J.B. Nelson, & J.F. Townsend**	**Yadkin Hedge-nettle**	**G1G2**	**S1**		
***Steinchisma hians* (Ell.) Nash** syn: *Panicum hians* Ell.	**Gaping Panic Grass**	**G5**	**S1**		
Stellaria alsine Grimm	**Bog Chickweed**	**G5**	**S1**		
***Stenanthium densum* (Desr.) Zomlefer & Judd**	**Dense-flowered Camas**	**G5**	**S1**		
***Stenanthium leimanthoides* (A. Gray) Zomlefer & Judd**	**Pinebarrens Death-camas**	**G4Q**	**S1**		
***Stewartia ovata* (Cav.) Weatherby**	**Mountain Camellia**	**G4**	**S2**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
Stillingia sylvatica* Garden ex L. ssp. *sylvatica	**Queen's-delight**	**G5T5**	**S1**		
Stipulicida setacea* Michx. var. *setacea	**Pineland Scalypink**	**G4G5T4T5**	**S1**		
***Streptopus amplexifolius* (L.) DC.**	**White Mandarin**	**G5**	**S1**		
***Stylophorum diphyllum* (Michx.) Nutt.**	**Celandine Poppy**	**G5**	**S2**		
***Sullivantia sullivantii* (Torr. & Gray) Britt.**	**Sullivantia**	**G4**	**S1**		
Symphoricarpos albus* (L.) Blake var. *albus	**Common Snowberry**	**G5T5**	**S1**		
All native Virginia *S. albus* is var. *albus*, non-native material is *S. albus* var. *laevigatus* (Fern.) Blake					
***Symphyotrichum elliottii* (Torr. & Gray) Nesom**	**Elliott's Aster**	**G4**	**S1**		
syn: *Aster puniceus* L. var. *elliottii* (Torr. & Gray) A.G. Jones					
syn: *A. elliottii* Torr. & Gray					
***Symphyotrichum praealtum* (Poiret) Nesom var. *angustior* (Wiegand) Nesom**	**Willow-leaf Aster**	**G5T4**	**S1**		
syn: *Aster praealtus* Poir. var. *angustior* Wieg.					
***Symphyotrichum pratense* (Raf.) Nesom**	**Western Silvery Aster**	**G4?**	**S1**		
syn: *Aster pratensis* Raf.					
syn: *A. sericeus* Vent. var. *microphyllus* DC.					
***Symphyotrichum shortii* (Lindl.) Nesom**	**Short's Aster**	**G5**	**S1**		
syn: *Aster shortii* Lindl.					
***Synandra hispidula* (Michx.) Baill.**	**Gyandotte Beauty**	**G4**	**S2**		
***Taxodium ascendens* Brongn.**	**Pondcypress**	**G5**	**S1**		
Largest population contains trees transitional to *T. distichum*					
***Tetragonotheca helianthoides* L.**	**Squarehead**	**G5**	**S1**		
***Thalictrum macrostylum* Small & Heller**	**Small-leaved Meadow-rue**	**G3G4**	**S1**		
***Tillandsia usneoides* (L.) L.**	**Spanish-moss**	**G5**	**S1S2**		
***Toxicodendron rydbergii* (Small ex Rydb.) Greene**	**Western Poison Ivy**	**G5**	**S1**		
***Triantha glutinosa* (Michx.) Pers.**	**Sticky False Asphodel**	**G5**	**S1**		
syn: *Tofieldia glutinosa* (Michx.) Pers.					
***Triantha racemosa* (Walt.) B.S.P.**	**Coastal False Asphodel**	**G5**	**SH**		
syn: *Tofieldia racemosa* (Walt.) B.S.P.					
***Trichostema setaceum* Houtt.**	**Narrow-leaf Blue Curls**	**G5**	**S2**		
***Tridens chapmanii* (Small) Chase**	**Chapman's Purpletop**	**G3**	**SH**		
syn: *T. flavus* (L.) A.S. Hitchc. var. *chapmanii* (Small) Shinners					
***Trifolium calcaricum* Collins and Wieboldt**	**Running Glade Clover**	**G1**	**S1**		**LE**
***Trifolium reflexum* L.**	**Buffalo Clover**	**G3G4**	**S1**		
***Trillium cernuum* L.**	**Nodding Trillium**	**G5**	**S2**		
***Trillium flexipes* Raf.**	**Drooping Trillium**	**G5**	**SH**		
***Trillium nivale* Riddell**	**Snow Trillium**	**G4**	**S1**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Trillium pusillum* Michx. var. *virginianum* Fern.** Includes var. *moniticulum* Bodkin & Reveal	**Virginia Least Trillium**	**G3T2**	**S2**		
Triphora trianthophora* (Sw.) Rydb. ssp. *trianthophora	**Three Birds Orchid**	**G3G4T3T4**	**S1**		
***Trisetum spicatum* (L.) Richter**	**Narrow False Oats**	**G5**	**S1**		
***Turritis glabra* L.** syn: *Arabis glabra* (L.) Bernh.	**Tower Mustard**	**G5**	**S1**		
***Utricularia juncea* Vahl**	**Southern Bladderwort**	**G5**	**S1**		
***Utricularia olivacea* C. Wright ex Griseb.**	**Dwarf Bladderwort**	**G4**	**SH**		
***Utricularia purpurea* Walt.**	**Purple Bladderwort**	**G5**	**S2**		
***Utricularia striata* Le Conte ex Torr.** syn: *U. fibrosa* Walt.	**Fibrous Bladderwort**	**G4G5**	**S1**		
***Vaccinium crassifolium* Andr.**	**Creeping Blueberry**	**G4G5**	**S1**		
***Vaccinium macrocarpon* Ait.**	**Cranberry**	**G5**	**S2**		
***Vaccinium myrtilloides* Michx.**	**Velvetleaf Blueberry**	**G5**	**S1**		
***Valeriana pauciflora* Michx.**	**Pink Valerian**	**G4**	**S1**		
***Valerianella chenopodiifolia* (Pursh) A.P. de Candolle**	**Goosefoot Corn-salad**	**G4**	**SH**		
***Vandenboschia boschiana* (Sturm) Ebihara & K. Iwatsuki** syn: *Trichomanes boscianum* Sturm	**Appalachian Filmy Fern**	**G4**	**S1**		
***Verbena scabra* Vahl**	**Rough Vervain**	**G5**	**S1**		
***Veronica scutellata* L.**	**Marsh Speedwell**	**G5**	**S1**		
***Viburnum lentago* L.**	**Nannyberry**	**G5**	**S1**		
Vicia americana* Muhl. ex Willd. var. *americana	**American Vetch**	**G5T5**	**S1**		
***Viola* sp. nov.** Unnamed taxon of shale barrens and woodlands, similar in appearance to *Viola pedatifida* G. Don	**A Violet**	**GNR**	**S1**		
***Viola tripartita* Ell. var. *glaberrima* (DC.) R.M. Harper**	**Three-parted Violet**	**G5TNR**	**S1**		
Viola walteri* House var. *walteri	**Prostrate Blue Violet**	**G4G5TNR**	**S2**		
***Vitis palmata* Vahl**	**Red Grape**	**G4**	**S1**		
***Vitis rupestris* Scheele**	**Sand Grape**	**G3**	**S1**		
***Wisteria frutescens* (L.) Poir.**	**American Wisteria**	**G5**	**S1**		
***Wolffia columbiana* Karst.**	**Columbian Watermeal**	**G5**	**S1**		
***Xyris caroliniana* Walt.**	**Carolina Yellow-eyed Grass**	**G4G5**	**S1**		
***Xyris curtissii* Malme** syn: *X. difformis* Chapman var. *curtisii* (Malme) Kral	**Curtiss' Yellow-eyed Grass**	**G5**	**S1**		
***Xyris fimbriata* Ell.**	**Fringed Yellow-eyed Grass**	**G5**	**S1**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Xyris iridifolia* Chapman**	**Iris-leaf Yellow-eyed Grass**	**G4G5**	**S1**		
syn: *Xyris laxifolia* Mart. var. *iridifolia* (Chapman) Kral					
***Xyris platylepis* Chapman**	**Tall Yellow-eyed Grass**	**G5**	**S2**		
***Yucca aloifolia* L.**	**Spanish Dagger**	**G5**	**S1**		
***Yucca flaccida* Haworth**	**Weakleaf Yucca**	**G5**	**S1**		
***Zenobia pulverulenta* (Bartr. ex Willd.) Pollard**	**Dusty Zenobia**	**G4?**	**S1**		
***Zigadenus glaberrimus* Michx.**	**Large Death-camas**	**G5**	**S1**		
***Zornia bracteata* J.F. Gmel.**	**Viperina**	**G5?**	**S1**

VASCULAR PLANT WATCH LIST

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Acalypha deamii* (Weatherby) Ahles**	**Deam's Copperleaf**	**G4?**	**S3**		
***Aconitum reclinatum* Gray**	**White Monkshood**	**G3**	**S3**		
***Adlumia fungosa* (Ait.) Greene ex B.S.P.**	**Climbing Fumitory**	**G4**	**S3**		
***Agrostis scabra* Willd.**	**Rough Bentgrass**	**G5**	**S3?**		
***Amelanchier sanguinea* (Pursh) DC.**	**Roundleaf Serviceberry**	**G5**	**S3**		
Amsonia tabernaemontana* Walt. var. *tabernaemontana	**Eastern Blue-star**	**G5T5**	**S3**		
***Andropogon perangustatus* Nash**	**Narrow-leaved Bluestem**	**G4**	**S3**		
syn: A. *gyrans* Ashe var. *stenophyllus* (Hack.) C. Cambell					
***Andropogon virginicus* L. var. *decipiens* C. Campbell**	**Deceptive Bluestem**	**G5T4**	**S3**		
Under *A. virginicus* L. in Radford *et al.* (1968)					
Under *A. virginicus* L. var. *virginicus* in Fernald (1950)					
***Anemone quinquefolia* L. var. *minima* (DC.) Frodin**	**Dwarf Anemone**	**G5T3**	**S3**		
***Anticlea glauca* Kunth**	**White Death-camas**	**G4G5**	**S3**		
syn: *Zigadenus elegans* Pursh ssp. *glaucus* (Nutt.) Hulten					
***Aristida lanosa* Muhl. ex Ell.**	**Woolly Three-awn Grass**	**G5**	**S3**		
***Aristida tuberculosa* Nutt.**	**Sea-beach Needlegrass**	**G5**	**S3**		
Asclepias incarnata* L. var. *incarnata	**Swamp Milkweed**	**G5T5**	**S3**		
***Asclepias lanceolata* Walt.**	**Few-flower Milkweed**	**G5**	**S3**		
***Asimina parviflora* (Michx.) Dunal**	**Dwarf Pawpaw**	**G5**	**S3**		
***Bacopa monnieri* (L.) Pennell**	**Coastal Water-hyssop**	**G5?**	**S3**		
Baptisia australis* (L.) R. Br. ex Ait. f. var. *australis	**Blue Wild Indigo**	**G5T3T4**	**S3**		
Bartonia paniculata* (Michx.) Muhl. ssp. *paniculata	**Twining Bartonia**	**G5T5**	**S3**		
***Blephilia hirsuta* (Pursh) Benth.**	**Hairy Wood Mint**	**G5?**	**S3**		
***Bolboschoenus novae-angliae* (Britt.) S.G. Sm.**	**New England Bulrush**	**G5**	**S3**		
syn: *Schoenoplectus novae-angliae* (Britt.) M.T. Strong					
***Bulbostylis ciliatifolia* (Ell.) Fern.**	**Savanna Hairsedge**	**G3G5**	**S3?**		
***Bulbostylis coarctata* (Ell.) Fern.**	**Elliott's Hairsedge**	**G3G5**	**S3**		
syn: *Bulbostylis ciliatifolia* (Ell.) Fern. var. *coarctata* (Ell.) Kral					
***Callitriche palustris* L.**	**Vernal Water-starwort**	**G5**	**S3**		
syn: *C. verna* L.					
***Cardamine douglassii* Britt.**	**Purple Cress**	**G5**	**S3**		
***Carex austrodeflexa* P.D. McMillan, Sorrie, & van Eerden**	**Canebrake Sedge**	**G3G4**	**S3S4**		
***Carex canescens* L. var. *disjuncta* (Fern.) Toivonen**	**Silvery Sedge**	**G5T5**	**S3**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Carex careyana* Torr. ex Dewey**	**Carey's Sedge**	**G4G5**	**S3**		
***Carex collinsii* Nutt.**	**Collins's Sedge**	**G4**	**S3**		
***Carex conjuncta* Boott**	**Soft Fox Sedge**	**G4G5**	**S3**		
***Carex floridana* Schwein.** syn: *Carex nigromarginata* Schwein. var. *floridana* (Schwein.) Kukenth.	**Florida Sedge**	**G5?**	**S3**		
***Carex fraseriana* Ker-Gawl.** syn: *Cymophyllus fraserianus* (Ker-Gawl.) Kartesz & Ghandi	**Fraser's Sedge**	**G4**	**S3**		
***Carex leptonervia* (Fern.) Fern.**	**Finely-nerved Sedge**	**G5**	**S3**		
***Carex lucorum* Willd. ex Link var. *austrolucorum* J. Rettig** syn: *C. pensylvanica* Lam. var. *distans* Peck	**Appalachian Woodland Sedge**	**G4T3T4**	**S3**		
***Carex meadii* Dewey**	**Mead's Sedge**	**G4G5**	**S3**		
Carex pedunculata* Muhl. ex Willd. var. *pedunculata	**Long-stalk Sedge**	**G5TNR**	**S3**		
***Carex pellita* Muhl. ex Willd.**	**Woolly Sedge**	**G5**	**S3S4**		
***Carex purpurifera* Mackenzie**	**Limestone Purple Sedge**	**G4?**	**S3**		
***Carex ruthii* Mackenzie**	**Ruth's Sedge**	**G3**	**S3**		
***Carex shortiana* Dewey**	**Short's Sedge**	**G5**	**S3**		
***Carex striata* Michx. var. *brevis* Bailey** syn: *C. walteriana* Bailey var. *brevis* (Bailey) Bailey	**Walter's Sedge**	**G4G5T4?**	**S3**		
***Carex suberecta* (Olney) Britt.**	**Prairie Straw Sedge**	**G4**	**S3**		
***Carex superata* Naczi, Reznicek, & B.A. Ford**	**Limestone Forest Sedge**	**G4?**	**S3**		
***Carex tetanica* Schkuhr**	**Rigid Sedge**	**G4G5**	**S3**		
Carex trisperma* Dewey var. *trisperma	**Three-seeded Sedge**	**G5T5**	**S3**		
***Carex venusta* Dewey**	**Dark Green Sedge**	**G4**	**S3?**		
***Castilleja coccinea* (L.) Spreng.**	**Eastern Indian Paintbrush**	**G5**	**S3**		
***Cenchrus incertus* M.A. Curtis** syn: *C. spinifex* Cav.	**Coastal Sandbur**	**GNR**	**S3**		
***Chaerophyllum procumbens* (L.) Crantz var. *shortii* Torr. & Gray**	**Short's Spreading Chervil**	**G5T3T4Q**	**S3?**		
***Chamaecrista fasciculata* (Michx.) Greene var. *macrosperma* (Fern.) C.F. Reed**	**Marsh Senna**	**G5T3**	**S3**		
***Chamaecyparis thyoides* (L.) B.S.P.**	**Atlantic White-cedar**	**G4**	**S3**		
***Chenopodium simplex* (Torr.) Raf.** Under *C. hybridum* L. in Fernald (1950), syn: *C. gigantospermum* Aellen	**Maple-leaf Goosefoot**	**G5**	**S3**		
***Chrysogon virginianum* L. var. *brevistolon* Nesom**	**Carolina Green-and-gold**	**G5TNR**	**S3**		
***Cinna latifolia* (Trev. ex Goepp.) Griseb.**	**Slender Wood Reedgrass**	**G5**	**S3**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Clematis albicoma* Wherry**	**White-haired Leatherflower**	**G4**	**S3**		
***Clematis coactilis* (Fern.) Keener**	**Virginia White-haired Leatherflower**	**G3**	**S3**		
***Clematis crispa* L.**	**Marsh Swamp Leatherflower**	**G5**	**S3**		
***Coleataenia longifolia* (Torrey) Soreng ssp. *combsii* (Scribn. & C.R. Ball) Soreng** syn: *Panicum longifolium* Torrey var. *combsii* (Scribn. & Ball) Fern.	**Combs' Panic Grass**	**G5T5?**	**S3?**		
***Corallorrhiza wisteriana* Conrad**	**Spring Coralroot**	**G5**	**S3**		
***Croton monanthogynus* Michx.**	**Prairie Tea**	**G5**	**S3**		
***Cyperus haspan* L.**	**Sheathed Flatsedge**	**G5**	**S3**		
***Cyperus refractus* Engelm. ex Boeckl.**	**Reflexed Flatsedge**	**G5**	**S3**		
***Delphinium exaltatum* Ait.**	**Tall Larkspur**	**G3**	**S3**		
***Dendrolycopodium dendroideum* (Michx.) A. Haines** syn: *Lycopodium dendroideum* Michx.	**Prickly Tree-clubmoss**	**G5**	**S3**		
***Dendrolycopodium hickeyi* (W.H. Wagner, Beitel & Moran) A. Haines** syn: *Lycopodium hickeyi* W.H. Wagner, Beitel, & Moran	**Hickey's Tree-clubmoss**	**G5**	**S3?**		
***Descurainia pinnata* (Walt.) Britt. var. *brachycarpa* (Richards.) Detling**	**Western Tansy Mustard**	**G5T5**	**S3?**		
***Desmodium fernaldii* Schub.**	**Fernald's Tick-trefoil**	**G4**	**S3**		
***Desmodium lineatum* DC.**	**Sand Tick-trefoil**	**G5**	**S3**		
***Diarrhena americana* Beauv.**	**American Beakgrain**	**G4G5**	**S3**		
***Dichanthelium annulum* (Ashe) LeBlond**	**Ringed Panic Grass**	**G3G4**	**S3**		
***Dichanthelium fusiforme* (Hitchcock) Harvill** Under D. *aciculare* (Desv. ex Poir.) Gould & C.A. Clark in Kartesz (1999)	**Spindle-fruited Panic Grass**	**G5?**	**S3**		
***Dichanthelium portoricense* (Desv. ex Ham.) B.F. Hansen & Wunderlin ssp. *patulum* (Scribn. & Merr.) Freckmann & LeLong** syn: *Panicum lancearium* Trin.	**Hemlock Panic Grass**	**G5T5**	**S3**		
***Dichanthelium ravenelii* (Scribn. & Merr.) Gould** syn: *Pancium ravenelii* Scribn. & Merr.	**Ravenel's Panic Grass**	**G5**	**S3**		
***Dichanthelium scabriusculum* (Ell.) Gould & C.A. Clark** syn: *Panicum scabriusculum* Ell.	**Tall Swamp Panic Grass**	**G4**	**S3**		
***Dichanthelium wrightianum* (Scribn.) Freckmann** syn: *Panicum wrightianum* Scribn.	**Wright's Panic Grass**	**G4**	**S3**		
***Dicliptera brachiata* (Pursh) Spreng.**	**Branched Dicliptera**	**G5**	**S3**		
***Diphylleia cymosa* Michx.**	**Umbrella-leaf**	**G4**	**S3**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Drosera brevifolia* Pursh** syn: *D. leucantha* Shinners	**Dwarf Sundew**	**G5**	**S3**		
***Drosera capillaris* Poir.**	**Pink Sundew**	**G5**	**S3**		
***Drosera intermedia* Hayne**	**Water Sundew**	**G5**	**S3**		
***Dryopteris campyloptera* Clarkson** syn: D. *spinulosa* (O.F. Muell.) Watt var. *americana* (Fisch.) Fern.	**Mountain Wood Fern**	**G5**	**S3**		
***Echinodorus cordifolius* (L.) Griseb.**	**Creeping Burhead**	**G5**	**S3**		
***Eleocharis albida* Torr.**	**White Spikerush**	**G4G5**	**S3**		
***Eleocharis palustris* (L.) Roemer & J.A. Schultes**	**Common Spikerush**	**G5**	**S3?**		
***Eleocharis rostellata* (Torr.) Torr.**	**Beaked Spikerush**	**G5**	**S3**		
***Erigenia bulbosa* (Michx.) Nutt.**	**Harbinger-of-spring**	**G5**	**S3**		
***Eriophorum virginicum* L.**	**Tawny Cottongrass**	**G5**	**S3**		
***Eurybia spectabilis* (Ait.) Nesom** *syn: Aster spectabilis* Ait. var. *spectabilis* and var. *suffultus* Fern. Under *A spectabilis* Ait. in Radford *et al.* (1968)	**Showy Aster**	**G5**	**S3**		
***Fallopia cilinodis* (Michx.) Holub** syn: *Polygonum cilinode* Michx.	**Fringed Bindweed**	**G5**	**S3**		
***Floerkea proserpinacoides* Willd.**	**False Mermaid**	**G5**	**S3**		
***Fraxinus nigra* Marsh.**	**Black Ash**	**G5**	**S3**		
***Fraxinus quadrangulata* Michx.**	**Blue Ash**	**G5**	**S3**		
***Galium boreale* L.**	**Northern Bedstraw**	**G5**	**S3**		
***Galium hispidulum* Michx.**	**Coastal Bedstraw**	**G5**	**S3**		
***Gentiana austromontana* Pringle & Sharp**	**Appalachian Gentian**	**G3**	**S3?**		
***Geranium robertianum* L.**	**Herb Robert**	**G5**	**S3**		
***Glyceria acutiflora* Torr.**	**Sharp-scaled Mannagrass**	**G5**	**S3**		
***Glyceria canadensis* (Michx.) Trin.**	**Canada Mannagrass**	**G5**	**S3**		
***Gymnocarpium appalachianum* Pryer & Haufler**	**Appalachian Oak Fern**	**G3**	**S3**		
***Gymnocladus dioicus* (L.) K. Koch**	**Kentucky Coffee-tree**	**G5**	**S3**		
***Gymnopogon brevifolius* Trin.**	**Short-leaf Beard Grass**	**G5**	**S3**		
***Helianthus hirsutus* Raf.**	**Hairy Sunflower**	**G5**	**S3**		
***Heuchera hispida* Pursh**	**Purple Alumroot**	**G3?**	**S3?**		
***Heuchera parviflora* Bartl.**	**Small-flowered Alumroot**	**G4**	**S3**		
Hexalectris spicata* (Walt.) Barnh. var. *spicata	**Crested Coralroot**	**G5T4T5**	**S3**		
***Hexastylis lewisii* (Fern.) Blomquist & Oosting**	**Lewis's Heartleaf**	**G3**	**S3**		
***Hottonia inflata* Ell.**	**Featherfoil**	**G4**	**S3**		
***Hydrastis canadensis* L.**	**Golden-seal**	**G3G4**	**S3**		
***Hydrolea quadrivalvis* Walt.**	**Waterpod**	**G5**	**S3**		
***Hypericum drummondii* (Grev. & Hook.) Torr. & Gray**	**Nits-and-lice**	**G5**	**S3**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Hypericum mitchellianum* Rydb.**	**Blue Ridge St. John's-wort**	**G3**	**S3**		
***Hypericum virgatum* Lam.**	**Sharp-leaf St. John's-wort**	**G4?**	**S3**		
syn: H. *denticulatum* Walt. var. *acutifolium* (Ell.) Blake					
***Hypoxis curtissii* Rose in Small**	**Curtiss' Yellow Stargrass**	**G4?**	**S3**		
***Ilex vomitoria* Ait.**	**Yaupon**	**G5**	**S3**		
***Iresine rhizomatosa* Standl.**	**Eastern Bloodleaf**	**G5**	**S3**		
***Iris prismatica* Pursh ex Ker-Gwal.**	**Slender Blue Iris**	**G4G5**	**S3**		
***Iris versicolor* L.**	**Larger Blue Flag**	**G5**	**S3**		
***Isoetes riparia* Engelm. ex A. Braun**	**Shore Quillwort**	**G5**	**S3**		
***Juglans cinerea* L.**	**Butternut**	**G4**	**S3?**		
***Juncus longii* Fern.**	**Long's Rush**	**G3Q**	**S3?**		
Justicia ovata* (Walt.) Lindau var. *ovata	**Coastal Plain Water-willow**	**G5T4T5**	**S3**		
***Lechea maritima* Leggett ex B.S.P. var. *virginica* Hodgon**	**Virginia Beach Pinweed**	**G5T3Q**	**S3**		
***Leptochloa fascicularis* (Lam.) Gray**	**Bearded Sprangletop**	**G5**	**S3**		
syn: *L. fusca* (L.) Kunth ssp. *fascicularis* (Lam.) N. Snow					
***Liatris helleri* T.C. Porter**	**Heller's Blazing Star**	**GNR**	**S3**		
***Lilium philadelphicum* L.**	**Wood Lily**	**G5**	**S3**		
***Linum sulcatum* Riddell**	**Grooved Yellow Flax**	**G5**	**S3**		
***Listera smallii* Wieg.**	**Appalachian Twayblade**	**G4**	**S3**		
***Lithospermum latifolium* Michx.**	**American Gromwell**	**G4**	**S3**		
***Lithospermum tuberosum* Rugel ex DC.**	**Tuberous Gromwell**	**G4**	**S3**		
***Lonicera canadensis* Bartr. ex Marsh.**	**American Fly-honeysuckle**	**G5**	**S3**		
***Ludwigia glandulosa* Walt.**	**Cylindric-fruited Primrose-willow**	**G5**	**S3**		
***Ludwigia leptocarpa* (Nutt.) Hara**	**Angle-stem Primrose-willow**	**G5**	**S3**		
***Ludwigia sphaerocarpa* Ell.**	**Globe-fruited Seedbox**	**G5**	**S3**		
***Lygodium palmatum* (Bernh.) Sw.**	**American Climbing Fern**	**G4**	**S3**		
***Malaxis spicata* Sw.**	**Florida Adder's-mouth**	**G4?**	**S3**		
syn: M. *floridana* (Chapman) Kuntze					
***Meehania cordata* (Nutt.) Britt.**	**Meehan's Mint**	**G5**	**S3**		
***Micranthes caroliniana* (A. Gray) Small**	**Carolina Saxifrage**	**G3**	**S3**		
syn: *Saxifraga caroliniana* Gray					
***Milium effusum* L. var. *cisatlanticum* Fern.**	**Tall Millet Grass**	**G5TNR**	**S3**		
***Minuartia patula* (Michx.) Mattf.**	**Pitcher's Stitchwort**	**G4**	**S3**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Monotropsis odorata* Schwein. *ex* Ell.**	**Sweet Pinesap**	**G3**	**S3**		
***Myriophyllum pinnatum* (Walt.) B.S.P.**	**Cut-leaf Water-milfoil**	**G5**	**S3**		
***Nabalus roanensis* Chickering**	**Roan Mountain Rattlesnake-root**	**G3**	**S3**		
syn: *Prenanthes roanensis* (Chickering) Chickering					
***Nelumbo lutea* Willd.**	**American Lotus**	**G4**	**S3**		
***Ophioglossum engelmannii* Prantl**	**Engelmann's Adder's-tongue**	**G5**	**S3**		
Packera paupercula (*Michx) Á. & D. Löve var. *paupercula	**Balsam Ragwort**	**G5TNR**	**S3?**		
syn: Senecio pauperculus Michx.					
***Panax quinquefolius* L.**	**Ginseng**	**G3G4**	**S3S4**		**LT**
***Paronychia baldwinii* (Torr. & Gray) Fenzl ex Walp.ssp. *riparia* (Chapman) Chaudhri**	**Baldwin's Nailwort**	**G4T4?**	**S3**		
***Parthenium integrifolium* L. var. *mabryanum* Mears**	**Mabry's Wild Quinine**	**G5T3**	**S3?**		
***Paspalum boscianum* Fluegge**	**Bull Paspalum**	**G5**	**S3**		
***Pedicularis lanceolata* Michx.**	**Swamp Lousewort**	**G5**	**S3**		
Pellaea glabella* Mett. ex Kuhn ssp. *glabella	**Smooth Cliff-brake**	**G5T5**	**S3**		
***Penstemon hirsutus* (L.) Willd.**	**Hairy Beard-tongue**	**G4**	**S3**		
***Phacelia purshii* Buckl.**	**Miami-mist**	**G5**	**S3**		
***Philadelphus hirsutus* Nutt.**	**Hairy Mock Orange**	**G5**	**S3**		
***Phlox nivalis* Lodd. ex Sweet**	**Trailing Phlox**	**G4**	**S3**		
***Phragmites australis* (Cav.) Trin. ex Steud. ssp. *americanus* Saltonstall, P.M. Peterson, & Soreng**	**American Common Reed**	**G5T5**	**S3**		
***Physalis walteri* Nutt.**	**Dune Ground-cherry**	**G4**	**S3**		
syn: *P. maritima* M.A. Curtiss syn: *P. viscosa* L. ssp. *maritima* (M.A. Curtiss) Waterfall					
***Physostegia leptophylla* Small**	**Slender-leaf False Dragonhead**	**G4?**	**S3**		
Platanthera flava* (L.) Lindl. var. *flava	**Southern Rein Orchid**	**G4?T4?Q**	**S3?**		
***Platanthera flava* (L.) Lindl. var. *herbiola* (R. Br. ex Ait. f.) Luer**	**Tubercled Rein Orchid**	**G4?T4Q**	**S3?**		
***Pogonia ophioglossoides* (L.) Ker-Gawl.**	**Rose Pogonia**	**G5**	**S3**		
***Polygala cruciata* L.**	**Cross-leaved Milkwort**	**G5**	**S3?**		
***Polygonella articulata* (L.) Meisn.**	**Coastal Jointweed**	**G5**	**S3**		
***Polygonum ramosissimum* Michx.**	**Bushy Knotweed**	**G5**	**S3**		
***Ponthieva racemosa* (Walt.) C. Mohr**	**Shadow Witch Orchid**	**G4G5**	**S3**		
***Potamogeton perfoliatus* L.**	**Perfoliate Pondweed**	**G5**	**S3**		
Treated as *P. perfoliatus* L. var. *bupleuroides* (Fern.) Farw. in Radford et al. (1968), and Fernald (1950)

VASCULAR PLANT REVIEW LIST
(Taxa of Uncertain Status)

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Agalinis fasciculata* (Ell.) Raf.**	**Tall False Foxglove**	**G5**	**SU**		
syn: *Gerardia fasciculata* (Ell.) Raf.					
***Agrostis altissima* (Walt.) Tuckerman**	**Coastal Bog Bentgrass**	**G4**	**SNR**		
***Allium burdickii* (Hanes) A.G. Jones**	**Narrow-leaved ramps**	**G4G5**	**SU**		
Alopecurus aequalis* Sobol. var. *aequalis	**Short-awn Foxtail Grass**	**G5T5**	**SNA**		
***Ampelopsis cordata* Michx.**	**Heart-leaf Peppervine**	**G5**	**SNR**		
***Andropogon glaucopsis* Ell.**	**Chalky Bluestem**	**G3G5**	**SNR**		
syn: *A. virginicus* L. var. *glaucopsis* (Ell.) A.S. Hitchc. syn: A. *glomeratus* (Walt.) Britt. var. *glaucopsis* (Ell.) A.S. Hitchc., Under *A. virginicus* L. in Radford *et al.* (1968)					
***Andropogon tenuispatheus* (Nash) Nash**	**Maritime Bushy Bluestem**	**G5**	**SU**		
syn: *A. glomeratus* (Walt.) Britt. var. *pumilus* Vasey ex Dewey					
***Antennaria howellii* Greene ssp. *petaloidea* (Fern.) Bayer**	**Small Pussytoes**	**G5T4T5**	**SU**		
syn: *A. petaloidea* (Fern.) Fern.					
***Arisaema triphyllum* (L.) Schott ssp. *stewardsonii* (Britt.) Huttleston**	**Bog Jack-in-the-pulpit**	**G5T4T5**	**SU**		
syn: *A. stewardsonii* Britt.					
***Asarum canadense* L. var. *acuminatum* Ashe**	**Wild ginger**	**G5TNR**	**SU**		
***Asplenium trichomanes* L. ssp. *quadrivalens* D.E. Meyer emend. Lovis**	**Limestone maidenhair**	**G5TNR**	**SU**		
***Boechera burkii* (Porter) Windham & Al-Shehbaz**	**Burk's Smooth Rock Cress**	**G3G5**	**SU**		
***Calystegia silvatica* (Kit.) Griseb. ssp. *fraterniflora* (Mackenzie & Bush) Brummitt**	**Large Bindweed**	**G5T5**	**SU**		
syn: *Convolvulus sepium* L. var. *fraterniflorus* Mackenzie & Bush					
***Carex cherokeensis* Schweinitz**	**Cherokee Sedge**	**G4G5**	**SNA**		
***Carex molesta* Mackenzie ex Bright**	**Troublesome Sedge**	**G4**	**SNR**		
***Carex muehlenbergii* Schkuhr ex Willd. var. *enervis* Boott**	**Small-fruited Muehlenberg's Sedge**	**G5T5**	**SNR**		
***Carex tribuloides* Wahlenberg var. *sangamonensis* Clokey**	**Midwestern Blunt Broom Sedge**	**G5T4T5**	**SNR**		
***Coleataenia anceps* (Michx.) Soreng ssp. *rhizomata* (A.S. Hitchc. & Chase) Soreng**	**Small Beaked Panic Grass**	**G5TNR**	**SU**		
syn: *Panicum anceps* Michx. var. *rhizomatum* (A.S. Hitchc. & Chase) Fern.					

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Crataegus disperma* Ashe**	**Two-seed Hawthorn**	**G4G5**	**SU**		
***Crataegus iracunda* Beadle**	**Forest Hawthorn**	**G5**	**SU**		
Included in *C. flabellata* (Bosc.) K. Koch. in Radford *et al*. (1968)					
***Crataegus vailiae* Britt.**	**Vail's Hawthorn**	**G4?Q**	**SU**		
***Crepidomanes intricatum* (Farrar) Ebihara & Weakley**	**Grotto-felt**	**G4G5**	**SU**		
syn: *Trichomanes intricatum* Farrar					
Cypripedium parviflorum* Salisb. var. *parviflorum	**Small Yellow Lady's-slipper**	**G5T3T5**	**SNR**		
***Desmodium paniculatum* (L.) DC. var. *epetiolatum* Schub.**	**Narrow-leaf Tick-trefoil**	**G5T1Q**	**SNR**		
***Diarrhena obovata* (Gleason) Brandenburg**	**Western Beakgrain**	**G4G5**	**SNA**		
syn: *D. americana* Beauv. var. *obovata* Gleason					
***Dichanthelium cryptanthum* (Ashe) LeBlond**	**Hidden-flowered Panic Grass**	**G2G3**	**S1**		
syn: *Panicum scabriusculum* (Ell.) Gould & Clark var. *cryptanthum* (Ashe) Gleason					
***Dichanthelium spretum* (J.A. Schultes) Freckmann**	**Eaton's Panic Grass**	**G5**	**SNR**		
syn: *Panicum spretum* J.A. Schultes					
***Digitaria villosa* (Walt.) Pers.**	**Shaggy Crabgrass**	**G5**	**SU**		
syn: D. *filiformis* (L.) Koeler var. *villosa* (Walt.) Fern.					
Eragrostis pectinacea* (Michx.) Nees ex Steud. var. *pectinacea	**Tufted Lovegrass**	**G5T5**	**SNR**		
***Eupatorium cordigerum* (Fern.) Fern.**	**Clasping Round-leaf Thoroughwort**	**GNR**	**SU**		
syn: *Eupatorium rotundifolium* L. var. *cordigerum* Fern.					
***Eupatorium vaseyi* Porter**	**Vasey's Thoroughwort**	**G3G5**	**SU**		
syn: *Eupatorium sessilifolium* L. var. *vaseyi* (Porter) Fern. & Grisc.					
syn: E. *album* L. var. *monardifolia* Fern.					
***Euphorbia pubentissima* Michx.**	**False Flowering Spurge**	**G5**	**SU**		
***Euphorbia spathulata* Lam.**	**Woodland Spurge**	**G5**	**SU**		
Included with *E. obtusata* Pursh in Harvill *et al*. (1992).					
***Euthamia hirtipes* (Fern.) Sieren**	**Marsh Flat-top Goldenrod**	**GNR**	**SNR**		
syn: E. *graminifolia* (L.) Nutt. var. *hirtipes* (Fern.) C.&J. Taylor					

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Galium orizabense* Hemsl. ssp. *laevicaule* (Weatherby & Blake) Dempster** syn: G. *pilosum* Ait. var. *laevicaule* Weatherby & Blake	**Bald Bedstraw**	**G5?T4?**	**SU**		
***Glandularia canadensis* (L.) Nutt.** syn: *Verbena canadensis* (L.) Britt.	**Rose Vervain**	**G5**	**SNA**		
***Gratiola virginiana* L. var. *aestuariorum* Pennell**	**Roundfruit hedge-hyssop**	**G5T2T4**	**SU**		
***Isolepis carinata* Hooker & Arnott ex Torr.** syn: *Isolepis koilolepis Steud.* syn: *Scirpus koilolepis* (Steud.) Gleason	**Keeled Bulrush**	**G5**	**SNA**		
Juncus validus* Coville var. *validus syn: J. *crassifolius* Buch.	**Round-headed Rush**	**G5T3T5**	**SNA**		
***Lathyrus pusillus* Ell.**	**Tiny Pea**	**G5?**	**SNA**		
***Lemna minuta* Kunth**	**Pale duckweed**	**G4**	**SU**		
***Leptochloa panicea* (Retz) Ohwi ssp. *brachiata*(Steudel) N. Snow**	**Red Sprangletop**	**GNRTNR**	**SNA**		
***Leptochloa panicoides* (J. Presl) A.S. Hitchc.** *syn: Diplachne panicoides* (J. Presl) McNeill	**Amazon Sprangletop**	**G5**	**SNA**		
***Liatris squarrulosa* Michx.** Under *L. aspera* Michx. in Harvill et al. (1992) syn: *L. earlei (Greene) K. Schum.*	**Appalachian Blazing Star**	**G4G5**	**SU**		
***Ludwigia polycarpa* Short & Peter**	**A seedbox**	**G4**	**SU**		
***Lycopus angustifolius* Ell.**	**Narrow-leaf Bugleweed**	**G4?Q**	**SU**		
***Malaxis bayardii* Fern.** Under *M. unifolia* Michx. in Radford et al. (1968)	**Appalachian Adder's-mouth**	**G1G2**	**SU**		
***Melampyrum lineare* Desr. var. *pectinatum* (Pennell) Fern.**	**Pine Barren Cow-wheat**	**G5T5**	**SU**		
***Orobanche riparia* L.T. Collins**	**River Broomrape**	**G4?**	**SU**		
***Panicum gattingeri* Nash**	**Gattinger's Panic Grass**	**G4**	**SNR**		
Physalis angulata* L. var. *angulata	**Cut-leaf Ground-cherry**	**G5TNR**	**SNA**		
***Planodes virginicum* (L.) E.L. Greene** syn: *Sibara virginica* (L.) Rollins	**Virginia Winged Rock Cress**	**G5**	**SNR**		
***Pycnanthemum beadlei* (Small) Fern.**	**Beadle's Mountain-mint**	**G2G4**	**SU**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***Pycnanthemum loomisii* Nutt.** Under *P. incanum* (L.) Michx. in Radford et al. (1968) syn: *Pycnanthemum incanum* (L.) Michx. var. *loomisii* (Nutt.) Fern.	**Loomis' Mountain-mint**	**G4?**	**SU**		
***Rosa blanda* Aiton**	**Smooth Rose**	**G5**	**SU**		
***Rudbeckia laciniata* L. var. *humilis* Gray** Under *R. laciniata* L. in Radford et al. (1968)	**Southeastern Cutleaf Coneflower**	**G5T3?**	**SU**		
***Sagittaria platyphylla* (Engelm.) J.G. Sm.**	**Delta Arrowhead**	**G5**	**SU**		
***Salix lucida* Muhl.**	**Shining Willow**	**G5**	**SNA**		
Silphium asteriscus* L. var. *asteriscus	**Starry Rosin Weed**	**G5TNR**	**SNR**		
***Silphium asteriscus* L. var. *latifolium* (Gray) Clevinger**	**Broad-leaved Rosin Weed**	**G4?T4?**	**SNR**		
***Sisyrinchium capillare* Bickn.** Under *S. albidum* Raf. in Radford et al. (1968)	**Wiry Blue-eyed-grass**	**GNR**	**SU**		
Solidago canadensis* L. var. *canadensis	**Canada Goldenrod**	**G5T5**	**SNR**		
***Solidago lancifolia* Torr. & Gray** Under *S. curtissii* Torr. & Gray in Kartesz (1999) Radford et al. (1968)	**Lance-leaf Goldenrod**	**G3G4Q**	**SU**		
Spiranthes lacera* (Raf.) Raf. var. *lacera	**A ladies'-tresses**	**G5T5**	**SU**		
Symphyotrichum ontarionis* (Wiegand) Nesom var. *ontarionis	**Bottomland Aster**	**G5TNR**	**SNR**		
***Symphyotrichum* x *schistosum* (Steele) Nesom** syn: *Aster schistosus* Steele syn: *A. x schistosus* (Steele) Nesom in Kartesz (1999)	**Millboro aster**	**GNA**	**SNA**		
***Tridens strictus* (Nutt.) Nash** syn: *Triodia stricta* (Nutt.) Benth. ex Vasey	**Long-spike Tridens**	**G5**	**SNA**		
***Trillium luteum* (Muhl.) Harbison**	**Yellow Trillium**	**G4**	**SE?**		
***Viola incognita* Brainerd** syn.: *Viola blanda* Willd. var. *palustriformis* Gray	**Large-leaved White Violet**	**G4G5T4T5**	**SNR**		
***Vittaria appalachiana* Farrar & Mickel**	**Appalachian Shoestring Fern**	**G4**	**SU**		

PART FOUR:

RARE LICHEN AND BRYOPHYTE LISTS

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
LICHENS					
***Alectoria fallacina* Motyka**	**Witch's-hair lichen**	**G2**	**SH**		
***Arctoparmelia centrifuga* (L.) Hale**	**Concentric ring lichen**	**G5**	**S1**		
***Buellia stellulata* (Taylor) Mudd**	**Button lichen**	**GNR**	**S1**		
***Calvitmela talayana* (Haugen & Timdal) Andreev**	**A lichen**	**GNR**	**S1**		
***Cetradonia linearis* (Evans) J.-C. Wei & Ahti** syn: *Gymnoderma lineare* (A.Evans) Yoshim. & Sharp	**Rock-gnome lichen**	**G3**	**S1**	**LE**	
***Cetrelia monachorum* (Zahlbr.) Culb. & C. Culb.**	**Sea-storm lichen**	**G2G4**	**SH**		
***Cladonia coccifera* (L.) Willd.**	**A Cladonia**	**G5**	**S1?**		
***Heterodermia appalachensis* (Kurok.) Culb.**	**Appalachian fringe lichen**	**G2?**	**SH**		
***Heterodermia erecta* Lendemer**	**A fringe lichen**	**G1?**	S1		
***Hypogymnia krogiae* Ohlsson**	**Freckled tube lichen**	**G3G4**	**S1**		
***Hypotrachyna lividescens* (Kurok.) Hale**	**A loop lichen**	**GNR**	S1		
***Hypotrachyna oostingii* (J.P. Dey) Hale**	**Oosting's loop lichen**	**G2?**	**SH**		
***Hypotrachyna prolongata* (Kurok.) Hale**	**A loop lichen**	**G3G4**	**SH**		
***Hypotrachyna virginica* (Hale) Hale** syn: *Parmelia virginica* Hale	**A loop lichen**	**G1G2**	**SH**		
***Melanelia culbersonii* (Hale) Thell**	**Appalachian camouflage lichen**	**G2G4**	**S2**		
***Parmelia omphalodes* (L.) Ach.**	**Smoky crottle**	**G2G4**	**S2?**		
***Parmotrema louisianae* (Hale) Hale**	**A ruffle lichen**	**G3G5**	**S1**		
***Peltigera hydrothyria* Miadikowski & Lutzona** syn: *Hydrothyria venosa* J.L. Russell	**Waterfan**	**G4**	**S1**		
***Porpidia lowiana* Gowan**	**A boulder lichen**	**G2G3**	**S1**		
***Porpidia tuberculosa* (Sm.) Hertel & Knoph**	**A boulder lichen**	**G2G4**	**S1**		
***Psilolechea clavulifera* (Nyl.) Coppins**	**A lichen**	**GNR**	**S1**		
***Punctelia graminicola* (B. de Lesd.) Egan**	**Speckled shield lichen**	**G?**	**S1**		
***Stereocaulon glaucescens* Tuck.**	**Bony foam lichen**	**G3**	**S2?**		
***Teloschistes flavicans* (Sw.) Norman**	**Powdered orange bush lichen**	**G4G5**	**SH**		
***Usnea angulata* Ach.**	**A beard lichen**	**G3G5**	**S1**		
LIVERWORTS					
***Anastrophyllum minutum* (Schreb.) R.M. Schust.**	**Comb Notchwort**	**G5**	**S1**		
***Aneura sharpii* Inoue & N.G. Mill.**	**A liverwort**	**G1G2**	**S1**		
***Barbilophozia attenuata* (Nees) Loeske**	**A liverwort**	**G5**	**S1**		
***Bazzania nudicaulis* A. Evans**	**A liverwort**	**G2G3**	**S1**		
***Bazzania tricrenata* (Wahlenb.) Trevis.**	**Three-toothed Whip Liverwort**	**G4**	**S1**		
***Cephaloziella spinicaulis* Douin**	**A liverwort**	**G3G4**	**S1**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
***LIVERWORTS*, continued**					
***Diplophyllum andrewsii* A. Evans**	**A moss**	**G3**	**SH**		
***Diplophyllum taxifolium* (Wahlenb.) Dumort.**	**Yew-leaved Earwort**	**G5**	**S1**		
***Drepanolejeunea appalachiana* R. M. Schuster**	**Appalachian threadwort**	**G2?**	**S1**		
***Frullania caulisequa* (Nees) Nees**	**A liverwort**	**GNR**	**SH**		
***Lejeunea blomquistii* (Evans) Schust.**	**Blomquist's Leafy Liverwort**	**G1G2**	**S1**		
***Lejeunea ruthii* (Evans) Schust.**	**A liverwort**	**G3G4**	**S1**		
***Leptoscyphus cuneifolius* (Hook.) Mitt.**	**Wedge Flapwort**	**G4G5**	**SH**		
***Marsupella paroica* R. M. Schust.**	**A liverwort**	**G3**	**SH**		
***Metzgeria temperata* Kuwahara**	**Whiskered Veilwort**	**G4**	**S1**		
***Pellia endiviifolia* (Dicks.) Dumort.**	**Endive Pellia**	**G5**	**SH**		
***Plagiochasma rupestre* (Forst.) Steph.**	**A flapwort**	**G5**	**S1**		
***Plagiochila exigua* (Taylor) Taylor**	**A liverwort**	**GNR**	**SH**		
***Plagiochila sullivantii* Gottsche ex A. Evans**	**Sullivant's leafy liverwort**	**G2**	**SH**		
***Schistochilopsis incisa* (Schrad.) Konstant.**	**Jagged notchwort**	**G5**	**S1**		
***Solenostoma pyrifolium* Steph.**	**A liverwort**	**GNR**	**SH**		
***Sphenolobopsis pearsonii* (Spruce) R.M. Schust**	**Horsehair threadwort**	**G2?**	**S1**		
***Tritomaria exsecta* (Schmidel ex Schrad.) Schiffn. ex Loeske**	**Cut Notchwort**	**G5**	**SH**		
***Tritomaria exsectiformis* (Breidl.) Schiffn. ex Loeske**	**Large cut notchwort**	**G5**	**SH**		
MOSSES					
***Bryoerythrophyllum ferruginascens* (Stirt.) Giacom.**	**Bryoerythrophyllum moss**	**G3G4**	**SH**		
***Calliergon cordifolium* (Hedw.) Kindb.**	**Calliergon moss**	**G5**	**S1**		
***Campylopus carolinae* Grout**	**A moss**	**G2**	**S1**		
***Campylopus surinamensis* Müll. Hal.**	**A moss**	**G4G5**	**S1**		
***Cirriphyllum piliferum* (Hedw.) Grout**	**Cirrhiphyllum moss**	**G5**	**S1**		
***Codriophorus aduncoides* (Bednarek-Ochyra) Bednarek-Ochyra & Ochyra**	**A moss**	**GNR**	**SH**		
***Conardia compacta* (Hook.) H. Rob.**	**A moss**	**G5**	**SH**		
***Coscinodon cribrosus* (Hedw.) Spruce**	**Copper Coscinodon**	**G3G4**	**S1**		
***Cryphaea nervosa* (Hook. & Wilson) Müll. Hal.**	**A moss**	**G4?**	**S1**		
***Dicranoweisia crispula* (Hedw.) Milde**	**Mountain Thatch Moss**	**G5**	**S1**		
***Dicranum muehlenbeckii* Bruch & Schimp.**	**A moss**	**G5**	**SH**		
***Entodon sullivantii* (Müll. Hal.) Lindb.**	**Sullivant's Entodon moss**	**G3G4**	**S2**		
***Forsstroemia producta* (Hornsch.) Paris**	**A moss**	**G5?**	**S1**		

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
MOSSES, continued					
Grimmia alpestris **(F. Weber & D. Mohr) Schleicher**	**A moss**	**G3G5**	**S1**		
Herpetineuron toccoae **(Sull. & Lesq.) Cardot**	**A moss**	**G4G5**	**S1**		
Heterocladium macounii **Best**	**A moss**	**G4**	**S1**		
Homalia trichomanoides **(Hedw.) Schimp. var. *trichomanoides***	**Lime Homalia moss**	**G5**	**SH**		
Homaliadelphus sharpii **(R.S. Williams) Sharp**	**Sharp's Homaliadelphus moss**	**G3?**	**S1**		
Hylocomiastrum umbratum **(Hedw.) M. Fleisch. ex Broth.**	**A moss**	**G5**	**SH**		
Imbribryum gemmiparum **(De. Not.) J.R. Spence & H.P. Ramsay**	**Bud-tipped Bryum**	**G3G5**	**S1**		
Leptodontium viticulosoides **var. *sulphureum*** **(Müll. Hal.) R.H. Zander**	**Granfather Mountain Leptodontium**	**G2**	**SH**		
Neckera complanata **(Hedw.) Hübener**	**A moss**	**G5**	**S1**		
Oncophorus rauei **(Austin) Grout**	**A moss**	**G3**	**SH**		
Orthotrichum elegans **Schwägr. ex Hook. & Grev.**	**A moss**	**G5**	**S1**		
Orthotrichum keeverae **Crum & Anders.**	**Keever's bristle-moss**	**G2**	**S1**		
Plagiothecium latebricola **BSG**	**Lurking leskea**	**G3G4**	**SNA**		
Platydictya minutissima	**Small willow moss**	**G3**	**SH**		
Polytrichastrum alpinum **(Hedw.) G. L. Sm. var. *alpinum***	**Alpine haircap moss**	**G5T5**	**SH**		
Polytrichastrum formosum **(Hedw.) G. L. Sm. var. *densifolium*** **(Mitten) Z. Iwatsuki & A. Noguchi**	**A haircap moss**	**G5TNR**	**SH**		
Pseudobryum cinclidioides **(Huebener) T.J. Kop.**	**River thyme moss**	**G5**	**SH**		
Rhabdoweisia crenulata **(Mitt.) H. Jameson**	**Himalayan Ribbed Weissia**	**G3G5**	**S1**		
Schistidium dupretii **(Thér.) W. A. Weber**	**A moss**	**GNR**	**SH**		
Schlotheimia rugifolia **(Hook.) Schwägr.**	**A moss**	**G3G5**	**SH**		
Sphagnum angustifolium **(C. Jens. ex Russ.) C. Jens.**	**Narrowleaf peatmoss**	**G5**	**S1S2**		
Sphagnum contortum **Schultz**	**A peatmoss**	**G5**	**S1**		
Sphagnum fuscum **(Schimp.) Klinggr.**	**Brown peatmoss**	**G5**	**SH**		
Sphagnum girgensohnii**Russ.**	**Girgensohn's peatmoss**	**G5**	**S1S2**		
Sphagnum macrophyllum **Bernh. ex Brid. var. *macrophyllum***	**Large-leaf peatmoss**	**G3G5**	**S2**		
Sphagnum portoricense **Hampe**	**Puerto Rico peatmoss**	**G5**	**S1**		
Sphagnum rubellum **Wils.**	**Red peatmoss**	**G5**	**S2**		
Syntrichia amphidiacea **(Müll. Hal.) R.H. Zandler**	**A moss**	**GNR**	**SH**		
Syrrhopodon incompletus **Schwägr.**	**A moss**	**G5**	**SH**

APPENDIX 1: Changes to the February, 2016 Lists

Additions to the rare vascular plant list

Scientific Name	Old Rank	New Rank
***Calystegia catesbeiana* Pursh**	N/A	S1
***Corallorhiza trifida* Châtelain**	N/A	S1
***Pityopsis graminifolia* (Michx.) Nutt. var. *tenuifolia* (Torr.) Semple & Bowers**	N/A	S1

Removals from the rare vascular plant list

Scientific Name	Old Rank	New Rank
***Dichanthelium annulum* (Ashe) LeBlond**	S2	S3

Rank changes to the rare vascular plant list

Scientific Name	Old Rank	New Rank
***Boechera dentata* (Raf.) Al-Shehbaz & Zarruchi**	S1S2	S1
***Cardamine flagellifera* O.E. Schulz**	SH	S1
***Carex sterilis* Willd.**	G4	G4G5
Cerastium velutinum* Raf. var. *velutinum	S1	S1S2
***Corallorhiza maculata* (Raf.) Raf. var. *occidentalis* (Lindl.) Cockerell**	S1	SH
Crataegus mollis* Scheele var. *mollis	G5TNR	G5T5
Crataegus succulenta* Schrad. ex Link var. *succulenta	G4G5TNR	G5T5
***Crotalaria purshii* DC.**	SH	S1
***Cuscuta cephalanthi* Engelm.**	SH	S1
***Cuscuta rostrata* Shuttlw. ex Engelm. & Gray**	S1	S1S2
***Cypripedium reginae* Walt.**	G4	G4G5
***Desmodium ochroleucum* M.A. Curtis ex Canby**	G1G2	G2
***Dichanthelium cryptanthum* (Ashe) LeBlond**	G2G3	G3G4Q
Epilobium ciliatum* Raf. ssp. *ciliatum	SH	S1
***Honckenya peploides* (L.) Ehrh. ssp. *robusta* (Fern.) Hulten**	G5T4	G5T5
***Hypericum denticulatum* Walt.**	SH	S1
***Packera millefolium* (Torr. & Gray) Weber & Löve**	G2	G3
***Platanthera leucophaea* (Nutt.) Lindl.**	S1	SH
***Poa languida* Hitchcock**	S2	S1
***Potamogeton oakesianus* J.W. Robbins**	G4	G5
***Schoenoplectus subterminalis* (Torr.) Sojak**	G4G5	G5
***Scirpus flaccidifolius* (Fern.) Schuyler**	S1	S1S2
***Smilax ecirrata* (Engelm. ex Kunth) S. Wats.**	G5?	G5
***Solidago stricta* Ait.**	S2	S1
***Spiranthes eatonii* Ames ex P.M. Brown**	SH	S1
***Trillium flexipes* Raf.**	S1	SH
***Vaccinium macrocarpon* Ait.**	G4	G5
***Valerianella chenopodiifolia* (Pursh) A.P. de Candolle**	G5	G4
***Yucca flaccida* Haworth**	N/A	S1

Nomenclatural changes to the rare vascular plant list

Old Name	New Name
***Betula cordifolia* Regel**	***Betula papyrifera* Marshall**
***Eupatorium* sp. nov.**	***Eupatorium maritimum* E.E. Schilling**

Removals from the vascular plant watchlist

Scientific Name	Old Rank	New Rank
***Ampelopsis arborea* (L.) Koehne**	S3	S4
***Croptilon divaricatum* (Nutt.) Raf.**	S3	S4

Rank changes to the vascular plant watchlist

Scientific Name	Old Rank	New Rank
***Carex leptonervia* (Fern.) Fern.**	G4	G5
***Phragmites australis* (Cav.) Trin. ex Steud. ssp. *americanus* Saltonstall, P.M. Peterson, & Soreng**	G5T4	G5T5

Removals from the vascular plant review list

Scientific Name	Old Rank	New Rank
***Calystegia soldanella* (L.) R. Br. ex Roemer & J.A. Schultes**	SNA	SNA
***Nothoscordum bivalve* (L.) Britt.**	SNA	S4
***Oenothera linifolia* Nutt.**	SNA	SNA
***Plantago heterophylla* Nutt.**	SNA	S4
***Solidago riddellii* Frank ex Riddell**	SNA	SNA

Additions to the rare bryophyte list - Liverworts

Scientific Name	Old Rank	New Rank
***Anastrophyllum minutum* (Schreb.) R.M. Schust.**	N/A	SH
***Barbilophozia attenuata* (Nees) Loeske**	N/A	SH
***Bazzania tricrenata* (Wahlenb.) Trevis.**	N/A	S1
***Diplophyllum taxifolium* (Wahlenb.) Dumort.**	N/A	SH
***Lejeunea blomquistii* (Evans) Schust.**	N/A	S1
***Tritomaria exsecta* (Schmidel ex Schrad.) Schiffn. ex Loeske**	N/A	SH

Rank Changes to the rare bryophyte list - Liverworts

Scientific Name	Old Rank	New Rank
***Drepanolejeunea appalachiana* R. M. Schuster**	SH	S1
***Metzgeria temperata* Kuwahara**	SH	S1

Additions to the rare bryophyte list - Mosses

Scientific Name	Old Rank	New Rank
***Dicranoweisia crispula* (Hedw.) Milde**	N/A	S1
***Neckera complanata* (Hedw.) Hübener**	N/A	S1
***Rhabdoweisia crenulata* (Mitt.) H. Jameson**	N/A	S1

Rank Changes to the rare bryophyte list - Mosses

Scientific Name	Old Rank	New Rank
***Conardia compacta* (Hook.) H. Rob.**	G3G5	G5
***Dicranum muehlenbeckii* Bruch & Schimp.**	G3G5	G5
***Orthotrichum elegans* Schwägr. ex Hook. & Grev.**	SH	S1
Polytrichastrum alpinum* (Hedw.) G. L. Sm. var. *alpinum	G5	G5T5
***Sphagnum portoricense* Hampe**	S1S2	S1

Species removed from the rare bryophyte list - Mosses

Scientific Name	Old Rank	New Rank
***Sphagnum cyclophyllum* Sull. & Lesq. ex Sull.**	S1S2	S4?
***Sphagnum fimbriatum* Wils. ex Wils. & J.D. Hook.**	S1	S3?
***Sphagnum flexuosum* Dozy & Molk.**	S1S2	S4?
***Sphagnum inundatum* Russ.**	S1S2	S4?
***Sphagnum molle* Sull.**	S2	S4?
***Sphagnum papillosum* Lindb.**	S1	S3?
***Sphagnum pulchrum* (Lindb.) Warnst.**	SH	SH
***Sphagnum quinquefarium* (Lindb. ex Braithw.) Warnst.**	S2S3	S4
***Sphagnum strictum* Sull.**	S2	S4
***Sphagnum torreyanum* Sull.**	S2	S3

Rank Changes to the rare Lichen List

Scientific Name	Old Rank	New Rank
***Alectoria fallacina* Motyka**	S1	SH
***Arctoparmelia centrifuga* (L.) Hale**	G3G5	G5
***Cetrelia monachorum* (Zahlbr.) Culb. & C. Culb.**	SU	SH
***Cetradonia linearis* (Evans) J.-C. Wei & Ahti**	G2	G3
***Heterodermia appalachensis* (Kurok.) Culb.**	S1	SH
***Hypotrachyna oostingii* (J.P. Dey) Hale**	SU	SH
***Hypotrachyna prolongata* (Kurok.) Hale**	S1	SH
***Hypotrachyna virginica* (Hale) Hale**	S1	SH

APPENDIX 2. RARE SPECIES SIGHTING FORM

An important component of the natural heritage inventory and protection process involves gathering information from state experts, professionals, and avocational naturalists throughout the state. To facilitate this, the Division of Natural Heritage has developed a rare species sighting form. If you would like to participate in ourinventory and protection activities, please take a few moments to complete the attached form for any taxon from our lists. This data will be incorporated into thenatural heritage data base and used exclusively for the protection of the rare taxon and its habitat. Please send the form or pertinent electronic files (including GIS data) to staff botanist John Townsend at: Department of Conservation and Recreation, Division of Natural Heritage, 600 East Main Street, 24th Floor, Richmond, VA 23219.

Thank you for your support. The Division of Natural Heritage can only realize the protection of the Commonwealth's natural diversity by working through a network of knowledgeable and concerned individuals.

TAXON NAME:

DATE SEEN:

CITY/COUNTY:

COLLECTION INFORMATION: (Include your personal collection number, if any, and the Herbarium where the specimen has been/will be deposited)

LOCATION: (Please provide as detailed a description as possible. (**Please include a topographic map or GIS file** showing the location.)

HABITAT DESCRIPTION: (Include associated species, natural features, vegetation, and other applicable habitat information).

POPULATION DATA: (Include number of individuals, age, size, spatial distribution, evidence of reproduction and other applicable population data.)

THREATS OR EVIDENCE OF DISTURBANCE TO SITE:

LAND OWNER(S):

REPORTED BY: (Please include name, address, telephone number, and email address.)

DATE OF THIS REPORT:

This page intentionally left blank.

TABLE OF CONTENTS

NATURAL HERITAGE RESOURCES
OF VIRGINIA: RARE ANIMALS

FEBRUARY 2016

INTRODUCTION

The Virginia Department of Conservation and Recreation's Division of Natural Heritage (DCR-DNH) was established in 1986 to protect Virginia's biological diversity. DCR-DNH is the state's first comprehensive program for conservation of our natural heritage, and includes an intensive statewide biological inventory, field surveys, electronic and manual database management, environmental review capabilities, and natural area protection and stewardship. Through its actions the Division identifies Natural Heritage Resources that are in need of conservation attention while creating an efficient means of evaluating the impacts of balanced economic growth. Natural Heritage Resources are defined in the Virginia Natural Area Preserves Act of 1989 (Section 10.1-209 through 217, Code of Virginia), as the habitat of rare, threatened, and endangered plant and animal species; exemplary natural communities, habitats, and ecosystems; and other natural features of the Commonwealth.

To achieve this protection, DCR-DNH maintains lists of the most significant elements of our natural diversity. These lists focus the Division's inventory on the Natural Heritage Resources most likely to be lost without conservation action in the near future. Most importantly, these lists are useful not only for DCR-DNH, but can be used by other agencies, organizations, and individuals to assist in the determination of actions in protection and development decision-making. In formulating these lists, the Division uses information from previous studies, museum records, observations and opinions of experts, DCR-DNH staff scientists, and field inventories.

The first list included in this report is the Rare Animal List. This list contains information on the legal and biological status of Virginia's rarest known native animals, including vertebrates, insects, and selected other invertebrate groups, **793** in total (189 vertebrates, 604 invertebrates). This list includes those species that are believed to be sufficiently rare or threatened to merit an inventory of their status and locations. Certain marine species that are listed as federally endangered or threatened are only included in the appendices. Only those species that use discrete habitat patches or can directly benefit from habitat protection are included in the main taxonomic lists.

The second list included in this report is the Animal Watchlist. This list contains information on the legal and biological status of **347** additional taxa (74 vertebrates, 273 invertebrates) that are decidedly uncommon in Virginia but not scarce enough to merit inclusion on the Rare Animal List. Species on this list are monitored to determine general population trends, and if a particular species is found to be rare or threatened, it is placed on the Rare Animal List. Some species included on the Animal Watchlist were formerly on the Rare Animal List but have been determined to be more common than previously believed. Other species on the Watchlist are declining and may warrant placement on the Rare Animal List in the future if their populations continue to decline.

The third list included in this report is the Animal Review List (Taxa of Uncertain Status). Many of these species lack numerical ranks, indicating that they are poorly known from a distributional and/or taxonomic standpoint. Although some of these species may prove to be conservation targets, more field and museum data are needed to assess their degree of rarity in Virginia and/or taxonomic status. There are **273** species (5 vertebrates, 268 invertebrates) in this category.

Natural Heritage Resource lists are necessarily dynamic, with updates occurring as new data become available. Such revisions assure the most current knowledge of the status of Virginia's animals. Animals are added to the list when it is determined that they have become rare or threatened to such an extent that their continued existence in the Commonwealth is in jeopardy. Animals are deleted from the list when additional field surveys or other new data indicate they are more common than previously believed and do not warrant priority conservation efforts.

All animals that are officially protected by federal or state endangered species acts are included in this list (except as noted above). Federally listed species are protected by the Endangered Species Act of 1973, as amended. The U.S. Department of the Interior's Fish and Wildlife Service administers the Act, listing and protecting federally endangered and threatened species. The Virginia Department of Game and Inland Fisheries has the regulatory responsibility for the listing and protection of the state's endangered and threatened animals (excluding the Class Insecta) under the Virginia Endangered Species Act (Section 29.1-564 through 570, Code of Virginia). The Office of Plant Protection within the Virginia Department of Agriculture and Consumer Services has regulatory

responsibility for the listing and protection of the state's insects (and plants) under the Virginia Endangered Plant and Insect Act (Section 3.1-1020 through 1030, Code of Virginia). DCR-DNH is a primary source of recommendations to each of the regulatory agencies for species that are in need of listing as endangered or threatened.

The Virginia Department of Conservation and Recreation, the U.S. Fish and Wildlife Service, the Virginia Department of Game and Inland Fisheries, and the Virginia Department of Agriculture and Consumer Services work cooperatively to insure the continued survival of Virginia's diverse fauna and other elements of natural diversity. The Division of Natural Heritage also works closely with many other state and federal agencies, local governments, conservation organizations, and many other organizations and individuals to seek adequate protection of Virginia's natural heritage.

LIST FORMAT

The lists are sorted by broad taxonomic groups and then ordered alphabetically by scientific name within each group. The format of each list consists of six fields: scientific name, common name, global rank, state rank, federal status, and state status. These fields are also used in the lists appearing in Appendices 1-3. To aid in the interpretation of the lists, a brief explanation of each field and a summary of abbreviations follow.

Column 1. Scientific name:

Nomenclature of animals is not contained in any single source. The most recent taxonomic sources are examined by the staff zoologist and, when necessary, direct consultations with experts are used to maintain the most scientifically accepted names for all animal groups. Divergences from these opinions are rare and generally occur only while an ongoing taxonomic study is being conducted. Contact the staff zoologist if you have questions or comments regarding the scientific names used herein.

Column 2. Common name:

A common name is provided for the convenience of the user. Standard common names have been developed and universally adopted for only a few animal groups; therefore, the user is cautioned to use scientific names whenever possible. The common names for most vertebrates and a few selected aquatic invertebrate groups (e.g., mussels) are recognized as stable. Most invertebrate species lack common names and it may not be practical to provide such names. They are usually indicated in the list as "a caddisfly", "a millipede", etc. The primary sources of common names applied to species in selected groups included in this list can be found on page 7. Many other common names that appear in the list, especially those of invertebrates, are not widely used or universally accepted.

Column 3. Global rank:

Global ranks are assigned by a consensus of the network of natural heritage programs, scientific experts, and NatureServe (a non-profit conservation organization) to designate the rangewide rarity of a species or subspecies. This system was originally developed by The Nature Conservancy and is widely used by other agencies (e.g., U.S. Fish and Wildlife Service, U.S. Forest Service) and organizations as the best available scientific and objective assessment of an animal's rarity and the level of threat to its existence. The ranks are assigned after considering a suite of factors including the number of occurrences (populations), number of individuals, and severity of threats to the species and its habitats. Global ranks found in the Rare Animal List are explained below:

G1 Extremely rare and critically imperiled with 5 or fewer occurrences or very few remaining individuals; or because of some factor(s) making it especially vulnerable to extinction.

G2 Very rare and imperiled with 6 to 20 occurrences or few remaining individuals; or because of some factor(s) making it vulnerable to extinction.

G3 Either very rare and local throughout its range or found locally (even abundantly at some of its locations) in a restricted range; or vulnerable to extinction because of other factors. Usually fewer than 100 occurrences are documented.

G4 Common and apparently secure globally, although it may be rare in parts of its range, especially at the periphery.

G5 Very common and demonstrably secure globally, although it may be rare in parts of its range, especially at the periphery.

GH Formerly part of the world's fauna with some expectation that it may be rediscovered; generally applies to species that have not been verified for an extended period (usually >15 years) and for which some inventory has been attempted recently.

GX Believed to be extinct throughout its range with virtually no likelihood of rediscovery.

GU Possibly rare, but status uncertain and more data needed.

G? Unranked, or, if following a numerical ranking, rank uncertain (e.g., G3?).

G_G_ The rank is uncertain, but considered to be within the indicated range (e.g., G2G4) of ranks (also, T_T_).

G_Q Taxon has a questionable taxonomic assignment (e.g., G3Q) and may prove to be invalid upon further study.

G_T_ Signifies the rank of a subspecies (e.g., G5T1 would apply to a subspecies if the species is demonstrably secure globally (G5) but the subspecies warrants a rank of T1, critically imperiled.)

GNR A global conservation status rank has not been assigned to the species.

Column 4. State rank:

State ranks are assigned in a manner similar to that described for global ranks, with values that generally range from S1-S5, but consider only factors within the political boundaries of Virginia. For example, an animal that is endemic to Virginia (found nowhere else in the world) will have the same global and state ranks, whereas a species that may be common in the northeastern United States but only known from a few occurrences in Virginia will have global and state ranks that differ. State ranks found in the Rare Animal List are explained below:

S1 Extremely rare and critically imperiled with 5 or fewer occurrences or very few remaining individuals in Virginia; or because of some factor(s) making it especially vulnerable to extirpation in Virginia.

S2 Very rare and imperiled with 6 to 20 occurrences or few remaining individuals in Virginia; or because of some factor(s) making it vulnerable to extirpation in Virginia.

S3 Rare to uncommon in Virginia with between 20 and 100 occurrences; may have fewer occurrences if found to be common or abundant at some of these locations; may be somewhat vulnerable to extirpation in Virginia.

S4 Common and apparently secure in Virginia, although it may be rare in parts of its range.

SH Formerly part of Virginia's fauna with some expectation that it may be rediscovered; generally applies to species that have not been verified in the state for an extended period (usually >15 years) and for which some inventory has been attempted recently.

SX Believed to be extirpated from Virginia with virtually no likelihood of rediscovery.

SU Possibly rare, but status uncertain and more data needed.

S_? Rank uncertain. For example the rank S2? denotes a species that may range from S1 to S3.

S_S_ Rank is uncertain, but considered to be within the indicated range of ranks (e.g., S2S4).

S_B Breeding status of an animal (primarily used for birds) in Virginia; these species typically inhabit Virginia only during the breeding season.

S_B/S_N Breeding and nonbreeding status of an animal (primarily used for birds) in Virginia, when they differ.

SNA A conservation status rank is not applicable because the species is not a suitable target for conservation activities in Virginia (includes accidental species, transients, exotics, etc.).

SNR A state conservation status rank has not been assigned to the species.

Column 5. Federal status:

Federal status is determined by the U.S. Fish and Wildlife Service and the National Marine Fisheries Service. This status is used for all animals listed as endangered or threatened by the U.S. government and receiving protection under the federal Endangered Species Act. The list also notes those species that have been formally proposed for listing or are currently candidates under consideration for listing. The federal status formerly known as "Category 2, candidate species" was abolished on February 28, 1996; species formerly designated as "Category 1, candidate species" are now referred to simply as "candidate species."

LE Listed Endangered. A species threatened with extinction throughout all or a significant portion of its range.

LT Listed Threatened. A species likely to become endangered in the foreseeable future.

LE/PT Currently listed as endangered but proposed for downlisting to threatened.

LT/SA Listed as Threatened due to Similarity of Appearance. The species so closely resembles an endangered or threatened species or population that enforcement personnel of the U.S. Fish and Wildlife Service cannot readily distinguish between the taxa (e.g., the northern population of the bog turtle is federally listed as endangered, but turtles from the southern population, which includes Virginia, are not readily distinguishable from them).

PE Proposed Endangered. A species proposed for listing as endangered.

PT Proposed Threatened. A species proposed for listing as threatened.

C Candidate. There is enough available information to propose the species for listing, but listing is "precluded by other pending proposals of higher priority". (Formerly Candidate, Category 1)

Column 6. State status:

State status is determined by the Virginia Department of Game and Inland Fisheries (all animals except insects) and the Virginia Department of Agriculture and Consumer Services (insects only). The informal category of "Special Concern" species that was previously maintained by the Virginia Department of Game and Inland Fisheries was abolished by that agency on January 1, 2011.

LE Listed Endangered; defined as a species that is in danger of extinction throughout all or a significant portion of its range.

LT Listed Threatened; defined as a species that is likely to become endangered within the foreseeable future.

LT/PDL Listed as Threatened but proposed for delisting (removal from the state list of Endangered and Threatened wildlife). However, at the present time, the species is still listed as Threatened pending further action and is thus protected under Virginia's Endangered Species Act.

PE Proposed Endangered. A species proposed for listing as endangered.

PT Proposed Threatened. A species proposed for listing as threatened.

The following table summarizes the ranks and legal status of the rarest animals tracked by the Virginia Department of Conservation and Recreation, Division of Natural Heritage (pages 10-30 of this list).

Rank[a]	Fish	Amphibians	Reptiles	Birds[b]	Mammals	Invertebrates
GH	0	0	0	0	1	5
G1	7	1	1	0	0	170
G2	10	3	0	2	6	118
G3	15	4	4	6	9	117
SX	3	0	0	0	1	5
SH	2	0	1	6	0	54
S1	30	4	8	38	11	323
S2	36	15	5	23	6	217
Totals	71	19	14	67	18	604
Legal Status[c]						
FE	4	1	1	2	5	31
FT	4	0	2	2	1	2
PFE	0	0	0	0	0	1
SE	8	2	4	5	11	50
PSE	0	0	0	0	2	0
ST	14	2	3	7	0	14
PST	0	0	0	1	1	0

[a] Rounded ranks (e.g., G1G2 is combined with G1, S2S3 with S2, G2G4 is treated as G3, S1S3 is treated as S2, etc.); also T ranks are treated as equivalent to G ranks for the purposes of this table.

[b] Breeding ranks of birds were used as the S ranks for the purposes of this table (except for Red Knot).

[c] FE = Federally Endangered; FT = Federally Threatened; PFE = Proposed Federally Endangered; SE = State Endangered; PSE = Proposed State Endangered; ST = State Threatened; PST = Proposed State Threatened.

Changes in legal status since the March 2013 DCR rare animal list

New Listings:

Fluted Kidneyshell and Slabside Pearlymussel – listed as endangered by the U.S. Fish and Wildlife Service in September 2013.

Thomas' cave beetle – listed as endangered by the Virginia Department of Agriculture and Consumer Services in December 2013.

Red Knot – listed as threatened by the U.S. Fish and Wildlife Service in January 2015.

Northern Long-eared Myotis (bat) – listed as threatened by the U.S. Fish and Wildlife Service in May 2015.

Delistings:

Virginia Northern Flying Squirrel – delisted by the U.S. Fish and Wildlife Service in March 2013.

Delmarva Fox Squirrel – delisted by the U.S. Fish and Wildlife Service in December 2015.

Papaipema astuta	Yellow stoneroot borer moth	G2G4	S1S3		
Papaipema duovata	Seaside goldenrod borer moth	G4	S2S3		
Papaipema duplicata	Dark stoneroot borer moth	G2G4	S2		
Papaipema necopina	Sunflower borer moth	G4?	S1S3		
Papaipema stenocelis	Chain fern borer moth	G4	S1S3		
Papaipema sp. 3	Southeastern cane borer moth	G4	S2S3		
Platypolia anceps	A noctuid moth	GNR	S1S2		
Polia purpurissata	Purple arches moth	GNR	SH		
Properigea costa	A noctuid moth	G4	S2		
Protodeltote sp. 1	A noctuid moth	G1G3	S1S2		
Psectrotarsia hebardi	Hebard's noctuid moth	GU	SH		
= Erythroecia hebardi					
Ptichodis bistrigata	Southern Ptichodis moth	G3	S1S3		
Pygarctia abdominalis	Yellow-edged Pygarctia moth	G3	S1S2		
Pyrrhia aurantiago	Aureolaria seed borer moth	G3G4	S1S3		
= Rhodoecia aurantiago					
Rheumaptera hastata	Spear-marked black moth	G5	S2		
Schinia siren	A flower moth	GNR	S1S2		
= Schinia inclara					
Schizura apicalis	Plain Schizura moth	G3G4	S1S3		
Speranza exonerata	Barrens Speranza moth	G3G4	S1S3		
Speranza ribearia	Currant spanworm moth	G4	S2S3		
= Itame ribearia					
Sphinx franckii	Franck's sphinx	G4	S2S3		
Sympistis perscripta	Scribbled sallow moth	G4	S1S3		
= Lepipolys perscripta					
Synanthedon castaneae	Chestnut clearwing moth	G3G5	SH		
Syngrapha alias	Hooked silver Y moth	G5	S1S2		
Syngrapha rectangula	Salt-and-pepper looper moth	G5	S2		
Tricholita notata	Marked Tricholita moth	G5	SH		
Xanthorhoe iduata	A geometrid moth	G4	S1S3		
Zale curema	A noctuid moth	G4	S1S3		
Zale lunifera	Pine barrens Zale moth	G3G4	S2

ANIMAL WATCHLIST

NATURAL HERITAGE ANIMAL WATCH LIST

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
VERTEBRATES					
FISH					
Ambloplites cavifrons	Roanoke bass	G3	S3		
Chologaster cornuta	Swampfish	G5	S3		
Enneacanthus obesus	Banded sunfish	G5	S3		
Erimystax dissimilis = *Hybopsis dissimilis*	Streamline chub	G4	S3		
Erimystax insignis = *Hybopsis insignis*	Blotched chub	G4	S3		
Etheostoma kanawhae	Kanawha darter	G4	S3		
Etheostoma simoterum	Snubnose darter	G3G4	S3		
Etheostoma tennesseense	Tennessee darter	G5	S3		
Etheostoma zonale	Banded darter	G5	S3		
Fundulus catenatus	Northern studfish	G5	S3		
Fundulus lineolatus	Lined topminnow	G5	S3		
Lampetra aepyptera	Least brook lamprey	G5	S3		
Lampetra appendix	American brook lamprey	G4	S3		
Margariscus margarita = *Semotilus margarita*	Pearl dace	G4	S3		
Moxostoma ariommum = *Scartomyzon ariommus*	Bigeye jumprock	G4	S3		
Moxostoma duquesnei	Black redhorse	G5	S3		
Notropis chalybaeus	Ironcolor shiner	G4	S3		
Notropis chiliticus	Redlip shiner	G4	S3		
Notropis sp. 4	Sawfin shiner	G4	S3		
Percina caprodes	Logperch	G5	S3		
Percina gymnocephala	Appalachia darter	G4	S3		
Percina oxyrhynchus	Sharpnose darter	G4	S3		
Phenacobius uranops	Stargazing minnow	G4	S3		
Uranidea kanawhae = *Cottus kanawhae*	Kanawha sculpin	G4	S3		
AMPHIBIANS					
Aneides aeneus	Green salamander	G3G4	S3		
Desmognathus orestes	Blue Ridge dusky salamander	G4	S3		
Lithobates virgatipes = *Rana virgatipes*	Carpenter frog	G4	S3		
Plethodon kentucki	Cumberland Plateau salamander	G4	S3		
Plethodon montanus	Northern Gray-cheeked salamander	G4	S3		
Plethodon yonahlossee	Yonahlossee salamander	G4	S3		
Pseudacris nigrita	Southern chorus frog	G5	S3		
Pseudacris ocularis = *Limnaoedus ocularis*	Little grass frog	G5	S3		
Siren lacertina	Greater siren	G5	S3		
Stereochilus marginatus	Many-lined salamander	G5	S3		
REPTILES					
Farancia erytrogramma	Rainbow snake	G4	S3		
Graptemys geographica	Northern map turtle	G5	S3		
Malaclemys terrapin	Diamond-backed terrapin	G4	S3		
Opheodrys vernalis = *Liochlorophis vernalis*	Smooth greensnake	G5	S3		
Plestiodon anthracinus = *Eumeces anthracinus*	Coal skink	G5	S3		
Tantilla coronata	Southeastern crowned snake	G5	S3		

NATURAL HERITAGE ANIMAL WATCH LIST

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
BIRDS					
Accipiter cooperii	Cooper's Hawk	G5	S3B/S3N		
Ardea herodias	Great Blue Heron	G5	S3B/S5N		
Cardellina canadensis = *Wilsonia canadensis*	Canada Warbler	G5	S3S4B		
Certhia americana	Brown Creeper	G5	S3B/S5N		
Empidonax minimus	Least Flycatcher	G5	S3S4B		
Haematopus palliatus	American Oystercatcher	G5	S3B/S3N		
Haliaeetus leucocephalus	Bald Eagle	G5	S3S4B/S3S4N		
Ictinia mississippiensis	Mississippi Kite	G5	S2B		
Ixobrychus exilis	Least Bittern	G5	S3B/S3N		
Nycticorax nycticorax	Black-crowned Night-heron	G5	S3B/S4N		
Passerculus sandwichensis	Savannah Sparrow	G5	S3S4B/S4N		
Petrochelidon pyrrhonota	Cliff Swallow	G5	S3S4B		
Riparia riparia	Bank Swallow	G5	S3B		
Setophaga cerulea = *Dendroica cerulea*	Cerulean Warbler	G4	S3S4B		
Spiza americana	Dickcissel	G5	S2S3B		
Sterna forsteri	Forster's Tern	G5	S3B/S3N		
Sterna hirundo	Common Tern	G5	S3B		
Tyto alba	Barn Owl	G5	S3B/S3N		
Vermivora chrysoptera	Golden-winged Warbler	G4	S3B		
Vermivora cyanoptera = *Vermivora pinus*	Blue-winged Warbler	G5	S3B		
MAMMALS					
Blarina brevicauda telmalestes	Dismal Swamp short-tailed shrew	G5T3	S3		
Lasionycteris noctivagans	Silver-haired bat	G5	SUB/S4N		
Lasiurus cinereus	Hoary bat	G5	SUB/S3N		
Lontra canadensis = *Lutra canadensis*	Northern river otter	G5	S4		
Mustela nivalis	Least weasel	G5	S3		
Neotoma magister	Allegheny (or Appalachian) woodrat	G3G4	S3		
Peromyscus gossypinus	Cotton mouse	G5	S3		
Sciurus niger niger	Southeastern fox squirrel	G5T5	S3		
Sorex dispar	Long-tailed or rock shrew	G4	S3		
Sorex longirostris fisheri	Dismal Swamp southeastern shrew	G5T4	S3		LT/PDL
Spilogale putorius	Eastern spotted skunk	G4	S3S4		
Sylvilagus obscurus = *Sylvilagus transitionalis* ?	Appalachian cottontail (New England cottontail)	G4	S4?		
Sylvilagus palustris	Marsh rabbit	G5	S3		
Synaptomys cooperi helaletes	Dismal Swamp bog lemming	G5T3	S3

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
INVERTEBRATES					
GASTROPODA (SNAILS)					
Elimia catenaria	Gravel Elimia	G4	S3		
= Pleurocera catenaria					
Fontigens orolibas	Blue Ridge springsnail	G3	S3		
Glyphyalinia picea	Rust glyph	G3	S1S3		
Glyphyalinia virginica	Depressed glyph	G3	S3		
Hendersonia occulta	Cherrystone Drop	G4	S3		
Leptoxis praerosa	Onyx rocksnail	G5	S3		
= Anculosa subglobosa					
Megapallifera wetherbyi	Blotchy mantleslug	G2G3	S1S3		
Mesodon elevatus	Proud globe	G5	S2?		
Mesomphix rugeli	Wrinkled button	G4	S3		
Patera panselenus	Virginia bladetooth	G3	S2?		
= Mesodon panselenus					
Philomycus virginicus	Virginia mantleslug	G3	S3		
Promenetus exacuous	Sharp Sprite	G5	S3		
Triodopsis burchi	Pittsylvania three-tooth	G3	S3		
Triodopsis fraudulenta	Baffled three-tooth	G4	S3		
Triodopsis tennesseensis	Budded three-tooth	G4	S3		
Ventridens arcellus	Golden dome	G4	S3		
Ventridens lasmodon	Hollow dome	G4	S3		
Ventridens pilsbryi	Yellow dome	G4	S3		
BIVALVIA (MUSSELS & CLAMS)					
Alasmidonta undulata	Triangle floater	G4	S3S4		
Anodonta implicata	Alewife floater	G5	S3?		
Fusconaia subrotunda	Longsolid	G3	S3		
Leptodea ochracea	Tidewater mucket	G3G4	S3		
= Ligumia ochracea					
Ligumia nasuta	Eastern pondmussel	G4	S3		
Medionidus conradicus	Cumberland moccasinshell	G3G4	S3S4		
Strophitus undulatus	Creeper	G5	S3S4		
Villosa constricta	Notched rainbow	G3	S3		
Villosa vanuxemensis	Mountain creekshell	G4	S3S4		
ARACHNIDA (SPIDERS, PSEUDOSCORPIONS & RELATIVES)					
Spiders					
Antrodiaetus robustus	Robust trapdoor spider	G3?	S2?		
Hypochilus gertschi	Gertsch's lampshade-web spider	G3	S3		
Hypochilus pococki	Pocock's lampshade-web spider	G4G5	S2S3		
Nesticus holsingeri	Holsinger's cave spider	G3G4	S3		
Nesticus tennesseensis	A cave spider	G3G4	S3S4		
Sphodros atlanticus	Atlantic purse-web spider	G4	S3		
Sphodros coylei	Coyle's purse-web spider	G4?	S3		
Sphodros niger	Black purse-web spider	G4G5	S3		
Pseudoscorpions					
Chitrella cavicola	A cave pseudoscorpion	G3	S3

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
CRUSTACEA (AMPHIPODS, ISOPODS & DECAPODS)					
Amphipods					
Crangonyx antennatus	Appalachian Valley cave amphipod	G5	S3		
Gammarus pseudolimnaeus	Northern spring amphipod	G5	S3		
Stygobromus araeus	Tidewater interstitial amphipod	G3	S3		
Stygobromus abditus	James Cave amphipod	G3	S3		
Stygobromus estesi	Craig County cave amphipod	G4	S3		
Stygobromus gracilipes	Shenandoah Valley cave amphipod	G3G4	S3		
Stygobromus indentatus	Tidewater amphipod	G3	S3		
Stygobromus spinosus	Blue Ridge spring amphipod	G3	S3		
Isopods					
Caecidotea holsingeri	Greenbrier Valley cave isopod	G5	S3		
Caecidotea pricei	Price's cave isopod	G5	S3		
Caecidotea recurvata	Southwestern Virginia cave isopod	G5	S3		
Caecidotea richardsonae	Tennessee Valley cave isopod	G5	S3		
Caecidotea vandeli	Vandel's cave isopod	G3G4	S3		
Decapods					
Cambarus angularis	Angled crayfish	G3	S3		
Cambarus chasmodactylus	New River crayfish	G4	S3		
Cambarus diogenes	Devil crawfish	G5	S3		
Cambarus longirostris	Longnose crayfish	G5Q	S3		
Cambarus sciotensis	Teays River crayfish	G5	S3		
Fallicambarus fodiens = *Fallicambarus uhleri*	Digger crayfish	G5	S3		
Orconectes cristavarius	Spiny stream crayfish	G5	S3		
Orconectes forceps	Surgeon crayfish	G5	S3		
Orconectes obscurus	Allegheny crayfish	G5	S3		
DIPLOPODA (MILLIPEDES)					
Abacion tesselatum	A millipede	G5	S3		
Andrognathus corticarius	A millipede	G5	S3		
Apheloria montana	A millipede	G5	S3		
Apheloria tigana	A millipede	G5	S3		
Brachycybe lecontii	A millipede	G5	S3		
Buotus carolinus	A millipede	G3	S3		
Cambala hubrichti	A millipede	G5	S3		
Cambala minor	A millipede	G5	S3		
Conotyla melinda	Melinda millipede	G3	S3		
Gyalostethus monticolens	A millipede	G4	S3		
Nannaria ericacea	McGraw Gap xystodesmid millipede	G3	S3		
Nannaria morrisoni	A millipede	G3	S3		
Nannaria wilsoni	A millipede	G3	S3		
Rudiloria kleinpeteri	A millipede	G3	S3		
Rudiloria trimaculata tortua	A millipede	G5T2	S2?		
Semionellus placidus	A millipede	G3	S3		
Zygonopus packardi = *Trichopetalum packardi*	Packard's blind cave millipede	G4	S3		

NATURAL HERITAGE ANIMAL WATCH LIST

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
INSECTS					
COLLEMBOLA (SPRINGTAILS)					
Pseudosinella granda	A cave springtail	G3	S3		
Pygmarrhopalites carolynae	A cave springtail	G4	S3		
Pygmarrhopalites clarus	A cave springtail	G4	S3		
Pygmarrhopalites marshalli	A cave springtail	G3	S3		
Pygmarrhopalites pavo	A cave springtail	G3?	S3		
Schaefferia hubbardi	A cave springtail	G3	S3		
Sinella barri	Barr's cave springtail	G5	S3		
DIPLURA (DIPLURANS)					
Litocampa cookei	Cooke's cave dipluran	G5	S3		
ODONATA (DAMSELFLIES & DRAGONFLIES)					
Damselflies					
Argia bipunctulata	Seepage dancer	G4	S3		
Calopteryx angustipennis	Appalachian jewelwing	G4	S3		
Enallagma daeckii	Attenuated bluet	G4	S3		
Enallagma doubledayi	Atlantic bluet	G5	S3		
Enallagma dubium	Burgundy bluet	G5	S3		
Enallagma hageni	Hagen's bluet	G5	S3		
Enallagma weewa	Blackwater bluet	G5	S3		
Ischnura prognata	Furtive forktail	G4	S3		
Lestes forcipatus	Sweetflag spreadwing	G5	S3		
Nehalennia integricollis	Southern sprite	G5	S3		
Telebasis byersi	Duckweed firetail	G5	S3		
Dragonflies					
Anax longipes	Comet darner	G5	S3		
Cordulegaster erronea	Tiger spiketail	G4	S3		
Cordulia shurtleffii	American emerald	G5	S3		
Epitheca spinosa = *Tetragoneuria spinosa*	Robust baskettail	G4	S3		
Gomphaeschna antilope	Taper-tailed darner	G4	S3		
Gomphus abbreviatus	Spine-crowned clubtail	G4	S3		
Gomphus dilatatus	Blackwater clubtail	G5	S3		
Gomphus quadricolor	Rapids clubtail	G3G4	S3		
Gomphus rogersi	Sable clubtail	G4	S3		
Helocordulia selysii	Selys' sundragon	G4	S3		
Leucorrhinia intacta	Dot-tailed whiteface	G5	S3		
Libellula flavida	Yellow-sided skimmer	G5	S3		
ORTHOPTERA (GRASSHOPPERS, KATYDIDS, CRICKETS & RELATIVES)					
Scudderia septentrionalis	Northern bush katydid	G3?	S3		
COLEOPTERA (BEETLES)					
Cicindela dorsalis media = *Habroscelimorpha dorsalis media*	White tiger beetle	G3G4T3T4	S3		
Cicindela purpurea	Purple tiger beetle	G5	S3		
Cicindela splendida	Splendid tiger beetle	G5	S3

Beetles (continued)					
Megacephala carolina = *Tetracha carolina*	Carolina big-headed tiger beetle	G5	S3		
Nicrophorus defodiens	A burying beetle	G4	S3		
Phloeoxena signata	A ground beetle	G3?	S3		
TRICHOPTERA (CADDISFLIES)					
Adicrophleps hitchcocki	A brachycentrid caddisfly	G4G5	S1S3		
Agapetus tomus	A glossosomatid caddisfly	G5	S1S3		
Agarodes libalis	Spring-loving psiloneuran caddisfly	G3	S1S3		
Ceraclea neffi	A leptocerid caddisfly	G5	S1S3		
Ceraclea punctata	A leptocerid caddisfly	G5	S1S3		
Ceraclea spongillovorax	A leptocerid caddisfly	G3G4	S1S3		
Ceraclea uvalo	A leptocerid caddisfly	G2G4	S1S3		
Cheumatopsyche parentum	A hydropsychid caddisfly	G3	S3		
Chimarra augusta	A philopotamid caddisfly	G3G4	S3		
Culoptila cantha	A glossosomatid caddisfly	G5	S1S3		
Heteroplectron americanum	A caddisfly	G5	S2		
Homoplectra monticola	A hydropsychid caddisfly	G2G3	S2S3		
Hydropsyche brunneipennis	A hydropsychid caddisfly	G3G4	S1S3		
Hydropsyche catawba	A hydropsychid caddisfly	G3	S3		
Hydropsyche frisoni	A hydropsychid caddisfly	G5	S1S3		
Hydropsyche hoffmani	A hydropsychid caddisfly	G3G4	S3		
Hydropsyche opthalmica	A hydropsychid caddisfly	G3	S3		
Hydropsyche potomacensis	A hydropsychid caddisfly	G2G3	S2S3		
Hydropsyche rotosa	A hydropsychid caddisfly	G2G3	S2S3		
Ironoquia lyrata	A limnephilid caddisfly	G5	S1S3		
Lepidostoma bryanti	A lepidostomatid caddisfly	G5	S1S3		
Lepidostoma carrolli	A lepidostomatid caddisfly	G5	S1S3		
Lepidostoma ontario	A lepidostomatid caddisfly	G5	S1S3		
Lepidostoma serratum	A lepidostomatid caddisfly	G4	S1S3		
Micrasema scotti	A brachycentrid caddisfly	G3G4	S3		
Micrasema sprulesi	A brachycentrid caddisfly	G5	S1S3		
Molanna tryphena	A molannid caddisfly	G5	S1S2		
Molanna uniophila	A molannid caddisfly	G5	S1S2		
Neophylax stolus	A uenoid caddisfly	G3	S3		
Ochrotrichia denningi	A microcaddisfly	G2G4	S1S3		
Ochrotrichia graysoni	A microcaddisfly	G3G4	S1S3		
Oxyethira pescadori	Pescador's bottle-cased caddisfly	G3G4	S1S2		
Parapsyche cardis	A hydropsychid caddisfly	G4	S2		
Phylocentropus auriceps	A caddisfly	G3G4	S2		
Phylocentropus carolinus	A caddisfly	G5	S2		
Polycentropus centralis	A polycentropodid caddisfly	G5	S1S2		
Polycentropus pixi	A polycentropodid caddisfly	G4	S1S2		
Pycnopsyche virginica	A limnephilid caddisfly	G3G4	S3		
Rhyacophila atrata	A rhyacophilid caddisfly	G5	S2		
Rhyacophila shenandoahensis	Shenandoah rhyacophilid caddisfly	G3	S3		
Setodes guttatus	A leptocerid caddisfly	G5	S1S3		
Theliopsyche grisea	A lepidostomatid caddisfly	G4	S1S3		
Theliopsyche melas	A lepidostomatid caddisfly	G4G5	S1S3		
Triaenodes dipsius	A leptocerid caddisfly	G5	S1S3		
Triaenodes taenia	A leptocerid caddisfly	G3G4	S1S3		

NATURAL HERITAGE INVERTEBRATE WATCH LIST

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
LEPIDOPTERA (BUTTERFLIES, SKIPPERS & MOTHS)					
Butterflies					
Atlides halesus	Great purple hairstreak	G4G5	S3		
Calephelis borealis	Northern metalmark	G3G4	S3		
Celastrina nigra = *Celastrina ebenina*	Dusky azure	G4	S3S4		
Danaus plexippus plexippus	Monarch (eastern population)	G4T1	SU		
Enodia creola	Creole pearly eye	G3G4	S3S4		
Pieris virginiensis	West Virginia white	G3?	S3		
Satyrium edwardsii	Edwards' hairstreak	G4	S3		
Satyrium favonius ontario = *Fixsenia favonius ontario*	Northern oak hairstreak	G4T4	S3		
Speyeria diana	Diana fritillary	G3G4	S3		
Skippers					
Amblyscirtes aesculapias	Lace-winged roadside skipper	G3G4	S3		
Amblyscirtes carolina	Carolina roadside skipper	G3G4	S3S4		
Amblyscirtes reversa	Reversed roadside skipper	G3G4	S3		
Hesperia leonardus	Leonard's skipper	G4	S3?		
Poanes aaroni	Aaron's skipper	G4	S3		
Poanes yehl	Yehl skipper	G4	S3		
Polites mystic	Long dash	G5	S3		
Thorybes confusis	Confused cloudywing	G4	S2S4		
Moths					
Abrostola ovalis	A noctuid moth	G4	S2S4		
Acronicta haesitata	Hesitant dagger moth	G5	S2S4		
Acronicta radcliffei	Radcliffe's dagger moth	G5	S2S4		
Acronicta tristis	A dagger moth	GNR	S1S3		
Anaplectoides prasina	Green arches	G5	S1S3		
Apamea cariosa	A noctuid moth	G4	S1S3		
Apamea lignicolora	Wood-colored Apamea moth	G5	S2S4		
Apamea plutonia	A noctuid moth	G4	S2S4		
Apamea sordens = *Apamea finitima*	Bordered Apamea moth	GNR	S1S3		
Argyrostrotis quadrifilaris	Four-lined chocolate moth	G4	S1S3		
Arugisa latiorella = *Arugisa watsoni*	A noctuid moth	G4	S1S3		
Autographa ampla	Large looper moth	G5	S1S3		
Bellura brehmei	A wetland borer moth	GNR	S2S4		
Cabera quadrifasciaria	Four-lined Cabera moth	GNR	S1S3		
Callopistria granitosa	Granitosa fern moth	G4	S1S3		
Capsula subflava = *Archanara subflava*	A sedge borer moth	G4	S1S3		
Catocala angusi	Angus' underwing	G4	S2S4		
Catocala concumbens	Sleepy underwing	G5	S1S3		
Catocala crataegi	Hawthorn underwing	G5	S2S4		
Catocala insolabilis	Inconsolable underwing	G5	S1S3		
Catocala miranda	Miranda underwing	G3G4	S2S4		
Catocala parta	Mother underwing	G5	S2S4		
Catocala robinsoni	Robinson's underwing	G4	S3		
Catocala sappho	Sappho underwing	G4	S1S3		
Catocala serena	Serene underwing	G5	S2S4		
Crambidia pura	Pure lichen moth	G4	S1S3		
Cucullia florea	A noctuid moth	GNR	S2S4

Haploa colona	Colona moth	G4G5	S2S4		
Heliomata infulata	Rare spring moth	G3G4	S2S4		
Homochlodes disconventa	Dark Homochlodes moth	G4	S2S4		
Hydraecia stramentosa	Figwort borer moth	G4	S2S4		
Hypena sordidula	Sordid Hypena moth	G4?	S2S4		
= Bomolocha sordidula					
Iridopsis pergracilis	A geometrid moth	G4G5	S1S3		
= Anacamptodes pergracilis					
Isoparce cupressi	Cypress sphinx	G4	S3		
Lintneria eremitus	Hermit sphinx	G4G5	S1S3		
= Sphinx eremitus					
Lithophane petulca	Wanton noctuid moth	G5	S1S3		
Lithophane querquera	Shivering pinion moth	GNR	S2S4		
Lophocampa maculata	Spotted Tussock Moth	G5	S1S3		
Melanchra assimilis	Black arches	G5	S1S3		
Melipotis jucunda	Merry Melipotis moth	G5	S1S3		
Mesoleuca ruficillata	White-ribboned carpet	G4	S2S4		
Metanema inatomaria	Pale Metanema moth	GNR	S1S3		
Metarranthis sp. 1	Mid-Atlantic Metarranthis moth	G3G4	S1S3		
Morrisonia triangula	Triangle-barred Morrisonia moth	G3G4	S2S4		
Nemoria elfa	Elfin emerald	G4?	S1S3		
Neoligia crytora	A noctuid moth	GNR	S2S4		
= Oligia crytora					
Neoligia exhausta	A noctuid moth	GNR	S1S3		
= Oligia exhausta					
Panopoda repanda	Orange Panopoda moth	G5	S3		
Panthea acronyctoides	Black zipzag	G5	S2S4		
Papaipema impecuniosa	Aster borer moth	G5	S2S4		
Papaipema nepheleptena	Turtlehead borer moth	G4	S2S4		
Papaipema polymniae	Leafcup borer moth	G4	S2S4		
Papaipema pterisii	Bracken fern borer moth	G5	S3		
Papaipema speciosissima	Osmunda borer moth	G4	S3		
Papaipema unimoda	Meadow rue borer moth	G5	S2S4		
Pero zalissaria	A geometrid moth	G4	S3

Zale calycanthata	Double-banded Zale moth	G4	S2S4		
Zale submediana	A noctuid moth	G4	S2S4		

PART THREE:

ANIMAL REVIEW LIST
(Taxa of Uncertain Status)

NATURAL HERITAGE ANIMAL REVIEW LIST

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
VERTEBRATES					
FISH					
Lepomis marginatus	Dollar sunfish	G5	SNR		
AMPHIBIANS					
Lithobates kauffeldi = *Rana kauffeldi*	Atlantic Coast leopard frog	GNR	SU		
REPTILES					
Lampropeltis elapsoides = *Lampropeltis triangulum elapsoides*	Scarlet kingsnake	G5	S2S4		
MAMMALS					
Peromyscus leucopus easti	Pungo mouse	G5T1	S1?		
Sylvilagus floridanus hitchensi	Smith Island cottontail	G5THQ	SH		
INVERTEBRATES					
GASTROPODA (SNAILS)					
Catinella hubrichti	Snowhill ambersnail	G3	SU		
Discus nigrimontanus	Black Mountain disc	G4	SU		
Euchemotrema leai = *Stenotrema leai aliciae*	Lowland pillsnail	G5	SU		
Fumonelix christyi = *Mesodon christyi*	Glossy covert	G3	SU		
Gastrocopta clappi = *Gastrocopta armifera clappi*	Bluegrass snaggletooth	G4G5	SU		
Gastrocopta pellucida	Slim snaggletooth	G5	SU		
Gastrodonta fonticula = *Gastrocopta interna fonticula*	Appalachia bellytooth	G3G4	SU		
Glyphyalinia praecox	Brilliant glyph	G4	SU		
Glyphyalinia sculptilis	Suborb glyph	G4	SU		
Helicodiscus shimeki	Temperate coil	G4G5	SU		
Holsingeria sp. 1	Skyline Caverns snail	G1Q	S1		
Inflectarius kalmianus = *Mesodon kalmianus*	Brown globelet	G3	SU		
Lobosculum pustuloides = *Polygyra pustuloides*	Tiny Liptooth	G4	SU		
Mesomphix subplanus	Flat button	G3G4	SU		
Oxyloma subeffusum	Chesapeake ambersnail	G3	SU		
Pallifera varia	Variable mantleslug	G2G4	SU		
Paravitrea grimmi	Buff Supercoil	G1G3Q	SU		
Paravitrea placentula	Glossy supercoil	G3	SU		
Paravitrea pontis	Natural Bridge supercoil	G3	SU		
Paravitrea reesei	Round supercoil	G3	SU		
Patera laevior	Smooth Bladetooth	G4	SU		
Pomatiopsis cincinnatiensis	Brown walker	G4	SU		
Pupilla muscorum	Widespread column	G5	SU		
Somatogyrus pennsylvanicus	Shale pebblesnail	G3	SU		
Stenotrema pilula	Pygmy slitmouth	G3G4	SU		
Stenotrema spinosum	Carinate slitmouth	G4	SU		
Striatura exigua	Ribbed striate	G5	SU		
Striatura milium	Fine-ribbed striate	G5	SU		
Triodopsis anteridon	Carter threetooth	G3	SU		
Triodopsis pendula	Hanging Rock threetooth	G3	SU		

NATURAL HERITAGE ANIMAL REVIEW LIST

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
Snails (continued)					
Vallonia parvula	Trumpet vallonia	G4	SU		
Ventridens decussatus	Crossed dome	G3	SU		
Ventridens lawae	Rounded dome	G4	SU		
Vertigo bollesiana	Delicate vertigo	G4	SU		
Vertigo clappi	Cupped vertigo	G1G2	SU		
Vertigo oralis	Palmetto vertigo	G5	SU		
Vertigo parvula	Smallmouth Vertigo	G3	SU		
Vertigo teskeyae	Swamp vertigo	G5	SU		
Vertigo ventricosa	Five-tooth vertigo	G5	SU		
Vitrinizonites latissimus	Glassy grapeskin	G4	SU		
BIVALVIA (MUSSELS & CLAMS)					
Clams					
Pisidium equilaterale	Round peaclam	G4G5	SU		
ARACHNIDA (SPIDERS, PSEUDOSCORPIONS & RELATIVES)					
Spiders					
Amaurobius borealis	An amaurobiid spider	G5	SU		
Barronopsis jeffersi	A funnel-web spider	G3	SU		
Castianeira trilineata	A two-clawed hunting spider	G4?	SU		
Clubiona spiralis	A two-clawed hunting spider	G4	SU		
Drassyllus louisianus	A gnaphosid spider	G4?	SU		
Drassyllus sp. 1	A gnaphosid spider	GU	SU		
Pisaurina dubia	A nursery-web spider	G4	SU		
Xysticus emertoni	Emerton's crab spider	G5	SU		
Sphodros rufipes	Red-legged purse-web spider	G4	SU		
Harvestmen					
Leiobunum hoffmani	A harvestman	GNR	S2?		
Pseudoscorpions					
Kleptochthonius polychaetus	Shenandoah pseudoscorpion	GU	SU		
CRUSTACEA (AMPHIPODS, ISOPODS & DECAPODS)					
Amphipods					
Crangonyx acicularis	A freshwater amphipod	G1G3	SU		
Crangonyx gracilis	A freshwater amphipod	G4	SU		
Stygobromus sp. 10	A cave amphipod (Botetourt Co.)	G1	S1		
Stygobromus sp. 11	A cave amphipod (Nelson Co.)	G1	S1		
Stygobromus sp. 12	A cave amphipod (Rockbridge Co.)	G1	S1		
Stygobromus sp. 19	A cave amphipod (Scott Co.)	G1	S1		
Stygobromus sp. 20	A cave amphipod (Bath, Highland Co.)	G1	S1		
Isopods					
Caecidotea sp. nov.	A groundwater isopod (Caroline Co.)	GNR	SNR		
Branchiopods					
Eulimnadia sp. 1	A clam shrimp	GNR	SU		
Decapods					
Cambarus buntingi	Longclaw crayfish	G4Q	S2

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
DIPLOPODA (MILLIPEDES)					
Auturus erythropygos	A millipede	G3	SU		
Chaetaspis albus	A millipede	G4	SU		
Euryurus leachii fraternus	A millipede	G4T?	SU		
Okeanobates americanus	A millipede	G4	SU		
Onomeris underwoodi	A millipede	G5	SU		
Orinisobates nigrior	A millipede	G4	SU		
Petaserpes rosalbus = *Polyzonium rosalbum*	A millipede	G5	SU		
Pseudopolydesmus paludicolus	A millipede	GU	SU		
Striaria columbiana	A millipede	G2	SU		
Striaria sp. 1	A millipede	G1	S1		
CHILOPODA (CENTIPEDES)					
Escaryus ethopus	A centipede	GNR	SU		
INSECTS					
DIPLURA (DIPLURANS)					
Litocampa sp. 10	A cave dipluran (Smyth)	G1	S1		
Litocampa sp. 11 (near *cookei*)	A cave dipluran (Lee/Scott/Wise)	G2	S2		
EPHEMEROPTERA (MAYFLIES)					
Ameletus cryptostimulus	Allegheny mayfly	G4	S2S4		
Ameletus tarteri	Tarter's Ameletus mayfly	G2G4	SU		
Isonychia arida	A mayfly	G5	SU		
Isonychia georgiae	Georgia Isonychia mayfly	G4	SU		
Isonychia tusculanensis	A mayfly	G4	SU		
Iswaeon anoka = *Heterocloeon anoka*	A mayfly	G5	SU		
Paraleptophlebia assimilis	A mayfly	G4	SU		
Paraleptophlebia jeanae	A mayfly	G3G4	SU		
Rhithrogena anomala	A mayfly	G3G4	SU		
Waynokiops dentatogriphus	A mayfly	GNR	SNR		
ODONATA (DAMSELFLIES & DRAGONFLIES)					
Epitheca costalis = *Tetragoneuria costalis*	Stripe-winged baskettail	G5	S2S4		
Gomphus hybridus	Cocoa clubtail	G4	SU		
Lestes dryas	Emerald spreadwing	G5	SNR		
Lestes vidua	Carolina spreadwing	G5	SNA		
Sympetrum internum = *Sympetrum janeae*	Cherry-faced meadowhawk	G5	SU		
PLECOPTERA (STONEFLIES)					
Allocapnia harperi	Stonyfork snowfly	G4	SU		
Alloperla banksi	Tufted sallfly	G4	SU		
Alloperla biserrata	Dusky sallfly	G3	SU		
Alloperla idei	*Vernal sallfly	G3	SU		
Alloperla nanina	Swannanoa sallfly	G4	SU		
Alloperla neglecta	Tennessee sallfly	G3	SU		
Bolotoperla rossi	Smoky willowfly	G4	SU		
Hansonoperla appalachia	Appalachian stonefly	G3	SU		
Isogenoides varians	Rock Island springfly	G3G4	SU		

NATURAL HERITAGE ANIMAL REVIEW LIST

Stoneflies (continued)					
Isoperla nelsoni	Nelson stripetail stonefly	GNR	SNR		
Isoperla powhatan	Powhatan stripetail stonefly	GNR	SNR		
Isoperla reesi	Elk Garden stripetail stonefly	GNR	SNR		
Isoperla stewarti	Stewart stripetail stonefly	GNR	SNR		
Isoperla yuchi	Yuchi stripetail stonefly	GNR	SNR		
Ostrocerca complexa	Notched forestfly	G4	S1S3		
Ostrocerca prolongata	Bent forestfly	G3	S1S3		
Paragnetina ichusa	Widecollar stonefly	G3	S1S3		
Perlesta roblei	Dragon Run stonefly	G3	SU		
Perlesta shawnee	Shawnee stonefly	G3	SU		
Perlesta teaysia	Teays stonefly	G4	SU		
Pteronarcys comstocki	Spiny salmonfly	G3	SU		
Pteronarcys scotti	Carolina salmonfly	G4	SU		
Shipsa rotunda	Intrepid forestfly	G5	SU		
Tallaperla cornelia	Southeastern roachfly	G4	SU		
ORTHOPTERA (GRASSHOPPERS, KATYDIDS, CRICKETS & RELATIVES)					
Melanoplus celatus	A spur-throat grasshopper	GU	SU		
Melanoplus devius	A spur-throat grasshopper	GU	SU		
Melanoplus impudicus	Immodest spur-throat grasshopper	G4G5	SU		
Melanoplus pachycercus	A spur-throat grasshopper	G2G3	SNR		
HEMIPTERA (TRUE BUGS, CICADAS, LEAFHOPPERS & RELATIVES)					
Acantholomidea denticulata	A shield bug	GNR	SU		
Allopodops mississippiensis	Mississippi turtle bug	G2G3	SU		
Botocudo modestus	A seed bug	G5	SU		
Corixidea major	A true bug	GU	SU		
Elasmostethus atricornis	Hercules club stink bug	G3?	SU		
Eurygaster alternata	A shield bug	G5	SU		
Galgupha denudata	A shield bug	G3	SU		
Glyptocombus saltator	A true bug	GNR	SU		
Isocytus chapmani	Chapman’s shore bug	GNR	SU		
Isthmocorius piceus	Black stalk-eyed bug	G5	SU		
Ligyrocoris depictus	A seed bug	G4?	SU		
Nannocoris arenarius	A true bug	GU	SU		
Neolygus crataegi	Hawthorn plant bug	GNR	SU		
Nepa apiculata	A water scorpion	GNR	SU		
Oncozygia clavicornis	A turtle bug	G3	SU		
Plagiognathus repetitus	Pine barrens plant bug	GNR	SU		
Pnirontis languida	An assassin bug	G4	SU		
Ranatra australis	Southern water scorpion	G5	SU		
Ranatra drakei	Drake’s water scorpion	G4	SU		
Stachyocnemus apicalis	Sandpit alydid bug	G4	SU		
Tominotus communis	A burrower bug	G5	SU		
Trialeurodes phlogis	Phlox whitefly	GU	SU		
COLEOPTERA (BEETLES)					
Anthophylax hoffmani	A longhorned beetle	GNR	S1S3		
Calligrapha pnirsa	A leaf beetle	G3	S1S3		
Cyclotrachelus incisus	A ground beetle	G4	SU		
Diabrotica cristata	A leaf beetle	GNR	SU		
Eucaerus varicornis	A ground beetle	G4?	SU		
Helops sulcipennis	A flightless darkling beetle	G3?	S1S3

BIRDS					
Calidris canutus rufa	Red Knot	G4T2	S2N	LT	
Charadrius melodus	Piping Plover	G3	S2B/S1N	LT	LT
Picoides borealis	Red-cockaded Woodpecker	G3	S1	LE	LE
Setophaga kirtlandii = *Dendroica kirtlandii*	Kirtland's Warbler	G1	SNA	LE	LE
Sterna dougallii	Roseate Tern	G4	SHB	LE	LE
MAMMALS					
Balaenoptera borealis	Sei whale	G3	SNA	LE	LE
Balaenoptera musculus	Blue whale	G3G4	SNA	LE	LE
Balaenoptera physalus	Fin whale	G3G4	SNA	LE	LE
Corynorhinus townsendii virginianus = *Plecotus townsendii virginianus*	Virginia big-eared bat	G3G4T2	S1	LE	LE
Eubalaena glacialis = *Balaena glacialis*	Northern right whale	G1	SNA	LE	LE
Glaucomys sabrinus coloratus	Carolina northern flying squirrel	G5T2	S1	LE	LE
Megaptera novaeangliae	Humpback whale	G4	S1N	LE	LE
Myotis grisescens	Gray myotis (bat)	G3	S1	LE	LE
Myotis sodalis	Indiana bat (= social myotis)	G2	S1	LE	LE
Myotis septentrionalis	Northern long-eared Myotis (bat)	G1G3	S1S3	LT	
Physeter macrocephalus = *Physeter catodon*	Sperm whale	G3G4	SNA	LE	LE
Trichechus manatus	West Indian manatee	G2	SNA	LE/PT	LE

APPENDIX 2. FEDERALLY ENDANGERED AND THREATENED INVERTEBRATE ANIMALS OF VIRGINIA

(exclusive of extirpated species, see Appendix 3)

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
INVERTEBRATES					
GASTROPODA (SNAILS)					
Polygyriscus virginianus	Virginia coil (= Virginia fringed mountain snail)	G1	S1	LE	LE
BIVALVIA (MUSSELS)					
Alasmidonta heterodon	Dwarf wedgemussel	G1G2	S1	LE	LE
Cumberlandia monodonta	Spectaclecase	G3	S1	LE	LE
Cyprogenia stegaria	Fanshell	G1Q	S1	LE	LE
Dromus dromas	Dromedary pearlymussel	G1	S1	LE	LE
Epioblasma brevidens	Cumberland combshell	G1	S1	LE	LE
Epioblasma capsaeformis	Oyster mussel	G1	S1	LE	LE
*Epioblasma florentina walkeri**	Tan riffleshell	G1T1	S1	LE	LE
Epioblasma triquetra	Snuffbox	G3	S1	LE	LE
Fusconaia cor	Shiny pigtoe	G1	S1	LE	LE
Fusconaia cuneolus	Fine-rayed pigtoe	G1	S1	LE	LE
Hemistena lata	Cracking pearlymussel	G1	S1	LE	LE
Lemiox rimosus	Birdwing pearlymussel	G1	S1	LE	LE
Pegias fabula	Little-winged pearlymussel	G1	S1	LE	LE
Plethobasus cyphyus	Sheepnose	G3	S1	LE	LE
Pleurobema collina	James spinymussel	G1	S1	LE	LE
Pleurobema plenum	Rough pigtoe	G1	SH	LE	LE
Pleuronaia dolabelloides	Slabside pearlymussel	G2	S2	LE	LE
Ptychobranchus subtentum	Fluted Kidneyshell	G2	S2	LE	LE
Quadrula cylindrica strigillata	Rough rabbits foot	G3G4T2	S2	LE	LE
Quadrula intermedia	Cumberland monkeyface	G1	S1	LE	LE
Quadrula sparsa	Appalachian monkeyface	G1	S1	LE	LE
Villosa perpurpurea	Purple bean	G1	S1	LE	LE
CRUSTRACEA (AMPHIPODS, ISOPODS & DECAPODS)					
Antrolana lira	Madison Cave isopod	G2G4	S2	LT	LT
Lirceus usdagalun	Lee County cave isopod	G2G3	S1	LE	LE
ARACHNIDA (SPIDERS, PSEUDOSCORPIONS & RELATIVES)					
Microhexura montivaga	Spruce-fir moss spider	G1	S1	LE	LE
INSECTA (INSECTS)					
Beetles					
Cicindela dorsalis dorsalis = *Habroscelimorpha dorsalis dorsalis*	Northeastern beach tiger beetle	G4T2	S2	LT	LT
Nicrophorus americanus	American burying beetle	G2G3	SH	LE	
Butterflies					
Neonympha mitchellii	Mitchell's satyr	G2	S1	LE	LE

*Virginia populations were recently described as a new subspecies, *Epioblasma florentina aureola* (golden riffleshell).

APPENDIX 3. EXTINCT AND EXTIRPATED ANIMALS OF VIRGINIA

SCIENTIFIC NAME	COMMON NAME	GLOBAL RANK	STATE RANK	FEDERAL STATUS	STATE STATUS
VERTEBRATES					
FISH					
Moxostoma lacerum = *Lagochila lacera*	Harelip sucker	GX	SX		
Percina bimaculata	Chesapeake darter	G1G2	SX		
Percina maculata	Blackside darter	G5	SX		
Percopsis omiscomaycus	Trout-perch	G5	SX		
BIRDS					
Conuropsis carolinensis	Carolina parakeet	GX	SX		
Ectopistes migratorius	Passenger pigeon	GX	SX		
Vermivora bachmanii	Bachman's warbler	GH	SX	LE	LE
MAMMALS					
Bos bison = *Bison bison*	American bison	G4	SX		
Canis lupus = *Canis lycaon*	Gray (= eastern timber) wolf	G4G5	SX	LE	LE
Canis rufus	Red wolf	G1Q	SX	LE	
Cervus elaphus = *Cervus canadensis*	Wapiti or elk	G5	SX*		
Puma concolor couguar = *Felis concolor couguar*	Eastern cougar (= mountain lion, puma)	G5THQ	SX	LE	LE
INVERTEBRATES					
BIVALVIA (MUSSELS)					
Epioblasma haysiana	Acornshell	GX	SX		
Epioblasma lenior	Narrow catspaw	GX	SX		
Epioblasma torulosa gubernaculum	Green-blossom pearlymussel	G2TX	SX	LE	LE
Lampsilis abrupta	Pink mucket	G2	SX	LE	LE
Villosa fabalis	Rayed bean	G2	SX	LE	LE
Villosa trabalis	Cumberland bean	G1	SX	LE	LE
INSECTS					
Phyciodes batesii batesii	Tawny crescent	G4T1	SX		

*The last record of a native elk in Virginia was from 1855. Small numbers of reintroduced elk from eastern Kentucky have moved into far southwestern Virginia in recent years and are currently considered a game species by the Virginia Department of Game and Inland Fisheries, which has initiated a reintroduction program in that portion of the state.

APPENDIX 4. LIST OF SYNONYMS

Synonym	Name used in lists above	Common name	Page
Acipenser oxyrhynchus	*Acipenser oxyrinchus*	Atlantic sturgeon	10
Acontia delecta	*Tarache delecta*	Delightful Bird-dropping moth	48
Aeshna mutata	*Rhionaeschna mutata*	Spatterdock darner	23
Aimophila aestivalis	*Peucaea aestivalis*	Bachman's Sparrow	14
Alasmidonta minor	*Alasmidonta viridis*	Slippershell mussel	17
Anacamptodes pergracilis	*Iridopsis pergracilis*	A geometrid moth	39
Anculosa subglobosa	*Leptoxis praerosa*	Onyx rocksnail	34
Anguispira alternata jessica	*Anguispira jessica*	Mountain disc	16
Anthrobia mammouthia	*Anthrobia monmouthia*	A cave spider	18
Apamea finitima	*Apamea sordens*	Bordered Apamea moth	38
Archanara subflava	*Capsula subflava*	A sedge borer moth	38
Arugisa watsoni	*Arugisa latiorella*	A noctuid moth	38
Balaena glacialis	*Eubalaena glacialis*	Northern right whale	49
Bellura melanopyga	*Bellura vulnifica*	A wetland borer moth	48
Bison bison	*Bos bison*	Bison	51
Bombus ashtoni	*Bombus bohemicus*	Ashton cuckoo bumble bee	48
Bomolocha sordidula	*Hypena sordidula*	Sordid Hypena moth	39
Brachoria falcifera	*Appalachioria falcifera*	Big Cedar Creek millipede	20
Brachoria separanda hamata	*Appalachioria separanda hamata*	A millipede	20
Brachoria separanda versicolor	*Appalachioria separanda versicolor*	A millipede	20
Brachoria turneri	*Appalachioria turneri*	Turner's millipede	20
Bufo quercicus	*Anaxyrus quercicus*	Oak toad	12
Cambarus veteranus (in part)	*Cambarus callainus*	Big Sandy Crayfish	20
Canis lycaon	*Canis lupus*	Gray wolf	51
Carpodacus purpureus	*Haemorhous purpureus*	Purple Finch	13
Carunculina glans	*Toxolasma lividus*	Purple liliput	18
Carunculina lividus	*Toxolasma lividus*	Purple liliput	18
Casmerodius albus	*Ardea alba*	Great Egret	13
Celastrina ebenina	*Celastrina nigra*	Dusky azure	38
Celastrina ladon lucia	*Celastrina lucia*	Northern spring azure	47
Cervus canadensis	*Cervus elaphus*	Wapiti or elk	51
Clemmys insculpta	*Glyptemys insculpta*	Wood turtle	12
Clemmys muhlenbergii	*Glyptemys muhlenbergii*	Bog turtle	12
Conradilla caelata	*Lemiox rimosus*	Birdwing pearlymussel	17
Cottus baileyi	*Uranidea baileyi*	Black sculpin	11
Cottus cognatus	*Uranidea cognata*	Slimy sculpin	11
Cottus kanawhae	*Uranidea kanawhae*	Kanawha sculpin	32
Cottus sp. 1	*Uranidea* sp. 1	Bluestone sculpin	11
Cottus sp. 4	*Uranidea* sp. 4	Clinch sculpin	11
Cottus sp. 5	*Uranidea* sp. 5	Holston sculpin	11
Cyprinella monacha	*Erimonax monachus*	Spotfin chub (= turquoise shiner)	10
Cyprogenia irrorata	*Cyprogenia stegaria*	Fanshell	17
Deciduphagus irus	*Callophrys irus*	Frosted elfin	27
Deciduphagus polios	*Callophyrs polios*	Hoary elfin	27
Dendroica cerulea	*Setophaga cerulea*	Cerulean Warbler	33
Dendroica fusca	*Setophaga fusca*	Blackburnian Warbler	14
Dendroica kirtlandii	*Setophaga kirtlandii*	Kirtland's Warbler	49
Dendroica magnolia	*Setophaga magnolia*	Magnolia Warbler	14
Dendroica virens waynei	*Setophaga virens waynei*	Wayne's Black-throated Green Warbler	14
Dixioria coronata	*Dixioria pela coronata*	A millipede	19
Ellipsoptera gratiosa	*Cicindela gratiosa*	Whitish tiger beetle	25
Ellipsoptera lepida	*Cicindela lepida*	Ghost tiger beetle	25
Enallagma cyathigerum (in part)	*Enallagma annexum*	Northern bluet	22
Ephemerella berneri	*Tsalia berneri*	Berner's Ephemerella mayfly	22
Epioblasma florentina walkeri (in part)	*Epioblasma florentina aureola*	Golden riffleshell	17
Erythroecia hebardi	*Psectrotarsia hebardi*	Hebard's noctuid moth	29
Etheostoma clarum	*Ammocrypta clara*	Western sand darter	10

APPENDIX 4 (continued)

Synonym	Name used in lists above	Common name	Page
Etheostoma stigmaeum jessiae	*Etheostoma jessiae*	Blueside darter	10
Etheostoma stigmaeum meadiae	*Etheostoma meadiae*	Bluespar darter	10
Etheostoma tippecanoe (in part)	*Etheostoma denoncourti*	Golden darter	10
Eumeces anthracinus	*Plestiodon anthracinus*	Coal skink	32
Eutolype grandis	*Psaphida grandis*	Gray sallow	43
Fallicambarus uhleri	*Fallicambarus fodiens*	A crayfish	35
Faronta rubripennis	*Dargida rubripennis*	Pink-streak moth	28
Felis concolor couguar	*Puma concolor couguar*	Eastern cougar	15
Fixsenia favonius ontario	*Satyrium favonius ontario*	Northern oak hairstreak	38
Foveacheles paralleloseta	*Traegaardia paralleloseta*	A cave mite	18
Fusconaia barnesiana	*Pleuronaia barnesiana*	Tennessee pigtoe	17
Fusconaia edgariana	*Fusconaia cor*	Shiny pigtoe	17
Gallinula chloropus (in part)	*Gallinula galeata*	Common Gallinule	13
Gastrocopta armifera clappi	*Gastrocopta clappi*	Bluegrass snaggletooth	42
Gastrocopta interna fonticula	*Gastrodonta fonticula*	Appalachia bellytooth	42
Gomphus brevis	*Gomphus adelphus*	Moustached clubtail	23
Goniobasis arachnoidea	*Elimia arachnoidea*	Spider Elimia	16
Graphisurus triangulifer	*Urographis triangulifer*	A longhorned beetle	46
Habroscelimorpha dorsalis dorsalis	*Cicindela dorsalis dorsalis*	Northeastern beach tiger beetle	25
Habroscelimorpha dorsalis media	*Cicindela dorsalis media*	White tiger beetle	36
Heterocloeon anoka	*Iswaeon anoka*	A mayfly	44
Heterocloeon rubrolaterale	*Iswaeon rubrolaterale*	A mayfly	22
Holomelina ferruginosa	*Virbia ferruginosa*	Rusty tiger moth	48
Holomelina immaculata	*Virbia immaculata*	Immaculate tiger moth	48
Homohadena badistriga	*Sympistis badistriga*	Brown-lined sallow moth	48
Hybopsis cahni	*Erimystax cahni*	Slender chub	10
Hybopsis dissimilis	*Erimystax dissimilis*	Streamline chub	32
Hybopsis insignis	*Erimystax insignis*	Blotched chub	32
Hybopsis labrosa	*Cyprinella labrosa*	Thicklip chub	10
Hybopsis monacha	*Erimonax monachus*	Spotfin chub (= turquoise shiner)	10
Incisalia irus	*Callophrys irus*	Frosted elfin	27
Incisalia polios	*Callophyrs polios*	Hoary elfin	27
Itame abruptata	*Speranza abruptata*	A geometrid moth	40
Itame evagaria	*Speranza evagaria*	A geometrid moth	40
Itame exauspicata	*Speranza exauspicata*	A geometrid moth	40
Itame ribearia	*Speranza ribearia*	Currant spanworm moth	29
Itame subcessaria	*Speranza subcessaria*	Barred Itame moth	40
Lagochila lacera	*Moxostoma lacerum*	Harelip sucker	51
Lampropeltis getula nigra	*Lampropeltis nigra*	Eastern black kingsnake	12
Lampropeltis triangulum elapsoides	*Lampropeltis elapsoides*	Scarlet kingsnake	42
Lampsilis orbiculata	*Lampsilis abrupta*	Pink mucket	17
Lastena lata	*Hemistena lata*	Cracking pearlymussel	17
Lepipolys perscripta	*Sympistis perscripta*	Scribbled sallow moth	29
Leurognathus marmoratus	*Desmognathus marmoratus*	Shovel-nosed salamander	12
Lexingtonia dolabelloides	*Pleuronaia dolabelloides*	Slabside pearlymussel	17
Lexingtonia subplana	*Fusconaia masoni*	Atlantic pigtoe	17
Libellula exusta	*Ladona exusta*	White corporal skimmer	23
Libellula julia	*Ladona julia*	Chalk-fronted corporal skimmer	23
Ligumia ochracea	*Leptodea ochracea*	Tidewater mucket	34
Ligumia recta latissima	*Ligumia recta*	Black sandshell	17
Limnaoedus ocularis	*Pseudacris ocularis*	Little grass frog	32
Liochlorophis vernalis	*Opheodrys vernalis*	Smooth greensnake	32
Lithacodia albidula	*Protodeltote albidula*	A noctuid moth	40
Lithobates virgatipes	*Rana virgatipes*	Carpenter frog	34
Lithophane lepida adipel	*Lithophane adipel*	A pinion moth	29
Loxagrotis apicalis	*Dichagyris grotei*	A noctuid moth	28
Lutra canadensis	*Lontra canadensis*	River otter	33
Merolonche dolli	*Acronicta dolli*	Doll's dagger moth	28

APPENDIX 4 (continued)

Synonym	Name used in lists above	Common name	Page
Mesodon christyi	*Fumonelix christyi*	Glossy covert	42
Mesodon clingmanicus	*Fumonelix wheatleyi clingmanicus*	Clingman covert	16
Mesodon kalmianus	*Inflectarius kalmianus*	Brown globelet	42
Mesodon panselenus	*Patera panselenus*	Virginia bladetooth	34
Microcreagris valentinei	*Lissocreagris valentinei*	Valentine's cave pseudoscorpion	18
Mitoura hesseli	*Callophrys hesseli*	Hessel's hairstreak	27
Moxostoma ariommum	*Scartomyzon ariommus*	Bigeye jumprock	34
Moxostoma hamiltoni	*Thoburnia hamiltoni*	Rustyside sucker	11
Neadysgonia telma	*Gondysia telma*	Telma darkwing moth	28
Neonympha areolatus septentrionalis	*Neonympha helicta*	Helicta satyr	27
Notropis hypsinotus	*Hybopsis hypsinotus*	Highback chub	10
Notropis lirus	*Lythrurus lirus*	Mountain shiner	10
Notropis whipplei	*Cyprinella whipplei*	Steelcolor shiner	10
Nuttallornis borealis	*Contopus cooperi*	Olive-sided Flycatcher	13
Nycticorax violaceus	*Nyctanassa violacea*	Yellow-crowned Night-heron	14
Odontonyx trivittis	*Paralichas trivittis*	A beetle	46
Oligia crytora	*Neoligia crytora*	A noctuid moth	39
Oligia exhausta	*Neoligia exhausta*	A noctuid moth	39
Ophiogomphus alleghaniensis	*Ophiogomphus incurvatus alleghaniensis*	Allegheny snaketail	23
Oporornis philadelphia	*Geothlypis philadelphia*	Mourning Warbler	13
Percina macrocephala	*Percina williamsi*	Sickle darter	11
Phoxinus cumberlandensis	*Chrosomus cumberlandensis*	Blackside dace	10
Phoxinus tennesseensis	*Chrosomus tennesseensis*	Tennessee dace	10
Phyciodes pascoensis	*Phyciodes cocyta*	Northern crescent	27
Phyciodes selenis	*Phyciodes cocyta*	Northern crescent	27
Physeter catodon	*Physeter macrocephalus*	Sperm whale	49
Pipistrellus subflavus	*Perimyotis subflavus*	Tricolored bat	15
Plauditus rubrolateralis	*Iswaeon rubrolaterale*	A mayfly	22
Plecotus rafinesquii macrotis	*Corynorhinus rafinesquii macrotis*	Eastern big-eared bat	15
Plecotus townsendii virginianus	*Corynorhinus townsendii virginianus*	Virginia big-eared bat	15
Pleurobema maculatum	*Pleurobema oviforme*	Tennessee clubshell	17
Pleurobema pyramidatum	*Pleurobema rubrum*	Pyramid pigtoe	17
Pleurocera catenaria	*Elimia catenaria*	Gravel Elimia	35
Polygyra plicata	*Millerelix plicata*	Cumberland liptooth	16
Polygyra pustuloides	*Lobosculum pustuloides*	Tiny Liptooth	42
Polyzonium rosalbum	*Petaserpes rosalbus*	A millipede	44
Pterourus appalachiensis	*Papilio appalachiensis*	Appalachian tiger swallowtail	47
Pyrgus wyandot	*Pyrgus centaureae wyandot*	Appalachian grizzled skipper	27
Rana kauffeldi	*Lithobates kauffeldi*	Atlantic Coast leopard frog	42
Rana virgatipes	*Lithobates virgatipes*	Carpenter frog	32
Rhodoecia aurantiago	*Pyrrhia aurantiago*	Aureolaria seed borer moth	29
Richia grotei	*Dichagyris grotei*	A noctuid moth	28
Scartomyzon ariommus	*Moxostoma ariommum*	Bigeye jumprock	32
Schinia inclara	*Schinia siren*	A flower moth	29
Seiurus noveboracensis	*Parkesia noveboracensis*	Northern Waterthrush	14
Semiothisa distribuaria	*Macaria distribuaria*	A geometrid moth	29
Semotilus margarita	*Margariscus margarita*	Pearl dace	32
Sphaeroderus nitidicollis schaumii	*Sphaeroderus schaumii*	Schaum's false snail-eating beetle	26
Sphinx eremitus	*Lintneria eremitus*	Hermit sphinx	39
Stenotrema leai alicia	*Euchemotrema leai*	Lowland pillsnail	42
Sterna antillarum	*Sternula antillarum*	Least Tern	14
Sterna caspia	*Hydroprogne caspia*	Caspian Tern	13
Sterna maxima	*Thalasseus maximus*	Royal Tern	14
Sterna nilotica	*Gelochelidon nilotica*	Gull-billed Tern	13
Sterna sandvicensis	*Thalasseus sandvicensis*	Sandwich Tern	14
Stizostedion canadense	*Sander canadensis*	Sauger	11
Sylvilagus transitionalis	*Sylvilagus obscurus*	Appalachian cottontail	33

APPENDIX 4 (continued)

Synonym	Name used in lists above	Common name	Page
Sympetrum janeae	*Sympetrum internum*	Cherry-faced meadowhawk	44
Tetracha carolina	*Megacephala carolina*	Carolina big-headed tiger beetle	37
Tetragoneuria canis	*Epitheca canis*	Beaverpond baskettail	23
Tetragoneuria costalis	*Epitheca costalis*	Stripe-winged baskettail	44
Tetragoneuria semiaquea	*Epitheca semiaquea*	Mantled baskettail	23
Tetragoneuria spinosa	*Epitheca spinosa*	Robust baskettail	36
Thalpius pygmaeus	*Pseudaptinus pygmaeus*	A ground beetle	46
Tischeria perplexa	*Coptotriche perplexa*	Chestnut leaf-mining moth	28
Trichopetalum packardi	*Zygonopus packardi*	Packard's blind cave millipede	35
Trichopetalum weyeriensis	*Zygonopus weyeriensis*	Grand Caverns blind cave millipede	21
Trichopetalum whitei	*Zygonopus whitei*	Luray Caverns blind cave millipede	21
Trionyx spiniferus	*Apalone spinifera*	Spiny softshell	12
Tritogonia verrucosa	*Quadrula verrucosa*	Pistolgrip	18
Troglodytes troglodytes (in part)	*Troglodytes hiemalis*	Winter Wren	14
Vermivora pinus	*Vermivora cyanoptera*	Blue-winged Warbler	33
Vermivora ruficapilla	*Oreothlypis ruficapilla*	Nashville Warbler	14
Wilsonia canadensis	*Cardellina canadensis*	Canada Warbler	33
Wyeomyia haynei	*Wyeomyia smythii*	Pitcher plant mosquito	30
Xestia tenuicula	*Pseudohermonassa tenuicula*	A dart moth	40
Zanclognatha gypsalis	*Zanclognatha theralis*	A noctuid moth	48

APPENDIX 5. RARE SPECIES SIGHTING FORM

Virginia Department of Conservation and Recreation, Division of Natural Heritage
600 E. Main Street, Richmond, Virginia 23219
(804) 786-7951

An important component of the natural heritage inventory and protection process involves gathering information from state experts, professionals, and avocational naturalists throughout the state. To facilitate this, the Division of Natural Heritage has developed this rare species sighting form. If you would like to participate in our inventory and protection activities, please take a few moments to complete the attached form for any species from our rare species list. These data will be evaluated for incorporation into the natural heritage database and used exclusively for the protection of the rare species and its habitat. Please send the form to the staff zoologist at the address above. Thank you for your support. The Division of Natural Heritage can only realize the protection of the Commonwealth's natural diversity by working through a network of knowledgeable and concerned individuals.

SPECIES OBSERVED:

DATE OBSERVED:

COUNTY:

USGS QUADRANGLE MAP NAME (if known; mark location on a photocopy of the appropriate map and submit with this form):

LOCATION (Provide a detailed description, including directions from nearest town, road intersection, etc.):

HABITAT DESCRIPTION (Include associated species, elevation, natural features, natural community type, etc.):

POPULATION DATA (Number of individuals observed, age, size, evidence of reproduction,etc.):

LANDOWNER (If know, provide name, address, and phone number):

THREATS TO SPECIES OR EVIDENCE OF HABITAT DISTURBANCE:

REPORTED BY (Include name, address, and phone number):

INTRODUCTION

The Virginia Department of Conservation and Recreation's Division of Natural Heritage (DCR-DNH) was established to protect Virginia's biological diversity. DCR-DNH is the state's first comprehensive program for conservation of our natural heritage, and includes an intensive statewide biological inventory, field surveys, database management, environmental review, GIS analysis and mapping, and natural area protection and stewardship. Through its actions the Division identifies Natural Heritage Resources that are in need of conservation attention while creating an efficient means of evaluating the impacts of balanced economic growth. Natural Heritage Resources are defined in the Virginia Natural Area Preserves Act of 1989 (Section 10.1-209 through 217, Code of Virginia), as the habitats of rare, threatened, and endangered plant and animal species; exemplary natural communities, habitats, and ecosystems; and other natural features of the Commonwealth.

To help prioritize conservation efforts, DCR-DNH maintains Natural Heritage Resource lists of rare plants and animals. These lists are revised as new data become available, usually every one to two years. Natural communities are described, inventoried, and tracked using a hierarchical classification developed by DCR-DNH Ecologists. The classification provides a framework in which to describe natural communities at a scale that is meaningful for conservation and land protection and management.

This document lists the full classification hierarchy and includes the 94 ecological groups and 317 community types currently defined for Virginia. It is meant to function as a companion to the Division's website, which provides descriptions and illustrations of all Ecological Groups, as well as more detailed information about the methods used to develop the classification. The website and classification can be accessed at the following link: http://www.dcr.virginia.gov/natural_heritage/natural_communities/ncintro.shtml

Classification Structure

The divisions of the Virginia classification hierarchy, from the top down, are: System, Ecological Class, Ecological Community Group, and Community Type.

The **System** is the upper-most level of the classification hierarchy. The System level is based on gross hydrologic regime and includes five divisions: the **Terrestrial System** includes all upland (non-wetland) habitats, while the **Palustrine System** encompasses all non-tidal wetlands dominated by woody plants and herbaceous emergents. The **Estuarine System** includes emergent and floating / submergent tidal wetlands, extending to the upstream limits of tidal influence. The **Riverine System** and the **Marine System** are each represented by a single ecological group that supports vascular plants. This system-level treatment generally follows Cowardin et al. (1979), except that freshwater tidal wetlands are included in the Estuarine System, and some communities that would be placed in the Lacustrine System of Cowardin et al. (1979) are included in the Palustrine System. Classifications of deepwater Lacustrine, Riverine, Estuarine, and Marine System communities that lack vascular plants, as well as of Subterranean System (cave) communities, are currently under study or development by other groups of specialists.

Ecological Class is a level of the classification that is meant to aid in organizing ecological community groups. We have defined 14 Ecological classes to organize the natural communities of Virginia. These classes are not necessarily mutually exclusive, but serve to group physiographically and topographically related community groups, which often co-occur on the landscape. Each Ecological Class is described below:

Terrestrial Ecological Classes:

- *High-Elevation Mountain Communities* - Ecological community groups with distributions centered above 1,070 m (3,500 ft) elevation and representing structurally and compositionally diverse vegetation rich in northern species.
- *Low-Elevation Mesic Forests* - Ecological community groups with distributions centered below 1,070 m (3,500 ft) elevation and representing mesophytic to submesophytic forest vegetation. A few community types of the Rich Cove and Slope Forests, Acidic Cove Forests, and Eastern Hemlock - Hardwood Forests occasionally extend into the high-elevation zone (> 1,070 m).

- *Low-Elevation Dry and Dry-Mesic Forests and Woodlands* - Ecological community groups with distributions centered below 1,070 m (3,500 ft) elevation and representing xerophytic to submesophytic forest and woodland vegetation. A few community types of the Montane Mixed Oak and Oak-Hickory Forests, Oak / Heath Forests, and Pine - Oak / Heath Woodlands extend significantly into the high-elevation zone (> 1,070 m), but are retained in this Class because of their compositional similarity to other members of these groups.
- *Low-Elevation Rock Outcrops and Barrens* - Ecological community groups with distributions centered below 1,070 m (3,500 ft) elevation and representing edaphically (or in one case, fire-) controlled woodland, scrub, herbaceous, and moss/lichen vegetation.
- *Maritime Zone Communities* - Ecological community groups with distributions and vegetation controlled by oceanic influences (e.g., deep sand deposits, salt spray, maritime microclimates). In Virginia, these are confined to narrow zones along both flanks of the Eastern Shore, the western shore of the Chesapeake Bay, and the Atlantic shore in extreme southeastern Virginia.
- *Sandy Woodlands of the Coastal Plain and Outer Piedmont* - Ecological community groups representing woodland vegetation of oligotrophic, fire-influenced or edaphically stressful, non-marine sandy habitats at very low elevations.

Palustrine Ecological Classes:

- *Alluvial Floodplain Communities* - Ecological community groups of alluvial habits with overland, non-tidal flooding regimes. Structurally and compositionally diverse vegetation is represented.
- *Non-Alluvial Wetlands of the Mountains* - Ecological community groups of groundwater-controlled, non-alluvial wetlands in the mountain region, including seeps, bogs, fens, and ponds. Structurally and compositionally diverse vegetation is represented.
- *Non-Alluvial Wetlands of the Coastal Plain and Piedmont* - Ecological community groups of groundwater-controlled, non-alluvial wetlands in the Coastal Plain and Piedmont. Structurally and compositionally diverse vegetation is represented.
- *Saturated Peatlands of the Coastal Plain* - Ecological community groups of fire-influenced, groundwater controlled, non-alluvial, Coastal Plain wetlands with deep organic soils and a saturated hydrologic regime. This class is represented in Virginia by woodland and forest vegetation, although shrublands are components further south. It is confined to the extreme southeastern portion of the state.
- *Non-Tidal Maritime Wetlands* - Ecological community groups of mostly groundwater-controlled wetlands subject to oceanic influences (e.g., deep sand deposits, salt spray, maritime microclimates). In Virginia, these are confined to narrow zones along both flanks of the Eastern Shore, the western shore of the Chesapeake Bay, and the Atlantic shore in extreme southeastern Virginia.

Riverine Ecological Class:

- *Riverine Vegetation* – Ecological communities of freshwater river channels, including floating and submergent herbaceous vegetation at water depths that exclude emergent species but permit bottom rooting of aquatic species. Vegetation with emergent species is included in the Palustrine Ecological classes.

Estuarine Ecological Class:

- *Tidal Wetlands* - Ecological community groups of regularly or irregularly flooded, lunar tidal wetlands and irregularly flooded, wind-tidal wetlands. Structurally and compositionally diverse vegetation is represented. In the descriptions that follow, the terms "high" and "low" marsh refer to the relative elevation of stands within the intertidal zone.

Marine Ecological Class:

- *Marine Vegetation* – Ecological community groups of sparsely vegetated ocean shores and flats where the substrate is exposed and flooded by ocean tides; includes vegetation of the splash zone.

The **Ecological Community Group** is the level of the classification that organizes community types. Ecological community groups are aggregations of community types with topographic, edaphic, physiognomic, and gross floristic similarities. Community types within an ecological community group are often distributed in different regions of the state and have floristic differences that result from biogeographic influences. Ecological Community Groups define natural communities at a relatively coarse scale that may be more appropriate for large-scale applications such as ecological modeling and vegetation mapping. In addition, they employ concepts and terminology that are communicable, familiar, and useful to a wide range of potential users.

The **Community Type** is the finest level of the classification system that is nested within the Ecological Community Group. Community Types are plant assemblages that exhibit similar total species composition and vegetation structure and that occur under similar habitat conditions, and, for the most part, repeat across the landscape. The Community Type level is equivalent to the Association level of the United States National Vegetation Classification System (USNVC) (Grossman *et al.* 1998, NatureServe 2010) and is a concept that has been used by most of the schools of floristic classification (Whittaker 1962, Braun-Blanquet 1965, Westhoff and van der Maarel 1973, Moravec 1993). The Community Type is the level at which community inventory and conservation action are aimed and, as such, it is the level at which community occurrences are tracked and for which conservation status ranks are assigned.

Relationship to the USNVC and NatureServe's Ecological System Classification

The United States National Vegetation Classification (USNVC) is a jurisdictional subset of the larger International Vegetation Classification of Ecological Communities (IVC). The USNVC is a hierarchical system that classifies vegetation using physiognomic (structural) features at the highest levels of the hierarchy and floristic features at the lower levels (Grossman et al 1997, FGDC 2008, Jennings et al 2009). Over the past twenty years, the USNVC has been developed and implemented by The Nature Conservancy (TNC), the network of Natural Heritage Programs, and, since 2001, NatureServe. NatureServe is the organization that currently maintains and updates the USNVC via the *NatureServe Explorer* website (NatureServe 2011) and on the usvnc.org website. Refinements to the floristic levels of the classification occur in the process of application, leading to ongoing proposed revisions that are reviewed both locally and nationally. DCR-DNH Ecologists work in partnership with NatureServe to develop the finest floristic level of the classification, the Association. USNVC Associations are equal in scale to Community Types in The Natural Communities of Virginia classification and, for the most part, have a one-to-one relationship to the Community Type. However, Community Types have Virginia-specific names and concepts, while Associations are named and defined based on the range-wide expression of the vegetation.

In 2003, NatureServe developed a classification of Ecological Systems (Comer et al 2003). Ecological Systems are not part of the USNVC hierarchy, but are vegetation-based, and can be linked to the USNVC at the middle levels of the hierarchy (Groups and Macrogroups) (Gawler et al 2008). The Ecological System classification is maintained by NatureServe and descriptions are available via the *NatureServe Explorer* website. Ecological Systems have been used as the basis for several national and regional scale classification and mapping efforts, including the Northeastern Terrestrial Wildlife Habitat Classification (Gawler et al 2008), LANDFIRE (The National Map Landfire 2007), and the Southeast GAP analysis project (USGS. National Gap Analysis Program 2008). Ecological Systems are recurring groups of biological communities (i.e. associations) that are found in similar physical environments and are influenced by similar dynamic ecological processes (Comer et al. 2003). Ecological Systems are defined based on biogeographic region, landscape scale, dominant cover type, and disturbance regime and, as such, are coarser in scale than the Association or Community Type. A single Association may occur in more than one Ecological System depending on the geographic regions in which it is found. In Virginia, a single Community Type may be split among several Ecological Systems that have been defined by geographic regions. The Ecological Group level in The Natural Communities of Virginia classification is similar in concept to Ecological System, but

the two classification units differ in geographic scale. Ecological Groups are defined within the constraints of the state of Virginia, while Ecological Systems are regional in scope, with divisions along physiographic provinces. To illustrate this relationship, a crosswalk of The Natural Communities of Virginia to Ecological Systems is provided on our website at http://www.dcr.virginia.gov/natural_heritage/documents/vaclass_system_xwalk_01302012.xls

Changes to Ecological Community Groups since Version 2.2 and Community Types since 2011
Development of the state classification is an iterative process of successive approximations. Since completion of the Second Approximation, version 2.2 (Fleming *et al.* 2006), analysis of several large, regional datasets and ongoing inventory of vegetation across the state have led to a number of changes to the Ecological Group Classification. These changes, as well as changes to Community Types since the publication of the 2011 list, are summarized in Appendix A of this document. In 2013, the nomenclature for vascular plant species used in the community type scientific name was changed to follow The Flora of Virginia (Weakley et al. 2012), resulting in the change of 104 community type names. These changes are not listed in this appendix.

Format of the List

The System and Ecological Class are listed at the top of each page.

Ecological Community Groups are organized into fourteen Ecological Classes.
Each Ecological Group is hyperlinked to a Group description on the DCR Natural Heritage Website

Community Types are listed in alphabetical order beneath each Ecological Community Group of which they are a member.

For each Community Type, the following information is provided:

Scientific Name - The scientific name (State Name) of the community type based on Latin names of dominant or characteristic plant species. Those species occurring in the same stratum are separated by a hyphen (-); those occurring in different strata are separated by a slash (/). Species found less consistently in all occurrences of a community type, are placed in parentheses. Names preceded by an asterisk are considered "provisional" and should be considered tentative. In most cases, these putative types are based on limited data and analysis, and are subject to reinterpretation or changes in concept as additional data become available. State Names are based on the occurrence of the community in Virginia, and species nomenclature follows the Flora of Virginia (Weakley et al. 2012), thus state names may differ from the Global scientific name assigned by NatureServe. Additionally, subspecies and varieties of nominal species are not included in the community type names unless they are explicitly diagnostic of the community.

Common Name – The common or colloquial name (State Common Name) of the community type. The common name is a unique name by which the community type may be more easily recognized or described. Common names are based on the occurrence of the community in Virginia, and may differ from the Global Common Name assigned by NatureServe.

Global Rank **–** Global conservation status ranks characterize the relative rarity or endangerment of the corresponding USNVC association (see below) range-wide and are assigned at NatureServe's Headquarters or by a designated lead office in the Heritage/Conservation Data Center Network. Definitions of global ranks are provided in Appendix B of this document. A table showing the number of classified community types by conservation rank is provided in Appendix C. of this document.

State Rank **–** State conservation status ranks characterize the relative rarity or endangerment of the community within Virginia. State ranks are assigned by the DCR-DNH and apply to a community only as it exists in each state, regardless of its range-wide status. Definitions of state ranks are provided in Appendix B of this document. A table showing the number of classified community types by conservation rank is provided in Appendix C. of this document

USNVC Code – Each community type is crosswalked to the equivalent (or nearest equivalent) unit (i.e. the "association") in the United States National Vegetation Classification (USNVC). The USNVC code is a unique identifier for the Association from USNVC databases (NatureServe 2012). Associations have a code that begins with the string "CEGL" (Community Element GLobal) followed by a unique 6-digit number. Community Types that are not defined in the USNVC are listed as "no equivalent" in this field. Each USNVC code in the list is hyperlinked to the corresponding association description on *NatureServe Explorer* website (NatureServe 2013). These descriptions contain detailed range-wide information for the associations. As of this writing, associations considered provisional in the USNVC are not served on NatureServe Explorer, thus these USNVC codes are hyperlinked to a provisonal description on the DCR-DNH website. On this list, each USNVC code is preceded by a symbol indicating the relationship Virginia Community Type to the USNVC Association. The symbols indicate equivalent (=), finer (<), broader (>), or intersects (x). In the infrequent case where a Virginia Community Type can be crosswalked to more than one USNVC Association, the association with the closest relationship to the state concept is listed.

Future Plans

The list of Ecological Community Groups and Community Types, with conservation status ranks, will be updated annually as new information becomes available. Over time, we will develop detailed descriptions of the Community Types. These descriptions will include information on the community's distribution, conservation status, management considerations, as well as key features that will help identify the community in the field. We plan to provide this information in a format that can be obtained via our website. In the meantime, more detailed information may be obtained by following the links provided in this list, and on the DCR-DNH website to the NatureServe Explorer treatments of the corresponding USNVC associations, many of which were authored by DCR-DNH ecologists.

Feedback

We welcome all comments and suggestions on the classification, particularly information about natural vegetation with which you are familiar that does not fit into this classification. We also appreciate information on high-quality examples of natural communities, as this will further our understanding of the conservation status of these communities, as well as provide data to help refine the classification. Comments and suggestions can be directed to Gary Fleming <gary.fleming@dcr.virginia.gov> or Karen Patterson <karen.patterson@dcr.virginia.gov>.

ACKNOWLEDGEMENTS

The authors would like to thank Mark Bradford for database assistance in the design of the list. Megan Rollins provided technical assistance in producing the list. Chris Ludwig and Kristin Taverna provided thoughtful review.

APPENDICES

Appendix A. Changes to Ecological Groups and Community Types

Development of the state classification is an iterative process of successive approximations. Since completion of the Second Approximation, version 2.2 (Fleming *et al.* 2006), analysis of several large, regional datasets and ongoing inventory of vegetation across the state have led to a number of changes to the Ecological Group Classification. Changes to Ecological Groups since 2006 are listed below. Changes to Community Types since the publication of the 2011 list are listed in a third and fourth table. In 2013, the nomenclature for vascular plant species used in the community type scientific name was changed to follow The Flora of Virginia (Weakley et al. 2012), resulting in the change of 104 community type names. These changes are not listed in this appendix.

Changes to Ecological Community Groups 2006 - 2010

Second Approximation (ver. 2.2)	Second Approximation (ver. 2.3)
SOUTHERN APPALACHIAN NORTHERN HARDWOOD FORESTS	merged with the following group into a new NORTHERN HARDWOOD FORESTS group
CENTRAL APPALACHIAN NORTHERN HARDWOOD FORESTS	merged with the preceding group into a new NORTHERN HARDWOOD FORESTS group
ULTRAMAFIC WOODLANDS	merged with the Ultramafic Barrens group into a new ULTRAMAFIC WOODLANDS AND BARRENS group
ULTRAMAFIC BARRENS	merged with the Ultramafic Woodlands group into a new ULTRAMAFIC WOODLANDS AND BARRENS group
MOSS / LICHEN BOULDERFIELDS	name changed to LICHEN / BRYOPHYTE NONVASCULAR BOULDERFIELDS AND OUTCROPS
CALCAREOUS FENS AND SEEPS	merged with the following group into a new CALCAREOUS FENS group
WET PRAIRIES AND PRAIRIE FENS	merged with the preceding group into a new CALCAREOUS FENS group
NON-RIVERINE PINE-HARDWOOD FORESTS	merged with the following two groups into a new NON-RIVERINE FLATWOODS AND SWAMPS group
NON-RIVERINE WET HARDWOOD FORESTS	merged with the preceding and following groups into a new NON-RIVERINE FLATWOODS AND SWAMPS group
NON-RIVERINE SWAMP FORESTS	merged with the preceding two groups into a new NON-RIVERINE FLATWOODS AND SWAMPS group
MARITIME WET PINE FOREST	moved to new group MARITIME SWAMP FORESTS
INTERDUNE WET PINE WOODLANDS	merged into the MARITIME SWAMP FORESTS group
ESTUARINE FRINGE PINE FORESTS	merged into the MARITIME SWAMP FORESTS group
ESTUARINE FRINGE SWAMP FORESTS	merged into the TIDAL BALDCYPRESS FORESTS AND WOODLANDS group
(not represented)	a new HIGH-ENERGY TIDAL SHORES group was added to represent vegetation previously included in the Tidal Freshwater Marshes group

Changes to Ecological Community Groups 2010 - 2011

Second Approximation (ver. 2.3)	Second Approximation (ver. 2.4)
COASTAL PLAIN / PIEDMONT FLOODPLAIN FOREST	Changed name to COASTAL PLAIN PIEDMONT BOTTOMLAND FOREST
COASTAL PLAIN / PIEDMONT SWAMP FOREST	Merged into COASTAL PLAIN PIEDMONT BOTTOMLAND FOREST
PIEDMONT / MOUNTAIN ALLUVIAL FOREST	Changed name to PIEDMONT / MOUNTAIN SMALL-STREAM ALLUVIAL FOREST
STREAMHEAD POCOSIN	Merged into NON-RIVERINE FLATWOOD / SWAMP

Changes to Ecological Community Groups 2011 - 2012

Second Approximation (ver. 2.4)	Second Approximation (ver. 2.5)
MARITIME SHRUB SWAMP	Merged into a new MARITIME SWAMP group
MARITIME SWAMP FOREST	Merged into a new MARITIME SWAMP group
INTERDUNE POND	Merged into a new INTERDUNE SWALES AND PONDS group
MARITIME WET GRASSLAND	Merged into a new INTERDUNE SWALES AND PONDS group

Changes to Community Types 2011 -2012

2011 Community List	2012 Community List
APPALACHIAN BOG: *Pinus rigida / Hypericum densiflorum / Osmunda cinnamomea - Carex atlantica ssp. atlantica - Eriophorum virginicum - Drosera rotundifolia* Woodland	Name changed to: *Pinus rigida / Osmunda cinnamomea - Carex stricta - Eriophorum virginicum / Sphagnum* spp. Woodland
BALD CYPRESS – TUPELO SWAMP: *Nyssa biflora - (Taxodium distichum) / Itea virginica - Viburnum nudum / Woodwardia areolata* Forest	Name changed to: *Nyssa biflora - (Taxodium distichum) / Clethra alnifolia - Viburnum nudum / Woodwardia areolata* Forest
COASTAL PLAIN / PIEDMONT BOTTOMLAND FOREST: *Fraxinus pennsylvanica - Celtis occidentalis - Ulmus (americana, alata) / Carpinus caroliniana / Carex grayi* Forest [Coastal Plain Bottomland Forest (Brownwater Low Ridge/Levee Type)]	Name changed to: *Platanus occidentalis - Celtis occidentalis - Ulmus americana - Fraxinus pennsylvanica / Acer negundo / Chasmanthium latifolium* Forest [Piedmont / Inner Coastal Plain Floodplain Levee Forest]
COASTAL PLAIN / PIEDMONT BOTTOMLAND FOREST: *Platanus occidentalis - Liquidambar styraciflua - Celtis occidentalis / Carpinus caroliniana - Asimina triloba / Carex amphibola* Forest [Southern Piedmont / Inner Coastal Plain Large-Stream Floodplain Forest]	Name changed to: *Liquidambar styraciflua - Quercus (michauxii, shumardii) - Carya cordiformis / Ilex decidua / Carex amphibola* Forest [Southern Piedmont / Inner Coastal Plain Floodplain Terrace Forest]
FLOODPLAIN PONDS AND POOLS: **Cephalanthus occidentalis* Shrubland	Name changed to: *Cephalanthus occidentalis - Decodon verticillatus* Shrubland
FLOODPLAIN PONDS AND POOLS: **Fraxinus pennsylvanica / Cephalanthus occidentalis / Penthorum sedoides - Bidens discoidea* Woodland [Southern Piedmont Oxbow Woodland]	Merged into: *Acer rubrum - Fraxinus pennsylvanica / Saururus cernuus* Forest in the Group: COASTAL PLAIN / PIEDMONT BOTTOMLAND FOREST
INTERDUNE POND: (*Myrica cerifera) - Panicum virgatum - Spartina patens* Herbaceous Vegetation [Interdune Pond (Switchgrass Freshwater Type)]	Name changed to: *Panicum virgatum - Schoenoplectus pungens* Herbaceous Vegetation [Interdune Swale / Pond (Switchgrass Type)] and moved to new Group: INTERDUNE SWALES AND PONDS
MARITIME DUNE GRASSLAND: *Myrica pensylvanica / Schizachyrium littorale* Shrub Herbaceous Vegetation	Name changed to: (*Myrica pensylvanica) / Schizachyrium littorale* Shrub Herbaceous Vegetation
MARITIME DUNE GRASSLAND: *Spartina patens - Schoenoplectus pungens - Solidago sempervirens* Herbaceous Vegetation	Name changed to: *Spartina patens - Panicum amarum (ssp. amarum, spp. amarulum) - Solidago sempervirens* Herbaceous Vegetation
MARITIME DUNE GRASSLAND: *Uniola paniculata - Schizachyrium littorale - Panicum amarum var. amarum* Herbaceous Vegetation	Named changed to *Uniola paniculata - Ammophila breviligulata* Herbaceous Vegetation
MARITIME DUNE SCRUB: *Hudsonia tomentosa / Panicum amarum var. amarulum* Dwarf-Shrubland	Name changed to: *Hudsonia tomentosa / Cyperus grayi* Dwarf-shrubland
MARITIME DUNE SCRUB: *Myrica pensylvanica / Diodia teres* Shrubland	Named changed to: *Myrica pensylvanica - (Prunus serotina, Diospyros virginiana) / Solidago sempervirens* Shrubland
MARITIME DUNE SCRUB: *Quercus virginiana - (Ilex vomitoria*) Shrubland	Name changed to: *Quercus virginiana - (Myrica pensylvanica)* Shrubland
MARITIME SHRUB SWAMP: *Myrica cerifera / Hydrocotyle verticillata* Shrubland	Name changed to: *Myrica cerifiera - Toxicodendron radicans / Hydrocotyle verticillata* Shrubland

Changes to Community Types 2011 -2012 (continued)

MARITIME WET GRASSLAND: *Juncus (dichotomous, scirpoides) - Drosera intermedia* Herbaceous Vegetation	Name changed to: *Juncus scirpoides - Eupatorium hyssopifolium - Euthamia caroliniana - Xyris jupicai* Herbaceous Vegetation and moved to the new Group: INTERDUNE SWALES AND PONDS
MARITIME WET GRASSLAND: *Schoenoplectus pungens - Fimbristylis (castanea, caroliniana) Herbaceous* Vegetation [Interdune Swale (Mixed Sedge Type)]	Name changed to: *Spartina patens - Fimbristylis (castanea, caroliniana) - Cyperus filicinus - (Schoenoplectus pungens)* Herbaceous Vegetation [Interdune Swale (Northern Mixed Grassland Type)] and moved to the new Group: INTERDUNE SWALES AND PONDS
MARITIME WET GRASSLAND: *Spartina patens - Eleocharis parvula* Herbaceous Vegetation [Interdune Swale (Saltmeadow Cordgrass Type)]	Named changed to: *Spartina patens - (Schoenoplectus robustus)* Herbaceous Vegetation [Interdune Swale (Saltmeadow Cordgrass Brackish Type)] and moved to the new Group: INTERDUNE SWALES AND PONDS
MESIC MIXED HARDWOOD FOREST: *Fagus grandifolia - Quercus (alba, falcata, pagoda) / Symplocos tinctoria - Stewartia malacodendron* Forest	Name changed to: *Fagus grandifolia - Quercus (alba, nigra, michauxii) / Symplocos tinctoria - (Stewartia malacodendron*) Forest
(not represented)	NEW COMMUNITY TYPE: *Myrica cerifera - Baccharis halimifolia / Spartina patens* Shrubland [Southern Bayberry Interdune Shrubland] in the new Group: INTERDUNE SWALES AND PONDS
(not represented)	NEW COMMUNITY TYPE: *Spartina patens - Schoenoplectus pungens - Thelypteris palustris var. pubescens - Centella erecta* Herbaceous Vegetation [Interdune Swale (Southern Mixed Grassland Type)] in the new Group: INTERDUNE SWALES AND PONDS
SALT SCRUB: *Iva frutescens - Baccharis halimifolia / Spartina patens - Panicum virgatum* Tidal Shrubland	Name changed to: *Baccharis halimifolia - Iva frutescens / Spartina patens* Shrubland
TIDAL BALD CYPRESS FOREST / WOODLAND: *Taxodium distichum / Pontederia cordata - Peltandra virginica* Tidal Woodland [Tidal Bald Cypress Woodland (Mixed Forbs Type)]	Name changed to: *Taxodium distichum - Nyssa biflora - Fraxinus profunda / Peltandra virginica - (Bignonia capreolata)* Tidal Forest [Northern Coastal Plain Tidal Bald Cypress Forest]
TIDAL MESOHALINE AND POLYHALINE MARSHES: *Spartina patens - Distichlis spicata - Sarcocornia perennis - Limonium carolinianum* Tidal Herbaceous Vegetation [Salt Meadow]	Merged into *(Salicornia virginica, Salicornia bigelovii, Sarcocornia perennis)* Herbaceous Vegetation [Glasswort Salt Flat] in the Group: SALT FLAT
UPPER BEACH / OVERWASH FLAT: *Cakile edentula ssp. edentula - Chamaesyce polygonifolia* Sparse Vegetation	Named changed to: *Cakile edentula ssp. edentula - Salsola caroliniana* Herbaceous Vegetation

Changes to Community Types 2012 – 2013

2012 Community List	2013 Community List
(not represented)	NEW COMMUNITY TYPE: *Quercus phellos - Quercus stellata / Ilex decidua / Danthonia spicata* Forest [Southern Piedmont Mixed Moisture Hardpan Forest] in the Group: PIEDMONT HARDPAN FOREST
(not represented)	NEW COMMUNITY TYPE: *(Hydrangea arborescens, Physocarpus opulifolius) / Heuchera villosa - Micranthes caroliniana* Shrub Herbaceous Vegetation [Southern Appalachian Mesic Calcareous Cliff] in the Group: MOUNTAIN / PIEDMONT CALCAREOUS CLIFF
(not represented)	NEW COMMUNITY TYPE: *Picea rubens - Betula alleghaniensis / Rhododendron (maximum, catawbiense) Forest* [Southern Appalachian Red Spruce - Northern Hardwood Forest (Evergreen Shrub Type)] in the Group: SPRUCE / FIR FOREST
(not represented)	NEW COMMUNITY TYPE*: Taxodium distichum / Lemna minor* Forest [Bald Cypress Semi-permanent Impoundment] in the Group: SEMIPERMANENT IMPOUNDMENT
(not represented)	NEW COMMUNITY TYPE: *Pinus serotina / Arundinaria tecta* Woodland [Canebrake Woodland] in the Group: POND PINE WOODLANDS AND POCOSINS

Appendix B. Definitions of global and subnational (state) conservation status ranks.

NatureServe and the Network of Natural Heritage Programs and Conservation Data Centers work together to assign conservation status ranks to elements of biodiversity (plants, animals, and ecological communities). These ranks have been developed using range-wide data collected by the Natural Heritage Network for nearly three decades and are critical in setting conservation priorities. Community types are ranked on a global (G), national (N), and subnational (S) scale of 1 to 5, with 1 indicating critical imperilment due to rarity, endemism, and/or threats, and 5 indicating little or no risk of extirpation or elimination.

The primary ranking factors used in assessing the appropriate conservation status rank for an ecological community element are: (1) the total number of occurrences, and (2) the total area (acreage) of the element. Secondary ranking factors, such as the geographic range over which the element occurs, the threats to the occurrences, and the viability of the occurrences, also affect the rank.

Additional factors that have been used in arriving at an assessment of a community's range-wide (global) rank include the geographic range over which the type occurs, the long term decline of the type across this range, the degree of site specificity exhibited by the type, and the rarity across the range based on state ranks assigned by state Natural Heritage Programs.

To learn more about Natural Heritage Methodology, go to:
http://www.natureserve.org/publications/ConsStatusAssess_RankMethodology.jsp

Global Rank Codes and Definitions

Global ranks (i.e. range-wide conservation status ranks) are assigned at NatureServe's Headquarters or by a designated lead office in the Heritage/Conservation Data Center Network.

GX - Extirpated - Eliminated throughout its range, with no restoration potential due to extinction of dominant or characteristic taxa and or elimination of the sites and ecological processes on which the type depends.

GH - Possibly Extinct (Historical) - Presumed eliminated throughout its range, with no, or virtually no, likelihood that it will be rediscovered, but with potential for restoration (e.g., *Castanea dentata* Forest).

G1 - Critically Imperiled - Critically imperiled globally. At very high risk of elimination due to extreme rarity, very steep declines, or other factors.

G2 - Imperiled - Imperiled globally. At high risk of elimination due to very restricted range, very few occurrences, steep declines, or other factors.

G3 - Vulnerable - Rare or uncommon. At moderate risk of extinction or elimination due to a restricted range, relatively few occurrences, recent and widespread declines, or other factors.

G4 - Apparently Secure - Uncommon but not rare. Apparently secure, but with cause for long-term concern. May be quite rare in parts of its range, especially at the periphery; apparently not vulnerable in most of its range

G5 - Secure - Demonstrably widespread, abundant, and secure. Common, widespread, and abundant, although it may be quite rare in parts of its range, especially at the periphery; not vulnerable in most of its range.

GNA - Rank not applicable - Common cultural, ruderal, planted, modified, managed, invasive, and/or non-natural type that is not a suitable target for conservation activities.

GNR - Not Yet Ranked - Status has not yet been assessed.

GU - Unrankable - Status cannot be determined at this time or due to lack of information or due to substantially conflicting information about status or trends.

G#G# - Rank Range - The actual rank of the element is within the range specified by the numbers; however, the exact status of the rarity of the element is uncertain. For example, G2G3 indicates that the rank may be either G2 or G3.

State Rank Codes and Definitions

State ranks are assigned by the Virginia Division of Natural Heritage and apply to an element only as it exists in the state, regardless of its range-wide status.

SX - Extirpated - Presumed extirpated from the state. Not located despite intensive searches of historical sites and other appropriate habitat, and virtually no likelihood that it will be rediscovered.

SH - Historical - Possibly extirpated (Historical). Historically known from the state, but not verified for an extended period, usually >15 years; this rank is used primarily when inventory has been attempted recently.

S1 - Critically Imperiled - Critically imperiled in the state because of extreme rarity or because of some factor(s) making it especially vulnerable to extirpation from the state; generally with 5 or fewer occurrences state-wide, and/or covering less than 50 ha (124 ac) in aggregate; or covering a larger area but highly threatened with destruction or modification.

S2 - Imperiled - Imperiled in the state because of rarity or because of some factor(s) making it very vulnerable to extirpation from the state. Generally with 6–20 occurrences state-wide, and/or covering less than 250 ha (618 ac) in aggregate; or covering a larger area but threatened with destruction or modification.

S3 - Vulnerable - Vulnerable in the state either because rare and uncommon, or found only in a restricted range (even if abundant at some locations), or because of other factors making it vulnerable to extirpation. Generally with 21–100 occurrences state-wide; or with a larger number of occurrences subject to relatively high levels of threat; may be of relatively frequent occurrence in specific localities or geographic parts of the state.

S4 - Apparently Secure - Uncommon but not rare, and usually widespread in the state. Some cause for long-term concern due to declines or other factors.

S5 - Secure - Demonstrably widespread, abundant, and secure in the state, and essentially ineradicable under present conditions.

SNA - Rank not applicable - Common cultural, ruderal, planted, modified, managed, invasive, and/or non-natural type that is not a suitable target for conservation activities.

SNR - Not Ranked - Status has not yet been assessed. As the state classification is further revised by additional information, the SNR will be changed to a numeric rank based on available data.

SU - **Unrankable -** Currently unrankable due to lack of information or due to substantially conflicting information about status or trends.

S#S# - Rank Range - The actual rank of the element is within the range specified by the numbers; however, the exact status of the rarity of the element is uncertain. For example, S1S3 indicates that the rank may be either S1, S2, or S3.

Global and State Rank Qualifiers

? - Inexact or Uncertain - A question mark added to a rank expresses an uncertainty about the rank in the range of 1 in either way on the 1-5 scale; for example, a G2? rank indicates that the rank is thought to be G2, but could be G1 or G3

Q - **Questionable taxonomy** - A "Q" added to a rank denotes questionable taxonomy that may reduce conservation priority; it modifies the degree of imperilment and is only used in cases where the type would have

a less imperiled rank if it were not recognized as a valid type (i.e., if it were combined with a more common type); a GUQ rank often indicates that the type is unrankable because of daunting taxonomic questions.

Appendix C. Number of Classified Community Types by Conservation Status Rank.

The following table shows the number of community types that have been assigned various conservation status ranks. Range ranks were rounded up to the highest whole rank. Ranks with modifiers were counted as the base rank. Percentage of types is the percentage of the total number of classified natural community types in The Natural Communities of Virginia classification.

Global Conservation Rank			State Conservation Rank		
	# of types	% of types*		# of types	% of types*
G1 -Critically imperiled	58	18%	S1 - Critically imperiled	111	35%
G2 – Imperiled	68	21%	S2 – Imperiled	56	18%
G3 – Vulnerable	67	21%	S3 – Vulnerable	68	21%
G4 - Apparently secure	56	18%	S4 - Apparently secure	27	9%
G5 – Secure	18	6%	S5 – Secure	4	1%
GNR - not yet ranked	39	12%	SU – currently unrankable	50	16%
No Global equivalent	11	3%	SX – Extirpated	1	<1%

* Percentage of the total number of natural community types in the classification.

Enclosure 1. Agricultural Outlease Agreements

NAVFAC 11011/22 (Rev. 7-75)
Supersedes NAVDOCKS 2595 and 2596

DEPARTMENT OF THE NAVY LEASE FOR AGRICULTURAL OR GRAZING PURPOSES

FILE NO: LO-10498
CONTRACT NUMBER:
N40085-15-RP-00014

LEASE BETWEEN Guy A. Newman
(HEREINAFTER CALLED "**LESSEE**") AND THE **UNITED STATES OF AMERICA** HEREINAFTER CALLED THE "**GOVERNMENT**",

THE GOVERNMENT HEREBY LEASES TO LESSEE THE PROPERTY DESCRIBED BELOW UNDER THE TERMS, CONDITIONS, GENERAL PROVISIONS AND SPECIAL PROVISIONS SET FORTH ON THIS PAGE AND SUBSEQUENT PAGES OF THIS LEASE FORM.

1. **LEASED PROPERTY:** ALL THAT PORTION OF THE NAVAL ACTIVITY IDENTIFIED IN ARTICLE 9, WHICH PORTION IS HEREINAFTER CALLED THE "PREMISES" AND DESCRIBED AS FOLLOWS: Approximately 329.7 acres, more or less, at the Naval Air Station, Oceana, Virginia Beach, Virginia, identified as Unit 02 in the Soil and Water Conservation Plan attached hereto and made a part hereof as Exhibit "A."

2. **TERM:** THE TERM OF THIS LEASE SHALL BEGIN ON 13 April 2015 AND END ON 31 December 2015 UNLESS SOONER TERMINATED IN ACCORDANCE WITH THE PROVISIONS OF ARTICLE 10H HEREOF.
LESSEE MAY REQUEST TO EXTEND THE TERM OF THIS LEASE FOR four (4) ADDITIONAL PERIODS OF ONE (1) YEAR EACH BY DELIVERY TO THE LOCAL GOVERNMENT REPRESENTATIVE OF WRITTEN NOTICE OF ITS INTENTION TO EXTEND NO LATER THAN NINETY (90) DAYS PRIOR TO THE EXPIRATION OF THE THEN CURRENT TERM: *PROVIDED*, NO EXTENSION SHALL BE GRANTED WHICH CREATES A TOTAL TERM IN EXCESS OF five (5) YEARS.

3. **RENT:** DURING THE INITIAL TERM OF THIS LEASE, WHICH IS FOR A PERIOD OF EIGHT (8) MONTHS AND EIGHTEEN (18) DAYS, THE LESSEE SHALL PAY THE GOVERNMENT A RENTAL OF $19,621.61, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $6,841.25 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF. THE FIRST PAYMENT WILL BE $5,939.11, WHICH IS THE PRORATED QUARTERLY PAYMENT RATE FOR THE LEASE DURING THE PERIOD OF 13 APRIL 2015 TO 30 JUNE 2015. FOR THE INITIAL TERM AND ANY RENEWAL TERMS, ALL FUTURE PAYMENTS WILL BE $6,841.25 AND DUE ON THE FIRST DAY OF JULY, OCTOBER, JANUARY, AND APRIL.

AFTER THE INITIAL EIGHT (8) MONTH AND EIGHTEEN (18) DAY TERM, AND PROVIDED LESSEE RENEWS THE LEASE, LESSEE SHALL PAY THE GOVERNMENT ANNUAL RENTAL OF $27,365.00, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $6,841.25 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF.

4. **USE:** THE PREMISES SHALL BE USED SOLELY FOR production of row crops (e.g., corn, soybeans, small grains, cotton) truck crops or hay/silage crops.

5. **PERFORMANCE BOND OR SECURITY:** TO SECURE THE FAITHFUL PERFORMANCE OF ITS OBLIGATIONS HEREUNDER LESSEE SHALL PROVIDE THE GOVERNMENT WITH EITHER: (a) COLLATERAL SECURITY IN THE FORM OF CASH OR NEGOTIABLE GOVERNMENT BONDS, OR (b) A PERFORMANCE BOND ISSUED BY A CORPORATE SURETY AND SATISFACTORY TO THE GOVERNMENT IN ALL RESPECTS, IN THE AMOUNT OF $ N/A

6. **EXECUTION BY LESSEE**

NAME OF LESSEE Guy A. Newman

BY Guy A Newman (SIGNATURE) Leslee Newman (WITNESS)

(TITLE) 04-08-2015. (DATE)

7. **CERTIFICATION BY SECRETARY OR ASSISTANT SECRETARY OF CORPORATE LESSEE**
I CERTIFY THAT THE PERSON WHO SIGNED THIS LEASE ON BEHALF OF LESSEE WAS THEN THE OFFICER INDICATED AND THIS AGREEMENT WAS DULY SIGNED FOR AND ON BEHALF OF SAID CORPORATION BY AUTHORITY OF ITS GOVERNING BODY AND IS WITHIN THE SCOPE OF ITS CORPORATE POWERS.

(CORPORATE SEAL) (SIGNATURE) (TITLE)

8. **EXECUTION FOR AND ON BEHALF OF THE GOVERNMENT**
THE UNITED STATES OF AMERICA

BY (CONTRACTING OFFICER) 4/13/15 (DATE) Scott Allen (WITNESS)

ADDRESS OF LESSEE 717 London Bridge Road Virginia Beach, VA Phone: 757-635-1305 or 757-340-8019	

10. GENERAL PROVISIONS

A. REPRESENTATIONS

The property under this lease is provided as is, where is. The term "as-is, where is" means that the Government is leasing the subject property in whatever condition it presently exists, and that the lessee is accepting the subject property with all faults, whether or not they could be ascertained by an inspection of the property or review of any due diligence material available. LESSEE has examined, knows and accepts the condition and state of repair of the Premises and all appurtenances thereto and acknowledges that the Government has made no representation concerning such condition and state of repair, nor any agreement or promise to alter, improve, adapt, repair or keep in repair such Premises and appurtenances, or any item thereof, which has not been fully set forth on this lease which contains all the agreements made and entered into between Lessee and the Government.

B. PROHIBITION OF FEDERAL SUBSIDY PARTICIPATION

Notwithstanding the uses permitted to it in Article 4 of this lease, Lessee shall at no time during the term of this lease, or any extension thereof, use the Premises or its interest therein in any manner which shall constitute direct participation in any subsidy program of the Federal Government relative to either the use or abstention from use of the Premises.

C. SUBJECTION TO GOVERNMENT SOIL & WATER CONSERVATION PLAN

During the term of this lease the Lessee shall apply the conservation measures and use the Premises in accordance with the conservation plan attached hereto and made a part hereof. Lessee shall in no manner substantially change the contour or condition of the land constituting any part of the Premises except for such changes as shall be reasonably required to effect soil and water conservation measures. (Soil and Water Conservation Plan is attached as Exhibit "A")

D. INSTALLATIONS AND REMOVALS

Subject to the prior written approval of the Government, Lessee shall have the right to erect, at its own expense, such temporary structures on the Premises as may be necessary or incidental to its use under this lease. All such structures shall remain the property of Lessee and Lessee shall remove any erected structures from the Premises prior to the expiration of the term of this lease. In the event the Government terminates this lease, Lessee shall be given thirty (30) days to accomplish such removal. All property not so removed shall be deemed abandoned by Lessee and may be used or disposed of by the Government in any manner whatsoever without any liability to account to the Government. Any such abandonment shall not reduce Lessee's obligation to restore the Premises.

E. SUBJECTION TO EXISTING AND FUTURE EASEMENTS AND RIGHTS-OF-WAY

This lease is subject to all outstanding easements and rights of way for location of any type of facility over, across, in and upon the Premises. In addition, the Government reserves the right to grant such additional easements as it shall determine to be in the public interest. The Government also reserves all mineral rights in the Premises, together with such rights of access and use of the surface as may be necessary for the mining and saving of any mineral deposits located thereon or thereunder. The Government reserves the right to allow ingress and egress to workers officially engaged in the construction, installation, maintenance, operation, repair or replacement of facilities located thereon, and to any Federal, State or local officials.

F. RESTORATION OF PREMISES

Before the expiration of this lease or the prior termination thereof, Lessee shall, if required to do so by the Government, restore the Premises to the condition existing at the time of its entrance thereon under this lease, or to such improved condition as they may have been placed in by the Government or the Lessee during the term of this lease, reasonable wear and tear and damage by the elements or from other causes over which Lessee had no control excepted; *Provided,* in the event the Government shall terminate this lease upon less than thirty (30) days notice Lessee shall have thirty (30) days from receipt of notice of termination to accomplish such restoration.

G. LIENS

Lessee shall promptly discharge or cause to be discharged any valid lien, *right in rem*, claim or demand of any kind, except one in favor of the

Government, which at any time may arise or exist with respect to the Premises or materials or equipment furnished therefor, or any part thereof, and if the same shall not be promptly discharged by Lessee, the Government may discharge, or cause to be discharged, the same at the expense of the Lessee.

H. TERMINATION BY GOVERNMENT

The Government shall have the right to terminate this lease, in whole or in part, at any time, without prior notice, and regardless of any lack of breach by Lessee of any of the terms and conditions of this lease. In the event of termination for any reason not involving a breach by Lessee of the terms and conditions of the lease the Government shall make an equitable adjustment of any advance rentals paid by Lessee hereunder and, if the Government's use of the Premises does not require immediate possession thereof, Lessee shall be permitted, within such time as the Local Government Representative shall prescribe, to harvest, gather and remove from the Premises such crops as can be so harvested and removed, but if the Government's requirements necessitate immediate repossession of the Premises, so as to require immediate removal of Lessee's livestock, and/or, to preclude Lessee from such harvesting and removal of any growing or matured crops, Lessee hereby specifically releases, remises, and forever discharges the Government from any and all liability or claims for loss or damage of any nature arising out of such termination and repossession, including, but not limited to, destruction of diminution in value of, or inability to harvest any growing crops, and/or death or diminution of value of any livestock of Lessee.

In the event that the Government shall elect to terminate this lease on account of the breach by the Lessee of any of the terms and conditions hereof no adjustment in advance rentals paid by Lessee shall be made, and the Government shall be entitled to recover and Lessee shall pay to the Government:

(1) The costs incurred in resuming possession of the Premises.

(2) The costs incurred in performing any obligation on the part of Lessee to be performed hereunder.

(3) An amount equal to the aggregate of all rents and charges assumed hereunder and not theretofore paid, less the net rentals, if any, collected by the Government on the re-letting of the Premises, which amounts shall be due and payable at the time when the rent reserved under this lease would become due and payable.

The Government may, at its option, attach any livestock or crops of Lessee on the Premises in full or partial satisfaction of Lessee's obligations under this Article.

I. SURRENDER

Upon the expiration of this lease or its prior termination, in whole or in part, Lessee shall quietly, and peacefully remove itself and its property from the Premises, or part thereof as to which this lease shall be terminated, and surrender the possession thereof to the Government. Upon failure or neglect of Lessee to so remove, the Government and its officers or agents may enter the Premises and cause the removal of all persons and property therefrom without recourse to any action or proceeding at law or in equity. Lessee hereby expressly waives any provision of law requiring notice to quit possession of the Premises. Such removal shall be at the sole cost and expense of Lessee and Lessee shall indemnify and save and hold harmless the Government, its officer, agents and employees for and from any and all liability or claims for damages of any nature whatsoever which may arise out of or be attributable to such removal.

J. DAMAGE TO GOVERNMENT PROPERTY

In the event of the destruction of or damage to any Government property located on or adjacent to the Premises by Lessee, or any of its officers, agents, servants, employees, subtenants, licensee or invitees, Lessee shall promptly repair or replace such property to the satisfaction of the Government, or pay to the Government an amount of money sufficient to compensate it for the loss or damage sustained, as the Government shall elect.

K. NON-LIABILITY OF GOVERNMENT

Lessee covenants that it will indemnify and save and hold harmless the Government, its officers, agents and employees for and from any and all liability or claims for loss of or damage to any property owned by or in the custody of Lessee, its officers, agents, servants, employees, subtenants, licensees or invitees, or for the death of or injury to any of the same which may arise out of or be attributable to the condition, state of repair or Lessee's use and occupancy of the Premises, or the furnishings of any utilities or services (including supply of water from wells or other sources), or any interruption therein or failure thereof, whether or not the same shall be occasioned by the negligence or

lack of diligence of Lessee, its officers, agents, servants or employees.

L. UTILITIES AND SERVICES

In the event that the Government shall furnish Lessee with any utilities and services maintained by the Government which Lessee may require in connection with its use of the Premises, Lessee shall pay the Government the charges therefor in addition to the cash rent required under this lease. Such charges and the method of payment thereof shall be determined by the Local Government Representative in accordance with applicable laws and regulations, on such basis as the Local Government Representative may establish, which may include a requirement for the installation of adequate connecting and metering equipment at the sole cost and expense of Lessee. It is expressly agreed and understood that the Government in no way warrants the continued maintenance or adequacy of any utilities or services furnished by it to Lessee.

M. ACCESS

The Government shall have access to the Premises at all reasonable times for any purposes not inconsistent with the quiet use and enjoyment thereof by Lessee, including, but not limited to, the purpose of inspection.

N. COVENANT AGAINST CONTINGENT FEES

Lessee warrants that no person or agency has been employed or retained to solicit or secure this lease upon an agreement or understanding for a commission, percentage, brokerage or contingent fee, excepting bona fide employees or bona fide established commercial agencies maintained by Lessee for the purpose of securing business. For breach or violation of this warranty, the Government shall have the right to annul this lease without liability or in its discretion to require Lessee to pay, in addition to the rental or consideration, the full amount of such commission, percentage, brokerage, or contingent fee.

O. STATE AND LOCAL TAXES

In the event that as a result of any future Act of Congress, subjecting Government-owned property to taxation, any taxes, assessments or similar charges are imposed by State or local authorities upon the Premises (other than upon Lessee's possessory interest therein), Lessee shall pay the same when due and payable and this lease shall be renegotiated so as to accomplish an equitable reduction in the rental provided for herein, which reduction shall in no event exceed the amount of such taxes, assessments, or similar charges; *Provided,* in event the parties hereto are unable to agree within ninety (90) days from the date of the imposition of such taxes, assessments, or similar charges, upon a rental which in the opinion of the Local Government Representative constitutes a reasonable return to the Government on the Premises, then in such event the Local Government Representative shall have the right to determine the amount of the rental, which determination shall be binding on Lessee, subject to appeal as a dispute in accordance with the provisions of paragraph P of this Article 10.

P. DISPUTES

1.1 This lease is subject to the Contract Disputes Act of 1978, as amended (41 U.S.C. 601-613) (the Act).

1.2 Except as provided in the Act, all disputes arising under or relating to this lease shall be resolved under this clause.

1.3 "Claim," as used in this clause, means a written demand or written assertion by the Lessee or the Government seeking, as a matter of right, the payment of money in a sum certain, the adjustment or interpretation of lease terms, or other relief arising under or relating to this lease. A claim arising under this lease, unlike a claim relating to this lease, is a claim that can be resolved under a lease clause that provides for the relief sought by the claimant. However, a written demand or written assertion by the Lessee seeking the payment of money exceeding $100,000 is not a claim under the Act until certified as required by subparagraph 1.4(2) below. A voucher, invoice, or other routine request for payment that is not in dispute when submitted is not a claim under the Act. The submission may be converted to a claim under the Act, by complying with the submission and certification requirements of this clause, if it is disputed either as to liability or amount or is not acted upon in a reasonable time.

1.4(1) A claim by the Lessee shall be made in writing and submitted to the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, for a written decision. A claim by the Government against the Lessee shall be subject to a written decision by the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic.

1.4(2)(a)The Lessee shall provide the certification specified in subparagraph 1.4(2)(c) of this clause when submitting any claim ---

(A) Exceeding $100,000; or

(B) Regardless of the amount claimed, when using--

(1) Arbitration conducted pursuant to 5 U.S.C. 575-580; or

(2) Any other alternative means of dispute resolution (ADR) technique that the agency elects to handle in accordance with the Administrative Dispute Resolution Act (ADRA).

1.4(2)(b) The certification requirement does not apply to issues in controversy that have not been submitted as all or part of a claim.

1.4(2)(c)The certification shall state as follows: "I certify that the claim is made in good faith; that the supporting data are accurate and complete to the best of my knowledge and belief; that the amount requested accurately reflects the contract adjustment for which the Lessee believes the Government liable; and that I am duly authorized to certify the claim on behalf of the Lessee."

1.4(3) The certification may be executed by any person duly authorized to bind the Lessee with respect to the claim.

1.5 For Lessee claim of $100,000 or less, the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, must, if requested in writing by the Lessee, render a decision within sixty (60) days of the request. For Lessee-certified claims over $100,000, the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, must, within sixty (60) days, decide the claim or notify the Lessee of the date by which the decision will be made.

1.6 The Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, decision shall be final unless the Lessee appeals or files a suit as provided in the Act.

1.7 At the time a claim by the Lessee is submitted to the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, or a claim by the Government is presented to the Lessee, the parties, by mutual consent, may agree to use ADR. When using arbitration conducted pursuant to 5 U.S.C. 575-580, or when using any other ADR technique that the agency elects to handle in accordance with the ADRA, any claim, regardless of amount, shall be accompanied by the certification described in paragraph 1.4(2)(c) of this clause, and executed in accordance with paragraph 1.4(3) of this clause.

1.8 The Government shall pay interest on the amount found due and unpaid by the Government from (1) the date the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, receives the claim (properly certified if required), or (2) the date of payment otherwise would be due, if that date is later, until the date of payment. With regard to claims having defective certifications, as defined in FAR 33.201, interest shall be paid from the date that the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, initially receives the claim. Simple interest on claims shall be paid at the rate, fixed by the Secretary of the Treasury, as provided in the Act, which is applicable to the period during which the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, receives the claim and then at the rate applicable for each 6-month period as fixed by the Treasury Secretary during the pendency of the claim.

1.9 The Lessee shall proceed diligently with the performance of the lease, pending, final resolution of any request for relief, claim, appeal, or action arising under the lease, and comply with any decision of the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic.

Q. OFFICIALS NOT TO BENEFIT

No Member of or Delegate to Congress, or Resident Commissioner, shall be admitted to any share of part of this lease, or to any benefit to arise therefrom but this provision shall not be construed to extend to this lease if made with a corporation for its general benefit.

R. LABOR PROVISION

(1) Equal Opportunity

During the term of this lease the Lessee agrees as follows:

(a) The Lessee will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The Lessee will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their

race, color, religion, sex, or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer, recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; selection for training, including apprenticeship. The Lessee agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the Government setting forth the provisions of this nondiscrimination clause.

(b) The Lessee will, in all solicitations or advertisements for employees placed by or on behalf of the lessee, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

(c) The Lessee will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding a notice to be provided by the Government, advising the labor union or worker's representative of the Lessee's commitments under this Equal Opportunity clause and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(d) The Lessee will comply with all provisions of Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and of the rules, regulations, and relevant orders of the Secretary of Labor.

(e) The Lessee will furnish all information and reports required by Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and by the rules, regulations, and orders of the Secretary of Labor or pursuant thereto, and will permit access to his books, records, and accounts by the Government and the Secretary of Labor for purposes of investigating to ascertain compliance with such rules, regulations and orders.

(f) In the event of the Lessee's noncompliance with the Equal Opportunity clause of this lease or with any of said rules, regulations, or orders, this lease may be canceled, terminated or suspended in whole or in part and the Lessee may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(g) The Lessee will include the provisions of paragraphs (a) through (g) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, so that such provisions will be binding upon each sublessee or vendor. The Lessee will take such action with respect to any sublessee or purchase order as the Government may direct as a means of enforcing such provisions including sanctions for noncompliance: *Provided, however,* that in the event the Lessee becomes involved in, or is threatened with, litigation with sublessee or vendor as a result of such direction by the Government, the Lessee may request the United States to enter into such litigation to protect the interests of the United States.

(2) Convict Labor

In connection with the performance of work required by this lease, Lessee agrees not to employ any person undergoing a sentence of imprisonment at hard labor.

(3) Contract Work Hours Standards Act (40 U.S. Code 327-330)

This lease, to the extent that it is a contract of a character specified in the Contract Work Hours Standards Act (40 U.S.C. 327-330) and is not covered by the Walsh-Healy Public Contracts Act (41 U.S.C. 35-45), is subject to the following provisions and exceptions of said Contract Work Hours Standards Act and to all other provisions and exceptions of said law:

(a) The Lessee shall not require or permit any laborer or mechanic in any workweek in which he is employed on any work under this contract to work in excess of 8 hours in any calendar day or in excess of 40 hours in such workweek on work subject to the provisions of the Contract Work Hours Standards Act unless such laborer or mechanic receives compensation at a rate not less than one and one-half times his basic rate of pay for all such hours worked in excess of 8 hours in any calendar day or in excess of 40 hours in such workweek, whichever is the greater number of overtime hours. The "basic rate of pay," as used in this clause, shall be the amount paid per hour, exclusive of the Lessee's contribution or cost for fringe benefits and any cash payment made in lieu of providing fringe benefits, or the basic hourly rate contained in the wage determination, whichever is greater.

(b) In the event of any violation of the provisions of paragraph (a), the Lessee shall be liable to any affected employee for any amounts due and to the United States for liquidated damages. Such

liquidated damages shall be computed with respect to each individual laborer or mechanic employed in violation of the provisions of paragraph (a) in the sum of $10 for each calendar day on which such employee was required or permitted to be employed on such work in excess of 8 hours or in excess of the standard workweek of 40 hours without payment of the overtime wages required by paragraph (a).

S. NOTICES

No notice, order, direction, determination, requirement, consent, or approval under this lease shall be of any effect unless in writing. All notices required under this lease shall be addressed to Lessee, or to the Local Government Representative, as may be appropriate, at the address thereof specified in Article 9 of this lease or at such other address as may from time to time be agreed upon by the parties hereto.

T. FAILURE OF GOVERNMENT TO INSIST ON COMPLIANCE

The failure of the Government to insist, in any one or more instances, upon performances of any of the terms, covenants or conditions of this lease shall not be construed as a waiver or relinquishment of the Government's right to the future performance of any such terms, covenants or conditions and Lessee's obligations in respect to such future performance shall continue in full force and effect.

U. ASSIGNMENT OR SUBLETTING

Lessee shall not transfer or assign this lease or any interest therein nor sublet or otherwise make available to any third party or parties any portion of the Premises or rights therein without prior written consent of the Government. Under any assignment made, with or without consent, the assignee shall be deemed to have assumed all the obligations of Lessee hereunder, but no assignment shall relieve the assignor of any of Lessee's obligations hereunder except for an extension of the lease term beginning after such assignment, and then only if the Government shall have consented thereto.

V. GOVERNMENT RULES AND REGULATIONS

Lessee shall comply with such rules and regulations regarding station security, ingress, egress, safety and sanitation as may be prescribed, from time to time, by the Local Government Representative, or by the Commanding Officer of the Naval activity of which the Premises forms a part.

W. PAYMENTS

All payments to the Government required under this lease shall be made by check or postal money order made payable to the U.S. Treasurer and mailed to Commander Naval Facilities Engineering command, Atlantic, Attn: FM, 6506 Hampton Blvd., Norfolk, VA 23508.

X. INTEREST

Notwithstanding any other provision of this lease, unless paid within thirty (30) days, all amounts that become payable by the Lessee to the Government under this contract (net of any applicable tax credit under the Internal Revenue Code) shall bear interest from the date due until paid and shall be subject to adjustments as provided by Part 6 of Appendix E of the Armed Services Procurement Regulation, as in effect on the date of this lease. The interest rate per annum shall be the interest rate in effect which has been established by the Secretary of the Treasury pursuant to Public Law 92-41; 85 STAT 97 for the Renegotiation Board, as of the date the amount becomes due as herein provided. Amounts shall be due upon the earliest one of (i) the date fixed pursuant to this contract; (ii) the date of the first written demand for payment, consistent with this lease, including demand consequent upon default termination; or (iii) the date of transmittal by the Government to the Lessee of a proposed supplemental agreement to confirm completed negotiations fixing the amount.

Y. ADMINISTRATION

The local Government Representative specified in Article 9 of this lease shall, under the direction of the Commander, Naval Facilities Engineering Command, Mid-Atlantic, have complete charge of the administration of this lease, and shall exercise full supervision and general direction thereof insofar as the interest of the Department are affected.

Z. INDEMNIFICATION

The Lessee accepts responsibility for all liability related to, or arising under, Lessee's use of the property. Further, Lessee shall release and hold harmless the Government, its officers, agents, and employees from all liability, suits, claims, actions, or demands in any way related to, or arising under, Lessee's use of the property. This includes, but is not limited to, all environmental suits, claims, and enforcement actions, arising during Lessee's construction on, or use of, the property, or after such construction, or use, has ended. Further, Lessee shall reimburse the Government for all expenditures incurred if the Government voluntarily chooses to undertake any remedial action to address contamination on the premises or facilities resulting from the acts or omissions of the Lessee.

11. SPECIAL PROVISIONS

The following specified additional provisions, which shall control in the event of any conflict with the General Provisions of Article 10, are hereby incorporated into this lease by attachment hereto.

A. RESTRICTIONS:

a. No substance shall be released into the air from the leased lands that could impair visibility including, without limitation, emissions such as steam, dust and smoke.

b. No lights shall be constructed, maintained, directed or allowed to shine from the said leased lands, which could interfere with or impair pilot vision. All light emissions must be shielded to prevent them from being used as geographic reference pints by aircraft personnel.

c. No electrical emissions shall be emitted from sources situated on said leased lands which could interfere in any way with aircraft communications systems, ordnance or navigational equipment now in existence or hereinafter invented.

d. No garbage shall be dumped or placed and no feeding stations or other facilities attractive to birds shall be constructed or maintained on said leased lands. All trash, debris and empty pesticide containers shall be removed from Government property and properly disposed of each day at Lessee's expense.

e. Relic hunting, or antique hunting or recovery is prohibited.

f. Aerial crop dusting, unless specifically authorized by permit, is prohibited

g. Hunting and horseback riding on the leased land is permitted. The Station is responsible for coordinating the hunting program with the Lessee. Excessive damage by these activities must be reported immediately to the Naval Air Station, Oceana, Natural Resources Specialist at (757) 341-0495.

h. A cultivation regimen of cutting, no-till seed drilling and discing to a depth no greater than 16 cm (6.4 inches) below the surface shall be followed.

B. REIMBURSABLE WORK

If at any time during the lease it is determined that work not identified in the Soil and Water Conservation Plan, as Non-Reimbursable work is necessary, the procedures below will be followed:

The NAVFAC Mid-Atlantic Natural Resource Specialist will prepare a Scope of Work and Government Cost Estimate. Scope of Work will include what work is to be done and identify how or what method should be used to complete the work. It will also include a time schedule in which the work must be completed.

The NAVFAC Mid-Atlantic Natural Resource Specialist will forward the Scope of Work and Government Cost Estimate to the Real Estate Contracting Officer.

The Real Estate Contracting Officer will forward the Scope of Work to the Lessee and request a cost proposal.

The Lessee will send a cost proposal to the Real Estate Contracting Officer. This proposal may be based on Lessee having a third party perform the work. The Lessee may at this time inform the Government that he is incapable of performing the work.

If the Lessee submits a proposal and is acceptable, the Real Estate Contracting Officer will either; (1) issue a letter of authorization to proceed, advising a modification to the lease will be forthcoming or (2) forward a modification to the Lessee reflecting changes. Work should not begin until a letter or authorization or a modification has been received.

If the proposal is unacceptable, the Government will negotiate with the Lessee or determine alternative means of completing the required work.

When work is completed, Lessee and Navy Representatives will perform a joint inspection. If work is acceptable and within the time frame allotted, terms of the modification will be activated; i.e., rent reduction granted.

If it is determined during a joint inspection that the work was not completed properly or done within the required time frame, the Navy may, at its option, allow the Lessee additional time, not to exceed 25% of original time allotted, to complete the work or the Navy will have the work completed and charge the Lessee.

C. ENVIRONMENTAL/INDEMNIFICATION

In accordance with 10 U.S.C. 2692, the Lessee may not allow the treatment, storage or disposal of any Toxic or Hazardous materials on the leased premises. For the purposes of this provision, the terms "storage" and "Toxic or Hazardous Materials" are defined as provided in 48 CFR 252.223-7006.

The Lessee will reimburse the Lessor for all expenditures incurred if the Lessor is required by any regulatory authority or voluntarily chooses to undertake any Remedial Action to address Contamination on the leased premises resulting from the acts or omissions of the Lessee or its contractors. The Lessor shall contact the Lessee before taking any Remedial Action and give the Lessee a reasonable opportunity to undertake such Remedial Action if the Lessor believes that the Lessee has the capability to do so. Notwithstanding the above, the Lessee may immediately take any Remedial Action required of the Lessee by law.

During the term of this Lease, if the Lessee becomes aware that a Release of Toxic or Hazardous Materials has occurred that has resulted in Contamination of the leased premises, the Lessee will provide oral notice to the Lessor within 24 hours of becoming aware of such Contamination, providing all relevant facts and circumstances. The Lessor may request from the Lessee a more detailed written description of these facts and circumstances within a time period specified by the Lessor. The Lessee will promptly take all actions, at its sole expense, as are necessary to comply with all Applicable Environmental Laws relating to such Release, including reporting the occurrence to the appropriate Federal, State, or local regulatory authority or taking required Remedial Action, related to addressing the Contamination and to minimize the impacts of such Release. The Lessee will provide all information requested by the Lessor regarding such actions.

The Lessee, at its sole expense, will promptly take all action necessary to comply with Applicable Environmental Laws pertaining to a Release described in the preceding paragraph, including but not limited to: one, report the occurrence to appropriate Federal, State, or local regulatory authorities, if so directed by the Government; tow, take timely and effective steps to minimize the Release and its impact on human health and the environment; and three, take Remedial Action. The Government may direct the Lessee to provide all information requested by the Government regarding such actions within a time certain.

During the term of this Lease, the Lessee will ensure that all activities conducted by the Lessee or its contractors on the leased premises are carried out in compliance with Applicable Environmental Laws. The Lessee will provide oral notice to the Lessor within 24 hours of receiving any complaint, order, directive, claim, citation, or notice by any Governmental authority or any other person or entity with respect to a violation of Applicable Environmental Laws resulting from the activities of the Lessee or its contractors on the leased premises. The Lessee will promptly take all actions, at its sole expense, as are necessary to comply with all Applicable Environmental Laws as directed by any Federal, State, or local regulatory authority. The Lessor may request a more detailed written description of the events or circumstances leading to this event within a time specified by the Lessor. Without limitation of the foregoing, the Lessor may, but will not be obligated to, enter onto the leased premises and take any Remedial Action as it deems necessary or advisable to address any Contamination of the leased premises by Toxic or Hazardous Materials or to ensure compliance with Applicable Environmental Laws.

At any time, the Lessor or its representatives may conduct inspections on the leased premises to ensure compliance with Applicable Environmental Laws. To assist in this evaluation, the Lessee will provide to the Lessor or the Lessor's representative, any and all books, records, or documents in their possession, or in the possession of their agents or contractors, related to the activities or operations on the leased premises, which the Lessor or its representatives may examine, copy, or make extracts from.

As the Lessor deems appropriate, the Lessor may require that the Lessee, from time to time, promptly conduct such tests and procedures for the purpose of ensuring that the leased premises are in compliance with Applicable Environmental Laws and of having the leased premises certified to the Lessor as such. Such tests and procedures shall be conducted by recognized professionals to be approved by the Lessor and in a manner that is satisfactory to the Lessor. When requesting such tests and procedures, the Lessor will work with the Lessee to establish accepted timeframes, appropriate parties to perform the required activities, and schedules for performance. If an agreement cannot be reached regarding any of the foregoing, the Lessor or its representatives may undertake such tests and procedures, with the Lessee being obligated to reimburse the Lessor for all costs incurred.

For the purposes of this provision, the terms used above are defined as follows:

"Toxic or Hazardous Materials" means any hazardous, harmful, odorous, radioactive, toxic or dangerous waste, substance or material, including, without limitation, asbestos, polychlorinated biphenyls ("PCBs") and petroleum products, and any hazardous or toxic substance, material or waste, or any pollutant or contaminant defined as such in, or for the purposes of, any environmental laws as are now or in the future may be in effect. The Lessee's obligation under this provision shall extend to any and all such Toxic or Hazardous Materials whether or not such substance was defined, recognized, known, or suspected of being hazardous, toxic, dangerous, or wasteful at the time of any act or omission giving rise to the Lessee's obligation.

"Contamination" means a level of Toxic or Hazardous Materials in the air, in or on soil, in the surfacewater, or in the groundwater that exceeds levels allowed by Applicable Environmental Laws.

"Applicable Environmental Laws" means:

one, any Federal, State, or local statute, law, ordinance, rule, regulation, or order (whether voluntary or not) that govern the activities or operations of the leased premises, or the persons carrying out those activities or operations, relating to the environment, natural resources, or human health and safety.

two, Executive Orders of the President of the United States;

three, decisions of courts and administrative tribunals of competent jurisdiction;

four, administrative orders of regulatory agencies of competent jurisdiction (involuntary or on consent); and

five, regulations and directives of the Department of Defense, the Department of the Navy, and the U.S. Marine Corps (for Marine Corps installations only),

which pertain to the human environment (as defined in the National Environmental Policy act of 1969); transportation of hazardous material; and human health and safety (including occupational safety).

Applicable Environmental Laws include, without limitation the Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. § 9601 *et seq*.), the Hazardous Material Transportation Act (49 U.S.C. § 1801 *et seq*.), the Resource Conservation and Recovery Act (42 U.S.C. 6901 *et seq*.), the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq*.), the Clean Air Act (42 U.S.C. § 7401 *et seq*.), the Toxic Substances Control Act (15 U.S.C. § 2601 *et seq*.), and the Occupational Safety and Health Act (29 U.S.C. § 651 *et seq*.), Superfund Amendments and Reauthorization Act Title III (SARA) Emergency Planning and Community Right-to-Know Act (EPCRA) reporting requirements (40 CFR 355, 40 CFR 370, 40 CFR 372 and 29 CFR 1910.1200), as such laws have been amended or supplemented now or in the future.

"Release" means any release, spill, emission, leaking, pumping, injection, deposit, disposal, leaching, or migration into the environment, whether accidental or otherwise, resulting from the act or omissions of the Lessee, its contractors, or by natural conditions.

"Remedial Action" means any investigation or monitoring of the condition of the leased premises or any cleanup, remedial, removal, or restoration work required or performed on the leased premises because of the presence, suspected presence, release, or suspected release of Toxic or Hazardous Materials.

The Lessor shall not be responsible for damages to property or injuries to persons which may arise from or be incident to the use and occupation of the leased premises by the Lessee, nor for damages to the property or injuries to the person of the Lessor's officers, agents, servants, or employees, or others who may be on the leased premises at their invitation or the invitation of any one of them arising from or incident to governmental activities except as permitted under the Federal Torts Claim Act, 28 U.S.C. 2671 et seq.

F. APPLICABLE STATE AND CITY LAWS, CODES, AND ORDINANCES

The Lessee agrees to comply with all applicable State and City laws, codes and ordinances applicable to use of the leased premises at Lessee's expense. Lessee further agrees to obtain all necessary permits and related items at Lessee's expense.

G. INSURANCE REQUIREMENTS

Prior to award of the Lease, the LESSEE shall submit a certificate of insurance meeting the following requirements. Public Liability and Property Damage shall meet the following requirements at a minimum:

$50,000	Third Party Property Damage
$500,000	Third Party Personal Injury Per Person
$1,000,000	Third Party Personal Injury Per Accident

The policy/certificate of insurance shall contain an endorsement reading as follows:

a. Loss, if any under this policy shall be adjusted with (name of LESSEE) and the proceeds, at the election of the GOVERNMENT, shall be payable to (name of LESSEE); any proceeds not paid to (name of LESSEE) shall be payable to the Treasurer of the United States of America.

b. The insurer waives any right of subrogation against the United States of America which might arise by reason of any payment made under this policy.

c. The GOVERNMENT shall be given thirty (30) days written notice prior to making any material change in or the cancellation of the policy. Please strike out (and initial) any clauses that state "…failure to make such notice imposes no obligation or liability of any kind upon the company, etc …"

d. The United States of America (Department of the Navy) is added as an additional insured in operations of the policyholder at or from the premises leased at Naval Station Oceana, Virginia Beach, Virginia, identified as Unit 01.

e. This insurance certificate is for use of premises known as **329.7acres more or less, at Naval Station Oceana, Virginia Beach, Virginia, identified as Unit 02, Contract number N40085-15-RP-00014 or LO10498**.

If, at any time, the GOVERNMENT determines that the insurance maintained by the LESSEE does not in fact adequately protect the GOVERNMENT, LESSEE may be required to carry such other insurance in such form, for such amounts and for such periods of time, and with such insurers as the GOVERNMENT may from time to time require or approve.

NAVFAC 11011/22 (Rev. 7-75)
Supersedes NAVDOCKS 2595 and 2596

DEPARTMENT OF THE NAVY LEASE FOR AGRICULTURAL OR GRAZING PURPOSES

FILE NO: LO-10499
CONTRACT NUMBER:
N40085-15-RP-00015

LEASE BETWEEN Guy A. Newman

(HEREINAFTER CALLED "LESSEE") AND THE UNITED STATES OF AMERICA HEREINAFTER CALLED THE "GOVERNMENT",

THE GOVERNMENT HEREBY LEASES TO LESSEE THE PROPERTY DESCRIBED BELOW UNDER THE TERMS, CONDITIONS, GENERAL PROVISIONS AND SPECIAL PROVISIONS SET FORTH ON THIS PAGE AND SUBSEQUENT PAGES OF THIS LEASE FORM.

1. **LEASED PROPERTY:** ALL THAT PORTION OF THE NAVAL ACTIVITY IDENTIFIED IN ARTICLE 9, WHICH PORTION IS HEREINAFTER CALLED THE "PREMISES" AND DESCRIBED AS FOLLOWS: Approximately 314.8 acres, more or less, at the Naval Air Station, Oceana, Virginia Beach, Virginia, identified as Unit 01 in the Soil and Water Conservation Plan attached hereto and made a part hereof as Exhibit "A."

2. **TERM:** THE TERM OF THIS LEASE SHALL BEGIN ON 13 April 2015 AND END ON 31 December 2015 UNLESS SOONER TERMINATED IN ACCORDANCE WITH THE PROVISIONS OF ARTICLE 10H HEREOF.

LESSEE MAY REQUEST TO EXTEND THE TERM OF THIS LEASE FOR four (4) ADDITIONAL PERIODS OF ONE (1) YEAR EACH BY DELIVERY TO THE LOCAL GOVERNMENT REPRESENTATIVE OF WRITTEN NOTICE OF ITS INTENTION TO EXTEND NO LATER THAN NINETY (90) DAYS PRIOR TO THE EXPIRATION OF THE THEN CURRENT TERM; *PROVIDED*, NO EXTENSION SHALL BE GRANTED WHICH CREATES A TOTAL TERM IN EXCESS OF FIVE (5) YEARS.

3. **RENT:** DURING THE INITIAL TERM OF THIS LEASE, WHICH IS FOR A PERIOD OF EIGHT (8) MONTHS AND EIGHTEEN (18) DAYS, THE LESSEE SHALL PAY THE GOVERNMENT A RENTAL OF $23,249.79, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $8,106.25 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF. THE FIRST PAYMENT WILL BE $7,037.29, WHICH IS THE PRORATED QUARTERLY PAYMENT RATE FOR THE LEASE DURING THE PERIOD OF 13 APRIL 2015 TO 30 JUNE 2015. FOR THE INITIAL TERM AND ANY RENEWAL TERMS, ALL FUTURE PAYMENTS WILL BE $8,106.25 AND DUE ON THE FIRST DAY OF JULY, OCTOBER, JANUARY, AND APRIL.

AFTER THE INITIAL EIGHT (8) MONTH AND EIGHTEEN (18) DAY TERM, AND PROVIDED LESSEE RENEWS THE LEASE, LESSEE SHALL PAY THE GOVERNMENT ANNUAL RENTAL OF $32,425.00, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $8,106.25 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF.

4. **USE:** THE PREMISES SHALL BE USED SOLELY FOR production of row crops (e.g., corn, soybeans, small grains, cotton) truck crops or hay/silage crops.

5. **PERFORMANCE BOND OR SECURITY:** TO SECURE THE FAITHFUL PERFORMANCE OF ITS OBLIGATIONS HEREUNDER LESSEE SHALL PROVIDE THE GOVERNMENT WITH EITHER: (a) COLLATERAL SECURITY IN THE FORM OF CASH OR NEGOTIABLE GOVERNMENT BONDS, OR (b) A PERFORMANCE BOND ISSUED BY A CORPORATE SURETY AND SATISFACTORY TO THE GOVERNMENT IN ALL RESPECTS, IN THE AMOUNT OF $ N/A

10. GENERAL PROVISIONS

A. REPRESENTATIONS

The property under this lease is provided as is, where is. The term "as-is, where is" means that the Government is leasing the subject property in whatever condition it presently exists, and that the lessee is accepting the subject property with all faults, whether or not they could be ascertained by an inspection of the property or review of any due diligence material available. LESSEE has examined, knows and accepts the condition and state of repair of the Premises and all appurtenances thereto and acknowledges that the Government has made no representation concerning such condition and state of repair, nor any agreement or promise to alter, improve, adapt, repair or keep in repair such Premises and appurtenances, or any item thereof, which has not been fully set forth on this lease which contains all the agreements made and entered into between Lessee and the Government.

B. PROHIBITION OF FEDERAL SUBSIDY PARTICIPATION

Notwithstanding the uses permitted to it in Article 4 of this lease, Lessee shall at no time during the term of this lease, or any extension thereof, use the Premises or its interest therein in any manner which shall constitute direct participation in any subsidy program of the Federal Government relative to either the use or abstention from use of the Premises.

C. SUBJECTION TO GOVERNMENT SOIL & WATER CONSERVATION PLAN

During the term of this lease the Lessee shall apply the conservation measures and use the Premises in accordance with the conservation plan attached hereto and made a part hereof. Lessee shall in no manner substantially change the contour or condition of the land constituting any part of the Premises except for such changes as shall be reasonably required to effect soil and water conservation measures. (Soil and Water Conservation Plan is attached as Exhibit "A")

D. INSTALLATIONS AND REMOVALS

Subject to the prior written approval of the Government, Lessee shall have the right to erect, at its own expense, such temporary structures on the Premises as may be necessary or incidental to its use under this lease. All such structures shall remain the property of Lessee and Lessee shall remove any erected structures from the Premises prior to the expiration of the term of this lease. In the event the Government terminates this lease, Lessee shall be given thirty (30) days to accomplish such removal. All property not so removed shall be deemed abandoned by Lessee and may be used or disposed of by the Government in any manner whatsoever without any liability to account to the Government. Any such abandonment shall not reduce Lessee's obligation to restore the Premises.

E. SUBJECTION TO EXISTING AND FUTURE EASEMENTS AND RIGHTS-OF-WAY

This lease is subject to all outstanding easements and rights of way for location of any type of facility over, across, in and upon the Premises. In addition, the Government reserves the right to grant such additional easements as it shall determine to be in the public interest. The Government also reserves all mineral rights in the Premises, together with such rights of access and use of the surface as may be necessary for the mining and saving of any mineral deposits located thereon or thereunder. The Government reserves the right to allow ingress and egress to workers officially engaged in the construction, installation, maintenance, operation, repair or replacement of facilities located thereon, and to any Federal, State or local officials.

F. RESTORATION OF PREMISES

Before the expiration of this lease or the prior termination thereof, Lessee shall, if required to do so by the Government, restore the Premises to the condition existing at the time of its entrance thereon under this lease, or to such improved condition as they may have been placed in by the Government or the Lessee during the term of this lease, reasonable wear and tear and damage by the elements or from other causes over which Lessee had no control excepted; *Provided,* in the event the Government shall terminate this lease upon less than thirty (30) days notice Lessee shall have thirty (30) days from receipt of notice of termination to accomplish such restoration.

G. LIENS

Lessee shall promptly discharge or cause to be discharged any valid lien, *right in rem*, claim or demand of any kind, except one in favor of the

Government, which at any time may arise or exist with respect to the Premises or materials or equipment furnished therefor, or any part thereof, and if the same shall not be promptly discharged by Lessee, the Government may discharge, or cause to be discharged, the same at the expense of the Lessee.

H. TERMINATION BY GOVERNMENT

The Government shall have the right to terminate this lease, in whole or in part, at any time, without prior notice, and regardless of any lack of breach by Lessee of any of the terms and conditions of this lease. In the event of termination for any reason not involving a breach by Lessee of the terms and conditions of the lease the Government shall make an equitable adjustment of any advance rentals paid by Lessee hereunder and, if the Government's use of the Premises does not require immediate possession thereof, Lessee shall be permitted, within such time as the Local Government Representative shall prescribe, to harvest, gather and remove from the Premises such crops as can be so harvested and removed, but if the Government's requirements necessitate immediate repossession of the Premises, so as to require immediate removal of Lessee's livestock, and/or, to preclude Lessee from such harvesting and removal of any growing or matured crops, Lessee hereby specifically releases, remises, and forever discharges the Government from any and all liability or claims for loss or damage of any nature arising out of such termination and repossession, including, but not limited to, destruction of diminution in value of, or inability to harvest any growing crops, and/or death or diminution of value of any livestock of Lessee.

In the event that the Government shall elect to terminate this lease on account of the breach by the Lessee of any of the terms and conditions hereof no adjustment in advance rentals paid by Lessee shall be made, and the Government shall be entitled to recover and Lessee shall pay to the Government:

(1) The costs incurred in resuming possession of the Premises.

(2) The costs incurred in performing any obligation on the part of Lessee to be performed hereunder.

(3) An amount equal to the aggregate of all rents and charges assumed hereunder and not theretofore paid, less the net rentals, if any, collected by the Government on the re-letting of the Premises, which amounts shall be due and payable at the time when the rent reserved under this lease would become due and payable.

The Government may, at its option, attach any livestock or crops of Lessee on the Premises in full or partial satisfaction of Lessee's obligations under this Article.

I. SURRENDER

Upon the expiration of this lease or its prior termination, in whole or in part, Lessee shall quietly, and peacefully remove itself and its property from the Premises, or part thereof as to which this lease shall be terminated, and surrender the possession thereof to the Government. Upon failure or neglect of Lessee to so remove, the Government and its officers or agents may enter the Premises and cause the removal of all persons and property therefrom without recourse to any action or proceeding at law or in equity. Lessee hereby expressly waives any provision of law requiring notice to quit possession of the Premises. Such removal shall be at the sole cost and expense of Lessee and Lessee shall indemnify and save and hold harmless the Government, its officer, agents and employees for and from any and all liability or claims for damages of any nature whatsoever which may arise out of or be attributable to such removal.

J. DAMAGE TO GOVERNMENT PROPERTY

In the event of the destruction of or damage to any Government property located on or adjacent to the Premises by Lessee, or any of its officers, agents, servants, employees, subtenants, licensee or invitees, Lessee shall promptly repair or replace such property to the satisfaction of the Government, or pay to the Government an amount of money sufficient to compensate it for the loss or damage sustained, as the Government shall elect.

K. NON-LIABILITY OF GOVERNMENT

Lessee covenants that it will indemnify and save and hold harmless the Government, its officers, agents and employees for and from any and all liability or claims for loss of or damage to any property owned by or in the custody of Lessee, its officers, agents, servants, employees, subtenants, licensees or invitees, or for the death of or injury to any of the same which may arise out of or be attributable to the condition, state of repair or Lessee's use and occupancy of the Premises, or the furnishings of any utilities or services (including supply of water from wells or other sources), or any interruption therein or failure thereof, whether or not the same shall be occasioned by the negligence or

lack of diligence of Lessee, its officers, agents, servants or employees.

L. UTILITIES AND SERVICES

In the event that the Government shall furnish Lessee with any utilities and services maintained by the Government which Lessee may require in connection with its use of the Premises, Lessee shall pay the Government the charges therefor in addition to the cash rent required under this lease. Such charges and the method of payment thereof shall be determined by the Local Government Representative in accordance with applicable laws and regulations, on such basis as the Local Government Representative may establish, which may include a requirement for the installation of adequate connecting and metering equipment at the sole cost and expense of Lessee. It is expressly agreed and understood that the Government in no way warrants the continued maintenance or adequacy of any utilities or services furnished by it to Lessee.

M. ACCESS

The Government shall have access to the Premises at all reasonable times for any purposes not inconsistent with the quiet use and enjoyment thereof by Lessee, including, but not limited to, the purpose of inspection.

N. COVENANT AGAINST CONTINGENT FEES

Lessee warrants that no person or agency has been employed or retained to solicit or secure this lease upon an agreement or understanding for a commission, percentage, brokerage or contingent fee, excepting bona fide employees or bona fide established commercial agencies maintained by Lessee for the purpose of securing business. For breach or violation of this warranty, the Government shall have the right to annul this lease without liability or in its discretion to require Lessee to pay, in addition to the rental or consideration, the full amount of such commission, percentage, brokerage, or contingent fee.

O. STATE AND LOCAL TAXES

In the event that as a result of any future Act of Congress, subjecting Government-owned property to taxation, any taxes, assessments or similar charges are imposed by State or local authorities upon the Premises (other than upon Lessee's possessory interest therein), Lessee shall pay the same when due and payable and this lease shall be renegotiated so as to accomplish an equitable reduction in the rental provided for herein, which reduction shall in no event exceed the amount of such taxes, assessments, or similar charges; *Provided,* in event the parties hereto are unable to agree within ninety (90) days from the date of the imposition of such taxes, assessments, or similar charges, upon a rental which in the opinion of the Local Government Representative constitutes a reasonable return to the Government on the Premises, then in such event the Local Government Representative shall have the right to determine the amount of the rental, which determination shall be binding on Lessee, subject to appeal as a dispute in accordance with the provisions of paragraph P of this Article 10.

P. DISPUTES

1.1 This lease is subject to the Contract Disputes Act of 1978, as amended (41 U.S.C. 601-613) (the Act).

1.2 Except as provided in the Act, all disputes arising under or relating to this lease shall be resolved under this clause.

1.3 "Claim," as used in this clause, means a written demand or written assertion by the Lessee or the Government seeking, as a matter of right, the payment of money in a sum certain, the adjustment or interpretation of lease terms, or other relief arising under or relating to this lease. A claim arising under this lease, unlike a claim relating to this lease, is a claim that can be resolved under a lease clause that provides for the relief sought by the claimant. However, a written demand or written assertion by the Lessee seeking the payment of money exceeding $100,000 is not a claim under the Act until certified as required by subparagraph 1.4(2) below. A voucher, invoice, or other routine request for payment that is not in dispute when submitted is not a claim under the Act. The submission may be converted to a claim under the Act, by complying with the submission and certification requirements of this clause, if it is disputed either as to liability or amount or is not acted upon in a reasonable time.

1.4(1) A claim by the Lessee shall be made in writing and submitted to the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, for a written decision. A claim by the Government against the Lessee shall be subject to a written decision by the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic.

1.4(2)(a)The Lessee shall provide the certification specified in subparagraph 1.4(2)(c) of this clause when submitting any claim ---

(A) Exceeding $100,000; or

(B) Regardless of the amount claimed, when using--

(1) Arbitration conducted pursuant to 5 U.S.C. 575-580; or

(2) Any other alternative means of dispute resolution (ADR) technique that the agency elects to handle in accordance with the Administrative Dispute Resolution Act (ADRA).

1.4(2)(b) The certification requirement does not apply to issues in controversy that have not been submitted as all or part of a claim.

1.4(2)(c)The certification shall state as follows: "I certify that the claim is made in good faith; that the supporting data are accurate and complete to the best of my knowledge and belief; that the amount requested accurately reflects the contract adjustment for which the Lessee believes the Government liable; and that I am duly authorized to certify the claim on behalf of the Lessee."

1.4(3) The certification may be executed by any person duly authorized to bind the Lessee with respect to the claim.

1.5 For Lessee claim of $100,000 or less, the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, must, if requested in writing by the Lessee, render a decision within sixty (60) days of the request. For Lessee-certified claims over $100,000, the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, must, within sixty (60) days, decide the claim or notify the Lessee of the date by which the decision will be made.

1.6 The Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, decision shall be final unless the Lessee appeals or files a suit as provided in the Act.

1.7 At the time a claim by the Lessee is submitted to the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, or a claim by the Government is presented to the Lessee, the parties, by mutual consent, may agree to use ADR. When using arbitration conducted pursuant to 5 U.S.C. 575-580, or when using any other ADR technique that the agency elects to handle in accordance with the ADRA, any claim, regardless of amount, shall be accompanied by the certification described in paragraph 1.4(2)(c) of this clause, and executed in accordance with paragraph 1.4(3) of this clause.

1.8 The Government shall pay interest on the amount found due and unpaid by the Government from (1) the date the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, receives the claim (properly certified if required), or (2) the date of payment otherwise would be due, if that date is later, until the date of payment. With regard to claims having defective certifications, as defined in FAR 33.201, interest shall be paid from the date that the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, initially receives the claim. Simple interest on claims shall be paid at the rate, fixed by the Secretary of the Treasury, as provided in the Act, which is applicable to the period during which the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, receives the claim and then at the rate applicable for each 6-month period as fixed by the Treasury Secretary during the pendency of the claim.

1.9 The Lessee shall proceed diligently with the performance of the lease, pending, final resolution of any request for relief, claim, appeal, or action arising under the lease, and comply with any decision of the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic.

Q. OFFICIALS NOT TO BENEFIT

No Member of or Delegate to Congress, or Resident Commissioner, shall be admitted to any share of part of this lease, or to any benefit to arise therefrom but this provision shall not be construed to extend to this lease if made with a corporation for its general benefit.

R. LABOR PROVISION

(1) Equal Opportunity

During the term of this lease the Lessee agrees as follows:

(a) The Lessee will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The Lessee will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their

race, color, religion, sex, or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer, recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; selection for training, including apprenticeship. The Lessee agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the Government setting forth the provisions of this nondiscrimination clause.

(b) The Lessee will, in all solicitations or advertisements for employees placed by or on behalf of the lessee, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

(c) The Lessee will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding a notice to be provided by the Government, advising the labor union or worker's representative of the Lessee's commitments under this Equal Opportunity clause and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(d) The Lessee will comply with all provisions of Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and of the rules, regulations, and relevant orders of the Secretary of Labor.

(e) The Lessee will furnish all information and reports required by Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and by the rules, regulations, and orders of the Secretary of Labor or pursuant thereto, and will permit access to his books, records, and accounts by the Government and the Secretary of Labor for purposes of investigating to ascertain compliance with such rules, regulations and orders.

(f) In the event of the Lessee's noncompliance with the Equal Opportunity clause of this lease or with any of said rules, regulations, or orders, this lease may be canceled, terminated or suspended in whole or in part and the Lessee may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(g) The Lessee will include the provisions of paragraphs (a) through (g) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, so that such provisions will be binding upon each sublessee or vendor. The Lessee will take such action with respect to any sublessee or purchase order as the Government may direct as a means of enforcing such provisions including sanctions for noncompliance: *Provided, however,* that in the event the Lessee becomes involved in, or is threatened with, litigation with sublessee or vendor as a result of such direction by the Government, the Lessee may request the United States to enter into such litigation to protect the interests of the United States.

(2) Convict Labor

In connection with the performance of work required by this lease, Lessee agrees not to employ any person undergoing a sentence of imprisonment at hard labor.

(3) Contract Work Hours Standards Act (40 U.S. Code 327-330)

This lease, to the extent that it is a contract of a character specified in the Contract Work Hours Standards Act (40 U.S.C. 327-330) and is not covered by the Walsh-Healy Public Contracts Act (41 U.S.C. 35-45), is subject to the following provisions and exceptions of said Contract Work Hours Standards Act and to all other provisions and exceptions of said law:

(a) The Lessee shall not require or permit any laborer or mechanic in any workweek in which he is employed on any work under this contract to work in excess of 8 hours in any calendar day or in excess of 40 hours in such workweek on work subject to the provisions of the Contract Work Hours Standards Act unless such laborer or mechanic receives compensation at a rate not less than one and one-half times his basic rate of pay for all such hours worked in excess of 8 hours in any calendar day or in excess of 40 hours in such workweek, whichever is the greater number of overtime hours. The "basic rate of pay," as used in this clause, shall be the amount paid per hour, exclusive of the Lessee's contribution or cost for fringe benefits and any cash payment made in lieu of providing fringe benefits, or the basic hourly rate contained in the wage determination, whichever is greater.

(b) In the event of any violation of the provisions of paragraph (a), the Lessee shall be liable to any affected employee for any amounts due and to the United States for liquidated damages. Such

liquidated damages shall be computed with respect to each individual laborer or mechanic employed in violation of the provisions of paragraph (a) in the sum of $10 for each calendar day on which such employee was required or permitted to be employed on such work in excess of 8 hours or in excess of the standard workweek of 40 hours without payment of the overtime wages required by paragraph (a).

S. NOTICES

No notice, order, direction, determination, requirement, consent, or approval under this lease shall be of any effect unless in writing. All notices required under this lease shall be addressed to Lessee, or to the Local Government Representative, as may be appropriate, at the address thereof specified in Article 9 of this lease or at such other address as may from time to time be agreed upon by the parties hereto.

T. FAILURE OF GOVERNMENT TO INSIST ON COMPLIANCE

The failure of the Government to insist, in any one or more instances, upon performances of any of the terms, covenants or conditions of this lease shall not be construed as a waiver or relinquishment of the Government's right to the future performance of any such terms, covenants or conditions and Lessee's obligations in respect to such future performance shall continue in full force and effect.

U. ASSIGNMENT OR SUBLETTING

Lessee shall not transfer or assign this lease or any interest therein nor sublet or otherwise make available to any third party or parties any portion of the Premises or rights therein without prior written consent of the Government. Under any assignment made, with or without consent, the assignee shall be deemed to have assumed all the obligations of Lessee hereunder, but no assignment shall relieve the assignor of any of Lessee's obligations hereunder except for an extension of the lease term beginning after such assignment, and then only if the Government shall have consented thereto.

V. GOVERNMENT RULES AND REGULATIONS

Lessee shall comply with such rules and regulations regarding station security, ingress, egress, safety and sanitation as may be prescribed, from time to time, by the Local Government Representative, or by the Commanding Officer of the Naval activity of which the Premises forms a part.

W. PAYMENTS

All payments to the Government required under this lease shall be made by check or postal money order made payable to the U.S. Treasurer and mailed to Commander Naval Facilities Engineering Command, Atlantic, Attn: FM, 6506 Hampton Blvd., Norfolk, VA 23508.

X. INTEREST

Notwithstanding any other provision of this lease, unless paid within thirty (30) days, all amounts that become payable by the Lessee to the Government under this contract (net of any applicable tax credit under the Internal Revenue Code) shall bear interest from the date due until paid and shall be subject to adjustments as provided by Part 6 of Appendix E of the Armed Services Procurement Regulation, as in effect on the date of this lease. The interest rate per annum shall be the interest rate in effect which has been established by the Secretary of the Treasury pursuant to Public Law 92-41; 85 STAT 97 for the Renegotiation Board, as of the date the amount becomes due as herein provided. Amounts shall be due upon the earliest one of (i) the date fixed pursuant to this contract; (ii) the date of the first written demand for payment, consistent with this lease, including demand consequent upon default termination; or (iii) the date of transmittal by the Government to the Lessee of a proposed supplemental agreement to confirm completed negotiations fixing the amount.

Y. ADMINISTRATION

The local Government Representative specified in Article 9 of this lease shall, under the direction of the Commander, Naval Facilities Engineering Command, Mid-Atlantic, have complete charge of the administration of this lease, and shall exercise full supervision and general direction thereof insofar as the interest of the Department are affected.

Z. INDEMNIFICATION

The Lessee accepts responsibility for all liability related to, or arising under, Lessee's use of the property. Further, Lessee shall release and hold harmless the Government, its officers, agents, and employees from all liability, suits, claims, actions, or demands in any way related to, or arising under, Lessee's use of the property. This includes, but is not limited to, all environmental suits, claims, and enforcement actions, arising during Lessee's construction on, or use of, the property, or after such construction, or use, has ended. Further, Lessee shall reimburse the Government for all expenditures incurred if the Government voluntarily chooses to undertake any remedial action to address contamination on the premises or facilities resulting from the acts or omissions of the Lessee.

11. SPECIAL PROVISIONS

The following specified additional provisions, which shall control in the event of any conflict with the General Provisions of Article 10, are hereby incorporated into this lease by attachment hereto.

A. RESTRICTIONS:

a. No substance shall be released into the air from the leased lands that could impair visibility including, without limitation, emissions such as steam, dust and smoke.

b. No lights shall be constructed, maintained, directed or allowed to shine from the said leased lands, which could interfere with or impair pilot vision. All light emissions must be shielded to prevent them from being used as geographic reference pints by aircraft personnel.

c. No electrical emissions shall be emitted from sources situated on said leased lands which could interfere in any way with aircraft communications systems, ordnance or navigational equipment now in existence or hereinafter invented.

d. No garbage shall be dumped or placed and no feeding stations or other facilities attractive to birds shall be constructed or maintained on said leased lands. All trash, debris and empty pesticide containers shall be removed from Government property and properly disposed of each day at Lessee's expense.

e. Relic hunting, or antique hunting or recovery is prohibited.

f. Aerial crop dusting, unless specifically authorized by permit, is prohibited

g. Hunting and horseback riding on the leased land is permitted. The Station is responsible for coordinating the hunting program with the Lessee. Excessive damage by these activities must be reported immediately to the Naval Air Station, Oceana, Natural Resources Specialist at (757) 341-0495.

h. A cultivation regimen of cutting, no-till seed drilling and discing to a depth no greater than 16 cm (6.4 inches) below the surface shall be followed.

B. REIMBURSABLE WORK

If at any time during the lease it is determined that work not identified in the Soil and Water Conservation Plan, as Non-Reimbursable work is necessary, the procedures below will be followed:

The NAVFAC Mid-Atlantic Natural Resource Specialist will prepare a Scope of Work and Government Cost Estimate. Scope of Work will include what work is to be done and identify how or what method should be used to complete the work. It will also include a time schedule in which the work must be completed.

The NAVFAC Mid-Atlantic Natural Resource Specialist will forward the Scope of Work and Government Cost Estimate to the Real Estate Contracting Officer.

The Real Estate Contracting Officer will forward the Scope of Work to the Lessee and request a cost proposal.

The Lessee will send a cost proposal to the Real Estate Contracting Officer. This proposal may be based on Lessee having a third party perform the work. The Lessee may at this time inform the Government that he is incapable of performing the work.

If the Lessee submits a proposal and is acceptable, the Real Estate Contracting Officer will either; (1) issue a letter of authorization to proceed, advising a modification to the lease will be forthcoming or (2) forward a modification to the Lessee reflecting changes. Work should not begin until a letter or authorization or a modification has been received.

If the proposal is unacceptable, the Government will negotiate with the Lessee or determine alternative means of completing the required work.

When work is completed, Lessee and Navy Representatives will perform a joint inspection. If work is acceptable and within the time frame allotted, terms of the modification will be activated; i.e., rent reduction granted.

If it is determined during a joint inspection that the work was not completed properly or done within the required time frame, the Navy may, at its option, allow the Lessee additional time, not to exceed 25% of original time allotted, to complete the work or the Navy will have the work completed and charge the Lessee.

C. ENVIRONMENTAL/INDEMNIFICATION

In accordance with 10 U.S.C. 2692, the Lessee may not allow the treatment, storage or disposal of any Toxic or Hazardous materials on the leased premises. For the purposes of this provision, the terms "storage" and "Toxic or Hazardous Materials" are defined as provided in 48 CFR 252.223-7006.

The Lessee will reimburse the Lessor for all expenditures incurred if the Lessor is required by any regulatory authority or voluntarily chooses to undertake any Remedial Action to address Contamination on the leased premises resulting from the acts or omissions of the Lessee or its contractors. The Lessor shall contact the Lessee before taking any Remedial Action and give the Lessee a reasonable opportunity to undertake such Remedial Action if the Lessor believes that the Lessee has the capability to do so. Notwithstanding the above, the Lessee may immediately take any Remedial Action required of the Lessee by law.

During the term of this Lease, if the Lessee becomes aware that a Release of Toxic or Hazardous Materials has occurred that has resulted in Contamination of the leased premises, the Lessee will provide oral notice to the Lessor within 24 hours of becoming aware of such Contamination, providing all relevant facts and circumstances. The Lessor may request from the Lessee a more detailed written description of these facts and circumstances within a time period specified by the Lessor. The Lessee will promptly take all actions, at its sole expense, as are necessary to comply with all Applicable Environmental Laws relating to such Release, including reporting the occurrence to the appropriate Federal, State, or local regulatory authority or taking required Remedial Action, related to addressing the Contamination and to minimize the impacts of such Release. The Lessee will provide all information requested by the Lessor regarding such actions.

The Lessee, at its sole expense, will promptly take all action necessary to comply with Applicable Environmental Laws pertaining to a Release described in the preceding paragraph, including but not limited to: one, report the occurrence to appropriate Federal, State, or local regulatory authorities, if so directed by the Government; tow, take timely and effective steps to minimize the Release and its impact on human health and the environment; and three, take Remedial Action. The Government may direct the Lessee to provide all information requested by the Government regarding such actions within a time certain.

During the term of this Lease, the Lessee will ensure that all activities conducted by the Lessee or its contractors on the leased premises are carried out in compliance with Applicable Environmental Laws. The Lessee will provide oral notice to the Lessor within 24 hours of receiving any complaint, order, directive, claim, citation, or notice by any Governmental authority or any other person or entity with respect to a violation of Applicable Environmental Laws resulting from the activities of the Lessee or its contractors on the leased premises. The Lessee will promptly take all actions, at its sole expense, as are necessary to comply with all Applicable Environmental Laws as directed by any Federal, State, or local regulatory authority. The Lessor may request a more detailed written description of the events or circumstances leading to this event within a time specified by the Lessor. Without limitation of the foregoing, the Lessor may, but will not be obligated to, enter onto the leased premises and take any Remedial Action as it deems necessary or advisable to address any Contamination of the leased premises by Toxic or Hazardous Materials or to ensure compliance with Applicable Environmental Laws.

At any time, the Lessor or its representatives may conduct inspections on the leased premises to ensure compliance with Applicable Environmental Laws. To assist in this evaluation, the Lessee will provide to the Lessor or the Lessor's representative, any and all books, records, or documents in their possession, or in the possession of their agents or contractors, related to the activities or operations on the leased premises, which the Lessor or its representatives may examine, copy, or make extracts from.

As the Lessor deems appropriate, the Lessor may require that the Lessee, from time to time, promptly conduct such tests and procedures for the purpose of ensuring that the leased premises are in compliance with Applicable Environmental Laws and of having the leased premises certified to the Lessor as such. Such tests and procedures shall be conducted by recognized professionals to be approved by the Lessor and in a manner that is satisfactory to the Lessor. When requesting such tests and procedures, the Lessor will work with the Lessee to establish accepted timeframes, appropriate parties to perform the required activities, and schedules for performance. If an agreement cannot be reached regarding any of the foregoing, the Lessor or its representatives may undertake such tests and procedures, with the Lessee being obligated to reimburse the Lessor for all costs incurred.

For the purposes of this provision, the terms used above are defined as follows:

"Toxic or Hazardous Materials" means any hazardous, harmful, odorous, radioactive, toxic or dangerous waste, substance or material, including, without limitation, asbestos, polychlorinated biphenyls ("PCBs") and petroleum products, and any hazardous or toxic substance, material or waste, or any pollutant or contaminant defined as such in, or for the purposes of, any environmental laws as are now or in the future may be in effect. The Lessee's obligation under this provision shall extend to any and all such Toxic or Hazardous Materials whether or not such substance was defined, recognized, known, or suspected of being hazardous, toxic, dangerous, or wasteful at the time of any act or omission giving rise to the Lessee's obligation.

"Contamination" means a level of Toxic or Hazardous Materials in the air, in or on soil, in the surfacewater, or in the groundwater that exceeds levels allowed by Applicable Environmental Laws.

"Applicable Environmental Laws" means:

one, any Federal, State, or local statute, law, ordinance, rule, regulation, or order (whether voluntary or not) that govern the activities or operations of the leased premises, or the persons carrying out those activities or operations, relating to the environment, natural resources, or human health and safety.

two, Executive Orders of the President of the United States;

three, decisions of courts and administrative tribunals of competent jurisdiction;

four, administrative orders of regulatory agencies of competent jurisdiction (involuntary or on consent); and

five, regulations and directives of the Department of Defense, the Department of the Navy, and the U.S. Marine Corps (for Marine Corps installations only),

which pertain to the human environment (as defined in the National Environmental Policy act of 1969); transportation of hazardous material; and human health and safety (including occupational safety).

Applicable Environmental Laws include, without limitation the Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. § 9601 *et seq*.), the Hazardous Material Transportation Act (49 U.S.C. § 1801 *et seq*.), the Resource Conservation and Recovery Act (42 U.S.C. 6901 *et seq*.), the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq*.), the Clean Air Act (42 U.S.C. § 7401 *et seq*.), the Toxic Substances Control Act (15 U.S.C. § 2601 *et seq*.), and the Occupational Safety and Health Act (29 U.S.C. § 651 *et seq*.), Superfund Amendments and Reauthorization Act Title III (SARA) Emergency Planning and Community Right-to-Know Act (EPCRA) reporting requirements (40 CFR 355, 40 CFR 370, 40 CFR 372 and 29 CFR 1910.1200), as such laws have been amended or supplemented now or in the future.

"Release" means any release, spill, emission, leaking, pumping, injection, deposit, disposal, leaching, or migration into the environment, whether accidental or otherwise, resulting from the act or omissions of the Lessee, its contractors, or by natural conditions.

"Remedial Action" means any investigation or monitoring of the condition of the leased premises or any cleanup, remedial, removal, or restoration work required or performed on the leased premises because of the presence, suspected presence, release, or suspected release of Toxic or Hazardous Materials.

The Lessor shall not be responsible for damages to property or injuries to persons which may arise from or be incident to the use and occupation of the leased premises by the Lessee, nor for damages to the property or injuries to the person of the Lessor's officers, agents, servants, or employees, or others who may be on the leased premises at their invitation or the invitation of any one of them arising from or incident to governmental activities except as permitted under the Federal Torts Claim Act, 28 U.S.C. 2671 et seq.

F. APPLICABLE STATE AND CITY LAWS, CODES, AND ORDINANCES

The Lessee agrees to comply with all applicable State and City laws, codes and ordinances applicable to use of the leased premises at Lessee's expense. Lessee further agrees to obtain all necessary permits and related items at Lessee's expense.

G. INSURANCE REQUIREMENTS

Prior to award of the Lease, the LESSEE shall submit a certificate of insurance meeting the following requirements. Public Liability and Property Damage shall meet the following requirements at a minimum:

$50,000	Third Party Property Damage
$500,000	Third Party Personal Injury Per Person
$1,000,000	Third Party Personal Injury Per Accident

The policy/certificate of insurance shall contain an endorsement reading as follows:

a. Loss, if any under this policy shall be adjusted with (name of LESSEE) and the proceeds, at the election of the GOVERNMENT, shall be payable to (name of LESSEE); any proceeds not paid to (name of LESSEE) shall be payable to the Treasurer of the United States of America.

b. The insurer waives any right of subrogation against the United States of America which might arise by reason of any payment made under this policy.

c. The GOVERNMENT shall be given thirty (30) days written notice prior to making any material change in or the cancellation of the policy. Please strike out (and initial) any clauses that state "…failure to make such notice imposes no obligation or liability of any kind upon the company, etc …"

d. The United States of America (Department of the Navy) is added as an additional insured in operations of the policyholder at or from the premises leased at Naval Station Oceana, Virginia Beach, Virginia, identified as Unit 01.

e. This insurance certificate is for use of premises known as **314.8 acres more or less, at Naval Station Oceana, Virginia Beach, Virginia, identified as Unit 01, Contract number N40085-15-RP-00015 or LO10499**.

If, at any time, the GOVERNMENT determines that the insurance maintained by the LESSEE does not in fact adequately protect the GOVERNMENT, LESSEE may be required to carry such other insurance in such form, for such amounts and for such periods of time, and with such insurers as the GOVERNMENT may from time to time require or approve.

LEASE BETWEEN Glenn Scott Weatherly

(HEREINAFTER CALLED "LESSEE") AND THE UNITED STATES OF AMERICA HEREINAFTER CALLED THE "GOVERNMENT".

THE GOVERNMENT HEREBY LEASES TO LESSEE THE PROPERTY DESCRIBED BELOW UNDER THE TERMS, CONDITIONS, GENERAL PROVISIONS AND SPECIAL PROVISIONS SET FORTH ON THIS PAGE AND SUBSEQUENT PAGES OF THIS LEASE FORM.

1. **LEASED PROPERTY:** ALL THAT PORTION OF THE NAVAL ACTIVITY IDENTIFIED IN ARTICLE 9, WHICH PORTION IS HEREINAFTER CALLED THE "PREMISES" AND DESCRIBED AS FOLLOWS: Approximately 339 acres, more or less, at the Naval Auxiliary Landing Field, Fentress, Chesapeake, Virginia, identified as Unit F1 in the Soil and Water Conservation Plan attached hereto and made a part hereof as Exhibit "A."

2. **TERM:** THE TERM OF THIS LEASE SHALL BEGIN ON 13 April 2015 AND END ON 31 December 2015 UNLESS SOONER TERMINATED IN ACCORDANCE WITH THE PROVISIONS OF ARTICLE 10H HEREOF.

LESSEE MAY REQUEST TO EXTEND THE TERM OF THIS LEASE FOR four (4) ADDITIONAL PERIODS OF ONE (1) YEAR EACH BY DELIVERY TO THE LOCAL GOVERNMENT REPRESENTATIVE OF WRITTEN NOTICE OF ITS INTENTION TO EXTEND NO LATER THAN NINETY (90) DAYS PRIOR TO THE EXPIRATION OF THE THEN CURRENT TERM; *PROVIDED*, NO EXTENSION SHALL BE GRANTED WHICH CREATES A TOTAL TERM IN EXCESS OF FIVE (5) YEARS.

3. **RENT:** DURING THE INITIAL TERM OF THIS LEASE, WHICH IS FOR A PERIOD OF EIGHT (8) MONTHS AND EIGHTEEN (18) DAYS, THE LESSEE SHALL PAY THE GOVERNMENT A RENTAL OF $24,594.23, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $8,575.00 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF. THE FIRST PAYMENT WILL BE $7,444.23, WHICH IS THE PRORATED QUARTERLY PAYMENT RATE FOR THE LEASE DURING THE PERIOD OF 13 APRIL 2015 TO 30 JUNE 2015. FOR THE INITIAL TERM AND ANY RENEWAL TERMS, ALL FUTURE PAYMENTS WILL BE $8,575.00 AND DUE ON THE FIRST DAY OF JULY, OCTOBER, JANUARY, AND APRIL.

AFTER THE INITIAL EIGHT (8) MONTH AND EIGHTEEN (18) DAY TERM, AND PROVIDED LESSEE RENEWS THE LEASE, LESSEE SHALL PAY THE GOVERNMENT ANNUAL RENTAL OF $34,300.00, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $8,575.00 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF.

4. **USE:** THE PREMISES SHALL BE USED SOLELY FOR production of row crops (e.g., corn, soybeans, small grains, cotton) truck crops or hay/silage crops.

5. **PERFORMANCE BOND OR SECURITY:** TO SECURE THE FAITHFUL PERFORMANCE OF ITS OBLIGATIONS HEREUNDER LESSEE SHALL PROVIDE THE GOVERNMENT WITH EITHER: (a) COLLATERAL SECURITY IN THE FORM OF CASH OR NEGOTIABLE GOVERNMENT BONDS, OR (b) A PERFORMANCE BOND ISSUED BY A CORPORATE SURETY AND SATISFACTORY TO THE GOVERNMENT IN ALL RESPECTS, IN THE AMOUNT OF $ N/A

10. GENERAL PROVISIONS

A. REPRESENTATIONS

The property under this lease is provided as is, where is. The term "as-is, where is" means that the Government is leasing the subject property in whatever condition it presently exists, and that the lessee is accepting the subject property with all faults, whether or not they could be ascertained by an inspection of the property or review of any due diligence material available. LESSEE has examined, knows and accepts the condition and state of repair of the Premises and all appurtenances thereto and acknowledges that the Government has made no representation concerning such condition and state of repair, nor any agreement or promise to alter, improve, adapt, repair or keep in repair such Premises and appurtenances, or any item thereof, which has not been fully set forth on this lease which contains all the agreements made and entered into between Lessee and the Government.

B. PROHIBITION OF FEDERAL SUBSIDY PARTICIPATION

Notwithstanding the uses permitted to it in Article 4 of this lease, Lessee shall at no time during the term of this lease, or any extension thereof, use the Premises or its interest therein in any manner which shall constitute direct participation in any subsidy program of the Federal Government relative to either the use or abstention from use of the Premises.

C. SUBJECTION TO GOVERNMENT SOIL & WATER CONSERVATION PLAN

During the term of this lease the Lessee shall apply the conservation measures and use the Premises in accordance with the conservation plan attached hereto and made a part hereof. Lessee shall in no manner substantially change the contour or condition of the land constituting any part of the Premises except for such changes as shall be reasonably required to effect soil and water conservation measures. (Soil and Water Conservation Plan is attached as Exhibit "A")

D. INSTALLATIONS AND REMOVALS

Subject to the prior written approval of the Government, Lessee shall have the right to erect, at its own expense, such temporary structures on the Premises as may be necessary or incidental to its use under this lease. All such structures shall remain the property of Lessee and Lessee shall remove any erected structures from the Premises prior to the expiration of the term of this lease. In the event the Government terminates this lease, Lessee shall be given thirty (30) days to accomplish such removal. All property not so removed shall be deemed abandoned by Lessee and may be used or disposed of by the Government in any manner whatsoever without any liability to account to the Government. Any such abandonment shall not reduce Lessee's obligation to restore the Premises.

E. SUBJECTION TO EXISTING AND FUTURE EASEMENTS AND RIGHTS-OF-WAY

This lease is subject to all outstanding easements and rights of way for location of any type of facility over, across, in and upon the Premises. In addition, the Government reserves the right to grant such additional easements as it shall determine to be in the public interest. The Government also reserves all mineral rights in the Premises, together with such rights of access and use of the surface as may be necessary for the mining and saving of any mineral deposits located thereon or thereunder. The Government reserves the right to allow ingress and egress to workers officially engaged in the construction, installation, maintenance, operation, repair or replacement of facilities located thereon, and to any Federal, State or local officials.

F. RESTORATION OF PREMISES

Before the expiration of this lease or the prior termination thereof, Lessee shall, if required to do so by the Government, restore the Premises to the condition existing at the time of its entrance thereon under this lease, or to such improved condition as they may have been placed in by the Government or the Lessee during the term of this lease, reasonable wear and tear and damage by the elements or from other causes over which Lessee had no control excepted; *Provided,* in the event the Government shall terminate this lease upon less than thirty (30) days notice Lessee shall have thirty (30) days from receipt of notice of termination to accomplish such restoration.

G. LIENS

Lessee shall promptly discharge or cause to be discharged any valid lien, *right in rem*, claim or demand of any kind, except one in favor of the

Government, which at any time may arise or exist with respect to the Premises or materials or equipment furnished therefor, or any part thereof, and if the same shall not be promptly discharged by Lessee, the Government may discharge, or cause to be discharged, the same at the expense of the Lessee.

H. TERMINATION BY GOVERNMENT

The Government shall have the right to terminate this lease, in whole or in part, at any time, without prior notice, and regardless of any lack of breach by Lessee of any of the terms and conditions of this lease. In the event of termination for any reason not involving a breach by Lessee of the terms and conditions of the lease the Government shall make an equitable adjustment of any advance rentals paid by Lessee hereunder and, if the Government's use of the Premises does not require immediate possession thereof, Lessee shall be permitted, within such time as the Local Government Representative shall prescribe, to harvest, gather and remove from the Premises such crops as can be so harvested and removed, but if the Government's requirements necessitate immediate repossession of the Premises, so as to require immediate removal of Lessee's livestock, and/or, to preclude Lessee from such harvesting and removal of any growing or matured crops, Lessee hereby specifically releases, remises, and forever discharges the Government from any and all liability or claims for loss or damage of any nature arising out of such termination and repossession, including, but not limited to, destruction of diminution in value of, or inability to harvest any growing crops, and/or death or diminution of value of any livestock of Lessee.

In the event that the Government shall elect to terminate this lease on account of the breach by the Lessee of any of the terms and conditions hereof no adjustment in advance rentals paid by Lessee shall be made, and the Government shall be entitled to recover and Lessee shall pay to the Government:

(1) The costs incurred in resuming possession of the Premises.

(2) The costs incurred in performing any obligation on the part of Lessee to be performed hereunder.

(3) An amount equal to the aggregate of all rents and charges assumed hereunder and not theretofore paid, less the net rentals, if any, collected by the Government on the re-letting of the Premises, which amounts shall be due and payable at the time when the rent reserved under this lease would become due and payable.

The Government may, at its option, attach any livestock or crops of Lessee on the Premises in full or partial satisfaction of Lessee's obligations under this Article.

I. SURRENDER

Upon the expiration of this lease or its prior termination, in whole or in part, Lessee shall quietly, and peacefully remove itself and its property from the Premises, or part thereof as to which this lease shall be terminated, and surrender the possession thereof to the Government. Upon failure or neglect of Lessee to so remove, the Government and its officers or agents may enter the Premises and cause the removal of all persons and property therefrom without recourse to any action or proceeding at law or in equity. Lessee hereby expressly waives any provision of law requiring notice to quit possession of the Premises. Such removal shall be at the sole cost and expense of Lessee and Lessee shall indemnify and save and hold harmless the Government, its officer, agents and employees for and from any and all liability or claims for damages of any nature whatsoever which may arise out of or be attributable to such removal.

J. DAMAGE TO GOVERNMENT PROPERTY

In the event of the destruction of or damage to any Government property located on or adjacent to the Premises by Lessee, or any of its officers, agents, servants, employees, subtenants, licensee or invitees, Lessee shall promptly repair or replace such property to the satisfaction of the Government, or pay to the Government an amount of money sufficient to compensate it for the loss or damage sustained, as the Government shall elect.

K. NON-LIABILITY OF GOVERNMENT

Lessee covenants that it will indemnify and save and hold harmless the Government, its officers, agents and employees for and from any and all liability or claims for loss of or damage to any property owned by or in the custody of Lessee, its officers, agents, servants, employees, subtenants, licensees or invitees, or for the death of or injury to any of the same which may arise out of or be attributable to the condition, state of repair or Lessee's use and occupancy of the Premises, or the furnishings of any utilities or services (including supply of water from wells or other sources), or any interruption therein or failure thereof, whether or not the same shall be occasioned by the negligence or

lack of diligence of Lessee, its officers, agents, servants or employees.

L. UTILITIES AND SERVICES

In the event that the Government shall furnish Lessee with any utilities and services maintained by the Government which Lessee may require in connection with its use of the Premises, Lessee shall pay the Government the charges therefor in addition to the cash rent required under this lease. Such charges and the method of payment thereof shall be determined by the Local Government Representative in accordance with applicable laws and regulations, on such basis as the Local Government Representative may establish, which may include a requirement for the installation of adequate connecting and metering equipment at the sole cost and expense of Lessee. It is expressly agreed and understood that the Government in no way warrants the continued maintenance or adequacy of any utilities or services furnished by it to Lessee.

M. ACCESS

The Government shall have access to the Premises at all reasonable times for any purposes not inconsistent with the quiet use and enjoyment thereof by Lessee, including, but not limited to, the purpose of inspection.

N. COVENANT AGAINST CONTINGENT FEES

Lessee warrants that no person or agency has been employed or retained to solicit or secure this lease upon an agreement or understanding for a commission, percentage, brokerage or contingent fee, excepting bona fide employees or bona fide established commercial agencies maintained by Lessee for the purpose of securing business. For breach or violation of this warranty, the Government shall have the right to annul this lease without liability or in its discretion to require Lessee to pay, in addition to the rental or consideration, the full amount of such commission, percentage, brokerage, or contingent fee.

O. STATE AND LOCAL TAXES

In the event that as a result of any future Act of Congress, subjecting Government-owned property to taxation, any taxes, assessments or similar charges are imposed by State or local authorities upon the Premises (other than upon Lessee's possessory interest therein), Lessee shall pay the same when due and payable and this lease shall be renegotiated so as to accomplish an equitable reduction in the rental provided for herein, which reduction shall in no event exceed the amount of such taxes, assessments, or similar charges; *Provided,* in event the parties hereto are unable to agree within ninety (90) days from the date of the imposition of such taxes, assessments, or similar charges, upon a rental which in the opinion of the Local Government Representative constitutes a reasonable return to the Government on the Premises, then in such event the Local Government Representative shall have the right to determine the amount of the rental, which determination shall be binding on Lessee, subject to appeal as a dispute in accordance with the provisions of paragraph P of this Article 10.

P. DISPUTES

1.1 This lease is subject to the Contract Disputes Act of 1978, as amended (41 U.S.C. 601-613) (the Act).

1.2 Except as provided in the Act, all disputes arising under or relating to this lease shall be resolved under this clause.

1.3 "Claim," as used in this clause, means a written demand or written assertion by the Lessee or the Government seeking, as a matter of right, the payment of money in a sum certain, the adjustment or interpretation of lease terms, or other relief arising under or relating to this lease. A claim arising under this lease, unlike a claim relating to this lease, is a claim that can be resolved under a lease clause that provides for the relief sought by the claimant. However, a written demand or written assertion by the Lessee seeking the payment of money exceeding $100,000 is not a claim under the Act until certified as required by subparagraph 1.4(2) below. A voucher, invoice, or other routine request for payment that is not in dispute when submitted is not a claim under the Act. The submission may be converted to a claim under the Act, by complying with the submission and certification requirements of this clause, if it is disputed either as to liability or amount or is not acted upon in a reasonable time.

1.4(1) A claim by the Lessee shall be made in writing and submitted to the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, for a written decision. A claim by the Government against the Lessee shall be subject to a written decision by the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic.

1.4(2)(a)The Lessee shall provide the certification specified in subparagraph 1.4(2)(c) of this clause when submitting any claim ---

(A) Exceeding $100,000; or

(B) Regardless of the amount claimed, when using--

(1) Arbitration conducted pursuant to 5 U.S.C. 575-580; or

(2) Any other alternative means of dispute resolution (ADR) technique that the agency elects to handle in accordance with the Administrative Dispute Resolution Act (ADRA).

1.4(2)(b) The certification requirement does not apply to issues in controversy that have not been submitted as all or part of a claim.

1.4(2)(c)The certification shall state as follows: "I certify that the claim is made in good faith; that the supporting data are accurate and complete to the best of my knowledge and belief; that the amount requested accurately reflects the contract adjustment for which the Lessee believes the Government liable; and that I am duly authorized to certify the claim on behalf of the Lessee."

1.4(3) The certification may be executed by any person duly authorized to bind the Lessee with respect to the claim.

1.5 For Lessee claim of $100,000 or less, the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, must, if requested in writing by the Lessee, render a decision within sixty (60) days of the request. For Lessee-certified claims over $100,000, the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, must, within sixty (60) days, decide the claim or notify the Lessee of the date by which the decision will be made.

1.6 The Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, decision shall be final unless the Lessee appeals or files a suit as provided in the Act.

1.7 At the time a claim by the Lessee is submitted to the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, or a claim by the Government is presented to the Lessee, the parties, by mutual consent, may agree to use ADR. When using arbitration conducted pursuant to 5 U.S.C. 575-580, or when using any other ADR technique that the agency elects to handle in accordance with the ADRA, any claim, regardless of amount, shall be accompanied by the certification described in paragraph 1.4(2)(c) of this clause, and executed in accordance with paragraph 1.4(3) of this clause.

1.8 The Government shall pay interest on the amount found due and unpaid by the Government from (1) the date the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, receives the claim (properly certified if required), or (2) the date of payment otherwise would be due, if that date is later, until the date of payment. With regard to claims having defective certifications, as defined in FAR 33.201, interest shall be paid from the date that the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, initially receives the claim. Simple interest on claims shall be paid at the rate, fixed by the Secretary of the Treasury, as provided in the Act, which is applicable to the period during which the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, receives the claim and then at the rate applicable for each 6-month period as fixed by the Treasury Secretary during the pendency of the claim.

1.9 The Lessee shall proceed diligently with the performance of the lease, pending, final resolution of any request for relief, claim, appeal, or action arising under the lease, and comply with any decision of the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic.

Q. OFFICIALS NOT TO BENEFIT

No Member of or Delegate to Congress, or Resident Commissioner, shall be admitted to any share of part of this lease, or to any benefit to arise therefrom but this provision shall not be construed to extend to this lease if made with a corporation for its general benefit.

R. LABOR PROVISION

(1) Equal Opportunity

During the term of this lease the Lessee agrees as follows:

(a) The Lessee will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The Lessee will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their

race, color, religion, sex, or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer, recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; selection for training, including apprenticeship. The Lessee agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the Government setting forth the provisions of this nondiscrimination clause.

(b) The Lessee will, in all solicitations or advertisements for employees placed by or on behalf of the lessee, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

(c) The Lessee will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding a notice to be provided by the Government, advising the labor union or worker's representative of the Lessee's commitments under this Equal Opportunity clause and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(d) The Lessee will comply with all provisions of Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and of the rules, regulations, and relevant orders of the Secretary of Labor.

(e) The Lessee will furnish all information and reports required by Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and by the rules, regulations, and orders of the Secretary of Labor or pursuant thereto, and will permit access to his books, records, and accounts by the Government and the Secretary of Labor for purposes of investigating to ascertain compliance with such rules, regulations and orders.

(f) In the event of the Lessee's noncompliance with the Equal Opportunity clause of this lease or with any of said rules, regulations, or orders, this lease may be canceled, terminated or suspended in whole or in part and the Lessee may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(g) The Lessee will include the provisions of paragraphs (a) through (g) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, so that such provisions will be binding upon each sublessee or vendor. The Lessee will take such action with respect to any sublessee or purchase order as the Government may direct as a means of enforcing such provisions including sanctions for noncompliance: *Provided, however,* that in the event the Lessee becomes involved in, or is threatened with, litigation with sublessee or vendor as a result of such direction by the Government, the Lessee may request the United States to enter into such litigation to protect the interests of the United States.

(2) Convict Labor

In connection with the performance of work required by this lease, Lessee agrees not to employ any person undergoing a sentence of imprisonment at hard labor.

(3) Contract Work Hours Standards Act (40 U.S. Code 327-330)

This lease, to the extent that it is a contract of a character specified in the Contract Work Hours Standards Act (40 U.S.C. 327-330) and is not covered by the Walsh-Healy Public Contracts Act (41 U.S.C. 35-45), is subject to the following provisions and exceptions of said Contract Work Hours Standards Act and to all other provisions and exceptions of said law:

(a) The Lessee shall not require or permit any laborer or mechanic in any workweek in which he is employed on any work under this contract to work in excess of 8 hours in any calendar day or in excess of 40 hours in such workweek on work subject to the provisions of the Contract Work Hours Standards Act unless such laborer or mechanic receives compensation at a rate not less than one and one-half times his basic rate of pay for all such hours worked in excess of 8 hours in any calendar day or in excess of 40 hours in such workweek, whichever is the greater number of overtime hours. The "basic rate of pay," as used in this clause, shall be the amount paid per hour, exclusive of the Lessee's contribution or cost for fringe benefits and any cash payment made in lieu of providing fringe benefits, or the basic hourly rate contained in the wage determination, whichever is greater.

(b) In the event of any violation of the provisions of paragraph (a), the Lessee shall be liable to any affected employee for any amounts due and to the United States for liquidated damages. Such

liquidated damages shall be computed with respect to each individual laborer or mechanic employed in violation of the provisions of paragraph (a) in the sum of $10 for each calendar day on which such employee was required or permitted to be employed on such work in excess of 8 hours or in excess of the standard workweek of 40 hours without payment of the overtime wages required by paragraph (a).

S. NOTICES

No notice, order, direction, determination, requirement, consent, or approval under this lease shall be of any effect unless in writing. All notices required under this lease shall be addressed to Lessee, or to the Local Government Representative, as may be appropriate, at the address thereof specified in Article 9 of this lease or at such other address as may from time to time be agreed upon by the parties hereto.

T. FAILURE OF GOVERNMENT TO INSIST ON COMPLIANCE

The failure of the Government to insist, in any one or more instances, upon performances of any of the terms, covenants or conditions of this lease shall not be construed as a waiver or relinquishment of the Government's right to the future performance of any such terms, covenants or conditions and Lessee's obligations in respect to such future performance shall continue in full force and effect.

U. ASSIGNMENT OR SUBLETTING

Lessee shall not transfer or assign this lease or any interest therein nor sublet or otherwise make available to any third party or parties any portion of the Premises or rights therein without prior written consent of the Government. Under any assignment made, with or without consent, the assignee shall be deemed to have assumed all the obligations of Lessee hereunder, but no assignment shall relieve the assignor of any of Lessee's obligations hereunder except for an extension of the lease term beginning after such assignment, and then only if the Government shall have consented thereto.

V. GOVERNMENT RULES AND REGULATIONS

Lessee shall comply with such rules and regulations regarding station security, ingress, egress, safety and sanitation as may be prescribed, from time to time, by the Local Government Representative, or by the Commanding Officer of the Naval activity of which the Premises forms a part.

W. PAYMENTS

All payments to the Government required under this lease shall be made by check or postal money order made payable to the U.S. Treasurer and mailed to Commander Naval Facilities Engineering Command, Atlantic, Attn: FM, 6506 Hampton Blvd., Norfolk, VA 23508.

X. INTEREST

Notwithstanding any other provision of this lease, unless paid within thirty (30) days, all amounts that become payable by the Lessee to the Government under this contract (net of any applicable tax credit under the Internal Revenue Code) shall bear interest from the date due until paid and shall be subject to adjustments as provided by Part 6 of Appendix E of the Armed Services Procurement Regulation, as in effect on the date of this lease. The interest rate per annum shall be the interest rate in effect which has been established by the Secretary of the Treasury pursuant to Public Law 92-41; 85 STAT 97 for the Renegotiation Board, as of the date the amount becomes due as herein provided. Amounts shall be due upon the earliest one of (i) the date fixed pursuant to this contract; (ii) the date of the first written demand for payment, consistent with this lease, including demand consequent upon default termination; or (iii) the date of transmittal by the Government to the Lessee of a proposed supplemental agreement to confirm completed negotiations fixing the amount.

Y. ADMINISTRATION

The local Government Representative specified in Article 9 of this lease shall, under the direction of the Commander, Naval Facilities Engineering Command, Mid-Atlantic, have complete charge of the administration of this lease, and shall exercise full supervision and general direction thereof insofar as the interest of the Department are affected.

Z. INDEMNIFICATION

The Lessee accepts responsibility for all liability related to, or arising under, Lessee's use of the property. Further, Lessee shall release and hold harmless the Government, its officers, agents, and employees from all liability, suits, claims, actions, or demands in any way related to, or arising under, Lessee's use of the property. This includes, but is not limited to, all environmental suits, claims, and enforcement actions, arising during Lessee's construction on, or use of, the property, or after such construction, or use, has ended. Further, Lessee shall reimburse the Government for all expenditures incurred if the Government voluntarily chooses to undertake any remedial action to address contamination on the premises or facilities resulting from the acts or omissions of the Lessee.

11. SPECIAL PROVISIONS

The following specified additional provisions, which shall control in the event of any conflict with the General Provisions of Article 10, are hereby incorporated into this lease by attachment hereto.

A. RESTRICTIONS:

a. No substance shall be released into the air from the leased lands that could impair visibility including, without limitation, emissions such as steam, dust and smoke.

b. No lights shall be constructed, maintained, directed or allowed to shine from the said leased lands, which could interfere with or impair pilot vision. All light emissions must be shielded to prevent them from being used as geographic reference pints by aircraft personnel.

c. No electrical emissions shall be emitted from sources situated on said leased lands which could interfere in any way with aircraft communications systems, ordnance or navigational equipment now in existence or hereinafter invented.

d. No garbage shall be dumped or placed and no feeding stations or other facilities attractive to birds shall be constructed or maintained on said leased lands. All trash, debris and empty pesticide containers shall be removed from Government property and properly disposed of each day at Lessee's expense.

e. Relic hunting, or antique hunting or recovery is prohibited.

f. Aerial crop dusting, unless specifically authorized by permit, is prohibited

g. Hunting on the leased land is permitted. The Station is responsible for coordinating the hunting program with the Lessee. Excessive damage by these activities must be reported immediately to the Naval Air Station, Oceana, Natural Resources Specialist at (757) 433-3461.

h. A cultivation regimen of cutting, no-till seed drilling and discing to a depth no greater than 16 cm (6.4 inches) below the surface shall be followed.

B. REIMBURSABLE WORK

If at any time during the lease it is determined that work not identified in the Soil and Water Conservation Plan, as Non-Reimbursable work is necessary, the procedures below will be followed:

The NAVFAC Mid-Atlantic Natural Resource Specialist will prepare a Scope of Work and Government Cost Estimate. Scope of Work will include what work is to be done and identify how or what method should be used to complete the work. It will also include a time schedule in which the work must be completed.

The NAVFAC Mid-Atlantic Natural Resource Specialist will forward the Scope of Work and Government Cost Estimate to the Real Estate Contracting Officer.

The Real Estate Contracting Officer will forward the Scope of Work to the Lessee and request a cost proposal.

The Lessee will send a cost proposal to the Real Estate Contracting Officer. This proposal may be based on Lessee having a third party perform the work. The Lessee may at this time inform the Government that he is incapable of performing the work.

If the Lessee submits a proposal and is acceptable, the Real Estate Contracting Officer will either; (1) issue a letter of authorization to proceed, advising a modification to the lease will be forthcoming or (2) forward a modification to the Lessee reflecting changes. Work should not begin until a letter or authorization or a modification has been received.

If the proposal is unacceptable, the Government will negotiate with the Lessee or determine alternative means of completing the required work.

When work is completed, Lessee and Navy Representatives will perform a joint inspection. If work is acceptable and within the time frame allotted, terms of the modification will be activated; i.e., rent reduction granted.

If it is determined during a joint inspection that the work was not completed properly or done within the required time frame, the Navy may, at its option, allow the Lessee additional time, not to exceed 25% of original time allotted, to complete the work or the Navy will have the work completed and charge the Lessee.

C. ENVIRONMENTAL/INDEMNIFICATION

In accordance with 10 U.S.C. 2692, the Lessee may not allow the treatment, storage or disposal of any Toxic or Hazardous materials on the leased premises. For the purposes of this provision, the terms "storage" and "Toxic or Hazardous Materials" are defined as provided in 48 CFR 252.223-7006.

The Lessee will reimburse the Lessor for all expenditures incurred if the Lessor is required by any regulatory authority or voluntarily chooses to undertake any Remedial Action to address Contamination on the leased premises resulting from the acts or omissions of the Lessee or its contractors. The Lessor shall contact the Lessee before taking any Remedial Action and give the Lessee a reasonable opportunity to undertake such Remedial Action if the Lessor believes that the Lessee has the capability to do so. Notwithstanding the above, the Lessee may immediately take any Remedial Action required of the Lessee by law.

During the term of this Lease, if the Lessee becomes aware that a Release of Toxic or Hazardous Materials has occurred that has resulted in Contamination of the leased premises, the Lessee will provide oral notice to the Lessor within 24 hours of becoming aware of such Contamination, providing all relevant facts and circumstances. The Lessor may request from the Lessee a more detailed written description of these facts and circumstances within a time period specified by the Lessor. The Lessee will promptly take all actions, at its sole expense, as are necessary to comply with all Applicable Environmental Laws relating to such Release, including reporting the occurrence to the appropriate Federal, State, or local regulatory authority or taking required Remedial Action, related to addressing the Contamination and to minimize the impacts of such Release. The Lessee will provide all information requested by the Lessor regarding such actions.

The Lessee, at its sole expense, will promptly take all action necessary to comply with Applicable Environmental Laws pertaining to a Release described in the preceding paragraph, including but not limited to: one, report the occurrence to appropriate Federal, State, or local regulatory authorities, if so directed by the Government; tow, take timely and effective steps to minimize the Release and its impact on human health and the environment; and three, take Remedial Action. The Government may direct the Lessee to provide all information requested by the Government regarding such actions within a time certain.

During the term of this Lease, the Lessee will ensure that all activities conducted by the Lessee or its contractors on the leased premises are carried out in compliance with Applicable Environmental Laws. The Lessee will provide oral notice to the Lessor within 24 hours of receiving any complaint, order, directive, claim, citation, or notice by any Governmental authority or any other person or entity with respect to a violation of Applicable Environmental Laws resulting from the activities of the Lessee or its contractors on the leased premises. The Lessee will promptly take all actions, at its sole expense, as are necessary to comply with all Applicable Environmental Laws as directed by any Federal, State, or local regulatory authority. The Lessor may request a more detailed written description of the events or circumstances leading to this event within a time specified by the Lessor. Without limitation of the foregoing, the Lessor may, but will not be obligated to, enter onto the leased premises and take any Remedial Action as it deems necessary or advisable to address any Contamination of the leased premises by Toxic or Hazardous Materials or to ensure compliance with Applicable Environmental Laws.

At any time, the Lessor or its representatives may conduct inspections on the leased premises to ensure compliance with Applicable Environmental Laws. To assist in this evaluation, the Lessee will provide to the Lessor or the Lessor's representative, any and all books, records, or documents in their possession, or in the possession of their agents or contractors, related to the activities or operations on the leased premises, which the Lessor or its representatives may examine, copy, or make extracts from.

As the Lessor deems appropriate, the Lessor may require that the Lessee, from time to time, promptly conduct such tests and procedures for the purpose of ensuring that the leased premises are in compliance with Applicable Environmental Laws and of having the leased premises certified to the Lessor as such. Such tests and procedures shall be conducted by recognized professionals to be approved by the Lessor and in a manner that is satisfactory to the Lessor. When requesting such tests and procedures, the Lessor will work with the Lessee to establish accepted timeframes, appropriate parties to perform the required activities, and schedules for performance. If an agreement cannot be reached regarding any of the foregoing, the Lessor or its representatives may undertake such tests and procedures, with the Lessee being obligated to reimburse the Lessor for all costs incurred.

For the purposes of this provision, the terms used above are defined as follows:

"Toxic or Hazardous Materials" means any hazardous, harmful, odorous, radioactive, toxic or dangerous waste, substance or material, including, without limitation, asbestos, polychlorinated biphenyls ("PCBs") and petroleum products, and any hazardous or toxic substance, material or waste, or any pollutant or contaminant defined as such in, or for the purposes of, any environmental laws as are now or in the future may be in effect. The Lessee's obligation under this provision shall extend to any and all such Toxic or Hazardous Materials whether or not such substance was defined, recognized, known, or suspected of being hazardous, toxic, dangerous, or wasteful at the time of any act or omission giving rise to the Lessee's obligation.

"Contamination" means a level of Toxic or Hazardous Materials in the air, in or on soil, in the surfacewater, or in the groundwater that exceeds levels allowed by Applicable Environmental Laws.

"Applicable Environmental Laws" means:

one, any Federal, State, or local statute, law, ordinance, rule, regulation, or order (whether voluntary or not) that govern the activities or operations of the leased premises, or the persons carrying out those activities or operations, relating to the environment, natural resources, or human health and safety.

two, Executive Orders of the President of the United States;

three, decisions of courts and administrative tribunals of competent jurisdiction;

four, administrative orders of regulatory agencies of competent jurisdiction (involuntary or on consent); and

five, regulations and directives of the Department of Defense, the Department of the Navy, and the U.S. Marine Corps (for Marine Corps installations only),

which pertain to the human environment (as defined in the National Environmental Policy act of 1969); transportation of hazardous material; and human health and safety (including occupational safety).

Applicable Environmental Laws include, without limitation the Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. § 9601 *et seq*.), the Hazardous Material Transportation Act (49 U.S.C. § 1801 *et seq*.), the Resource Conservation and Recovery Act (42 U.S.C. 6901 *et seq*.), the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq*.), the Clean Air Act (42 U.S.C. § 7401 *et seq*.), the Toxic Substances Control Act (15 U.S.C. § 2601 *et seq*.), and the Occupational Safety and Health Act (29 U.S.C. § 651 *et seq*.), Superfund Amendments and Reauthorization Act Title III (SARA) Emergency Planning and Community Right-to-Know Act (EPCRA) reporting requirements (40 CFR 355, 40 CFR 370, 40 CFR 372 and 29 CFR 1910.1200), as such laws have been amended or supplemented now or in the future.

"Release" means any release, spill, emission, leaking, pumping, injection, deposit, disposal, leaching, or migration into the environment, whether accidental or otherwise, resulting from the act or omissions of the Lessee, its contractors, or by natural conditions.

"Remedial Action" means any investigation or monitoring of the condition of the leased premises or any cleanup, remedial, removal, or restoration work required or performed on the leased premises because of the presence, suspected presence, release, or suspected release of Toxic or Hazardous Materials.

The Lessor shall not be responsible for damages to property or injuries to persons which may arise from or be incident to the use and occupation of the leased premises by the Lessee, nor for damages to the property or injuries to the person of the Lessor's officers, agents, servants, or employees, or others who may be on the leased premises at their invitation or the invitation of any one of them arising from or incident to governmental activities except as permitted under the Federal Torts Claim Act, 28 U.S.C. 2671 et seq.

F. APPLICABLE STATE AND CITY LAWS, CODES, AND ORDINANCES

The Lessee agrees to comply with all applicable State and City laws, codes and ordinances applicable to use of the leased premises at Lessee's expense. Lessee further agrees to obtain all necessary permits and related items at Lessee's expense.

G. INSURANCE REQUIREMENTS

Prior to award of the Lease, the LESSEE shall submit a certificate of insurance meeting the following requirements. Public Liability and Property Damage shall meet the following requirements at a minimum:

$50,000	Third Party Property Damage
$500,000	Third Party Personal Injury Per Person
$1,000,000	Third Party Personal Injury Per Accident

The policy/certificate of insurance shall contain an endorsement reading as follows:

a. Loss, if any under this policy shall be adjusted with (name of LESSEE) and the proceeds, at the election of the GOVERNMENT, shall be payable to (name of LESSEE); any proceeds not paid to (name of LESSEE) shall be payable to the Treasurer of the United States of America.

b. The insurer waives any right of subrogation against the United States of America which might arise by reason of any payment made under this policy.

c. The GOVERNMENT shall be given thirty (30) days written notice prior to making any material change in or the cancellation of the policy. Please strike out (and initial) any clauses that state "…failure to make such notice imposes no obligation or liability of any kind upon the company, etc …"

d. The United States of America (Department of the Navy) is added as an additional insured in operations of the policyholder at or from the premises leased at Naval Auxiliary Landing Field, Fentress, Virginia, identified as Unit F1.

e. This insurance certificate is for use of premises known as **339 acres more or less, at Naval Auxiliary Landing Field, Fentress, Chesapeake, Virginia, identified as Unit F1, Contract number N40085-15-RP-00016 or LO10500**.

If, at any time, the GOVERNMENT determines that the insurance maintained by the LESSEE does not in fact adequately protect the GOVERNMENT, LESSEE may be required to carry such other insurance in such form, for such amounts and for such periods of time, and with such insurers as the GOVERNMENT may from time to time require or approve.

LEASE BETWEEN Heath Cutrell

(HEREINAFTER CALLED "LESSEE") AND THE UNITED STATES OF AMERICA HEREINAFTER CALLED THE "GOVERNMENT".

THE GOVERNMENT HEREBY LEASES TO LESSEE THE PROPERTY DESCRIBED BELOW UNDER THE TERMS, CONDITIONS, GENERAL PROVISIONS AND SPECIAL PROVISIONS SET FORTH ON THIS PAGE AND SUBSEQUENT PAGES OF THIS LEASE FORM.

1. **LEASED PROPERTY:** ALL THAT PORTION OF THE NAVAL ACTIVITY IDENTIFIED IN ARTICLE 9, WHICH PORTION IS HEREINAFTER CALLED THE "PREMISES" AND DESCRIBED AS FOLLOWS: Approximately 255.5 acres, more or less, at the Naval Auxiliary Landing Field, Fentress, Chesapeake, Virginia, identified as Unit F2 in the Soil and Water Conservation Plan attached hereto and made a part hereof as Exhibit "A."

2. **TERM:** THE TERM OF THIS LEASE SHALL BEGIN ON 13 April 2015 AND END ON 31 December 2015 UNLESS SOONER TERMINATED IN ACCORDANCE WITH THE PROVISIONS OF ARTICLE 10H HEREOF.

LESSEE MAY REQUEST TO EXTEND THE TERM OF THIS LEASE FOR four (4) ADDITIONAL PERIODS OF ONE (1) YEAR EACH BY DELIVERY TO THE LOCAL GOVERNMENT REPRESENTATIVE OF WRITTEN NOTICE OF ITS INTENTION TO EXTEND NO LATER THAN NINETY (90) DAYS PRIOR TO THE EXPIRATION OF THE THEN CURRENT TERM; *PROVIDED*, NO EXTENSION SHALL BE GRANTED WHICH CREATES A TOTAL TERM IN EXCESS OF FIVE (5) YEARS.

3. **RENT:** DURING THE INITIAL TERM OF THIS LEASE, WHICH IS FOR A PERIOD OF EIGHT (8) MONTHS AND EIGHTEEN (18) DAYS, THE LESSEE SHALL PAY THE GOVERNMENT A RENTAL OF $25,098.66, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $8,750.88 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF. THE FIRST PAYMENT WILL BE $7,596.91, WHICH IS THE PRORATED QUARTERLY PAYMENT RATE FOR THE LEASE DURING THE PERIOD OF 13 APRIL 2015 TO 30 JUNE 2015. FOR THE INITIAL TERM AND ANY RENEWAL TERMS, ALL FUTURE PAYMENTS WILL BE $8,750.88 AND DUE ON THE FIRST DAY OF JULY, OCTOBER, JANUARY, AND APRIL.

AFTER THE INITIAL EIGHT (8) MONTH AND EIGHTEEN (18) DAY TERM, AND PROVIDED LESSEE RENEWS THE LEASE, LESSEE SHALL PAY THE GOVERNMENT ANNUAL RENTAL OF $35,003.50, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $8,750.88 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF.

4. **USE:** THE PREMISES SHALL BE USED SOLELY FOR production of row crops (e.g., corn, soybeans, small grains, cotton) truck crops or hay/silage crops.

5. **PERFORMANCE BOND OR SECURITY:** TO SECURE THE FAITHFUL PERFORMANCE OF ITS OBLIGATIONS HEREUNDER LESSEE SHALL PROVIDE THE GOVERNMENT WITH EITHER: (a) COLLATERAL SECURITY IN THE FORM OF CASH OR NEGOTIABLE GOVERNMENT BONDS, OR (b) A PERFORMANCE BOND ISSUED BY A CORPORATE SURETY AND SATISFACTORY TO THE GOVERNMENT IN ALL RESPECTS, IN THE AMOUNT OF $ N/A

(HEREINAFTER CALLED "**LESSEE**") AND THE **UNITED STATES OF AMERICA** HEREINAFTER CALLED THE "**GOVERNMENT**",

THE GOVERNMENT HEREBY LEASES TO LESSEE THE PROPERTY DESCRIBED BELOW UNDER THE TERMS, CONDITIONS, GENERAL PROVISIONS AND SPECIAL PROVISIONS SET FORTH ON THIS PAGE AND SUBSEQUENT PAGES OF THIS LEASE FORM.

1. **LEASED PROPERTY**: ALL THAT PORTION OF THE NAVAL ACTIVITY IDENTIFIED IN ARTICLE 9, WHICH PORTION IS HEREINAFTER CALLED THE "PREMISES" AND DESCRIBED AS FOLLOWS: Approximately 255.5 acres, more or less, at the Naval Auxiliary Landing Field, Fentress, Chesapeake, Virginia, identified as Unit F2 in the Soil and Water Conservation Plan attached hereto and made a part hereof as Exhibit "A."

2. **TERM:** THE TERM OF THIS LEASE SHALL BEGIN ON 13 April 2015 AND END ON 31 December 2015 UNLESS SOONER TERMINATED IN ACCORDANCE WITH THE PROVISIONS OF ARTICLE 10H HEREOF.

LESSEE MAY REQUEST TO EXTEND THE TERM OF THIS LEASE FOR four (4) ADDITIONAL PERIODS OF ONE (1) YEAR EACH BY DELIVERY TO THE LOCAL GOVERNMENT REPRESENTATIVE OF WRITTEN NOTICE OF ITS INTENTION TO EXTEND NO LATER THAN NINETY (90) DAYS PRIOR TO THE EXPIRATION OF THE THEN CURRENT TERM; *PROVIDED*, NO EXTENSION SHALL BE GRANTED WHICH CREATES A TOTAL TERM IN EXCESS OF FIVE (5) YEARS.

3. **RENT:** DURING THE INITIAL TERM OF THIS LEASE, WHICH IS FOR A PERIOD OF EIGHT (8) MONTHS AND EIGHTEEN (18) DAYS, THE LESSEE SHALL PAY THE GOVERNMENT A RENTAL OF $25,098.66, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $8,750.88 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF. THE FIRST PAYMENT WILL BE $7,596.91, WHICH IS THE PRORATED QUARTERLY PAYMENT RATE FOR THE LEASE DURING THE PERIOD OF 13 APRIL 2015 TO 30 JUNE 2015. FOR THE INITIAL TERM AND ANY RENEWAL TERMS, ALL FUTURE PAYMENTS WILL BE $8,750.88 AND DUE ON THE FIRST DAY OF JULY, OCTOBER, JANUARY, AND APRIL.

AFTER THE INITIAL EIGHT (8) MONTH AND EIGHTEEN (18) DAY TERM, AND PROVIDED LESSEE RENEWS THE LEASE, LESSEE SHALL PAY THE GOVERNMENT ANNUAL RENTAL OF $35,003.50, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $8,750.88 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF.

4. **USE:** THE PREMISES SHALL BE USED SOLELY FOR production of row crops (e.g., corn, soybeans, small grains, cotton) truck crops or hay/silage crops.

5. **PERFORMANCE BOND OR SECURITY:** TO SECURE THE FAITHFUL PERFORMANCE OF ITS OBLIGATIONS HEREUNDER LESSEE SHALL PROVIDE THE GOVERNMENT WITH EITHER: (a) COLLATERAL SECURITY IN THE FORM OF CASH OR NEGOTIABLE GOVERNMENT BONDS, OR (b) A PERFORMANCE BOND ISSUED BY A CORPORATE SURETY AND SATISFACTORY TO THE GOVERNMENT IN ALL RESPECTS, IN THE AMOUNT OF $ ____N/A_____

6. **EXECUTION BY LESSEE**

ADDRESS OF LESSEE 3030 Cedarville Road Chesapeake, VA 23322 Phone: 757-567-9044	

10. GENERAL PROVISIONS

A. REPRESENTATIONS

The property under this lease is provided as is, where is. The term "as-is, where is" means that the Government is leasing the subject property in whatever condition it presently exists, and that the lessee is accepting the subject property with all faults, whether or not they could be ascertained by an inspection of the property or review of any due diligence material available. LESSEE has examined, knows and accepts the condition and state of repair of the Premises and all appurtenances thereto and acknowledges that the Government has made no representation concerning such condition and state of repair, nor any agreement or promise to alter, improve, adapt, repair or keep in repair such Premises and appurtenances, or any item thereof, which has not been fully set forth on this lease which contains all the agreements made and entered into between Lessee and the Government.

B. PROHIBITION OF FEDERAL SUBSIDY PARTICIPATION

Notwithstanding the uses permitted to it in Article 4 of this lease, Lessee shall at no time during the term of this lease, or any extension thereof, use the Premises or its interest therein in any manner which shall constitute direct participation in any subsidy program of the Federal Government relative to either the use or abstention from use of the Premises.

C. SUBJECTION TO GOVERNMENT SOIL & WATER CONSERVATION PLAN

During the term of this lease the Lessee shall apply the conservation measures and use the Premises in accordance with the conservation plan attached hereto and made a part hereof. Lessee shall in no manner substantially change the contour or condition of the land constituting any part of the Premises except for such changes as shall be reasonably required to effect soil and water conservation measures. (Soil and Water Conservation Plan is attached as Exhibit "A")

D. INSTALLATIONS AND REMOVALS

Subject to the prior written approval of the Government, Lessee shall have the right to erect, at its own expense, such temporary structures on the Premises as may be necessary or incidental to its use under this lease. All such structures shall remain the property of Lessee and Lessee shall remove any erected structures from the Premises prior to the expiration of the term of this lease. In the event the Government terminates this lease, Lessee shall be given thirty (30) days to accomplish such removal. All property not so removed shall be deemed abandoned by Lessee and may be used or disposed of by the Government in any manner whatsoever without any liability to account to the Government. Any such abandonment shall not reduce Lessee's obligation to restore the Premises.

E. SUBJECTION TO EXISTING AND FUTURE EASEMENTS AND RIGHTS-OF-WAY

This lease is subject to all outstanding easements and rights of way for location of any type of facility over, across, in and upon the Premises. In addition, the Government reserves the right to grant such additional easements as it shall determine to be in the public interest. The Government also reserves all mineral rights in the Premises, together with such rights of access and use of the surface as may be necessary for the mining and saving of any mineral deposits located thereon or thereunder. The Government reserves the right to allow ingress and egress to workers officially engaged in the construction, installation, maintenance, operation, repair or replacement of facilities located thereon, and to any Federal, State or local officials.

F. RESTORATION OF PREMISES

Before the expiration of this lease or the prior termination thereof, Lessee shall, if required to do so by the Government, restore the Premises to the condition existing at the time of its entrance thereon under this lease, or to such improved condition as they may have been placed in by the Government or the Lessee during the term of this lease, reasonable wear and tear and damage by the elements or from other causes over which Lessee had no control excepted; *Provided,* in the event the Government shall terminate this lease upon less than thirty (30) days notice Lessee shall have thirty (30) days from receipt of notice of termination to accomplish such restoration.

G. LIENS

Lessee shall promptly discharge or cause to be discharged any valid lien, *right in rem*, claim or demand of any kind, except one in favor of the

Government, which at any time may arise or exist with respect to the Premises or materials or equipment furnished therefor, or any part thereof, and if the same shall not be promptly discharged by Lessee, the Government may discharge, or cause to be discharged, the same at the expense of the Lessee.

H. TERMINATION BY GOVERNMENT

The Government shall have the right to terminate this lease, in whole or in part, at any time, without prior notice, and regardless of any lack of breach by Lessee of any of the terms and conditions of this lease. In the event of termination for any reason not involving a breach by Lessee of the terms and conditions of the lease the Government shall make an equitable adjustment of any advance rentals paid by Lessee hereunder and, if the Government's use of the Premises does not require immediate possession thereof, Lessee shall be permitted, within such time as the Local Government Representative shall prescribe, to harvest, gather and remove from the Premises such crops as can be so harvested and removed, but if the Government's requirements necessitate immediate repossession of the Premises, so as to require immediate removal of Lessee's livestock, and/or, to preclude Lessee from such harvesting and removal of any growing or matured crops, Lessee hereby specifically releases, remises, and forever discharges the Government from any and all liability or claims for loss or damage of any nature arising out of such termination and repossession, including, but not limited to, destruction of diminution in value of, or inability to harvest any growing crops, and/or death or diminution of value of any livestock of Lessee.

In the event that the Government shall elect to terminate this lease on account of the breach by the Lessee of any of the terms and conditions hereof no adjustment in advance rentals paid by Lessee shall be made, and the Government shall be entitled to recover and Lessee shall pay to the Government:

(1) The costs incurred in resuming possession of the Premises.

(2) The costs incurred in performing any obligation on the part of Lessee to be performed hereunder.

(3) An amount equal to the aggregate of all rents and charges assumed hereunder and not theretofore paid, less the net rentals, if any, collected by the Government on the re-letting of the Premises, which amounts shall be due and payable at the time when the rent reserved under this lease would become due and payable.

The Government may, at its option, attach any livestock or crops of Lessee on the Premises in full or partial satisfaction of Lessee's obligations under this Article.

I. SURRENDER

Upon the expiration of this lease or its prior termination, in whole or in part, Lessee shall quietly, and peacefully remove itself and its property from the Premises, or part thereof as to which this lease shall be terminated, and surrender the possession thereof to the Government. Upon failure or neglect of Lessee to so remove, the Government and its officers or agents may enter the Premises and cause the removal of all persons and property therefrom without recourse to any action or proceeding at law or in equity. Lessee hereby expressly waives any provision of law requiring notice to quit possession of the Premises. Such removal shall be at the sole cost and expense of Lessee and Lessee shall indemnify and save and hold harmless the Government, its officer, agents and employees for and from any and all liability or claims for damages of any nature whatsoever which may arise out of or be attributable to such removal.

J. DAMAGE TO GOVERNMENT PROPERTY

In the event of the destruction of or damage to any Government property located on or adjacent to the Premises by Lessee, or any of its officers, agents, servants, employees, subtenants, licensee or invitees, Lessee shall promptly repair or replace such property to the satisfaction of the Government, or pay to the Government an amount of money sufficient to compensate it for the loss or damage sustained, as the Government shall elect.

K. NON-LIABILITY OF GOVERNMENT

Lessee covenants that it will indemnify and save and hold harmless the Government, its officers, agents and employees for and from any and all liability or claims for loss of or damage to any property owned by or in the custody of Lessee, its officers, agents, servants, employees, subtenants, licensees or invitees, or for the death of or injury to any of the same which may arise out of or be attributable to the condition, state of repair or Lessee's use and occupancy of the Premises, or the furnishings of any utilities or services (including supply of water from wells or other sources), or any interruption therein or failure thereof, whether or not the same shall be occasioned by the negligence or

lack of diligence of Lessee, its officers, agents, servants or employees.

L. UTILITIES AND SERVICES

In the event that the Government shall furnish Lessee with any utilities and services maintained by the Government which Lessee may require in connection with its use of the Premises, Lessee shall pay the Government the charges therefor in addition to the cash rent required under this lease. Such charges and the method of payment thereof shall be determined by the Local Government Representative in accordance with applicable laws and regulations, on such basis as the Local Government Representative may establish which may include a requirement for the installation of adequate connecting and metering equipment at the sole cost and expense of Lessee. It is expressly agreed and understood that the Government in no way warrants the continued maintenance or adequacy of any utilities or services furnished by it to Lessee.

M. ACCESS

The Government shall have access to the Premises at all reasonable times for any purposes not inconsistent with the quiet use and enjoyment thereof by Lessee, including, but not limited to, the purpose of inspection.

N. COVENANT AGAINST CONTINGENT FEES

Lessee warrants that no person or agency has been employed or retained to solicit or secure this lease upon an agreement or understanding for a commission, percentage, brokerage or contingent fee, excepting bona fide employees or bona fide established commercial agencies maintained by Lessee for the purpose of securing business. For breach or violation of this warranty, the Government shall have the right to annul this lease without liability or in its discretion to require Lessee to pay, in addition to the rental or consideration, the full amount of such commission, percentage, brokerage, or contingent fee.

O. STATE AND LOCAL TAXES

In the event that as a result of any future Act of Congress, subjecting Government-owned property to taxation, any taxes, assessments or similar charges are imposed by State or local authorities upon the Premises (other than upon Lessee's possessory interest therein), Lessee shall pay the same when due and payable and this lease shall be renegotiated so as to accomplish an equitable reduction in the rental provided for herein, which reduction shall in no event exceed the amount of such taxes, assessments, or similar charges; *Provided,* in event the parties hereto are unable to agree within ninety (90) days from the date of the imposition of such taxes, assessments, or similar charges, upon a rental which in the opinion of the Local Government Representative constitutes a reasonable return to the Government on the Premises, then in such event the Local Government Representative shall have the right to determine the amount of the rental, which determination shall be binding on Lessee, subject to appeal as a dispute in accordance with the provisions of paragraph P of this Article 10.

P. DISPUTES

1.1 This lease is subject to the Contract Disputes Act of 1978, as amended (41 U.S.C. 601-613) (the Act).

1.2 Except as provided in the Act, all disputes arising under or relating to this lease shall be resolved under this clause.

1.3 "Claim," as used in this clause, means a written demand or written assertion by the Lessee or the Government seeking, as a matter of right, the payment of money in a sum certain, the adjustment or interpretation of lease terms, or other relief arising under or relating to this lease. A claim arising under this lease, unlike a claim relating to this lease, is a claim that can be resolved under a lease clause that provides for the relief sought by the claimant. However, a written demand or written assertion by the Lessee seeking the payment of money exceeding $100,000 is not a claim under the Act until certified as required by subparagraph 1.4(2) below. A voucher, invoice, or other routine request for payment that is not in dispute when submitted is not a claim under the Act. The submission may be converted to a claim under the Act, by complying with the submission and certification requirements of this clause, if it is disputed either as to liability or amount or is not acted upon in a reasonable time.

1.4(1) A claim by the Lessee shall be made in writing and submitted to the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, for a written decision. A claim by the Government against the Lessee shall be subject to a written decision by the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic.

1.4(2)(a)The Lessee shall provide the certification specified in subparagraph 1.4(2)(c) of this clause when submitting any claim ---

(A) Exceeding $100,000; or

(B) Regardless of the amount claimed, when using--

(1) Arbitration conducted pursuant to 5 U.S.C. 575-580; or

(2) Any other alternative means of dispute resolution (ADR) technique that the agency elects to handle in accordance with the Administrative Dispute Resolution Act (ADRA).

1.4(2)(b) The certification requirement does not apply to issues in controversy that have not been submitted as all or part of a claim.

1.4(2)(c)The certification shall state as follows: "I certify that the claim is made in good faith; that the supporting data are accurate and complete to the best of my knowledge and belief; that the amount requested accurately reflects the contract adjustment for which the Lessee believes the Government liable; and that I am duly authorized to certify the claim on behalf of the Lessee."

1.4(3) The certification may be executed by any person duly authorized to bind the Lessee with respect to the claim.

1.5 For Lessee claim of $100,000 or less, the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, must, if requested in writing by the Lessee, render a decision within sixty (60) days of the request. For Lessee-certified claims over $100,000, the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, must, within sixty (60) days, decide the claim or notify the Lessee of the date by which the decision will be made.

1.6 The Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, decision shall be final unless the Lessee appeals or files a suit as provided in the Act.

1.7 At the time a claim by the Lessee is submitted to the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, or a claim by the Government is presented to the Lessee, the parties, by mutual consent, may agree to use ADR. When using arbitration conducted pursuant to 5 U.S.C. 575-580, or when using any other ADR technique that the agency elects to handle in accordance with the ADRA, any claim, regardless of amount, shall be accompanied by the certification described in paragraph 1.4(2)(c) of this clause, and executed in accordance with paragraph 1.4(3) of this clause.

1.8 The Government shall pay interest on the amount found due and unpaid by the Government from (1) the date the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, receives the claim (properly certified if required), or (2) the date of payment otherwise would be due, if that date is later, until the date of payment. With regard to claims having defective certifications, as defined in FAR 33.201, interest shall be paid from the date that the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, initially receives the claim. Simple interest on claims shall be paid at the rate, fixed by the Secretary of the Treasury, as provided in the Act, which is applicable to the period during which the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, receives the claim and then at the rate applicable for each 6-month period as fixed by the Treasury Secretary during the pendency of the claim.

1.9 The Lessee shall proceed diligently with the performance of the lease, pending, final resolution of any request for relief, claim, appeal, or action arising under the lease, and comply with any decision of the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic.

Q. OFFICIALS NOT TO BENEFIT

No Member of or Delegate to Congress, or Resident Commissioner, shall be admitted to any share of part of this lease, or to any benefit to arise therefrom but this provision shall not be construed to extend to this lease if made with a corporation for its general benefit.

R. LABOR PROVISION

(1) Equal Opportunity

During the term of this lease the Lessee agrees as follows:

(a) The Lessee will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The Lessee will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their

race, color, religion, sex, or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer, recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; selection for training, including apprenticeship. The Lessee agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the Government setting forth the provisions of this nondiscrimination clause.

(b) The Lessee will, in all solicitations or advertisements for employees placed by or on behalf of the lessee, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

(c) The Lessee will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding a notice to be provided by the Government, advising the labor union or worker's representative of the Lessee's commitments under this Equal Opportunity clause and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(d) The Lessee will comply with all provisions of Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and of the rules, regulations, and relevant orders of the Secretary of Labor.

(e) The Lessee will furnish all information and reports required by Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and by the rules, regulations, and orders of the Secretary of Labor or pursuant thereto, and will permit access to his books, records, and accounts by the Government and the Secretary of Labor for purposes of investigating to ascertain compliance with such rules, regulations and orders.

(f) In the event of the Lessee's noncompliance with the Equal Opportunity clause of this lease or with any of said rules, regulations, or orders, this lease may be canceled, terminated or suspended in whole or in part and the Lessee may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(g) The Lessee will include the provisions of paragraphs (a) through (g) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, so that such provisions will be binding upon each sublessee or vendor. The Lessee will take such action with respect to any sublessee or purchase order as the Government may direct as a means of enforcing such provisions including sanctions for noncompliance: *Provided, however,* that in the event the Lessee becomes involved in, or is threatened with, litigation with sublessee or vendor as a result of such direction by the Government, the Lessee may request the United States to enter into such litigation to protect the interests of the United States.

(2) Convict Labor

In connection with the performance of work required by this lease, Lessee agrees not to employ any person undergoing a sentence of imprisonment at hard labor.

(3) Contract Work Hours Standards Act (40 U.S. Code 327-330)

This lease, to the extent that it is a contract of a character specified in the Contract Work Hours Standards Act (40 U.S.C. 327-330) and is not covered by the Walsh-Healy Public Contracts Act (41 U.S.C. 35-45), is subject to the following provisions and exceptions of said Contract Work Hours Standards Act and to all other provisions and exceptions of said law:

(a) The Lessee shall not require or permit any laborer or mechanic in any workweek in which he is employed on any work under this contract to work in excess of 8 hours in any calendar day or in excess of 40 hours in such workweek on work subject to the provisions of the Contract Work Hours Standards Act unless such laborer or mechanic receives compensation at a rate not less than one and one-half times his basic rate of pay for all such hours worked in excess of 8 hours in any calendar day or in excess of 40 hours in such workweek, whichever is the greater number of overtime hours. The "basic rate of pay," as used in this clause, shall be the amount paid per hour, exclusive of the Lessee's contribution or cost for fringe benefits and any cash payment made in lieu of providing fringe benefits, or the basic hourly rate contained in the wage determination, whichever is greater.

(b) In the event of any violation of the provisions of paragraph (a), the Lessee shall be liable to any affected employee for any amounts due and to the United States for liquidated damages. Such

liquidated damages shall be computed with respect to each individual laborer or mechanic employed in violation of the provisions of paragraph (a) in the sum of $10 for each calendar day on which such employee was required or permitted to be employed on such work in excess of 8 hours or in excess of the standard workweek of 40 hours without payment of the overtime wages required by paragraph (a).

S. NOTICES

No notice, order, direction, determination, requirement, consent, or approval under this lease shall be of any effect unless in writing. All notices required under this lease shall be addressed to Lessee, or to the Local Government Representative, as may be appropriate, at the address thereof specified in Article 9 of this lease or at such other address as may from time to time be agreed upon by the parties hereto.

T. FAILURE OF GOVERNMENT TO INSIST ON COMPLIANCE

The failure of the Government to insist, in any one or more instances, upon performances of any of the terms, covenants or conditions of this lease shall not be construed as a waiver or relinquishment of the Government's right to the future performance of any such terms, covenants or conditions and Lessee's obligations in respect to such future performance shall continue in full force and effect.

U. ASSIGNMENT OR SUBLETTING

Lessee shall not transfer or assign this lease or any interest therein nor sublet or otherwise make available to any third party or parties any portion of the Premises or rights therein without prior written consent of the Government. Under any assignment made, with or without consent, the assignee shall be deemed to have assumed all the obligations of Lessee hereunder, but no assignment shall relieve the assignor of any of Lessee's obligations hereunder except for an extension of the lease term beginning after such assignment, and then only if the Government shall have consented thereto.

V. GOVERNMENT RULES AND REGULATIONS

Lessee shall comply with such rules and regulations regarding station security, ingress, egress, safety and sanitation as may be prescribed, from time to time, by the Local Government Representative, or by the Commanding Officer of the Naval activity of which the Premises forms a part.

W. PAYMENTS

All payments to the Government required under this lease shall be made by check or postal money order made payable to the U.S. Treasurer and mailed to Commander Naval Facilities Engineering Command, Atlantic, Attn: FM, 6506 Hampton Blvd., Norfolk, VA 23508.

X. INTEREST

Notwithstanding any other provision of this lease, unless paid within thirty (30) days, all amounts that become payable by the Lessee to the Government under this contract (net of any applicable tax credit under the Internal Revenue Code) shall bear interest from the date due until paid and shall be subject to adjustments as provided by Part 6 of Appendix E of the Armed Services Procurement Regulation, as in effect on the date of this lease. The interest rate per annum shall be the interest rate in effect which has been established by the Secretary of the Treasury pursuant to Public Law 92-41; 85 STAT 97 for the Renegotiation Board, as of the date the amount becomes due as herein provided. Amounts shall be due upon the earliest one of (i) the date fixed pursuant to this contract; (ii) the date of the first written demand for payment, consistent with this lease, including demand consequent upon default termination; or (iii) the date of transmittal by the Government to the Lessee of a proposed supplemental agreement to confirm completed negotiations fixing the amount.

Y. ADMINISTRATION

The local Government Representative specified in Article 9 of this lease shall, under the direction of the Commander, Naval Facilities Engineering Command, Mid-Atlantic, have complete charge of the administration of this lease, and shall exercise full supervision and general direction thereof insofar as the interest of the Department are affected.

Z. INDEMNIFICATION

The Lessee accepts responsibility for all liability related to, or arising under, Lessee's use of the property. Further, Lessee shall release and hold harmless the Government, its officers, agents, and employees from all liability, suits, claims, actions, or demands in any way related to, or arising under, Lessee's use of the property. This includes, but is not limited to, all environmental suits, claims, and enforcement actions, arising during Lessee's construction on, or use of, the property, or after such construction, or use, has ended. Further, Lessee shall reimburse the Government for all expenditures incurred if the Government voluntarily chooses to undertake any remedial action to address contamination on the premises or facilities resulting from the acts or omissions of the Lessee.

11. SPECIAL PROVISIONS

The following specified additional provisions, which shall control in the event of any conflict with the General Provisions of Article 10, are hereby incorporated into this lease by attachment hereto.

A. RESTRICTIONS:

a. No substance shall be released into the air from the leased lands that could impair visibility including, without limitation, emissions such as steam, dust and smoke.

b. No lights shall be constructed, maintained, directed or allowed to shine from the said leased lands, which could interfere with or impair pilot vision. All light emissions must be shielded to prevent them from being used as geographic reference pints by aircraft personnel.

c. No electrical emissions shall be emitted from sources situated on said leased lands which could interfere in any way with aircraft communications systems, ordnance or navigational equipment now in existence or hereinafter invented.

d. No garbage shall be dumped or placed and no feeding stations or other facilities attractive to birds shall be constructed or maintained on said leased lands. All trash, debris and empty pesticide containers shall be removed from Government property and properly disposed of each day at Lessee's expense.

e. Relic hunting, or antique hunting or recovery is prohibited.

f. Aerial crop dusting, unless specifically authorized by permit, is prohibited

g. Hunting on the leased land is permitted. The Station is responsible for coordinating the hunting program with the Lessee. Excessive damage by these activities must be reported immediately to the Naval Air Station, Oceana, Natural Resources Specialist at (757) 433-3461.

h. A cultivation regimen of cutting, no-till seed drilling and discing to a depth no greater than 16 cm (6.4 inches) below the surface shall be followed.

B. REIMBURSABLE WORK

If at any time during the lease it is determined that work not identified in the Soil and Water Conservation Plan, as Non-Reimbursable work is necessary, the procedures below will be followed:

The NAVFAC Mid-Atlantic Natural Resource Specialist will prepare a Scope of Work and Government Cost Estimate. Scope of Work will include what work is to be done and identify how or what method should be used to complete the work. It will also include a time schedule in which the work must be completed.

The NAVFAC Mid-Atlantic Natural Resource Specialist will forward the Scope of Work and Government Cost Estimate to the Real Estate Contracting Officer.

The Real Estate Contracting Officer will forward the Scope of Work to the Lessee and request a cost proposal.

The Lessee will send a cost proposal to the Real Estate Contracting Officer. This proposal may be based on Lessee having a third party perform the work. The Lessee may at this time inform the Government that he is incapable of performing the work.

If the Lessee submits a proposal and is acceptable, the Real Estate Contracting Officer will either; (1) issue a letter of authorization to proceed, advising a modification to the lease will be forthcoming or (2) forward a modification to the Lessee reflecting changes. Work should not begin until a letter or authorization or a modification has been received.

If the proposal is unacceptable, the Government will negotiate with the Lessee or determine alternative means of completing the required work.

When work is completed, Lessee and Navy Representatives will perform a joint inspection. If work is acceptable and within the time frame allotted, terms of the modification will be activated; i.e., rent reduction granted.

If it is determined during a joint inspection that the work was not completed properly or done within the required time frame, the Navy may, at its option, allow the Lessee additional time, not to exceed 25% of original time allotted, to complete the work or the Navy will have the work completed and charge the Lessee.

C. ENVIRONMENTAL/INDEMNIFICATION

In accordance with 10 U.S.C. 2692, the Lessee may not allow the treatment, storage or disposal of any Toxic or Hazardous materials on the leased premises. For the purposes of this provision, the terms "storage" and "Toxic or Hazardous Materials" are defined as provided in 48 CFR 252.223-7006.

The Lessee will reimburse the Lessor for all expenditures incurred if the Lessor is required by any regulatory authority or voluntarily chooses to undertake any Remedial Action to address Contamination on the leased premises resulting from the acts or omissions of the Lessee or its contractors. The Lessor shall contact the Lessee before taking any Remedial Action and give the Lessee a reasonable opportunity to undertake such Remedial Action if the Lessor believes that the Lessee has the capability to do so. Notwithstanding the above, the Lessee may immediately take any Remedial Action required of the Lessee by law.

During the term of this Lease, if the Lessee becomes aware that a Release of Toxic or Hazardous Materials has occurred that has resulted in Contamination of the leased premises, the Lessee will provide oral notice to the Lessor within 24 hours of becoming aware of such Contamination, providing all relevant facts and circumstances. The Lessor may request from the Lessee a more detailed written description of these facts and circumstances within a time period specified by the Lessor. The Lessee will promptly take all actions, at its sole expense, as are necessary to comply with all Applicable Environmental Laws relating to such Release, including reporting the occurrence to the appropriate Federal, State, or local regulatory authority or taking required Remedial Action, related to addressing the Contamination and to minimize the impacts of such Release. The Lessee will provide all information requested by the Lessor regarding such actions.

The Lessee, at its sole expense, will promptly take all action necessary to comply with Applicable Environmental Laws pertaining to a Release described in the preceding paragraph, including but not limited to: one, report the occurrence to appropriate Federal, State, or local regulatory authorities, if so directed by the Government; tow, take timely and effective steps to minimize the Release and its impact on human health and the environment; and three, take Remedial Action. The Government may direct the Lessee to provide all information requested by the Government regarding such actions within a time certain.

During the term of this Lease, the Lessee will ensure that all activities conducted by the Lessee or its contractors on the leased premises are carried out in compliance with Applicable Environmental Laws. The Lessee will provide oral notice to the Lessor within 24 hours of receiving any complaint, order, directive, claim, citation, or notice by any Governmental authority or any other person or entity with respect to a violation of Applicable Environmental Laws resulting from the activities of the Lessee or its contractors on the leased premises. The Lessee will promptly take all actions, at its sole expense, as are necessary to comply with all Applicable Environmental Laws as directed by any Federal, State, or local regulatory authority. The Lessor may request a more detailed written description of the events or circumstances leading to this event within a time specified by the Lessor. Without limitation of the foregoing, the Lessor may, but will not be obligated to, enter onto the leased premises and take any Remedial Action as it deems necessary or advisable to address any Contamination of the leased premises by Toxic or Hazardous Materials or to ensure compliance with Applicable Environmental Laws.

At any time, the Lessor or its representatives may conduct inspections on the leased premises to ensure compliance with Applicable Environmental Laws. To assist in this evaluation, the Lessee will provide to the Lessor or the Lessor's representative, any and all books, records, or documents in their possession, or in the possession of their agents or contractors, related to the activities or operations on the leased premises, which the Lessor or its representatives may examine, copy, or make extracts from.

As the Lessor deems appropriate, the Lessor may require that the Lessee, from time to time, promptly conduct such tests and procedures for the purpose of ensuring that the leased premises are in compliance with Applicable Environmental Laws and of having the leased premises certified to the Lessor as such. Such tests and procedures shall be conducted by recognized professionals to be approved by the Lessor and in a manner that is satisfactory to the Lessor. When requesting such tests and procedures, the Lessor will work with the Lessee to establish accepted timeframes, appropriate parties to perform the required activities, and schedules for performance. If an agreement cannot be reached regarding any of the foregoing, the Lessor or its representatives may undertake such tests and procedures, with the Lessee being obligated to reimburse the Lessor for all costs incurred.

For the purposes of this provision, the terms used above are defined as follows:

"Toxic or Hazardous Materials" means any hazardous, harmful, odorous, radioactive, toxic or dangerous waste, substance or material, including, without limitation, asbestos, polychlorinated biphenyls ("PCBs") and petroleum products, and any hazardous or toxic substance, material or waste, or any pollutant or contaminant defined as such in, or for the purposes of, any environmental laws as are now or in the future may be in effect. The Lessee's obligation under this provision shall extend to any and all such Toxic or Hazardous Materials whether or not such substance was defined, recognized, known, or suspected of being hazardous, toxic, dangerous, or wasteful at the time of any act or omission giving rise to the Lessee's obligation.

"Contamination" means a level of Toxic or Hazardous Materials in the air, in or on soil, in the surfacewater, or in the groundwater that exceeds levels allowed by Applicable Environmental Laws.

"Applicable Environmental Laws" means:

one, any Federal, State, or local statute, law, ordinance, rule, regulation, or order (whether voluntary or not) that govern the activities or operations of the leased premises, or the persons carrying out those activities or operations, relating to the environment, natural resources, or human health and safety.

two, Executive Orders of the President of the United States;

three, decisions of courts and administrative tribunals of competent jurisdiction;

four, administrative orders of regulatory agencies of competent jurisdiction (involuntary or on consent); and

five, regulations and directives of the Department of Defense, the Department of the Navy, and the U.S. Marine Corps (for Marine Corps installations only),

which pertain to the human environment (as defined in the National Environmental Policy act of 1969); transportation of hazardous material; and human health and safety (including occupational safety).

Applicable Environmental Laws include, without limitation the Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. § 9601 *et seq*.), the Hazardous Material Transportation Act (49 U.S.C. § 1801 *et seq*.), the Resource Conservation and Recovery Act (42 U.S.C. 6901 *et seq*.), the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq*.), the Clean Air Act (42 U.S.C. § 7401 *et seq*.), the Toxic Substances Control Act (15 U.S.C. § 2601 *et seq*.), and the Occupational Safety and Health Act (29 U.S.C. § 651 *et seq*.), Superfund Amendments and Reauthorization Act Title III (SARA) Emergency Planning and Community Right-to-Know Act (EPCRA) reporting requirements (40 CFR 355, 40 CFR 370, 40 CFR 372 and 29 CFR 1910.1200), as such laws have been amended or supplemented now or in the future.

"Release" means any release, spill, emission, leaking, pumping, injection, deposit, disposal, leaching, or migration into the environment, whether accidental or otherwise, resulting from the act or omissions of the Lessee, its contractors, or by natural conditions.

"Remedial Action" means any investigation or monitoring of the condition of the leased premises or any cleanup, remedial, removal, or restoration work required or performed on the leased premises because of the presence, suspected presence, release, or suspected release of Toxic or Hazardous Materials.

The Lessor shall not be responsible for damages to property or injuries to persons which may arise from or be incident to the use and occupation of the leased premises by the Lessee, nor for damages to the property or injuries to the person of the Lessor's officers, agents, servants, or employees, or others who may be on the leased premises at their invitation or the invitation of any one of them arising from or incident to governmental activities except as permitted under the Federal Torts Claim Act, 28 U.S.C. 2671 et seq.

F. APPLICABLE STATE AND CITY LAWS, CODES, AND ORDINANCES

The Lessee agrees to comply with all applicable State and City laws, codes and ordinances applicable to use of the leased premises at Lessee's expense. Lessee further agrees to obtain all necessary permits and related items at Lessee's expense.

G. INSURANCE REQUIREMENTS

Prior to award of the Lease, the LESSEE shall submit a certificate of insurance meeting the following requirements. Public Liability and Property Damage shall meet the following requirements at a minimum:

$50,000	Third Party Property Damage
$500,000	Third Party Personal Injury Per Person
$1,000,000	Third Party Personal Injury Per Accident

The policy/certificate of insurance shall contain an endorsement reading as follows:

a. Loss, if any under this policy shall be adjusted with (name of LESSEE) and the proceeds, at the election of the GOVERNMENT, shall be payable to (name of LESSEE); any proceeds not paid to (name of LESSEE) shall be payable to the Treasurer of the United States of America.

b. The insurer waives any right of subrogation against the United States of America which might arise by reason of any payment made under this policy.

c. The GOVERNMENT shall be given thirty (30) days written notice prior to making any material change in or the cancellation of the policy. Please strike out (and initial) any clauses that state "…failure to make such notice imposes no obligation or liability of any kind upon the company, etc …"

d. The United States of America (Department of the Navy) is added as an additional insured in operations of the policyholder at or from the premises leased at Naval Auxiliary Landing Field, Fentress, Virginia, identified as Unit F2.

e. This insurance certificate is for use of premises known as **255.5 acres more or less, at Naval Auxiliary Landing Field, Fentress, Chesapeake, Virginia, identified as Unit F2, Contract number N40085-15-RP-00017 or LO10501**.

If, at any time, the GOVERNMENT determines that the insurance maintained by the LESSEE does not in fact adequately protect the GOVERNMENT, LESSEE may be required to carry such other insurance in such form, for such amounts and for such periods of time, and with such insurers as the GOVERNMENT may from time to time require or approve.

N40085-15-RP-00018

LEASE BETWEEN Heath Cutrell

(HEREINAFTER CALLED "LESSEE") AND THE UNITED STATES OF AMERICA HEREINAFTER CALLED THE "GOVERNMENT".

THE GOVERNMENT HEREBY LEASES TO LESSEE THE PROPERTY DESCRIBED BELOW UNDER THE TERMS, CONDITIONS, GENERAL PROVISIONS AND SPECIAL PROVISIONS SET FORTH ON THIS PAGE AND SUBSEQUENT PAGES OF THIS LEASE FORM.

1. **LEASED PROPERTY:** ALL THAT PORTION OF THE NAVAL ACTIVITY IDENTIFIED IN ARTICLE 9, WHICH PORTION IS HEREINAFTER CALLED THE "PREMISES" AND DESCRIBED AS FOLLOWS: Approximately 263.2 acres, more or less, at the Naval Auxiliary Landing Field, Fentress, Chesapeake, Virginia, identified as Unit F3 in the Soil and Water Conservation Plan attached hereto and made a part hereof as Exhibit "A."

2. **TERM:** THE TERM OF THIS LEASE SHALL BEGIN ON 13 April 2015 AND END ON 31 December 2015 UNLESS SOONER TERMINATED IN ACCORDANCE WITH THE PROVISIONS OF ARTICLE 10H HEREOF.

LESSEE MAY REQUEST TO EXTEND THE TERM OF THIS LEASE FOR four (4) ADDITIONAL PERIODS OF ONE (1) YEAR EACH BY DELIVERY TO THE LOCAL GOVERNMENT REPRESENTATIVE OF WRITTEN NOTICE OF ITS INTENTION TO EXTEND NO LATER THAN NINETY (90) DAYS PRIOR TO THE EXPIRATION OF THE THEN CURRENT TERM: *PROVIDED*, NO EXTENSION SHALL BE GRANTED WHICH CREATES A TOTAL TERM IN EXCESS OF FIVE (5) YEARS.

3. **RENT:** DURING THE INITIAL TERM OF THIS LEASE, WHICH IS FOR A PERIOD OF EIGHT (8) MONTHS AND EIGHTEEN (18) DAYS, THE LESSEE SHALL PAY THE GOVERNMENT A RENTAL OF $24,449.07, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $8,524.39 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF. THE FIRST PAYMENT WILL BE $7,400.29, WHICH IS THE PRORATED QUARTERLY PAYMENT RATE FOR THE LEASE DURING THE PERIOD OF 13 APRIL 2015 TO 30 JUNE 2015. FOR THE INITIAL TERM AND ANY RENEWAL TERMS, ALL FUTURE PAYMENTS WILL BE $8,524.39 AND DUE ON THE FIRST DAY OF JULY, OCTOBER, JANUARY, AND APRIL.

AFTER THE INITIAL EIGHT (8) MONTH AND EIGHTEEN (18) DAY TERM, AND PROVIDED LESSEE RENEWS THE LEASE, LESSEE SHALL PAY THE GOVERNMENT ANNUAL RENTAL OF $34,097.56, PAYABLE QUARTERLY IN ADVANCE AT THE RATE OF $8,524.39 PER QUARTER, IN CONFORMITY WITH THE PROVISIONS OF ARTICLE 10W HEREOF.

4. **USE:** THE PREMISES SHALL BE USED SOLELY FOR production of row crops (e.g., corn, soybeans, small grains, cotton) truck crops or hay/silage crops.

5. **PERFORMANCE BOND OR SECURITY:** TO SECURE THE FAITHFUL PERFORMANCE OF ITS OBLIGATIONS HEREUNDER LESSEE SHALL PROVIDE THE GOVERNMENT WITH EITHER: (a) COLLATERAL SECURITY IN THE FORM OF CASH OR NEGOTIABLE GOVERNMENT BONDS, OR (b) A PERFORMANCE BOND ISSUED BY A CORPORATE SURETY AND SATISFACTORY TO THE GOVERNMENT IN ALL RESPECTS, IN THE AMOUNT OF $ N/A

10. GENERAL PROVISIONS

A. REPRESENTATIONS

The property under this lease is provided as is, where is. The term "as-is, where is" means that the Government is leasing the subject property in whatever condition it presently exists, and that the lessee is accepting the subject property with all faults, whether or not they could be ascertained by an inspection of the property or review of any due diligence material available. LESSEE has examined, knows and accepts the condition and state of repair of the Premises and all appurtenances thereto and acknowledges that the Government has made no representation concerning such condition and state of repair, nor any agreement or promise to alter, improve, adapt, repair or keep in repair such Premises and appurtenances, or any item thereof, which has not been fully set forth on this lease which contains all the agreements made and entered into between Lessee and the Government.

B. PROHIBITION OF FEDERAL SUBSIDY PARTICIPATION

Notwithstanding the uses permitted to it in Article 4 of this lease, Lessee shall at no time during the term of this lease, or any extension thereof, use the Premises or its interest therein in any manner which shall constitute direct participation in any subsidy program of the Federal Government relative to either the use or abstention from use of the Premises.

C. SUBJECTION TO GOVERNMENT SOIL & WATER CONSERVATION PLAN

During the term of this lease the Lessee shall apply the conservation measures and use the Premises in accordance with the conservation plan attached hereto and made a part hereof. Lessee shall in no manner substantially change the contour or condition of the land constituting any part of the Premises except for such changes as shall be reasonably required to effect soil and water conservation measures. (Soil and Water Conservation Plan is attached as Exhibit "A")

D. INSTALLATIONS AND REMOVALS

Subject to the prior written approval of the Government, Lessee shall have the right to erect, at its own expense, such temporary structures on the Premises as may be necessary or incidental to its use under this lease. All such structures shall remain the property of Lessee and Lessee shall remove any erected structures from the Premises prior to the expiration of the term of this lease. In the event the Government terminates this lease, Lessee shall be given thirty (30) days to accomplish such removal. All property not so removed shall be deemed abandoned by Lessee and may be used or disposed of by the Government in any manner whatsoever without any liability to account to the Government. Any such abandonment shall not reduce Lessee's obligation to restore the Premises.

E. SUBJECTION TO EXISTING AND FUTURE EASEMENTS AND RIGHTS-OF-WAY

This lease is subject to all outstanding easements and rights of way for location of any type of facility over, across, in and upon the Premises. In addition, the Government reserves the right to grant such additional easements as it shall determine to be in the public interest. The Government also reserves all mineral rights in the Premises, together with such rights of access and use of the surface as may be necessary for the mining and saving of any mineral deposits located thereon or thereunder. The Government reserves the right to allow ingress and egress to workers officially engaged in the construction, installation, maintenance, operation, repair or replacement of facilities located thereon, and to any Federal, State or local officials.

F. RESTORATION OF PREMISES

Before the expiration of this lease or the prior termination thereof, Lessee shall, if required to do so by the Government, restore the Premises to the condition existing at the time of its entrance thereon under this lease, or to such improved condition as they may have been placed in by the Government or the Lessee during the term of this lease, reasonable wear and tear and damage by the elements or from other causes over which Lessee had no control excepted; *Provided,* in the event the Government shall terminate this lease upon less than thirty (30) days notice Lessee shall have thirty (30) days from receipt of notice of termination to accomplish such restoration.

G. LIENS

Lessee shall promptly discharge or cause to be discharged any valid lien, *right in rem*, claim or demand of any kind, except one in favor of the

Government, which at any time may arise or exist with respect to the Premises or materials or equipment furnished therefor, or any part thereof, and if the same shall not be promptly discharged by Lessee, the Government may discharge, or cause to be discharged, the same at the expense of the Lessee.

H. TERMINATION BY GOVERNMENT

The Government shall have the right to terminate this lease, in whole or in part, at any time, without prior notice, and regardless of any lack of breach by Lessee of any of the terms and conditions of this lease. In the event of termination for any reason not involving a breach by Lessee of the terms and conditions of the lease the Government shall make an equitable adjustment of any advance rentals paid by Lessee hereunder and, if the Government's use of the Premises does not require immediate possession thereof, Lessee shall be permitted, within such time as the Local Government Representative shall prescribe, to harvest, gather and remove from the Premises such crops as can be so harvested and removed, but if the Government's requirements necessitate immediate repossession of the Premises, so as to require immediate removal of Lessee's livestock, and/or, to preclude Lessee from such harvesting and removal of any growing or matured crops, Lessee hereby specifically releases, remises, and forever discharges the Government from any and all liability or claims for loss or damage of any nature arising out of such termination and repossession, including, but not limited to, destruction of diminution in value of, or inability to harvest any growing crops, and/or death or diminution of value of any livestock of Lessee.

In the event that the Government shall elect to terminate this lease on account of the breach by the Lessee of any of the terms and conditions hereof no adjustment in advance rentals paid by Lessee shall be made, and the Government shall be entitled to recover and Lessee shall pay to the Government:

(1) The costs incurred in resuming possession of the Premises.

(2) The costs incurred in performing any obligation on the part of Lessee to be performed hereunder.

(3) An amount equal to the aggregate of all rents and charges assumed hereunder and not theretofore paid, less the net rentals, if any, collected by the Government on the re-letting of the Premises, which amounts shall be due and payable at the time when the rent reserved under this lease would become due and payable.

The Government may, at its option, attach any livestock or crops of Lessee on the Premises in full or partial satisfaction of Lessee's obligations under this Article.

I. SURRENDER

Upon the expiration of this lease or its prior termination, in whole or in part, Lessee shall quietly, and peacefully remove itself and its property from the Premises, or part thereof as to which this lease shall be terminated, and surrender the possession thereof to the Government. Upon failure or neglect of Lessee to so remove, the Government and its officers or agents may enter the Premises and cause the removal of all persons and property therefrom without recourse to any action or proceeding at law or in equity. Lessee hereby expressly waives any provision of law requiring notice to quit possession of the Premises. Such removal shall be at the sole cost and expense of Lessee and Lessee shall indemnify and save and hold harmless the Government, its officer, agents and employees for and from any and all liability or claims for damages of any nature whatsoever which may arise out of or be attributable to such removal.

J. DAMAGE TO GOVERNMENT PROPERTY

In the event of the destruction of or damage to any Government property located on or adjacent to the Premises by Lessee, or any of its officers, agents, servants, employees, subtenants, licensee or invitees, Lessee shall promptly repair or replace such property to the satisfaction of the Government, or pay to the Government an amount of money sufficient to compensate it for the loss or damage sustained, as the Government shall elect.

K. NON-LIABILITY OF GOVERNMENT

Lessee covenants that it will indemnify and save and hold harmless the Government, its officers, agents and employees for and from any and all liability or claims for loss of or damage to any property owned by or in the custody of Lessee, its officers, agents, servants, employees, subtenants, licensees or invitees, or for the death of or injury to any of the same which may arise out of or be attributable to the condition, state of repair or Lessee's use and occupancy of the Premises, or the furnishings of any utilities or services (including supply of water from wells or other sources), or any interruption therein or failure thereof, whether or not the same shall be occasioned by the negligence or

lack of diligence of Lessee, its officers, agents, servants or employees.

L. UTILITIES AND SERVICES

In the event that the Government shall furnish Lessee with any utilities and services maintained by the Government which Lessee may require in connection with its use of the Premises, Lessee shall pay the Government the charges therefor in addition to the cash rent required under this lease. Such charges and the method of payment thereof shall be determined by the Local Government Representative in accordance with applicable laws and regulations, on such basis as the Local Government Representative may establish which may include a requirement for the installation of adequate connecting and metering equipment at the sole cost and expense of Lessee. It is expressly agreed and understood that the Government in no way warrants the continued maintenance or adequacy of any utilities or services furnished by it to Lessee.

M. ACCESS

The Government shall have access to the Premises at all reasonable times for any purposes not inconsistent with the quiet use and enjoyment thereof by Lessee, including, but not limited to, the purpose of inspection.

N. COVENANT AGAINST CONTINGENT FEES

Lessee warrants that no person or agency has been employed or retained to solicit or secure this lease upon an agreement or understanding for a commission, percentage, brokerage or contingent fee, excepting bona fide employees or bona fide established commercial agencies maintained by Lessee for the purpose of securing business. For breach or violation of this warranty, the Government shall have the right to annul this lease without liability or in its discretion to require Lessee to pay, in addition to the rental or consideration, the full amount of such commission, percentage, brokerage, or contingent fee.

O. STATE AND LOCAL TAXES

In the event that as a result of any future Act of Congress, subjecting Government-owned property to taxation, any taxes, assessments or similar charges are imposed by State or local authorities upon the Premises (other than upon Lessee's possessory interest therein), Lessee shall pay the same when due and payable and this lease shall be renegotiated so as to accomplish an equitable reduction in the rental provided for herein, which reduction shall in no event exceed the amount of such taxes, assessments, or similar charges; *Provided,* in event the parties hereto are unable to agree within ninety (90) days from the date of the imposition of such taxes, assessments, or similar charges, upon a rental which in the opinion of the Local Government Representative constitutes a reasonable return to the Government on the Premises, then in such event the Local Government Representative shall have the right to determine the amount of the rental, which determination shall be binding on Lessee, subject to appeal as a dispute in accordance with the provisions of paragraph P of this Article 10.

P. DISPUTES

1.1 This lease is subject to the Contract Disputes Act of 1978, as amended (41 U.S.C. 601-613) (the Act).

1.2 Except as provided in the Act, all disputes arising under or relating to this lease shall be resolved under this clause.

1.3 "Claim," as used in this clause, means a written demand or written assertion by the Lessee or the Government seeking, as a matter of right, the payment of money in a sum certain, the adjustment or interpretation of lease terms, or other relief arising under or relating to this lease. A claim arising under this lease, unlike a claim relating to this lease, is a claim that can be resolved under a lease clause that provides for the relief sought by the claimant. However, a written demand or written assertion by the Lessee seeking the payment of money exceeding $100,000 is not a claim under the Act until certified as required by subparagraph 1.4(2) below. A voucher, invoice, or other routine request for payment that is not in dispute when submitted is not a claim under the Act. The submission may be converted to a claim under the Act, by complying with the submission and certification requirements of this clause, if it is disputed either as to liability or amount or is not acted upon in a reasonable time.

1.4(1) A claim by the Lessee shall be made in writing and submitted to the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, for a written decision. A claim by the Government against the Lessee shall be subject to a written decision by the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic.

1.4(2)(a)The Lessee shall provide the certification specified in subparagraph 1.4(2)(c) of this clause when submitting any claim ---

(A) Exceeding $100,000; or

(B) Regardless of the amount claimed, when using--

(1) Arbitration conducted pursuant to 5 U.S.C. 575-580; or

(2) Any other alternative means of dispute resolution (ADR) technique that the agency elects to handle in accordance with the Administrative Dispute Resolution Act (ADRA).

1.4(2)(b) The certification requirement does not apply to issues in controversy that have not been submitted as all or part of a claim.

1.4(2)(c)The certification shall state as follows: "I certify that the claim is made in good faith; that the supporting data are accurate and complete to the best of my knowledge and belief; that the amount requested accurately reflects the contract adjustment for which the Lessee believes the Government liable; and that I am duly authorized to certify the claim on behalf of the Lessee."

1.4(3) The certification may be executed by any person duly authorized to bind the Lessee with respect to the claim.

1.5 For Lessee claim of $100,000 or less, the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, must, if requested in writing by the Lessee, render a decision within sixty (60) days of the request. For Lessee-certified claims over $100,000, the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, must, within sixty (60) days, decide the claim or notify the Lessee of the date by which the decision will be made.

1.6 The Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, decision shall be final unless the Lessee appeals or files a suit as provided in the Act.

1.7 At the time a claim by the Lessee is submitted to the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, or a claim by the Government is presented to the Lessee, the parties, by mutual consent, may agree to use ADR. When using arbitration conducted pursuant to 5 U.S.C. 575-580, or when using any other ADR technique that the agency elects to handle in accordance with the ADRA, any claim, regardless of amount, shall be accompanied by the certification described in paragraph 1.4(2)(c) of this clause, and executed in accordance with paragraph 1.4(3) of this clause.

1.8 The Government shall pay interest on the amount found due and unpaid by the Government from (1) the date the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, receives the claim (properly certified if required), or (2) the date of payment otherwise would be due, if that date is later, until the date of payment. With regard to claims having defective certifications, as defined in FAR 33.201, interest shall be paid from the date that the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, initially receives the claim. Simple interest on claims shall be paid at the rate, fixed by the Secretary of the Treasury, as provided in the Act, which is applicable to the period during which the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic, receives the claim and then at the rate applicable for each 6-month period as fixed by the Treasury Secretary during the pendency of the claim.

1.9 The Lessee shall proceed diligently with the performance of the lease, pending, final resolution of any request for relief, claim, appeal, or action arising under the lease, and comply with any decision of the Commanding Officer, Naval Facilities Engineering Command, Mid-Atlantic.

Q. OFFICIALS NOT TO BENEFIT

No Member of or Delegate to Congress, or Resident Commissioner, shall be admitted to any share of part of this lease, or to any benefit to arise therefrom but this provision shall not be construed to extend to this lease if made with a corporation for its general benefit.

R. LABOR PROVISION

(1) Equal Opportunity

During the term of this lease the Lessee agrees as follows:

(a) The Lessee will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The Lessee will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their

race, color, religion, sex, or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer, recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; selection for training, including apprenticeship. The Lessee agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the Government setting forth the provisions of this nondiscrimination clause.

(b) The Lessee will, in all solicitations or advertisements for employees placed by or on behalf of the lessee, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

(c) The Lessee will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding a notice to be provided by the Government, advising the labor union or worker's representative of the Lessee's commitments under this Equal Opportunity clause and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(d) The Lessee will comply with all provisions of Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and of the rules, regulations, and relevant orders of the Secretary of Labor.

(e) The Lessee will furnish all information and reports required by Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and by the rules, regulations, and orders of the Secretary of Labor or pursuant thereto, and will permit access to his books, records, and accounts by the Government and the Secretary of Labor for purposes of investigating to ascertain compliance with such rules, regulations and orders.

(f) In the event of the Lessee's noncompliance with the Equal Opportunity clause of this lease or with any of said rules, regulations, or orders, this lease may be canceled, terminated or suspended in whole or in part and the Lessee may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(g) The Lessee will include the provisions of paragraphs (a) through (g) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, as amended by Executive Order 11375 of October 13, 1967, so that such provisions will be binding upon each sublessee or vendor. The Lessee will take such action with respect to any sublessee or purchase order as the Government may direct as a means of enforcing such provisions including sanctions for noncompliance: *Provided, however,* that in the event the Lessee becomes involved in, or is threatened with, litigation with sublessee or vendor as a result of such direction by the Government, the Lessee may request the United States to enter into such litigation to protect the interests of the United States.

(2) Convict Labor

In connection with the performance of work required by this lease, Lessee agrees not to employ any person undergoing a sentence of imprisonment at hard labor.

(3) Contract Work Hours Standards Act (40 U.S. Code 327-330)

This lease, to the extent that it is a contract of a character specified in the Contract Work Hours Standards Act (40 U.S.C. 327-330) and is not covered by the Walsh-Healy Public Contracts Act (41 U.S.C. 35-45), is subject to the following provisions and exceptions of said Contract Work Hours Standards Act and to all other provisions and exceptions of said law:

(a) The Lessee shall not require or permit any laborer or mechanic in any workweek in which he is employed on any work under this contract to work in excess of 8 hours in any calendar day or in excess of 40 hours in such workweek on work subject to the provisions of the Contract Work Hours Standards Act unless such laborer or mechanic receives compensation at a rate not less than one and one-half times his basic rate of pay for all such hours worked in excess of 8 hours in any calendar day or in excess of 40 hours in such workweek, whichever is the greater number of overtime hours. The "basic rate of pay," as used in this clause, shall be the amount paid per hour, exclusive of the Lessee's contribution or cost for fringe benefits and any cash payment made in lieu of providing fringe benefits, or the basic hourly rate contained in the wage determination, whichever is greater.

(b) In the event of any violation of the provisions of paragraph (a), the Lessee shall be liable to any affected employee for any amounts due and to the United States for liquidated damages. Such

liquidated damages shall be computed with respect to each individual laborer or mechanic employed in violation of the provisions of paragraph (a) in the sum of $10 for each calendar day on which such employee was required or permitted to be employed on such work in excess of 8 hours or in excess of the standard workweek of 40 hours without payment of the overtime wages required by paragraph (a).

S. NOTICES

No notice, order, direction, determination, requirement, consent, or approval under this lease shall be of any effect unless in writing. All notices required under this lease shall be addressed to Lessee, or to the Local Government Representative, as may be appropriate, at the address thereof specified in Article 9 of this lease or at such other address as may from time to time be agreed upon by the parties hereto.

T. FAILURE OF GOVERNMENT TO INSIST ON COMPLIANCE

The failure of the Government to insist, in any one or more instances, upon performances of any of the terms, covenants or conditions of this lease shall not be construed as a waiver or relinquishment of the Government's right to the future performance of any such terms, covenants or conditions and Lessee's obligations in respect to such future performance shall continue in full force and effect.

U. ASSIGNMENT OR SUBLETTING

Lessee shall not transfer or assign this lease or any interest therein nor sublet or otherwise make available to any third party or parties any portion of the Premises or rights therein without prior written consent of the Government. Under any assignment made, with or without consent, the assignee shall be deemed to have assumed all the obligations of Lessee hereunder, but no assignment shall relieve the assignor of any of Lessee's obligations hereunder except for an extension of the lease term beginning after such assignment, and then only if the Government shall have consented thereto.

V. GOVERNMENT RULES AND REGULATIONS

Lessee shall comply with such rules and regulations regarding station security, ingress, egress, safety and sanitation as may be prescribed, from time to time, by the Local Government Representative, or by the Commanding Officer of the Naval activity of which the Premises forms a part.

W. PAYMENTS

All payments to the Government required under this lease shall be made by check or postal money order made payable to the U.S. Treasurer and mailed to Commander Naval Facilities Engineering Command, Atlantic, Attn: FM, 6506 Hampton Blvd., Norfolk, VA 23508.

X. INTEREST

Notwithstanding any other provision of this lease, unless paid within thirty (30) days, all amounts that become payable by the Lessee to the Government under this contract (net of any applicable tax credit under the Internal Revenue Code) shall bear interest from the date due until paid and shall be subject to adjustments as provided by Part 6 of Appendix E of the Armed Services Procurement Regulation, as in effect on the date of this lease. The interest rate per annum shall be the interest rate in effect which has been established by the Secretary of the Treasury pursuant to Public Law 92-41; 85 STAT 97 for the Renegotiation Board, as of the date the amount becomes due as herein provided. Amounts shall be due upon the earliest one of (i) the date fixed pursuant to this contract; (ii) the date of the first written demand for payment, consistent with this lease, including demand consequent upon default termination; or (iii) the date of transmittal by the Government to the Lessee of a proposed supplemental agreement to confirm completed negotiations fixing the amount.

Y. ADMINISTRATION

The local Government Representative specified in Article 9 of this lease shall, under the direction of the Commander, Naval Facilities Engineering Command, Mid-Atlantic, have complete charge of the administration of this lease, and shall exercise full supervision and general direction thereof insofar as the interest of the Department are affected.

Z. INDEMNIFICATION

The Lessee accepts responsibility for all liability related to, or arising under, Lessee's use of the property. Further, Lessee shall release and hold harmless the Government, its officers, agents, and employees from all liability, suits, claims, actions, or demands in any way related to, or arising under, Lessee's use of the property. This includes, but is not limited to, all environmental suits, claims, and enforcement actions, arising during Lessee's construction on, or use of, the property, or after such construction, or use, has ended. Further, Lessee shall reimburse the Government for all expenditures incurred if the Government voluntarily chooses to undertake any remedial action to address contamination on the premises or facilities resulting from the acts or omissions of the Lessee.

11. SPECIAL PROVISIONS

The following specified additional provisions, which shall control in the event of any conflict with the General Provisions of Article 10, are hereby incorporated into this lease by attachment hereto.

A. RESTRICTIONS:

a. No substance shall be released into the air from the leased lands that could impair visibility including, without limitation, emissions such as steam, dust and smoke.

b. No lights shall be constructed, maintained, directed or allowed to shine from the said leased lands, which could interfere with or impair pilot vision. All light emissions must be shielded to prevent them from being used as geographic reference pints by aircraft personnel.

c. No electrical emissions shall be emitted from sources situated on said leased lands which could interfere in any way with aircraft communications systems, ordnance or navigational equipment now in existence or hereinafter invented.

d. No garbage shall be dumped or placed and no feeding stations or other facilities attractive to birds shall be constructed or maintained on said leased lands. All trash, debris and empty pesticide containers shall be removed from Government property and properly disposed of each day at Lessee's expense.

e. Relic hunting, or antique hunting or recovery is prohibited.

f. Aerial crop dusting, unless specifically authorized by permit, is prohibited

g. Hunting on the leased land is permitted. The Station is responsible for coordinating the hunting program with the Lessee. Excessive damage by these activities must be reported immediately to the Naval Air Station, Oceana, Natural Resources Specialist at (757) 433-3461.

h. A cultivation regimen of cutting, no-till seed drilling and discing to a depth no greater than 16 cm (6.4 inches) below the surface shall be followed.

B. REIMBURSABLE WORK

If at any time during the lease it is determined that work not identified in the Soil and Water Conservation Plan, as Non-Reimbursable work is necessary, the procedures below will be followed:

The NAVFAC Mid-Atlantic Natural Resource Specialist will prepare a Scope of Work and Government Cost Estimate. Scope of Work will include what work is to be done and identify how or what method should be used to complete the work. It will also include a time schedule in which the work must be completed.

The NAVFAC Mid-Atlantic Natural Resource Specialist will forward the Scope of Work and Government Cost Estimate to the Real Estate Contracting Officer.

The Real Estate Contracting Officer will forward the Scope of Work to the Lessee and request a cost proposal.

The Lessee will send a cost proposal to the Real Estate Contracting Officer. This proposal may be based on Lessee having a third party perform the work. The Lessee may at this time inform the Government that he is incapable of performing the work.

If the Lessee submits a proposal and is acceptable, the Real Estate Contracting Officer will either; (1) issue a letter of authorization to proceed, advising a modification to the lease will be forthcoming or (2) forward a modification to the Lessee reflecting changes. Work should not begin until a letter or authorization or a modification has been received.

If the proposal is unacceptable, the Government will negotiate with the Lessee or determine alternative means of completing the required work.

When work is completed, Lessee and Navy Representatives will perform a joint inspection. If work is acceptable and within the time frame allotted, terms of the modification will be activated; i.e., rent reduction granted.

If it is determined during a joint inspection that the work was not completed properly or done within the required time frame, the Navy may, at its option, allow the Lessee additional time, not to exceed 25% of original time allotted, to complete the work or the Navy will have the work completed and charge the Lessee.

C. ENVIRONMENTAL/INDEMNIFICATION

In accordance with 10 U.S.C. 2692, the Lessee may not allow the treatment, storage or disposal of any Toxic or Hazardous materials on the leased premises. For the purposes of this provision, the terms "storage" and "Toxic or Hazardous Materials" are defined as provided in 48 CFR 252.223-7006.

The Lessee will reimburse the Lessor for all expenditures incurred if the Lessor is required by any regulatory authority or voluntarily chooses to undertake any Remedial Action to address Contamination on the leased premises resulting from the acts or omissions of the Lessee or its contractors. The Lessor shall contact the Lessee before taking any Remedial Action and give the Lessee a reasonable opportunity to undertake such Remedial Action if the Lessor believes that the Lessee has the capability to do so. Notwithstanding the above, the Lessee may immediately take any Remedial Action required of the Lessee by law.

During the term of this Lease, if the Lessee becomes aware that a Release of Toxic or Hazardous Materials has occurred that has resulted in Contamination of the leased premises, the Lessee will provide oral notice to the Lessor within 24 hours of becoming aware of such Contamination, providing all relevant facts and circumstances. The Lessor may request from the Lessee a more detailed written description of these facts and circumstances within a time period specified by the Lessor. The Lessee will promptly take all actions, at its sole expense, as are necessary to comply with all Applicable Environmental Laws relating to such Release, including reporting the occurrence to the appropriate Federal, State, or local regulatory authority or taking required Remedial Action, related to addressing the Contamination and to minimize the impacts of such Release. The Lessee will provide all information requested by the Lessor regarding such actions.

The Lessee, at its sole expense, will promptly take all action necessary to comply with Applicable Environmental Laws pertaining to a Release described in the preceding paragraph, including but not limited to: one, report the occurrence to appropriate Federal, State, or local regulatory authorities, if so directed by the Government; tow, take timely and effective steps to minimize the Release and its impact on human health and the environment; and three, take Remedial Action. The Government may direct the Lessee to provide all information requested by the Government regarding such actions within a time certain.

During the term of this Lease, the Lessee will ensure that all activities conducted by the Lessee or its contractors on the leased premises are carried out in compliance with Applicable Environmental Laws. The Lessee will provide oral notice to the Lessor within 24 hours of receiving any complaint, order, directive, claim, citation, or notice by any Governmental authority or any other person or entity with respect to a violation of Applicable Environmental Laws resulting from the activities of the Lessee or its contractors on the leased premises. The Lessee will promptly take all actions, at its sole expense, as are necessary to comply with all Applicable Environmental Laws as directed by any Federal, State, or local regulatory authority. The Lessor may request a more detailed written description of the events or circumstances leading to this event within a time specified by the Lessor. Without limitation of the foregoing, the Lessor may, but will not be obligated to, enter onto the leased premises and take any Remedial Action as it deems necessary or advisable to address any Contamination of the leased premises by Toxic or Hazardous Materials or to ensure compliance with Applicable Environmental Laws.

At any time, the Lessor or its representatives may conduct inspections on the leased premises to ensure compliance with Applicable Environmental Laws. To assist in this evaluation, the Lessee will provide to the Lessor or the Lessor's representative, any and all books, records, or documents in their possession, or in the possession of their agents or contractors, related to the activities or operations on the leased premises, which the Lessor or its representatives may examine, copy, or make extracts from.

As the Lessor deems appropriate, the Lessor may require that the Lessee, from time to time, promptly conduct such tests and procedures for the purpose of ensuring that the leased premises are in compliance with Applicable Environmental Laws and of having the leased premises certified to the Lessor as such. Such tests and procedures shall be conducted by recognized professionals to be approved by the Lessor and in a manner that is satisfactory to the Lessor. When requesting such tests and procedures, the Lessor will work with the Lessee to establish accepted timeframes, appropriate parties to perform the required activities, and schedules for performance. If an agreement cannot be reached regarding any of the foregoing, the Lessor or its representatives may undertake such tests and procedures, with the Lessee being obligated to reimburse the Lessor for all costs incurred.

For the purposes of this provision, the terms used above are defined as follows:

"Toxic or Hazardous Materials" means any hazardous, harmful, odorous, radioactive, toxic or dangerous waste, substance or material, including, without limitation, asbestos, polychlorinated biphenyls ("PCBs") and petroleum products, and any hazardous or toxic substance, material or waste, or any pollutant or contaminant defined as such in, or for the purposes of, any environmental laws as are now or in the future may be in effect. The Lessee's obligation under this provision shall extend to any and all such Toxic or Hazardous Materials whether or not such substance was defined, recognized, known, or suspected of being hazardous, toxic, dangerous, or wasteful at the time of any act or omission giving rise to the Lessee's obligation.

"Contamination" means a level of Toxic or Hazardous Materials in the air, in or on soil, in the surfacewater, or in the groundwater that exceeds levels allowed by Applicable Environmental Laws.

"Applicable Environmental Laws" means:

one, any Federal, State, or local statute, law, ordinance, rule, regulation, or order (whether voluntary or not) that govern the activities or operations of the leased premises, or the persons carrying out those activities or operations, relating to the environment, natural resources, or human health and safety.

two, Executive Orders of the President of the United States;

three, decisions of courts and administrative tribunals of competent jurisdiction;

four, administrative orders of regulatory agencies of competent jurisdiction (involuntary or on consent); and

five, regulations and directives of the Department of Defense, the Department of the Navy, and the U.S. Marine Corps (for Marine Corps installations only),

which pertain to the human environment (as defined in the National Environmental Policy act of 1969); transportation of hazardous material; and human health and safety (including occupational safety).

Applicable Environmental Laws include, without limitation the Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. § 9601 *et seq*.), the Hazardous Material Transportation Act (49 U.S.C. § 1801 *et seq*.), the Resource Conservation and Recovery Act (42 U.S.C. 6901 *et seq*.), the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq*.), the Clean Air Act (42 U.S.C. § 7401 *et seq*.), the Toxic Substances Control Act (15 U.S.C. § 2601 *et seq*.), and the Occupational Safety and Health Act (29 U.S.C. § 651 *et seq*.), Superfund Amendments and Reauthorization Act Title III (SARA) Emergency Planning and Community Right-to-Know Act (EPCRA) reporting requirements (40 CFR 355, 40 CFR 370, 40 CFR 372 and 29 CFR 1910.1200), as such laws have been amended or supplemented now or in the future.

"Release" means any release, spill, emission, leaking, pumping, injection, deposit, disposal, leaching, or migration into the environment, whether accidental or otherwise, resulting from the act or omissions of the Lessee, its contractors, or by natural conditions.

"Remedial Action" means any investigation or monitoring of the condition of the leased premises or any cleanup, remedial, removal, or restoration work required or performed on the leased premises because of the presence, suspected presence, release, or suspected release of Toxic or Hazardous Materials.

The Lessor shall not be responsible for damages to property or injuries to persons which may arise from or be incident to the use and occupation of the leased premises by the Lessee, nor for damages to the property or injuries to the person of the Lessor's officers, agents, servants, or employees, or others who may be on the leased premises at their invitation or the invitation of any one of them arising from or incident to governmental activities except as permitted under the Federal Torts Claim Act, 28 U.S.C. 2671 et seq.

F. APPLICABLE STATE AND CITY LAWS, CODES, AND ORDINANCES

The Lessee agrees to comply with all applicable State and City laws, codes and ordinances applicable to use of the leased premises at Lessee's expense. Lessee further agrees to obtain all necessary permits and related items at Lessee's expense.

G. INSURANCE REQUIREMENTS

Prior to award of the Lease, the LESSEE shall submit a certificate of insurance meeting the following requirements. Public Liability and Property Damage shall meet the following requirements at a minimum:

$50,000	Third Party Property Damage
$500,000	Third Party Personal Injury Per Person
$1,000,000	Third Party Personal Injury Per Accident

The policy/certificate of insurance shall contain an endorsement reading as follows:

a. Loss, if any under this policy shall be adjusted with (name of LESSEE) and the proceeds, at the election of the GOVERNMENT, shall be payable to (name of LESSEE); any proceeds not paid to (name of LESSEE) shall be payable to the Treasurer of the United States of America.

b. The insurer waives any right of subrogation against the United States of America which might arise by reason of any payment made under this policy.

c. The GOVERNMENT shall be given thirty (30) days written notice prior to making any material change in or the cancellation of the policy. Please strike out (and initial) any clauses that state "…failure to make such notice imposes no obligation or liability of any kind upon the company, etc …"

d. The United States of America (Department of the Navy) is added as an additional insured in operations of the policyholder at or from the premises leased at Naval Auxiliary Landing Field, Fentress, Virginia, identified as Unit F2.

e. This insurance certificate is for use of premises known as **263.2 acres more or less, at Naval Auxiliary Landing Field, Fentress, Chesapeake, Virginia, identified as Unit F3, Contract number N40085-15-RP-00018 or LO10502**.

If, at any time, the GOVERNMENT determines that the insurance maintained by the LESSEE does not in fact adequately protect the GOVERNMENT, LESSEE may be required to carry such other insurance in such form, for such amounts and for such periods of time, and with such insurers as the GOVERNMENT may from time to time require or approve.

Enclosure 2 Soil and Water Conservation Plans

SOIL AND WATER CONSERVATION PLAN

Naval Air Station, Oceana
Virginia Beach, Virginia

Unit-O1
Farmable Area: 314.8 Acres
November 12, 2014

GENERAL INFORMATION

This Plan was prepared by **Mr. Emmett Carawan the Natural Resources Specialist at the Environmental Planning and Conservation Division, Naval Facilities Engineering Command (NAVFAC MID-ATLANTIC), Building Z-144, Room 214 Virginia Avenue, Norfolk, VA 23511 phone 757-341-0495.** Mr. Carawan will be the Government Representative of the Navy in administering the Soil and Water Conservation Plan.

The Real Estate Contracting Officer, Mr. Paul Moomaw, Hampton Roads IPT, Naval Facilities Engineering Command (NAVFAC MID-ATLANTIC) Norfolk, Virginia Telephone 757-341-1509 will be the Government Representative for the Navy in administering the lease.

Daily operational conflicts or problems can be resolved by calling the **NASO Natural Resources Specialist at 757-433-3461 or the NAVFAC MID-ATLANTIC Natural Resources Specialist at 757-341-0495.**

The unit of land available for agriculture leasing is located on the eastern side of Naval Air Station Oceana, Virginia Beach, VA. The gross area of 314.8 acres includes access roads and drainage ditches. Net farmable area will be less than this. The farmable area is made up of five (5) non-contiguous parcels of land (Attachment "2").

Special Provisions

Current military use of the land is to provide buffer and peripheral areas to perform military air operations within an effective compatible use zone. **There is a strict prohibition of electronic interference with communications.**

The station requires that the lessee coordinate at least 72 hours prior to bringing equipment and/or chemicals onto the installation, with the NAS Oceana's Natural Resources Specialist at 757-433-3461.

In the event that the lessee experiences a delay or problem caused by the Navy, they must immediately notify the NAS Oceana Natural Resources Specialist to resolve the problem at 757-433-3461.

Hunting and horseback riding on leased lands is permitted. The Station is responsible for coordinating the programs with the lessee. Excessive damage caused by these activities must be reported immediately to the NAS Oceana Natural Resources Specialist 757-433-3461.

Farming operations are to be restricted to the production of corn, soybeans, small grains, cotton, or hay/silage crops. When agreeing to the terms and conditions of the agricultural lease, special attention shall be paid to crop selection and its underlying impacts to the Bird/Animal Strike Hazard (BASH) program.

The Commanding Officer of NAS Oceana requests that crop location and planting schedules be provided to the NAS Oceana Natural Resources Specialist 757-433-3461 and the AODO at Oceana_aodo_kntu@navy.mil **or 757-433-2161/3 to help mitigate hazards at least a few days in advance. These schedules should be provided within 72 hours of field preparation and planting each season.** Tilling of soil prior to planting should be conducted at night whenever possible to reduce the affinity of exposed ground and food sources for birds. When harvesting crops, spillage should be minimized and cleaned up promptly.

No deviation in land use or drainage improvements, as outlined in this plan, shall be permitted without prior written consent of the Real Estate Contracting Officer.

Under Article 10B of the Lease General Provisions, cultivation of federally subsidized crops on the leased land is prohibited.

The Lessee is required to park and load all farm equipment and vehicles within leased property boundaries.

All equipment should be clean (no visible soil, plant or animal material) prior to arrival on the installation to minimize and avoid the spread of non-native invasive species. It is recommended that all equipment after utilization on the installation also be cleaned prior to utilization on other properties. If equipment is being utilized on one Navy installation and is transported to another Navy installation it must be cleaned prior to use on the other Navy property.

Cultural Resources

A "Phase I" archaeological survey has been partially completed at NAS Oceana. This survey has identified prehistoric and historic sites on the Station; many of these sites are found within the agricultural units. To alleviate any potential destruction of these sites the State Historic Preservation Officer (SHPO) recommends that the only ground-disturbing activity permitted will be the ongoing agricultural cultivation practices and be limited to the current plow zone. If the lessee anticipates a problem which would cause him to deviate from his current cultivation practices he shall notify Mr. Emmett Carawan, Government Representative at NAVFAC MID-ATLANTIC 757-341-0495.

Conservation Inventory

Approximately 200 acres of the lease area are designated resource management areas under the Chesapeake Bay Preservation Act. The "Act" which became effective on January 1, 1995, requires a Nutrient Management Plan be approved by the local Soil and Water Conservation District. The State Soil Conservation Service will develop this Plan for the Lessee. The Nutrient Management Plan will become part of this Soil and Water Conservation Plan when it is furnished to the NAVFAC MID-ATLANTIC Natural Resource Specialist, Mr. Emmett Carawan at 757-341-0495. The remaining acreage is within the southern or owl's creek watersheds.

The 314.8 acres are considered a single farming unit. The land is wet and requires drainage. The land capability is Class IIIW for soil type 71 Acredale silt loam. The land capability is Class III when properly drained. Open ditch drainage is required to assure production.

Conservation Practices

All conservation practices shall be performed in accordance with standard specifications of the USDA **Natural Resources Conservation Service (NRCS)**. The Lessee shall utilize the technical services of the local Field Office located at the Municipal Center, Chesapeake, Virginia, in the design, layout, construction, and supervision of the conservation practices performed. All improvements shall become the property of the government at the expiration of the lease.

Soil fertility shall be maintained at the optimum level for the crops that are to be grown. USDA NRCS should be notified if nutrient deficiencies arise and resolved in accordance with their recommendations. USDA NRCS or the Virginia Tech Extension Service can assist in making fertilizer and lime recommendations that will be sufficient to maintain adequate pH levels and soil fertility.

Permission is granted to the lessee to take advantage of Hampton Roads Sanitation Division's Bio Solid disposal program. Coordination of this program shall be made **30 days prior** to application with the NAVFAC MID-ATLANTIC and NAS Oceana Natural Resource Specialists.

Herbicides/Pesticides

Pesticides to be used by the Lessee must be coordinated and approved by Mr. Jack Markham 757-322-4882 at NAVFAC Atlantic's Applied Biology Section, within 30 days of award of the lease. Pesticide requirements are found in Attachments 3, 4 and 5 of this Plan. The pesticide approval submission form must include product labels and Material Safety Data Sheets (MSDSs) when submitted to NAVFAC Atlantic's Applied Biology Section, (Address and phone number is located in the Government Offices section of this Soil & Water Conservation Plan). Actual application of herbicides / pesticides shall be reported quarterly on the Pesticide Application Record keeping form. The quarterly report shall be submitted to Mr. Markham, no later than 15 April, 15 July, 15 October, and 15 December, of each crop year.

Application of pesticides will conform to the Environmental Protection Agencies "Worker protection standards" as stated on the Pesticide label.

Mixing of pesticides is allowed on site if the lessee uses spill containment equipment. Storing of pesticides on site is not allowed.

The Lessee shall report all farm chemical spills, leaks or releases to NAS Oceana via the emergency coordination number at 757-433-9111 and to the NAS Oceana's Natural Resources Specialist at 757-433-3461.

If the Lessee finds it necessary to apply pesticides by aerial application of pesticides, the Lessee must have approval of NAVFAC Atlantics Applied Biologist at 757-322-4882 and the NAS Oceana's Natural Resources Specialist at 757-433-3461, 72 hours in advance of the anticipated spray application. This approval / notification must be direct contact and not voice mail message. Notification shall include POC for the Crop Dusting pilot, date, time and location of the spray application.

The pilot of the crop dusting aircraft shall contact the NAS Oceana Air Operations Duty Officer (757-433-2163) prior to takeoff to update ETA and location, and coordinate with Air Traffic Control (757-433-3471).

The Pilot shall contact the NTU Tower prior to entering the Class Delta airspace and receive clearance to begin the spray operations.

The Air Operations Officer will determine whether or not to cancel or reschedule the operation.

The control and/or eradication of Federal and State listed noxious weeds, particularly **Johnsongrass,** *Sorghum haleplense*, is required. Any pesticides and herbicides used for insect, disease, or weed control shall be approved and registered by the Environmental Protection Agency for the crops being grown.

The lessee is responsible for removal of all debris, refuse, garbage, pesticide containers, and unused residue of farm operations from the leased area and the Installation. The Lessee is encouraged to use the City of Chesapeake's pesticide container recycling program (see back of pesticide form for information).

Additional requirements for pesticide use on the property are provided in Attachment 3, Pesticide Mixing, Storage and Use on Navy-Owned Property Leased for Agricultural Purposes.

Conservation Requirements

Non-Reimbursable work

Soil and water conservation goals on this property include control of surface run-off and concurrent reduction in soil erosion, sedimentation and nutrient loading. The following measures will achieve these goals and are the responsibility of the lessee:

1. A conservation cropping system shall be established to include minimum tillage.

2. Maintenance of ditches and culverts is the responsibility of the lessee (subject to inspection at any time during the term of the lease) and shall include the following:

a. Mowing of ditch banks is required every other year of the lease. Mowing must be completed by 31 December. If this poses a problem for the lessee, he should notify the NAVFAC MID-ATLANTIC Natural Resources Specialist at 757-341-0495.

b. **No-tilled strips/Vegetation buffer strips, a minimum of three (3) feet wide, shall be maintained along edges of ditch banks to prevent soil sloughing into ditches, and to serve as erosion control filter strips. Width of no-tilled strips will be strictly enforced. Width of no-tilled strips are measured from the top of the ditch bank and away from the ditch, towards the crop. Lessee shall avoid " scalping" ditch banks to avoid eroding ditch banks.**

c. Boundary ditches are considered lease area to the ditch center-line.

3. Any acreage not cropped shall be seeded to a cover crop of hay or silage for protection and erosion control. If land is left fallow crop residue shall be left on the soil surface as a winter cover to provide mulch and soil improvement until seedbed preparation the following spring. Minimum tillage practices are encouraged.

Yearly inspections by the Government Representatives of the Navy in administering the Soil and Water Conservation Plan will ensure compliance with these conditions and other environmental requirements.

Reimbursable Work

During the term of this lease, it is anticipated that reimbursable work will be requested. The reimbursable work will be based on a scope of work furnished by the Government. The Lessee will be requested to provide an estimate for the work based on the scope of work. If the Lessee decides not to do the work himself, he may contract with a third party to do so (to be approved by the Real Estate Contracting Officer), or inform the Government that he is not capable of performing the work.

If the proposal is acceptable the Real Estate Contracting Officer will either; (1) issue a letter of authorization to begin work or (2) will forward a lease modification to the lease authorizing the work. Work should not begin until the letter of authorization or lease modification has been received.

When work is completed, a joint inspection will be performed by the Lessee and Navy representatives. If the work is complete and acceptable, terms of the letter or modification will be activated (i.e., rent reduction granted).

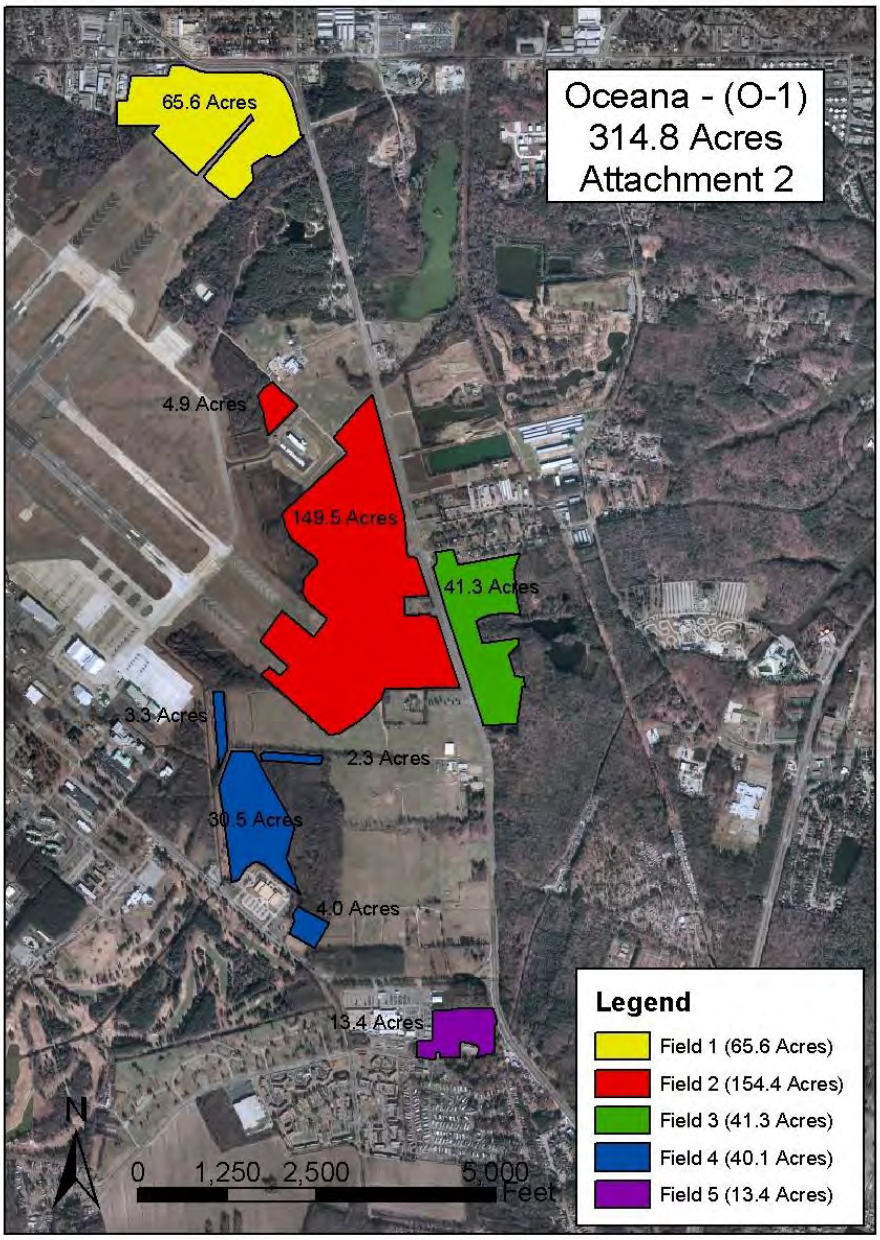
ATTACHMENT 2



ATTACHMENT 3

Pesticide Mixing, Storage, and Use
on
Navy-Owned Property
Leased for Agricultural Purposes

1. a. Certified Applicators Requirement

All pesticide applications shall be performed by a State-certified pesticide applicator. Private applicator's licenses are acceptable if the Lessee performs the work. Commercial grade license(s) are required if the Lessee hires (for fee) an application company to apply the pesticide(s). "Registered Technician" status is not considered "Commercial Grade" or "Private" pesticide applicator license grade. The pesticide applicator shall be certified in the category in which the work will be performed.

b. Integrated Pest Management

Integrated Pest Management (IPM) is a pest population management system that uses all suitable control techniques (chemical, biological, cultural, mechanical, or physical) to maintain pest populations at or below tolerable levels. Integrated Pest Management (IPM) techniques shall be used to the maximum extent practicable.

2. SUBMITTAL REQUIREMENTS

a. Business License

If a commercial applicator will apply pesticides (i.e. the Lessee does NOT have a private applicators license), the commercial applicator shall provide proof of a business license (as a pesticide application business) as required by the State of Virginia. A copy of this business license shall be forwarded to the Navy representative designated as responsible for oversight of the outlease before the pesticide application(s) are performed.

b. Certificate of Insurance

If a commercial applicator will apply pesticide(s), proof of Insurance as a pesticide applicator business shall be forwarded to the Navy representative designated as responsible for oversight of the outlease before the pesticide application(s) are performed.

c. Pesticide Approval

All pesticides must be approved within 30 days after award of lease. A list of the pesticide(s) proposed for use (by either a private and/or commercial applicator) shall be submitted to the designated Navy representative for approval before the pesticide application(s) are performed. The "Pesticides Approval Submission" form (attachment 2) shall be used. Any changes in pesticides to be used shall have prior approval before their use (Submittal for changes shall be on the pesticide approval form provided).

d. Pesticide Labels and Material Safety Data Sheets

Attached to the Pesticide Approval Form, submit legible copies of the pesticide label and material safety data sheets for each pesticide proposed for use.

e. Commercial Grade Pesticide Applicators Certificate(s) In the Appropriate Categories

Attached to the Pesticide Approval form, submit legible copies of State pesticide applicators certificate(s) in the appropriate applicator categories (the category in which the work will be performed).

f. Pesticide Label/MSDS Reference Book

The Lessee shall maintain a reference book of approved pesticide labels and Material Safety Data Sheets (MSDS), and have it readily available **ON-SITE** (in the truck or other vehicle that was used to arrive on site) whenever any pesticides are on site. The reference book shall be readily available for inspection.

g. Reporting Pesticide and Fertilizer Use

The Lessee shall report all pesticide and/or fertilizer use on the Pesticide Application Record Keeping Form (attached to the contract) and forward the form to the Navy representative designated as responsible for oversight of the outlease.

3. PESTICIDE APPLICATION AND CONTROL OPERATIONS

All pesticides must be used in accordance with Federal, state, local, and installation publications, and any requirements identified in attachments. All pesticides shall be procured, processed, handled, and applied in strict accordance with the manufacturer's label. All pesticides shall be registered with the U.S. Environmental Protection Agency and the cognizant State pesticide regulatory agency.

a. Pesticide Preparation and Use.

During preparation, and/or application of pesticides, the Contractor shall:

(1) Always store pesticides in original containers having EPA-registered labels or in containers meeting EPA label requirements; and
(2) Use application equipment appropriate for the nature and size of work, that is clean, calibrated, and in proper operational condition; and
(3) Never leave equipment unattended during filling and application/usage; and
(4) Use back flow preventers on hoses when connected to water outlets in filling operations, and
(5) Inspect equipment (per manufacturer's label) and the area during application to insure proper and safe treatment; and
(6) Keep safety equipment and spill kit available on site when pesticides are present.

b. Pesticide Mixing.

The Lessee shall mix pesticides on a portable containment device. The device shall be capable of containing the maximum amount of pesticide and diluent being mixed at one time.

c. Storage of Other Pesticides.

No other pesticides shall be stored overnight at the site. Any pesticide container and/or application tank shall be secured against theft and vandalism when the site is unattended during the day. Only those pesticides expected to be used that day should be imported to the site.

d. Pesticide Disposal.

The Lessee shall not dispose of any pesticides, pesticide containers, pesticide residue, pesticide rinse water, or any pesticide contaminated articles on government property.

e. Spill Management.

A pesticide spill containment kit shall be available on site if pesticides are being applied. The kit shall contain (at least) absorbent material capable of absorbing at least 25 gallons of liquid, rubber boots, rubber gloves, safety goggles, and a shovel.

f. **Safety Equipment.**

When pesticides are being mixed or applied, a portable eyewash station and at least 2 gallons of fresh water (in plastic jugs marked “emergency wash water”) shall be within 25 feet of the operation.

g. Pesticide Spills and Decontamination.

The Lessee is responsible for properly cleaning, decontaminating, and reporting pesticide spills to the Navy representative.

h. Pesticide Dispersal Equipment Markings.

All pesticide dispersal equipment shall be clearly and plainly marked with "DANGER"..."PESTICIDES".

4. SPECIFIC PESTICIDE USE PROVISIONS

a. The Lessee shall coordinate, 72 hours in advance, with the Navy representative designated as responsible for oversight of the outlease that pesticide(s) and/or application equipment will be brought onto the site.

b. All application of pesticides shall conform to the Worker Protection Standards CFR 170 as amended.
c. All pesticide applications shall conform to all label and supplemental labeling of the pesticide product.
d. All applicable laws and regulations regarding notification and posting shall be strictly adhered to.

5. HERBICIDE REQUIREMENTS

Only glyphosate herbicides may be used for bare ground vegetation management. Paraquat use is not permitted. Simizine or any simizine family herbicide use is not permitted. Selective herbicides may be approved for use. If lessee is growing cotton, specialty defoliant herbicides will be authorized through the normal approval process.

SOIL AND WATER CONSERVATION PLAN

Naval Air Station, Oceana
Virginia Beach, Virginia

Unit-O2
Farmable Area: 329.7 Acres
November 12, 2014

GENERAL INFORMATION

This Plan was prepared by **Mr. Emmett Carawan the Natural Resources Specialist at the Environmental Planning and Conservation Division, Naval Facilities Engineering Command (NAVFAC MID-ATLANTIC), Building Z-144, Room 214 Virginia Avenue, Norfolk, VA 23511 phone 757-341-0495.** Mr. Carawan will be the Government Representative of the Navy in administering the Soil and Water Conservation Plan.

The Real Estate Contracting Officer, Mr. Paul Moomaw, Hampton Roads IPT, Naval Facilities Engineering Command (NAVFAC MID-ATLANTIC) Norfolk, Virginia Telephone 757-341-1509 will be the Government Representative for the Navy in administering the lease.

Daily operational conflicts or problems can be resolved by calling the **NASO Natural Resources Specialist at 757-433-3461 or the NAVFAC MID-ATLANTIC Natural Resources Specialist at 757-341-0495.**

The unit of land available for agriculture leasing is located on the southern and Western side of Naval Air Station Oceana, Virginia Beach, VA. The gross area of 329.7 acres includes access roads and drainage ditches. Net farmable area will be less than this. The farmable area is made up of five (5) non-contiguous parcels of land (Attachment "2").

Special Provisions

Current military use of the land is to provide buffer and peripheral areas to perform military air operations within an effective compatible use zone. **There is a strict prohibition of electronic interference with communications.**

The station requires that the lessee coordinate at least 72 hours prior to bringing equipment and/or chemicals onto the installation, with the NAS Oceana's Natural Resources Specialist at 757-433-3461.

In the event that the lessee experiences a delay or problem caused by the Navy, they must immediately notify the NAS Oceana Natural Resources Specialist to resolve the problem at 757-433-3461.

Hunting and horseback riding on the leased lands is permitted. The Station is responsible for coordinating the programs with the lessee. Excessive damage caused by these activities must be reported immediately to the NAS Oceana Natural Resources Specialist 757-433-3461.

Farming operations are to be restricted to the production of corn, soybeans, small grains, cotton, or hay/silage crops. When agreeing to the terms and conditions of the agricultural lease, special attention shall be paid to crop selection and its underlying impacts to the Bird/Animal Strike Hazard (BASH) program.

The Commanding Officer of NAS Oceana requests that crop location and planting schedules be provided to the NAS Oceana Natural Resources Specialist 757-433-3461 and the AODO at Oceana_aodo_kntu@navy.mil **or 757-433-2161/3 to help mitigate hazards at least a few days in advance. These schedules should be provided within 72 hours of field preparation and planting each season.** Tilling of soil prior to planting should be conducted at night whenever possible to reduce the affinity of exposed ground and food sources for birds. When harvesting crops, spillage should be minimized and cleaned up promptly.

No deviation in land use or drainage improvements, as outlined in this plan, shall be permitted without prior written consent of the **Real Estate Contracting Officer.**

The Lessee is required to park and load all farm equipment and vehicles within leased property boundaries.

All equipment should be clean (no visible soil, plant or animal material) prior to arrival on the installation to minimize and avoid the spread of non-native invasive species. It is recommended that all equipment after utilization on the installation also be cleaned prior to utilization on other properties. If equipment is being utilized on one Navy installation and is transported to another Navy installation it must be cleaned prior to use on the other Navy property.

Cultural Resources

A "Phase I" archaeological survey has been partially completed at NAS Oceana. This survey has identified prehistoric and historic sites on the Station; many of these sites are found within the agricultural units. To alleviate any potential destruction of these sites the State Historic Preservation Officer (SHPO) recommends that the only ground-disturbing activity permitted will be the ongoing agricultural cultivation practices and be limited to the current plow zone. If the lessee anticipates a problem which would cause him to deviate from his current cultivation practices he shall notify Mr. Emmett Carawan, Government Representative at NAVFAC MID-ATLANTIC 757-341-0495.

Conservation Inventory

Approximately 219.3 acres of the lease area are designated resource management areas under the Chesapeake Bay Preservation Act. The "Act" which became effective on January 1, 1995, requires a Nutrient Management Plan be approved by the local Soil and Water Conservation District for this acreage. The State Soil Conservation Service will develop this Plan for the Lessee. The Nutrient Management Plan will become part of this Soil and Water Conservation Plan when it is furnished to the NAVFAC MIDLANT Natural Resource Specialist, Mr. Emmett Carawan at 757-341-0495. The remaining acreage is within the southern watershed.

The 329.7 acres are considered a single farming unit. The land is wet and requires drainage. The land capability is Class IIIW for soil type 71 Acredale silt loam. The land capability is Class III when properly drained. Open ditch drainage is required to assure production.

Conservation Practices

All conservation practices shall be performed in accordance with standard specifications of the USDA **Natural Resources Conservation Service (NRCS)**. The Lessee shall utilize the technical services of the local Field Office located at the Municipal Center, Chesapeake, Virginia, in the design, layout, construction, and supervision of the conservation practices performed. All improvements shall become the property of the government at the expiration of the lease.

Soil fertility shall be maintained at the optimum level for the crops that are to be grown. USDA NRCS should be notified if nutrient deficiencies arise and resolved in accordance with their recommendations. USDA NRCS or the Virginia Tech Extension Service can assist in making fertilizer and lime recommendations that will be sufficient to maintain adequate pH levels and soil fertility.

Permission is granted to the lessee to take advantage of Hampton Roads Sanitation Division's Bio Solid disposal program. Coordination of this program shall be made **30 days prior** to application with the NAVFAC MID-ATLANTIC and NAS Oceana Natural Resource Specialists.

Herbicides/Pesticides

Pesticides to be used by the Lessee must be coordinated and approved by Mr. Jack Markham 322-4882 at NAVFAC Atlantic's Applied Biology Section, within 30 days of award of the lease. Pesticide requirements are found in Attachments 3, 4 and 5of this Plan. The pesticide approval submission form must include product labels and Material Safety Data Sheets (MSDSs) when submitted to NAVFAC Atlantic's Applied Biology Section, (Address and phone number is located in the Government Offices section of this Soil & Water Conservation Plan). Actual application of herbicides / pesticides shall be reported quarterly on the Pesticide Application Record keeping form. The quarterly report shall be submitted to Mr. Markham, no later than 15 April, 15 July, 15 October, and 15 December, of each crop year.

Application of pesticides will conform to the Environmental Protection Agencies "Worker protection standards" as stated on the Pesticide label.

Mixing of pesticides is allowed on site if the lessee uses spill containment equipment. Storing of pesticides on site is not allowed.

The Lessee shall report all farm chemical spills, leaks or releases to NAS Oceana via the emergency coordination number at 757-433-9111 and to the NAS Oceana's Natural Resources Specialist at 757-433-3461.

If the Lessee finds it necessary to apply pesticides by aerial application of pesticides, the Lessee must have approval of NAVFAC Atlantics Applied Biologist at 757-322-4882 and the NAS Oceana's Natural Resources Specialist at 757-433-3461, 72 hours in advance of the anticipated spray application. This approval / notification must be direct contact and not voice mail message. Notification shall include POC for the Crop Dusting pilot, date, time and location of the spray application.

The pilot of the crop dusting aircraft shall contact the NAS Oceana Air Operations Duty Officer (757-433-2163) prior to takeoff to update ETA and location, and coordinate with Air Traffic Control (757-433-3471).

The Pilot shall contact the NTU Tower prior to entering the Class Delta airspace and receive clearance to begin the spray operations.

The Air Operations Officer will determine whether or not to cancel or reschedule the operation.

The control and/or eradication of Federal and State listed noxious weeds, particularly **Johnsongrass,** *Sorghum haleplense*, is required. Any pesticides and herbicides used for insect, disease, or weed control shall be approved and registered by the Environmental Protection Agency for the crops being grown. The lessee is responsible for removal of all debris, refuse, garbage, pesticide containers, and unused residue of farm operations from the leased area and the Installation. The Lessee is encouraged to use the City of Chesapeake's pesticide container recycling program (see back of pesticide form for information).

Additional requirements for pesticide use on the property are provided in Attachment 3, Pesticide Mixing, Storage and Use on Navy-Owned Property Leased for Agricultural Purposes.

Conservation Requirements

Non-Reimbursable work

Soil and water conservation goals on this property include control of surface run-off and concurrent reduction in soil erosion, sedimentation and nutrient loading. The following measures will achieve these goals and are the responsibility of the lessee:

1. A conservation cropping system shall be established to include minimum tillage.

2. Maintenance of ditches and culverts is the responsibility of the lessee (subject to inspection at any time during the term of the lease) and shall include the following:

a. Mowing of ditch banks is required every other year of the lease. Mowing must be completed by 31 December. If this poses a problem for the lessee, he should notify the NAVFAC MID-ATLANTIC Natural Resources Specialist at 757-341-0495.

b. **No-tilled strips/Vegetation buffer strips, a minimum of three (3) feet wide, shall be maintained along edges of ditch banks to prevent soil sloughing into ditches, and to serve as erosion control filter strips. Width of no-tilled strips will be strictly enforced. Width of no-tilled strips are measured from the top of the ditch bank and away from the ditch, towards the crop. Lessee shall avoid " scalping" ditch banks to avoid eroding ditch banks.**

c. Boundary ditches are considered lease area to the ditch center-line.

3. Any acreage not cropped shall be seeded to a cover crop of hay or silage for protection and erosion control. If land is left fallow crop residue shall be left on the soil surface as a winter cover to provide mulch and soil improvement until seedbed preparation the following spring. Minimum tillage practices are encouraged.

Yearly inspections by the Government Representatives of the Navy in administering the Soil and Water Conservation Plan will ensure compliance with these conditions and other environmental requirements.

Reimbursable Work

During the term of this lease, it is anticipated that reimbursable work will be requested. The reimbursable work will be based on a scope of work furnished by the Government. The Lessee will be requested to provide an estimate for the work based on the scope of work. If the Lessee decides not to do the work himself, he may contract with a third party to do so (to be approved by the Real Estate Contracting Officer), or inform the Government that he is not capable of performing the work.

If the proposal is acceptable the Real Estate Contracting Officer will either; (1) issue a letter of authorization to begin work or (2) will forward a lease modification to the lease authorizing the work. Work should not begin until the letter of authorization or lease modification has been received.

When the work has been completed, a joint inspection will be performed by the Lessee and Navy representatives. If the work is complete and acceptable, terms of the letter or modification will be activated (i.e., rent reduction granted).

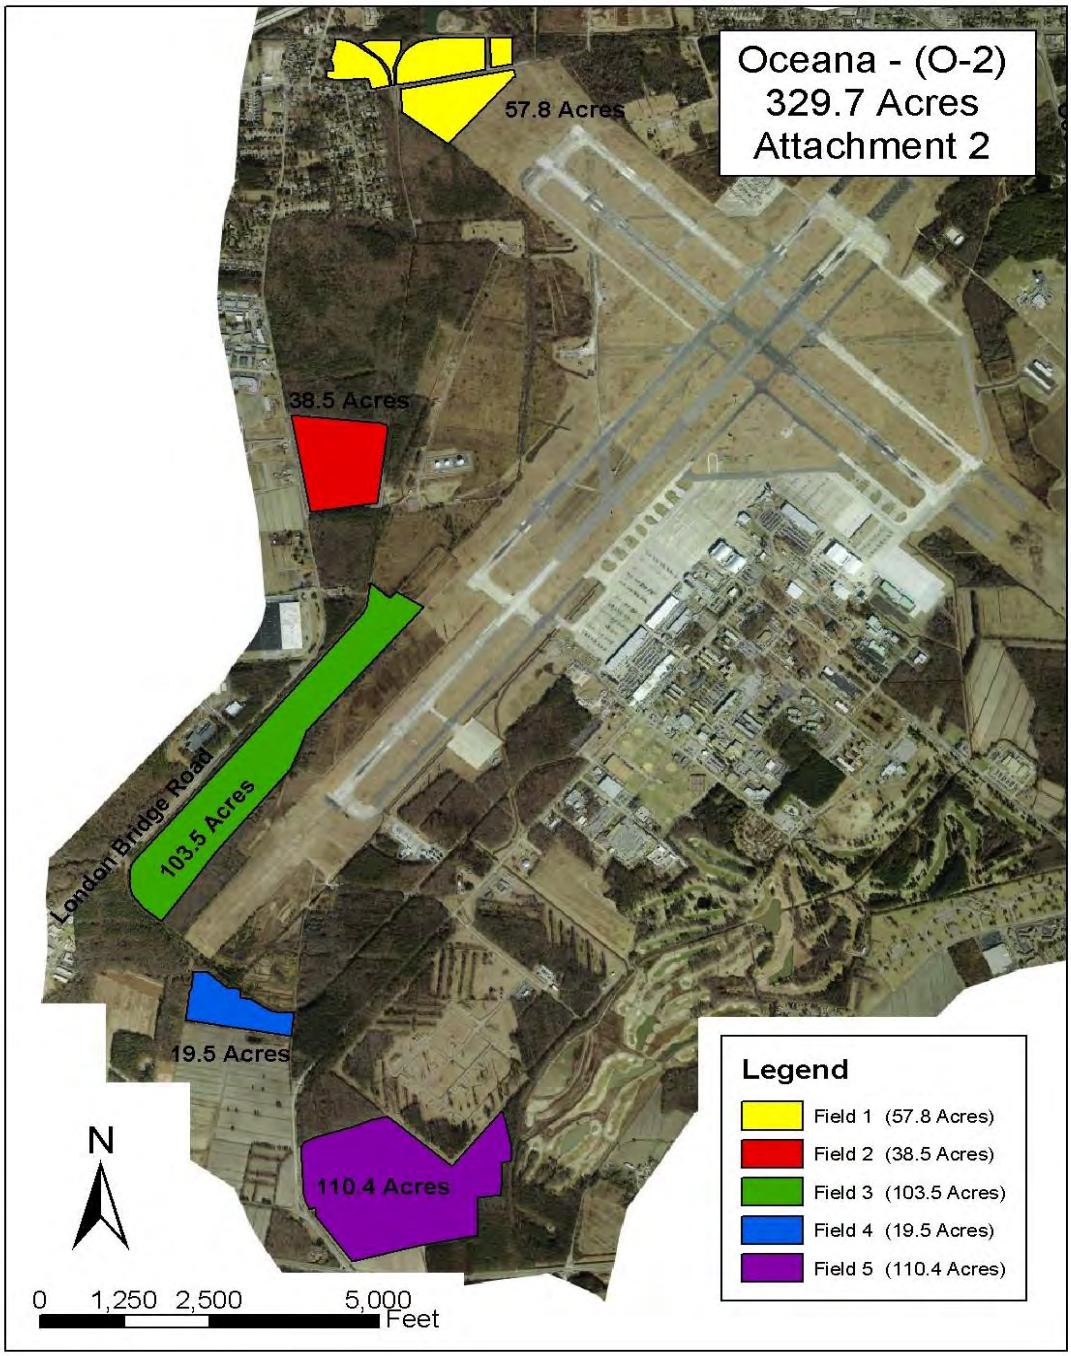
ATTACHMENT 2



ATTACHMENT 3

Pesticide Mixing, Storage, and Use
on
Navy-Owned Property
Leased for Agricultural Purposes

1. a. Certified Applicators Requirement

All pesticide applications shall be performed by a State-certified pesticide applicator. Private applicator's licenses are acceptable if the Lessee performs the work. Commercial grade license(s) are required if the Lessee hires (for fee) an application company to apply the pesticide(s). "Registered Technician" status is not considered "Commercial Grade" or "Private" pesticide applicator license grade. The pesticide applicator shall be certified in the category in which the work will be performed.

b. Integrated Pest Management

Integrated Pest Management (IPM) is a pest population management system that uses all suitable control techniques (chemical, biological, cultural, mechanical, or physical) to maintain pest populations at or below tolerable levels. Integrated Pest Management (IPM) techniques shall be used to the maximum extent practicable.

2. SUBMITTAL REQUIREMENTS

a. Business License

If a commercial applicator will apply pesticides (i.e. the Lessee does NOT have a private applicators license), the commercial applicator shall provide proof of a business license (as a pesticide application business) as required by the State of Virginia. A copy of this business license shall be forwarded to the Navy representative designated as responsible for oversight of the outlease before the pesticide application(s) are performed.

b. Certificate of Insurance

If a commercial applicator will apply pesticide(s), proof of Insurance as a pesticide applicator business shall be forwarded to the Navy representative designated as responsible for oversight of the outlease before the pesticide application(s) are performed.

c. Pesticide Approval

All pesticides must be approved within 30 days after award of lease. A list of the pesticide(s) proposed for use (by either a private and/or commercial applicator) shall be submitted to the designated Navy representative for approval before the pesticide application(s) are performed. The "Pesticides Approval Submission" form (attachment 2) shall be used. Any changes in pesticides to be used shall have prior approval before their use (Submittal for changes shall be on the pesticide approval form provided).

d. Pesticide Labels and Material Safety Data Sheets

Attached to the Pesticide Approval Form, submit legible copies of the pesticide label and material safety data sheets for each pesticide proposed for use.

e. Commercial Grade Pesticide Applicators Certificate(s) In the Appropriate Categories

Attached to the Pesticide Approval form, submit legible copies of State pesticide applicators certificate(s) in the appropriate applicator categories (the category in which the work will be performed).

f. Pesticide Label/MSDS Reference Book

The Lessee shall maintain a reference book of approved pesticide labels and Material Safety Data Sheets (MSDS), and have it readily available **ON-SITE** (in the truck or other vehicle that was used to arrive on site) whenever any pesticides are on site. The reference book shall be readily available for inspection.

g. Reporting Pesticide and Fertilizer Use

The Lessee shall report all pesticide and/or fertilizer use on the Pesticide Application Record Keeping Form (attached to the contract) and forward the form to the Navy representative designated as responsible for oversight of the outlease.

3. PESTICIDE APPLICATION AND CONTROL OPERATIONS

All pesticides must be used in accordance with Federal, state, local, and installation publications, and any requirements identified in attachments. All pesticides shall be procured, processed, handled, and applied in strict accordance with the manufacturer's label. All pesticides shall be registered with the U.S. Environmental Protection Agency and the cognizant State pesticide regulatory agency.

a. Pesticide Preparation and Use.

During preparation, and/or application of pesticides, the Contractor shall:

(1) Always store pesticides in original containers having EPA-registered labels or in containers meeting EPA label requirements; and
(2) Use application equipment appropriate for the nature and size of work, that is clean, calibrated, and in proper operational condition; and
(3) Never leave equipment unattended during filling and application/usage; and
(4) Use back flow preventers on hoses when connected to water outlets in filling operations, and
(5) Inspect equipment (per manufacturer's label) and the area during application to insure proper and safe treatment; and
(6) Keep safety equipment and spill kit available on site when pesticides are present.

b. Pesticide Mixing.

The Lessee shall mix pesticides on a portable containment device. The device shall be capable of containing the maximum amount of pesticide and diluent being mixed at one time.

c. Storage of Other Pesticides.

No other pesticides shall be stored overnight at the site. Any pesticide container and/or application tank shall be secured against theft and vandalism when the site is unattended during the day. Only those pesticides expected to be used that day should be imported to the site.

d. Pesticide Disposal.

The Lessee shall not dispose of any pesticides, pesticide containers, pesticide residue, pesticide rinse water, or any pesticide contaminated articles on government property.

e. Spill Management.

A pesticide spill containment kit shall be available on site if pesticides are being applied. The kit shall contain (at least) absorbent material capable of absorbing at least 25 gallons of liquid, rubber boots, rubber gloves, safety goggles, and a shovel.

f. **Safety Equipment.**

When pesticides are being mixed or applied, a portable eyewash station and at least 2 gallons of fresh water (in plastic jugs marked “emergency wash water”) shall be within 25 feet of the operation.

g. Pesticide Spills and Decontamination.

The Lessee is responsible for properly cleaning, decontaminating, and reporting pesticide spills to the Navy representative.

h. Pesticide Dispersal Equipment Markings.

All pesticide dispersal equipment shall be clearly and plainly marked with "DANGER"..."PESTICIDES".

4. SPECIFIC PESTICIDE USE PROVISIONS

a. The Lessee shall coordinate, 72 hours in advance, with the Navy representative designated as responsible for oversight of the outlease that pesticide(s) and/or application equipment will be brought onto the site.

b. All application of pesticides shall conform to the Worker Protection Standards CFR 170 as amended.

c. All pesticide applications shall conform to all label and supplemental labeling of the pesticide product.

d. All applicable laws and regulations regarding notification and posting shall be strictly adhered to.

5. HERBICIDE REQUIREMENTS

Only glyphosate herbicides may be used for bare ground vegetation management. Paraquat use is not permitted. Simizine or any simizine family herbicide use is not permitted. Selective herbicides may be approved for use. If lessee is growing cotton specialty defoliant herbicides will be authorized through the normal approval process.

SOIL AND WATER CONSERVATION PLAN

Naval Auxiliary Landing Field
Fentress
Chesapeake, Virginia

Unit-F-1
Farmable Area: 339.0 Acres
SIF: 12.1 Acres
November 12, 2014

GENERAL INFORMATION

This Plan was prepared by **Mr. Emmett Carawan the Natural Resources Specialist at the Environmental Planning and Conservation Division, Naval Facilities Engineering Command (NAVFAC MID-ATLANTIC), Building Z-144, Room 214 Virginia Avenue, Norfolk, VA 23511 phone 757-341-0495.** Mr. Carawan will be the Government Representative of the Navy in administering the Soil and Water Conservation Plan.

The Real Estate Contracting Officer, Mr. Paul Moomaw, Hampton Roads IPT, Naval Facilities Engineering Command (NAVFAC MID-ATLANTIC) Norfolk, Virginia Telephone 757-341-1509 will be the Government Representative for the Navy in administering the lease.

Daily operational conflicts or problems can be resolved by calling the **NASO Natural Resources Specialist at 757-433-3461 or the NAVFAC MID-ATLANTIC Natural Resources Specialist at 757-341-0495.**

The unit of land available for agriculture leasing is located at Naval Auxiliary Landing Field Fentress, Chesapeake, Virginia. The general location is shown on Attachment "1".

The gross area of 339.0 acres includes access roads and drainage ditches. Net farmable area will be less than the 339.0 acres. Also included in this lease is a 12.1acre spray irrigation field (SIF). The unit is located on the Northeastern side of the Station, and is accessed off of Fentress Airfield Road and Lockheed Road (Attachment 2).

Spray Irrigation Field Provisions

The Spray Irrigation Field (SIF) consists of 12.1 acres and is identified as SIF. The 12.1 acres is a wastewater irrigation area regulated under Virginia Department of Environmental Quality (DEQ) permit VPA01003. The Lessee may crop this area for the production hay / silage in conformance to the permit requirements.

If the Lessee chooses not to place the SIF in hay / silage production, the Lessee must mow, rake and remove cuttings in accordance with the permit (approximately six times per year). **Bids should reflect the cost of this mowing, raking and cutting removal.**

All conservation practices including liming, fertilization, and development of an annual crop plan shall be performed in accordance with permit no VPA01003 and the Nutrient Management Plan. The Station's representative will notify the Lessee of irrigation cycles or mowing requirements.

The Lessee must submit an annual report to the NASO Natural Resources Specialist and NAVFAC MID-ATLANTIC Natural Resources Specialist by January 15 of each year. This report will include a summary of agronomic practices which have occurred during the preceding growing season, including (but not limited to):

1. The timing and number of cuttings.
2. An estimate of total crop yield (tons / acre).
3. Lime and fertilizer additions.
4. Pesticide / herbicide usage.
5. Reseeding.

No hunting is permitted in the SIF area.
The DEQ's, Inspector may inspect the SIF at any time.

Special Provisions

Current military use of the land is to provide buffer and peripheral areas to perform military air operations within an effective compatible use zone. **There is a strict prohibition of electronic interference with communications.**

The station requires that the lessee coordinate at least 72 hours prior to bringing equipment and/or chemicals onto the installation, with the NAS Oceana's Natural Resources Specialist at 757-433-3461.

In the event that the lessee experiences a delay or problem caused by the Navy, they must immediately notify the NAS Oceana Natural Resources Specialist to resolve the problem at 757-433-3461.

Hunting on the leased lands is permitted. The Station is responsible for coordinating the programs with the lessee. Excessive damage caused by these activities must be reported immediately to the NAS Oceana Natural Resources Specialist at 757-433-3461.

Farming operations are to be restricted to the production of corn, soybeans, small grains, cotton, or hay/silage crops. When agreeing to the terms and conditions of the agricultural lease, special attention shall be paid to crop selection and its underlying impacts to the Bird/Animal Strike Hazard (BASH) program.

The Commanding Officer of NAS Oceana requests that crop location and planting schedules be provided to the NAS Oceana Natural Resources Specialist 757-433-3461 and the AODO at Oceana_aodo_kntu@navy.mil **or 757 433-2161/3 to help mitigate hazards at least a few days in advance. These schedules should be provided within 72 hours of field preparation and planting each season.** Tilling of soil prior to planting should be conducted at night whenever possible to reduce the affinity of exposed ground and food sources for birds. When harvesting crops, spillage should be minimized and cleaned up promptly.

No deviation in land use or drainage improvements, as outlined in this plan, shall be permitted without prior written consent of the Real Estate Contracting Officer.

Under Article 10B of the Lease General Provisions, cultivation of federally subsidized crops on the leased land is prohibited.

The Lessee is required to park and load all farm equipment and vehicles within leased property boundaries.

All equipment should be clean (no visible soil, plant or animal material) prior to arrival on the installation to minimize and avoid the spread of non-native invasive species. It is recommended that all equipment after utilization on the installation also be cleaned prior to utilization on other properties. If equipment is being utilized on one Navy installation and is transported to another Navy installation it must be cleaned prior to use on the other Navy property.

Cultural Resources

A "Phase I" archaeological survey has been partially completed at NALF Fentress. This survey has identified prehistoric and historic sites on the Station; many of these sites are found within the agricultural units. To alleviate any potential destruction of these sites the State Historic Preservation Officer (SHPO) recommends that the only ground-disturbing activity permitted will be the ongoing agricultural cultivation practices and be limited to the current plow zone. If the lessee anticipates a problem which would cause him to deviate from his current cultivation practices he shall notify Mr. Emmett Carawan, Government Representative at NAVFAC MID-ATLANTIC 757-341-0495.

Conservation Inventory

The 339.0 acres are considered a single farming unit. The land is wet and requires drainage. The land capability is Class IIIW for soil type 71 Acredale silt loam. The land capability is Class III when properly drained. Open ditch drainage is required to assure production.

Conservation Practices

All conservation practices shall be performed in accordance with standard specifications of the USDA **Natural Resources Conservation Service (NRCS)**. The Lessee shall utilize the technical services of the local Field Office located at the Municipal Center, Chesapeake, Virginia, in the design, layout, construction, and supervision of the conservation practices performed. All improvements shall become the property of the government at the expiration of the lease.

Soil fertility shall be maintained at the optimum level for the crops that are to be grown. USDA NRCS should be notified if nutrient deficiencies arise and resolved in accordance with their recommendations. USDA NRCS or the Virginia Tech Extension Service can assist in making fertilizer and lime recommendations that will be sufficient to maintain adequate pH levels and soil fertility.

Permission is granted to the lessee to take advantage of Hampton Roads Sanitation Division's Bio Solid disposal program. Coordination of this program shall be made, **30 days prior** to application with the NAVFAC MID-ATLANTIC and NAS Oceana Natural Resource Specialists.

Herbicides/Pesticides

Pesticides to be used by the Lessee must be coordinated and approved by Mr. Jack Markham (757-322-4882) at NAVFAC Atlantic's Applied Biology Section, within 30 days of award of the lease. Pesticide requirements are found in Attachments 3,4 and 5 of this Plan. The pesticide approval submission form must include product labels and Material Safety Data Sheets (MSDSs) when submitted to NAVFAC Atlantic's Applied Biology Section, (Address and phone number is located in the Government Offices section of this Soil & Water Conservation Plan). Actual application of herbicides / pesticides shall be reported quarterly on the Pesticide Application Record keeping form. The quarterly report shall be submitted to Mr. Markham, no later than 15 April, 15 July, 15 October, and 15 December, of each crop year.

Application of pesticides will conform to the Environmental Protection Agencies "Worker protection standards" as stated on the Pesticide label.

Mixing of pesticides is allowed on site if the lessee uses spill containment equipment. Storing of pesticides on site is not allowed.

The Lessee shall report all farm chemical spills, leaks or releases to NAS Oceana via the emergency coordination number at 757-433-9111 and to the NAS Oceana's Natural Resources Specialist at 757-433-3461.

If the Lessee finds it necessary to apply pesticides by aerial application of pesticides, the Lessee must have approval of NAVFAC Atlantics Applied Biologist at 757-322-4882 and the NAS Oceana's Natural Resources Specialist at 757-433-3461, 72 hours in advance of the anticipated spray application. This approval / notification must be direct contact and not voice mail message. Notification shall include POC for the Crop Dusting pilot, date, time and location of the spray application.

The pilot of the crop dusting aircraft shall contact the NAS Oceana Air Operations Duty Officer (757-433-2163) prior to takeoff to update ETA and location, and coordinate with Air Traffic Control (757-433-3471).

The Pilot shall contact the NTU Tower prior to entering the Class Delta airspace and receive clearance to begin the spray operations.

The Air Operations Officer will determine whether or not to cancel or reschedule the operation.

The control and/or eradication of Federal and State listed noxious weeds, particularly **Johnsongrass,** *Sorghum haleplense,* is required. Any pesticides and herbicides used for insect, disease, or weed control shall be approved and registered by the Environmental Protection Agency for the crops being grown.

The lessee is responsible for removal of all debris, refuse, garbage, pesticide containers, and unused residue of farm operations from the leased area and the Installation. The Lessee is encouraged to use the City of Chesapeake's pesticide container recycling program (see back of pesticide form for information).

Additional requirements for pesticide use on the property are provided in Attachment 3, Pesticide Mixing, Storage and Use on Navy-Owned Property Leased for Agricultural Purposes.

Conservation Requirements (SIF)

Non-Reimbursable Work
Soil and water conservation goals on this property include control of surface run-off and concurrent reduction in soil erosion, sedimentation and nutrient loading. The following measures will achieve these goals and are the responsibility of the lessee:

1. Since soil and wastewater test results vary over time, Soil tests must be conducted at least twice during the term of the lease to insure maximum economic benefits of the nutrient/wastewater applications.

2. Control and/or eradication of state regulated noxious weeds will be required, especially Johnsongrass.

3. The lessee will be responsible for removal of all debris, refuse, garbage, pesticide containers, and unused residue of farm operations from the leased area and the station.

4. The lessee is responsible for repairing damage incurred by him or his employees to the sprinkler system. If lessee finds that the sprinkler system has malfunctioned or is damaged, He is to report damage immediately to the crash control desk at NALF Fentress 757-433-2259.

This plan addresses the spray irrigation of treated, primarily, domestic wastewater generated at NALF Fentress. Approximately 6000 gallons of treated wastewater is produced per day or 2,190,000 gallons per year. Treatment consists of a raw sewage lagoon with a capacity for 462,000 gallons, a 282,000 gallon polishing pond and a storage lagoon with a capacity of 550,000 gallons providing storage for approximately 2.8 months. The effluent is chlorinated and then pumped to the irrigation field. This field is composed of irrigation zones, a total of 6 acres with buffer zones established. The fields are approved by the DEQ to be planted in the following crops:

1. Small grains, corn, soybeans

2. Orchard or fescue grass for hay or green chop.

To achieve long term economic yields and reduce environmental risks, three major considerations are required:

1. Control the nutrient application rates carefully to match expected uptake of nutrients by the planted crops. .

2. Be aware of environmentally sensitive areas when making nutrient applications.

3. Control the timing of nutrient applications to maximize crop uptake.

Conservation Requirements

Non-Reimbursable work

Soil and water conservation goals on this property include control of surface run-off and concurrent reduction in soil erosion, sedimentation and nutrient loading. The following measures will achieve these goals and are the responsibility of the lessee:

1. A conservation cropping system shall be established to include minimum tillage.

2. Maintenance of ditches and culverts is the responsibility of the lessee (subject to inspection at any time during the term of the lease) and shall include the following:

a. Mowing of ditch banks is required every other year of the lease. Mowing must be completed by 31 December. If this poses a problem for the lessee, he should notify the NAVFAC MID-ATLANTIC Natural Resources Specialist at 757-341-0495.

b. **No-tilled strips/Vegetation buffer strips, a minimum of three (3) feet wide, shall be maintained along edges of ditch banks to prevent soil sloughing into ditches, and to serve as erosion control filter strips. Width of no-tilled strips will be strictly enforced. Width of no-tilled strips are measured from the top of the ditch bank and away from the ditch, towards the crop. Lessee shall avoid " scalping" ditch banks to avoid eroding ditch banks.**

c. Boundary ditches are considered lease area to the ditch center-line.

3. Any acreage not cropped shall be seeded to a cover crop of hay or silage for protection and erosion control. If land is left fallow crop residue shall be left on the soil surface as a winter cover to provide mulch and soil improvement until seedbed preparation the following spring. Minimum tillage practices are encouraged.

Yearly inspections by the Government Representatives of the Navy in administering the Soil and Water Conservation Plan will ensure compliance with these conditions and other environmental requirements.

Reimbursable Work

During the term of this lease, it is anticipated that reimbursable work will be requested. The reimbursable work will be based on a scope of work furnished by the Government. The Lessee will be requested to provide an estimate for the work based on the scope of work. If the Lessee decides not to do the work himself, he may contract with a third party to do so (to be approved by the Real Estate Contracting Officer), or inform the Government that he is not capable of performing the work.

If the proposal is acceptable the Real Estate Contracting Officer will either; (1) issue a letter of authorization to begin work or (2) will forward a lease modification to the lease authorizing the work. Work should not begin until the letter of authorization or lease modification has been received.

When work is completed, a joint inspection will be performed by the Lessee and Navy representatives. If the work is complete and acceptable, terms of the letter or modification will be activated (i.e., rent reduction granted).

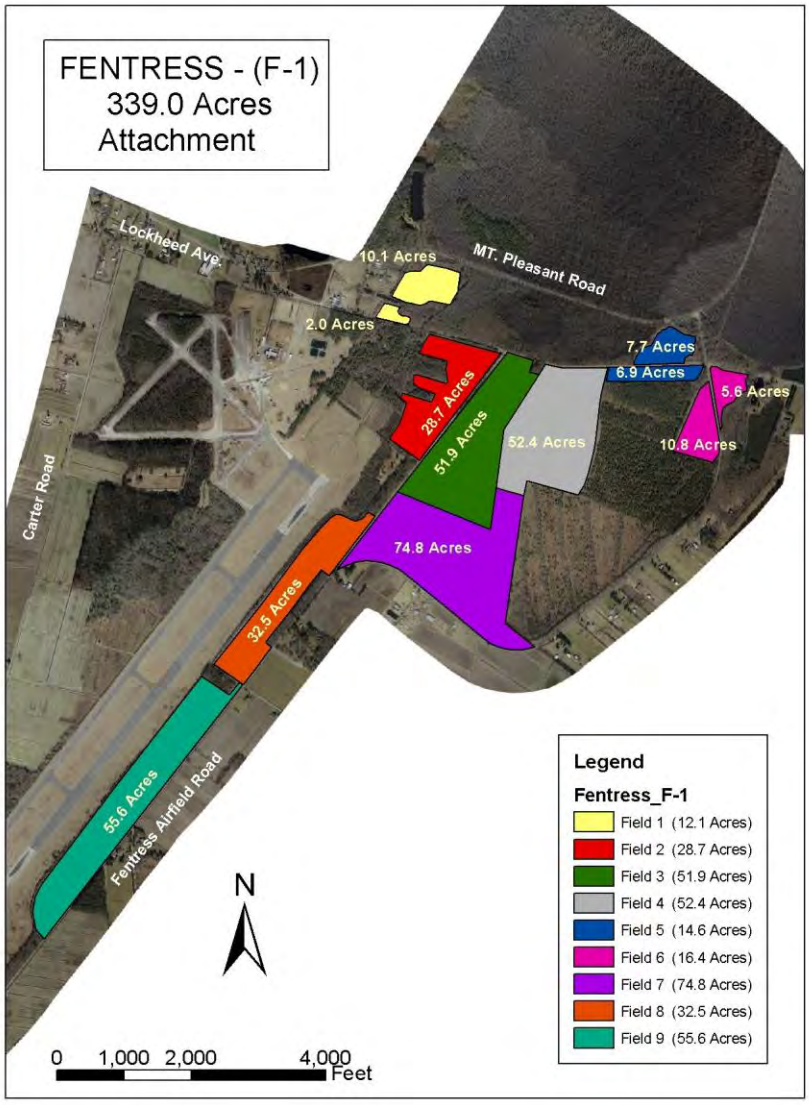
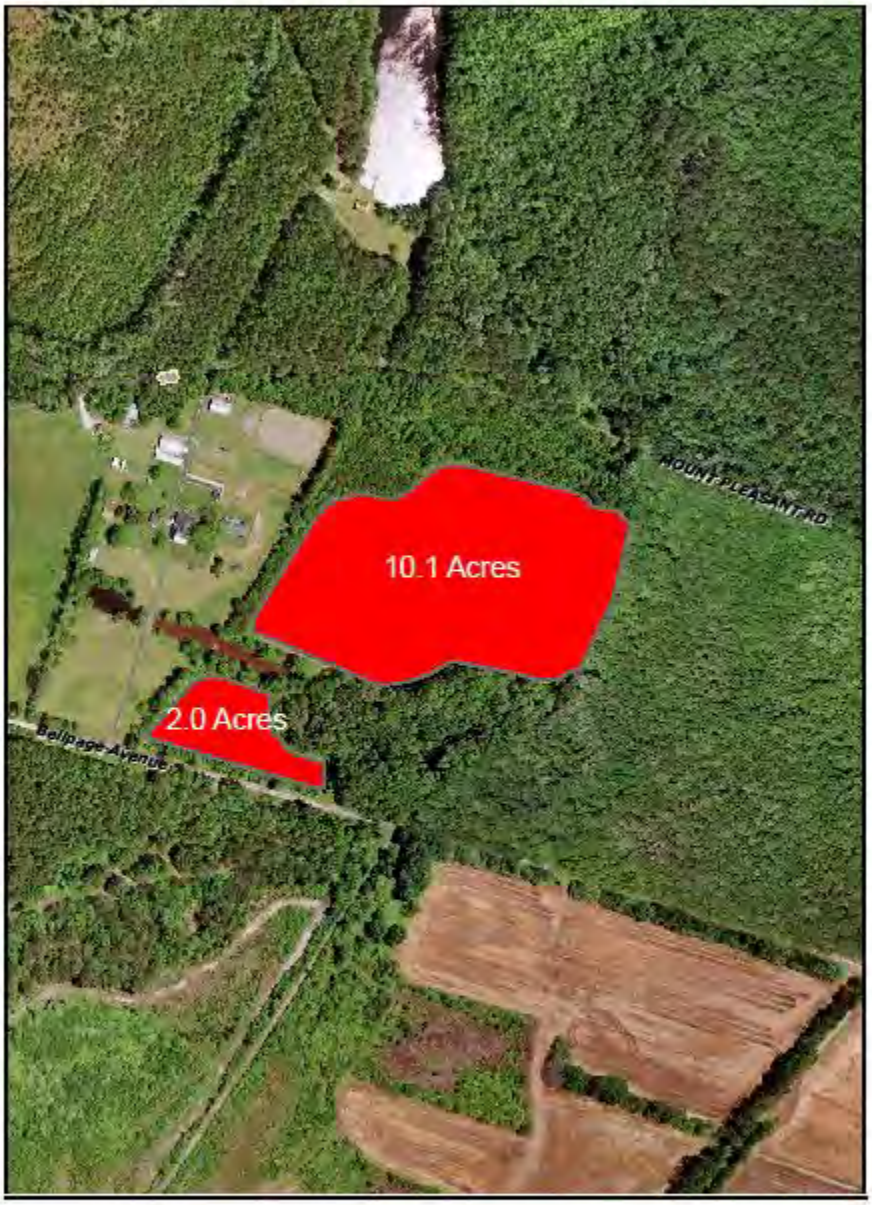
Attachment 1



Attachment 2



ATTACHMENT 3

Pesticide Mixing, Storage, and Use
on
Navy-Owned Property
Leased for Agricultural Purposes

1. a. Certified Applicators Requirement

All pesticide applications shall be performed by a State-certified pesticide applicator. Private applicator's licenses are acceptable if the Lessee performs the work. Commercial grade license(s) are required if the Lessee hires (for fee) an application company to apply the pesticide(s). "Registered Technician" status is not considered "Commercial Grade" or "Private" pesticide applicator license grade. The pesticide applicator shall be certified in the category in which the work will be performed.

b. Integrated Pest Management

Integrated Pest Management (IPM) is a pest population management system that uses all suitable control techniques (chemical, biological, cultural, mechanical, or physical) to maintain pest populations at or below tolerable levels. Integrated Pest Management (IPM) techniques shall be used to the maximum extent practicable.

2. SUBMITTAL REQUIREMENTS

a. Business License

If a commercial applicator will apply pesticides (i.e. the Lessee does NOT have a private applicators license), the commercial applicator shall provide proof of a business license (as a pesticide application business) as required by the State of Virginia. A copy of this business license shall be forwarded to the Navy representative designated as responsible for oversight of the outlease before the pesticide application(s) are performed.

b. Certificate of Insurance

If a commercial applicator will apply pesticide(s), proof of Insurance as a pesticide applicator business shall be forwarded to the Navy representative designated as responsible for oversight of the outlease before the pesticide application(s) are performed.

c. Pesticide Approval

All pesticides must be approved within 30 days after award of lease. A list of the pesticide(s) proposed for use (by either a private and/or commercial applicator) shall be submitted to the designated Navy representative for approval before the pesticide application(s) are performed. The "Pesticides Approval Submission" form (attachment 2) shall be used. Any changes in pesticides to be used shall have prior approval before their use (Submittal for changes shall be on the pesticide approval form provided).

d. Pesticide Labels and Material Safety Data Sheets

Attached to the Pesticide Approval Form, submit legible copies of the pesticide label and material safety data sheets for each pesticide proposed for use.

e. Commercial Grade Pesticide Applicators Certificate(s) In the Appropriate Categories

Attached to the Pesticide Approval form, submit legible copies of State pesticide applicators certificate(s) in the appropriate applicator categories (the category in which the work will be performed).

f. Pesticide Label/MSDS Reference Book

The Lessee shall maintain a reference book of approved pesticide labels and Material Safety Data Sheets (MSDS), and have it readily available **ON-SITE** (in the truck or other vehicle that was used to arrive on site) whenever any pesticides are on site. The reference book shall be readily available for inspection.

g. Reporting Pesticide and Fertilizer Use

The Lessee shall report all pesticide and/or fertilizer use on the Pesticide Application Record Keeping Form (attached to the contract) and forward the form to the Navy representative designated as responsible for oversight of the outlease.

3. PESTICIDE APPLICATION AND CONTROL OPERATIONS

All pesticides must be used in accordance with Federal, state, local, and installation publications, and any requirements identified in attachments. All pesticides shall be procured, processed, handled, and applied in strict accordance with the manufacturer's label. All pesticides shall be registered with the U.S. Environmental Protection Agency and the cognizant State pesticide regulatory agency.

a. Pesticide Preparation and Use.

During preparation, and/or application of pesticides, the Contractor shall:

(1) Always store pesticides in original containers having EPA-registered labels or in containers meeting EPA label requirements; and
(2) Use application equipment appropriate for the nature and size of work, that is clean, calibrated, and in proper operational condition; and
(3) Never leave equipment unattended during filling and application/usage; and
(4) Use back flow preventers on hoses when connected to water outlets in filling operations, and
(5) Inspect equipment (per manufacturer's label) and the area during application to insure proper and safe treatment; and
(6) Keep safety equipment and spill kit available on site when pesticides are present.

b. Pesticide Mixing.

The Lessee shall mix pesticides on a portable containment device. The device shall be capable of containing the maximum amount of pesticide and diluents being mixed at one time.

c. Storage of Other Pesticides.

No other pesticides shall be stored overnight at the site. Any pesticide container and/or application tank shall be secured against theft and vandalism when the site is unattended during the day. Only those pesticides expected to be used that day should be imported to the site.

d. Pesticide Disposal.

The Lessee shall not dispose of any pesticides, pesticide containers, pesticide residue, pesticide rinse water, or any pesticide contaminated articles on government property.

e. Spill Management.

A pesticide spill containment kit shall be available on site if pesticides are being applied. The kit shall contain (at least) absorbent material capable of absorbing at least 25 gallons of liquid, rubber boots, rubber gloves, safety goggles, and a shovel.

f. **Safety Equipment.**

When pesticides are being mixed or applied, a portable eyewash station and at least 2 gallons of fresh water (in plastic jugs marked “emergency wash water”) shall be within 25 feet of the operation.

g. Pesticide Spills and Decontamination.

The Lessee is responsible for properly cleaning, decontaminating, and reporting pesticide spills to the Navy representative.

h. Pesticide Dispersal Equipment Markings.

All pesticide dispersal equipment shall be clearly and plainly marked with "DANGER"..."PESTICIDES".

4. SPECIFIC PESTICIDE USE PROVISIONS

a. The Lessee shall coordinate, 72 hours in advance, with the Navy representative designated as responsible for oversight of the outlease that pesticide(s) and/or application equipment will be brought onto the site.

b. All application of pesticides shall conform to the Worker Protection Standards CFR 170 as amended.

c. All pesticide applications shall conform to all label and supplemental labeling of the pesticide product.

d. All applicable laws and regulations regarding notification and posting shall be strictly adhered to.

5. HERBICIDE REQUIREMENTS

Only glyphosate herbicides may be used for bare ground vegetation management. Paraquat use is not permitted. Simizine or any simizine family herbicide use is not permitted. Selective herbicides may be approved for use. If lessee is growing cotton specialty defoliant herbicides will be authorized through the normal approval process.

ATTACHMENT "4"

REPORTING REQUIREMENTS

Item # Description	Submit To	Date Required
1. Submit Pesticide Approval Form, Labels and MSDS Sheets 30 days after award of lease	Jack Markham, NAVFAC ATLANTIC Applied Biology	30 days
2. Submit copies of current State Certification for all employees that will be applying pesticides, including those of contract Commercial Applicators 30 days after award of lease. Include copies of proof of insurance by Commercial Applicator.	Jack Markham, NAVFAC ATLANTIC Applied Biology	30 days
3. Submit Soil Test and Nutrient Mgt. Plan 90 days after award of lease	Emmett Carawan, NAVFAC MID-ATLANTIC Natural Resources Specialist	90 days
4. Submit Pesticide Application Reporting Form (attachment 6) beginning April 1 of lease year continuing quarterly for the life of the lease	Jack Markham, NAVFAC ATLANTIC Applied Biology	Quarterly
5. Pesticide Spill Report	Michael Wright, NAS Oceana Natural Resource Specialist Emergency Communication Center	Immediately
6. Approval of Aerial Pesticide application	Jack Markham, NAVFAC ATLANTIC Applied Biology, Emmett Carawan, NAVFAC MID-ATLANTIC Natural Resources Specialist Michael Wright, NASO Natural Resources Specialist	72 Hrs prior
7. Annual SIF Activity report	Emmett Carawan, NAVFAC MID-ATLANTIC Natural Resources Specialist Michael Wright, NASO Natural Resources Specialist	JAN/15

Send pesticide approval forms and reports to:
Commander
NAVFAC Atlantic
Attn: Mr. Jack Markham EV51
LRA Bldg A
6506 Hampton Blvd.
Norfolk, Virginia 23508-1278

ATTACHMENT 5

PESTICIDE APPROVAL SUBMISSION
(This list MUST be submitted and approval obtained
prior to initiation of work)

NOTES:

1. *LEGIBLE COPIES OF THE PESTICIDE LABEL AND MATERIAL SAFETY DATA SHEET FOR EACH PESTICIDE LISTED MUST BE ATTACHED.*
2. *IF APPLICABLE, A COPY OF THE STATE OF VIRGINIA LICENSE AS AN APPLICATOR OF PESTICIDES MUST BE ATTACHED.*
3. *IF APPLICABLE, A COPY OF THE STATE OF VIRGINIA COMMERCIAL GRADE CERTIFIED PESTICIDE APPLICATOR'S CERTIFICATE IN THE APPROPRIATE CATEGORY(S) MUST BE ATTACHED.*

PROPOSED PESTICIDE	**EPA REG.#**	**INTENDED USE** (EX: selective weed control, bare ground weed control etc.)	**INTENDED LOCATION** (EX: Area A, between rows, on crop etc.)

Note: Copy this form if you need more pages.

SOIL AND WATER CONSERVATION PLAN

Naval Auxiliary Landing Field
Fentress
Chesapeake, Virginia

Unit-F-2
Farmable Area: 255.5 Acres
November 19, 2014

GENERAL INFORMATION

This Plan was prepared by **Mr. Emmett Carawan the Natural Resources Specialist at the Environmental Planning and Conservation Division, Naval Facilities Engineering Command (NAVFAC MID-ATLANTIC), Building Z-144, Room 214 Virginia Avenue, Norfolk, VA 23511 phone 757-341-0495.** Mr. Carawan will be the Government Representative of the Navy in administering the Soil and Water Conservation Plan.

The Real Estate Contracting Officer, Mr Paul Moomaw, Hampton Roads IPT, Naval Facilities Engineering Command (NAVFAC MID-ATLANTIC) Norfolk, Virginia Telephone -757-341-1509 will be the Government Representative for the Navy in administering the lease.

Daily operational conflicts or problems can be resolved by calling the **NASO Natural Resources Specialist at 757-433-3461 or the NAVFAC MID-ATLANTIC Natural Resources Specialist at 757-341-0495.**

The unit of land available for agriculture leasing is located at Naval Auxiliary Landing Field Fentress, Chesapeake, Virginia. The gross area of approximately 255.5 acres includes access roads and drainage ditches and is made up of two non-contiguous parcels of land. The unit is located on the Southern side of side of the Station, and is accessed off of Fentress Airfield Road and Government Road. A location map is found in Attachment 2.

Special Provisions

Current military use of the land is to provide buffer and peripheral areas to perform military air operations within an effective compatible use zone. **There is a strict prohibition of electronic interference with communications.**

The station requires that the lessee coordinate at least 72 hours prior to bringing equipment and/or chemicals onto the installation, with the NAS Oceana's Natural Resources Specialist at 757-433-3461.

In the event that the lessee experiences a delay or problem caused by the Navy, they must immediately notify the NAS Oceana Natural Resources Specialist to resolve the problem at 757-433-3461.

Hunting on the leased lands is permitted. The Station is responsible for coordinating the programs with the lessee. Excessive damage caused by these activities must be reported immediately to the NAS Oceana Natural Resources Specialist 757-433-3461.

Farming operations are to be restricted to the production of corn, soybeans, small grains, cotton, or hay/silage crops. When agreeing to the terms and conditions of the agricultural lease, special attention shall be paid to crop selection and its underlying impacts to the Bird/Animal Strike Hazard (BASH) program.

The Commanding Officer of NAS Oceana requests that crop location and planting schedules be provided to the NAS Oceana Natural Resources Specialist 757-433-3461 and the AODO at Oceana_aodo_kntu@navy.mil **or 757 433-2161/3 to help mitigate hazards at least a few days in advance. These schedules should be provided within 72 hours of field preparation and planting each season.** Tilling of soil prior to planting should be conducted at night whenever possible to reduce the affinity of exposed ground and food sources for birds. When harvesting crops, spillage should be minimized and cleaned up promptly.

No deviation in land use or drainage improvements, as outlined in this plan, shall be permitted without prior written consent of the **Real Estate Contracting Officer.**

Under Article 10B of the Lease General Provisions, cultivation of federally subsidized crops on the leased land is prohibited.

The Lessee is required to park and load all farm equipment and vehicles within leased property boundaries.

All equipment should be clean (no visible soil, plant or animal material) prior to arrival on the installation to minimize and avoid the spread of non-native invasive species. It is recommended that all equipment after utilization on the installation also be cleaned prior to utilization on other properties. If equipment is being utilized on one Navy installation and is transported to another Navy installation it must be cleaned prior to use on the other Navy property.

Cultural Resources

A "Phase I" archaeological survey has been partially completed at NALF Fentress. This survey has identified prehistoric and historic sites on the Station; many of these sites are found within the agricultural units. To alleviate any potential destruction of these sites the State Historic Preservation Officer (SHPO) recommends that the only ground-disturbing activity permitted will be the ongoing agricultural cultivation practices and be limited to the current plow zone. If the lessee anticipates a problem which would cause him to deviate from his current cultivation practices he shall notify Mr. Emmett Carawan, Government Representative at NAVFAC MID-ATLANTIC 757-341-0495.

Conservation Inventory

The 255.5 acres is considered a single farming unit. The land is wet and requires drainage. The land capability is Class IIIW for soil type 71, Acredale silt loam. The land capability is Class III when properly drained. Open ditch drainage is required to assure production.

Conservation Practices

All conservation practices shall be performed in accordance with standard specifications of the USDA **Natural Resources Conservation Service (NRCS)**. The Lessee shall utilize the technical services of the local Field Office located at the Municipal Center, Chesapeake, Virginia, in the design, layout, construction, and supervision of the conservation practices performed. All improvements shall become the property of the government at the expiration of the lease.

Soil fertility shall be maintained at the optimum level for the crops that are to be grown. USDA NRCS should be notified if nutrient deficiencies arise and resolved in accordance with their recommendations. USDA NRCS or the Virginia Tech Extension Service can assist in making fertilizer and lime recommendations that will be sufficient to maintain adequate pH levels and soil fertility.

Permission is granted to the lessee to take advantage of Hampton Roads Sanitation Division's pasteurized sludge disposal program. Co-ordination of this program shall be made, **30 days prior** to application with the NAVFAC MID-ATLANTIC and NAS Oceana Natural Resource Specialists.

Herbicides/Pesticides

Pesticides to be used by the Lessee must be coordinated and approved by Mr. Jack Markham 757-322-4882 at NAVFAC Atlantic's Applied Biology Section, within 30 days of award of the lease. Pesticide requirements are found in Attachments 3, 4 and 5 of this Plan. The pesticide approval submission form must include product labels and Material Safety Data Sheets (MSDSs) when submitted to NAVFAC

Atlantic's Applied Biology Section, (Address and phone number is located in the Government Offices section of this Soil & Water Conservation Plan). Actual application of herbicides / pesticides shall be reported quarterly on the Pesticide Application Record keeping form. The quarterly report shall be submitted to Mr. Markham, no later than 15 April, 15 July, 15 October, and 15 December, of each crop year.

Application of pesticides will conform to the Environmental Protection Agencies "Worker protection standards" as stated on the Pesticide label.

Mixing of pesticides is allowed on site if the lessee uses spill containment equipment. Storing of pesticides on site is not allowed.

The Lessee shall report all farm chemical spills, leaks or releases to NAS Oceana via the emergency coordination number at 757-433-3911 and to the NAS Oceana's Natural Resources Specialist at 757-433-3461.

If the Lessee finds it necessary to apply pesticides by aerial application of pesticides, the Lessee must have approval of NAVFAC Atlantics Applied Biologist at 757-322-4882 and the NAS Oceana's Natural Resources Specialist at 757-433-3461, 72 hours in advance of the anticipated spray application. This approval / notification must be direct contact and not voice mail message. Notification shall include POC for the Crop Dusting pilot, date, time and location of the spray application.

The pilot of the crop dusting aircraft shall contact the NAS Oceana Air Operations Duty Officer (757-433-2163) prior to takeoff to update ETA and location, and coordinate with Air Traffic Control (757-433-3471).

The Pilot shall contact the NTU Tower prior to entering the Class Delta airspace and receive clearance to begin the spray operations.

The Air Operations Officer will determine whether or not to cancel or reschedule the operation.

The control and/or eradication of Federal and State listed noxious weeds, particularly **Johnsongrass,** *Sorghum haleplense,* is required. Any pesticides and herbicides used for insect, disease, or weed control shall be approved and registered by the Environmental Protection Agency for the crops being grown.

The lessee is responsible for removal of all debris, refuse, garbage, pesticide containers, and unused residue of farm operations from the leased area and the Installation. The Lessee is encouraged to use the City of Chesapeake's pesticide container recycling program (see back of pesticide form for information).

Additional requirements for pesticide use on the property are provided in Attachment 3, Pesticide Mixing, Storage and Use on Navy-Owned Property Leased for Agricultural Purposes.

Conservation Requirements

Non-Reimbursable work

Soil and water conservation goals on this property include control of surface run-off and concurrent reduction in soil erosion, sedimentation and nutrient loading. The following measures will achieve these goals and are the responsibility of the lessee:

1. A conservation cropping system shall be established to include minimum tillage.

2. Maintenance of ditches and culverts is the responsibility of the lessee (subject to inspection at any time during the term of the lease) and shall include the following:

a. Mowing of ditch banks is required every other year of the lease. Mowing must be completed by 31 December. If this poses a problem for the lessee, he should notify the NAVFAC MID-ATLANTIC Natural Resources Specialist at 757-341-0495.

b. **No-tilled strips/Vegetation buffer strips, a minimum of three (3) feet wide, shall be maintained along edges of ditch banks to prevent soil sloughing into ditches, and to serve as erosion control filter strips. Width of no-tilled strips will be strictly enforced. Width of no-tilled strips are measured from the top of the ditch bank and away from the ditch, towards the crop. Lessee shall avoid " scalping" ditch banks to avoid eroding ditch banks.**

c. Boundary ditches are considered lease area to the ditch center-line.

3. Any acreage not cropped shall be seeded to a cover crop of hay or silage for protection and erosion control. If land is left fallow crop residue shall be left on the soil surface as a winter cover to provide mulch and soil improvement until seedbed preparation the following spring. Minimum tillage practices are encouraged.

Yearly inspections by the Government Representatives of the Navy in administering the Soil and Water Conservation Plan will ensure compliance with these conditions and other environmental requirements.

Reimbursable Work

During the term of this lease, it is anticipated that reimbursable work will be requested. The reimbursable work will be based on a scope of work furnished by the Government. The Lessee will be requested to provide an estimate for the work based on the scope of work. If the Lessee decides not to do the work himself, he may contract with a third party to do so (to be approved by the Real Estate Contracting Officer), or inform the Government that he is not capable of performing the work.

If the proposal is acceptable the Real Estate Contracting Officer will either; (1) issue a letter of authorization to begin work or (2) will forward a lease modification to the lease authorizing the work. Work should not begin until the letter of authorization or lease modification has been received.

When the work has been completed, a joint inspection will be performed by the Lessee and Navy representatives. If the work is complete and acceptable, terms of the letter or modification will be activated (i.e., rent reduction granted).

ATTACHMENT 3

Pesticide Mixing, Storage, and Use
on
Navy-Owned Property
Leased for Agricultural Purposes

1. a. Certified Applicators Requirement

All pesticide applications shall be performed by a State-certified pesticide applicator. Private applicator's licenses are acceptable if the Lessee performs the work. Commercial grade license(s) are required if the Lessee hires (for fee) an application company to apply the pesticide(s). "Registered Technician" status is not considered "Commercial Grade" or "Private" pesticide applicator license grade. The pesticide applicator shall be certified in the category in which the work will be performed.

b. Integrated Pest Management

Integrated Pest Management (IPM) is a pest population management system that uses all suitable control techniques (chemical, biological, cultural, mechanical, or physical) to maintain pest populations at or below tolerable levels. Integrated Pest Management (IPM) techniques shall be used to the maximum extent practicable.

2. SUBMITTAL REQUIREMENTS

a. Business License

If a commercial applicator will apply pesticides (i.e. the Lessee does NOT have a private applicators license), the commercial applicator shall provide proof of a business license (as a pesticide application business) as required by the State of Virginia. A copy of this business license shall be forwarded to the Navy representative designated as responsible for oversight of the outlease before the pesticide application(s) are performed.

b. Certificate of Insurance

If a commercial applicator will apply pesticide(s), proof of Insurance as a pesticide applicator business shall be forwarded to the Navy representative designated as responsible for oversight of the outlease before the pesticide application(s) are performed.

c. Pesticide Approval

All pesticides must be approved within 30 days after award of lease. A list of the pesticide(s) proposed for use (by either a private and/or commercial applicator) shall be submitted to the designated Navy representative for approval before the pesticide application(s) are performed. The "Pesticides Approval Submission" form (attachment 2) shall be used. Any changes in pesticides to be used shall have prior approval before their use (Submittal for changes shall be on the pesticide approval form provided).

d. Pesticide Labels and Material Safety Data Sheets

Attached to the Pesticide Approval Form, submit legible copies of the pesticide label and material safety data sheets for each pesticide proposed for use.

e. Commercial Grade Pesticide Applicators Certificate(s) In the Appropriate Categories

Attached to the Pesticide Approval form, submit legible copies of State pesticide applicators certificate(s) in the appropriate applicator categories (the category in which the work will be performed).

f. Pesticide Label/MSDS Reference Book

The Lessee shall maintain a reference book of approved pesticide labels and Material Safety Data Sheets (MSDS), and have it readily available **ON-SITE** (in the truck or other vehicle that was used to arrive on site) whenever any pesticides are on site. The reference book shall be readily available for inspection.

g. Reporting Pesticide and Fertilizer Use

The Lessee shall report all pesticide and/or fertilizer use on the Pesticide Application Record Keeping Form (attached to the contract) and forward the form to the Navy representative designated as responsible for oversight of the outlease.

3. PESTICIDE APPLICATION AND CONTROL OPERATIONS

All pesticides must be used in accordance with Federal, state, local, and installation publications, and any requirements identified in attachments. All pesticides shall be procured, processed, handled, and applied in strict accordance with the manufacturer's label. All pesticides shall be registered with the U.S. Environmental Protection Agency and the cognizant State pesticide regulatory agency.

a. Pesticide Preparation and Use.

During preparation, and/or application of pesticides, the Contractor shall:

(1) Always store pesticides in original containers having EPA-registered labels or in containers meeting EPA label requirements; and
(2) Use application equipment appropriate for the nature and size of work, that is clean, calibrated, and in proper operational condition; and
(3) Never leave equipment unattended during filling and application/usage; and
(4) Use back flow preventers on hoses when connected to water outlets in filling operations, and
(5) Inspect equipment (per manufacturer's label) and the area during application to insure proper and safe treatment; and
(6) Keep safety equipment and spill kit available on site when pesticides are present.

b. Pesticide Mixing.

The Lessee shall mix pesticides on a portable containment device. The device shall be capable of containing the maximum amount of pesticide and diluent being mixed at one time.

c. Storage of Other Pesticides.

No other pesticides shall be stored overnight at the site. Any pesticide container and/or application tank shall be secured against theft and vandalism when the site is unattended during the day. Only those pesticides expected to be used that day should be imported to the site.

d. Pesticide Disposal.

The Lessee shall not dispose of any pesticides, pesticide containers, pesticide residue, pesticide rinse water, or any pesticide contaminated articles on government property.

e. Spill Management.

A pesticide spill containment kit shall be available on site if pesticides are being applied. The kit shall contain (at least) absorbent material capable of absorbing at least 25 gallons of liquid, rubber boots, rubber gloves, safety goggles, and a shovel.

f. **Safety Equipment.**

When pesticides are being mixed or applied, a portable eyewash station and at least 2 gallons of fresh water (in plastic jugs marked “emergency wash water”) shall be within 25 feet of the operation.

g. Pesticide Spills and Decontamination.

The Lessee is responsible for properly cleaning, decontaminating, and reporting pesticide spills to the Navy representative.

h. Pesticide Dispersal Equipment Markings.

All pesticide dispersal equipment shall be clearly and plainly marked with "DANGER"..."PESTICIDES".

4. SPECIFIC PESTICIDE USE PROVISIONS

a. The Lessee shall coordinate, 72 hours in advance, with the Navy representative designated as responsible for oversight of the outlease that pesticide(s) and/or application equipment will be brought onto the site.
b. All application of pesticides shall conform to the Worker Protection Standards CFR 170 as amended.
c. All pesticide applications shall conform to all label and supplemental labeling of the pesticide product.
d. All applicable laws and regulations regarding notification and posting shall be strictly adhered to.

5. HERBICIDE REQUIREMENTS

Only glyphosate herbicides may be used for bare ground vegetation management. Paraquat use is not permitted. Simizine or any simizine family herbicide use is not permitted. Selective herbicides may be approved for use. If lessee is growing cotton specialty defoliant herbicides will be authorized through the normal approval process.

ATTACHMENT "4"

REPORTING REQUIREMENTS

Item # Description	Submit To	Date Required
1. Submit Pesticide Approval Form, Labels and MSDS Sheets 30 days after award of lease	Jack Markham, NAVFAC ATLANTIC Applied Biology	30 days
2. Submit copies of current State Certification for all employees that will be applying pesticides, including those of contract Commercial Applicators 30 days after award of lease. Include copies of proof of insurance by Commercial Applicator.	Jack Markham, NAVFAC ATLANTIC Applied Biology	30 days
3. Submit Soil Test and Nutrient Mgt. Plan 90 days after award of lease	Emmett Carawan, NAVFAC MID-ATLANTIC Natural Resources Specialist	90 days
4. Submit Pesticide Application Reporting Form (attachment 6) beginning April 1 of lease year continuing quarterly for the life of the lease	Jack Markham, NAVFAC ATLANTIC Applied Biology	Quarterly
5. Pesticide Spill Report	Michael Wright, NAS Oceana Natural Resource Specialist Emergency Communication Center	Immediately
6. Approval of Aerial Pesticide application	Jack Markham, NAVFAC ATLANTIC Applied Biology Emmett Carawan, NAVFAC MID-ATLANTIC Natural Resources Specialist Michael Wright, NASO Natural Resources Specialist	72 Hrs prior

Note: Copy this form if you need more pages.

SOIL AND WATER CONSERVATION PLAN

Naval Auxiliary Landing Field
Fentress
Chesapeake, Virginia

Unit-F-3
Farmable Area: 263.2 Acres
November 12, 2014

GENERAL INFORMATION

This Plan was prepared by **Mr. Emmett Carawan the Natural Resources Specialist at the Environmental Planning and Conservation Division, Naval Facilities Engineering Command (NAVFAC MID-ATLANTIC), Building Z-144, Room 214 Virginia Avenue, Norfolk, VA 23511 phone 757-341-0495.** Mr. Carawan will be the Government Representative of the Navy in administering the Soil and Water Conservation Plan.

The Real Estate Contracting Officer, Mr. Paul Moomaw, Hampton Roads IPT, Naval Facilities Engineering Command (NAVFAC MID-ATLANTIC) Norfolk, Virginia Telephone 757-341-1509 will be the Government Representative for the Navy in administering the lease.

Daily operational conflicts or problems can be resolved by calling the **NASO Natural Resources Specialist at 757-433-3461 or the NAVFAC MID-ATLANTIC Natural Resources Specialist at 757-341-0495.**

The unit of land available for agriculture leasing is located at Naval Auxiliary Landing Field Fentress, Chesapeake, Virginia. The gross area of 263.2 acres includes access roads and drainage ditches. Net farmable area will be less than the 263.2 acres; and is made up of two non-contiguous parcels of land. The unit is located on the western side of side of the Station, and is accessed off of Carter Road and Blue Ridge Road. A location map is found in Attachment "2".

Special Provisions

Current military use of the land is to provide buffer and peripheral areas to perform military air operations within an effective compatible use zone. **There is a strict prohibition of electronic interference with communications.**

The station requires that the lessee coordinate at least 72 hours prior to bringing equipment and/or chemicals onto the installation, with the NAS Oceana's Natural Resources Specialist at 757-433-3461.

In the event that the lessee experiences a delay or problem caused by the Navy, they must immediately notify the NAS Oceana Natural Resources Specialist to resolve the problem at 757- 433-3461.

Hunting on the leased lands is permitted. The Station is responsible for coordinating the programs with the lessee. Excessive damage caused by these activities must be reported immediately to the NAS Oceana Natural Resources Specialist at 757-433-3461.

Farming operations are to be restricted to the production of corn, soybeans, small grains, cotton, or hay/silage crops. When agreeing to the terms and conditions of the agricultural lease, special attention shall be paid to crop selection and its underlying impacts to the Bird/Animal Strike Hazard (BASH) program.

The Commanding Officer of NAS Oceana requests that crop location and planting schedules be provided to the NAS Oceana Natural Resources Specialist 757-433-3461 and the AODO at Oceana_aodo_kntu@navy.mil **or 757 433-2161/3 to help mitigate hazards at least a few days in advance. These schedules should be provided within 72 hours of field preparation and planting each season.** Tilling of soil prior to planting should be conducted at night whenever possible to reduce the affinity of exposed ground and food sources for birds. When harvesting crops, spillage should be minimized and cleaned up promptly.

No deviation in land use or drainage improvements, as outlined in this plan, shall be permitted without prior written consent of the Real Estate Contracting Officer.

Under Article 10B of the Lease General Provisions, cultivation of federally subsidized crops on the leased land is prohibited.

The Lessee is required to park and load all farm equipment and vehicles within leased property boundaries.

All equipment should be clean (no visible soil, plant or animal material) prior to arrival on the installation to minimize and avoid the spread of non-native invasive species. It is recommended that all equipment after utilization on the installation also be cleaned prior to utilization on other properties. If equipment is being utilized on one Navy installation and is transported to another Navy installation it must be cleaned prior to use on the other Navy property.

Cultural Resources

A "Phase I" archaeological survey has been partially completed at NALF Fentress. This survey has identified prehistoric and historic sites on the Station; many of these sites are found within the agricultural units. To alleviate any potential destruction of these sites the State Historic Preservation Officer (SHPO) recommends that the only ground-disturbing activity permitted will be the ongoing agricultural cultivation practices and be limited to the current plow zone. If the lessee anticipates a problem which would cause him to deviate from his current cultivation practices he shall notify Mr. Emmett Carawan, Government Representative at NAVFAC MID-ATLANTIC 757-341-0495.

Conservation Inventory

The 263.2 acres are considered a single farming unit. The land is wet and requires drainage. The land capability is Class IIIW for soil type 71 Acredale silt loam. The land capability is Class III when properly drained. Open ditch drainage is required to assure production.

Conservation Practices

All conservation practices shall be performed in accordance with standard specifications of the USDA **Natural Resources Conservation Service (NRCS)**. The Lessee shall utilize the technical services of the local Field Office located at the Municipal Center, Chesapeake, Virginia, in the design, layout, construction, and supervision of the conservation practices performed. All improvements shall become the property of the government at the expiration of the lease.

Soil fertility shall be maintained at the optimum level for the crops that are to be grown. USDA NRCS should be notified if nutrient deficiencies arise and resolved in accordance with their recommendations. USDA NRCS or the Virginia Tech Extension Service can assist in making fertilizer and lime recommendations that will be sufficient to maintain adequate pH levels and soil fertility.

Permission is granted to the lessee to take advantage of Hampton Roads Sanitation Division's pasteurized sludge disposal program. Co-ordination of this program shall be made, **30 days prior** to application with the NAVFAC MID-ATLANTIC and NAS Oceana Natural Resource Specialists.

Herbicides/Pesticides

Pesticides to be used by the Lessee must be coordinated and approved by Mr. Jack Markham (757-322-4882) at NAVFAC Atlantic's Applied Biology Section, within 30 days of award of the lease. Pesticide requirements are found in Attachments 3, 4 and 5 of this Plan. The pesticide approval submission form must include product labels and Material Safety Data Sheets (MSDSs) when submitted to NAVFAC Atlantic's Applied Biology Section, (Address and phone number is located in the Government Offices

section of this S&W Plan). Actual application of herbicides / pesticides shall be reported quarterly on the Pesticide Application Record keeping form. The quarterly report shall be submitted to Mr. Markham, no later than 15 April, 15 July, 15 October, and 15 December, of each crop year.

Application of pesticides will conform to the Environmental Protection Agencies "Worker protection standards" as stated on the Pesticide label.

Mixing of pesticides is allowed on site if the lessee uses spill containment equipment. Storing of pesticides on site is not allowed.

The Lessee shall report all farm chemical spills, leaks or releases to NAS Oceana via the emergency coordination number at 757-433-9111 and to the NAS Oceana's Natural Resources Specialist at 757-433-3461.

If the Lessee finds it necessary to apply pesticides by aerial application of pesticides, the Lessee must have approval of NAVFAC Atlantics Applied Biologist at 757-322-4882 and the NAS Oceana's Natural Resources Specialist at 757-433-3461, 72 hours in advance of the anticipated spray application. This approval / notification must be direct contact and not voice mail message. Notification shall include POC for the Crop Dusting pilot, date, time and location of the spray application.

The pilot of the crop dusting aircraft shall contact the NAS Oceana Air Operations Duty Officer (757-433-2163) prior to takeoff to update ETA and location, and coordinate with Air Traffic Control (757-433-3471).

The Pilot shall contact the NTU Tower prior to entering the Class Delta airspace and receive clearance to begin the spray operations.

The Air Operations Officer will determine whether or not to cancel or reschedule the operation.

The control and/or eradication of Federal and State listed noxious weeds, particularly **Johnsongrass,** *Sorghum haleplense,* is required. Any pesticides and herbicides used for insect, disease, or weed control shall be approved and registered by the Environmental Protection Agency for the crops being grown. The lessee is responsible for removal of all debris, refuse, garbage, pesticide containers, and unused residue of farm operations from the leased area and the Installation. The Lessee is encouraged to use the City of Chesapeake's pesticide container recycling program (see back of pesticide form for information).

Additional requirements for pesticide use on the property are provided in Attachment 3, Pesticide Mixing, Storage and Use on Navy-Owned Property Leased for Agricultural Purposes.

Conservation Requirements

Non-Reimbursable work

Soil and water conservation goals on this property include control of surface run-off and concurrent reduction in soil erosion, sedimentation and nutrient loading. The following measures will achieve these goals and are the responsibility of the lessee:

1. A conservation cropping system shall be established to include minimum tillage.

2. Maintenance of ditches and culverts is the responsibility of the lessee (subject to inspection at any time during the term of the lease) and shall include the following:

a. Mowing of ditch banks is required every other year of the lease. Mowing must be completed by 31 December. If this poses a problem for the lessee, he should notify the NAVFAC MID-ATLANTIC Natural Resources Specialist at 757-341-0495.

b. **No-tilled strips/Vegetation buffer strips, a minimum of three (3) feet wide, shall be maintained along edges of ditch banks to prevent soil sloughing into ditches, and to serve as erosion control filter strips. Width of no-tilled strips will be strictly enforced. Width of no-tilled strips are measured from the top of the ditch bank and away from the ditch, towards the crop. Lessee shall avoid " scalping" ditch banks to avoid eroding ditch banks.**

c. Boundary ditches are considered lease area to the ditch center-line.

3. Any acreage not cropped shall be seeded to a cover crop of hay or silage for protection and erosion control. If land is left fallow crop residue shall be left on the soil surface as a winter cover to provide mulch and soil improvement until seedbed preparation the following spring. Minimum tillage practices are encouraged.

Yearly inspections by the Government Representatives of the Navy in administering the Soil and Water Conservation Plan will ensure compliance with these conditions and other environmental requirements.

Reimbursable Work

During the term of this lease, it is anticipated that reimbursable work will be requested. The reimbursable work will be based on a scope of work furnished by the Government. The Lessee will be requested to provide an estimate for the work based on the scope of work. If the Lessee decides not to do the work himself, he may contract with a third party to do so (to be approved by the Real Estate Contracting Officer), or inform the Government that he is not capable of performing the work.

If the proposal is acceptable the Real Estate Contracting Officer will either; (1) issue a letter of authorization to begin work or (2) will forward a lease modification to the lease authorizing the work. Work should not begin until the letter of authorization or lease modification has been received.

When work is completed, a joint inspection will be performed by the Lessee and Navy representatives. If the work is complete and acceptable, terms of the letter or modification will be activated (i.e., rent reduction granted).

ATTACHMENT 3

Pesticide Mixing, Storage, and Use
on
Navy-Owned Property
Leased for Agricultural Purposes

1. a. Certified Applicators Requirement

All pesticide applications shall be performed by a State-certified pesticide applicator. Private applicator's licenses are acceptable if the Lessee performs the work. Commercial grade license(s) are required if the Lessee hires (for fee) an application company to apply the pesticide(s). "Registered Technician" status is not considered "Commercial Grade" or "Private" pesticide applicator license grade. The pesticide applicator shall be certified in the category in which the work will be performed.

b. Integrated Pest Management

Integrated Pest Management (IPM) is a pest population management system that uses all suitable control techniques (chemical, biological, cultural, mechanical, or physical) to maintain pest populations at or below tolerable levels. Integrated Pest Management (IPM) techniques shall be used to the maximum extent practicable.

2. SUBMITTAL REQUIREMENTS

a. Business License

If a commercial applicator will apply pesticides (i.e. the Lessee does NOT have a private applicators license), the commercial applicator shall provide proof of a business license (as a pesticide application business) as required by the State of Virginia. A copy of this business license shall be forwarded to the Navy representative designated as responsible for oversight of the outlease before the pesticide application(s) are performed.

b. Certificate of Insurance

If a commercial applicator will apply pesticide(s), proof of Insurance as a pesticide applicator business shall be forwarded to the Navy representative designated as responsible for oversight of the outlease before the pesticide application(s) are performed.

c. Pesticide Approval

All pesticides must be approved within 30 days after award of lease. A list of the pesticide(s) proposed for use (by either a private and/or commercial applicator) shall be submitted to the designated Navy representative for approval before the pesticide application(s) are performed. The "Pesticides Approval Submission" form (attachment 2) shall be used. Any changes in pesticides to be used shall have prior approval before their use (Submittal for changes shall be on the pesticide approval form provided).

d. Pesticide Labels and Material Safety Data Sheets

Attached to the Pesticide Approval Form, submit legible copies of the pesticide label and material safety data sheets for each pesticide proposed for use.

e. Commercial Grade Pesticide Applicators Certificate(s) In the Appropriate Categories

Attached to the Pesticide Approval form, submit legible copies of State pesticide applicators certificate(s) in the appropriate applicator categories (the category in which the work will be performed).

f. Pesticide Label/MSDS Reference Book

The Lessee shall maintain a reference book of approved pesticide labels and Material Safety Data Sheets (MSDS), and have it readily available **ON-SITE** (in the truck or other vehicle that was used to

arrive on site) whenever any pesticides are on site. The reference book shall be readily available for inspection.

g. Reporting Pesticide and Fertilizer Use

The Lessee shall report all pesticide and/or fertilizer use on the Pesticide Application Record Keeping Form (attached to the contract) and forward the form to the Navy representative designated as responsible for oversight of the outlease.

3. PESTICIDE APPLICATION AND CONTROL OPERATIONS

All pesticides must be used in accordance with Federal, state, local, and installation publications and any requirements identified in attachments. All pesticides shall be procured, processed, handled, and applied in strict accordance with the manufacturer's label. All pesticides shall be registered with the U.S. Environmental Protection Agency and the cognizant State pesticide regulatory agency.

a. Pesticide Preparation and Use.

During preparation, and/or application of pesticides, the Contractor shall:

(1) Always store pesticides in original containers having EPA-registered labels or in containers meeting EPA label requirements; and
(2) Use application equipment appropriate for the nature and size of work, that is clean, calibrated, and in proper operational condition; and
(3) Never leave equipment unattended during filling and application/usage; and
(4) Use back flow preventers on hoses when connected to water outlets in filling operations, and
(5) Inspect equipment (per manufacturer's label) and the area during application to insure proper and safe treatment; and
(6) Keep safety equipment and spill kit available on site when pesticides are present.

b. Pesticide Mixing.

The Lessee shall mix pesticides on a portable containment device. The device shall be capable of containing the maximum amount of pesticide and diluent being mixed at one time.

c. Storage of Other Pesticides.

No other pesticides shall be stored overnight at the site. Any pesticide container and/or application tank shall be secured against theft and vandalism when the site is unattended during the day. Only those pesticides expected to be used that day should be imported to the site.

d. Pesticide Disposal.

The Lessee shall not dispose of any pesticides, pesticide containers, pesticide residue, pesticide rinse water, or any pesticide contaminated articles on government property.

e. Spill Management.

A pesticide spill containment kit shall be available on site if pesticides are being applied. The kit shall contain (at least) absorbent material capable of absorbing at least 25 gallons of liquid, rubber boots, rubber gloves, safety goggles, and a shovel.

f. **Safety Equipment.**

When pesticides are being mixed or applied, a portable eyewash station and at least 2 gallons of fresh water (in plastic jugs marked “emergency wash water”) shall be within 25 feet of the operation.

g. Pesticide Spills and Decontamination.

The Lessee is responsible for properly cleaning, decontaminating, and reporting pesticide spills to the Navy representative.

h. Pesticide Dispersal Equipment Markings.

All pesticide dispersal equipment shall be clearly and plainly marked with "DANGER"..."PESTICIDES".

4. SPECIFIC PESTICIDE USE PROVISIONS

a. The Lessee shall coordinate, 72 hours in advance, with the Navy representative designated as responsible for oversight of the outlease that pesticide(s) and/or application equipment will be brought onto the site.

b. All application of pesticides shall conform to the Worker Protection Standards CFR 170 as amended.

c. All pesticide applications shall conform to all label and supplemental labeling of the pesticide product.

d. All applicable laws and regulations regarding notification and posting shall be strictly adhered to.

5. HERBICIDE REQUIREMENTS

Only glyphosate herbicides may be used for bare ground vegetation management. Paraquat use is not permitted. Simizine or any simizine family herbicide use is not permitted. Selective herbicides may be approved for use. If lessee is growing cotton specialty defoliant herbicides will be authorized through the normal approval process.

Enclosure 1. Hazards/Safety: Black Bear

This page intentionally left blank.

Hazards/Safety: Black Bear

- Avoid Contact
- Don't get between an adult and their cub (see a cub look for an adult)
- Don't turn your back on the animal
- Don't run, back away slowly
- Make yourself look big (open wide arms)
- Speak in a loud, authoritative voice (not a scared voice)
- If attacked, fight back (most black bear will back down to resistance)

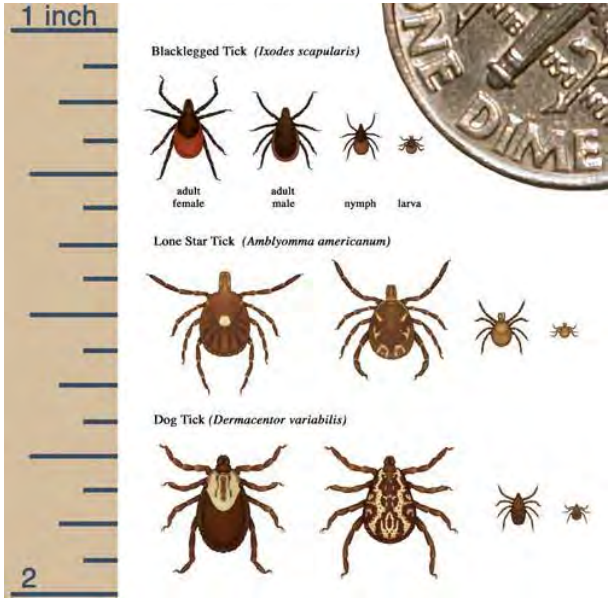
Enclosure 2. Hazards/Safety: Diseases

This page intentionally left blank.

Hazards/Safety: Diseases

- Lyme's Disease
- West Nile Virus
- Equine Encephalitis
- Rabies
- Distemper



Protect yourself from mosquito-born illnesses: When working or playing outdoors, utilize Mosquito repellents; Cover as much of your body as possible with clothing; Reduce the amount of standing water that may be supporting breeding populations of mosquitoes.

Protect yourself from tick-born illnesses: When working or playing outdoors, utilize Tick repellents (spray all clothing, including hats); Cover as much of your body as possible with clothing; Tuck your pant legs into your boots and Tuck your shirt into your pants; Utilize duct tape around your pant bottoms and boots, your waist line, and your shirt sleeve arm openings (to seal potential openings for ticks to get to our skin); Wear a hat and tuck your hair into the hat.

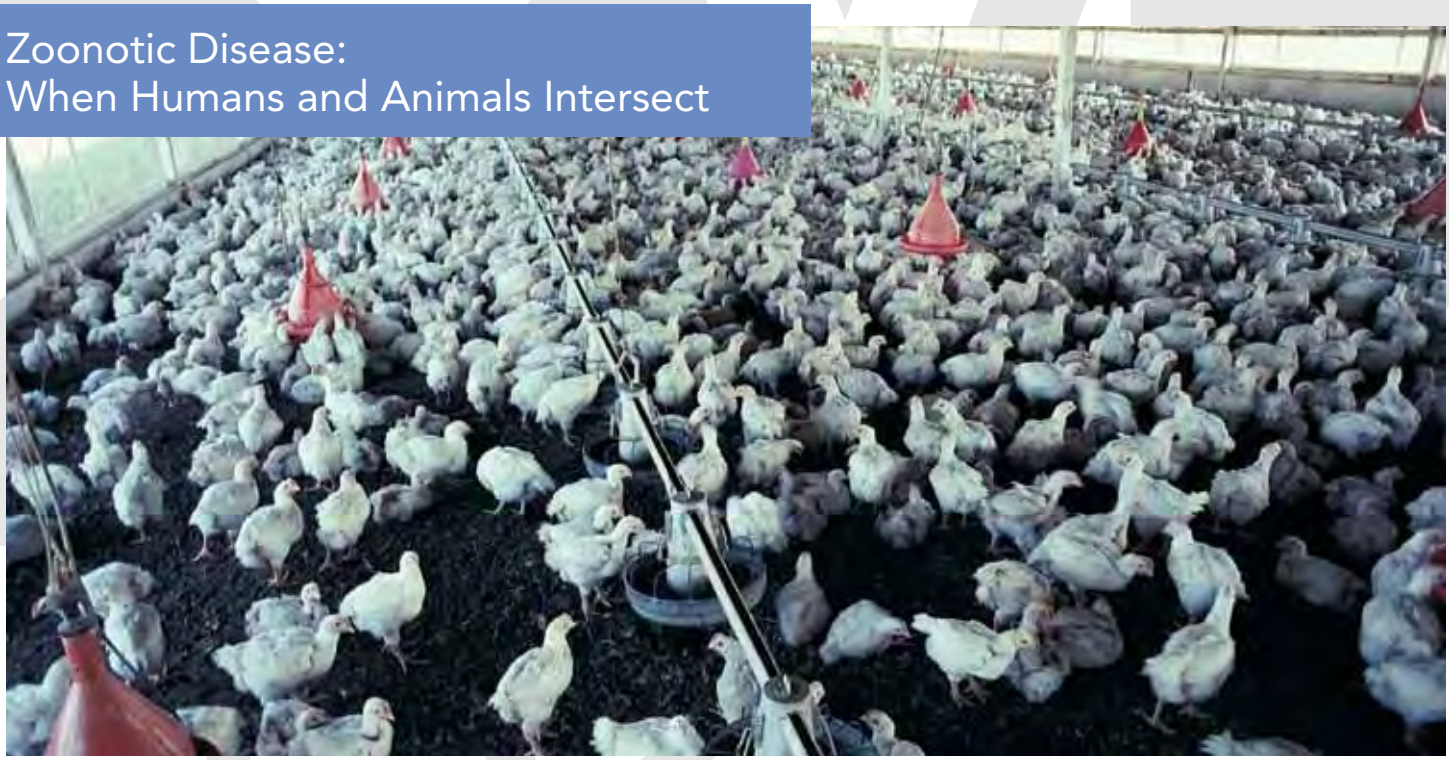
Protect yourself from Rabies and other diseases by avoiding contact with wildlife. Admire from afar, do not try to pick up, touch, or come in contact with any animals (wild or domesticated).

Enclosure 3. Zoonotic Disease: When Humans and Animals Intersect

This page intentionally left blank.

CDC 24/7 Saving Lives. Protecting People. Saving Money Through Prevention.

Zoonotic Disease: When Humans and Animals Intersect



What are zoonotic diseases?

Zoonotic diseases are contagious diseases spread between animals and humans. These diseases are caused by bacteria, viruses, parasites, and fungi that are carried by animals and insects. Examples are anthrax, dengue, Ebola hemorrhagic fever, Escherichia coli infection, Lyme disease, malaria, Plague, Rocky Mountain spotted fever, salmonellosis, and West Nile virus infection.

How do you get zoonotic diseases?

People can get zoonotic diseases from contact with infected live poultry, rodents, reptiles, amphibians, insects, and other domestic and wild animals. A common way for these diseases to spread is through the bite of a mosquito or tick. People can get diseases in most places where they might have contact with infected animals and insects, including:

- Animal displays
- Petting zoos
- Pet stores
- Nature parks
- Wooded and bushy areas
- Farms
- County or state fairs
- Child-care facilities or schools

Who can get zoonotic diseases?

- Anyone who has contact with animals can get a zoonotic disease, but people may be more at risk than others. These include people with a weakened immune system, children age 5, the elderly, and pregnant women.

Centers for Disease Control and Prevention
Office of the Director

CS226601K

Zoonotic Disease: When Humans and Animals Intersect

How to prevent zoonotic diseases

- Be aware of zoonotic diseases and your potential for infection
- Wash hands thoroughly and frequently
- Avoid direct contact with certain animals and their environment
- Closely supervise children to ensure they wash their hands properly and avoid hand-to-mouth activities (thumb-sucking, eating, and use of pacifiers) after animal contact
- Use EPA-registered insect repellents that contain 20% or more DEET (N, N-diethyl-m-toluamide) on the exposed skin for protection that lasts up to several hours.
- Use products that contain repellents (such as permethrin) on clothing. Treat clothing and gear, such as boots, pants, socks and tents.
- Look for and remove ticks from your body. Parents should check their children for ticks.
- Limit the number of places around your home for mosquitoes to breed by getting rid of items that hold water.

Interesting facts about zoonotic diseases

- About 75% of recently emerging infectious diseases affecting humans are diseases of animal origin, and approximately 60% of all human pathogens are zoonotic.
- Tick-borne diseases, including Lyme disease and Rocky Mountain spotted fever, are serious public health problems, infecting tens of thousands in the United States each year. CDC is working closely with local communities, developing innovative control approaches and researching improved diagnostics.
- Almost all persons infected by rabid animals will die if not treated appropriately. Dogs are responsible for most human rabies deaths worldwide, but the public health threat of canine rabies has been virtually eliminated in the United States.
- There have been 1.5 million West Nile virus infections since 1999. 2.5 billion people are at risk for dengue in more than 100 endemic countries with 50 million cases of dengue fever each year.

For more information on zoonotic diseases, visit www.cdc.gov/ncezid or call 1-800-CDC-INFO.
To view this fact sheet on the web, visit http://www.cdc.gov/24-7/CDCFastFacts/zoonotic.html

Centers for Disease Control and Prevention
CDC 24/7: Saving Lives. Protecting People.™

Preventing Tick Bites

While it is a good idea to take preventive measures against ticks year-round, be extra vigilant in warmer months (April-September) when ticks are most active.

Avoid Direct Contact with Ticks

- Avoid wooded and bushy areas with high grass and leaf litter.
- Walk in the center of trails.

Repel Ticks with DEET or Permethrin

- Use repellents that contain 20 to 30% DEET (N, N-diethyl-m-toluamide) on exposed skin and clothing for protection that lasts up to several hours. Always follow product instructions. Parents should apply this product to their children, avoiding hands, eyes, and mouth.
- Use products that contain permethrin on clothing. Treat clothing and gear, such as boots, pants, socks and tents with products containing 0.5% permethrin. It remains protective through several washings. Pre-treated clothing is available and may be protective longer.
- Other repellents registered by the Environmental Protection Agency (EPA) may be found at http://cfpub.epa.gov/oppref/insect/. (http://cfpub.epa.gov/oppref/insect/) (http://www.cdc.gov/Other/disclaimer.html)

Find and Remove Ticks from Your Body

- Bathe or shower as soon as possible after coming indoors (preferably within two hours) to wash off and more easily find ticks that are crawling on you.
- Conduct a full-body tick check using a hand-held or full-length mirror to view all parts of your body upon return from tick-infested areas. Parents should check their children for ticks under the arms, in and around the ears, inside the belly button, behind the knees, between the legs, around the waist, and especially in their hair.
- Examine gear and pets. Ticks can ride into the home on clothing and pets, then attach to a person later, so carefully examine pets, coats, and day packs.
- Tumble clothes in a dryer on high heat for an hour to kill remaining ticks. (Some research suggests that shorter drying times may also be effective, particularly if the clothing is not wet.)

Enclosure 4. Feral Animal Control (Cats, Hogs, etc.)

Keeping Cats Indoors Is Good For Birds

Isn't it natural for cats to kill birds?
No! Cats are not native to North America or many other parts of the world. Our wildlife did not evolve with this abundant and efficient predator, and thus have few defenses against them. Millions of animals may be killed each year by outdoor, pet cats in the U.S. Stray and feral cats add to the toll.

The Truth About Cats and Wildlife

- **Even well-fed cats kill wildlife.** This is because cats are born predators and the urges to hunt and eat are controlled by different parts of their brain.
- Belled cats kill wildlife. Cats quickly learn to silently stalk their prey. Wild animals don't necessarily know a ringing bell means danger.

Photo: Michael Stubblefield

Cats kill rare species such as this Piping Plover chick.

- Once caught by a cat, few small animals survive the ordeal. Even if the animal escapes, infection from a cat's teeth or claws, or internal injury usually result in death.

Tips for Happy Indoor Cats

Kittens who are kept indoors from the start usually show no desire to go outside as adults. With patience and time, most outdoor cats can become happy indoor pets. The following tips will help:

Photo: Dr. Jeff Price

An indoor cat is a safe and happy cat.

- Play with your cat for at least 15 minutes each day.
- Paper bags and cardboard boxes provide places to play when they are alone.
- Provide window shelves and bird feeders to keep your indoor cat entertained.
- Give your cat a nutritious diet, including constant access to clean water.
- If your cat must go outside, train him to wear a harness and leash or provide a safe outside enclosure such as a screened porch or cat run.
- Plant kitty grass in indoor pots so your cat can safely graze.
- Keep the litter box clean.

Indoor Cats Can Slip Out, So Remember To:

- Spay or neuter your kitten as early as eight weeks old, *before* it can breed. Your cat will be healthier and won't contribute to the overpopulation problem.
- Attach an ID tag to your pet's collar or get a microchip implanted containing your contact information.
- Provide routine veterinary care, including an annual check up and vaccinations.

Cat ownership is a responsibility, so please do your part.

For the Sake of Cats, Wildlife and People:

- *Never* abandon cats. If you are transferred and can't take your cat with you, find a good home or contact a veterinarian or local humane society for help.
- Do not feed stray cats—this only increases the cat overpopulation problem. Take them to a local shelter or call your base animal control officer for help.

For more information: contact your base veterinarian, local humane society, or **www.denix.osd.mil/DoDPIF.**

Produced by DoD Legacy Program
Prepared by American Bird Conservancy

Don't Let Your Cat Go AWOL!

Indoor Cats Are Safe Cats

Military bases often struggle with how to manage domestic cat populations. Frequent transfers of personnel often means cats are left behind, abandoned to fend for themselves. Lucky cats find a new human, but most are not so fortunate. Abandoned cats face many dangers: being hit by cars, starving, freezing temperatures, disease, and more. If not spayed or neutered, cat populations can explode.

Free-roaming cats kill native wildlife, including many rare and endangered species, and can also threaten the health and safety of military personnel and their children. Base commanders must deal with how to humanely and cost-effectively resolve the issue of too many free-roaming cats. ***As a cat owner, you are an important part of the solution.***

Photo: Dr. Gil Ewing

Cat killing a Yellow-rumped Warbler at a bird bath.

The Skinny on Cats

Domesticated in Egypt over 4,000 years ago, house cats are descendants of the European and African wild cat. Now considered a separate species, *Felis catus* was introduced all over the rest of the world by European explorers and settlers. Recent estimates place the U.S. pet cat population at 90 million. No one knows how many stray or feral cats are out there—best estimates range from 60 to 100 million.

- ***Stray* cats are lost or abandoned by their owners.**
- **Truly *feral* cats live entirely on their own without any human assistance.**
- **A female cat can have two to three litters per year, with four to eight kittens per litter.**

Photo: Microsoft

Cats kill small animals such as chipmunks.

Keeping Cats Indoors Is Good For People

Stray cats often congregate around a food source such as garbage dumps and mess halls, or where people leave food out for them. They can be a nuisance around base housing, where people may feed birds, tend flower gardens, or have children's sand boxes.

Outdoor cats are exposed to many diseases and parasites, some of which can be transmitted to people:

Rabies, a deadly virus, can infect cats, wildlife, and humans. Outdoor cats are more likely to contract rabies than any other domestic animal.

Cat-scratch Disease: is transmitted from cat to cat by fleas, and from cat to human by a scratch or bite. While cats show no symptoms of the disease, it can cause severe illness in people.

Toxoplasmosis is caused by a tiny parasite found in the intestines of cats and in the tissues of many animals. People can contract this disease by not washing their hands after coming into contact with cat litter or soil contaminated with cat feces. If contracted by a pregnant woman, abortion of the fetus or blindness or retardation in the newborn can result.

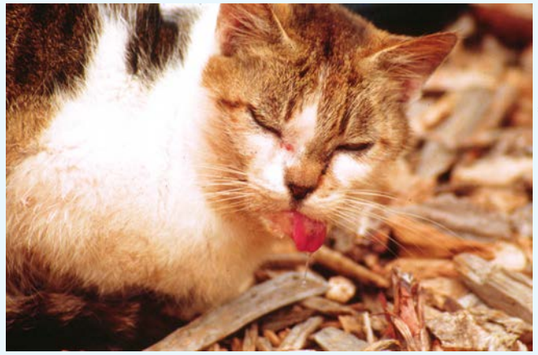

Photo: Alan Hopkins

Cats are not wildlife and struggle to survive outdoors.

Cats can also transmit fleas, roundworm, and hookworm to humans. In the southwest, cases of the most lethal form of plague in humans have been linked to outdoor cats.

Keeping Cats Indoors Is Good For Cats

Many people don't realize the daily hazards that outdoor cats face. The average life expectancy of a free-roaming cat is less than five years, while indoor cats commonly live to 12 - 20 years. Cats who roam are in constant danger from:

Cars: Millions of cats are run over by cars annually. In colder climates, cats may crawl into car engines to get warm and are killed or maimed when the car is started.

Disease: In addition to rabies, outdoor cats risk exposure to fatal diseases such as feline leukemia and feline immunodeficiency virus (FIV). While vaccines are available for some diseases, they are not 100 percent effective. A vaccine for FIV is not available.

Injuries: Abscesses, broken limbs, disease, torn ears, scratched eyes, internal injuries, parasites, and death can result from encounters with dogs, other cats, coyotes, raccoons, foxes, hawks, and owls.

Overpopulation: Cats who have not been spayed or neutered are the greatest cause of cat overpopulation. As a result, millions of cats must be euthanized each year because there are not enough homes for them.

Poisons and Traps: Pesticides, rodenticides, and antifreeze poison and kill thousands of outdoor cats yearly. Cats may be caught in traps set for furbearing animals.

Parasites: Outdoor cats suffer from debilitating parasites such as ear mites, fleas, ticks, and worms.

Human Cruelty: Unfortunately, it is not uncommon for animal shelters and veterinarians to have to treat cats who have been shot, stabbed, or set on fire.

Inclement Weather: Outside cats suffer from extreme weather conditions and natural disasters, such as hurricanes, floods, fires, and tornadoes.

Enclosure 5. CNRMA Environmental Management System

CNRMA
Environmental Policy Statement

CNRMA's Environmental Policy Statement is the foundation of the EMS and reflects CNRMA's commitment to integrate mission accomplishment with environmental stewardship.

CNRMA's policy is communicated through the acronym, **"CARE"**, which summarizes the key concepts:

- **C – Comply with all rules**
- **A – Always improve**
- **R – Reduce waste**
- **E – Eliminate pollution**

Visit our website to see entire policy

CNRMA EMS facilities include:

- NAVSTA Norfolk
- NSA Norfolk
- NAS Oceana
- NAVPHIBASE Little Creek
- WPNSTA Yorktown
- NAVSUBASE New London
- NAVSTA Newport
- NAS Brunswick
- NAES Lakehurst
- NWS Earle
- NCTAMS LANT DET Cutler
- NAS JRB Willow Grove
- NSA Mechanicsburg
- NSA Philadelphia
- Philadelphia Naval Business Center
- NSGA Sugar Grove

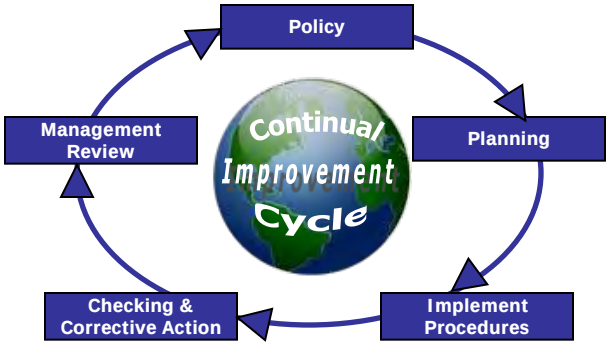
To learn more about CNRMA's EMS, please visit our Website: www.cnrma.navy.mil/environmental/Environmental_management_system.htm

Commander Navy Region Mid-Atlantic (CNRMA)

E nvironmental
M anagement
S ystem

www.cnrma.navy.mil/environmental/environmental_management_system.htm

CNRMA
Environmental Management System (EMS)



The EMS Cycle of Continuous Improvement

What is EMS?

EMS is a set of management processes and procedures that allows an organization to:

- analyze, control and reduce it's impact on the environment
- operate with greater efficiency and control

The EMS management tool is used to plan, implement, review, and improve the actions CNRMA takes to meet environmental goals. The CNRMA EMS must be:

- Mission focused
- Integrated into existing business processes
- Flexible in order to optimize mission performance while minimizing negative environmental impacts

The EMS is based on the International Organization for Standardization (ISO) 14001 Standard

CNRMA's EMS Goals include:

Reduce energy and water use

Increase purchase of alternative fuel vehicles, hybrid, and plug-in hybrid vehicles

Reduce greenhouse gas emissions

Reduce use of petroleum in fleet vehicles

Increase use of alternative fuels and renewable energy

Integrate green building concepts in major renovations and new construction

Expand purchase of green products and services; increase recycling

Procure, use, and dispose of electronic equipment in an environmentally-sound manner

Reduce purchase and use of toxic and hazardous materials

What is your role?

All personnel working for or on behalf of CNRMA have roles and responsibilities regarding CNRMA's EMS. Following are some examples:

- Know CNRMA's environmental policy, or the "CARE" acronym
- Know and comply with the environmental procedures that apply to your job
- Know how your job could impact the environment (i.e. potential spills, emission of air pollutants, material and energy use
- Know what your installation's significant environmental aspects are
- Incorporate concepts of conservation and pollution prevention in your day-to-day activities
- Know what to do in the event of a spill or environmental emergency:
  - * Contain the spill if safe to do so
  - * Notify your supervisor
  - * Call Emergency Communications Center

Think about activities you do everyday that may impact the environment:

- Do you recycle?
- Do you buy "green" office supplies?
- Do you print double-sided copies?
- Do you conserve energy and water?
- Do you comply with all environmental laws applicable to your job?

This page intentionally left blank.

Enclosure 6. NASO, NASO Dam Neck Annex, NALFF, and NSA Northwest Annex Hunting, Fishing, and Archery Range

Fishing: Questions & Answers

Q: What permits are needed to fish and where can they be purchased?

A: Authorized patrons and guests between the ages 16 and 65 must obtain as appropriate, Virginia (state or county) freshwater fishing licenses and Base fishing permits. Virginia Saltwater fishing licenses are required for anyone attempting saltwater fishing except when fishing from MWR piers that maintain pier licenses. Dependents and guests under the age of 12 must be directly supervised by an adult, 18 years of age or older, who holds a valid fishing licenses and station permits. Permits are sold at the NAS Oceana and NASO Dam Neck Annex MWR ITT offices and they are currently valid, in authorized locations only, at: NAS Oceana, NASO Dam Neck Annex, NSA Northwest Annex, JEB Little Creek, and JEBLC Fort Story. Permits are currently $8.00 for a full calendar year, but the cost is subject to change.

Q: When can I Fish?

A. Fishing is only authorized during state sanctioned seasons. Fishing is from sunrise to sunset (dawn to dusk), unless otherwise stipulated in the Base Fishing Instruction.

Q: With what can I Fish?

A. Fishing shall be conducted only by angling with a hook and line or rod and reel, held in hand. No more than two treble hooks are permitted on any fishing lure. In catch-and-release waters, barbed hooks are discouraged and treble hooks are prohibited. A hand-held landing net may also be used to remove legally hooked fish. No live bait fish are authorized.

Q: Where can I get more specific information regarding fishing on base?

A. Visit the Natural Resources Website and view the CNRMA Fishing Instruction. The general content of the instruction is still good, but there have been updates to fishing area locations, and ticket purchasing locations. Contact the NRC for the most current information.

Q: Can I use a boat?

A. Only at those locations authorized in the Fishing instruction. The boat and trailer should be cleaned, thoroughly flushing water through the motor's cooling system, live wells, and other areas that hold water and drying the boat and equipment for five days in a sunny location before transferring it to a new body of water.

Additional Information

WARNINGs:
No off-road or 4-wheel driving is authorized.

Be aware there are venomous snakes and poisonous plants on the premises.

It is unlawful and strictly PROHIBITED to harm, disturb, or collect plants and animals.

The release of fish of or other aquatic wildlife not caught on the premises is PROHIBITED.

The release of any animals or the planting of any plants without the written approval of the Base's Natural Resources Manager is PROHIBITED.

It is recommended that individuals recreating on site use insect repellent.

It is required to provide, when requested, appropriate identification, permits and passes to Base Security and Conservation Law Enforcement Officers.

Please enjoy yourself while recreating on base and help us maintain it by packing out your trash and placing your litter in appropriate receptacles.

Public Access

Hunting, Fishing & Archery range utilization is open to anyone with Base Access privileges. Members of the General Public that would like to recreate on base must have a qualified sponsor. Sponsors can be active or retired military or government civilians with current base access identification. Contact the Natural Resource Center (NRC) at 757-433-2151 or stop by the NRC, Building 78, to ensure you have all appropriate access documentation.

You may also visit the Natural Resources Website at:
http://www.cnic.navy.mil/Oceana/About/Departments/NaturalResources/index.htm

In case of an emergency call 911 or 757-433-9111.

Hunting, Fishing & Archery Range

NAS Oceana,
NASO Dam Neck Annex,
NALF Fentress &
NSA Northwest Annex

Hunting: Questions & Answers

Q: What do I need to do to hunt on the local bases?

A: (1) You must be Active Duty, dependent or retired. DoD Civilians are allowed and Non-DoD affiliated civilians are allowed with a qualified sponsor.

(2) You need a Hunter Safety Course Certificate valid in the state of Virginia.

(3) You need to attend the annual Basic Hunter Indoctrination (Indoc.) conducted by Navy Natural Resources Staff.

Note: The above will allow you to deer hunt with shotgun, buckshot only, at NASO Dam Neck Annex, NALF Fentress, and NSA Northwest Annex. The fee for the annual license as of 2010 is $20.00 (subject to change). This license is in addition to the required Virginia State Hunting Licenses.

(4) To hunt via Shotgun with Slugs, Muzzleloader, or Archery:

Shotgun Slugs?

You must qualify with your shotgun by shooting 3 out of 3 slugs within a 9" circle @ 50 yards. You will be allowed to shoot from a seated rest.
Note: Slugs are only allowed for use at NSA Northwest Annex.

Muzzleloader?

You must qualify with your muzzleloader by shooting 3 out of 3 slugs within a 9" circle @ 50 yards. You will be allowed to shoot from a seated rest. Flintock, Percussion Cap and In-Lines are allowed on NAS Oceana, NASO Dam Neck Annex, NALF Fentress, and NSA Northwest Annex only in designated hunting areas.

Archery?

You must have graduated from the International Bowhunter Education Program (IBEP) which is taught at the Natural Resources Center (NRC) Building #78 on NAS Oceana. Schedules will be posted by July 1st each year. You must qualify by shooting two arrows from an elevated platform into the kill zone of each of three 3D deer targets placed at varying ranges. The ranges will vary from directly beneath the platform out to 30 yards maximum. Your archery tackle will be inspected prior to any qualification attempt and can be grounds for rejection if determined to be unsafe. The qualification will be with Broadheads attached unless you will be hunting with Mechanical Broadheads; you will be allowed to shoot field points in this instance.

Q: Where do I purchase a permit?

A: You must have both the appropriate State Hunting Permit(s) and a Base Hunting Permit. Contact the appropriate state Wildlife Agency for information on purchasing their permits. Base Hunting Permit can be purchased from the NAS Oceana or NASO Dam Neck Annex MWR ITT ticket offices.

Q: Where and when are qualifications?

A: A schedule of qualifications will be posted at the NRC/NAS Oceana Bldg. 78, made available at the Basic Indoctrination Classes, and will be posted on the Natural Resources Program Website. Muzzleloader and shotgun qualifications will be conducted at the NASO Dam Neck Annex rifle range. Bow qualifications will be conducted at the NRC/Bldg. #78. All qualifications must be observed by designated NRC representatives on scheduled days to be valid.

Q: Where can I hunt on base?

A: The NAS Oceana Natural Resources Center controls and manages all hunting aboard NAS Oceana, NASO Dam Neck Annex, NALF Fentress, and NSA Norfolk Northwest Annex. Areas are designated at each base for Archery, Shotgun, and Muzzleloader as applicable. NAS Oceana allows Archery and Muzzleloader ONLY. NASO Dam Neck Annex and NALF Fentress allow Archery, Shotgun (Buckshot Only) and Muzzleloader. NSA Northwest Annex allows Archery, Shotgun (Buckshot and Slugs) and Muzzleloader. Maps of the exact hunting area are located on the Natural Resources website or can be obtained at the Natural Resources Center, Oceana building 78.

Q: Can I hunt anything else besides deer?

A: Yes. Small game hunting is authorized. Contact the NRC for more details.

Q: When can I deer hunt?

A: Within the State Hunting season dates, generally from Oct 1st through the 1st Saturday in January. NAS Oceana has an extended hunting season through the end of February. Operational Security and Threat Conditions will dictate closures but normally NAS Oceana, NASO Dam Neck Annex and NALF Fentress are open 6 days a week, closed only on Sundays. NSA Northwest is only open on Tuesdays, Thursdays, and Saturdays.

Q: Can I deer hunt from the ground?

A: Ground hunting or stalking is only allowed by Archers (except crossbow archers). No ground hunting is allowed on any base by Shotgun, Muzzleloader or Crossbow hunters.

Q: Do I need a tree stand?

A: Tree stands are required of all Shotgun, Muzzleloader and Crossbow hunters. These stands must be elevated at a shooting height of 15 feet. Climbers and clip-ons are allowed with minimal tree limb removal permitted. NAS Oceana, NASO Dam Neck Annex, and NALF Fentress have no permanent tree stands available. Any permanent tree stands found on these bases are not maintained and are unauthorized for use. NSA Northwest Annex has permanent tree stands available for use. Much work has gone into the stands at NSA Northwest Annex but they are still only available for use at your own risk and judgment. You can use your own tree stand at these locations but you must use it in the vicinity of the stand you have checked out.

Q: Where do I find the Base's Annual Hunting Rules & Regulations?

A: On the Oceana Natural Resources website. For questions regarding the R&Rs visit the Natural Resources Center, Oceana building 78, or call the NRC at 757-433-2151.

Archery Range: Questions & Answers

Q: Where is the Archery Range?

A: The range is located off of Oceana Blvd., across from the Oceana Stables, at/adjacent to the Natural Resources Center, NASO building 78.

Q: What do I need to do to use the archery range on NAS Oceana?

A. Obtain a permit from the Oceana MWR ITT ticket office and visit the NRC to fill out the appropriate paperwork and obtain required signatures and stamps. Contact the NRC if you have additional questions.

Q: Can I use the range if I purchased a base hunting permit?

A: Yes, the hunting permit and the archery range permit are all on 1 single permit. If you qualify to be a hunter you can use the archery range for the permitted calendar year. If you do not qualify to be a hunter or you do not want to hunt but just use the archery range you may get your permit stamped for archery range use only. You are not authorized to use this range until you have obtained the range or appropriate hunting stamps, signatures and card lamination. (To get your permit stamped for archery range use only visit the NRC, Oceana Building 78.)

This page intentionally left blank.

Enclosure 7. Naval Air Station Oceana, Oceana Pond Outdoor Recreation Area

Please enjoy yourself on the trail and help us maintain it by placing your litter in the marked receptacles along the way.

Additional Information

NAS Oceana sponsored Scout Troops may use the camping area on a reservation basis. Scouts utilizing these facilities contribute to this beautiful natural area by helping with regular maintenance.

WARNINGs:
No vehicles are authorized to drive past the gate without prior approval and appropriate passes and identification. Park in designated parking areas ONLY.

No off-road or 4-wheel driving is authorized.

Be aware this is a natural area and there are venomous snakes and poisonous plants on the premises. **It is unlawful and strictly PROHIBITED to harm, disturb, or collect plants and animals.**

The release of fish of or other aquatic wildlife not caught on the premises is PROHIBITED.

The release of any animals or the planting of any plants without the written approval of the Base's Natural Resources Manager is PROHIBITED.

Alcoholic beverages, glass bottles, and firearms are PROHIBITED.

Fishing and use of the archery range are by permit ONLY.

It is recommended that individuals recreating on site use insect repellent.

It is required to provide, when requested, appropriate identification, permits and passes to Base Security and Conservation Law Enforcement Officers.

Public Access

Oceana Pond is open to anyone with Base Access privileges. Members of the General Public that would like to recreate on Oceana Pond must have a Base Sponsor. Base sponsors can be active or retired military or government civilians with current base access identification. To recreate at Oceana Pond or for other questions regarding Natural Resources Programs please contact the Natural Resource Center (NRC) at 757-433-2151 or stop by the NRC, Building 78, to ensure you have all appropriate access documentation.

You may also visit the Natural Resources Website at:
http://www.cnic.navy.mil/Oceana/About/Departments/NaturalResources/index.htm

In case of an emergency call 911 or 757-433-9111.

Naval Air Station Oceana Oceana Pond Outdoor Recreation Area

Welcome to the NASO Oceana Pond – natural area preserved and restored through the collective efforts of the Navy's Construction Battalion Unit #415, the Chesapeake Bay Youth Conservation Corps, the City of Virginia Beach Habitat Enhancement Committee, NASO's Natural Resources Division and volunteers.

The pond area supports several natural habitat types including forested wetlands, freshwater wetlands, open water, and upland forests. Due to the diversity of habitats, the pond supports a variety of wildlife including various waterfowl, deer, songbirds, small mammals, reptiles, and amphibians.

The NASO Oceana Pond is one of the premier outdoor recreation areas on NASO were fishing, nature watching, hiking, picnicking, and canoeing are authorized.

Trails

Trail Map

The Oceana Pond Trail starts near the Natural Resources Center (at the wildflower meadow) and continues for nearly a mile through forested area. The naturally maintained trail then loops around the eight-acre Oceana Pond, providing hikers with a continuous circuit for observing the plants and animals within the area. The nature lover exploring the trail will encounter a host of native plants. Some of these plants are marked along the trail, while the location of others is noted on this trail map.

We hope that you will enjoy your visit and are able to apply some of the concepts utilized here in your own back yard. Some of these concepts include: the use of native plants for landscaping (which are more drought and disease tolerant than many ornamental plants), bluebird and wood duck boxes (with predator guards), bat boxes, the retention of some dead trees for woodpecker and squirrel nesting, and the use of fallen leaves, or "leaf litter," for compost. The following points of interest, which reflect many of these concepts, are identified along the trail:

1. WILDFLOWER MEADOW

The wildflower meadows may have a variety of flowers in bloom, depending on the time of year you visit. Wildflowers are not only beautiful, their nectar, leaves and seeds provide a valuable food source for a number of small creatures, including, birds, butterflies, and other insects.

2. BORROW PONDS

The footpath leading to the pond passes on the south side of two small ponds shaded by an assortment of forest trees. Typical trees in this area include ash, sweet gum, black cherry, oak, and poplar. These trees and their associated wetland habitat serve as a source of food and water for many species of birds and small mammals. The ponds are also home to a number of amphibians and reptiles.

3. LEAF LITTER

Underlying the forest canopy, you will note an abundance of dry leaves. Leaf litter provides natural organic compost in woodland settings. Within this leaf litter, fungi, bacteria, and small organisms, such as beetles and worms, break down the leaves into a nutrient-rich mulch. The small absorbing roots of trees and shrubs then proliferate in this mulch, accelerating the growth of the plants.

4. IRONWOOD

American hornbeam (*Carpinus caroliniana*) is also known as ironwood or musclewood due to the strong muscle-like appearance of its trunk and the density of its wood. Ironwood bears fruit, which is eaten by many birds such as cardinals, goldfinch, wood duck, bobwhite, pheasant, and wild turkeys. Rabbit and deer also nip and browse on new shoots. This pretty native tree, which is usually found along rivers and streams, serves as an excellent example of a tree species that provides abundant food for wildlife and can also be used in a naturalized landscape. Flowering dogwood (*Cornus florida*) is another native plant that makes a nice addition to the landscape while providing food and shelter for approximately 94 species of birds.

5. NATIVE FERNS

Late spring is an excellent time to observe ferns along the trail. Just south of the pond there is a wet depression with five different species of ferns, including royal fern and cinnamon fern. In the early spring, fern fiddleheads serve as a food source to deer, squirrels, and small mammals. Ferns are also an attractive native ground cover for partially shaded areas.

6. HIGHBUSH BLUEBERRY

Vaccinium corymbosum, or highbush blueberry is an excellent understory shrub. This species is an important food source for deer and birds. Highbush blueberry is well adapted to Virginia and makes an attractive native ornamental backyard plant. The shrub does very well in shaded corners of buildings and along the shady side of fences.

7. TREE SNAG

Many birds and small mammals, such as woodpeckers and squirrels, use the crevices of decaying trees as nesting sites and perches. Instead of cutting down damaged trees, Natural resources personnel encourage leaving some snags for wildlife.

8. WOOD DUCKS

Take a moment while viewing the pond to observe (but not disturb) our wood ducks. Wood ducks, which adapt to a variety of wetlands, including artificially constructed ponds and ditches, nest in both natural cavities and nest boxes. The wood duck boxes in the pond provide additional shelter during the nesting season. The round metal flashing around the underside of the boxes is installed to deter raccoons, opossums, and various snakes that will eat eggs and baby ducks if given an opportunity. If you install a wood duck box in a marsh or pond, remember to include this "predator guard." Other waterfowl that you may observe include the wigeon, mallard, gadwall, and hooded merganser.

9. WETLANDS MITIGATION AREA

The nature trail winds around to the east, through a wooded lane that opens into a marsh area on the southeast corner of the pond. This area was designed by the Natural Resources Division to compensate for minor wetland losses associated with construction projects on NAS Oceana. The marsh is an excellent place to view wetland plants. Wetland species in this area include those that were planted and many "volunteer" species. Trees planted in the mitigation area include Bald Cypress (*Taxodium distichum*) , Atlantic White-cedar (*Chamaecyparis thyoides*), and River Birch (*Betula nigra*).

10. BOAT RAMP

The ramp located on the northwest side of the Pond is for recreational use. Watercraft on the lake are limited to handpowered boats and canoes. A life jacket is required for each person in the boat and persons under the age of 10 years must wear jackets while aboard boats.

11. NATIVE SHRUBS

The understory around the Pond includes many native shrubs, such as dogwood, holly, blueberry, and pawpaw. Many of these species have the advantage of being shade-tolerant, which allows them to survive in the shaded understory. Many other tree/shrub species do not survive in the decreased sunlight environment of the forest floor.

12. DECAYED LOG

Over 85 bird species forage on decayed logs. Fungi often colonize on fallen trees and limbs, providing an additional food source for small mammals. Insects, such as beetles, grubs, and centipedes, live and breed in the logs, while slowly consuming the wood. Decayed wood provides lignin, which is an important nutrient source for these lower organisms.

This page intentionally left blank.

Enclosure 8. Compliance: Wildlife

Compliance: Wildlife

- Threatened & Endangered Species
- Marine Resources
- Migratory Birds
- Bald Eagles
- Code of Virginia
- Code of North Carolina

Bald Eagle, *delisted but still protected*

Small Whorled Pogonia

Loggerhead Sea-Turtle

Canebrake Rattlesnake

Endangered Species Act (ESA); Marine Mammal Protection Act (MMPA); Bald & Golden Eagle Protection Act; Code of Virginia; Migratory Bird Treaty Act (MBTA)...etc. (there are many laws which protect wildlife, several of which cross international/country borders)

Yes, even the dead remains of a protected species are protected and you are subject to federal or state penalties if found to be in violation of the law (possession without permit is a violation).

Assume all bird species are protected (since there are very few species that are not protected).

This page intentionally left blank.

Enclosure 9. Poisonous Plants

NIOSH

Fast Facts

Protecting Yourself from

Poisonous Plants

Any person working outdoors is at risk of exposure to poisonous plants, such as poison ivy, poison oak, and poison sumac. When in contact with skin, the sap oil (urushiol) of these plants can cause an allergic reaction. Burning these poisonous plants produces smoke that, when inhaled, can cause lung irritation.

Workers may become exposed through:

- Direct contact with the plant
- Indirect contact (touching tools, animals, or clothing with urushiol on them)
- Inhalation of particles containing urushiol from burning plants

Symptoms of Skin Contact

- Red rash within a few days of contact
- Swelling
- Itching
- Possible bumps, patches, streaking or weeping blisters
  NOTE: Blister fluids are not contagious

First Aid

If you are exposed to a poisonous plant:

- Immediately rinse skin with rubbing alcohol, poison plant wash, or degreasing soap (such as dishwashing soap) or detergent, and lots of water.
  - Rinse frequently so that wash solutions do not dry on the skin and further spread the urushiol.
- Scrub under nails with a brush.
- Apply wet compresses, calamine lotion, or hydrocortisone cream to the skin to reduce itching and blistering.
  - Oatmeal baths may relieve itching.
- An antihistamine may help relieve itching.
  - NOTE: Drowsiness may occur.
- In severe cases or if the rash is on the face or genitals, seek professional medical attention.
- Call 911 or go to a hospital emergency room if you have a severe allergic reaction, such as swelling or difficulty breathing, or have had a severe reaction in the past.

Poisonous plants, from left to right: poison ivy, poison oak, poison sumac.

Images courtesy of U.S. Department of Agriculture.

Protect Yourself

- Wear long sleeves, long pants, boots, and gloves.
  - Wash exposed clothing separately in hot water with detergent.
- Barrier skin creams, such as lotion containing bentoquatum, may offer some protection.
- After use, clean tools with rubbing alcohol or soap and lots of water. Urushiol can remain active on the surface of objects for up to 5 years.
  - Wear disposable gloves during this process.
- Do not burn plants or brush piles that may contain poison ivy, poison oak, or poison sumac.
  - Inhaling smoke from burning plants can cause severe allergic respiratory problems.

When exposure to burning poisonous plants is unavoidable, employers should provide workers with:

- A NIOSH-certified half-face piece particulate respirator rated R–95, P–95, or better. This recommendation does NOT apply to wildland firefighters, who may require a higher level of protection.
- These respirators should protect against exposure to burning poisonous plants, but will not protect against all possible combustion products in smoke, such as carbon monoxide.
- Respirators must be worn correctly and consistently throughout the time they are used.
- For respirators to be effective there must be a tight seal between the user's face and the respirator.
- Respirators must be used in the context of a written comprehensive respiratory protection program (see OSHA Respiratory Protection standard 29 CFR 1910.134).
- For more information about respirators, visit www.cdc.gov/niosh/npptl/topics/respirators/

invasive plant species

"...the homeland is vulnerable to a different type of asymmetric attack, a biological attack from invasive species."

— Col. Robert J. Pratt

Tree-of-heaven (*Ailanthus altissima*)

photo courtesy of L. Eiser

Common invasive plants at:

- Naval Air Station Oceana
- NASO Dam Neck Annex
- Naval Auxiliary Landing Field Fentress
- Naval Support Activity Hampton Roads Northwest Annex (NSAHR NWA)

The purpose of this brochure is to provide a basic understanding of the most common invasive plants occurring at four Navy installations in the Hampton Roads region, the threats they pose, and what you can do to help control and prevent their spread.

what are invasive species?

Invasive species are plants, animals, or micro-organisms that are non-native and are likely to cause economic or environmental harm or harm to human health. They are often spread by wind, wildlife, and intentional or unintentional actions.

The Department of Defense and other Federal and state agencies have instituted policies and guidelines to prevent and control the introduction and spread of invasive species.

why are invasive plants a problem?

Invasive species can interfere with military operations and readiness, kill or shade out native plants, harm fish and wildlife and their habitats, and have negative economic impacts on crop yields and forest productivity. Furthermore, invasive species are a threat to availability of training areas, increase risk of wildfires, and can pose serious health and safety issues for people.

Economic losses and control costs have been estimated to exceed $120 billion per year (Pimentel et al. 2005)

what you can do about invasive plants

You can help stop invasive plants by identifying these species and taking actions to prevent their introduction and spread:

- Learn about the invasive species that are in your area and what is being done about them
- Be able to identify invasive plants
- Report new invasive species and infestations to the Natural Resources Manager
- Remove invasive plants from your property
- Plant non-invasive plants on your property
- Clean boats and trailers, off-road vehicles, boots, waders, and other pathways of spread to stop hitchhiking invasive species
- Use certified “weed-free” forage, firewood, hay, mulch, and soil
- Volunteer for organized efforts to remove invasive species from natural areas and support organizations that work with invasive species

Natural Resources Managers need your help to prevent and contain the spread of these invaders.

Early Detection and Rapid Response (EDRR) is critical to identify new areas of infestation, rapidly respond, and increase the chances of success.

The Department of Defense is a leader in natural resources management and controlling invasive species.

This page intentionally left blank.

Enclosure 11. Venomous Snakes of Naval Facilities in Southeastern Virginia

Characteristics of Venomous Snake

- Elliptical pupil (Figure 7)
- Pit organ: The pit organ is located on each side of the head between the eye and nostril (Figure 1) It detects heat from small mammals and other prey
- The scales under the tail form only a single row (Figure 8)
- The head is distinctly wider than the neck (However, this is also true for many nonvenomous snakes)

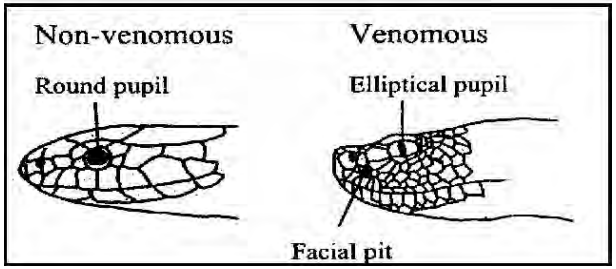

Figure 7. Facial characteristics of nonvenomous and venomous snakes of Virginia.

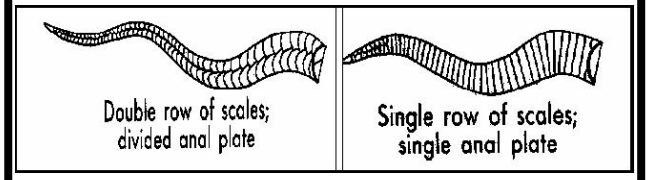

Figure 8. Undersides of tails of a nonvenomous and venomous snake.

Safety

• Wear long pants & hiking boots while in areas known to have snakes.

• Stay on hiking/designated trails.

•Avoid walking through dense piles of brush.

• Do not step over or move logs or rocks without checking for snakes first.

• Do not disturb any snakes you see. Most snakes will not strike unless provoked.

• If you are bitten by a snake seek medical attention immediately.

•DO NOT PANIC!!!

For any emergency, 1st call 911:
Notify Installation CDO
&/or
757-433-9111(NASO/NALFF; NASO DNA)
or
757-421-8000 (NSA NWA)
Report all wildlife incidences to your local Environmental Office, Safety Office, or Security Office.

Oceana Environmental and Natural Resources: 433-3461 or 433-2151.

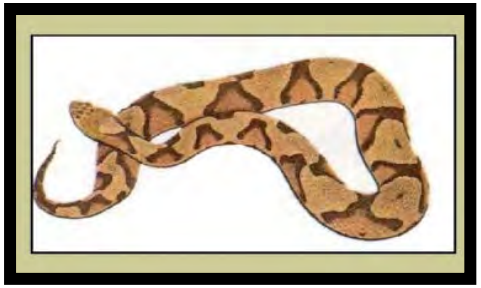
Venomous Snakes of Naval Facilities in Southeastern Virginia



Canebrake Rattlesnake

(Crotalus horridus)

Figure 1. Canebrake Rattlesnake

Figure 2. Rattle of Canebrake. Shape of rattle and number of segments varies.

Description

•Black chevron-shaped markings on a dark yellow, gray or tan background color
•Orange or rust-brown stripe down the middle of the back
•Black tail with distinctive rattle
•Newborns look like adults, but rattle consists of only one segment

Size

Average length: 54 inches
Maximum length in Virginia: 67 inches

Remarks

This snake was listed as State Endangered in 1992, primarily due to habitat loss.

Copperhead

(Agkistrodon contortrix)

Figures 3, 4. Copperhead

Description

Chestnut to brown hourglass-shaped bands on a lighter brown to tan back-ground color
Hourglass markings on the sides may not always match up along the back
Newborns and young have a bright yellow tail.

Size

Average length: 45.3 inches
Maximum length in Virginia: 48 inches

Remarks

This snake is often confused with a juvenile rat snake.

Cottonmouth

(Agkistrodon piscivorus)

Figures 5, 6. Cottonmouth

Description

Black, olive or brown bands on a lighter olive to gray background
Some individuals may appear to be all back in color, especially when out of the water
Newborns and young have a bright yellow tail.

Size

Average length: 51.8 inches
Maximum length in Virginia: 61 inches

Remarks

Habitats used by this snake include: streams, lakes, rivers and ditches. It is often confused with three com-mon species of nonvenomous water snakes.

This page intentionally left blank.

Enclosure 12. Commanding Officer’s Environmental Policy

NAVAL AIR STATION OCEANA
ENVIRONMENTAL POLICY

1. Environmental stewardship is essential to the safe, healthful and compliant execution of our mission and the protection and preservation of our natural resources. I expect all commands and personnel onboard Naval Air Station (NAS) Oceana, Dam Neck Annex and Naval Auxiliary Landing Field Fentress to be active stewards of the environment in their day-to-day operations and planning

2. To that end, NAS Oceana will establish, maintain and communicate an Environmental Management System that will:

a. Comply with applicable laws, regulations and policies.

b. Integrate environmental stewardship with operational decisions.

c. Implement, modify and sustain practices that minimize and prevent creation of waste and pollutants at their source.

d. Develop objectives and targets to minimize environmental risk and monitor progress towards those goals.

e. Educate our workforce and supported commands on their responsibility to the environment.

f. Foster communication throughout the installation on our environmental commitments and performance.

g. Sustain our partnerships with public agencies and community organizations to mutually monitor and improve the quality of the environment.

3. These actions can be summarized through the acronym "CARE". We will:

a. Comply with the rules

b. Always improve

c. Reduce waste

d. Eliminate pollution

Tree City USA

2016 Application for Certification

TREE CITY USA

The Tree City USA award is in recognition of work completed by the community during the 2016 calendar year.

As Mayor or Equivalent of the Community of NAS Oceana

I herewith make application for this community to be officially certified/recertified as a Tree City USA for 2016, having achieved the standards set forth by the Arbor Day Foundation as noted below.

Standard 1: A Tree Board or Department
Community has a Tree Board only

Tree Board Chair
Michael Wright Natural Resources Manager 757-433-3461 michael.f.wright@navy.mil

Standard 2: A Community Tree Ordinance
✔ Our community ordinance is on record

Standard 3: A Community Forestry Program with an Annual Budget of at Least $2 Per Capita

Total Community Forestry Expenditures	$751090.32
Community Population	12000
Per Capita Spending	$62.59

Standard 4: An Arbor Day Observance and Proclamation
✔ Official Arbor Day proclamation is on record

Mayor or Equivalent Signature	Title	Date
	CAPT, USN COMMANDING OFFICER	21 Oct 16

Application Certification

To Be Completed By The State Forester:

NAS Oceana

The above named community has made formal application to this office. I am pleased to advise you that we reviewed the application and have concluded that, based on the information contained herein, said community is eligible to be certified as a Tree City USA community, for the 2016 calendar year, having in my opinion met the four standards required for recognition.

State Forester Signature	Title	Date

Arbor Day Foundation®

NAS OCEANA
ARBOR DAY
AGENDA
28 April 2016

Prior to 0900- Natural Resources (NR) staff will prepare the site for the tree planting activity.

0845- NR staff to escort Virginia Department of Forestry (VDOF) designated representative on base.

0900- All involved will arrive at the NASO Aviation Park, corner of 3rd St and F Ave…see attached map.

0905- Introduction of the NASO Commanding Officer (CO) and VDOF designated representative. *(Michael Wright, NR Manager)*

0910- Reading and signing of the proclamation. *(Captain Louis Schager, NASO CO)*

0915- History of Arbor Day, explanation of how to plant a tree, explanation of the importance of trees and their relationship to the environment, to celebrating Earth Day and celebrating International Migratory Bird Day. *(Mike Aherron, VDOF Forester and Michael Wright, NR Manager)*

0925- Presentation of the Tree City USA Award, if applicable. *(VDOF representative)* *…award flag will be taken by Command Representative to be flown a minimum of 1 week on the installation flag pole, previous flags not in use can be returned to the installation NR Manager.*

0930- Initiate planting of the tree. *(NASO CO, VDOF representative and Child Development Center/CDC children)…this year's tree is a Bald Cypress.*

0940- Photo ops with NASO CO, CDC children, VDOF designated representative, command reps. etc. Ceremony ends for NASO CO. *(Public Affairs Office representative and NR staff)*

0950- Finish planting the tree and post the new Tree City USA stickers. *(NR staff and volunteers)…ensure placement of tree guard around base of tree, tree is watered (5 gallon watering bucket or bag), mulch is placed around base of tree (no more than 3 inches), etc.*

Note: Event will start at 0905 hours. Length of event varies depending on audience participation.

Proposed Location for 28 April 2016 Arbor Day Tree Planting Ceremony (NAS Oceana)

2016 Urban Forestry Program – Naval Air Station Oceana
Annual Work Plan & Budget
(NASO and NALFF)

Regional Forestry Program Manager(s):

Emmett Carawan, NAVFAC MIDLANT Natural Resources Program Manager
Jack Markham, NAVFAC MIDLANT Natural Resources Forestry Program Media Manager
Taylor Austin, NAVFAC MIDLANT Natural Resources Specialist Intern

Installation/City Forestry Program Manager:

Michael Wright, Natural Resources Program Manager/Team Leader

Additional Forestry Program Affiliates/Consultants:

Mike Aherron, VA Dept of Forestry
Pete Acker, VA Dept of Game & Inland Fisheries
Timothy Craig, US Fish & Wildlife Service
Chris Petersen, US Navy, NAVFAC LANT Natural Resources Specialist
Jeff Gardner, US Navy, NAVFAC HQ Natural Resources Specialist & Forestry Program Manager
Lawrence McGrogan, US Navy, Installation Biological Science Tech. & Conservation Officer
Mark Edwards, US Navy, Installation Biological Science Tech.
Terry Chamberlain, US Navy, Installation Environmental Program Director
(These individuals are consulted regarding the development, management, and implementation of the Base's Integrated Natural Resources Management Plan, which includes the overall Forestry and Urban Forestry Programs.)

Tree Ordinance

A tree preservation and replacement standard operating procedure/instruction including pruning, planting, preservation and mitigation guidelines has been added to the installation's Integrated Natural Resources Management Plan (INRMP). The INRMP is a living and legally binding document required per the Sikes Act. The INRMP is reviewed annually for accuracy, functionality, enforcement, and update requirements. At a minimum of every 5 years the Navy, USFWS, State Wildlife Agency(ies), and NOAA-NMFWS (as appropriate) review the INRMP for operation and effect and issue letters or signatures of concurrence to implement the INRMP. The INRMP received its signatures from the following Agencies in June 2015: US Navy, USFWS Region 5, VA Department of Game & Inland Fisheries, and NOAA-National Marine Fisheries Service.

Community Forestry Program and Budget

The Regional and Installation Natural Resource Managers and staff consider all of the forest and landscape trees in planting and future development decisions. The INRMP Tree Preservation Instruction provides a framework for avoiding or mitigating tree loss due to development. The instruction also defines acceptable grounds maintenance practices with respect to proper tree protection, planting, and care. Execution of our hazardous tree removal plan, per a hazardous tree evaluation conducted by certified arborists, continued on NASO. The Facilities Engineering and Acquisitions Department (FEAD) accomplish the grounds maintenance contract quality assurance. Any tree work contracted to a private company is/was managed by the FEAD and any necessary technical advice provided by the Regional and Installation Natural Resources staff. Any tree work conducted in-house was coordinated through the Navy Natural Resources program managers. In 2016, sailors, marines, Department of Defense civilians, and children from the Base's Child Development Center participated in NASO's inaugural Clean the Base Day and Arbor Day Celebrations. The basewide events included trimming/planting/maintenance of trees and mulching along with other non-tree related activities. Additional tree maintenance was accomplished by 15 Natural Resources Program volunteers for various programmatic objectives throughout the year. In 2016 several storm events in the fall (Tropical Storm Hermine; Former Tropical Storm Julia; Hurricane Matthew; etc.) resulted in basewide tree damage, which was addressed via contracted, military, and MWR personnel actions.

NASO:

Forestry Program Statistics:

Current Estimated Installation Property Acreage: ~5,732 acres

Estimated Amount of Forest Cover upon/prior to Navy Acquisition: TBD

- Evergreen: TBD
- Deciduous: TBD
- Mixed: TBD

Estimated Current Amount of Forest Cover: ~1,400 acres

- Evergreen: ~147 acres
- Deciduous: ~584 acres
- Mixed: ~645
- Upland: TBD
    - 2016 Estimated Upland Forest Cover Lost: 17.5 acres (2,625 trees)
    - 2016 Estimated Upland Forest Mitigation: 0
- Wetland: TBD
    - 2016 Estimated Wetland Forest Cover Lost: 0
    - 2016 Amount of Forested Wetland Mitigation: 0

2016 Trees Planted: 5

2016 Trees Regenerating from Construction or Timber Harvest Activities: 0

- Since 2011, Airfield 5R Clearing: ~2.05 acres (~205 trees)
- Since 2012, Airfield Obstruction/BASH Compliance-Safety: ~2 acres (~400 trees)
- 2016, PAR Line of Sight Clearing for Airfield Compliance: ~17.5 acres (~2,625 trees)
    - Note: additional acreage/trees to be removed by 15 Jan 2017: ~2.35 acres (~875 trees)

2016 Merchantable Timber Trees Permanently Removed: ~5.3 acres (~1,059)

- 2016, PAR Line of Sight Clearing for Airfield Compliance:
    - Note: additional acreage/trees to be removed by 15 Jan 2017: ~1.76 acres (~352 trees)

2016 Non-merchantable Timber Trees Removed: ~1580 trees

2016 Trees Removed as a Forestry Action (currently re-foresting naturally): 0

2016 Trees Pruned: 1150 ≥ 150

2016 Firewood Sales: 0

Notes:

1. Living trees removed for non-construction purposes are replaced. Trees removed for construction purposes are replaced to the maximum extent practical. Trees removed for construction within a wetland area will be replaced or forested wetland banking credits purchased.
2. Currently, have Urban Forest Inventory, Invasive Species Projects and other Forest Resources related projects underway or getting ready to be awarded, which will update existing Forestry Program Information and answer TBD information as appropriate/available.
3. All forest clearing and naturally regenerating estimates are based on 200 trees per acre at maturity. Any areas that are not naturally regenerating and are being specifically managed as part of a forestry program project will be reflected accordingly.

2016 NASO Expenditures & Reimbursements:

Project Association	Acreage (in 2016)	# trees (in 2016)	Type of Action	Type of Funding	Expenditure/ Reimbursement (in 2016)	Info. Source
FY16 Award/FY17 Complete: Precision Aviation Radar Vegetation Maintenance	19.85 (17.5)	3,500 (2,625)	Tree Clearing	Contracted	-$526,025.00 (-$394,518.75)	FEAD

201 6 Total Urban Forestry Funding Expenditures/Transactions (*Requirement = $24,000.00 based on 12,000 population*) **= $746,968.20** *(Includes projects awarded in previous fiscal years, only those portions of funds executed in the current FY were reported. Includes funding associated with any Forest Resources action, including wildlife survey work.)*

2016 Total Urban Forestry Funding Reimbursements = $0.00 *(Includes funding received as payment for timber value, such as firewood permit sales, forestry program timber harvesting sales, or construction timber clearing timber value payments.)*

Arbor Day Observance and Proclamation

Due to poor weather conditions event was relocated to the Oceana Child Development Center (CDC) on 28 April 2016. A native Bald cypress (*Taxodium distichum*) was utilized has a fun educational tool for teaching children & adults about the importance of trees, the role of a tree in the cycle of life, and how to properly plant and care for a tree. Typically, the children get to assist with actually planting the tree; however due to the weather conditions they could not visit the tree's planting location. Though the children did not get to plant the tree, they did get to interact with the tree: touching the bark, touching the leaves, touching the exposed roots, etc. The tree was later planted by Natural Resources staff at the NASO Aviation Park on 28 April 2016.

CAPT Louis Schager, NASO Executive Officer; Michael Wright, Installation Natural Resources Manager; and Mike Aherron, Virginia Department of Forestry Representative led the interactive educational lessons. Approximately 30 children and 15 adults attended the tree planting ceremony. Many others contributed to the preparation for the ceremony and others provided continued care for the tree after the ceremony. The CDC classes adopted the tree to help nurse it into becoming a mature tree. The Natural Resources program, in addition to purchasing the tree, purchased tree gators, mulch, and tree protectors to help ensure adequate water supply during early development and to prevent landscaping (mowing & weedwhacking) practices from damaging/scaring the tree.

Event announcements were made: on the Installation's Facebook (https://www.facebook.com/NavalAirStationOceana/) and Twitter Accounts (https://twitter.com/nas_oceana); via community email & word of mouth; via a News Release by the Navy's Public Affairs Officer; and the local newspaper "Oceana Observer."

A map of Arbor Day Tree Celebration planting locations is available upon request from the installation's Natural Resources Manager, Mike Wright.

Installation received an award for its 22nd consecutive year as a Tree City USA community.

Attendees of the event received one or more of the following trees to take home and plant: hawthorn, persimmon, and gray dogwood. The trees were supplied by the Virginia Department of Forestry.

News Article on Event:

The Oceana Observer published an article on the event, 12 May 2016: <https://issuu.com/militarynews/docs/observer_finalpdf_05.12.16>.

NALFF (*note: info not included in Tree City USA Application***):**
Forestry Program Statistics:
Current Estimated Installation Property Acreage: ~2,576 acres

Estimated Amount of Forest Cover upon/prior to Navy Acquisition: TBD

- Evergreen: TBD
- Deciduous: TBD
- Mixed: TBD

Estimated Current Amount of Forest Cover: ~1100 acres

- Evergreen: ~67 acres
- Deciduous: ~622 acres
- Mixed: ~366 acres
- Upland: TBD
- Wetland: TBD

2016 Trees Planted: 0

2016 Trees Regenerating from Construction or Timber Harvest Activities:

- Since 2013, Airfield Obstruction Clearing: 19 acres (3,800 trees)

2016 Merchantable Timber Trees Permanently Removed: 0

2016 Non-merchantable Timber Trees Removed: 0

2016 Trees Removed as a Forestry Action (currently re-foresting naturally): 0

2016 Trees Pruned: 150 ≥ 10

2016 Firewood Sales: 0

Notes: (See aforementioned notes.)

2016 NALFF Expenditures & Reimbursements:

Enclosure 2. Tree City USA Proclamation

DEPARTMENT OF THE NAVY
1750 TOMCAT BOULEVARD
NAVAL AIR STATION OCEANA
VIRGINIA BEACH, VIRGINIA 23460-2191

IN REPLY REFER TO:

Naval Air Station Oceana

Proclamation

Whereas, *In 1872, Arbor Day founder, J. Sterling Morton set aside a special day for the planting of trees; that first Arbor Day resulted in the planting of more than a million trees in Nebraska; and*

Whereas, *Naval Air Station Oceana is committed to managing and enhancing its natural resources for multiple uses while fulfilling its assigned missions in support of the Departments of Defense and Homeland Security; and*

Whereas, *Naval Air Station Oceana celebrates Arbor Day with the planting of a tree; and*

Whereas, *trees reduce erosion, clean the air, produce oxygen, cut heating and cooling costs, and provide habitat for wildlife; and*

Whereas, *the personnel assigned to Naval Air Station Oceana take great pride in their installation through participation in activities and programs designed to improve the appearance and the quality of life onboard Naval Air Station Oceana; and*

Whereas, *Naval Air Station Oceana takes pride in supporting various community environmental events and activities including Arbor Day, Earth Day, and National Public Lands Day; and*

Whereas, *I, Captain Louis J. Schager, Commanding Officer of Naval Air Station Oceana, do hereby proclaim 28 April 2016 as,*

"The Annual Naval Air Station Oceana Arbor Day Celebration"

In Witness Whereof, I sign this proclamation,

Louis J. Schager
Captain, U.S. Navy
Commanding Officer

This page intentionally left blank.

Enclosure 3. Pruning and Planting Guidelines

TREE PRESERVATION AND REPLACEMENT ON INSTALLTION

1. Purpose

a. This policy establishes a program for forest conservation and tree protection during development or maintenance activities. The hierarchy for tree protection initiatives begins with preservation of existing trees wherever practical, and ends with planting replacement trees at specified ratios to compensate for unavoidable loss.

b. The policy parallels the intent of local ordinances. Local municipalities have determined that the planting and preservation of trees is not only desirable but essential to the present and future health, safety and welfare of all citizens.

2. Policy

a. It is the intent of this policy to prevent the unauthorized destruction or disfigurement of existing trees. It is further intended to perpetuate tree growth, to encourage tree preservation and to provide adequate tree canopy and numbers.

b. Where tree preservation is not practicable, replacement tree establishment is required. The determination of justified loss will be made in concert with the appropriate installation and or Regional Environmental Natural Resources Manager, who will also assist with preparation of tree inventories at potential development areas. Such inventories and determinations will be made during the preliminary siting phase of a project.

c. Where concurrence with the finding of justified loss is received from the Natural Resources personnel, it is the intent to require the replacement planting of trees as mitigation. Previously planted and approved tree mitigation banks may be acceptable as replacement. The overall goal is “no net loss” of trees or tree canopy cover.

d. Commercial forestry operations, conducted under an approved Integrated Natural Resources Management Plan or Forest Management Plan are exempt from the requirements of this instruction.

3. Application

a. The terms and provisions of this policy shall apply to:

(1) Development and expansion of existing facilities, including roadway, utilities and other infrastructure development.

(2) Negligent grounds maintenance activities.

b. Actions involving tree removal necessary to meet critical military mission requirements are excluded from this instruction. All such projects will be reviewed for compliance with this instruction by the appropriate installation Natural Resources Manager who may recommend tree protection measures, mitigation for lost trees or selection of alternative sites. Forest products will not be given away, abandoned, carelessly destroyed, used to offset costs of contracts or traded for products, supplies, or services. Natural Resources personnel will review contracts involving removal of significant amounts of timber to ensure these conditions are met.

c. Maintenance activities within NAVFAC P80.3 standards for the airfield clear zones or required for maintenance of ordnance areas, communication systems, security, or right-of-ways are also exempt from the requirements of this instruction.

d. Special accommodations may be made to support Morale, Welfare and Recreation operations and improvements to comply with professional recommendations for the program involved and to assist in furthering these programs at a minimal cost to station personnel.

4. Tree Preservation Plans and Tree Protection

a. Proponents of all projects and activities, which may affect existing trees, shall team with the Natural Resources Manager to identify all trees in the affected area and to develop a project/activity-specific tree preservation plan in accordance with this policy. All trees designated in the plan to be preserved shall be identified on all applicable project drawings, and also shall be marked in the field. Existing trees designated for retention shall be protected in accordance with Attachment A.

b. Certain trees and forests are considered priority areas for tree protection, and shall be left in an undisturbed condition unless no practicable alternative is identified by the Natural Resources Manager. The following areas are designated as priority areas for tree protection:

(1) Trees in wetlands, floodplains, Chesapeake Bay Protection Areas and designated drainage ditches or riparian buffers. Drainage ditch flow routes are exempt from these requirements in order to maintain design flow volumes.

(2) Contiguous forests - forested corridors that connect with other forested tracts.

(3) Critical habitat - protection areas for rare, threatened or endangered species.

(4) Historic trees - associated with historic sites.

(5) Specimen trees - trees 30 inches in diameter or larger, or trees with 75 percent or more of the diameter of the state champion tree.

5. Compensation for Unavoidable Losses

a. Due to the difficulty and time required to replace the function provided by mature trees, replacement ratios shall be based on the size of the individual trees scheduled for removal. In lieu of performing tree replacement activities, the project proponent may elect to fund the replacement.

b. The ratio for determining the number of required replacement trees shall be one replacement tree for every 6" increment in the dbh (diameter breast height) of the tree to be removed, with the replacement ratio to be rounded upwards to the next increment. A minimum 1:1 replacement ratio shall be accomplished. As an example, the following replacement ratios shall be implemented:

(1) Removal of 1" to 5.9" dbh tree: 1:1 replacement
(2) Removal of 6" to 11.9" dbh tree: 2:1 replacement
(3) Removal of 12" to 17.9" dbh tree: 3:1 replacement

c. Replacement tree species and planting locations must be approved by the installation Natural Resources Manager. Replacement planting shall be conducted in accordance with the requirements set forth in Attachment (D). The following guidelines shall be used in developing appropriate tree replacement procedures for each project:

(1) Size. At the time of planting, replacement trees shall be a minimum of two (2) inches caliper.

(2) Siting. Tree locations shall be based on sound urban forestry practices, and shall ensure adequate distance from buildings, sidewalks, roads, utilities, and other development to preclude the need for future tree removal. The location of replacement trees shall favor the benefits provided by trees in an urban setting, including noise attenuation, shading of cooling units and buildings, storm water management benefits, and sensible placement with respect to turf management areas.

(3) Reforestation. In instances where space or conditions at the project site are undesirable for tree replacement, the Natural Resources Manager will assist in identifying priority reforestation locations on installation. Priority planting areas include buffers for drainage ditches, corridors to connect existing forests, buffers

between differing land uses, plantings to achieve energy conservation and expansion of existing forests.

(4) Planting Seasons. Trees shall be planted during the proper planting season to benefit survival rates. For most shade tree species this is the dormant season or leaf-off period and runs from November through March, except when the ground is frozen.

6. Unauthorized Destruction of Trees

a. Instances where trees have been willfully damaged or are found in physically or structurally poor condition as a result of improper protection shall be adjudged as destruction of government property.

b. In instances where compensation for destruction cannot be agreed upon based on the replacement criteria outlined in Section 5 of this enclosure, the Natural Resources Manager may use procedures detailed by reference (m) to calculate tree value. The appraisal process includes valuation of the tree species, size, condition and location. Tree replacement and reimbursement will be the responsibility of the person or persons who caused the destruction.

ATTACHMENT A
TREE PROTECTION STANDARDS

1. Purpose. Proper tree protection during construction and grounds maintenance activities is essential to the long-term survival of trees in development areas.

2. Construction. Existing trees to be saved shall be protected by measures outlined in Attachment (B) to enclosure (1). In addition the following conditions apply:

a. An inventory and map of trees within the footprint of construction activity must be completed. This data should be used to minimize impacts from structures and improvements.

b. Whenever possible, protection areas should include groups rather than individual trees.

c. Excavating equipment should not be used to prune roots inside a protection area. Roots should be severed using a root pruner. If roots outside the tree protection area are encountered during construction, they should be severed using a sharp chansaw, axe or handsaw.

d. Tunneling of utilities should be utilities whenever possible to reduce damage to tree roots. If tunneling or altering the route of utilities is not possible, roots should be pruned with a root pruner.

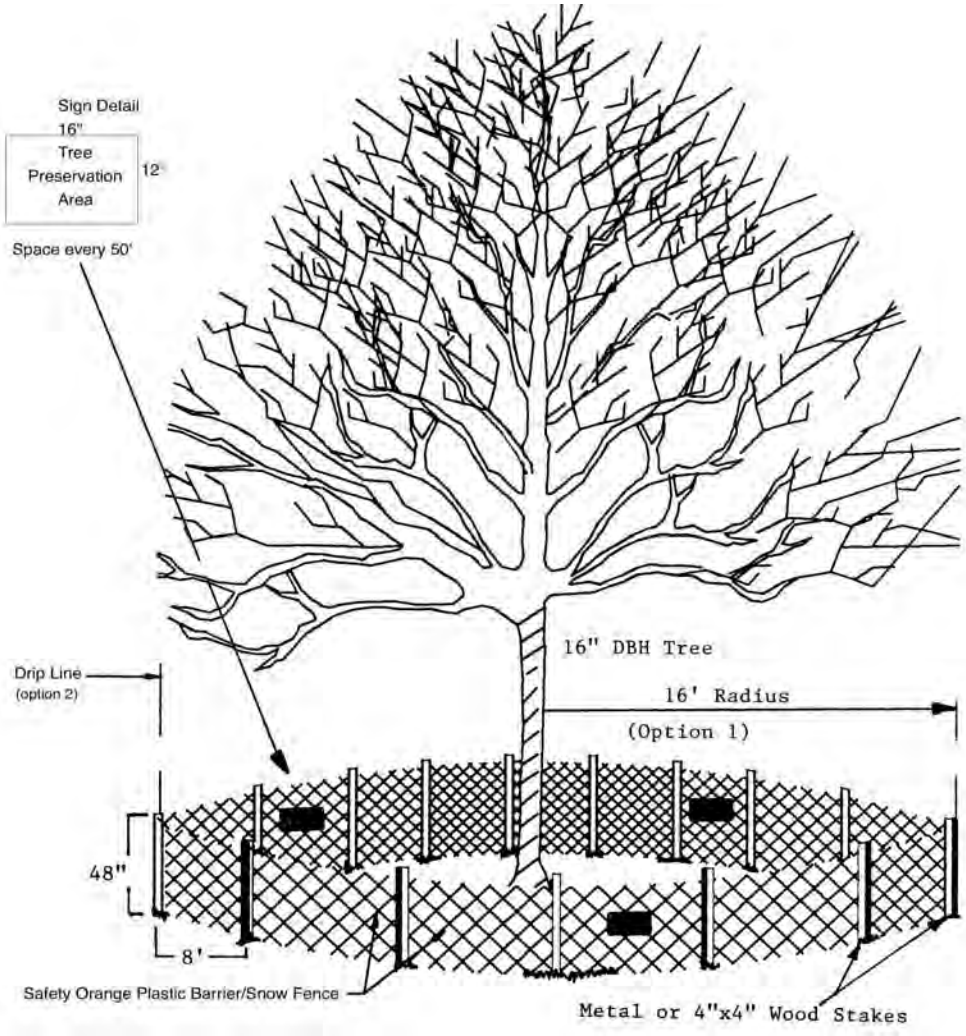
3. Grounds Maintenance. Grounds maintenance personnel shall be responsible for damage to trees and shrubbery in accordance with current grounds maintenance contract requirements. At a minimum, the following standards shall apply:

a. Contractors shall not subject trees, shrubs or hedges to damage by lawn mowers, string trimmers or other equipment. Damage includes wounds inflicted to bark, limbs or exposed roots.

b. Extreme care shall be exercised when performing grounds maintenance work around any of the defined priority areas for tree protection.

4. Tree planting and Care. All tree pruning shall be done in accordance with the information in Attachment (C) to enclosure (1). All tree plantings must be first approved by the installation Natural Resources Manager to ensure selection of proper species and siting. Planting of trees shall be done in accordance with procedures outlined in attachment (D) to enclosure (1). When determining planting locations, long-term survivability shall be considered based on sound forestry practices. Trees shall be planted in locations that favor the benefits of trees and to avoid future tree removal.

TREE PROTECTION DETAIL



1. Prior to any clearing, grading, or construction, tree protection fences (See Detail) shall be placed around all trees to be retained on the site to prevent the destruction or damaging of trees.

- Option 1. If site conditions permit, the radius of the tree protection fence shall be equal to 1 foot for every inch of tree diameter at breast height measured at four and a half (4½) feet above the surface of the ground.

- Option 2. If site conditions do not permit a fence system as large as described above then, the fence shall be located in a circular pattern with a radius equal to the length of the widest or longest branch, or drip line.

a. Fence material shall be made of polypropylene or similar plastic material, and the color shall be safety orange and shall not be less than 48 inches in height.

b. Metal fence stakes or 4-inch x 4-inch wood posts shall be used to erect the fence. Sufficient stakes shall be used to ensure that the fence material remains upright without sagging. Spacing between wood or metal stakes shall not exceed 8 feet.

c. Signs (16 inch x 12 inch) shall be spaced every 50 feet along the fence indicating the site is a tree preservation area.

2. Materials shall not be stockpiled within the tree protection area, and vehicles and other equipment shall be excluded to avoid soil compaction and root damage. Equipment operator shall not damage tree trunks, limbs and roots during clearing, grading or construction operations.

3. Protected trees shall be kept free of nails or other fastening devices, signs, survey makers, and electrical wires.

4. In cases where the construction drawings indicate that utilities, sidewalks or other structures enter the tree protection area, the following protection measures shall be implemented.

a. Minimize disturbance to the root area by adjusting the tree protection fence and staying as far away from the tree as possible. Disturbance shall be minimized within the critical zone, which are 3 to 10 feet from the tree trunk.

b. Place 16 to 20 inches of wood chips (from trees already removed) or bark mulch over the root zone to reduce soil compaction from equipment.

c. Bridge the root area with plates of steel supported on wood ties.

d. Spread a heavy plastic tarp over the roots prior to placing excavated material on the ground. The tarp will serve as a marker for equipment operators indicating the existing grade and roots systems as they place the spoil material back into the excavated trench.

e. Pump concrete through conveyor pipes instead of driving vehicles over the tree roots.

TREE PRUNING DETAIL

1. The Contractor shall contact the Natural Resources Manager prior to initiating pruning on the trees designated for protection. Additional pruning techniques may be provided.

2. All cuts shall be made as close as possible to the trunk or parent limb without cutting into the branch collar or leaving a protruding stub (see Figure 1). Bark at the edge of all pruning cuts shall remain firmly attached.

3. All branches too large to support with one hand shall be precut (see Figure 1) to avoid splitting or tearing the bark. Where necessary, ropes or other equipment shall be used to lower large branches or stubs to the ground.

4. Treatment of cuts and wounds with wound dressing or paint shall not permitted.

5. Equipment that will damage the bark or cambium layer shall not be used on or in the tree. The use of climbing spurs (hook, irons) shall not be permitted. Sharp tools shall be used so that clean cuts will be made at all times. Trucks and other support vehicles shall not be permitted inside the drip line of the tree canopy. Temporary removal of the tree protection fence shall be permitted to facilitate pruning, and removal of limbs and other woody material from under the drip line. The tree protection fence shall be erected immediately after pruning is complete.

6. All cut limbs and woody material shall be removed from the crown upon completion of pruning. All limbs, brush, leaves, and other woody material shall be removed from government property by the Contractor.

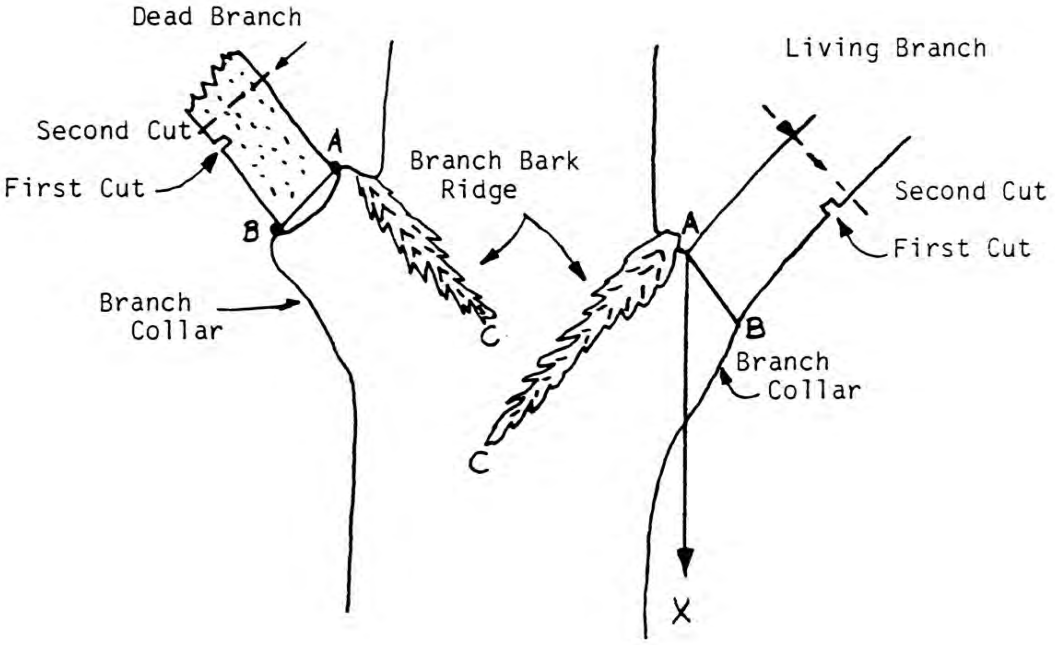
7. Pruning shall conform to the American National Standard for Tree Care Operations - Tree, Shrub, and Other Woody Plant Maintenance - Standard Practices, ANSI A300-1995 and International Society of Arboriculture Tree-Pruning Guidelines. Copies of both documents can be purchased by contacting the International Society of Arboriculture, PO Box 3129, Champaign, IL 61826-3129, tel 217-355-9411 or http://www.isa-arbor.com.

8. All work performed shall adhere to the American National Standard for Tree Care Operations-Pruning, Trimming, Repairing, Maintaining, and Removing Trees, and Cutting Brush - Safety Requirements, ANSI Z133.1-1994. Contact the International Society of Arboriculture, PO Box 3129, Champaign, IL 61826-3129, phone 217-355-9411, fax 217-355-9516, or web site www.isa-arbor.com to obtain a copy of ANSI Z133.1.

9. Tree maintenance contractors shall have an ISA Certified Arborist on-site during all tree maintenance operations.

TREE PRUNING DETAIL

1. Locate the branch ridge
2. Find target a – outside of branch bark ridge
3. Find target b – swelling where branch meets branch collar
4. If b is hard to find – drop a line at ax. angle xac = to angle xab
5. Stub branch to be pruned
6. Make cut at line AB



Do not

- Cut behind the branch bark ridge
- Leave stubs
- Cut branch collar
- Paint cuts
- Use dull tools
- Use climbing spurs

TREE PLANTING DETAIL

Remember: Select a Native Tree.

1. Growing Stock Inspection

a. All trees and shrubs shall meet the American Standard for Nursery Stock, ANSI Z60.1-1996. Contact the American Nursery & Landscape Association, 1250 I Street NW, Suite 500, Washington, DC 20005, tel 202-789-2900 or web site www.anla.org to obtain a copy of ANSI Z60.1-1996.

b. All trees shall be true to type or name as ordered or shown on the plans and shall be individually tagged or tagged in-groups by species and cultivar.

c. All trees shall be healthy, have a form typical for the species or cultivar, be well rooted, and stand upright without support. Tree size shall be not larger than 1-1/2" to 2" in caliper diameter.

d. All trees shall comply with federal and state laws requiring inspection for plant diseases and insect pest infestations.

e. The rootball of all trees shall be moist throughout and solid with little or no movement at the trunk. The crown shall show no signs of moisture stress. Check that the tree is free of girdling roots (roots that develop and grow across or around other roots), and free of knees (roots protruding above the soil). The roots should be abundant and white. Brown or black roots indicate a health problem.

f. Except for small-growing, multistemmed ornamentals, select trees that have a single, straight trunk and leader, and spreading branches. Reject trees with double leaders (codominant stems) or vigorous, upright branches competing with the leader. Radial and vertical distribution of branches shall form a symmetrical crown. Foliage should be evenly distributed on the upper 2/3 of the tree, and not concentrated at the top. The Government shall reject trees that have been severely pruned or headed back, with trunk injury, and without an abundance of healthy, green leaves.

2. Planting

a. Planting season is from November through March, except when the ground is frozen.

b. Site factors that influence long-term survivability must be considered: overhead and underground utilities, sidewalks, signage conflict, traffic visibility, light poles, etc. Utilities must be marked prior to excavation.

c. Balled and Burlapped (B&B) Stock: All synthetic or non-degradable material such as nylon rope or treated burlap must be

removed from the root ball prior to planting. All material including biodegradable material must be remove from the upper 1/3 of the root ball. Prevent remaining pieces from extending above the soil or they will act as wicks, drying the soil. Take extra care not to loosen or break the soil ball. If trees are planted

with wire baskets around the root ball, cut and remove the top two tiers of the wire after the ball is set in the hole.

d. Container Grown and Containerized Stock: Carefully remove the container at the planting site. Cutting the containers may be necessary. Remove all containers, including biodegradable paper-mache pots. Newly containerized stock may be only slightly rooted; the container must be removed with care so as not to disturb the root ball. In contrast, container grown stock may be rootbound. If roots are growing in a spiral around the soil ball, the plant is root bound. These roots need to be separated or they will eventually girdle the plant. Make vertical cuts on the sides of the ball just deep enough to cut the net of roots. Also, make a criss-cross cut across the bottom of the ball.

e. Mark out a planting area 3-5 times the diameter of the root ball. Use a rototiller or shovel to loosen and mix the soil in this entire area to a depth of 12 inches. Organic matter can be added to the loosened soil as long as the new material is used uniformly throughout the area. In the center of the prepared area, dig a hole as only as wide enough and deep enough to accept the root ball. The hole should allow the root ball to sit on solid ground rather than on loose soil. Once the ball is set in the hole, its upper surface should be level with or slightly above the surrounding ground.

f. Position the tree so that it is vertical and plumb to the ground and the main stem is growing straight up.

g. Backfill with soil from the planting site if the soil is not contaminated. Remove large rocks and construction debris from the soil. Amending the backfill soil with organic matter does not increase survival or growth of woody plants.

h. When the hole is half full, slowly water to saturate the soil, then continue to fill the hole. Settle the soil by watering or lightly tamping to ensure that all air pockets are eliminated. Do not pack the soil by using equipment or feet. Do not create an earthen berm around the tree.

i. Water thoroughly to remove air pockets, secure the soil around the roots, and provide nourishment.

j. Rake soil evenly around the entire planting area.

3. Mulching

a. Mulch an area at least 3 times the diameter of the root ball to a depth of 2-4 inches with wood chips, bark mulch, shredded leaves, or pine needles. Do not mound the mulch around the base of the tree.

4. Staking

a. Only stake the tree if it will not stand on its own, and use only one stake on the opposite side of the leaning tree. The stake is to be placed outside of the root ball.

b. Do not use wire even if the wire is in-cased by hose. Use a flexible tie attached to a single stake. Biodegradable material is recommended.

c. Do not wrap tree with protective tape. If tree arrives on the site with a protective tree wrap, remove it immediately after the tree is planted.

d. Remove stakes and ties after 1 year.

5. Pruning

a. At the time of planting dead, damaged and rubbing or cross branches can be removed.

b. Do not remove any other living branches. Do not apply any type of wound dressing.

c. Remove sucker sprouts from the base of the tree.

6. Watering

a. During the first growing season, irrigate the root ball with 5 gallons of water every three days after a rain event. Slow deep watering is recommended. Soil should be moistened to a depth of 12-18 inches. Water the soil within the root zone. Do not water the tree trunk.

7. Fertilizing

Fertilizer must be phosphorus free.

a. Use no fertilizer during the establishment period. The establishment period is about one year for every 1 inch of caliper. So, a 2-inch caliper tree would require two years to reestablish the top:root ratio.

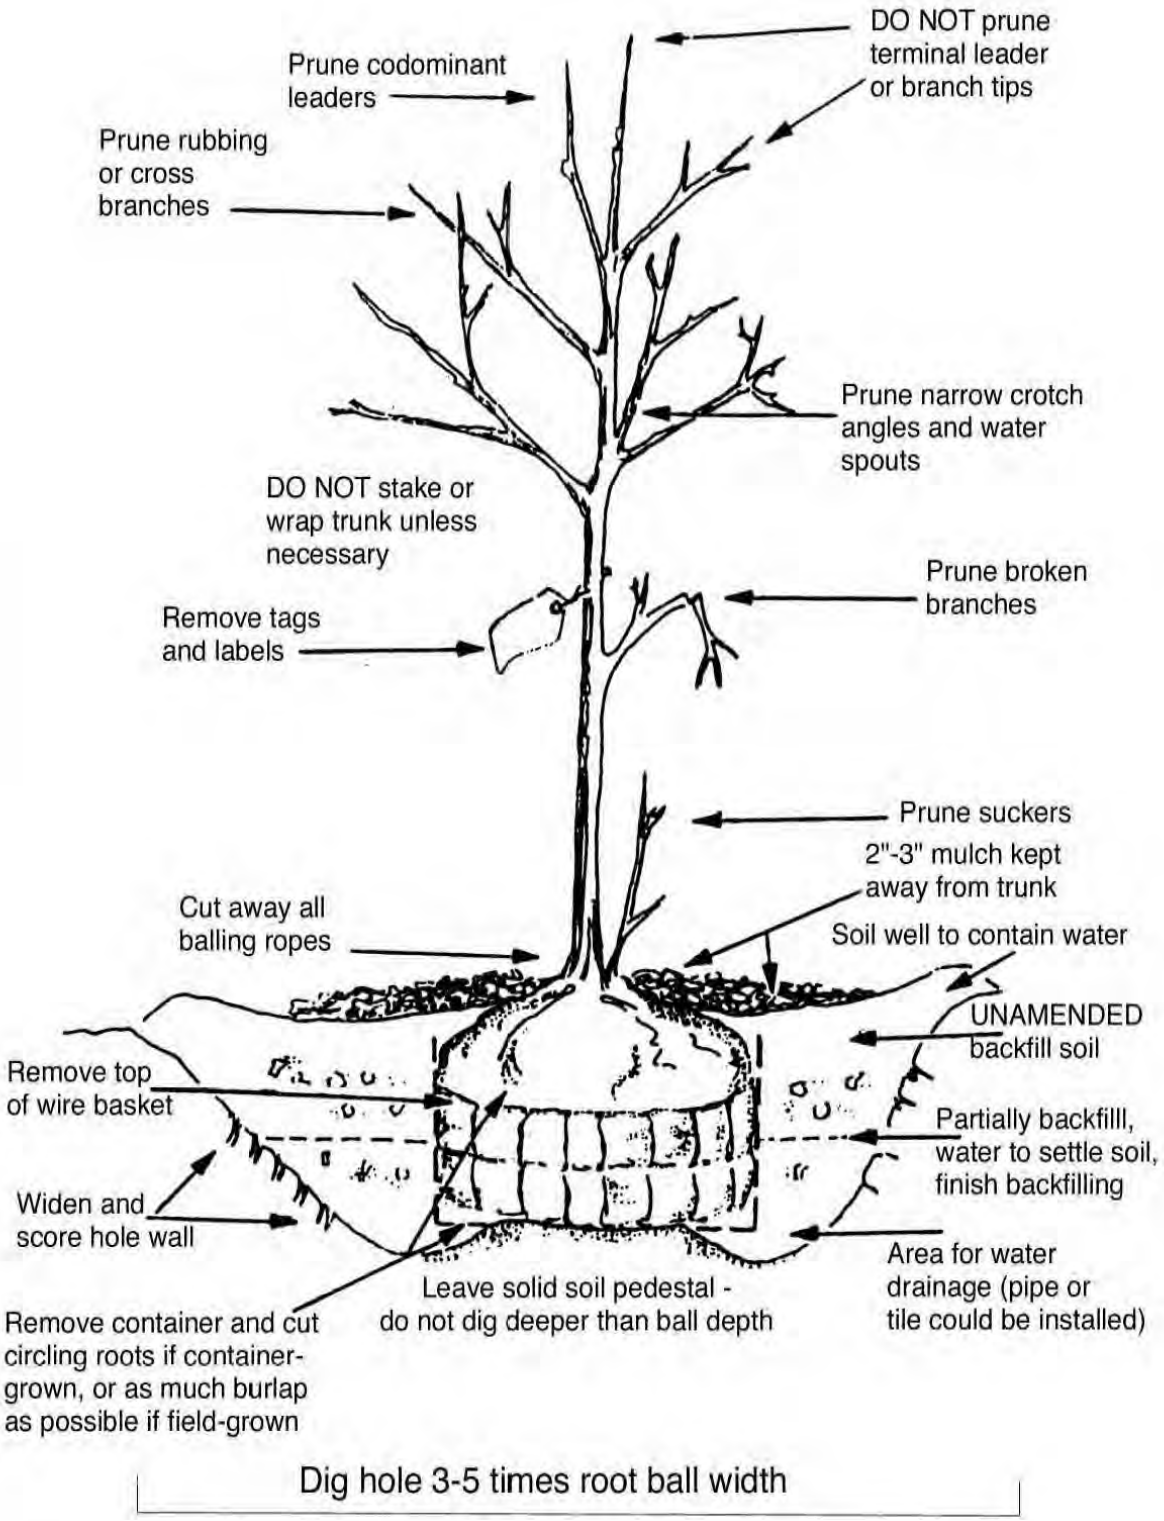
b. Once the trees are established, nitrogen fertilization should be applied at a rate of 2-lbs. N/1,000 square feet/year. Established, mature trees require minimal nitrogen, 1 lb. N/1,000 square feet/two to four years. All tree fertilizes must be slow or controlled release versus water-soluble.

c. Mature trees growing in fertilized turf should not be fertilized.

d. Apply fertilizers during October through April, except when the ground is frozen or covered with snow.

Reference: Principle and Practice of Planting Trees and Shrubs, 1997, Watson and Himelick, International Society of Arboriculture, PO Box 3129, Champaign, IL 61826-3129 or www.isa-arbor.com.

TREE PLANTING DETAIL



Pruning Trees

Pruning is the most common tree maintenance procedure. Although forest trees grow quite well with only nature's pruning, landscape trees require a higher level of care to maintain their safety and aesthetics. Pruning should be done with an understanding of how the tree responds to each cut. Improper pruning can cause damage that will last for the life of the tree, or worse, it will shorten the tree's life.

Reasons for Pruning

Since each cut has the potential to change the growth of the tree, no branch should be removed without a reason. Common reasons for pruning are to remove dead branches, to remove crowded or rubbing limbs, and to eliminate hazards. Trees may also be pruned to increase light and air penetration to the inside of the tree's crown or to the landscape below. In most cases, mature trees are pruned as a corrective or preventative measure.

When to Prune

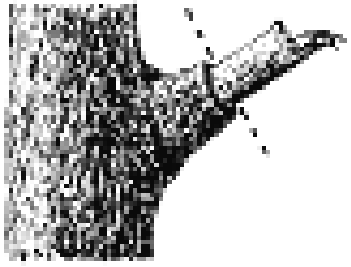
Most routine pruning to remove weak, diseased or dead limbs can be accomplished at any time during the year with little effect on the tree. As a rule, growth is maximized and wound closure is fastest if pruning takes place before the spring growth flush. Some trees, such as maples and birches, tend to "bleed" if pruned early in the spring. This may be unsightly, but is of little consequence to the tree.

A few tree diseases, such as oak wilt, can be spread when pruning wounds allow spores access into the tree. Susceptible trees should not be pruned during active transmission periods.

Heavy pruning just after the spring growth flush should be avoided. This is when trees have just expended a great deal of energy to produce foliage and early shoot growth. Removal of a large percentage of foliage at this time can stress the tree.

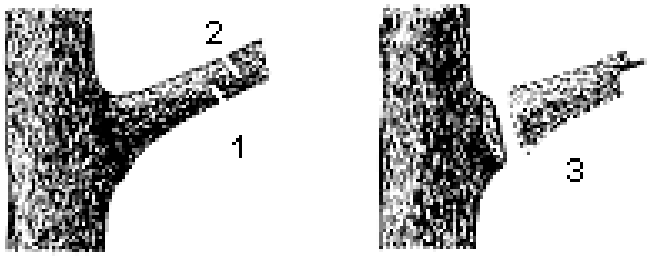
Making Proper Pruning Cuts to Mature Trees

Pruning cuts should be made just outside the branch collar. The branch collar contains trunk or parent branch tissue and should not be damaged or removed. If trunk collar has grown out on a dead limb to be removed, make the cut just beyond the collar. Do not cut the collar (see figure).



On a dead branch that has a collar of live wood, the final cut should be made just beyond the outer edge of the collar.

If a large limb is to be removed, its weight should first be reduced. This is done by making an undercut about 12-18 inches from the limb's point of attachment. A second cut is made from the top, directly above or a few inches further out on the limb. This removes the limb leaving the 12-18 inch stub. The stub is removed by cutting back to the branch collar. This technique reduces the possibility of tearing the bark



Use the 3-cut method to remove a large limb.

How Much Should be Pruned?

The amount of live tissue that should be removed depends on the tree size, species, and age, as well as the pruning objectives. Younger trees will tolerate the removal of a higher percentage of living tissue than mature trees. A common mistake is to remove too much inner foliage and small branches. It is important to maintain an even distribution of foliage along large limbs and in the lower portion of the crown. A widely accepted rule of thumb is never to remove more than one fourth of a tree's leaf bearing crown. In a mature tree, pruning even that much could have negative effects. Removing even a single, large-diameter limb can create a wound that the tree may not be able to close. The older and larger a tree becomes, the less energy it has in reserve to close wounds and defend against decay or insect attack. The pruning of large, mature trees is usually limited to the removal of dead or potentially hazardous limbs.

Wound Dressings

Wound dressings were once thought to accelerate wound closure, protect against insects and diseases, and reduce decay. However, research has shown that dressings do not reduce decay or speed closure, and rarely prevent insect or disease infestations. Most experts recommend that wound dressings not be used. If a dressing must be used for cosmetic purposes, then only a thin coating of a non-toxic material should be applied.

Newly Planted Trees

Pruning of newly planted trees should be limited to corrective pruning. Remove torn or broken branches. Save other pruning measures for the second or third year. The belief that trees should be pruned when planted to compensate for root loss is misguided. Trees need their leaves and shoot tips to provide food and the substances, which stimulate new root production. Unpruned trees establish faster, with a stronger root system than trees pruned at the time of planting.

(From International Society Arboriculture at *http://www.isa-arbor.com/consumer/pruning.html*)

New Tree Planting

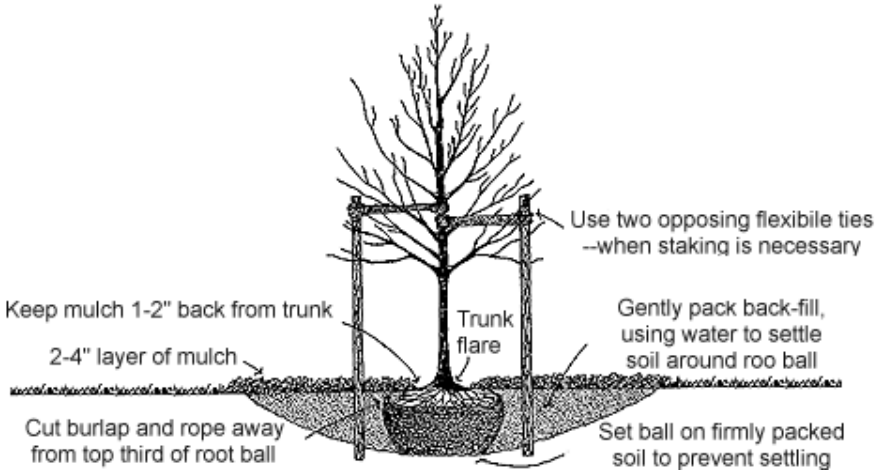
The ideal time to plant trees and shrubs is during the dormant season, in the fall after leafdrop or early spring before bud-break. Weather conditions are cool and allow plants to establish roots in the new location before spring rains and summer heat stimulate new top growth. However, trees properly cared for in the nursery or garden center, and given the appropriate care during transport to prevent damage, can be planted throughout the growing season. In either situation, proper handling during planting is essential to ensure a healthy future for new trees and shrubs. *Before you begin planting your tree, be sure you have had all underground utilities located prior to digging.*

If the tree you are planting is balled and burlapped, or bare rooted, it is important to understand that the tree's root system has been reduced by 90-95% of its original size during transplanting. As a result of the trauma caused by the digging process, trees will commonly exhibit what is known as **transplant shock.** Transplant shock is indicated by slow growth and reduced vigor following transplanting. Proper site preparation before and during planting, coupled with good follow up care will reduce the amount of time the plant experiences transplant shock and will allow the tree to quickly establish in its new location. Carefully follow eight simple steps and you can significantly reduce the stress placed on the plant at the time of planting.

1. **Dig a shallow, broad planting hole.** Make the hole wide, as much as three times the diameter of the root ball, but only as deep as the root ball. It is important to make the hole wide because the tree roots on the newly establishing tree must push through surrounding soil to establish. On most planting sites in new developments, the existing soils have been compacted and are unsuitable for healthy root growth. Breaking up the soil in a large area around the tree provides the newly emerging roots room to expand into loose soil to hasten establishment.

2. **Identify the trunk flare.** The trunk flare is where the roots spread at the base of the tree. This point should be partially visible after the tree has been planted (see diagram). If the trunk flare is not partially visible, you may have to remove some soil from the top of the root ball. Find it so you can determine how deep the hole needs to be for proper planting.

3. **Place the tree at the proper height.** Before placing the tree in the hole, check to see that the hole has been dug to the proper depth, and no more. The majority of the roots on the newly planted tree will develop in the top 12" of soil. If the tree is planted too deep, new roots will have difficulty developing due to a lack of oxygen. It is better to plant the tree a little high, 1-2" above the base of the trunk flare, than to plant it at or below the original growing level. This will allow for some settling (see diagram). To avoid damage when setting the tree in the hole, always lift the tree by the root ball, and never by the trunk.



4. **Straighten the tree in the hole.** Before you begin backfilling have someone view the tree from several directions to confirm the tree is straight. Once you begin backfilling it is difficult to reposition.

5. **Fill the hole, gently but firmly.** Fill the hole about 1/3 full and gently but firmly pack the soil around the base of the root ball. Then, if the tree is balled and burlapped, cut and remove the string and wire from around the trunk and top 1/3 of the root ball (see diagram). Be careful not to damage the trunk or roots in the process. Fill the remainder of the hole, taking care to firmly pack soil to eliminate air pockets that may cause roots to dry out. To avoid this problem, add the soil a few inches at a time and settle with water. Continue this process until the hole is filled and the tree is firmly planted. It is not recommended to apply fertilizer at the time of planting.

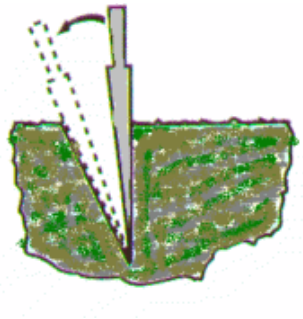
6. **Stake the tree, if necessary.** If the tree is grown and dug properly at the nursery, staking for support is not necessary in most home landscape situations. Studies have shown that trees will establish more quickly and develop stronger trunk and root systems if they are not staked at the time of planting. However, protective staking may be required on sites where lawn mower damage, vandalism or windy conditions are concerns. If staking is necessary for support, two stakes used in conjunction with a wide flexible tie material will hold the tree upright, provide flexibility, and minimize injury to the trunk (see diagram). Remove support staking and ties after the first year of growth. Leave protective staking in place as long as necessary.

7. **Mulch the base of the tree.** Mulch is simply organic matter applied to the area at the base of the tree. It acts as a blanket to hold moisture, protect against harsh soil temperatures, both hot and cold, and reduces competition from grass and weeds. Some good choices are leaf litter, pine straw, shredded bark, peat moss, or wood chips. A two to four inch layer is ideal. More that four inches may cause a problem with gas exchange. When placing mulch, care should be taken so that the actual trunk of the tree is not covered. This may cause decay of the living bark at the base of the tree. A mulch-free area, one to two inches wide at the base of the tree, is sufficient to avoid moist bark conditions and prevent decay.

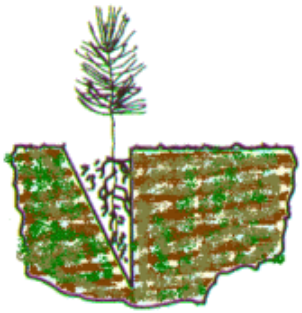
8. **Follow-up care.** Keep the soil moist but not soaked; overwatering will cause leaves to turn yellow or fall off. Water trees at least once a week, barring rain, and more frequently during hot weather. When the soil is dry below the surface of the mulch, it is time to water. Continue until mid-fall, tapering off for lower temperatures that require less frequent watering. Other follow-up care may include minor pruning of branches damaged during the planting process. Prune sparingly immediately after planting, and wait to begin necessary corrective pruning until after a full season of growth in the new location.

(Taken from the International Society of Arboriculture at http://www.isa-arbor.com/consumer/planting.htm)

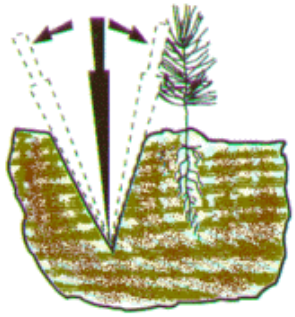
How to Plant with a Dibble Bar



1. Push the blade vertically into the soil then pull the handle toward you to open the hole.



2. Set the seedling 1 to 3 inches deeper than the nursery depth with the roots straight.



3. Push the blade into the soil just behind the planting hole then pull the handle back to close the bottom of the hole. Push the handle forward to close the top of the hole.

4. Pack the soil firmly with your heel.

(From South Carolina Forestry Commission at www.state.sc.us/forest/refplant.htm)

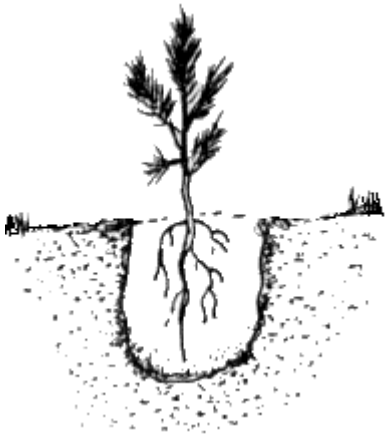
How to Plant Bare-root Trees

1. It is best to plant bare-root trees immediately, in order to keep the fragile roots from drying out. If you can't plant because of weather or soil conditions, store the trees in a cool place and keep the roots moist.

2. Unpack tree and soak in water 3 to 6 hours. Do not plant with packing materials attached to roots, and do not allow roots to dry out.

3. Dig a hole, wider than seems necessary, so the roots can spread without crowding. Remove any grass within a three-foot circular area. To aid root growth, turn soil in an area up to 3 feet in diameter.

4. Plant the tree at the same depth it stood in the nursery, without crowding the roots. Partially fill the hole, firming the soil around the lower roots. Do not add soil amendments.



5. Shovel in the remaining soil. It should be firmly, but not tightly packed with your heel. Construct a water-holding basin around the tree. Give the tree plenty of water.

6. After the water has soaked in, place a 2-inch deep protective mulch area 3 feet in diameter around the base of the tree (but not touching the trunk).

7. Water the tree generously every week or 10 days during the first year of establishment.

Recognizing Hazardous Trees

Hazardous Trees & Utility Lines. Trees that fall into utility lines have additional serious consequences. Not only can they injure people or property near the line, but hitting a line may cause power outages, surges, fires and other damage. Downed lines still conducting electricity are especially dangerous. A tree with a potential to fall into a utility line is a very serious situation.

Tree Hazard Checklist

Consider these questions . . .

1. Are there large dead branches in the tree?
2. Are there detached branches hanging in the tree?
3. Does the tree have cavities or rotten wood along the trunk or in major branches?
4. Are mushrooms present at the base of the tree?
5. Are there cracks or splits in the trunk or where branches are attached?
6. Have any branches fallen from the tree?
7. Have adjacent trees fallen over or died?
8. Has the trunk developed a strong lean?
9. Do many of the major branches arise from one point on the trunk?
10. Have the roots been broken off, injured or damaged by lowering the soil level, installing pavement, repairing sidewalks or digging trenches?
11. Has the site recently been changed by construction, raising the soil level or installing lawns?
12. Have the leaves prematurely developed an unusual color or size?
13. Have trees in adjacent wooded areas been removed?
14. Has the tree been topped or otherwise heavily pruned?

Managing Tree Hazards

One of these treatments may help make your tree safer. Reducing the risk associated with hazardous trees can take many forms.

1. **Prune the tree**. Remove the defective branches of the tree. Since in appropriate pruning may also weaken a tree,

2. **Provide routine care**. Mature trees need routine care in the form of water, fertilizer (in some cases), mulch and pruning as dictated by the season and their structure.

A number of treatments are best done by a Certified Arborist

1. **Cable and brace the tree.** Provide physical support for weak branches and stems to increase their strength and stability.

2. **Remove the tree.** Some hazardous trees are best removed. If possible, plant a new tree in an appropriate place as a replacement.

Enclosure 4. Native Plants for Landscaping

Integrated Natural Resources Management Plan (INRMP) & National Environmental Policy Act (NEPA) Review
Landscaping Guidance
(Vegetation and other Organic Materials)

Per OPNAVINST 5090.1D and associated manual M-5090.1, Navy installations shall comply with the goals of section 207 of E.O. 13423 (Greening the Government Through Leadership in Environmental Management) on all new or extended landscaped areas and shall use native plants to the maximum extent practicable, when replacement or rejuvenation of existing landscaping is required.

The installation is located within the Coastal Plains (C) of VA and as such species native to this zone should be utilized for vegetation/landscaping activities on base. A list of native-plant nurseries is maintained by the Virginia Native Plant Society: <www.vnps.org>. Warning: Not all plants sold at Native Plant Nurseries are necessarily native to the region in which you plan to plant and some of these nurseries also sell non-native plants in addition to the native plants. Below are additional links that can be used for researching native plants: <http://www.vaplantatlas.org/>; <http://plants.usda.gov/java/>; and <www.dcr.virginia.gov/natural_heritage/nativeplants.shtml>.

Plant selection and application should be done in a manor to minimize BASH concerns. If using seed it will be attractive to wildlife. If utilizing seed to minimize BASH concerns the seed should be applied utilizing a slit seed technique. Grass seed does best when spread in the fall or spring time frames. There is a native mix of grass available on the market consisting of: Virginia Wildrye (Elymus virginicus); Purpletop/redtop (Tridens flavus); and Broomsedge (Andropogon virginicus). They recommend 18 lbs./acre of seed and planting in spring or early summer. The NASO NRM has coordinated with USDA BASH Biologists to confirm that these species would be acceptable for use on the installation. Additional native grass species to consider include: Axonopus furcatus (Big Carpetgrass); Setaria parviflora (Knotroot Foxtail, Knotroot Bristlegrass); Danthonia spicata (Poverty Oatgrass); and Piptochaetium avenaceum (Eastern Needlegrass/Blackseed Speargrass).

Any vegetation planting lists should be submitted to the installation Natural Resources Manager for final approvals. (CAUTION: EXISTING PLANTS FOUND ON BASE, PLANTS IDENTIFIED in the INSTALLATION APPERANCE PLAN, or PLANTS IDENTIFIED in the LOW IMPACT DEVELOPMENT PLAN may NOT be Native Species. You must select Native Species.)

Invasive species & Noxious weed management/removal/spread avoidance is required by Navy Policy, EO 13751 and the Sikes Act via the Integrated Natural Resources Management Plan. Non-native invasive and noxious weed species commonly invade areas after land disturbance. If these species invade the area they must be removed due to the aforementioned policies. They should also be removed because certain species can become wildlife attractants that would pose an increased Bird/Animal Aircraft Strike Hazard for the airfield.

Due to the known presence of non-native invasive species & noxious weeds in the area, on base soil/sludge/organic material removed from any projects on base should be disposed of appropriately off base. Materials on base should not be relocated anywhere on base beyond its originating location unless it has been certified clean & noxious weed free. Soil/hay/sand/plants/mulch/etc. brought on base for this project should be certified clean (contaminate and noxious weed free).

Equipment should be clean prior to arriving on base to avoid introduction of new or spread of existing non-native invasive species to the base/location. After working at this site, equipment should also be cleaned prior to working in any other location/site on or off base.

Additional Recommendations for Native Alternative Vegetation for Use on the NASO Solar PV Array per Virginia Natural Heritage Program Botanists
(these are in addition to lists previously provided by the Navy and comments on the AMEC Proposed Planting Plan)

Native to Coastal Plains of Virginia Low Growing Plants

Grasses:
Axonopus furcatus (Big Carpetgrass) - has been used as a lawn, pasture or field binding grass in the south

Setaria parviflora (Knotroot Foxtail, Knotroot Bristlegrass) - tenacious in turf situations and along roadsides

Danthonia spicata (Poverty Oatgrass) - full shade to full sun; low to moderate moisture

Piptochaetium avenaceum (Eastern Needlegrass/Blackseed Speargrass) - full-moderate shade, low moisture

Flowering Plants:

Chamaecrista nictitans (Sensitive Partridge Pea)

Desmodium rotundifolium (Round-leaf Tick-trefoil)

Hylodesmum (Desmodium) nudiflorum (Naked-flowered Tick-trefoil)

Ionactis (Aster) linariifolia/linariifolius (Stiff-leaved Aster/ flaxleaf whitetop aster)

Lespedeza procumbens (Trailing Lespedeza)

Lespedeza repens (Creeping Lespedeza)

Lupinus perennis (Sundial Lupine) - (partial sun, low moisture

Stylosanthes biflora (Pencilflower)

Tephrosia spicata (Spiked Hoary Pea)

Centrosema virginianum (Spurred Butterfly Pea)

Clitoria mariana (Butterfly Pea)

Silene caroliniana (Wild Pink/sticky catchfly)

<u>Native to Coastal Plains of Virginia Taller than Low Growing Plants (would require some mowing during the year to keep short)</u>

Grasses:

Andropogon ternarius (Splitbeard Bluestem)

Andropogon virginicus var. virginicus (Broomsedge, Broomstraw)

Panicum anceps (Beaked Panic Grass)

Paspalum floridanum (Florida Paspalum) - A good soil binder.

Tridens flavus (Purpletop, Tall Redtop)

NOTE: Additional Species would be recommended; however, due to the height restriction requested were not included on this list. One would need to know level of mowing tolerance to provide additional options.

ABOUT THE NATIVE PLANTS FOR CONSERVATION, RESTORATION AND LANDSCAPING PROJECT

This project is a collaboration between the Virginia Department of Conservation and Recreation and the Virginia Native Plant Society. VNPS chapters across the state helped to fund the 2011 update to this brochure.

The following partners have provided valuable assistance throughout the life of this project:

The Nature Conservancy – Virginia Chapter • Virginia Tech Department of Horticulture • Virginia Department of Agriculture and Consumer Services • Virginia Department of Environmental Quality, Coastal Zone Management Program • Virginia Department of Forestry • Virginia Department of Game and Inland Fisheries • Virginia Department of Transportation

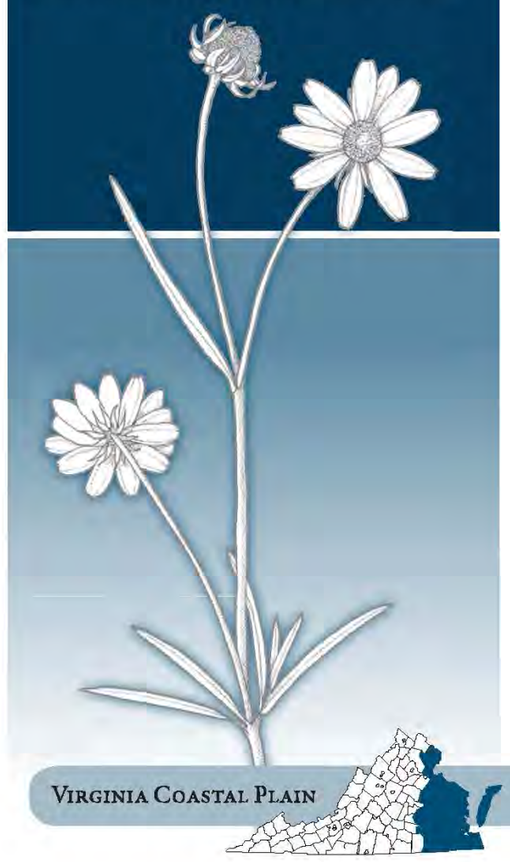
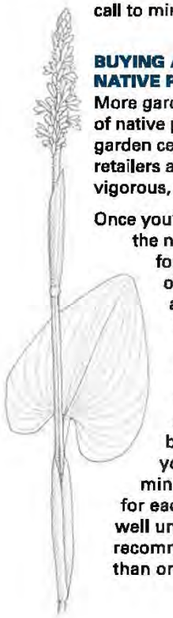
Native Plants

for Conservation, Restoration & Landscaping



Virginia Coastal Plain



WHAT ARE NATIVES?

Native species evolved within specific regions and dispersed throughout their range without known human involvement. They form the primary component of the living landscape and provide food and shelter for native animal species. Native plants co-evolved with native animals over many thousands to millions of years and have formed complex and interdependent relationships. Our native fauna depend on native flora to provide food and cover. Many animals require specific plants for their survival.

BENEFITS OF NATIVE PLANTS

Using native species in landscaping reduces the expense of maintaining cultivated landscapes and minimizes the likelihood of introducing new invasive species. It may provide a few unexpected benefits as well.

Native plants often require less water, fertilizer and pesticide, thus adding fewer chemicals to the landscape and maintaining water quality in nearby rivers and streams. Fewer inputs mean time and money saved for the gardener.

Native plants increase the presence of desirable wildlife, such as birds and butterflies, and provide sanctuaries for these animals as they journey between summer and winter habitats. The natural habitat you create with native plants can become an outdoor classroom for children, or a place for you to find peace and quiet after a busy day.

Native plants evoke a strong sense of place and regional character. For example, live oak and magnolia trees are strongly associated with the Deep South. Redwood trees characterize the Pacific Northwest. Saguaro cacti call to mind the deserts of the Southwest.

BUYING AND GROWING NATIVE PLANTS

More gardeners today are discovering the benefits of native plants and requesting them at their local garden centers. Because of this increased demand, retailers are offering an ever-widening selection of vigorous, nursery-propagated natives.

Once you've found a good vendor for native plants, the next step is choosing appropriate plants for a project. One of the greatest benefits of designing with native plants is their adaptation to local conditions. However, it is important to select plants with growth requirements that best match conditions in the area to be planted.

If you're planning a project using native plant species, use the list in this brochure to learn which plants grow in your region of Virginia. Next, study the minimum light and moisture requirements for each species, noting that some plants grow well under a variety of conditions. Many of the recommended species are well-suited to more than one of these categories.

For more information, refer to field guides and publications on local natural history for color, shape, height, bloom times and specific wildlife value of the plants that grow in your region. Visit a nearby park, natural area preserve, forest or wildlife management area to learn about common plant associations, spatial groupings and habitat conditions. For specific recommendations and advice about project design, consult a landscape or garden design specialist with experience in native plants.

WHAT ARE NON-NATIVE PLANTS?

Sometimes referred to as "exotic," "alien," or "non-indigenous," non-native plants are species introduced, intentionally or accidentally, into a new region by humans. Over time, many plants and animals have expanded their ranges slowly and without human assistance. As people began cultivating plants, they brought beneficial and favored species along when they moved into new regions or traded with people in distant lands. Humans thus became a new pathway, enabling many species to move into new locations.

WHAT ARE INVASIVE PLANTS?

Invasive plants are introduced species that cause health, economic or ecological damage in their new range. More than 30,000 species of plants have been introduced to the United States since the time of Columbus. Most were introduced intentionally, and many provide great benefits to society as agricultural crops and landscape ornamentals. Some were introduced accidentally, for example, in ship ballast, in packing material and as seed contaminants. Of these introduced species, fewer than 3,000 have naturalized and become established in the United States outside cultivation. Of the 3,500 plant species in Virginia, more than 800 have been introduced since the founding of Jamestown. The Virginia Department of Conservation and Recreation currently lists more than 100 of these species as invasive.

In the United States, invasive species cause an estimated $120 billion in annual economic losses, including costs to manage their effects. Annual costs and damages arising from invasive plants alone are estimated at $34 billion.

NATIVE PLANTS VS. INVASIVE PLANTS

Invasive plants have competitive advantages that allow them to disrupt native plant communities and the wildlife dependent on them. For example, kudzu (*Pueraria montana*) grows very rapidly and overtops forest canopy, thus shading other plant species from the sunlight necessary for their survival. A tall invasive wetland grass, common reed (*Phragmites australis ssp. australis*), invades and dominates marshes, reducing native plant diversity and sometimes eliminating virtually all other species.

Invasive species can marginalize or even cause the loss of native species. With their natural host plants gone, many insects disappear. And since insects are an essential part of the diet of many birds, the effects on the food web become far reaching. Habitats with a high occurrence of invasive plants become a kind of "green desert." Although green and healthy in appearance, far fewer native species of plants and animals are found in such radically altered places.

Virginia Coastal Plain

Virginia's Coastal Plain extends from the sands of Virginia Beach west to the fall line. Formed by marine sediments eroded from the Appalachian Highlands, the Coastal Plain varies in topography from north to south. In the north, the Northern Neck is somewhat hilly and well-drained. On the Middle Peninsula and Lower Peninsula, hills are less steep. South of the James River, the landscape levels off to about a 1-degree slope toward the ocean. In places, streams cut easily through the sands, gravels and clays to form well-developed ravine systems, and tidal rivers widen as the topography flattens. The Eastern Shore, separated from the mainland by the Chesapeake Bay, exhibits relatively little topography across the uplands extending from the Atlantic on the east to the bay on the west. From white sand beaches of the barrier islands, to tidal freshwater marshes, to blackwater swamps, to upland mixed hardwood and pine forests, the Coastal Plain has a diverse array of habitats for many native plant species.

Recommended Uses
W = Wildlife
H = Horticulture & landscaping
C = Conservation & restoration
D = Domestic livestock forage

Minimum Light Requirements
S = Shade
P = Partial sun
F = Full sun

Moisture Requirements
L = Low moisture
M = Moderate moisture
H = High moisture

Some species are marked with the following footnote symbols:

\+ May be aggressive in a garden setting

* Due to the rarity and sensitivity of habitat in Virginia, these species are recommended for horticultural use only. Planting these species in natural areas could be detrimental to the survival of native populations.

Scientific Name	Common Name	Uses				Light			Moisture		
		W	H	C	D	S	P	F	L	M	H
Herbs											
Achillea millefolium	common yarrow		•				•	•	•

NAS OCEANA INSTRUCTION 5090.2E

Subj: PROCEDURES FOR CUTTING FIREWOOD AND USE OF TREE PRODUCTS

Ref: (a) OPNAVINST 5090.1B
(b) NAVFAC P-73

Encl: (1) Chainsaw Safety

1. Purpose. To establish procedures governing cutting of trees for firewood and obtaining other forest products on board Naval Air Station (NAS) Oceana, Fleet Combat Training Center (FCTC) Dam Neck and Naval Auxiliary Landing Field (NALF) Fentress.

2. Cancellation. NASOCEANAINST 5090.2D. Because of numerous revisions, paragraph markings have been omitted.

3. Definition. Forest products, for the purpose of this instruction include: Pine straw, live and felled trees and scrap lumber or pallets.

4. Policy. It is the continuing policy of the Secretary of the Navy that all Navy facilities and installations having land areas with a potential for timber production have an active program for the conservation and management of forest resources as outlined in reference (a).

5. Responsibilities

a. Natural Resources Manager, Regional Environmental Group Oceana shall administer and oversee the Firewood Program by designating areas for cutting, issuing permits, collecting fees and monitoring cutting. Methods of dispersal, sales and handling of funds shall be per references (a) and (b). Reference (a) notes that forest products will not be given away, abandoned, carelessly destroyed, used to offset costs of contracts or traded for products, supplies or services.

b. Base Security, with support from the designated Game Wardens, shall be responsible for enforcing this instruction and any conditions of firewood permits. At NALF Fentress woodcutters shall sign out in the visitor's logbook at the Crash Captain's Desk, Building 100.

c. Cutters and Gatherers shall comply with this instruction, applicable state and federal regulations and enclosure (1).

6. General

a. Authorized Personnel. The following persons are authorized to cut firewood and obtain other forest products on NAS Oceana, FCTC Dam Neck and NALF Fentress:

(1) Active duty military personnel

(2) Retired military personnel

(3) Federal civilian employees of NAS Oceana or FCTC Dam Neck

(4) Reservists

b. Utilization. All purchased wood is for the sole benefit of the purchaser's personal home use and is not to be resold.

7. Procedures

a. Permits. All persons cutting or collecting firewood or other wood products on NAS Oceana, FCTC Dam Neck or NALF Fentress shall have a firewood permit.

(1) Firewood permits are obtainable only from the Regional Environmental Group Oceana, Building 830 or Natural Resources Center, Building 78. A permit will be issued for a specific day and area and displayed on the vehicle dashboard. Cutting outside of designated days or areas may constitute a charge of trespassing.

(2) At the time of permit issuance, individuals shall be required to complete and sign a general release statement which relieves the federal government of all liability in case of accident or injury.

(3) There is a nominal charge for tree products. Prices may vary due to changes in marketability of a product. Loads larger or smaller than the standard fees listed below shall be priced by the Natural Resources Manager according to seasonal demand and availability.

Firewood - $20.00/small pickup truck load (cut-your-own)

Firewood - $30.00/small pickup truck load (cut and split, when available)

Firewood - $25.00/standard 8 foot bed pickup truck load (cut-your-own)

Firewood - $40.00/standard 8 foot bed pickup truck load (cut and split, when available)

Scrap lumber, crates, and pallets - $ 10.00/pickup truck load

Pine straw - $ 5.00/pickup truck load

Live trees - $ 10.00 - $25.00/tree. Varies with species and availability. Requires prior approval from the Natural Resources Manager.

(4) Permits shall specify the date of harvest and/or collection and can be used only for the specified number of loads.

(5) Individuals may not remove more than three cords of wood per calendar year.

b. Harvesting

(1) Individuals shall provide their own cutting and hauling equipment.

(2) Wood shall be cut only in locations on NAS Oceana, FCTC Dam Neck and NALF Fentress designated by the Natural Resources Manager.

(3) Firewood shall be cut during daylight hours only.

(4) Unless otherwise specified on the permit, only trees within the designated area that have been previously felled may be taken.

(5) No minors (under the age of 18) shall be allowed to operate a chainsaw or any other sharp tools, such as a saw, hatchet or axe.

(6) Limbs and/or brush shall be removed at least twenty feet away from any road or firebreak and removed from any stream or standing body of water.

(7) Young trees shall be protected and there shall be no ground disturbances that could cause erosion.

(8) Littering is prohibited at all times. Individuals found littering shall have their woodcutting privileges suspended.

(9) Operating a chainsaw while under the influence of alcohol is prohibited. Individuals found guilty of consuming alcoholic beverages while on the worksite shall have their privileges revoked.

8. Violations. Individuals found violating the provisions of this instruction may have wood cutting privileges suspended or revoked.

W. C. ZOBEL

Distribution:
NASOCEANAINST 5216.1U
List I (Case A), III and IV

CHAINSAW SAFETY

1. Wear snug fitting clothes, gloves, and heavy boots.

2. Wear ear and eye protection.

3. Avoid kick-back. Never cut with the nose of the guidebar.

4. Avoid over reaching and cutting above shoulder height.

5. Have non-alcoholic beverages on hand to prevent dehydration in hot and cold weather.

6. Use a sharp chain, set at the proper tension.

7. Stay clear of the cutting path of the chainsaw.

WILDLIFE HAZARD ASSESSMENT

For

NAVAL AIR STATION OCEANA

June 1, 2010 through May 31, 2011

Prepared by

United States Department of Agriculture

Animal and Plant Health Inspection Service

Wildlife Services

Timothy J. Linder, Wildlife Biologist

July 20, 2012

Table of Contents

EXECUTIVE SUMMARY

The United States Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services program (WS) conducted a 12-month wildlife hazard assessment (WHA) to identify wildlife hazards to aviation safety at Naval Air Station Oceana (NASO) from June 2010 through May 2011. To assess daily and seasonal patterns of wildlife use, we conducted bird surveys twice per month throughout the airfield and twenty-two night-time surveys to observe deer abundance and distribution. Data collected included species abundance, behavior, and habitat use. In addition, WS identified and monitored areas outside of the airfield that may attract hazardous wildlife species to NASO. Bird species observed were grouped into guilds (species that display similar behavioral characteristics) for analysis. Data collected during surveys were analyzed and compared with records from the Navy Safety Center Web Enabled Safety System (WESS) BASH database, control efforts by NASO and WS personnel, and a wildlife hazard ranking list (Dolbeer and Wright 2009) to identify the species that are most hazardous to aviation safety at NASO.

Based on information collected during the WHA, 1 mammal group and 7 guilds identified at NASO from June 2010 through May 2011 presented the greatest threats to aviation safety. These group/guilds included deer, gulls, raptors (hawks, vultures, eagles), waterfowl (ducks and geese), pigeons/doves, crows/ravens, starlings, and blackbirds/orioles. Though blackbirds/orioles were the most abundant guild, deer were the most hazardous due to their large size, strike record, availability of habitat at or near NASO, and general abundance in the area. There were 4 species observed during the WHA that ranked as an extremely high hazard to aviation safety, and one species ranked as very high.

WS recommends a variety of methods to reduce or eliminate the threat of wildlife strikes from the group and guilds observed during the WHA. Habitat management can include: eliminating or excluding areas of standing water; vegetation management in the airfield; reducing or excluding bird perching/loafing areas; reducing abundance of prey species (such as small rodents and insects) in the airfield; installation of an Air Operations Area (AOA) fence, and ensuring that the perimeter fence is in good repair and prevents mammals such as deer from entering the airfield. WS also recommends harassment methods such as pyrotechnics, sirens, paintballs, propane cannons and other acoustic dispersal devices to disperse birds from the airfield. Lethal control of hazardous species should be exercised when necessary utilizing firearms and/or traps. Permits for lethal control of species protected under Federal and State laws should be maintained from the U.S. Fish and Wildlife Service and the Virginia Department of Game and Inland Fisheries.

Additional recommendations include updating the NASO's Bird/Animal Aircraft Strike Hazard (BASH) Plan, establishment of a formal BASH Working Group (BWG), establish a Bird Detection and Dispersal Team (BDDT), establish formal BASH training and evaluating potential wildlife hazards when planning new construction or land use changes. It is recommended that NASO continue to monitor wildlife abundance and habitat use in order to provide insight into wildlife use of the airfield and aircraft hangars to gauge the effectiveness of control efforts.

1.0 INTRODUCTION

1.1 Purpose and Need for Action

Birds and other wildlife in the vicinity of airports are an increasing threat to aviation safety (Dolbeer et al. 2011). Since 1980, the Navy's national wildlife/aircraft strikes database accounted for 440 A, B, C and D Class-rated incidents that included two fatalities to Naval pilots and over $372 million dollars in damages (Naval Safety Center). Based on the Naval Safety Center analysis and statistics, the average damage cost over the last 31 years is one million dollars per month. It is estimated that wildlife/aircraft strikes cost the U.S. civil aviation industry more than $614 million annually, while worldwide the total cost is over $1.2 billion per year (Keirn et al. 2010). In addition to costly aircraft repairs and down time, wildlife strikes sometimes result in serious injury or death. In January 2009, the wildlife/aircraft strike issue was dramatically illustrated when U.S. Airways Flight 1549 crash landed in New York's Hudson River after ingesting Canada Geese into both engines shortly after takeoff from LaGuardia Airport (Dolbeer 2009). This incident has been referred to in the media as "The Miracle on the Hudson" since all 155 passengers and crew survived despite the aircraft being a total loss. Less than two weeks prior to this incident, eight people were killed and one was seriously injured when a helicopter transporting workers to an offshore site in Louisiana struck a Red-tailed Hawk and crashed into a marsh (Wright 2011).

The Commander, Naval Installations Command (CNIC) established the Navy Bird/Animal Strike Hazard Program Implementing Guidance (CNICINST 3700, Appendix A). This instruction establishes the guidance for all installations that conduct or support air operations to conduct a Wildlife Hazard Assessment (WHA). Although the U.S. Navy is not required to follow the regulations set down by the FAA, the Navy does implement the FAA's guidance and expertise whenever practical and appropriate.

The Federal Aviation Administration (FAA) is responsible for setting and enforcing the Federal Aviation Regulations (FAR) and policies to enhance public safety at civil airports. To ensure compliance with Code of Federal Regulations (CFR) 14 Part 139.337, the FAA requires certificated airports to conduct a wildlife hazard assessment (WHA), and if necessary, establish a wildlife hazard management plan (WHMP) when any of the following triggering events occur on or near an airport:

(1) An air carrier aircraft experiences multiple wildlife strikes;

(2) An air carrier aircraft experiences substantial damage from striking wildlife. As used in this paragraph, substantial damage means damage or structural failure incurred by an aircraft that adversely affects the structural strength, performance or flight characteristics of the aircraft and that would normally require major repair or replacement of the affected component;

(3) An air carrier aircraft experiences an engine ingestion of wildlife; or

(4) Wildlife of a size, or in numbers, capable of causing an event described above are observed to have access to any airport flight pattern or aircraft movement area.

The WHA must be conducted by a qualified wildlife biologist (see FAA Advisory Circular 150/5200-33B) and should include the following information:

(1) An analysis of the events or circumstances that prompted the assessment;

(2) Identification of the wildlife species observed and their numbers, locations, local movements, and daily and seasonal occurrences;

(3) Identification and location of features on and near the airport that attract wildlife;

(4) A description of wildlife hazards to air carrier operations; and

(5) Recommended actions for reducing identified wildlife hazards to air carrier operations.

Naval Air Station Oceana

In June 2010 NASO entered into a cooperative service with the United States Department of Agriculture, Animal and Plant Health Services, Wildlife Services (hereafter referred to as WS) to initiate bird and deer surveys, evaluate current Wildlife Damage Management (WDM) program and provide direct control of hazardous wildlife using the airfield and hangars. The initial efforts focused on direct reduction of deer populations on and around the airfield. In August 2010, CNIC entered into a cooperative service agreement with WS to conduct a WHA and to establish and continue an Integrated Wildlife Damage Management program (IWDM) at NASO. Oversight and direction of the IWDM will fall under direct supervision of the NAS Oceana Air Operations Department. Prior to 2010 a WHA had not been conducted at NASO. In March of 1999 Geo-Marine, Inc. provided NASO with a BASH Plan. This BASH Plan did not include a formal evaluation of airfield specific hazards.

1.2 Legal Authority of Wildlife Services

The U.S. Navy, Commander Navy Installations Command (CNIC) and the U.S. Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services program (WS) have entered into a Work/ Financial Plan where WS will provide assistance to mitigate potential and realized wildlife hazards at USN air stations in the continental United States (Appendix B). The Plan establishes WS as the appropriate agency to conduct wildlife hazard management at Navy installations.

The primary statutory authority by which WS operates is the Animal Damage Control Act of March 2, 1931, as amended (7 U.S.C. 426-426c; 46 Stat. 1468). WS has the authority to manage migratory bird damage as specified in the CFR. In addition, the

Rural Development, Agriculture, and Related Agencies Appropriations Act of 1988 authorizes and directs the Secretary of Agriculture to cooperate with States, individuals, public and private agencies, organizations, and institutions in the control of nuisance mammals and birds deemed injurious to the public.

The Plan and legislation authorizes WS to conduct initial on-site investigations, biological assessments (short-term studies), WHA, and wildlife management techniques to assist USN air stations.

1.3 Legal Status of Wildlife Species

Most species of wildlife are protected by one or more Federal, State, and/or local laws and regulations. As such, several agencies may be responsible for implementation of these regulations and specific permits may be required prior to taking action to reduce wildlife threats to aviation safety.

Federal laws passed by Congress to protect wildlife include (but are not limited to) the Migratory Bird Treaty Act (MBTA), Bald and Golden Eagle Protection Act (BGEPA), and the Endangered Species Act (ESA). Federal wildlife laws are generally administered by the U.S. Fish and Wildlife Service (USFWS), which is the lead agency responsible for migratory birds protected under the MBTA, BGEPA, and ESA. The USFWS may issue depredation permits to take or harass migratory birds when those species are causing damage to various resources or threaten human health and safety (Appendix C).

The Commonwealth of Virginia defers to the Federal depredation permit for take of non-game migratory bird species, though a separate permit is required to take mammals and game bird species managed by the Virginia Department of Game and Inland Fisheries (VDGIF). As detailed in § 29.1-529 of the Code of Virginia, airport operators may obtain authorization from VDGIF to take wildlife (that are not federally protected) as necessary to protect aviation safety (Appendix D).

The Commonwealth of Virginia hosts a number of threatened and endangered (T&E) species that are granted protection under Federal and State regulations (Appendix E). Prior to conducting operational control work such as harassment, shooting, trapping, or habitat manipulation, the list of species of concern should be reviewed to ensure compliance with Federal and State regulations.

2.0 OBJECTIVES

The objectives of this WHA were to:

1. Identify wildlife species, numbers, locations, behavior, and habitat use in and around the airfield, with particular emphasis on species most hazardous to aircraft safety;
2. Identify and locate features on and in the vicinity of the airport that attract wildlife;
3. Describe wildlife hazards to aviation safety at NASO;
4. Provide NASO with management recommendations to reduce or eliminate wildlife hazards to aviation safety and serve as a basis for updating the current BASH Plan.

3.0 DESCRIPTION OF STUDY AREA

Figure 1: Aerial view of NASO (photo from GoogleEarth, 2010).

Naval Air Station Oceana is located within the City of Virginia Beach, VA. NASO's 4 runways, 2 sets of parallel runways (5R/23L, 5L/23R, 14R/32L, and 14L/32R), supported 76,296 aircraft operations in calendar year 2010. There are 19 squadrons based at NASO housing approximately 315 military aircraft. NASO property incorporates approximately 5,900 acres, of which 3,200 acres makeup the airfield. The airfield is comprised of open grassland (~920 acres), agricultural leases (~720 acres), woodlots, and areas of secondary growth (~1,560 acres). The woodlots are primarily comprised of mixed hardwoods and evergreens. The remaining 2,700 acres of base not included in the airfield are comprised of facility buildings, two 18-hole golf courses, woodlots, agricultural areas, wetland mitigation sites, and open grasslands. A 7-foot fence with a three strand barbed-wire outriggers surrounds the perimeter of the base. NASO is bordered by a mixture of residential, woodland, industrial, agricultural, and open water areas.

4.0 METHODS

Data collection for the WHA began June 1, 2010 and continued through May 31, 2011. Bird survey procedures were based on the North American Breeding Bird Survey methodology. Surveys were conducted twice per month for 12 months at 18 observation points on the airfield (Figure 2). The beginning observation point for each survey was randomly selected, with 2 repetitions of the survey route per day (1/2 hour after sunrise and 2-3 hours prior to dusk).

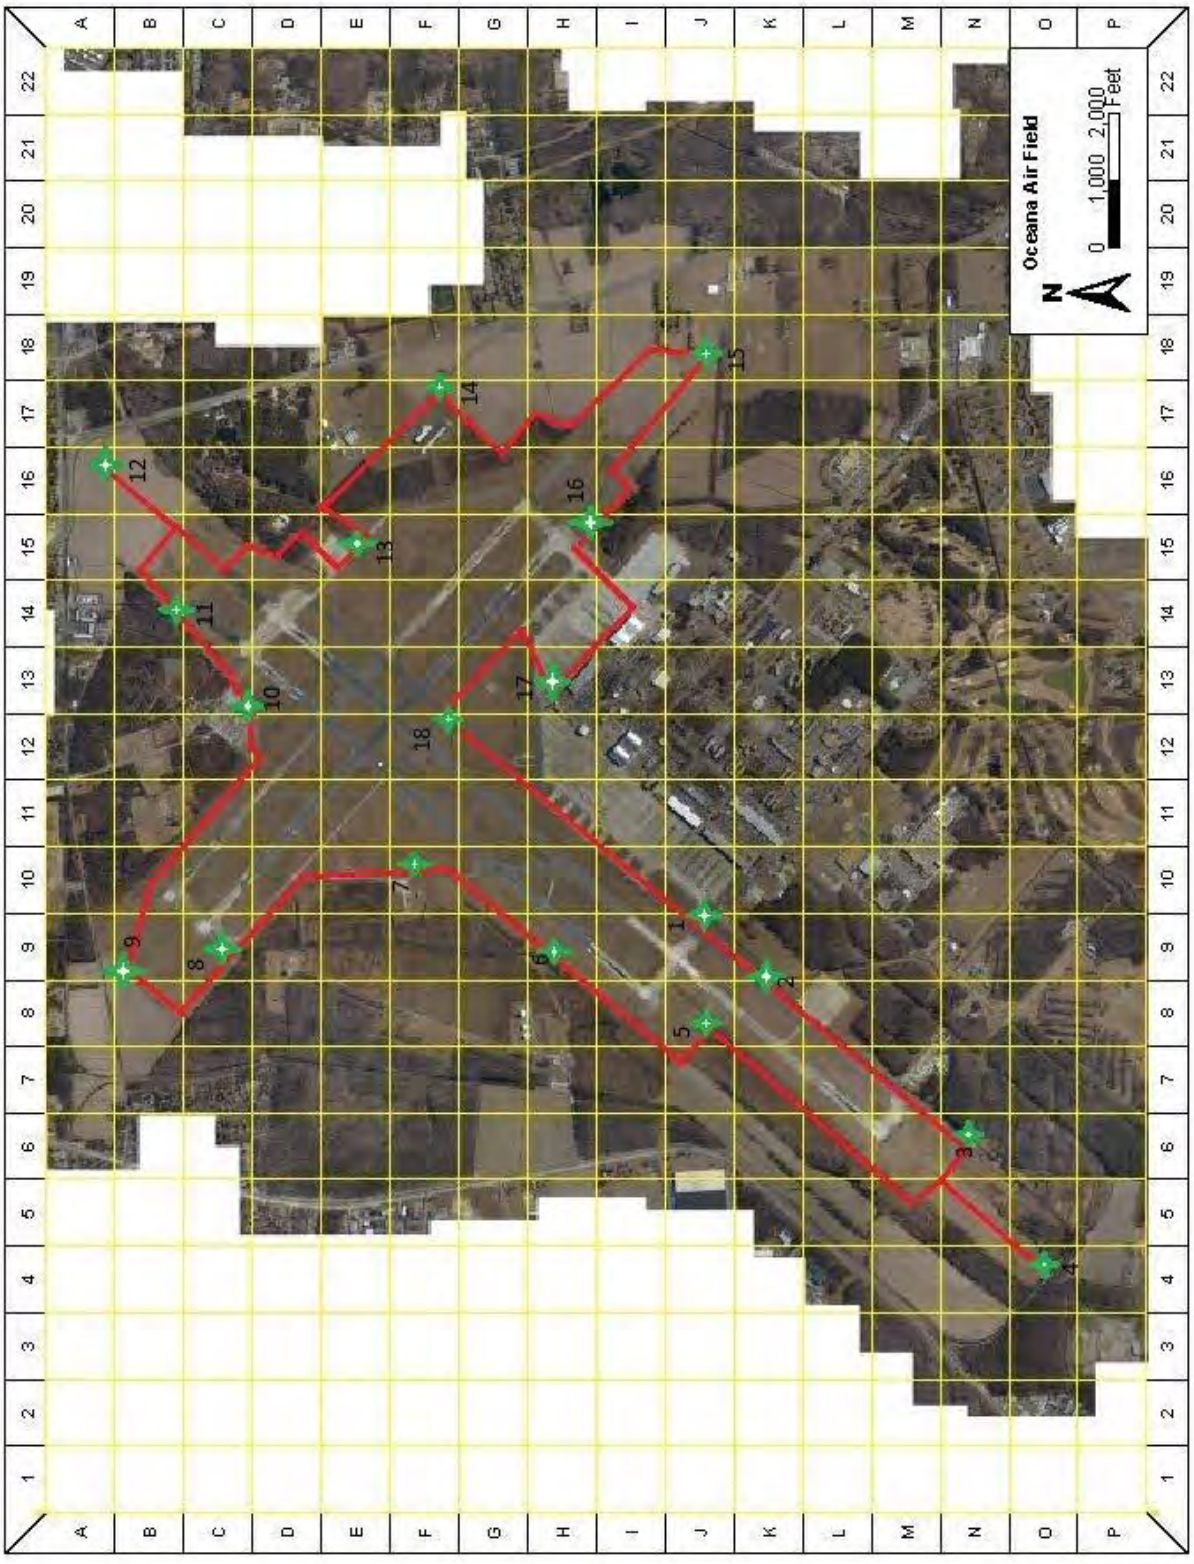

Figure 2: NAS Oceana Bird Observation Points and Survey Route.

Birds were observed from a vehicle for 3 minutes at each point, with approximately ¼ mile distance between points. At each observation point, the following data were recorded: weather, temperature, time, location, species, number observed, activity (behavior), habitat type, direction of flight, and comments on any other significant information (i.e., freshly mowed grass, approaching weather, change in flight activity, agricultural crop on fields, etc.). A map overlain with a 1000-foot grid system was used to record location. Bird species were located without the aid of binoculars, though binoculars were used to identify species that could not be readily identified with the naked eye or in low light conditions. Alpha species codes from the North American Bird Banding Manual were used to record birds observed during surveys.

In addition to bird surveys, 22 night-time deer surveys were conducted in the airfield over the course of the study period. Beginning 1 hour after sunset, night surveys were conducted by driving an established route 15.5 miles long around the airfield (Figure 3). Observations were made using spotlights and forward looking infra-red (FLIR) equipment to determine primarily deer and other mammal use of the airfield. Information recorded included: weather, temperature, time, location, species, number observed, activity, and habitat type.

Data were analyzed with descriptive statistics and frequency distributions per month using the Wildlife Hazard Management Information System (WHMIS) software developed by WS to determine trends in species abundance, habitat use, and behavior. For analysis purposes, common species were categorized into groups or guilds. Species were placed into their respective guilds based on similar behavioral characteristics, not taxonomic relationships (although guilds often parallel taxonomic lines). This approach was selected because behavioral attributes play a significant role in predisposing some species of wildlife to collisions with aircraft. In addition, wildlife control strategies are often selected based on their ability to exploit an animal's specific behavior(s), therefore species that exhibit similar behaviors and life history attributes generally require similar control methods.

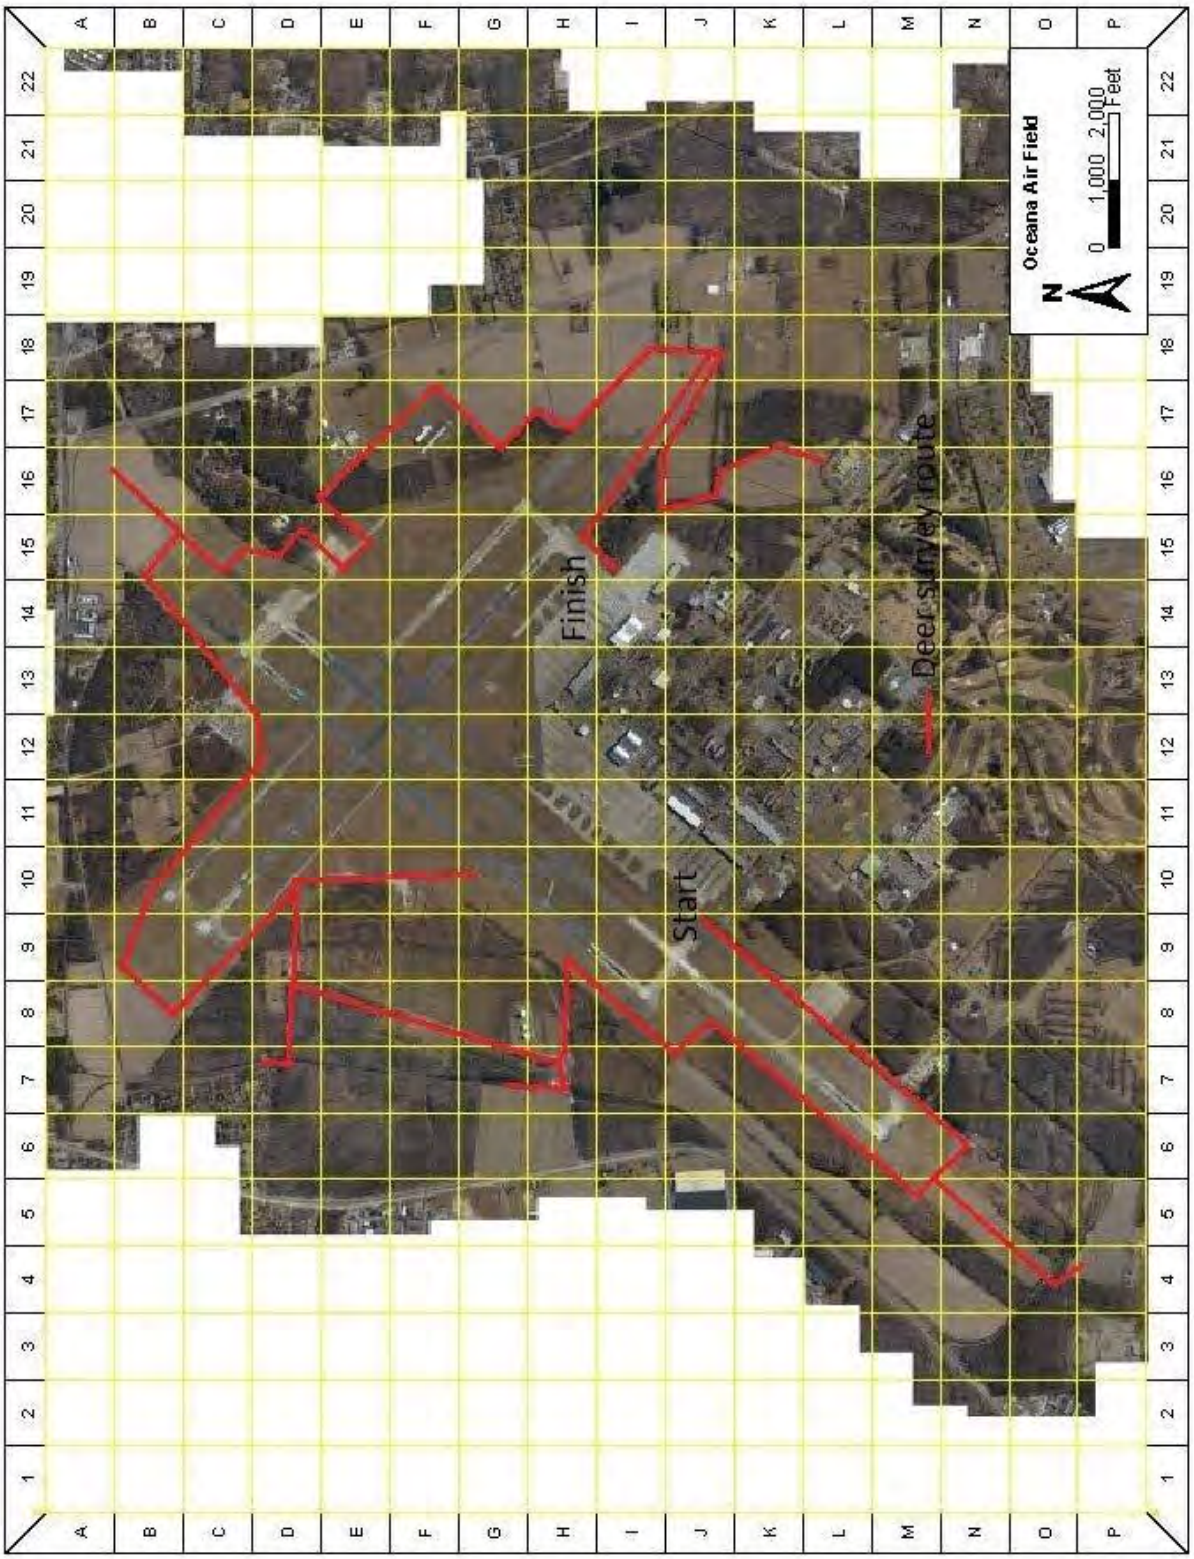

Figure 3: NAS Oceana Deer Survey Route.

5.0 RESULTS

5.1 Wildlife/Aircraft Strikes

According to criteria outlined in FAA Advisory Circular 150/5200-33A, a wildlife strike has occurred when:

1. A pilot reports striking 1 or more birds or other wildlife;
2. Aircraft maintenance personnel report aircraft damage as having been caused by a wildlife strike;
3. Personnel on the ground report seeing an aircraft strike 1 or more birds or other wildlife;
4. Bird or other wildlife remains, whether in whole or in part, are found within 250 feet of a runway centerline, unless another reason for the animal's death is identified; and
5. An animal's presence on the airport had a significant negative effect on a flight (i.e., aborted takeoff, aborted landing, high speed emergency stop, aircraft left pavement area to avoid collision with an animal, etc.).

Wildlife strike data provide valuable information about wildlife hazards on or near airfields, including the species that are struck, seasonal trends, and time of day when strikes occur. Nationwide, the number of reported wildlife strikes has shown a five-fold increase from 1990 through 2009 (Dolbeer et al. 2011). Despite the increase in reported strikes, the number of strikes resulting in damage during this same time period has declined by 21% (Dolbeer et al. 2011). This important fact is attributed to successful wildlife hazard management programs and improved reporting at many certificated airports (Dolbeer et al. 2011).

Data obtained from the Navy Safety Center WESS and Smithsonian Feather ID Lab revealed that there have been 327 reported wildlife strikes at NASO from 1981 through 2010 (Figure 4). Wildlife strikes peaked in 2010 with 45 reported strikes (Figure 4). The upward trend in wildlife strikes at NASO may be attributed to factors such as increases in wildlife populations, changing land uses on and adjacent to the airbase, and an increase in reporting. The Navy Safety Center estimates that only 25% of all strikes are reported. Much of the increase may be attributed to better reporting of wildlife strikes due to greater awareness of the wildlife strike issue and greater cooperation within the aviation industry to report strikes (Dolbeer et al. 2011).

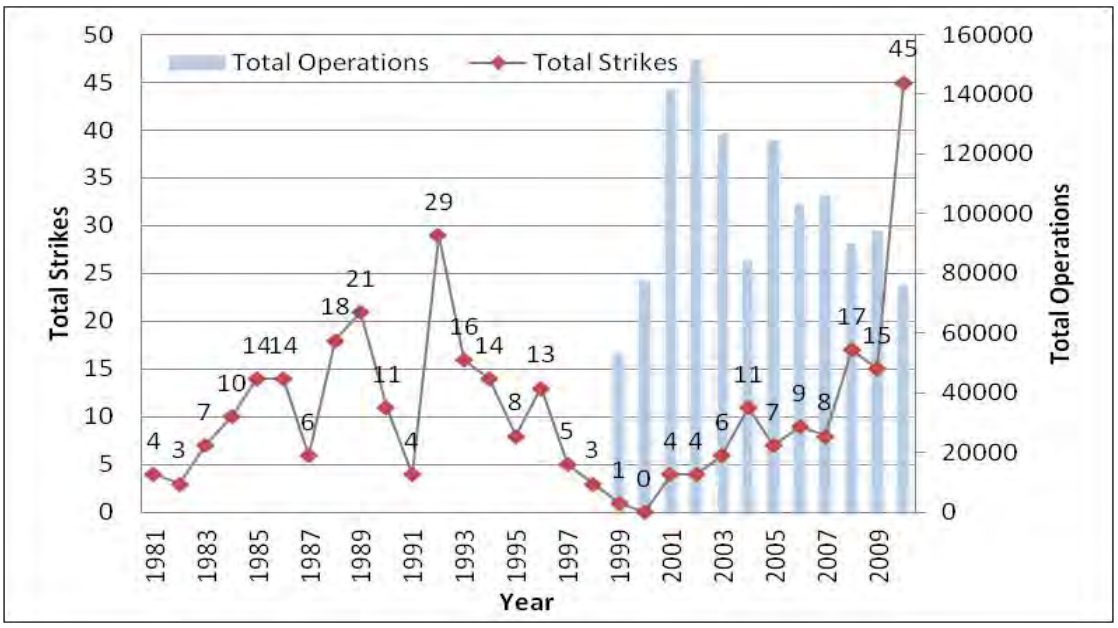

Figure 4: Reported wildlife strikes (1981-2010) and aircraft operations (1999-2010) at NASO.

Of the 327 reported strikes at NASO from 1981 through 2010, over 80% were unknown species (263), 11.9% involved birds (39), 7.3% were white-tailed deer (24), and less than 1% involved bats (1). Most of the unknown strike reports were bird species (270, or 82.5%). Of the strikes where the species was identified, white-tailed deer (24), and gulls (5) were the most frequently reported species. Consistent with national trends (Dolbeer et al. 2011), most strikes at NASO occur in the late summer through early fall (Figure 5). Strikes during these periods coincide with the dispersal of naïve juveniles and fall migration.

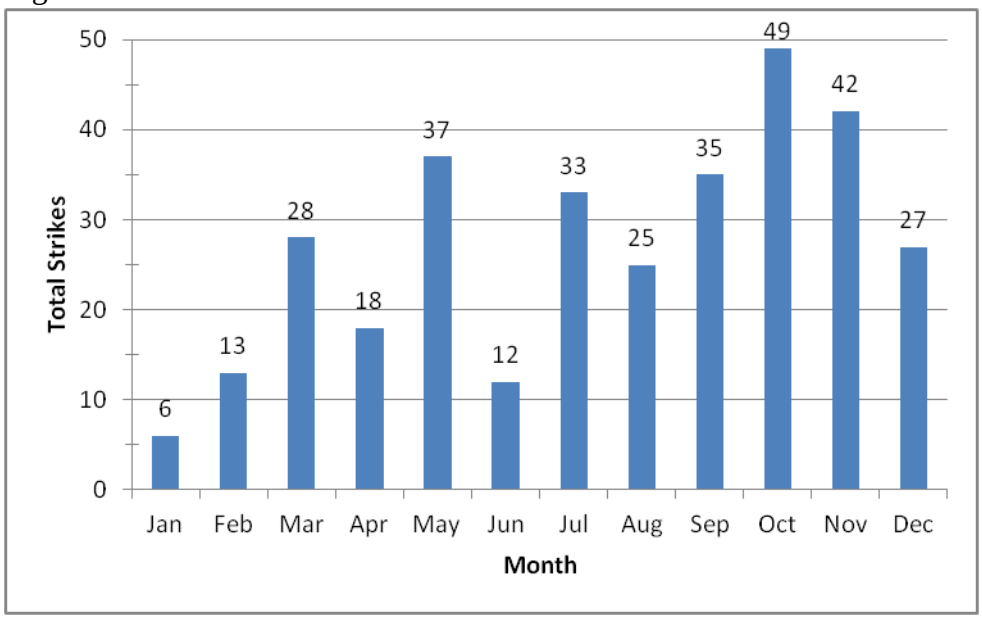

Figure 5: Number of strikes reported by month at NASO, 1981-2010.

For all strikes reported at NASO only 0.9% (3 of 327) reported damage >$10,000 (Table 1). All 3 strikes were * Class C Mishaps (1 deer $15,000, 1 deer $12,258, and 1 unknown gull $19,999).

Table 1: Strikes with reported damage at NASO, 1981-2010.

C = $10,000 to <$200,000

5.2 Wildlife Surveys

Birds

From June 2010 through May 2011, WS recorded 32,037 bird observations at NASO during bird surveys. Sixty-nine bird species representing 29 different bird guilds were observed throughout the study year (a complete table listing each guild and species observed throughout the study year may be found in Appendix F). The 6 most abundant guilds were Blackbirds/Orioles (15,454), Starlings (6,046), Waterfowl (1,701), Pigeons/Doves (1,571), Crows/Ravens (1,472), Meadowlarks (1,244), and Gulls (1,139. The 10 most abundant species observed are listed below[1]:

1.) European Starling (*Sturnus vulgaris*) = 6,046
2.) Canada Geese (*Branta canadensis*) = 1,618
3.) American Crow (*Corvus Brachyrincos*) = 1,472
4.) Eastern Meadowlark (*Sturnella magna*) = 1,244
5.) Mourning Dove (*Zenaida macroura*) = 952
6.) Laughing Gull (*Larus atricilla*) = 766
7.) Rock Pigeon (*Columba liva*) = 619
8.) Tree Swallow (*Tachycineta bicolor*) = 510
9.) Red-winged Blackbird (*Agelaius phoeniceus*) = 441
10.) Killdeer (*Charadrius vociferous*) = 432

Birds were observed in 14 different habitat types during surveys at NASO. Birds were most commonly observed utilizing the large, open areas of short grass (32%) that makeup the dominant habitat feature on the airfield (Figure 6). Woodland areas were the next most commonly used habitat (21%), followed by structures (13%) such as towers, fences, and buildings where birds were often observed loafing.

Bird activity was classified into 12 categories: flying locally (short, random flights); perched (loafing on a structure); vocalizing; feeding (actively consuming food); standing; flying passing (flying in a continuous path beyond the survey area); loafing (staying in one area, on a structure for a length of time without engaging in another activity); towering (flying in a circular pattern, often while utilizing thermal currents); hawking insects (flying erratically while attempting to catch insects); walking; roosting (perched in a single location for the night); and swimming. Sixty-three percent of all observations fell into three activities: flying locally (31%), perched (19%) and vocalizing (13%) for all species during the study year (Figure 7).

[1] Total abundance is derived by summing all bird observations throughout the study year. Therefore, the total number of bird observations includes individuals that may have been present on the airfield day after day and were recorded on multiple occasions.

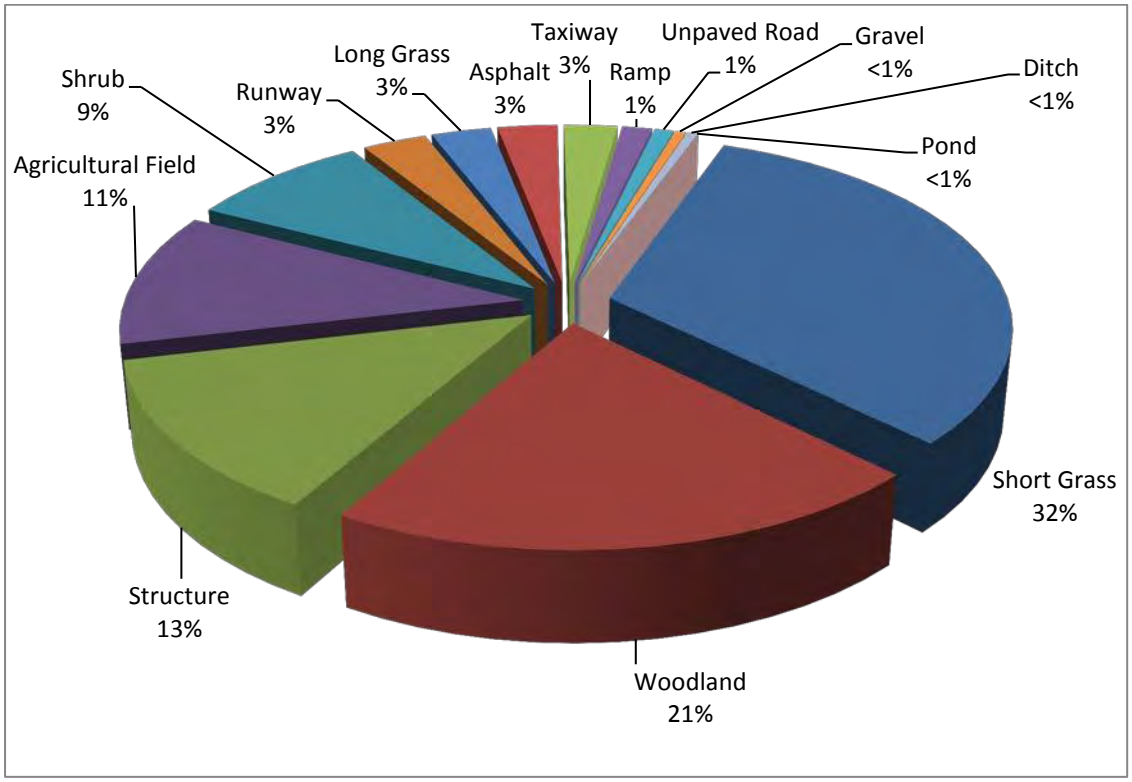

Figure 6: Habitat use by birds at NASO, June 2010 through May 2011.

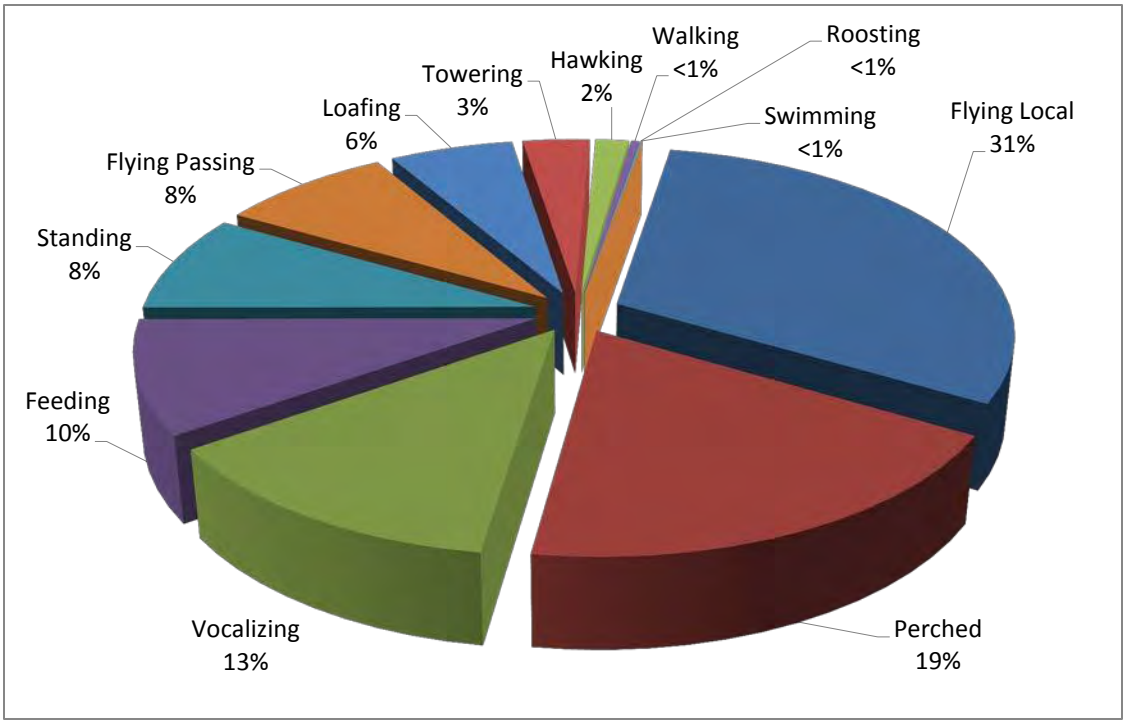

Figure 7: Bird activity at NASO, June 2010 through May 2011.

Mammals

WS completed 22 night surveys of the NASO airfield during the study year. Three hundred and seventy-nine medium to large mammals were observed during night surveys throughout the study year, with white-tailed deer (*Odocoileus virginianus*) being the most frequently observed species (Table 2). Observations recorded during night surveys may have been multiple observations of the same individuals throughout the survey year. Most mammal species were observed in the agricultural fields or in short grass (Table 2).

Table 2: Mammal species and cover type observed during night surveys at NASO.

Species	Ag. Fields	Grass, Short	Grass, long	Woodland	Shrub	Asphalt/Unpaved Road	Total
White-tailed Deer	143	134	31	28	29	0	**365**
Coyote	1	3	0	0	0	1	**5**
Red Fox	0	0	1	1	0	1	**3**
Gray Fox	2	0	0	0	0	0	**2**
Bobcat	1	0	0	0	1	1	**3**
Total	**147**	**137**	**32**	**29**	**30**	**3**	**378**

Small mammal surveys were not included in this WHA. Small mammal surveys are conducted bi-annually in the fall and spring to determine abundance and preferred habitat for species such as voles and mice inhabiting the airfield. The data is beneficial for evaluating predator-prey relationships on the airfield by comparing relative rodent abundance to wildlife activity and strike information. Small mammal surveys were conducted in the fall of 2011 and spring of 2012. The data collected from these surveys will be evaluated and included in the first annual update to this WHA.

6.0 DISCUSSION

Although almost all wildlife species commonly found at airports can pose some hazard to aircraft safety, not all species are equally hazardous to aviation (Dolbeer and Wright 2009). For example, large bird species such as Canada Geese (*Branta canadensis*) are more likely to cause damage if struck by aircraft than species the size of a sparrow. Utilizing the FAA wildlife strike database, Dolbeer and Wright (2009) developed a ranking of 89 wildlife species that pose the greatest threats to aircraft safety. The ranking was based on the percentage of strikes causing damage to aircraft from 1990 through 2007, and species were classified into 6 hazard severity levels ranging from extremely high (>40% of strikes causing damage) to very low (<1% of strikes causing damage). Combined with wildlife surveys conducted locally at an airbase, this hazard ranking list can be used to prioritize management actions to species posing the greatest risk to aircraft safety (Dolbeer and Wright 2009).

Though there were 76 species observed from 29 different guilds and 4 mammal groups during the study year (Appendix F), for this discussion emphasis will be placed on those guilds/groups that pose the greatest threats to aviation safety at NASO. For this analysis the following criteria was used:

Primary Consideration:

1. Number of individuals observed during surveys.

2. The individuals' associated hazard ranking according to Dolbeer and Wright.
3. Evaluation of NAS Oceana's strike record.

Secondary consideration was given for the following conditions:

- Location and behavior of individuals within each guild/group.
- Amount of control effort attributed to remove the specific hazard from the airfield (i.e. did the species easily disperse or not).

Using this information, guilds/groups were ranked in order of the threat level that they pose to aviation safety at NASO from the most severe to the least. This comparison helps to show that the most abundant species at an airfield (Blackbirds/Orioles, in this case) are not necessarily the most hazardous to aircraft safety due to abundance alone. The 8 guilds/group identified as most hazardous to aircraft safety at NASO from June 2010 through May 2011 were deer, Gulls, Raptors, Waterfowl, Pigeons/Dove, Crows/Ravens, Starlings, and Blackbirds/Orioles (Table 3), respectively. There were four species observed at NASO that ranked as extremely high hazards to aviation safety, one as very high, and six as high hazards (Table 3). The following discussion and management recommendations will focus on the 8 most hazardous guilds/groups listed in Table 3. However, most if not all of the management recommendations (habitat modification, dispersal methods, etc.) will be effective for managing the majority of species observed at NASO.

Table 3: Guild hazard ranking and total observations at NASO, June 2010 through May 2011.

Guild/Group	Species	Hazard Level and percentage of strikes causing damage in the U.S.[1]	Total Observed at NASO[2]	Reported Strikes at NASO, 1981-2010	Strikes at NASO with reported damage, 1981-2010[3]
Artiodactyls	White-tailed Deer	Extremely High (82%)	365	24	2
Gulls	Laughing Gull	Moderate (7%)	766	0	0
	Ring-billed Gull	High (10%)	346	3	0

1. Ranking based on strike reports from 1990-2007 (Dolbeer and Wright 2009); "n/a" indicates that species was not individually ranked.
2. Total observations obtained by summing all observations during surveys (day and night) from June 2010-May 2011. Total may include individuals that were present day after day and were recorded on multiple occasions.
3. Reported damage >$10,000.

6.1 Artiodactyls

Artiodactyls (i.e., deer) rank as the most hazardous mammal species to aviation safety in the United States, with 82% of strikes resulting in damage from 1990 through 2007 (Dolbeer and Wright 2009). The large size of species such as white-tailed deer and the percentage of strikes involving multiple animals make them especially hazardous to aircraft during the takeoff and landing phases of flight. From 1990 through 2009, Artiodactyls, primarily white-tailed deer, have been involved in 847 damaging strikes in the U.S., resulting in over $36 million in reported costs (Dolbeer et al. 2011).

General Abundance

Deer were the twelfth most abundant group observed at NASO from June 2010 through May 2011 (Appendix F). White-tailed deer (*Odocoileus virginianus*), the only species observed in this group, rank as an extremely high hazard to aviation safety, with 82% of strikes causing damage from 1990 through 2007 on civil airfields (Table 3, Dolbeer and Wright 2009). From 1981 through 2010, twenty-four deer were struck by aircraft at NASO, and account for two out of only three reported Class C mishaps (WESS Database) on base. A total of 365 deer were observed during 22 night surveys. Night surveys were conducted by driving a predetermined 15.5 mile route around the airfield, using spotlights and/or FLIR to locate deer. The initial two surveys in June of 2010 surveyed 61 and 66 deer. While the deer surveys in May of 2011 surveyed only five and seven deer, respectively. Large numbers of deer are routinely observed in areas surrounding the base property located outside the perimeter fence, on both Navy and private properties.

Attractants

The NASO airfield contains ideal habitat for deer, including agricultural fields, mature timber (especially white oak, a preferred food source), edge/shrub areas, emergent vegetation, and open grassland.

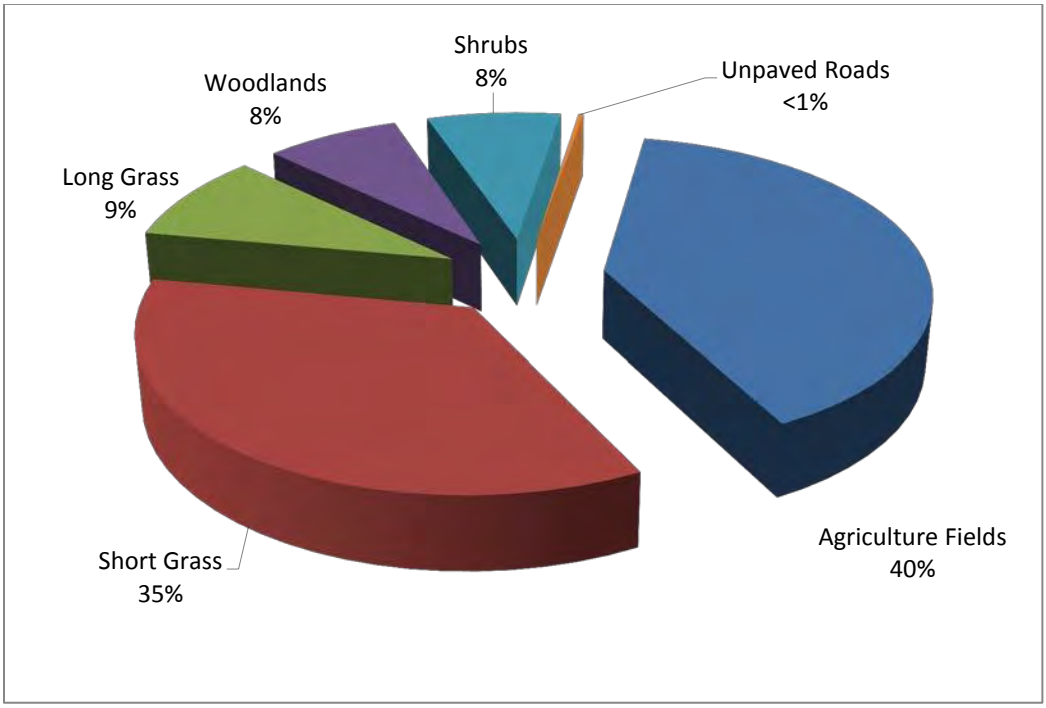

Figure 8: Deer habitat use at NASO, June 2010 through May 2011.

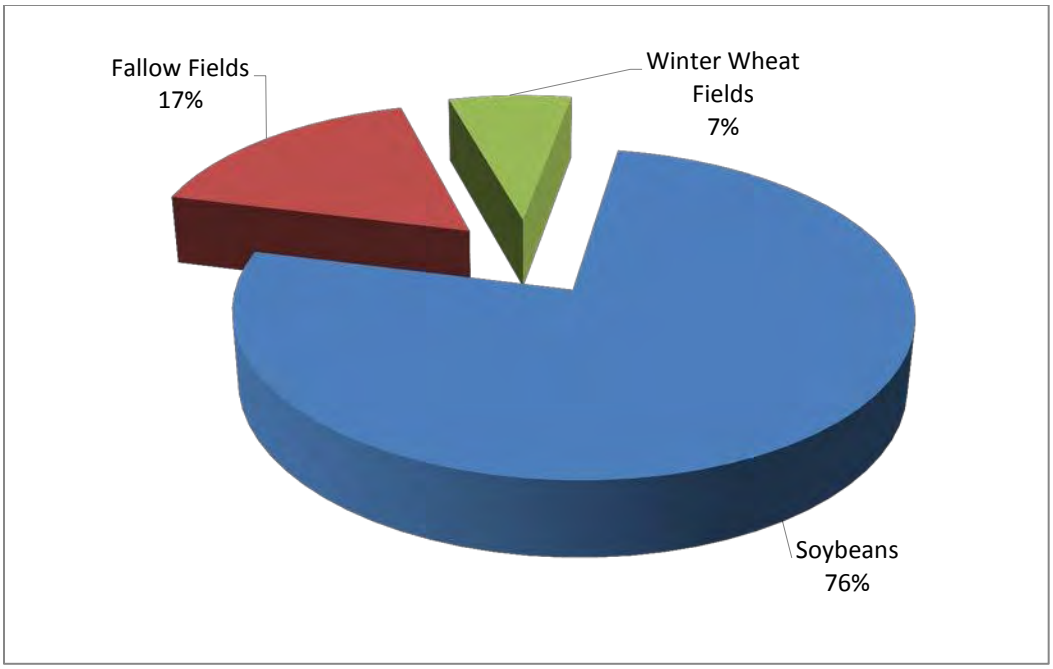

Figure 9: Deer agricultural field use at NASO, June 2010 through May 2011.

Deer were most often observed utilizing two habitat features at NASO: agricultural fields (40%) and short grass (35%, Figure 8). Soybeans accounted for 76% of all deer surveyed in agricultural fields (Figure 9).

NASO contains areas outside of the airfield within the base perimeter fence that contain ideal habitat for deer including: agricultural fields, mature timber, edge/shrub areas, emergent vegetation, wetland mitigation site, two 18-hole golf courses, and open grassland. Deer are often seen utilizing these habitat features by WS and base personnel. These areas outside of the airfield are not fenced off from the airfield. WS personnel have identified several travel corridors utilized by deer to gain access to the airfield (Figure 10). Travel corridors were identified by direct and indirect observations. The travel corridors are identified in yellow below.

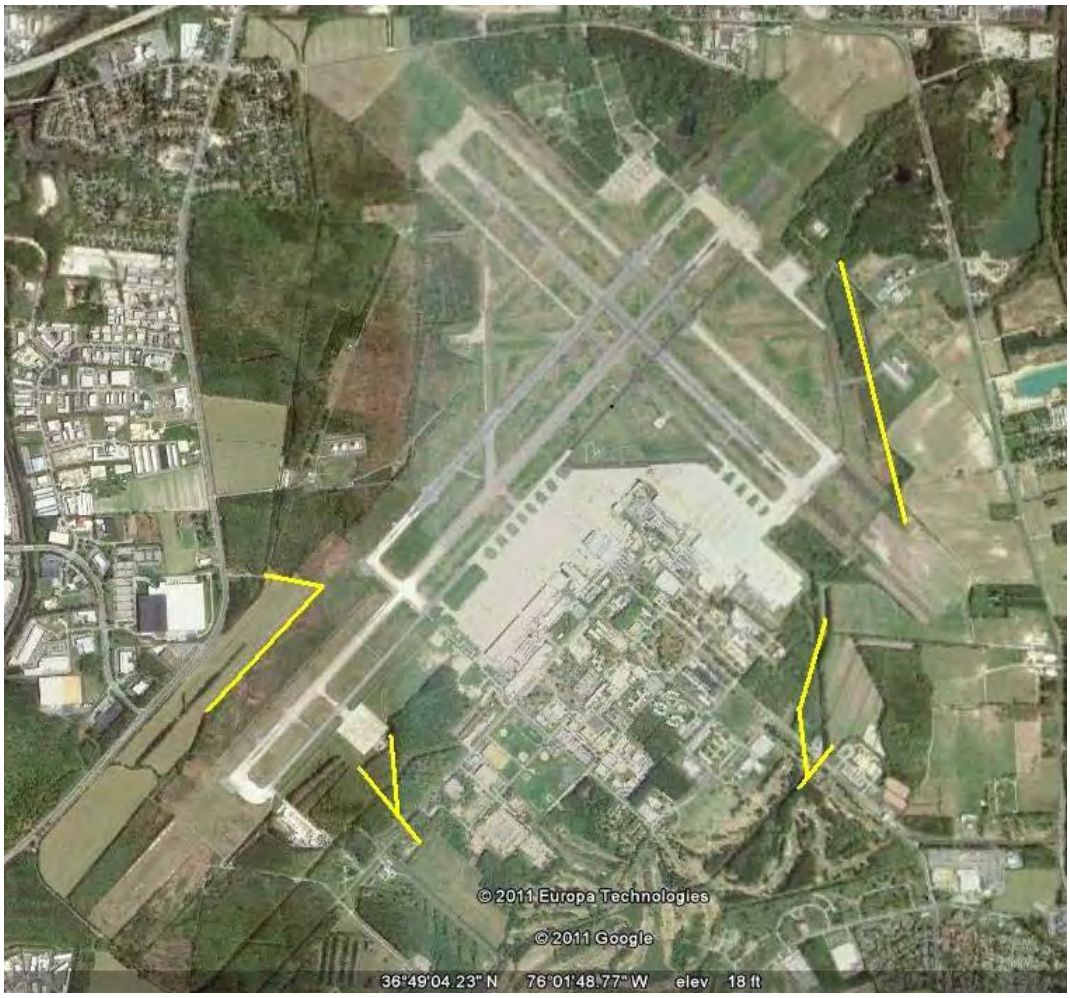

Figure 10: White-tailed deer travel corridors aerial view (photo from GoogleEarth, 2011).

Management Recommendations

Habitat management, installation of an airfield fence, maintenance of the perimeter fence, and removal of deer within the perimeter fence are the most important methods for reducing the threat of deer strikes at NASO. Airfield management is currently converting areas of optimal deer habitat (i.e., secondary growth and security cover) adjacent to the runways to maintained open grassland. After these areas have been cleared, it is important that they are properly maintained (regular mowing) to prevent them from reverting back to woody habitat. This site conversion has decreased the number of deer observed in close proximity to runways. Airfield Operations is currently pursuing a Clear Zone Management Plan that will continue to reduce optimal deer habitat adjacent to runways.

The entire base perimeter fence should be inspected frequently. Any gaps large enough to allow deer and any medium sized mammals access to the base should be repaired immediately by installing bars, wire, stone, or patching with sections of fence. Gates should be inspected regularly and personnel should ensure that gates are secured tightly so that there are no spaces between or under gates, large enough to allow deer to pass between or through them. Sections of fence that cross water drainage ditches/culverts

should be inspected for possible deer access points. If these areas are large enough to allow deer access to the base, they should be affixed with a swing gate or other similar devices that would allow high water to flow from the base while excluding deer access.

NASO should continue to actively remove deer from the base. Removal is currently being accomplished through WS personnel and a base hunting program utilizing VDGIF Deer Population Reduction Program (DPOP). Currently, there are additional base properties that could utilize the DPOP program to reduce the deer threats to aviation safety and provide recreational opportunities for Navy personnel. These areas include old base housing, Boy Scout area, base property behind Natural Resource building located on Oceana Boulevard, and all other areas that could be hunted safely.

WS recommends that any deer present in the airfield be removed immediately via shooting or trapping. While not an immediate threat to aircraft safety, deer present on base property can and do gain access to the airfield. Deer on base, off of the airfield also serve as a source population for deer to annually disperse to the airfield. Lethal removal of deer requires a permit from the VDGIF, and it is recommended that NASO keep its permit current.

6.2 Gulls

From 1990 through 2009, gulls were the most frequently struck bird guild in the United States (for strikes where the species was identified), with 24% of the 7,894 reported civil strikes resulting in damage (Dolbeer et al. 2011). Gulls threaten aircraft safety due to their tendency to form large flocks, size, flight characteristics, and their foraging and loafing behaviors.

General Abundance

While gulls were the seventh most abundant guild observed at NASO from June 2010 through May 2011 with 1,160 observations (Appendix F), 2 species observed at NASO in the gull guild pose a high risk to aviation safety (Table 3), making gulls the second most hazardous guild to aircraft safety at NASO (Table 3). As shown in Table 3, Laughing Gulls (*Larus atricilla*) were the most commonly observed species in the Gull guild, followed by Ring-billed Gulls (*Larus delawarensis*), Herring Gulls (*Larus argentatus*), and unknown gulls (i.e., gull species that could not be identified during the survey). Gulls were most often observed in or over agricultural and long grass areas of the airfield (Figure 11).

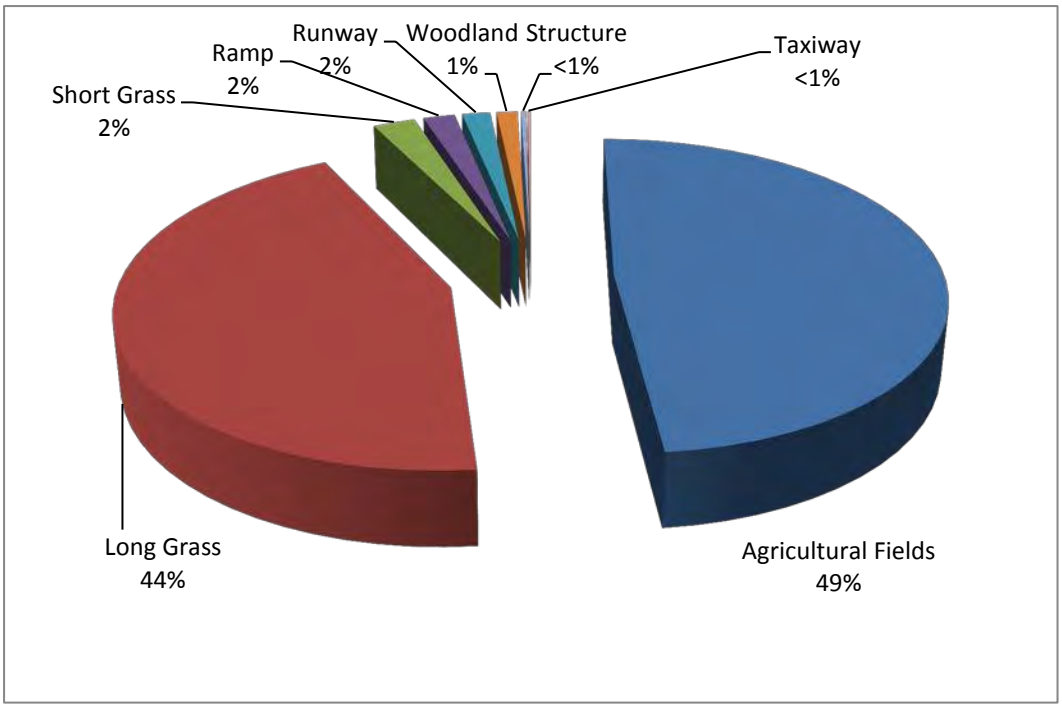

Figure 11: Gull habitat use at NASO, June 2010 through May 2011.

Gull use of agricultural fields occurred most frequently on or over winter wheat and fallow fields (Figure 12).

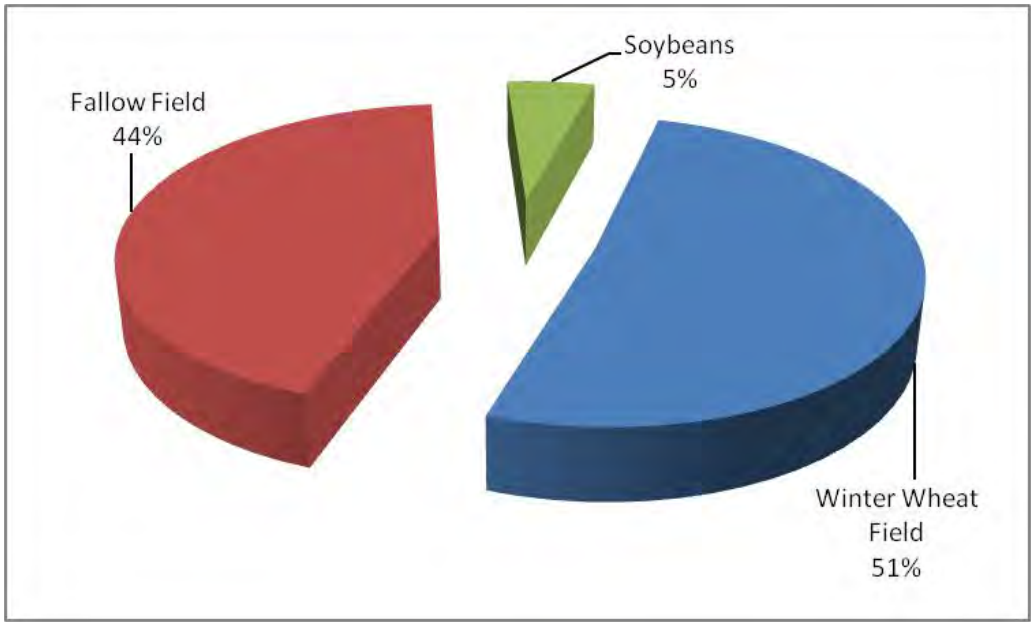

Figure 12: Gull agricultural habitat use at NASO, June 2010 through May 2011.

Flying locally, loafing and feeding accounting for 88% of all gull activity observed (Figure 13).

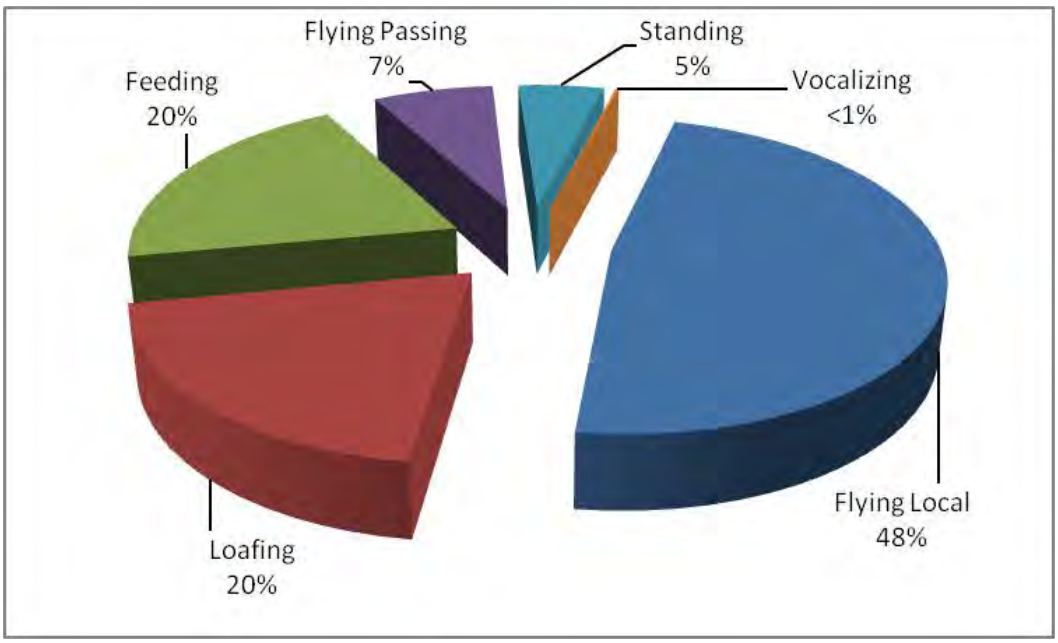

Figure 13: Gull activity at NASO, June 2010 through May 2011.

Attractants

Gulls are most commonly attracted to NASO during periods of inclement weather where they fly locally, loaf and forage throughout the airfield. During surveys, gulls were observed over agricultural and long grass areas. Outside of these survey periods, WS personnel observed gulls using paved areas of the airfield. Gulls may find an abundance of food such as earthworms on and adjacent to taxiways and runways after rain events when the ground becomes saturated. This ground saturation forces earthworms to the surface. Thousands of gulls are also observed loafing and flying locally at a waste transfer station located on Virginia Beach Boulevard. This transfer station is located within one mile of the departure end of Runway 32.

Management Recommendations

Although gulls were only the seventh most observed guild, gulls rank as the second most hazardous guild to aircraft safety at NASO for several reasons. From June 2010 through May 2011 WS personnel dispersed 6,565 gulls from the airfield (Table 4, Appendix G). Gulls are sporadically present on the airfield, but when present their numbers can be very high, and their habits during inclement weather (e.g., loafing/foraging on runways) make them very hazardous to aviation. Once dispersed, gulls tend to tower over the area they were dispersed from, or move to other parts of the airfield increasing the time, effort and geographical area required to alleviate this threat.

As with many species, removing sources of water is an important component of gull management. Since large flocks of gulls are mostly observed at NASO during (and immediately following) periods of rain, improving drainage can help reduce pooling of water in low lying areas. Using sweepers to remove earthworms from paved areas after rainfall may help to reduce the number of gulls foraging in the airfield. Care should be taken to ensure that dumpsters and other waste disposal areas are covered to prevent

attracting gulls and any feeding of gulls by airport tenants or customers should be stopped immediately.

Gulls may be harassed from the airfield by a variety of methods, including vehicles, sirens, pyrotechnics, and propane cannons. Lethal removal of gulls should be implemented when dispersal efforts are insufficient, and as such the airfield's migratory bird depredation permit should be kept current.

6.3 Raptors

Raptors (birds of prey) pose serious threats to aviation safety due to the larger size of many species and their flight behaviors. Some raptors may soar high over the airfield (eagles, vultures), others perch on structures in the airfield (Red-tailed Hawks and American Kestrels), while others may fly slowly close to the ground while hunting (harriers). From 1990 through 2009, raptors have been involved in 925 damaging wildlife strikes in the United States, resulting in almost $56 million in damages (Dolbeer et al. 2011). Since 1981, there have been 5 reported strikes involving raptors at NASO (Table 3).

General Abundance
Whereas raptors were the ninth most abundant guild observed at NASO from June 2010 through May 2011 with 744 observations (Appendix F), 2 species observed at NASO in the raptor guild pose an extremely high risk to aviation safety (Table 3), making raptors the third most hazardous guild to aviation safety (Table 3). As shown in Table 3, Red-tailed Hawks (*Buteo jamaicensis*) were the most commonly observed species in the raptor guild, followed by American Kestrels (*Falco sparverius*), Northern Harriers (*Circus cyaneus*), Turkey Vultures (*Cathartes aura*), Osprey (*Pandion haliaetus*), Cooper's Hawks (*Accipiter cooperii*), Bald Eagles (*Haliaeetus leucocephalus*), and Sharp-shinned Hawks (*Accipiter striatus*). Raptors were most often observed in or over short grass areas of the airfield (Figure 14).

Attractants
Raptors are attracted to the airfield at NASO by several features. Raptors find abundant prey (i.e., meadow voles, field mice, Eastern cottontails, etc.) in the grassland and woodland areas of the airfield. There are numerous perching sites such as navigation aids, lights, communication towers, trees, and radar facilities that may be utilized by raptors. Vultures are often observed towering on thermal updrafts high above the airfield. Mowing operations, road-killed animals, and deer shot but not retrieved provide abundant food sources for vultures in the area.

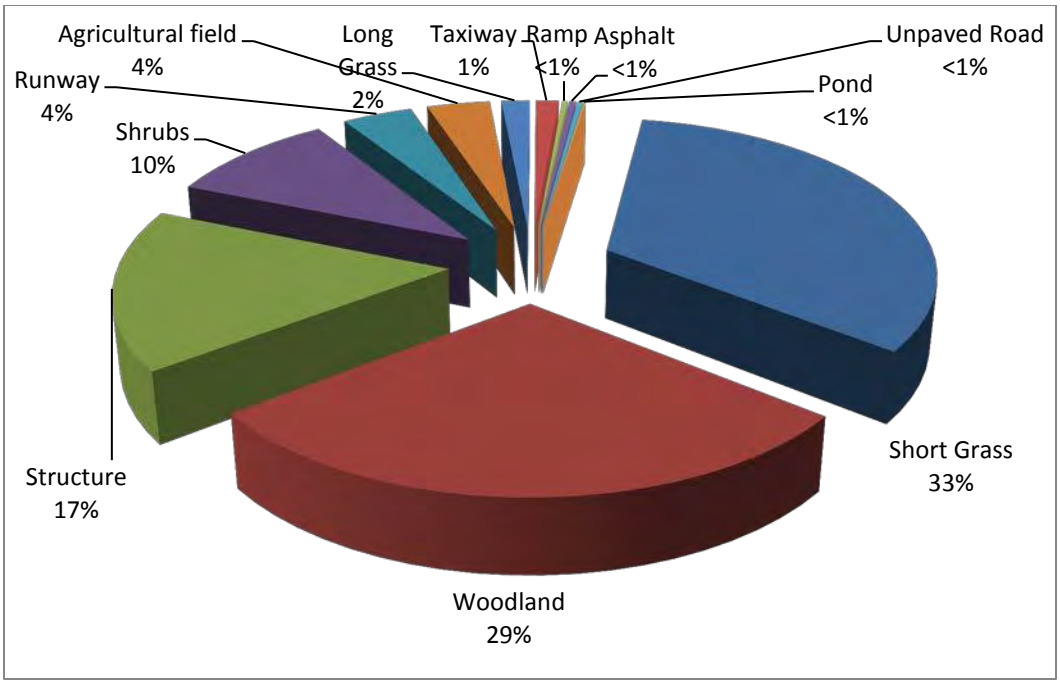

Figure 14: Raptor habitat use at NASO, June 2010 – May 2011.

Management Recommendations

To reduce the likelihood of strikes involving raptors, Blackwell and Wright (2006) suggest that management efforts in the airfield should be directed towards the availability of food and alteration of habitat used by raptors. The reduction of food sources such as rodents and carrion in the airfield is critical in controlling foraging by Red-tailed Hawks and vultures (Blackwell and Wright 2006). Reducing the number of small mammals in the airfield may be accomplished by a variety of methods, including trapping, shooting, or the use of rodenticides. Any animal carcasses found in or around the airfield should be removed and disposed of promptly to avoid attracting vultures. Turkey Vultures were noticeably more abundant following airfield mowing operations. During mowing, small mammals and snakes are often hit by the mower, leaving carcasses on the airfield.

Research has shown that small mammals use unmanaged areas of tall vegetation far more than disturbed areas (Barras and Seamans 2002, Blackwell and Wright 2006, Washburn and Seamans 2007), so frequent mowing can help to reduce small mammal abundance at airports (Barras and Seamans 2002), thereby reducing the availability of food for raptors. When possible, reducing the availability of locations where raptors may perch, roost, loaf, or nest is recommended. As such, NASO should consider the removal of trees and unused structures in the airfield (such as old utility poles). For structures that cannot be removed (i.e., signs, lights, towers, etc.), devices that exclude birds or make it difficult for their perching should be considered (such as spider wires, bird spikes, coil wire, etc.).

Raptor species must be harassed from the airfield whenever present using methods such as vehicles, horns, and pyrotechnics. Vultures commonly soar high above the airfield, making them difficult to disperse using 15mm pyrotechnics, given their limited range. Devices with much greater range (such as CAPA rounds or 12-gauge shellcrackers) may

be more useful for dispersing vultures. Lethal removal of some raptors may be necessary for persistent individuals, and as such NASO's depredation permit must be kept current to allow take of raptors. Lethal removal may include methods such as shooting or trapping. Though recently removed from the federal endangered species list, Bald Eagles are protected under the Bald and Golden Eagle Protection Act and are state threatened species, and a permit is required to simply harass eagles from the airfield. Eagles are becoming more abundant in the area around NASO and observations by base and WS personnel have increased in the past few years. NASO received a U.S. Fish and Wildlife Service Bald Eagle Depredation Permit in March of 2012 (Appendix C). The current permit is active for five years or until 2017, at this time it is recommended that the permit be renewed. All eagle dispersals conducted under this permit are required by the U.S. Fish and Wildlife Service to be documented and submitted at the end of each calendar year for the duration of the permit. Eagle activity is great in the areas immediately surrounding nests and any nesting attempts should be discouraged, and established nests should be removed promptly.

6.4 Waterfowl

Waterfowl can be particularly hazardous to aircraft safety due to their larger size and flocking behavior. In particular, Canada Geese have been responsible for some of the more serious wildlife strikes. In addition to the more recent "Miracle on the Hudson" event (see Section 1.1), 24 airmen were killed in 1995 when an Air Force AWACS aircraft crashed at Elmendorf Air Force Base in Alaska after striking a flock of Canada Geese (Wright 2011). From 1990 through 2009, waterfowl have been responsible for the greatest number of damaging strikes in the United States (1,503), resulting in over $144 million in losses (Dolbeer et al. 2011).

General Abundance

Waterfowl were the fourth most abundant guild observed at NASO from June 2010 through May 2011 (Appendix F). Waterfowl rank as the fourth most hazardous guild to aircraft safety at NASO (Table 3). Canada Geese (*Branta canadensis*) were the most commonly observed species in the waterfowl guild. Canada Geese are ranked as an extremely high hazard threat to aviation safety (Table 3). Canada Geese accounted for 95% of all observations in the waterfowl guild. Canada Geese were observed year-round at NASO and were most abundant during the winter months when migrating birds wintered in the area. The number of Canada Goose observations during summer months supports a substantial resident (non-migratory) population. Other waterfowl species observed at NASO included American Brant (*Branta bernicla*), Tundra Swan (*Cygnus* columbianus), Hooded Merganser (*Lophodytes cucullatus*) and a single Mallard (*Anas platyrhynchos*). Although only a single Mallard was observed during surveys, WS personnel observed numerous Mallards during routine field activities, removing 21, and dispersing 54 individuals from the airfield (Appendix G). All Mallards were removed or dispersed from standing water.

Attractants

Utilization of short grass areas adjacent to runways and taxiways by Canada Geese occurred predominantly during May through July, coinciding with populations of resident

geese. Tundra Swans were observed during migratory periods flying high over the airfield. Canada Geese were often observed by WS and NASO personnel feeding in grassy areas outside of the airfield on and off base. Resident Canada Geese were observed frequently utilizing ponds located on the Aero Pines Golf Course and the agricultural field located outside of the back gate.

Waterfowl are attracted to NASO and the surrounding area by several habitat features. There are many small bodies of water on and around the airport that provide a source of food and cover for waterfowl. Most of these bodies of water are small retention ponds and wetland mitigation sites that are the result of required Best Management Practices (BMP) for construction projects. These BMPs are found throughout the base and on the Aero Pines Golf Course. Three barrow pits are located along Oceana Boulevard just outside of the base. The barrow pits contain standing water, and are attractive to waterfowl. Agricultural fields on and off base outside of the active airfield are known to attract large numbers of foraging Canada Geese during the winter months.

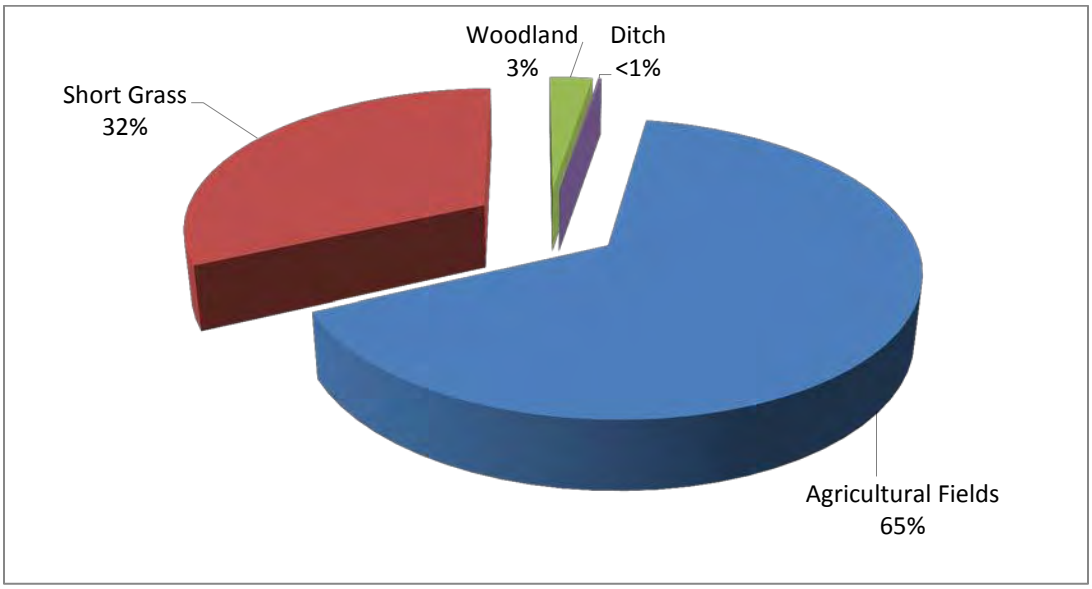

Figure 15: Waterfowl habitat use at NASO, June 2010 – May 2011.

Waterfowl were most often observed utilizing two habitat features at NASO: agricultural fields and short grass (Figure 15). Agricultural fields were utilized the most with winter wheat accounting for 85% of the sightings (Figure 16). Utilization of winter wheat occurred predominantly by Canada Geese and American Brant during December through March.

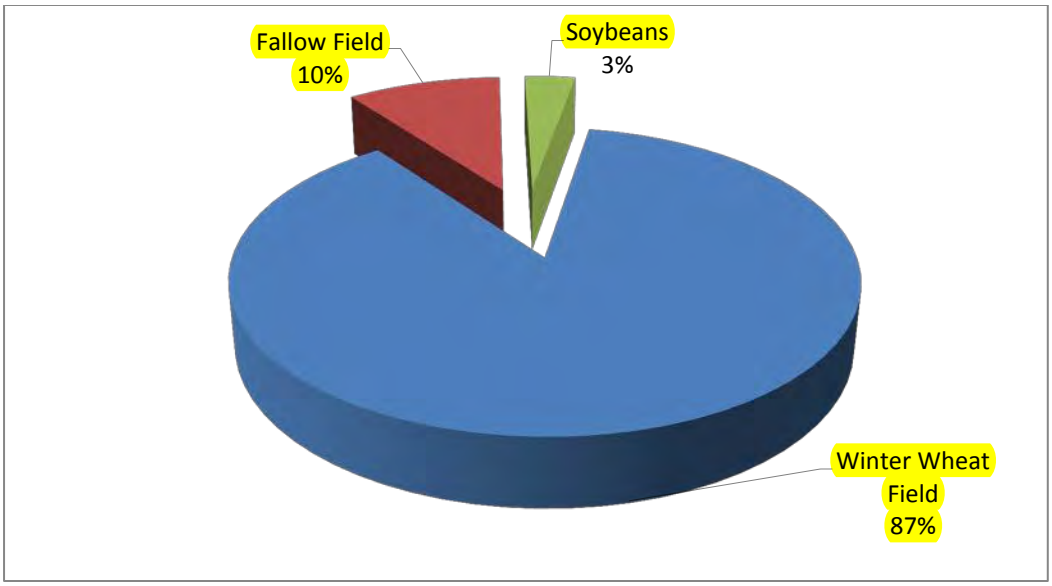

Figure 16: Waterfowl agricultural habitat use at NASO, June 2010 through May 2011.

Management Recommendations

Canada Geese should be considered the second greatest wildlife species threat to aviation safety at NASO. Nationally, Canada Geese are ranked as an extremely high hazard to civil aviation safety, as 51% of aircraft strikes with geese resulted in damage from 1990 through 2007 (Dolbeer and Wright 2009). By comparison, Mallards are ranked as a very high hazard to aviation safety, but the damaging strike rate for Mallards is about half that of Canada Geese (Dolbeer and Wright 2009). Resident Canada Geese find many areas of suitable habitat all around NASO and regularly fly through critical airspace when traveling from roosting/loafing areas to feeding areas. There are several control methods that should be considered to reduce hazards from Canada Geese (and waterfowl in general).

Winter wheat was the largest single attractant for geese during winter months on base property. Consideration should be given to eliminate the production of winter wheat on NASO agricultural fields. Whenever and wherever possible, areas of standing water in the airfield should be eliminated by improving drainage, grading, or filling in low areas. In the airfield, the wet areas of most concern are located at the approach and departure ends of runways 32R and 32L. Other areas of concern that contain standing water adjacent to the airfield include the barrow pits located along Oceana Boulevard, ponds located on the Aero Pines Golf Course, and Aero Pines wetland mitigation site. A permit may be required prior to disturbing/altering some wet areas, so coordination with the U.S. Army Corps of Engineers (ACOE) may be necessary. For areas that cannot be drained (such as BMPs), it may be useful to suspend a wire grid over ponds that may act as both a physical and visual barrier to prevent waterfowl from landing on the water. Installing stone rip-rap along the banks of BMPs or drainage ditches may help to reduce waterfowl use of these areas, as well. Drainage ditches should be properly maintained, allowing water to effectively drain from the airfield and the ditches. Ditches can be maintained by: removal of

vegetation slowing the flow, proper grading, removal of excess sediment, and use of herbicides to limit vegetation growth.

Vegetation management can be an important approach for managing Canada Geese. Generally, it is recommended that airfields maintain grass at an intermediate height in the airfield (between 6 and 10 inches). It has long been thought that tall vegetation management in the airfield would deter Canada Geese since they often prefer to forage in areas of short grass, though there is limited scientific data on how Canada Geese react to tall vegetation management and studies have often produced conflicting results (Seamans et al. 2007, Barras and Seamans 2002, Washburn et al. 2007). Though more research is needed, studies suggest that a promising method of reducing Canada Geese use of airfields is to use an endophyte-infected variety of tall fescue when re-seeding areas of an airport disturbed by tree removal, construction or renovation (Washburn et al. 2007). Research suggests that when consumed by wildlife, tall fescue produces a variety of adverse effects (taste aversion, physical distress) and is generally avoided (Washburn et al. 2007). When re-seeding areas of the airfield, NASO should consider planting tall fescue and avoid grass mixtures containing millet or ryegrass so as not to provide a preferred food source for geese and other hazardous bird species.

NASO should adopt and maintain a "zero tolerance" policy towards waterfowl in and adjacent to the airfield, especially Canada Geese. Waterfowl species should be aggressively harassed to disperse them from the area. Harassment methods may include the use of pyrotechnics, horns, sirens, paintballs, and chasing with vehicles. NASO should maintain its current migratory bird depredation permit from the USFWS to allow lethal take of waterfowl species that do not respond to harassment. Canada Geese may also be taken under the Control Order at Airports and Military Airfields (50 CFR §21.49), which allows take of Canada Geese on base property and other properties within a 3-mile radius of the airfield (with written permission of the landowner) from April 1 to September 15.

In order to further reduce threats from Canada Geese, NASO has expanded control efforts beyond the airfield to base properties that provide attractive sources of food and cover. This control should be expanded to off base locations within 3 miles of the base. A study conducted in New York by Seamans et al. (2009) indicated that resident Canada Geese remained within 3 miles (5 km) of their primary feeding and loafing areas around JFK International Airport, and this trend seems to be reflected in the areas around NASO. The WS program in NY reported that goose numbers at Rikers Island decreased yearly after removal efforts from 2004 through 2007, and subsequently goose strikes at nearby LaGuardia Airport decreased by 80% (Seamans et al. 2009).

6.5 Pigeons/Doves,

Pigeons/Doves were the fifth most hazardous guild identified at NASO from June 2010 through May 2011 (Table 3). Although Rock or feral Pigeons (*Columba livia*) rank as only a high hazard to aircraft, Pigeons are also a hazard to aircraft located in hangars due to fecal contamination. Fecal contamination of aircraft has been reported to cause corrosion of critical aircraft instruments. Rock Pigeons and Mourning Doves (*Zenaida macroura*) are the only two species observed at NASO in this guild.

From June 2010 through May 2011 Pigeons/Doves were the third most abundant guild observed at NASO (Appendix F). Pigeons were usually observed perched on hangars, while Morning Doves were usually observed perched on the perimeter fences to the blue ramp area and VACAPS. From 1981-2010 the only reported strike occurring at NASO involving this guild was one Morning Dove.

Attractants

Pigeons/Doves were observed most frequently utilizing structures followed by agricultural fields (Figure 17). Pigeons are attracted to the airfield to roost and nest on structures, while Mourning Doves prefer to feed in agricultural fields or perch/loaf on fences.

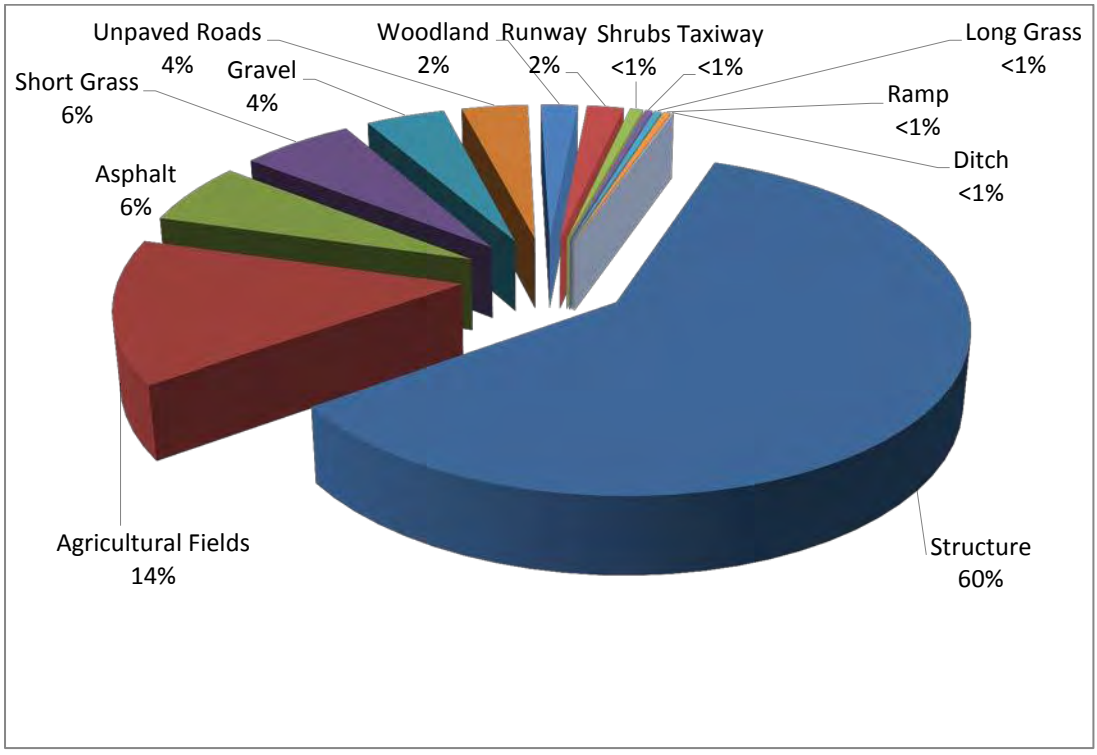

Figure 17: Pigeons/Doves habitat use at NASO, June 2010 – May 2011.

Management Recommendations

Flocks of birds in these guilds may be dispersed by using pyrotechnics, sirens, horns, or recorded distress calls. Persistent species that do not easily disperse should be removed lethally by shooting or trapping. The most effective means to remove pigeons from hangars is through trapping. Shooting should not be conducted in any hangars containing aircraft. Control of pigeons does not require a permit, though control of Mourning Doves does require a Federal Migratory Bird Depredation Permit. Mourning Doves are especially attracted to areas of bare ground and old pavement. These areas provide ideal areas for foraging and obtaining grit. Bare ground areas that have been graded or re-seeded should be monitored for Mourning Dove activity. WS noticed large numbers of doves utilizing the old ramp area north of runway 32L and 5R intersection. WS recommends that areas of old pavement no longer needed for airfield operations are removed and all areas of bare ground be reseeded. Activities at the stables should be evaluated for accidental feeding of pigeons and other wildlife. All feed should be maintained in closed containers and any spilled feed cleaned up. Even with all these measures in place the birds (pigeons and blackbirds) will always be attracted to this area due to the availability of undigested grains present in the horse manure. Other places of concern are any areas where the manure is spread mechanically.

6.6 Crows/Ravens, Starlings, and Blackbirds/Orioles

Crows/Ravens, starlings, and blackbirds/orioles were the sixth, seventh, and eighth most hazardous guilds identified at NASO from June 2010 through May 2011 (Table 3). One species within these guilds, the American Crow is ranked as high, while two other species the European Starling and Common Grackle were ranked as moderate, and a low ranking was given to the Red-winged Blackbird and Brown-headed Cowbird. While these guilds do not contain any species that rank as an extremely high or very high hazard, control efforts are often required, due to the large number of individuals observed on the airfield.

From June 2010 through May 2011, Blackbirds/Orioles were the most abundant guild observed at NASO, starlings were second, and Crows/Ravens were the fifth most abundant (Appendix F). These species were mostly observed flying locally over short grass and agricultural areas, though European Starlings (*Sturnis vulgaris*) were commonly observed perched on structures throughout the airfield. None of these guilds have been involved in reported damaging strikes at NASO since 1981 (Table 3). The greatest hazard these species pose to aviation is through their tendency to form large dense flocks that stay in almost continuous motion over short grass habitat near runways.

Attractants

Species in these guilds are attracted to the airfield to feed in the large areas of open grassland agricultural fields where they find abundant forage such as seeds, earthworms, and insects. There are many perching roosting locations utilized by these guilds such as hangars, buildings, communication equipment, fences, and radar facilities.

Management Recommendations

Flocks of birds in these guilds may be dispersed by using pyrotechnics, sirens, horns, or recorded distress calls. Persistent species that do not easily disperse should be removed

lethally by shooting and/or trapping. The control of crows, starlings, and blackbirds does not require a Federal permit. Grass management can be important for controlling these species. Grass that is tall enough to produce a seed head provides a food source and effective cover for species such as starlings and blackbirds, so grass in the airfield should be maintained at the recommended height of 6 to 10 inches (Dolbeer et al. 2011). Starlings using structures such as hangars for roosting locations can be excluded by keeping doors/windows closed and repairing any holes in the structure that allow birds to access the building. Nest traps, mist nets and toxicants may also be used to reduce the population of starlings utilizing these structures.

6.7 All Other Guilds

Appendix F. lists all guilds and species observed at NASO during wildlife surveys from June 2010 through May 2011. For all other guilds observed during wildlife surveys, many, if not all, of the management recommendations listed for waterfowl, raptors, artiodactyls, and gulls are applicable in reducing their threats to aviation safety. Many species utilize the same habitats, so management for one species will likely affect another. As discussed earlier in this section, habitat management and exclusion are the two most important components for reducing the threat of wildlife strikes at NASO. Vegetation and water management will likely have the greatest impact for most bird species, while maintaining the perimeter fence will be most effective in reducing the presence of larger mammal species (such as deer and coyotes).

6.8 Threatened and Endangered Species

Appendix E. lists species that are considered endangered, threatened, or of concern in the Commonwealth of Virginia. Of the species observed at NASO during the survey period, Bald Eagles and Upland Sandpiper are the only species appearing on the list, classified as State Threatened and a Federal Species of Concern. Strike records report one Upland Sandpiper has been struck at NASO. Six Upland Sandpipers were observed during wildlife surveys, and WS personnel have observed others during periods of migration.

7.0 CONTROL ACTIVITIES

In addition to conducting a wildlife hazard assessment, WS also provided direct control services to NASO from June 2010 through May 2011. Table 4 lists species within guilds that were removed or dispersed to protect aviation safety at NASO by WS.

Table 4: Species or Guilds removed or dispersed by WS at NASO, June 2010 – May 2011.

Guild/Group	Guild Hazard Ranking at NASO	# Removed[1]	# Dispersed[1]
Artiodactyls (i.e. White-tailed Deer)	1	138	0[2]
Gulls	2	11	7,643
Raptors	3	13	87
Waterfowl	4	51	5,399
Pigeons/Doves	5	310	276
Crows/Ravens	6	3	45
Starlings	7	99	382
Blackbirds/Orioles	8	61	5,450
All other Birds	N/A[3]	9	20
All other Mammals	N/A[3]	68	2
Totals	**-**	**763**	**19,304**

1. Total species removed and dispersed obtained by summing all activities conducted by WS personnel from June 2010-May 2011.
2. Deer were not considered dispersed from the airfield.
3. All other bird and mammal guilds were not ranked and are combined.

Artiodactyls

WS personnel removed 138 deer from NASO base property from June 2010 through May 2011 including 15 deer from Aeropines Golf Course. The other 123 deer were removed from the airfield. The initial two deer surveys conducted in June of 2010 surveyed 61 and 66 deer, while the two surveys in May 2011 surveyed 5 and 7 deer. Figure 18 below shows all deer survey numbers and cumulative deer removal.

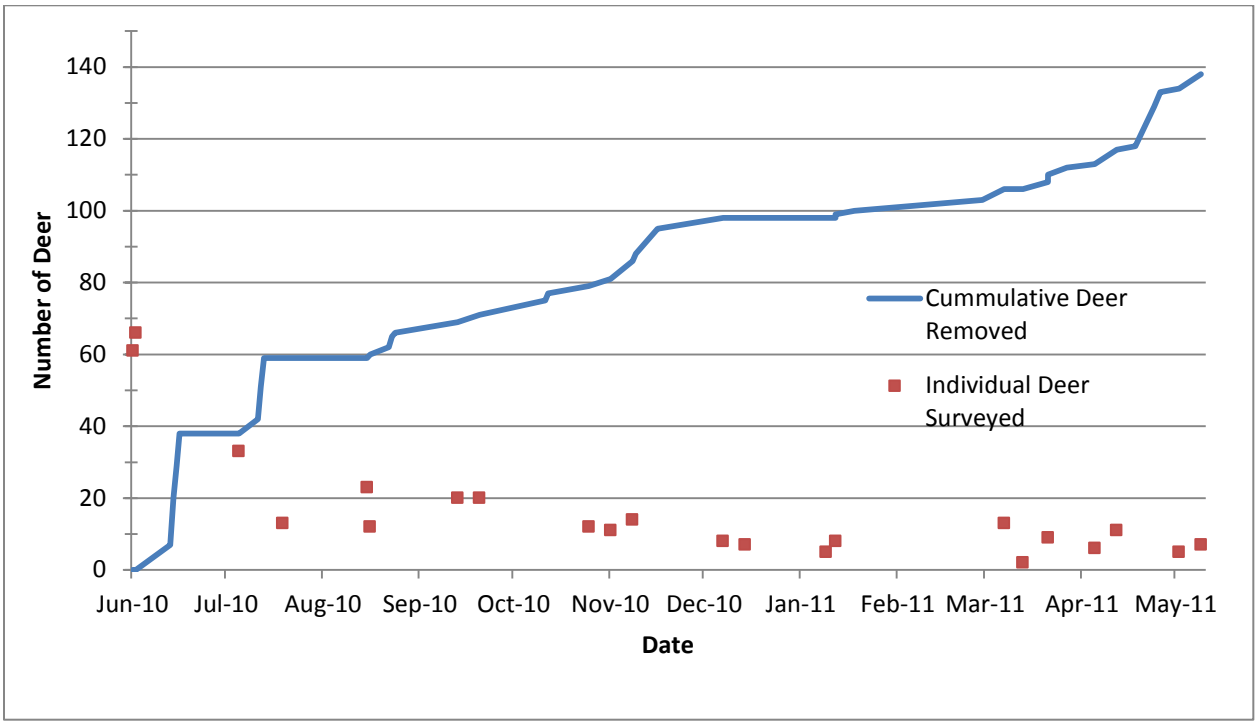

Figure 18: Deer surveyed and removed from NASO by WS personnel from June 2010 – May 2011.

Birds
WS dispersed 19,302 and removed 557 individual birds from the airfield (Table 4). The top 8 species dispersed from the airfield are listed below and Appendix G contains all species removed and dispersed from the airfield that fall in the eight most hazardous guilds/groups identified at NASO.

WS personnel responded to complaints of pigeons in hangars causing corrosion damage to aircraft by trapping and removing 276 pigeons from September 2010 through November 2011. Pigeons were not observed utilizing the hangars again after this trapping effort.

8.0 RECOMMENDATIONS

In addition to placing an emphasis on the management of the species discuss in Section 6, WS recommends that the following actions are implemented at NASO to improve wildlife hazard management at NASO and further reduce the threat of wildlife/aircraft strikes:

Install a security/wildlife fence around the perimeter of the entire airfield

The Federal Aviation Administration (FAA) recommends that civil airports in areas of high deer populations install a 10 to 12 foot chain link fence with outriggers supporting three strands of barbwire projecting away from the airfield. FAA also supports a 4 foot skirt of chain link fence attached at the bottom of the fence and buried at a 45 degree angle away from the airfield to exclude wildlife from digging of slipping under the fence. A properly installed wildlife fence will greatly improve safety and security of the airfield.

Update the NASO BASH Plan (WHMP) Based on the WHA

NASO's current BASH plan (NASOCEANAINST 3750.2B) was developed in 2008 by Geo-Marine, Inc. and was not based on a WHA. The plan provides the framework for the base to address wildlife hazards. The BASH plan lacks base specific details of wildlife hazards, and who, how and when the programs outlined in the plan will be conducted. It is recommended that the BASH plan be updated to reflect the information contained in this WHA.

Training of Airfield Personnel in Wildlife Hazard Management

FAA regulations require that civilian airport personnel who are responsible for implementing wildlife control measures are properly trained in wildlife hazard management by a qualified wildlife biologist [14 CFR Part 139.303 (c) and (e)]. NASO currently does not have a formalized training. Formalized training topics should include: USN regulations, policies, and procedures; wildlife strike reporting; wildlife attractants; habitat management; species identification; safety; and hands-on demonstrations of wildlife management tools and techniques. It is recommended that NASO develop formalized training for airfield personnel that may encounter wildlife on the airfield. The current BASH plan outlines this in the form of a Bird Detection and Dispersal Team (BDDT).

Establish a Formal BASH Working Group

The current NASO BASH Plan and the Navy Bird/Animal Aircraft Strike Hazard Program Implementing Guidance (CNICINST 3700, 7 Jul 2011) both outline the functions and personnel to be involved with the BASH Working Group (BWG). WS recommends that NASO establish a BWG in accordance with CNICINST 3700. The formation of this group is important, as it will facilitate greater sharing of information and cooperation among those who have a stake in managing wildlife hazards at NASO.

Continue to Seek Cooperation from Adjacent Property Owners

As discussed in Section 6, wildlife on properties near the airport pose serious threats to aviation safety at NASO. WS recommends that NASO continues to identify areas within 3 miles of the airport that may provide roosting and/or foraging areas for birds that utilize the airspace at NASO, especially Canada Geese. NASO should approach these landowners to seek cooperation for the removal of these hazards.

Utilize the Wildlife Activity Log and Report Bird Strikes

Airfield Operations personnel currently use the airfield wildlife activity database to record occasional instances of wildlife activity on the airfield. It is recommended that operations personnel continue to increase the accuracy of the wildlife activity records. WS recommends that this log also be extended to other personnel including AFF, GEMD and Tower. WS recommends that the wildlife activity log be modified to include additional information that is currently not recorded, such as the number of birds involved, cover type, and location on the airfield. This information can be useful in determining trends and prioritizing management objectives.

Bird strikes should be reported online via WESS and a sample submitted to the Smithsonian Feather ID Lab for positive identification. Evaluation of the WESS data base has shown a lack in bird strike reporting. WS have seen an increase in strike reporting since June 2010. WS should continue training on proper strike reporting to airfield personnel and squadrons. Damage to aircraft following a strike or wildlife incidence is seldom recorded. WS recommends that NASO formalizes a process for recording damage. Damage should include aircraft structural damage, aircraft down time, repair, cleaning, and all other costs associated with a wildlife incidence. WS recommends that NASO work with the Naval Safety Center to ensure that the WESS data base is being updated with species identification and associated damages. This information is usually not available at the time a WESS report is initially submitted.

Maintain Necessary Permits to Control Wildlife

As stated previously, Federal and State permits are necessary for lethal take of migratory bird species and state-managed species such as deer and turkeys. In addition, a Federal permit is needed before Bald Eagles may be harassed from the airfield. NASO currently holds a migratory bird depredation permit, a State permit, and a Bald Eagle Harassment Permit. WS recommends that these permits be maintained to address wildlife species as necessary. If eagle nests are established, an amendment to the existing permit for base

property or a new permit for neighboring property will need to be obtained for immediate removal of the nest.

Have Wildlife Control Supplies on Hand

WS recommends that airfield personnel that are members of the BDDT who are responsible for wildlife hazard management be provided adequate equipment needed to disperse wildlife and adequate storage for this equipment, especially pyrotechnics. Such devices may include pyrotechnics and launchers, propane cannons, and vehicles equipped with sirens and lights. WS recommends that BDDT members are properly trained in the safe use and storage of these devices.

Evaluate Potential Wildlife Hazards When Planning New Construction or Land Use Changes

NASO is constantly undergoing expansion and improvement projects. It is critical to consider wildlife attractants during these planning phases. Several aspects to consider will be the planting of new vegetation, which may provide food to wildlife in the form of seeds and fruits and the creation of water bodies or drainage basins that provide fresh water. NASO's Airfield Manager currently reviews airfield maintenance projects with WS for possible BASH concerns. WS recommends that this continue and be expanded to all construction and maintenance projects on base property. In addition, adjacent off-site projects, industrial development, road construction, recreational development, etc. need to be considered as potential wildlife attractant hazards and dealt with accordingly.

Continue to Monitor Wildlife Populations and Habitat Use Patterns throughout the Airfield

The intent of this WHA has been to document general occurrence, land-use patterns, and population characteristics of wildlife at NASO. It must be realized that wildlife abundance and use patterns on airfields are affected by a host of variables that are rarely the same from year-to-year. Hence, conclusions based on wildlife populations and patterns during this study are only meant to be a guide and may or may not be consistent in subsequent years. Survey routes and methods were established in a manner that facilitates continued monitoring. Data from this study will provide a baseline for comparison in subsequent years and NASO should continue to monitor wildlife populations by conducting regular surveys using the same stations established in this assessment. While surveys conducted in subsequent years may not be conducted with the same frequency or intensity as this initial hazard assessment, they will still provide general insights into wildlife use patterns over time and enable NASO to gauge the effectiveness of its control efforts.

Habitat Modification and Exclusion

As discussed in Section 6, habitat modification and exclusion are two of the most important components of a wildlife hazard management plan. NASO airfield maintenance personnel have been diligent in maintaining grass in the airfield at the

recommended height (6 to 10 inches), and WS recommends that regular mowing is continued. Grass management is seasonal, and frequency of mowing may need to be increased during growing season as resources permit. Woody vegetation growing in drainage ditches should be removed and these areas should be maintained to prevent creating thick, shrub-like habitat that can provide cover for small mammals and perching sites for raptors. Most ditches within the airfield have become clogged with woody vegetation. This not only attracts wildlife but prevents water from effectively draining from the airfield compounding the problem with areas of standing water within the airfield. The resulting saturated soils increase the chance of field equipment rutting the airfield when driving across or avoiding the area completely during mowing operations.

Because all species are attracted to water, areas of standing water should be eliminated where possible. Low lying areas should be filled or graded to improve drainage. Underground drainage culverts in the airfield have failed in areas creating extended periods of standing water following heavy rains. WS recommends NASO continue with their plans to repair/replace all non-functioning drainage systems.

The entire perimeter fence should be inspected periodically for any areas that may allow larger mammals to enter the airfield. Any gaps discovered in or under the fence should be repaired immediately using bars, wire, or sections of fence to patch the area. Where wildlife are crawling under fences, it may be useful to install stone rip-rap along the bottom of the fence to prevent digging. If this is not sufficient, installing an "apron" of woven-wire or chain-link fence on the bottom of the perimeter fence that extends several feet out can help to prevent digging. Specific habitat features that require attention are detailed in appendix H. A list of habitat management sites should be maintained and progress toward resolving these hazards should be discussed in working group meetings and documented in annual monitoring reports.

Agricultural Practices

Agricultural crops can attract hazardous wildlife to the airfield. All approach/departure corridors on NASO contain agricultural fields. The WHA has shown that these fields attract wildlife (e.g., geese) to the airfield. Consideration should be given to the crops that are planted and the agricultural practices used for their production. Cereal grain products should be avoided. These crops attract large numbers of waterfowl for forage. Agriculture practices should minimize tilling. Tilling exposes large numbers of forage (i.e. insects, worms, etc.) that attract large numbers of gulls. Care should be taken during harvest to ensure excess amounts of grains are not spilled. If spills occur they should be cleaned up.

The FAA recommends a distance of 5 statute miles between the farthest edge of the airfield and the hazardous wildlife attractant if the attractant could cause hazardous wildlife movement into or across the approach or departure airspace.

Evaluation of Off Base Aviation Hazards

The FAA recommends a separation distance of 5 statute miles between the farthest edge of the airports AOA and hazardous wildlife attractant if the attractant could cause hazardous wildlife movement into or across the approach or departure airspace (FAA AC 150/5200-33B). WS has identified several potential areas that attract hazardous wildlife within the approach/departure and circling airspace of NAS Oceana. These areas include: several barrow pits located along Oceana Blvd, Owl's Creek Golf Course, and a waste transfer station located on Oceana Blvd. WS recommends that potential hazards surrounding the airfield be identified. Areas identified as potential hazards should be evaluated and BASH mitigation procedures implemented to reduce hazards.

9.0 SUMMARY

Based on data collected during the WHA, records from the WESS wildlife strike database, and control efforts by WS and NASO personnel, several species were identified that threaten aircraft safety at NASO. The guilds/groups that are of most concern to aircraft safety include Deer, gulls, raptors, waterfowl, pigeons/doves, crows, starlings, and blackbirds. Several management strategies may be implemented to reduce wildlife hazards at NASO, including habitat modification, exclusion, harassment, and lethal removal of hazardous wildlife species. WS recommends that NASO continues to take an active approach to wildlife hazard management, utilizing the information contained in this WHA to reduce wildlife hazards and provide a safe environment for aircraft operations.

(f) USDA/CNIC Work/Financial Plan

1. Purpose

a. To establish policy and procedures for implementing the Commander, Navy Installations Command (CNIC) Bird/Animal Aircraft Strike Hazard (BASH) Program.

b. To establish mandatory BASH event reporting and remains collection procedures in accordance with references (a), (b) and (c).

c. To establish BASH program procedures in accordance with reference (b) and consistent with reference (d).

2. Background

a. The Navy's first loss of life due to a bird strike occurred in 1914, coincidentally the same year it obtained its first aircraft. Since 1981, Naval Aviators have reported over 16,550 bird strikes, which resulted in over 440 aircraft mishaps, 250 foreign object damaged (FOD) engines and $372,000,000.00 in damage costs. Additionally, ten aircraft were destroyed along with one fatality. The Naval Safety Center's review of recent Navy BASH incidents found that the lack of an effective installation BASH program was a consistent contributing factor. The BASH program manages risk by addressing specific aviation safety hazards associated with

wildlife near airfields through coordination among all the entities supporting the aviation mission. The BASH program should also strive to effectively minimize secondary consequences of strikes, such as damage to aircraft, environmental cleanup due to aircraft crashes, and impairment of training. Success of the program, therefore, can be measured by the steady reduction and low recurrence rate of actual wildlife-to-aircraft strike events. Such success will be gained by the persistent application of dedicated resources, focused leadership support, execution of time-tested practices and procedures, effective monitoring programs, and institutionalized BASH training across aviation commands.

b. The goals of the guidance contained in this instruction are to increase the reporting and identification of strike events and to reduce BASH incidences at Navy airfields. These goals can be accomplished by reducing the quality and attractiveness of those airfields as habitats for identified problem wildlife, manage wildlife populations to minimize the potential for aircraft strikes, and through coordination with aircraft custodians and shore-based air operations personnel to improve the reporting and communications on both wildlife management and aircraft strikes.

3. Policy

a. CNIC is the Executive Agent, Budget Submitting Office, Program Manager, and Single Process Integrator for executing, monitoring and sustaining the BASH Program at all CNIC installations that conduct or support air operations.

b. This instruction is applicable to all CNIC commands that support fixed and rotary-wing air operations.

c. All Navy flying units that are tenants of CNIC commands shall report bird/wildlife strikes of known origin (e.g., bird remains found on an aircraft, bird remains found on the runway and correlated to a specific aircraft) in accordance with reference (a) and collect/forward remains in accordance with Appendix A-1 of reference (b).

d. All CNIC commands shall report all wildlife strikes in accordance with reference (a) and manage facilities in accordance with reference (b) and consistent with reference (d).

e. BASH manpower and equipment resourcing falls under the Chief Of Naval Operations (OPNAV) Shore Installation Readiness (N46) Base Operating Support (BOS) funding umbrella.

f. CNIC N3, as BASH Program Manager, is final authority for approval and submission to OPNAV N46 for BASH manpower and equipment resourcing requirements across the Navy shore enterprise.

g. Annual updates to those requirements beyond the basic equipment provided in appendix A-2 of reference (b) will be the province of Commanding Officers (CO) at air installations and air operations supporting facilities.

h. BASH incidents shall be reported, via the Web Enabled Safety System (WESS), in accordance with procedures contained in references (a) and (c).

4. Responsibilities

a. CNIC is responsible for execution and oversight of the BASH program.

b. Regional Commanders are responsible for execution and oversight of the BASH program in their regions.

c. COs are responsible for execution and oversight of the BASH program on installations that conduct or support air operations.

d. Air Operations Department Heads are responsible as the BASH program managers on installations that conduct or support air operations.

e. Public Works Officers (PWO) are responsible for ensuring BASH programs are supported by routine facility support services, maintenance, and management.

f. Environmental Program Directors (EPD) are responsible for ensuring BASH programs are compliant with all applicable state and federal environmental laws and regulations, and all applicable Department of Defense (DoD), Department of the Navy (DON) and U.S. Navy environmental policies, directives, and instructions.

g. Natural Resource Managers (NRM) are responsible for ensuring BASH programs are addressed in the installation Integrated Natural Resources Management Plan (INRMP) and compliant with all applicable state and federal natural resource laws and regulations as well as all applicable DoD, DON, and

U.S. Navy environmental policies, directives, and instructions related to natural resources.

5. Action

a. CNIC Headquarters shall:

(1) Assign N3 is the BASH program manager.

(2) Assign Air Operations Program Director (N32) as the executing agent for the CNIC BASH Program and will serve as principal point of contact to all agencies, internal or external, on matters involving the BASH Program. CNIC N32 shall:

(a) Resource CNIC air facilities to the recommended minimum equipment standards established in Appendix A-2 of reference (b).

(b) Centrally fund the United States Department of Agriculture (USDA) Animal and Plant Health Inspection Service (APHIS) Wildlife Services (WS) for biologists assigned to air operations departments to perform Integrated Wildlife Damage Management (IWDM) and monitoring efforts in support of the installation BASH plan.

(c) Manage BASH resource execution.

(d) Chair an annual DON BASH Working Group among major aviation stakeholders typically attended by representatives from fleet type commanders, Naval Safety Center, OPNAV Shore Readiness (N46), OPNAV Energy and Environmental Readiness (N45), Naval Facilities Engineering Command (NAVFAC), regional and installation air operations and natural resources personnel.

(e) Compile regional inputs and additional requirements inputs from air operations stakeholders at the annual BASH Working Group prior to final Program Objective Memoranda (POM) requirements submissions.

(f) Review BASH procedures, and formulate and submit budgetary planning documents to OPNAV N46 per the annual POM schedule.

(g) Conduct a formal review of this instruction every year.

(3) CNIC N4 shall:

(a) Ensure adequately trained NRMs, professional biologists, and biological technicians are available to support preparation and implementation of installation BASH plans.

(b) Ensure BASH programs are addressed in and compliant with installation INRMPs.

b. CNIC Regions shall:

(1) Regional Commanders shall charge the Regional Operations Officer (N3) with responsibility for execution oversight of BASH at the installations. In Regions with an Air Operations Program, the Operations Officer will typically appoint the Air Operations Program Director with responsibility for BASH management oversight.

(2) Regional Air Operations Program Directors shall:

(a) Support COs in establishment and reporting of BASH budget requirements for the annual POM submission cycle.

(b) Manage BASH financial execution.

(c) Monitor installation BASH program viability and BASH incident reporting.

(d) Ensure training for BASH personnel at the installations is in place and standardized.

(3) Regional Engineer Environmental Program Directors (N4) shall ensure that adequately trained NRMs, professional biologists, and biological technicians are available to support Air Department staffs in preparation and implementation of installation BASH plans.

c. CNIC Installations shall:

(1) COs of installations that conduct or support air operations shall:

(a) Issue a BASH plan and maintain its currency based on normal command review guidelines and interim changes to this instruction. The BASH plan shall, at a minimum, address the following:

1. Establishment of a BASH Working Group (BWG) to coordinate BASH issues and requirements across departments and tenants.

2. Identify bird/animal hazards to aviation in the local geographic environment. Hazards shall be identified by regular monitoring of wildlife and if necessary a Wildlife Hazard Assessment (WHA).

3. Establish BASH mitigation procedures (active and passive) relative to the identified hazards in accordance with reference (b) and consistent with reference (d).

4. Develop methods to monitor the effectiveness of the installation IWDM and associated BASH program elements to ensure changes are made as necessary. Data shall be collected and compared from one year to the next in order to document program effectiveness over time.

5. Determine how real time BASH information is made available to aviators as well as potential changes to flying operations based on current operating conditions.

6. Establish procedures for a rapid response capability to deal with emergent BASH issues that threaten daily operations.

7. Ensure compliance with all applicable state and federal environmental and natural resources laws and and regulations, and all applicable DoD, DoN and U.S. Navy environmental policies, directives, and instructions.

8. Address submittal of regular updates to the BWG for review. These reports shall detail methodology and results of all work completed as well as appropriate BASH management recommendations.

9. Training requirements for installation personnel involved with air operations to promote knowledge of BASH issues and to institutionalize standardized procedures for reporting incidents and collecting/forwarding remains.

10. Establish requirements for an annual BASH program self-assessment process that, at a minimum, incorporates appendix A-3 of reference (b).

(b) Institutionalize these procedures by ensuring training on reporting procedures is provided to all divisions and offices directly exposed to the execution of air operations.

(c) Ensure installation personnel are responsible for reporting bird/wildlife strikes of unknown origin (e.g., bird remains found on a runway and not correlated to a specific aircraft) in accordance with references (b) and (c).

(d) Ensure installation personnel collect and forward remains in accordance with Appendix A-1 of reference (b).

(2) Installation Air Operations Officer shall:

(a) Be the BASH Program Manager responsible for execution oversight of installation BASH plan. Serve as central point of contact for BASH coordination and planning with other departments, installation tenants, and the local community.

(b) Establish a WESS account for the mandatory reporting of all BASH incidents.

(c) Coordinate with aircraft custodians on the proper reporting, via WESS, and remains collection procedures of all bird/animal strikes of known origin in accordance with references (a), (b) and (c).

(d) Ensure bird/animal strikes of unknown origin (wildlife found on or near the runway) are reported, via WESS, to the Naval Safety Center in accordance with reference (b) and that any remains are appropriately packaged and forwarded to the Smithsonian Institution for positive identification in accordance with references (b) and (c).

(e) Ensure all wildlife strike reporting and identification data is provided to the members of the BWG and analyzed by the installation for development of future BASH reduction management strategies.

(f) Ensure aircraft reporting custodians receive assistance in their efforts to report strikes of known origin and forward remains.

(g) Provide local oversight of the USDA Wildlife Biologist, if one is assigned, and ensure regular coordination of efforts and strike identification with the installation NRM occur.

(h) Chair the BWG which will typically be staffed, dependent on local billets, by the Air Field Manager (AFM), PWO, Aviation Safety Officer (ASO), tenant Wing or Squadron ASOs (SSO/WSO), a USDA Wildlife Biologist, and representatives from Air Traffic Control, environmental department, Natural Resources, Public Affairs Office (PAO), and Community Plans and Liaison Officer (CPLO). Ensure installation PWOs, EPDs, and NRMs participate as key members in the BASH Working Group.

(i) At overseas installations where host nation maintains responsibility for BASH, coordinate with host nation to ensure U. S. Navy representation on airfield BASH Working Group (BWG), or its equivalent. To the extent host nation agreements require, provide cost sharing or direct support of the installation BASH program.

(3) Installation PWOs shall:

(a) Participate in the local BWG and in on-site technical reviews of installation BASH programs during periodic Naval Safety Center surveys.

(b) Provide facilities support services and maintenance (such as mowing, vegetation and landscape management, trash removal, facilities and sign maintenance, etc.) that correspond to mitigation procedures appropriate for hazards, in accordance with reference (b) and consistent with reference (d), in the local installation operational environment.

(c) Ensure BASH projects that exceed local approval authority are submitted in compliance with reference (e).

(4) Installation EPDs shall:

(a) Ensure BASH programs are in compliance with all applicable state and federal environmental laws and regulations including but not limited to the National Environmental Policy Act and the Clean Water Act.

(b) Ensure BASH programs are in compliance with all applicable DoD, DoN and U.S. Navy environmental policies, directives, and instructions including but not limited to DoD Instruction 4715.03 Natural Resources Conservation dated March 2011 and Chief of Naval Operations Instruction 5090.

(c) Participate in local BWG and in on-site technical reviews of installation BASH programs during periodic Naval Safety Center surveys.

(5) Installation NRMs shall:

(a) Be the BASH program manager on installations that do not have an Air Operations Officer.

(b) In the absence of an air operations funded USDA wildlife biologist, and in addition to other duties assigned, assist the Air Operations Officer in managing the BASH program.

(c) Ensure BASH programs and plans are in compliance with the INRMP and all applicable state and federal natural resource laws and regulations including but not limited to the Endangered Species Act, Migratory Bird Treaty Act, and Sikes Act.

(d) Coordinate INRMP revisions and updates with air operations.

(e) Coordinate and manage all applicable natural resources consultations and permits necessary to support the BASH program including but not limited to Army Corps of Engineer Section 404 permits, U.S. Fish and Wildlife Service (USFWS) Migratory Bird Depredation Permits, and Endangered Species Act Section 7 consultations.

(f) Ensure BASH program elements consider sustainable land management practices, adaptive management and scientifically sound monitoring techniques.

(g) Support the WHA and ensure data collected is able to be reproduced for annual monitoring and reporting requirements.

(h) Participate in the local BWG and in on-site technical reviews of installation BASH programs during periodic Naval Safety Center surveys. If requested, participate as a co-chair of the BWG.

(i) Coordinate with the air operations funded USDA wildlife biologist, if one is assigned.

(j) Assist with strike identifications.

(6) USDA wildlife biologists, sponsored by Air Operations, shall:

(a) Abide by the roles and responsibilities defined in reference (f).

(b) Participate in the local BWG.

5. Forms and Reports. BASH incidents shall be reported, via WESS, in accordance with procedures contained in references (a) and (c). Tenant aviation units shall send a copy of the WESS BASH report to the installation BASH Program Manager.

27 § 1.1.3

NEED FOR ASSISTANCE The United States Navy, Commander Navy Installations Command (CNIC) has requested that the United States Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services Program (APHIS WS) provide assistance to mitigate potential and realized wildlife hazards at USN air stations in the continental United States.

Pursuant to this agreement between the (APHIS WS) and (CNIC), this Work/Financial Plan defines the basic objectives, plan of action, and budget for the APHIS Wildlife Services program to begin on 01 October 2010 for FY11 and continue for a period not to exceed 5 years. A new work and financial plan will be discussed between the parties prior to the initiation of the each subsequent FY for a period not to exceed 5 years.

The U.S. Department of Agriculture (USDA) is authorized to protect American agriculture and other resources from damage associated with wildlife. The primary authority for Wildlife Services (WS) is the Act of March 2, 1931 (46 Stat. 1468; 7 U.S.C.426-426b) as amended, and the Act of December 22, 1987 (101Stat. 1329-331, 7 U.S.C. 426c). Wildlife Services activities are conducted in cooperation with other Federal, State and local agencies; private organizations and individuals.

The Animal and Plant Health Inspection Service (APHIS) WS program uses an Integrated Wildlife Damage Management (IWDM) approach (sometimes referred to as IPM or "Integrated Pest Management") in which a series of methods may be used or recommended to reduce wildlife damage. IWDM is described in Chapter 1, 1-7 of the Animal Damage Control Program Final Environmental Impact Statement (USDA, 1994). These methods include the alteration of cultural practices as well as habitat and behavioral modification to prevent damage. However, controlling wildlife damage may require that the offending animal(s) are killed or that the populations of the offending species be reduced.

I. OBJECTIVES/GOALS

To establish and continue an Integrated Wildlife Damage Management program (IWDM) incorporating direct assistance and technical recommendations at installations subject to this agreement and associated outlying fields including any private property deemed necessary for the mitigation of damage to naval aircraft operations in order to alleviate wildlife hazards to aircraft as well as for the protection of human health and safety. The secondary objective will be to reduce damage to property and natural resources caused by wildlife at the installations subject to this agreement.

APHIS WS is recognized as the appropriate agency to conduct wildlife hazard management at military installations as well as civilian airports to reduce wildlife hazards. APHIS WS has the expertise in IWDM to provide these services.

Various wildlife species have caused problems at military airports. Wildlife, especially birds within aircraft operating environment, has caused damage to aircraft and continue to pose a safety threat to aircrews. Species directly or indirectly response for damage to aircraft include vultures, hawks, kestrels and a wide assortment of passerines. Mammals such as deer, feral hogs, coyotes and jack rabbits can get onto runways and pose a threat to aircraft and property as well as interrupt take-offs and landings at these facilities.

Additional objectives include:

a. Supplement and enhance the overall Natural Resource Program (NRP) for installations subject to this agreement.

b. To monitor wildlife activity while evaluating the effectiveness of IWDM program efforts.

c. To facilitate the acquisition and renewal of an annual migratory bird depredation/salvage permit

and state depredation permits, as needed.

d. To assist in wildlife-strike reporting and monthly briefings on the status of the BASH program.

e. To assist with the review and revision of the installation BASH Plan to ensure updated, effective techniques are in place to reduce the threat of wildlife strikes to aircraft.

f. To assist in the collection, preparation and shipment of wildlife strike remains to the Smithsonian Institution for positive identification.

g. As directed by installation points of contact, evaluate off-station airfields frequented by military aircraft, where repeated strikes have occurred.

h. Serve as a member of the installation Bird Hazard Working Group.

i. To train USN personnel that may be part of the installation Bird Detection and Dispersal Team (BDDT) in accordance with Weapons Division Qualification/Certification program.

j. To train BDDT on use of active scare techniques, as well as placement of static wildlife deterrent devices.

k. To provide training to local squadrons detailing bird and animal strike hazards.

II. PLAN OF ACTION

APHIS WS will assign one full-time Wildlife Biologist at each installation (and where needed an additional wildlife specialist) subject to this agreement and will provide a vehicle, field supplies and equipment, unless otherwise noted in this work plan. APHIS WS personnel will conduct Wildlife Hazard Assessments and mitigate wildlife hazards at all facilities. The timing and initiation of assessments will be coordinated locally so as to not impact on-going mitigation efforts (e.g., installations where an outlying training field exists but main efforts are focused on the air station). Information collected from this effort will be used to inform installation BASH plans.

IWDM techniques for controlling birds include all appropriate methods such as, but not limited to, cage traps, decoy traps, pole traps, capture nets, pyrotechnics, pellet guns, firearms, **Alpha Chloralose, Avitrol, DRC-1339**, hand capture and various exclusion and harassment techniques. APHIS WS will be responsible for application of bird toxicants and will adhere to all chemical label restrictions. All pesticides will be stored onsite as designated by the installation commanding officer or at offsite APHIS WS facilities.

IWDM techniques for controlling mammals will include all appropriate methods such as, but not limited to, foothold traps, snares, calling/ shooting, shooting, cage traps and hand capture. Only APHIS WS, military security, or other designated personnel will remove captured animals. APHIS WS will be responsible for the application and maintenance of WDM devices. All capture devices will be set to reduce the likelihood of non-target catches.

IWDM activities will be performed on or near runways and primarily confined to the facility boundaries outlined in the work plan with periodic activities conducted offsite where mammals and birds pose a hazard to aircraft operations. WDM will compliment NRP activities and coordinate activities with the Natural Resource Program Manager and Air Operations Officer, as well as with local, state and federal officials.

The installation will provide the APHIS WS employees assigned to this project with an area to dispose of carcasses, eggs and nesting material removed from the facilities outlined in this work. The Smithsonian

Institution shall be contacted about shipment of certain species, collected from the depredated carcasses, to enhance bird strike identification and education.

III. STIPULATIONS AND RESTRICTIONS

a. All operations shall have the joint concurrence of APHIS WS and the Installation Commanding Officer. APHIS WS personnel assigned to this project will remain under the direct supervision of APHIS WS.

b. APHIS WS will provide CNIC quarterly reports on program execution.

c. Control on Private Lands: An agreement for Control of Animal Damage on Private Property (WS Form 12A) will be executed between APHIS WS and the landowner, lessee, or administrator before any APHIS WS work is conducted.

d. Control on Public Lands: An Agreement for Control of Animal Damage on Non-Private Property (WS Form 12C) or an appropriate NEPA document will be executed between APHIS WS and the public land administrator(s)/manager(s) before any APHIS WS work is conducted.

e. APHIS WS will use only APHIS WS employees. All APHIS WS employees will adhere to installation and APHIS WS guidelines/policies while conducting IWDM activities, and have successfully met APHIS firearm safety and other training standards as necessary.

f. The installation will provide APHIS WS employees with the appropriate security identification badges/passes and safety training to allow free movement within the facilities as outlined in the work plan. APHIS WS vehicles operating within the project area will be properly marked and equipped with an amber strobe light or lights provided by the installation. Naval Air Station personnel will provide escort in restricted areas when needed.

g. The installation will provide furnished office space, office/communications equipment and secure storage as well as pyrotechnic magazine(s) from which the work to be conducted under the work plan can be organized and implemented efficiently and safely. Office/communications equipment shall include computers, printers, telephone equipment, associated data lines and two-way radios to facilitate communications between APHIS WS and installation personnel.

h. Local oversight for this program will be the responsibility of the Installation Air Operations Officer. Ordnance / firearms will be approved by the Operations Officer / Airfield Manager and shall be registered with installation security.

i. Any equipment and supplies purchased under the terms of this agreement will remain the property of APHIS WS.

IV. EFFECTIVE DATES

The agreement shall commence on October 01, 2010, and the work plan/ financial plan shall be renewed annually for a term not to exceed five years or until modified or terminated by mutual consent of all parties. Additional installations will be considered as modifications to this agreement during an annual review to be done concurrent with the renewal process. This agreement may be cancelled by either party upon giving at least 90 days written notice to the other party. Fiscal year funding will be provided via MIPR prior to the commencement of the succeeding fiscal year (subject to funds availability).

V. ISSUANCE OF ORDER and AVAILABILITY OF FUNDING

This agreement is subject to CNIC's issuance of an order through a Military Interdepartmental Purchase Request (MIPR), DD Form 448, to the USDA/APHIS-WS. No work may be initiated, or any expenses incurred, until such time as the MIPR is received by USDA/APHIS-WS.

Funding for the continuation of this agreement is issued in anticipation of the enactment of the FY11 DOD Appropriations Act or passage of an FY11 Continuing Resolution Authority (CRA), and is subject to the provisions of whichever act becomes applicable. In the event of a Continuing Resolution Act for Fiscal Year 2011, funds provided herein are releasable only for the amount of time covered by any additional Continuing Resolution passed by Congress.

CNIC's obligation under this agreement is contingent upon the availability of appropriated funds. No legal liability on the part of CNIC, the Navy, or the Department of Defense for any payment may arise until funds are made available to CNIC.

VI. PREVIOUS AGREEMENTS

This agreement supersedes all previous agreements between the following installations (NAS Whidbey Island, Naval Base Coronado, Naval Base Ventura County, NAS Corpus Christi, NAS Fort Worth, NAS Oceana, NAS Kingsville, NAS Meridian, NAS Pensacola, NAS Whiting Field) and the USDA.

VII. PERSONNEL PERFORMANCE REVIEW

In the event, performance deficiencies arise with APHIS WS personnel, a performance review will be conducted by the local APHIS WS state program office. A formal request by the installation commanding officer will be made to the local APHIS WS state program office for deficiency resolution.

VIII. INSTALLATION APHIS WILDLIFE SERVICES BASH BUDGET FY11

The overall budget for this work plan/financial plan is $1,946,420. These funds consist of $1,727,520 in FY11 appropriations directly from CNIC and $218,900 in FY10 appropriations for Naval Base Coronado - North Island and Naval Base Ventura County - Point Mugu. An estimated itemization of expenses is listed below. USDA/APHIS-WS may distribute costs between itemized categories at its discretion, subject to the standards, guidance, and limitations of DOD Financial Management Regulation (FMR), Volume 11A, Chapter 3, Section 306 and Volume 11A, Chapter 1.

Installations included in this agreement with one Biologist

a. NAS Whidbey Island
b. Naval Base Coronado – North Island
c. Naval Base Ventura County – Point Mugu
d. NAS Corpus Christi
e. NAS Fort Worth
f. NAS Kingsville
g. NAS New Orleans (new installation FY11)
h. NAS Meridian
i. NAS Patuxent River (new installation FY11)
j. NAS Key West (new installation FY11)
k. NAS Pensacola

Installations included in this agreement with one Biologist and a Specialist

l. NAS Oceana and NAS Chambers Field
m. NAS Jacksonville (new installation FY11)
n. NAS Whiting Field and NAS Mayport

Personnel (Salary - OPM rest of the U.S. base salary + average 20% locality adjustment + average 36% benefits)	
Wildlife Biologist (GS 9 at 14 installations)	$1,076,208
Wildlife Specialist (GS 7 at 3 installations)	$188,550
Supervisory and miscellaneous personnel (10%)	$126,473
Salaries	**$1,391,231**
Travel and miscellaneous training (e.g., Bird Strike Conference, etc.)	$35,000
Vehicle Usage (Lease, Mileage, Insurance)	$121,550
Equipment, and miscellaneous Supplies	$112,000
Equipment, and miscellaneous Supplies (extra start up costs for, 4 installations FY11)	$16,000
Logistics	**$284,550**
Sub-total	**$1,675,781**
Program Support (16.15%)	**$270,639**
Total FY11	**$1,946,420**
Existing SW Region FY10 funding	**$218,900**
CNIC FY11 Total	**$1,727,520**

The distribution of the budget for this project financial plan may be varied by APHIS WS as necessary to accomplish the purpose of this agreement but may not exceed the TOTAL COST of $1,946,420 for FY11.

Funding is based on 100 percent utilization of both labor and non labor. Disposition of funds available due to program under utilization (e.g., vacant positions or hiring delays) will be jointly discussed between USDA and CNIC with a goal of utilizing funds to maximize delivery of service. FY12 through FY15 budgets will be negotiated by the parties, include a cost increase pursuant with the federally approved inflation rate and POM guidance, and be subject to the limitations in section V above, "Issuance of Order and Availability of Funding."

06/01/2010	05/31/2011

8. NAME AND TITLE OF PRINCIPAL OFFICER *(If #1 is a business)*
CHERRYL F. BARNETT
ENV. PROGRAM MANAGER

9. TYPE OF PERMIT
DEPREDATION AT AIRPORTS

10. LOCATION WHERE AUTHORIZED ACTIVITY MAY BE CONDUCTED
(1) NAVAL AIR STATION OCEANA, VIRGINIA BEACH, VA; (2) NAVAL AUXILIARY LANDING FIELD FENTRESS, CHESAPEAKE, VA; (3) CHAMBERS FIELD, NORFOLK, VA; (4) NAVAL STATION NORFOLK, NORFOLK, VA; (5) NAVAL AMPHIBIOUS BASE LITTLE CREEK, VIRGINIA BEACH, VA; and (6) NAVAL MEDICAL CENTER PORTSMOUTH, PORTSMOUTH, NH **TEL: 757-462-8564 (X-392)**

11. CONDITIONS AND AUTHORIZATIONS:

A. GENERAL CONDITIONS SET OUT IN SUBPART D OF 50 CFR 13, AND SPECIFIC CONDITIONS CONTAINED IN FEDERAL REGULATIONS CITED IN BLOCK #2 ABOVE, ARE HEREBY MADE A PART OF THIS PERMIT. ALL ACTIVITIES AUTHORIZED HEREIN MUST BE CARRIED OUT IN ACCORD WITH AND FOR THE PURPOSES DESCRIBED IN THE APPLICATION SUBMITTED. CONTINUED VALIDITY, OR RENEWAL, OF THIS PERMIT IS SUBJECT TO COMPLETE AND TIMELY COMPLIANCE WITH ALL APPLICABLE CONDITIONS, INCLUDING THE FILING OF ALL REQUIRED INFORMATION AND REPORTS.

B. THE VALIDITY OF THIS PERMIT IS ALSO CONDITIONED UPON STRICT OBSERVANCE OF ALL APPLICABLE FOREIGN, STATE, LOCAL OR OTHER FEDERAL LAW.

C. VALID FOR USE BY PERMITTEE NAMED ABOVE.

THE CONDITIONS BELOW APPLY TO ACTIVIES AT ALL LOCATIONS COMBINED

D. You are authorized to take, temporarily possess, and transport the migratory birds specified below to relieve or prevent injurious situations impacting public safety. All take must be done as part of an integrated wildlife damage management program that emphasizes nonlethal management techniques. You may not use this authority for situations in which migratory birds are merely causing a nuisance.

(1) The following may be lethally taken:

(a) **50 of each: Herring gulls, Mallards and Brant,**
(b) **200 Ring-billed gulls,**
(c) **300 Laughing gulls,**
(d) **5 Great Black-backed gulls, and**
(e) **10 of each: Great Blue herons and Great Egrets**

(2) The following may be **taken within airport boundaries: up to 150 Canada Geese**, using:
(a) shotgun,
(b) legal live-traps or nets, and/or
(c) an immobilizing drug (Alpha Chloralose, FDA Investigational New Animal Drug Registration 6602).
Birds captured under (b) and (c) must be euthanized, and may be transported and donated to a local food bank for charity purposes.

(3) The following active nests (including eggs) may be destroyed: **50 Mallard nests**

☒ ADDITIONAL CONDITIONS AND AUTHORIZATIONS ALSO APPLY

12. REPORTING REQUIREMENTS

ANNUAL REPORT DUE WITH NEXT RENEWAL FORM

Forms can be found at: www.fws.gov/migratorybirds/mbpermits.html

ISSUED BY	TITLE	DATE
	CHIEF, MIGRATORY BIRD PERMIT OFFICE - REGION 5	06/01/2010

State restrictions: Peregrine Falcons and other bird species are listed as Endangered or Threatened by Virginia State law and therefore may not be taken, unless otherwise authorized by the Virginia Department of Game and Inland Fisheries.

E. You are authorized in emergency situations only to take, trap, or relocate any migratory birds, nests and eggs, including species that are not listed in Condition D (except bald eagles, golden eagles, or endangered or threatened species) when the migratory birds, nests, or eggs are posing a direct threat to human safety. A direct threat to human safety is one which involves a threat of serious bodily injury or a risk to human life.

You must report any emergency take activity to your migratory bird permit issuing office, Hadley, Ma, 413-253-8424 (fax), within 72 hours after the emergency take action. Your report must include the species and number of birds taken, method, and a complete description of the circumstances warranting the emergency action.

F. You are authorized to salvage and temporarily possess migratory birds found dead or taken under this permit for (1) disposal, (2) transfer to the U.S. Department of Agriculture, (3) diagnostic purposes, (4) purposes of training airport personnel, (5) donation to a public charity (those suitable for human consumption), or (6) donation to a public scientific or educational institution as defined in 50 CFR 10.12. Any dead bald eagles or golden eagles salvaged must be reported within 48 hours to the National Eagle Repository at (303) 287-2110 and to the migratory bird permit issuing office at 413-253-8643. The Repository will provide directions for shipment of these specimens.

G. You may not salvage and must immediately report to U.S. Fish and Wildlife Service Law Enforcement any migratory birds that appear to have been poisoned, shot, or otherwise injured as the result of criminal activity.

H. You may use the following methods of take: (1) firearms; (2) nets; (3) ONLY USDA Wildlife Services may use registered animal drugs (excluding nicarbazin), pesticides and repellents;
(4) falconry abatement; and (5) legal lethal and live traps (excluding pole traps). Birds caught live may be euthanized or transported and relocated to another site approved by the appropriate State wildlife agency, if required. When using firearms, you may use rifles or air rifles to shoot any bird when you determine that the use of a shotgun is inadequate to resolve the injurious situation. The use of any of the above techniques is at your discretion for each situation.

I. You may temporarily possess and stabilize sick and injured migratory birds and immediately transport them to a federally licensed rehabilitator for care.

J. The following subpermittees are authorized: **Employees of Regional Environmental Group Oceana; employees of the Natural Resources Program, Department of the Navy, Norfolk, VA; and employees of USDA/APHIS/Wildlife Services**

In addition, any other person who is (1) employed by or under contract to you for the activities specified in this permit, or (2) otherwise designated a subpermittee by you in writing, may exercise the authority of this permit.

K. You and any subpermittee(s) must comply with the attached Standard Conditions for Migratory Bird Depredation Permits

For suspected illegal activity, immediately contact USFWS Law Enforcement at: Richmond, VA 804-771-2883

For Canada Geese Egg Addling or Nest Destruction you MUST register each year between January 1 and June 30 at: https://epermits.fws.gov/eRCGR. You must return to website and report your take before October 31 each year.

11 CONDITIONS AND AUTHORIZATIONS

A. GENERAL CONDITIONS SET OUT IN SUBPART D OF 50 CFR 13, AND SPECIFIC CONDITIONS CONTAINED IN FEDERAL REGULATIONS CITED IN BLOCK #2 ABOVE, ARE HEREBY MADE A PART OF THIS PERMIT. ALL ACTIVITIES AUTHORIZED HEREIN MUST BE CARRIED OUT IN ACCORD WITH AND FOR THE PURPOSES DESCRIBED IN THE APPLICATION SUBMITTED. CONTINUED VALIDITY, OR RENEWAL, OF THIS PERMIT IS SUBJECT TO COMPLETE AND TIMELY COMPLIANCE WITH ALL APPLICABLE CONDITIONS, INCLUDING THE FILING OF ALL REQUIRED INFORMATION AND REPORTS.

B. THE VALIDITY OF THIS PERMIT IS ALSO CONDITIONED UPON STRICT OBSERVANCE OF ALL APPLICABLE FOREIGN, STATE, LOCAL, TRIBAL, OR OTHER FEDERAL LAW.

C. VALID FOR USE BY PERMITTEE NAMED ABOVE.

D. You are authorized to use non-lethal scare devices, scare tactics or frightening devices to move or disperse **Bald eagles** endangering human safety due to a high risk of a serious bird strike to landing and departing aircraft. You are authorized to use airhorns, pyrotechnics, and drive vehicles with horns as necessary to scare eagles. Pyrotechnics must not be shot directly at the eagles.

E. You must make a continuous effort to eliminate attractants and other physical properties that may draw eagles to airport property.

F. This permit does not authorize the killing, injury or capture of any eagle or the destruction of any young or nests.

G. This permit does not authorize the disturbance of eagles at active nest sites that contain eggs or young or nests.

H. You must notify the permit issuing office at telephone 413-253-8643 within 48 hours of any injury or death of any eagle during project activities.

I. The following subpermittees are authorized: Naval Air Station Oceana flight safety personnel or environmental staff and *employees of USDA/APHIS/Wildlife Services*. In addition, any other person who is (1) employed by or under contract to you for the activities specified in this permit, or (2) otherwise designated a subpermittee by you in writing, may exercise the authority of this permit.

J. You must submit a report of activities conducted under this permit to the USFWS, Migratory Bird Permit Office, P.O. Box 779, Hadley, MA, 01035, by the due date specified on the face of the permit. The report form, 3-202-11, is available at: http://www.fws.gov/forms/3-202-11.pdf.

K. You must comply with the attached Standard Conditions for Eagle Depredation Permits. **These standard conditions are a continuation of your permit conditions *and must remain with your permit*.**

For suspected illegal activity, immediately contact USFWS Law Enforcement at: Richmond, VA/DC 804-771-2883

☒ ADDITIONAL CONDITIONS AND AUTHORIZATIONS ALSO APPLY

Standard Conditions
Eagle Depredation Permits
50 CFR 22.23

All of the provisions and conditions of the governing regulations at 50 CFR part 13 and 50 CFR part 22.23 are conditions of your permit. Failure to comply with the conditions of your permit could be cause for suspension of the permit. The standard conditions below are a continuation of your permit conditions and must remain with your permit. If you have questions regarding these conditions, refer to the regulations or, if necessary, contact your migratory bird permit issuing office. For copies of the regulations and forms, or to obtain contact information for your issuing office, visit: http://www.fws.gov/migratorybirds/mbpermits.html.

1. Unless otherwise specified on the face of this permit, you may not lethally take any bald eagle or golden eagle under this permit. Eagles may be taken only by the method(s) specified on the face of your permit. [*Note: Explosive Pest Control Devices (EPCDs) are regulated by the Bureau of Alcohol, Tobacco, Firearms, and Explosives (ATF). If you plan to use EPCDs, you require a Federal explosives permit, unless you are exempt under 27 CFR 555.141. Information and contacts may be found at* www.atf.gov/explosives/how-to/become-an-fel.htm.]

2. If you encounter an eagle with a Federal band issued by the U.S. Geological Survey Bird Banding Laboratory, Laurel, MD, report the band number to 1-800-327-BAND (2263) or http://www.reportband.gov.

3. This permit does not authorize take or release of any bald eagle or golden eagle on Federal lands without additional prior written authorization from the applicable Federal agency, or on State lands or other public or private property without prior written permission or permits from the landowner or custodian.

4. Unless otherwise specified on the face of the permit, any bald eagle or golden eagle taken under this permit must be promptly turned over to a U.S. Fish and Wildlife Service (Service) agent or other wildlife law enforcement officer designated on the face of the permit.

5. Any person exercising the authorities of this permit must carry a legible copy of this permit, *including these Standard Conditions*, and display it upon request to any State or Federal officer when exercising its authority.

6. You must maintain records as required in 50 CFR 13.46. All records relating to the permitted activities must be kept at the location indicated in writing by you to the migratory bird permit issuing office.

7. Acceptance of this permit authorizes the Service to inspect any wildlife held, and to audit or copy any permits, books, or records required to be kept by the permit and governing regulations.

8. You may not conduct the activities authorized by this permit if doing so would violate the laws of the applicable State, county, municipal or tribal government or any other applicable law.

(EADP 12/3/2011)

APPENDIX D

Commonwealth of Virginia VDGIF Official Kill Permit for NAS Oceana

PWD

Gramps

COMMONWEALTH of VIRGINIA

L. Preston Bryant, Jr.
Secretary of Natural Resources

Department of Game and Inland Fisheries

Robert W. Duncan
Executive Director

July 8, 2009

Markham K. Rich
Captain, U. S. Navy
Commanding Officer
Naval Air Station Oceana
1750 Tomcat Boulevard
Virginia Beach, VA 23640-2191

Dear Captain Rich,

On behalf of the Department of Game and Inland Fisheries I would like to respond to your request for concurrence with NAS Oceana's proposed deer management plan we have recently received from you. We concur that this plan sufficiently identifies appropriate methodologies for herd reduction, which should meet the NAS Oceana deer management plan identified goals.

I have spoken to our local Conservation Police Officer for Virginia Beach and we have agreed that we can issue a kill permit for the entire 4,909-acre deer management focus area at Oceana. We will not go as far as to request individual names for participants on the kill permit; however, we will request that appropriate descriptions be placed on the permit for participants who will carry out the kill permit (e.g., "Seal team X" or "Natural Resource staff"). We will then leave it up to you to designate who will be allowed to participate, within the descriptions placed on the permit, and when you will conduct kill permit activities.

Regarding calibers of weapons used under the kill permit, I will say that popular rifle calibers commonly used on such deer reduction programs are .223, .22-250, .243, .270, and .308. Although the use of a caliber smaller than .23 is illegal for deer and bear hunting in Virginia, the Code of Virginia differentiates between "to kill" and "to hunt," so .22 caliber centerfire rifles would be allowed on your kill permit. In terms of muzzle energy and velocity, nothing weaker than a .223 and nothing more powerful than a .308 is recommended. Anything beyond these calibers is not necessary for white-tail deer removal given the flat landscape at Oceana and the population density in and around the base.

It is highly advisable that participants who will carry out the kill permit utilize suppressed weapons. Suppressed rifles are often used by USDA and VDGIF staff on deer collections, both for concealing muzzle blast from citizens as well as serving to dampen noise heard by other deer.

This fall, we will replace your base's DMAP (Deer Management Assistance Program) deer management program with a DPOP (Deer Population Reduction Program) permit to extend your

Shoot does Jan-Feb

4010 WEST BROAD STREET, P.O. BOX 11104, RICHMOND, VA 23230-1104

base's recreational hunting season through the month of February, effectively utilizing an extra 2 months of hunting season for antlerless deer only. This program will function much like the previous DMAP program we have used before at NAS Oceana.

We are currently coordinating with your Natural Resources Manager, Michael Wright, with regards to acquiring the aforementioned permits and providing appropriate training for those participants that will be caring out the kill permit.

These measures should go a long way in helping reduce the deer herd density at NAS Oceana.

Please contact me if you or your staff has further questions or concerns.

Sincerely,

§ 29.1-529. Killing of deer or bear damaging fruit trees, crops, livestock, or personal property or creating a hazard to aircraft or motor vehicles.

A. Whenever deer or bear are damaging fruit trees, crops, livestock or personal property utilized for commercial agricultural production in the Commonwealth, the owner or lessee of the lands on which such damage is done shall immediately report the damage to the Director or his designee for investigation. If after investigation the Director or his designee finds that deer or bear are responsible for the damage, he shall authorize in writing the owner, lessee or any other person designated by the Director or his designee to kill such deer or bear when they are found upon the land upon which the damages occurred. However, the Director or his designee shall have the option of authorizing non-lethal control measures rather than authorizing the killing of the bear, provided that such measures occur within a reasonable period of time; and whenever deer cause damage on parcels of land of five acres or less, except when such acreage is used for commercial agricultural production. The Director or his designee shall have discretion as to whether to issue a written authorization to kill the deer. The Director or his designee issuing these authorizations shall specify in writing that only antlerless deer shall be killed, unless the Director or his Designee determines that there is clear and convincing evidence that the damage was done by deer with antlers. Deer or bear killed pursuant to such authorization shall be utilized or disposed of within 24 hours of being killed. Any owner or lessee of land who has been issued a written authorization shall not be issued an authorization in subsequent years unless he can demonstrate to the satisfaction of the Director or his designee that during the period following the prior authorization, the owner or his designee has hunted bear or deer on the land for which he received a previous authorization.

B. Subject to the provisions of subsection A. the Director or his designee may issue a written authorization to kill deer causing damages to residential plants, whether ornamental, noncommercial agricultural, or other types of residential plants. The Director may charge a fee not to exceed actual costs. The holder of this written authorization shall be subject to local ordinances, including those regulating the discharge of firearms.

C. Whenever wildlife is creating a hazard to the operation of any aircraft or to the facilities connected with the operation of aircraft, the person or persons responsible for the safe operation of the aircraft or facilities shall report such fact to the Director or his designee for investigation. If after investigation the Director or his Designee finds that wildlife is creating a hazard, he shall authorize such person or persons or their representative to kill wildlife when the wildlife is found to be creating such a hazard. As used in this subsection, the term "wildlife" shall not include any federally protected species.

D. Whenever deer are creating a hazard to the operation of motor vehicle traffic within the corporate limits of any city, the operator of a motor vehicle may report such fact to the Director or his designee for investigation. If after investigation the Director or his designee finds that deer are creating a hazard within such city, he may authorize responsible persons, or their representatives, to kill the deer when they are found to be creating such a hazard. The carcass of every deer or bear so killed may be awarded to the owner or lessee by the Director or his designee, who shall give such person a certificate to that affect on forms furnished by the Department. Any person awarded a deer or bear under this section may use the carcass as if he had killed the animal during the hunting season for deer or bear.

E. Whenever deer are damaging property in a locality in which deer herd population reduction has been recommended in the current Deer Management Plan adopted by the Board, the owner or lessee of the lands on which such damage is being done may report such damage to the Director or his designee for investigation. If after investigation the Director or his designee finds that deer are responsible for the damages, he may authorize in writing the owner, lessee or any other person designated by the Director or his designee to kill such deer when they are found upon the land upon which the damages occurred. The Director or his designee also may limit such authorization by specifying in writing the number of animals to be killed and the period of time for which the authorization is effective. The carcass of every deer so killed may be awarded to the owner or lessee by the Director or his designee, who shall give such person a certificate to that effect on forms furnished by the Department. Any person awarded a deer under this section may use the carcass as if he had killed the animal during the hunting season for deer. The requirement in subsection A of this section, that an owner or lessee of land demonstrate that during the period following the prior authorization deer or bear have been hunted on his land, shall not apply to any locality that conducts a deer population control program authorized by the Department.

F. The Director or his designee may revoke or refuse to reissue any authorization granted under this section when it has been shown by a preponderance of the evidence that an abuse of the authorization has occurred. Such evidence may include a complaint filed by any person with the Department alleging that an abuse of the written authorization has occurred. Any person aggrieved by the issuance, denial or revocation of a written authorization can appeal the decision to the Department of Game and Inland Fisheries. Any person convicted of violating any provision of the hunting and trapping laws and regulations shall be entitled to receive written authorization to kill deer or bear. However, such person shall not (i) be designated as a shooter nor (ii) carry out the authorized activity for a person who has received such written authorization for a period of at least two years and up to five years following his most recent conviction for violating any provisions of the hunting and trapping laws and regulations. In determining the appropriate length of the restriction, the Director shall take into account the nature and severity of the most recent violation and of any past violations of the hunting and trapping laws and regulations by the applicant. No person shall be designated as a shooter under this section during a period when such person's hunting license or privileges to hunt have been suspended or revoked.

G. The Director or his designee may authorize, subject to the provisions of this section, the killing of deer over bait within the political boundaries of any city or town, or any county with a special late antlerless season, in the Commonwealth when requested by a certified letter from the governing body of such locality.

H. It is unlawful to willfully and intentionally impede any person who is engaged in the lawful killing of a bear or deer pursuant to written authorization issued under this section. Any person convicted of a violation of this subsection is guilty of a Class 3 misdemeanor.

	Red-winged Blackbird	441	2	0
	Common Grackle	84	57	0
	Brown-headed Cowbird	4	2	0
	Totals	**15454**	**61**	**5450**
Grand Totals for the 8 Most Hazardous Guilds at NASO		**28492**	**686**	**18113**

1. Total observations obtained by summing all observations during surveys (day and night) from June 2010-May 2011. Total may include individuals that were present day after day and were recorded on multiple occasions.
2. Total species removed and dispersed obtained by summing all activities conducted by WS personnel from June 2010-May 2011.
3. Deer were not considered to be dispersed from the airfield.

APPENDIX H

Specific Habitat Features Requiring Attention.

NAS Oceana Specific Airfield Habitat Recommendations

1. Airfield Drainage

1.1 – Repair malfunctioning underground drainage structures.

Specific areas on the airfield with poor or improper drainage allowing for extended periods of standing water (Figure 20):

1.2 – Runway 5R approach adjacent to the pavement.

1.3 – Runway 32L inboard of the 9 gear.

1.4 – Between 23L/R approach under run.

1.5 – 32L approach agricultural field.

1.6 – Inboard Bravo and outboard Foxtrot taxiways.

1.7 – Outboard runway 23R under run.

1.8 – Decrease vegetation height of airfield ditches to improve water flow.

2. Vegetation Management

2.1 – Removal of secondary growth adjacent to runways and taxiways. All areas identified by the NR Burn Plan.

2.2 - Increase separation of woody vegetation from runways and taxiways.

Figure 20: Specific areas on the airfield with poor or improper drainage allowing for extended periods of standing water.

Enclosure 2. Wildlife Hazard Assessment for Naval Auxiliary Landing Field Fentress (2012)

This page intentionally left blank.

WILDLIFE HAZARD ASSESSMENT

For

NAVAL AUXILARY LANDING FIELD FENTRESS

October 1, 2011 through September 30, 2012

Prepared by

United States Department of Agriculture

Animal and Plant Health Inspection Service

Wildlife Services

Taylor S. Austin, Wildlife Specialist

February 19, 2013

Project was monitored by Tim Linder, Wildlife Biologist, Virginia Wildlife Services.

Table of Contents

TABLE OF APPENDICES

EXECUTIVE SUMMARY

The United States Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services program (WS) conducted a 12-month wildlife hazard assessment (WHA) to identify wildlife hazards to aviation safety at Naval Auxiliary Landing Field Fentress (NALFF), an outlying airfield associated with Naval Air Station Oceana (NASO), from October 2011 to September 2012. Airfield bird surveys were conducted twice per month. Twenty-four night-time surveys of the airfield were also conducted to observe deer and other mammals' use of this area. Data collected included species abundance, behavior, and habitat use. Small mammal surveys were conducted in the fall of 2011 and spring of 2012 to determine species abundance in four different habitat types. In addition, WS identified and monitored areas outside of the airfield that may attract hazardous wildlife species to NALFF. Bird species observed were grouped into guilds (species that display similar behavioral characteristics) for analysis. Data collected during surveys were analyzed and compared with records from the Navy Safety Center Web Enabled Safety System (WESS) BASH database, control efforts by NALFF and WS personnel, and a wildlife hazard ranking list (Dolbeer and Wright 2009) to identify the species that are most hazardous to aviation safety at NALFF.

Based on information collected during the WHA, 1 mammal group and 7 bird guilds identified at NALFF from October 2011 through September 2012 presented the greatest threats to aviation safety. These group/guilds included deer, raptors (hawks, vultures, eagles), waterfowl (ducks and geese), pigeons/doves, blackbirds/orioles, starlings and swallows. Though blackbirds/orioles were the most abundant guild, deer were the most hazardous due to their large size, strike record, availability of habitat at or near NALFF, and general abundance in the area. There were 6 species within these group/guilds that were observed during the WHA that ranked as an extremely high hazard to aviation safety, and one species that ranked very high.

WS recommends a variety of methods to reduce or eliminate the threat of wildlife strikes from the group and guilds observed during the WHA. Habitat management can include: eliminating or excluding wildlife from areas of standing water; vegetation management in the airfield; reducing or excluding birds from perching/loafing areas; reducing abundance of prey species (such as small rodents) in the airfield; and installation and maintenance of a perimeter fence to prevent mammals such as deer from entering the airfield. WS also recommends harassment methods such as pyrotechnics, sirens, paintballs, and propane cannons to disperse birds from the airfield. Lethal control of hazardous species should be exercised when necessary utilizing firearms or traps. Permits for lethal control of species protected under federal and state laws should be maintained from the U.S. Fish and Wildlife Service and the Virginia Department of Game and Inland Fisheries as appropriate.

Additional recommendations include updating the NASO's/NALFF's Bird/Animal Aircraft Strike Hazard (BASH) Plan, establishment of a formal BASH Working Group (BWG), establish a Bird Detection and Dispersal Team (BDDT), establish formal BASH training and evaluating potential wildlife hazards when planning new construction or land use changes. It is recommended that NALFF continue to monitor wildlife abundance and habitat use in order to provide insight into wildlife use of the airfield and to gauge the effectiveness of control efforts.

1.0 INTRODUCTION

1.1 Purpose and Need for Action

Birds and other wildlife in the vicinity of airports are an increasing threat to aviation safety (Dolbeer et al. 2011). Since 1980, the Navy's national wildlife/aircraft strike database accounted for 440 A (> $1,000,000 in damages), B ($200,000 to < $1,000,000), C ($10,000 to < $200,000) and D (<$10,000) Class-rated incidents that included two fatalities to Naval pilots and over $372 million dollars in damages (Naval Safety Center). Based on the Naval Safety Center analysis and statistics, the average damage cost over the last 31 years is one million dollars per month. It is estimated that wildlife/aircraft strikes cost the U.S. civil aviation industry more than $614 million annually, while worldwide the total cost is over $1.2 billion per year (Keirn et al. 2010). In addition to costly aircraft repairs and down time, wildlife strikes sometimes result in serious injury or death. In January 2009, the wildlife/aircraft strike issue was dramatically illustrated when U.S. Airways Flight 1549 crash landed in New York's Hudson River after ingesting Canada Geese into both engines shortly after takeoff from LaGuardia Airport (Dolbeer 2009). This incident has been referred to in the media as "The Miracle on the Hudson" since all 155 passengers and crew survived despite the aircraft being a total loss. Less than two weeks prior to this incident, eight people were killed and one was seriously injured when a helicopter transporting workers to an offshore site in Louisiana struck a Red-tailed Hawk and crashed into a marsh (Wright 2011).

The Commander, Naval Installations Command (CNIC) established the Navy Bird/Animal Strike Hazard Program Implementing Guidance (CNICINST 3700, Appendix A). This instruction establishes the guidance for all installations that conduct or support air operations to conduct a Wildlife Hazard Assessment (WHA). Although the U.S. Navy is not required to follow the regulations set down by the FAA, the Navy does implement the FAA's guidance and expertise whenever practical.

The Federal Aviation Administration (FAA) is responsible for setting and enforcing the Federal Aviation Regulations (FAR) and policies to enhance public safety at civil airports. To ensure compliance with Code of Federal Regulations (CFR) 14 Part 139.337, the FAA requires certificated airports to conduct a wildlife hazard assessment (WHA), and if necessary, establish a wildlife hazard management plan (WHMP) when any of the following triggering events occur on or near an airport:

(1) An air carrier aircraft experiences multiple wildlife strikes;

(2) An air carrier aircraft experiences substantial damage from striking wildlife. As used in this paragraph, substantial damage means damage or structural failure incurred by an aircraft that adversely affects the structural strength, performance or flight characteristics of the aircraft and that would normally require major repair or replacement of the affected component;

(3) An air carrier aircraft experiences an engine ingestion of wildlife; or

(4) Wildlife of a size, or in numbers, capable of causing an event described above are observed to have access to any airport flight pattern or aircraft movement area.

The WHA must be conducted by a qualified wildlife biologist (see FAA Advisory Circular 150/5200-33B) and should include the following information:

(1) An analysis of the events or circumstances that prompted the assessment;

(2) Identification of the wildlife species observed and their numbers, locations, local movements, and daily and seasonal occurrences;

(3) Identification and location of features on and near the airport that attract wildlife;

(4) A description of wildlife hazards to air carrier operations; and

(5) Recommended actions for reducing identified wildlife hazards to air carrier operations.

Naval Auxiliary Landing Field Fentress

In June 2010, Natural Resources MidAtlantic entered into a cooperative service agreement with the United States Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services Program (hereafter referred to as WS) to initiate bird and deer surveys, evaluate the current Wildlife Damage Management (WDM) program, and provide direct control of hazardous wildlife using the airfield. In August 2010, CNIC entered into a cooperative service agreement with WS to conduct a WHA and to establish and continue an Integrated Wildlife Damage Management program (IWDM) at NALFF. Oversight and direction of the IWDM will fall under direct supervision of the NAS Oceana Air Operations Department. In March of 1999, Geo-Marine, Inc. provided NASO/NALFF with a BASH Plan. This BASH Plan did not include a formal evaluation of airfield specific hazards.

Starting in December of 2011, NALFF underwent complete renovation, remaining closed through October 2012. The taxiway and runway were completely reconstructed, lighting and signs were replaced, and buildings were reconstructed.

1.2 Legal Authority of Wildlife Services

The U.S. Navy, Commander Navy Installations Command (CNIC) and the U.S. Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services program (WS) have entered into a Work/ Financial Plan where WS will provide assistance to mitigate potential and realized wildlife hazards at USN air stations in the continental United States (Appendix B). The Plan establishes WS as the appropriate agency to conduct wildlife hazard management at Navy installations.

The primary statutory authority by which WS operates is the Animal Damage Control Act of March 2, 1931, as amended (7 U.S.C. 426-426c; 46 Stat. 1468). WS has the authority to manage migratory bird damage as specified in the CFR. In addition, the Rural Development, Agriculture and Related Agencies Appropriations Act of 1988 authorizes and directs the Secretary of Agriculture to cooperate with States, individuals, public and private agencies, organizations and institutions in the control of nuisance mammals and birds deemed injurious to the public.

The Plan and legislation authorize WS to conduct initial on-site investigations, biological assessments (short-term studies), WHA, and wildlife management techniques to assist USN air stations.

1.3 Legal Status of Wildlife Species

Most species of wildlife are protected by one or more Federal, State, and/or local laws and regulations. As such, several agencies may be responsible for implementation of these regulations and issuance of specific permits may be required prior to taking action to reduce wildlife threats to aviation safety.

Federal laws passed by Congress to protect wildlife include (but are not limited to) the Migratory Bird Treaty Act (MBTA), Bald and Golden Eagle Protection Act (BGEPA), and the Endangered Species Act (ESA). Federal wildlife laws are generally administered by the U.S. Fish and Wildlife Service (USFWS), which is the lead agency responsible for migratory birds protected under the MBTA, BGEPA, and ESA. The USFWS may issue depredation permits to take or harass migratory birds when those species are causing damage to various resources or threaten human health and safety (Appendix C).

The Commonwealth of Virginia defers to the Federal depredation permit for take of non-game migratory bird species, though a separate permit is required to take mammals and game bird species managed by the Virginia Department of Game and Inland Fisheries (VDGIF). As detailed in § 29.1-529 of the Code of Virginia, airport operators may obtain authorization from VDGIF to take wildlife (that are not federally protected) as necessary to protect aviation safety (Appendix D).

The Commonwealth of Virginia hosts a number of threatened and endangered (T&E) species that are granted protection under Federal and State regulations (Appendix E). Prior to conducting operational control work such as harassment, shooting, trapping, or habitat manipulation, the list of species of concern should be reviewed to ensure compliance with Federal and State regulations.

2.0 OBJECTIVES

The objectives of this WHA were to:

1. Identify wildlife species, numbers, locations, behavior and habitat use in and around the airfield, with particular emphasis on species most hazardous to aviation safety;
2. Identify and locate features on and in the vicinity of the airfield that attract wildlife;

3. Describe wildlife hazards to aviation safety at NALFF;
4. Provide NALFF with management recommendations to reduce or eliminate wildlife hazards to aviation safety and serve as a basis for updating the current BASH Plan.

3.0 DESCRIPTION OF STUDY AREA

Figure 1: Aerial view of NALFF (photo from GoogleEarth, 2010).

NALFF is located within Chesapeake, VA. NALFF has one operational runway (5/23), supporting day and night Field Carrier Landing Practice (FCLP) operations by US Navy and US Marine Corps F/A 18 Hornet, F/A 18 Super Hornet and E-2/C-2 Hawkeye, supporting 42,688 day and 50,132 night aircraft operations in calendar year 2010. The runway was closed in December 2011 for complete reconstruction and became fully operational in October 2012. The airfield also includes 8 Landing Zones (LZ's), primarily supporting H-60 and H-53 helicopters. For calendar year 2010, 496 LZ operations were conducted. The NALFF property incorporates approximately 3,000 acres, comprised of open, mowed grassland (296 acres), agricultural leases (~860 acres), woodlots and areas of secondary growth (~1850 acres). The woodlots are primarily comprised of mixed hardwoods, forested swamps and evergreens. A 7-foot fence with a three strand barbed-wire outrigger surrounds the buildings on base, though there is no perimeter or aircraft operating area (AOA) fence present. NALFF is surrounded by agricultural and residential property. To the North and East of the airfield lies the Intracoastal Waterway, connecting the Atlantic Ocean and James River.

4.0 METHODS

Data collection for the WHA began October 1, 2011 and continued through September 30, 2012.

Bird Surveys

Bird survey procedures were based on the North American Breeding Bird Survey methodology. Surveys were conducted twice per month for 12 months at 11 observation points on the airfield (Figure 2). The beginning observation point for each survey was randomly selected, with 2 repetitions of the survey route per day (1/2 hour after sunrise and 2-3 hours prior to dusk).

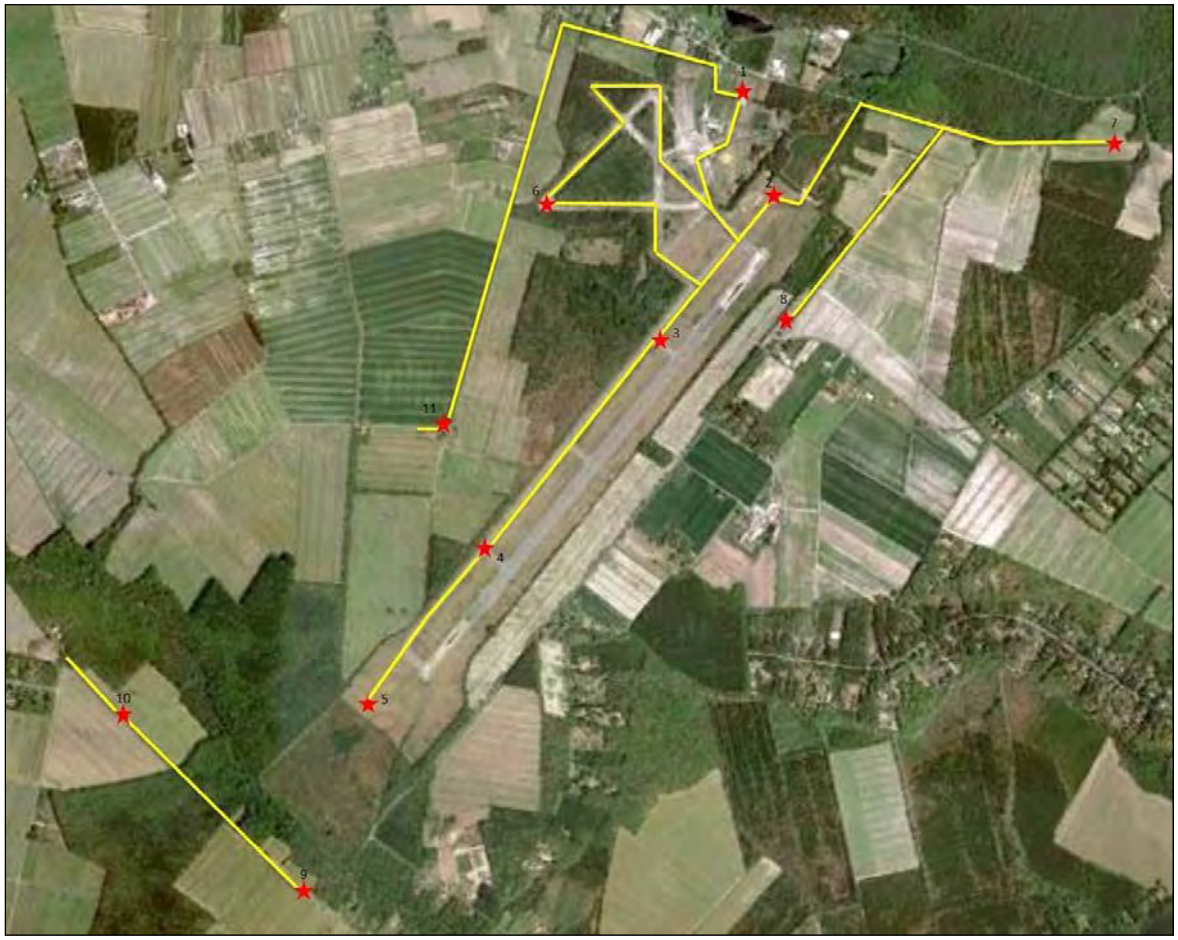

Figure 2: NALFF Bird Observation Points and Survey Route.

Birds were observed from a vehicle for 3 minutes at each point, with approximately ¼ mile distance between points. Between each observation point and at each point, the following data were recorded: weather, temperature, time, location, species, number observed, activity (behavior), habitat type, direction of flight, and comments on any other significant information (e.g., freshly mowed grass, approaching weather, change in flight activity, agricultural crop on fields, etc.). A map overlain with a 1,000-foot grid system was used to record location. Bird species were located without the aid of binoculars, though binoculars were used to identify species that could not be readily identified with the naked eye or in low light conditions. Alpha

species codes from the North American Bird Banding Manual were used to record birds observed during surveys.

Spotlight Surveys

In addition to bird surveys, 24 night-time spotlight surveys were conducted on the airfield over the course of the study period. Beginning 1 hour after sunset, night surveys were conducted by driving an established route approximately 8 miles long around the airfield (Figure 3). Observations were made using spotlights and forward looking infra-red (FLIR) equipment to determine primarily deer and other mammal use of the airfield. Information recorded included: weather, temperature, time, location, species, number observed, activity, and habitat type.

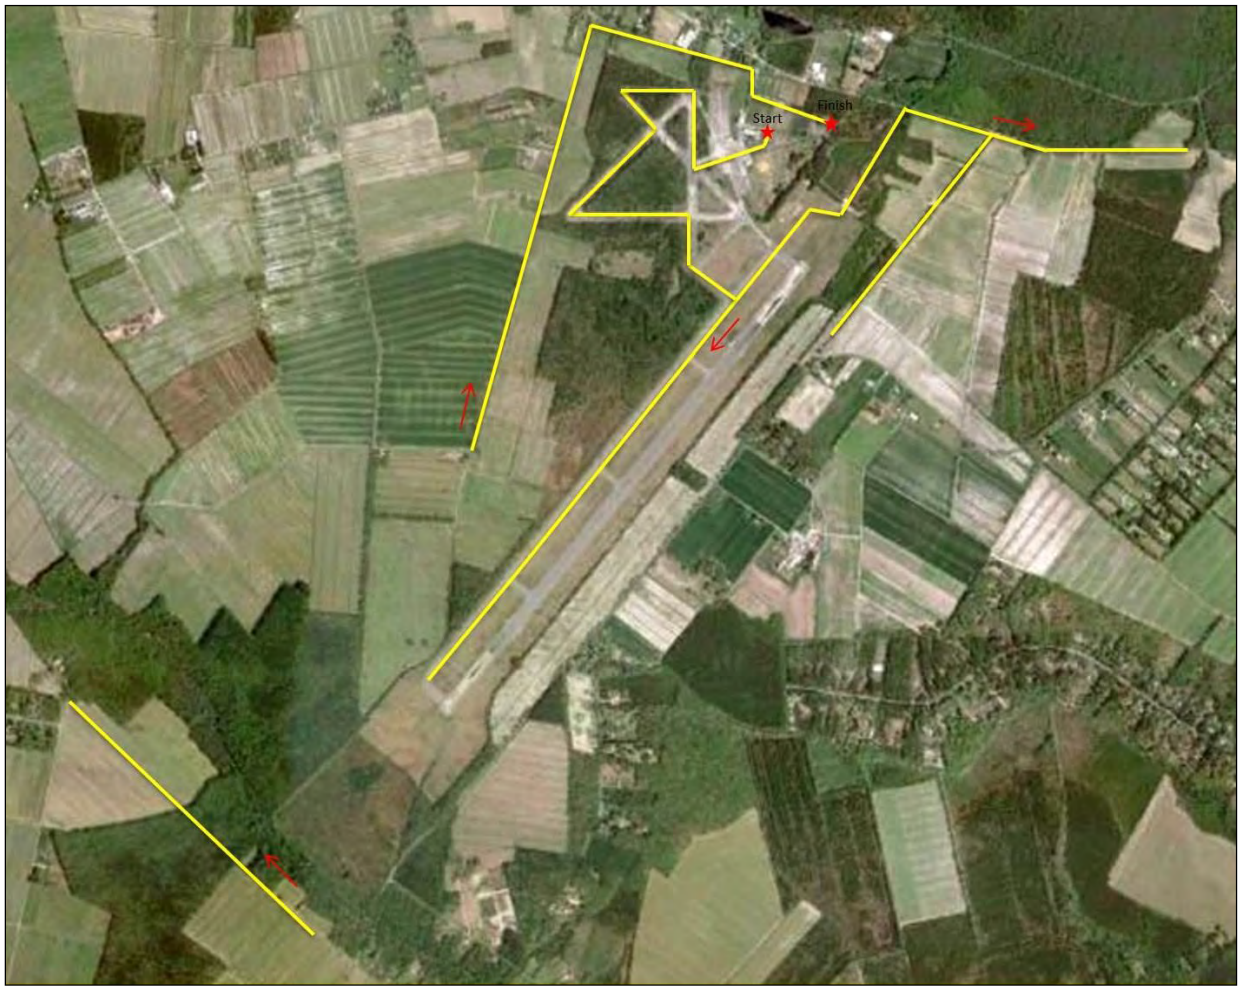

Figure 3: NALFF Spotlight Survey Route.

Small Mammal Surveys

Small mammal surveys were conducted in the fall of 2011 and spring of 2012 to determine abundance and habitat associations for species such as voles and mice inhabiting the airfield. Trapping sessions occurred in the spring and fall seasons over a three night period. Eight plot areas were randomly selected within airfield study areas. Plots consisted of 25 snap-traps in a 5x5 grid spaced ten yards apart within each sample area. Sample areas consisted of 4 different

habitat types; short grass, woodland, secondary growth/shrub, and agricultural field. Each trap was checked for three consecutive days and traps were re-baited, if necessary. Data recorded included: date, weather, study plot, number of species captured, number of sprung traps without capture, number of unsprung traps, and the number of missing traps. Capture-per-unit-effort was calculated for each trap session.

Data Analysis

Data were analyzed with descriptive statistics and frequency distributions per month using the Wildlife Hazard Management Information System (WHMIS) software developed by WS to determine trends in species abundance, habitat use, and behavior. For analysis purposes, common species were categorized into groups or guilds. Species were placed into their respective guilds based on similar behavioral characteristics, not taxonomic relationships (although guilds often parallel taxonomic lines). This approach was selected because behavioral attributes play a significant role in predisposing some species of wildlife to collisions with aircraft. In addition, wildlife control strategies are often selected based on their ability to exploit an animal's specific behavior(s), therefore species that exhibit similar behaviors and life history attributes generally require similar control methods.

5.0 RESULTS

5.1 Wildlife/Aircraft Strikes

According to criteria outlined in FAA Advisory Circular 150/5200-33A, a wildlife strike has occurred when:

1. A pilot reports striking 1 or more birds or other wildlife;
2. Aircraft maintenance personnel report aircraft damage as having been caused by a wildlife strike;
3. Personnel on the ground report seeing an aircraft strike 1 or more birds or other wildlife;
4. Bird or other wildlife remains, whether in whole or in part, are found within 250 feet of a runway centerline, unless another reason for the animal's death is identified; and
5. An animal's presence on the airport had a significant negative effect on a flight (i.e., aborted takeoff, aborted landing, high speed emergency stop, aircraft left pavement area to avoid collision with an animal, etc.).

Wildlife strike data provide valuable information about wildlife hazards on or near airfields, including the species that are struck, seasonal trends, and time of day when strikes occur. Nationwide, the number of reported wildlife strikes has shown a five-fold increase from 1990 through 2009 (Dolbeer et al. 2011). Despite the increase in reported strikes, the number of strikes resulting in damage during this same time period has declined by 21% (Dolbeer et al. 2011). This important fact is attributed to successful wildlife hazard management programs at many FAA certificated airports (Dolbeer et al. 2011).

Data obtained from the Navy Safety Center WESS and Smithsonian Feather ID Lab revealed that there have been 170 reported wildlife strikes at NALFF from 1981 through

2011 (Figure 4). Wildlife strikes peaked in 2010 with 26 reported strikes (Figure 4). The upward trend in wildlife strikes at NALFF may be attributed to factors such as increases in wildlife populations, changing land uses on and adjacent to the airbase, an increase in reporting, as well as more strikes being attributed to NALFF as opposed to NASO in accordance with the number of operations and flight time at that specific airfield. The Navy Safety Center estimates that only 25% of all strikes are reported. Much of the increase may be attributed to better reporting of wildlife strikes due to greater awareness of the wildlife strike issue and greater cooperation within the aviation industry to report strikes (Dolbeer et al. 2011).

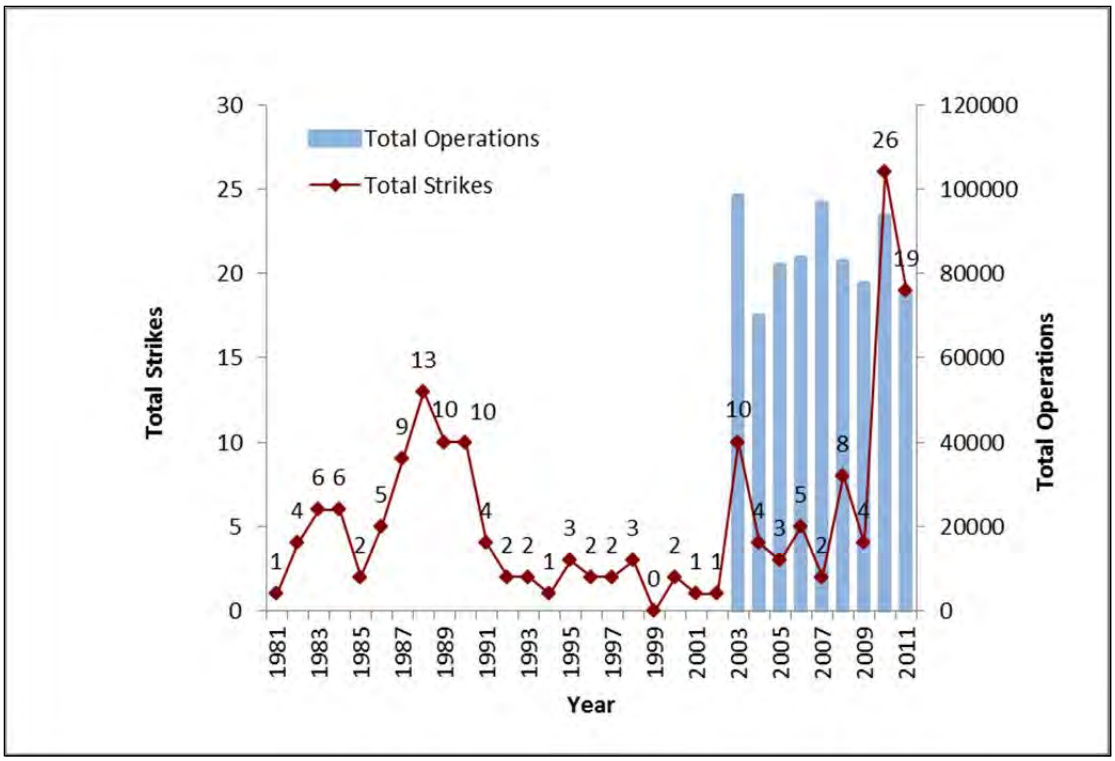

Figure 4: Reported wildlife strikes (1981-2011) and aircraft operations (2003-2011) at NALFF.

Of the 170 reported strikes at NALFF from 1981 through 2011, over 86% were unknown (146), 10% involved birds (17), 2% were white-tailed deer (3), and 2% involved bats (3). Most of the unknown strike reports were bird species (146, or 86%). Of the strikes where the species was identified, Yellow-rumped Warbler (5), Vesper Bats (3) and white-tailed deer (3) were the most frequently reported species. Consistent with national trends (Dolbeer et al. 2011), most strikes at NALFF occur in the late summer through early fall (Figure 5). Strikes during these periods coincide with the dispersal of naïve juveniles and fall migration.

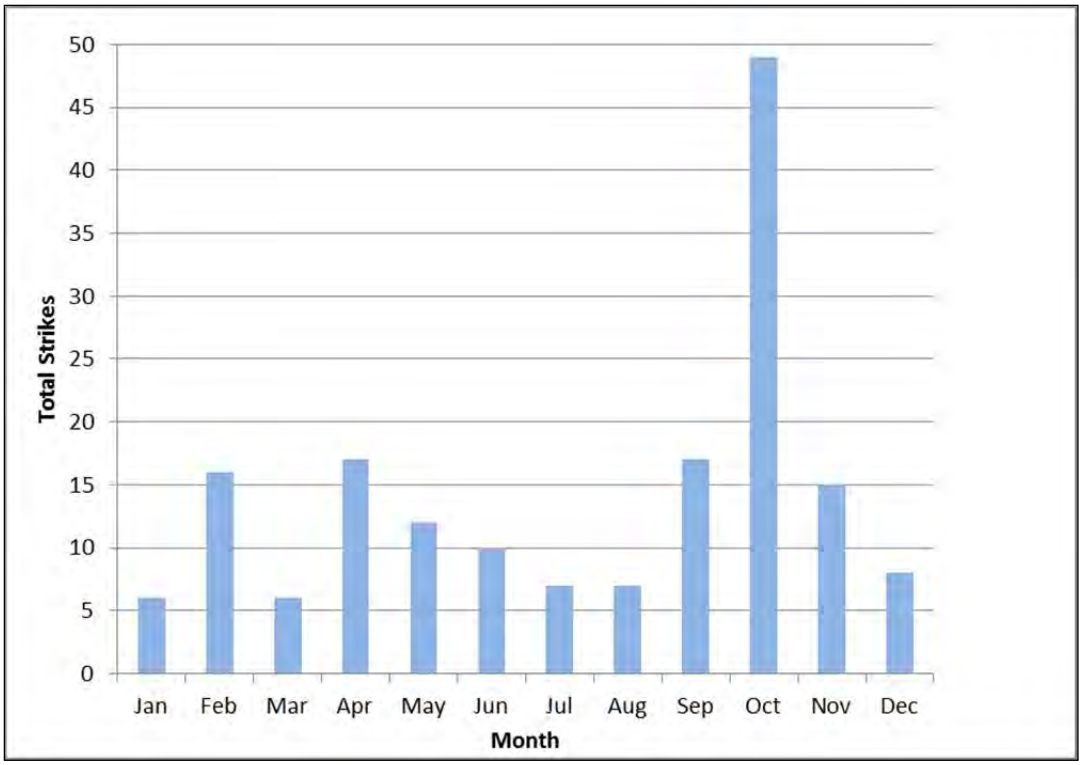

Figure 5: Number of strikes reported by month at NALFF, 1981-2011.

For all strikes reported at NALFF only 3.5% (6 of 170) reported damage >$10,000 (Table 1). All 6 strikes were * Class C Mishaps (1 deer $179,484, 1 Lesser Scaup $125,039 and 4 unknowns which individually totaled $47,842, $34,131, $15,000 and $13,500, respectively).

Table 1: Strikes with reported damage at NALFF, 1981-2011.

Species	N	A	B	C	Total
Unknown	142			4	146
Yellow-rumped Warbler (*Dendroica coronate)*	5				5
White-tailed Deer (*Odocoileus virginianus*)	2			1	3

C = $10,000 to <$200,000

5.2 Wildlife Surveys

Bird Surveys

From October 2011 through September 2012, WS recorded 44,448 bird observations at NALFF during bird surveys. Sixty-seven bird species representing 26 different bird guilds were observed throughout the study year (a complete table listing each guild and species observed throughout the study year may be found in Appendix F). The 6 most abundant guilds were Blackbirds/Orioles (27,252), Swallows (8,325), Starlings (3,801), Thrushes (1,075), Pigeons/Doves (880), Waterfowl (715), and Warblers (595). The 10 most abundant species observed are listed below[1]:

1.) Mixed Blackbirds = 25,918
2.) Tree Swallows (*Tachycineta bicolor*) = 7,703
3.) European Starling (*Sturnus vulgaris*) = 3,801
4.) Red-winged Blackbird (*Agelaius phoeniceus*) = 1,074
5.) American Robin (*Turdus migratorious*) = 1,064
6.) Yellow-rumped Warbler (*Dendroica coronata*) = 578
7.) Rock Pigeon (*Columba liva*) = 551
8.) Snow Goose (*Chen caerulescens*) = 530
9.) Eastern Meadowlark (*Strunella magna*) = 474
10.) Purple Martin (*Progne subis*) = 464

Birds were observed in 13 different habitat types during surveys at NALFF. Birds were most commonly observed utilizing the large, agricultural fields (76%) that makeup the dominant habitat feature around the airfield. Short grass areas were the next most commonly used habitat (8%), followed by structure (6%) such as power lines, towers, fences, buildings and old aircraft where birds were often observed perching (Figure 6). Bird activity was classified into 11 categories: flying passing (flying in a continuous path beyond the survey area); flying locally (short, random flights); feeding (actively

[1] Total abundance is derived by summing all bird observations throughout the study year. Therefore, the total number of bird observations includes individuals that may have been present on the airfield day after day and were recorded on multiple occasions.

consuming food); perched (loafing on a structure); vocalizing; standing; towering (flying in a circular pattern, often while utilizing thermal currents); walking; loafing (staying in one area, not on a structure for a length of time without engaging in another activity); hawking insects (flying erratically while attempting to catch insects) and running. Ninety percent of all observations fell into three activities: flying passing (54%), flying locally (24%) and feeding (12%) for all species during the study year (Figure 7).

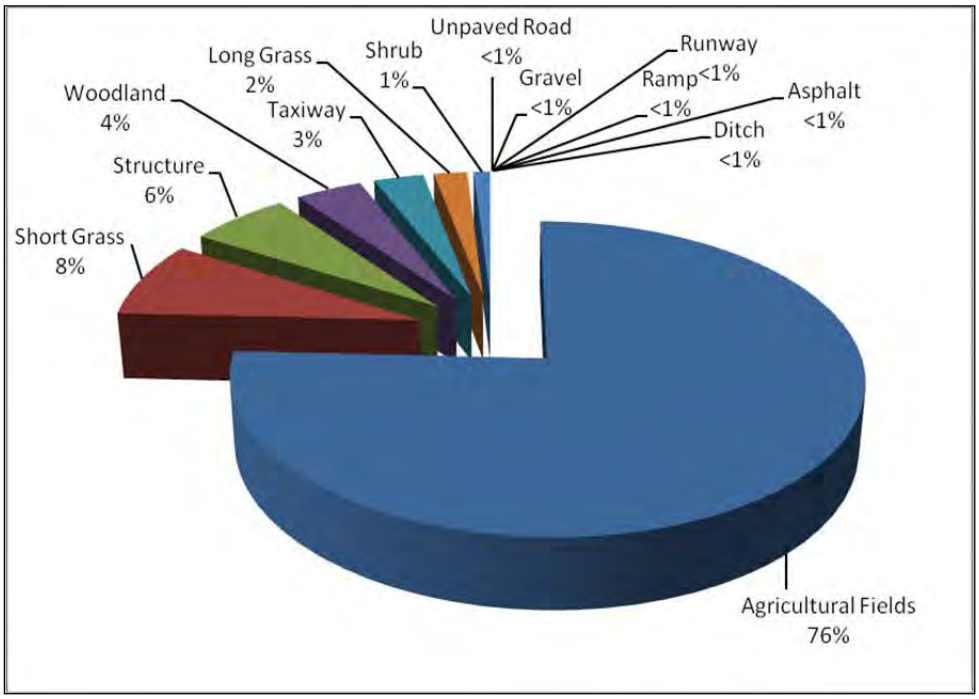

Figure 6: Habitat use by birds at NALFF, October 2011 through September 2012.

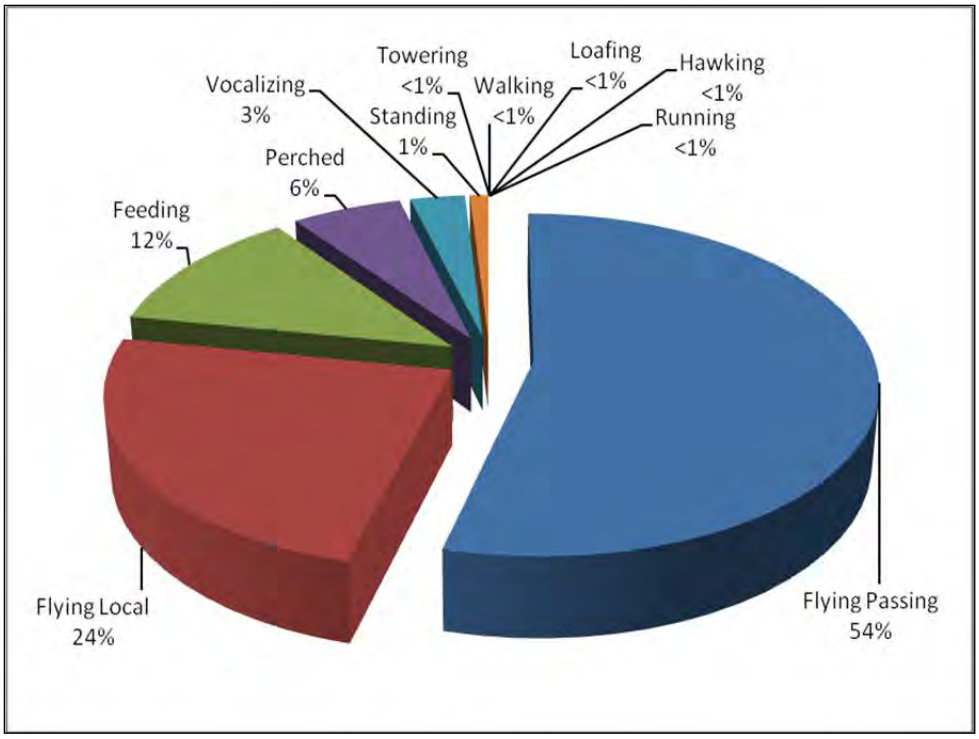

Figure 7: Bird activity at NALFF, October 2011 through September 2012.

Spotlight Surveys

WS completed 24 night spotlight surveys of the NALFF airfield during the study year. Three hundred-forty medium to large-sized mammals were observed during night surveys, with white-tailed deer (*Odocoileus virginianus*) being the most frequently observed species (Table 2). Observations recorded during night surveys may have been multiple observations of the same individuals throughout the survey year. Most mammal species were observed in the agricultural fields or in short grass (Table 2).

Table 2: Mammal species and cover type observed during night surveys at NALFF.

Species	Ag. Fields	Grass, Short	Woodland	Unpaved Road	Grass, Long	Shrub	Ramp/ Ditch	Total
White-tailed Deer	216	51	15	4	6	3	0	**295**
Coyote	3	0	0	0	0	0	0	**3**
Red Fox	1	0	2	0	0	0	1	**4**
Gray Fox	1	3	0	0	0	0	0	**4**
Raccoon	10	0	5	0	0	1	2	**18**
Rabbit	1	0	0	4	0	0	0	**5**
Opossum	7	1	1	2	0	0	0	**11**
Total	**239**	**55**	**23**	**10**	**6**	**4**	**3**	**340**

Small Mammal Surveys

Airfield small mammal surveys were conducted in November 2011 (fall trapping session) and May 2012 (spring trapping session). Species captured during the trapping sessions included: northern short-tailed shrew (*Blarina brevicauda,* 33%), peromyscus species (32%), least shrew (*Cryptotis parva,* 21%), meadow vole (*Microtus pensylvaticus,* 13%) and hispid cotton rat (*Sigmodon hispidus,* 1%). Capture rates were greater during the spring when compared to the fall trapping sessions (Figure 8). Small mammals were most often captured in secondary growth/shrub (49%) and woodland (37%) habitats.

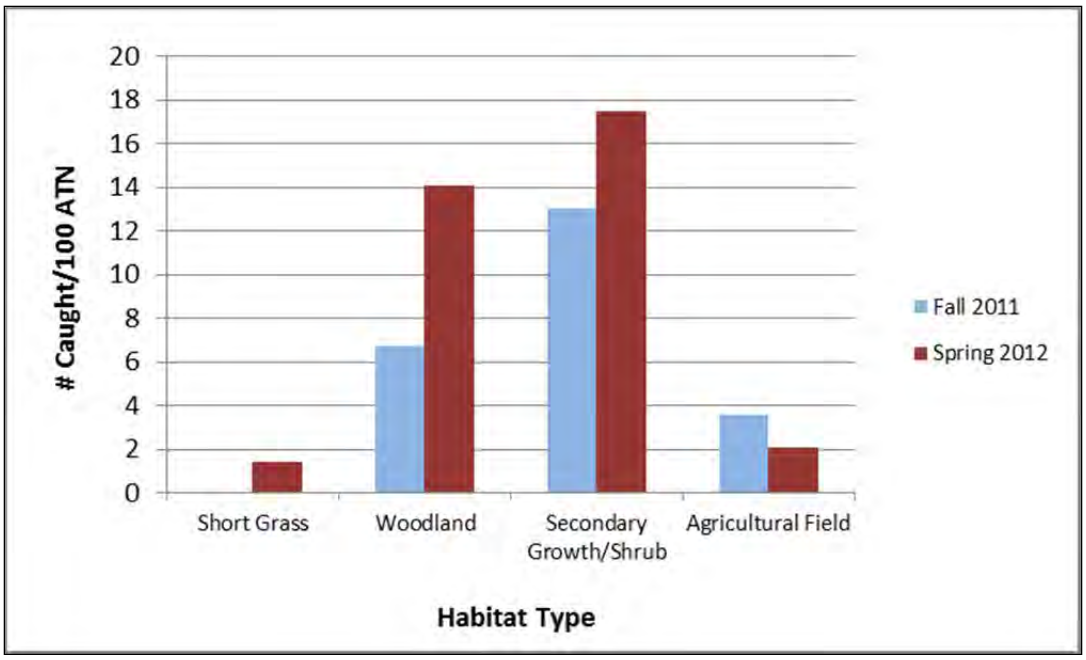

Figure 8: Catch-per-unit-effort of rodents captured for each habitat type at NALFF, fall 2011 and spring 2012.

6.0 DISCUSSION

Although almost all wildlife species commonly found at airports can pose some hazard to aviation safety, not all species are equally hazardous to aviation (Dolbeer and Wright 2009). For example, bird species such as Canada Geese (*Branta canadensis*) are more likely to cause damage if struck by aircraft than species the size of a sparrow. Utilizing the FAA wildlife strike database, Dolbeer and Wright (2009) developed a ranking of 89 wildlife species that pose the greatest threats to aviation safety. The ranking was based on the percentage of strikes causing damage from aircraft from 1990 to 2007, and species were classified into 6 hazard severity levels ranging from extremely high (>40% of strikes causing damage) to very low (<1% of strikes causing damage). Combined with wildlife surveys conducted locally at an airbase, this hazard ranking list can be used to prioritize management actions to species posing the greatest risk to aviation safety (Dolbeer and Wright 2009). As of 2011, DeVault et. al developed a new process for identifying the hazard level ranking of wildlife if struck as opposed to species that caused the most damage. The effects of avian body mass, body density, and group size on relative hazard

scores was assessed, and a ranking was developed (DeVault et al 2011). Even though the process has been updated, the species that pose the greatest risk remained the same.

Though 67 species were observed from 26 different guilds and 7 mammal groups through the study year (Appendix F), for this discussion emphasis will be placed on those guilds/groups that pose the greatest threats to aviation safety at NALFF. For this analysis the following criteria were used:

Primary Consideration:

1. Number of individuals observed during surveys.
2. The individuals' associated hazard ranking according to Dolbeer and Wright.
3. Evaluation of NALF Fentress' strike record.

Additional consideration was given for the following conditions:

- Location and behavior of individuals within each guild/group.
- Amount of control effort required to remove the specific hazard from the airfield (i.e. did the species easily disperse or not).

Using this information, guilds/groups were ranked in order of the threat level that they pose to aviation safety at NALFF from the most severe to the least. This comparison helps to show that the most abundant species on an airfield (Blackbirds/Orioles, in this case) are not necessarily the most hazardous to aviation safety due to abundance alone. The 7 guilds/groups identified as most hazardous to aviation safety at NALFF from October 2011 through September 2012 were deer, Raptors, Waterfowl, Pigeons/Doves, Blackbird/Orioles, Starlings, and Swallows (Table 3). There were six species observed at NALFF that rank as an extremely high hazard to aviation safety, one as very high, and two as a high hazard (Table 3). The following discussion and management recommendations will focus on the 7 most hazardous guilds/groups listed in Table 3. However, most if not all of the management recommendations (habitat modification, dispersal methods, etc.) will be effective for managing the majority of species observed at NALFF.

Table 3: Guild hazard ranking and total observations at NALFF, October 2011 - September 2012.

Guild/Group	Species	Hazard Level and percentage of strikes causing damage in the U.S.[1]	Total Observed at NALFF[2]	Reported Strikes at NALFF, 1981-2010	Strikes at NALFF with reported damage, 1981-2010[3]
Artiodactyls	White-tailed Deer	Extremely High (82%)	295	3	1
Raptors	Turkey Vulture	Extremely High (52%)	126	0	0
	Red-tailed Hawk	High (17%)	49	0	0

	Totals		**8,325**	**0**	**0**

1. Ranking based on strike reports from 1990-2007 (Dolbeer and Wright 2009); "n/a" indicates that species was not individually ranked.
2. Total observations obtained by summing all observations during surveys (day and night) from October 2011-September 2012. Total may include individuals that were present day after day and were recorded on multiple occasions.
3. Reported damage >$10,000.

6.1 Artiodactyls

Artiodactyls (i.e., deer) rank as the most hazardous mammal species to aviation safety in the United States, with 93% of strikes resulting in damage from 1990 through 2009 (Dolbeer et al. 2011). The large size of species such as white-tailed deer and the percentage of strikes involving multiple animals make them especially hazardous to aircraft during the takeoff and landing phases of flight. From 1990 through 2009, Artiodactyls, primarily white-tailed deer, have been involved in 847 damaging strikes in the U.S., resulting in over $36 million in reported costs (Dolbeer et al. 2011).

General Abundance

Deer were the ninth most abundant group observed at NALFF from October 2011 through September 2012 (Appendix F). White-tailed deer (*Odocoileus virginianus*), the only species observed in this group, rank as an extremely high hazard to aviation safety, with 82% of strikes causing damage from 1990 through 2007 on civil airfields (Table 3, Dolbeer and Wright 2009). From 1981 through 2011, three deer were struck by aircraft at NALFF, and account for one out of 6 reported Class C mishaps (WESS Database) on base. A total of 295 deer were observed during 24 night surveys. Night surveys were conducted by driving a predetermined 8 mile route around the airfield, using spotlights and/or FLIR to locate deer. Deer observations ranged from 3 to 25 animals, with an average of 12 seen per survey. A major contributing factor to the variation in deer surveyed was due to the agricultural practices present on NALFF property. Corn fields throughout the summer drastically decreased visibility of deer present in the agricultural fields. Also, a lack of perimeter fence allows white-tailed deer to move in and out of the airfield and surrounding agricultural areas of NALFF at will.

Attractants

The NALFF airfield and surrounding habitats are ideal for deer, including agricultural fields (corn, soybeans), mature timber (especially white oak, a preferred food source), edge/shrub areas, wetlands, and open grassland.

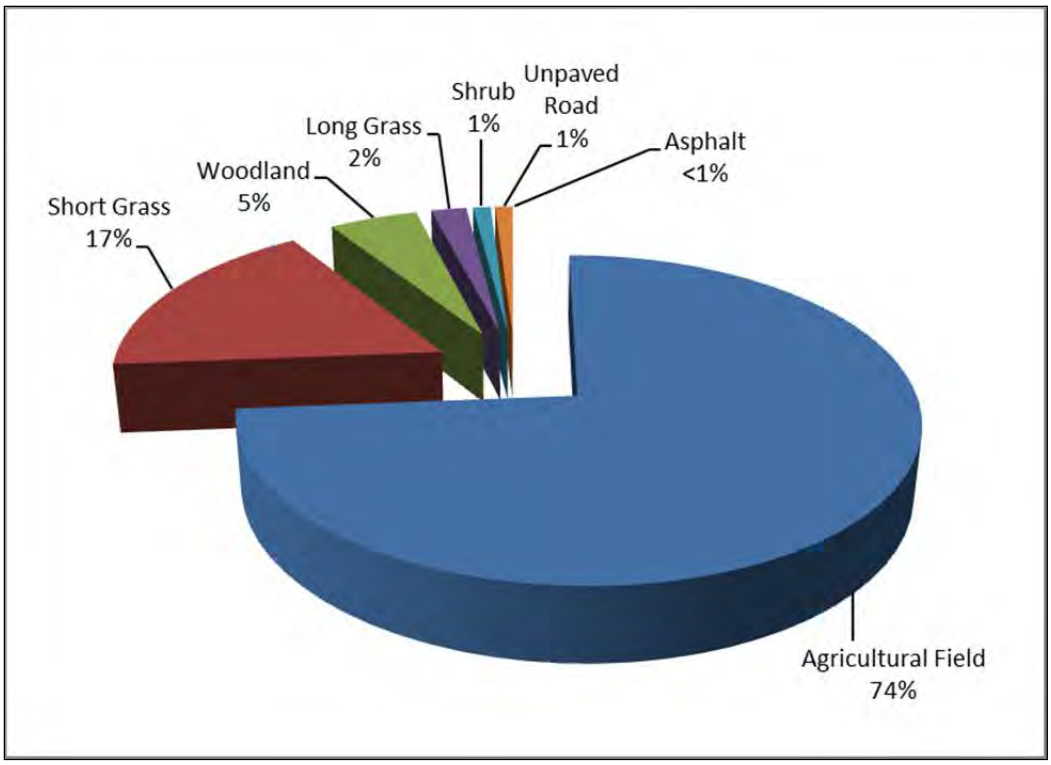

Figure 9: Deer habitat use at NALFF, October 2011 through September 2012.

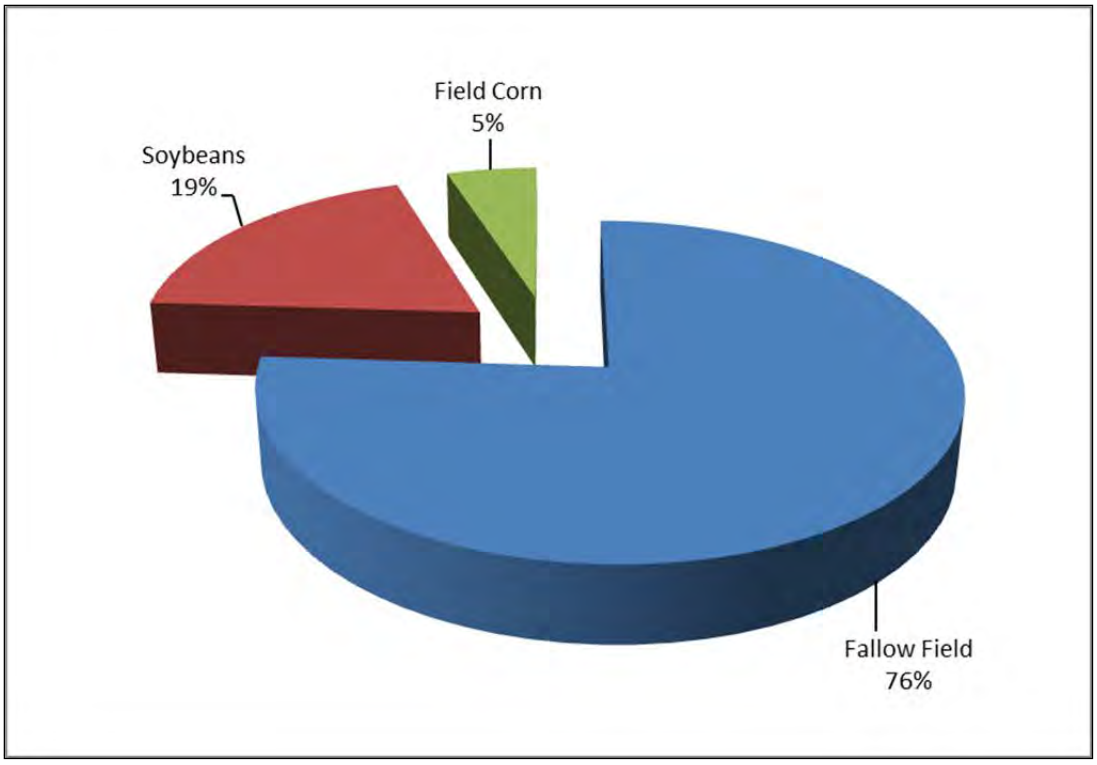

Figure 10: Deer agricultural field use at NALFF, October 2011 - September 2012.

Deer were most often observed utilizing agricultural fields (74%) at NALFF (Figure 9). Fallow fields accounted for 76% of all deer surveyed in agricultural fields (Figure 10). Visibility of fallow fields is much greater in comparison to a field with crops, most likely resulting in a higher percentage of deer observed. Fallow fields are identified as an agricultural field that is not planted with any crops. Agricultural fields were planted in soybeans and corn, both of which were harvested throughout the study period.

NALFF contains areas outside of the airfield on base property that contain ideal habitat for deer including: agricultural fields, mature timber, edge/shrub areas, wetland areas and open grassland. Deer were often seen utilizing these habitat features by WS and base personnel. With no perimeter fence installed, deer are free to roam across the airfield with no restrictions.

Figure 11: White-tailed deer removal focus area at NALFF.

Management Recommendations

The best recommendation for NALFF to decrease and limit deer activity on the airfield involves the installation of a 10-12 foot perimeter fence with three strands of barbed wire attached to outriggers. This is the most effective method for reducing the threat of deer strikes at NALFF. Once installed, it is necessary that the entire fence be inspected frequently for damage and gaps. Habitat management and removal of deer on the airfield and nearby navy property are also major components to reducing the threat. Airfield management is currently converting areas of optimal deer habitat (i.e., secondary growth and security cover) adjacent to the runways to maintained open grassland or agricultural fields. Airfield Operations is currently pursuing a Clear Zone Management Plan that will target travel corridors and continue to reduce optimal deer habitat adjacent to runways and taxiways.

NALFF should continue to actively remove deer from the base. This is currently being accomplished through WS personnel and a base hunting program utilizing VDGIF Deer Population Reduction Program (DPOP). Removal activities should be focused on the area denoted in Figure 11.

WS recommends that any deer present in the airfield be removed immediately via shooting or trapping. While not an immediate threat to aviation safety, deer present on base property can and do gain access to the airfield. Deer on base, off of the airfield also

serve as a source population for deer to annually disperse to the airfield. Lethal removal of deer requires a permit from the VDGIF, and it is recommended that NALFF maintain its permit current.

6.2 Raptors

Raptors (birds of prey) pose serious threats to aviation safety due to the larger size of many species and their flight behaviors. Some raptors may soar high over the airfield (eagles, vultures), others perch on structures in the airfield (Red-tailed Hawks and American Kestrels), while others may fly slowly close to the ground while hunting (harriers). From 1990 through 2009, raptors have been involved in 925 damaging wildlife strikes in the United States, resulting in almost $56 million in damages (Dolbeer et al. 2011).

General Abundance

Although raptors were the ninth most abundant guild observed at NALFF from October 2011 through September 2012 with 212 observations (Appendix F), 3 species observed at NALFF in the raptor guild pose an extremely high risk to aviation safety, making raptors the second most hazardous guild to aviation safety at NALFF (Table 3). As shown in Table 3, Turkey Vultures (*Cathartes aura*) were the most commonly observed species in the raptor guild, followed by Red-tailed Hawk (*Buteo jamaicensis*), American Kestrel, (*Falco sparverius*), Black Vulture (*Coragyps atratus*), Cooper's Hawk (*Accipiter cooperii*), Northern Harrier (*Circus cyaneus*), Bald Eagle (*Haliaeetus leucocephalus*), and Sharp-shinned Hawk (*Accipiter striatus*). Raptors were most often observed flying locally 46% of the time in or over woodland areas and agricultural fields at NALFF (Figure 12).

Attractants

Raptors are attracted to the airfield at NALFF by several features. Raptors find abundant prey (e.g., meadow voles, field mice, Eastern cottontails, etc.) in the grassland, agricultural field and woodland areas of the airfield. There are numerous perching sites such as navigation aids, lights, communication towers, trees, and radar facilities that may be utilized by raptors. Vultures are often observed towering on thermal updrafts high above the airfield. Mowing operations and road-killed animals provide abundant food sources for vultures in the area.

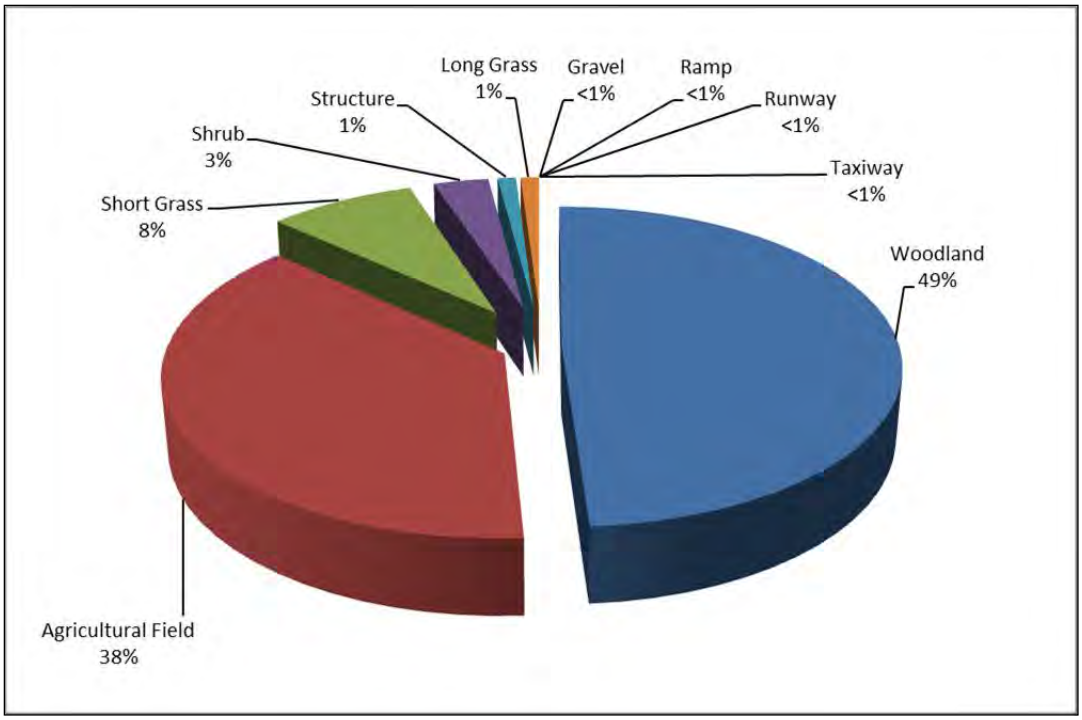

Figure 12: Raptor habitat use at NALFF, October 2011 through September 2012.

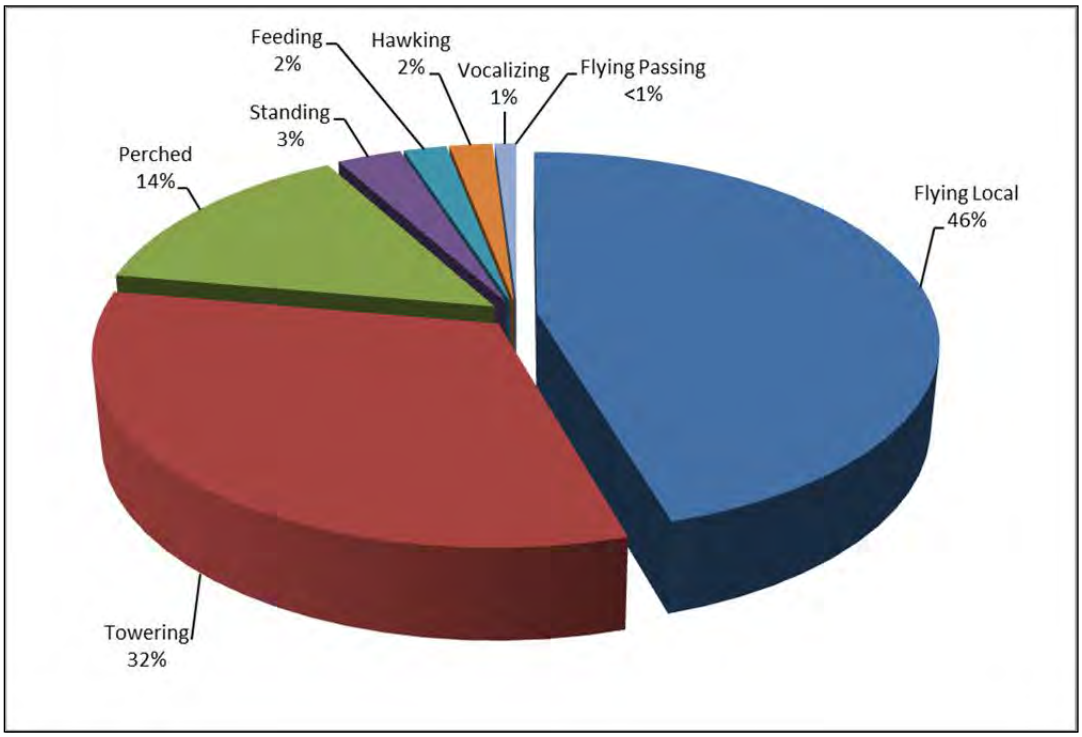

Figure 13: Raptor activity on NALFF, October 2011 through September 2012.

Management Recommendations

To reduce the likelihood of aircraft strikes involving raptors, Blackwell and Wright (2006) suggested that management efforts in the airfield should be directed towards the

availability of food and alteration of habitat used by raptors. The reduction of food sources such as rodents and carrion in the airfield is critical in controlling foraging by Red-tailed Hawks and vultures (Blackwell and Wright 2006). Reducing the number of small mammals in the airfield may be accomplished by a variety of methods, including frequent mowing and/or the use of rodenticides. Any animal carcasses found in or around the airfield should be removed and disposed of promptly to avoid attracting vultures. Mowing practices should remain consistent throughout the summer to prevent vegetation from reaching heights attractive to small rodents, decreasing the amount of scavenging by Turkey Vultures and other birds of prey.

Research has shown that small mammals use unmanaged areas of tall vegetation far more than disturbed areas (Barras and Seamans 2002, Blackwell and Wright 2006, Washburn and Seamans 2007), so frequent mowing can help to reduce small mammal abundance at airports (Barras and Seamans 2002), reducing the availability of food for raptors. When possible, reducing the availability of locations where raptors may perch, roost, loaf, or nest is recommended. As such, NALFF should consider the removal of trees and unused structures in the airfield. For structures that cannot be removed (i.e., signs, lights, towers, etc.), devices that exclude birds or make it difficult for their perching should be considered (such as spider wires, bird spikes, coil wire, etc.).

Raptor species must be harassed from the airfield whenever present using methods such as vehicles, horns, and pyrotechnics. Vultures commonly soar high above the airfield, making them difficult to disperse using 15mm pyrotechnics, given their limited range. Devices with much greater range (such as CAPA rounds or 12-gauge shellcrackers) may be more useful for dispersing vultures. Lethal removal of some raptors may be necessary for persistent individuals, and as such NALFF's depredation permit must be kept current to allow take of raptors. Lethal removal may include methods such as shooting or trapping. Though recently removed from the endangered species list, Bald Eagles are protected under the Bald and Golden Eagle Protection Act and a permit is required to simply harass eagles from the airfield. Eagles are periodically observed around the airfield environment. The intracoastal waterway to the North and East of the airfield is a major attractant for eagles, and falls within the 5 mile radius of the airfield. NALFF has submitted an application for this dispersal permit and it is recommended that the permit be kept current once obtained.

6.3 Waterfowl

Waterfowl can be particularly hazardous to aviation safety due to their larger size and flocking behavior. In particular, Canada Geese have been responsible for some of the more serious wildlife strikes. In addition to the more recent "Miracle on the Hudson" event (see Section 1.1), 24 airmen were killed in 1995 when an Air Force AWACS aircraft crashed at Elmendorf Air Force Base in Alaska after striking a flock of Canada Geese (Wright 2011). From 1990 through 2009, waterfowl have been responsible for the greatest number of damaging strikes in the United States (1,503), resulting in over $144 million in losses (Dolbeer et al. 2011).

General Abundance

Waterfowl were the sixth most abundant guild observed at NALFF from October 2011 through September 2012 (Appendix F). Waterfowl rank as the third most hazardous guild to aviation safety at NALFF (Table 3). Snow Geese (*Chen caerulescens*) are ranked as an extremely high hazard threat to aviation safety (Table 3) and accounted for the majority of waterfowl observed, but only occurred one time in February 2012. Other waterfowl observed at NALFF included Canada Geese (six observations), Tundra Swans (*Cygnus columbianus*) (one observation) and a single Mallard (*Anas platyrhynchos)* making up the rest of the waterfowl guild. Waterfowl observations were not common in terms of number of observations on NALFF property, most likely due to a lack of water, and were seen flying passing above or in the vicinity of the airfield during bird surveys 85% of the time (Figure 14).

Attractants

The Chesapeake/Virginia Beach area is within the Atlantic Flyway and home to a major stopover area for migrating waterfowl in Back Bay National Wildlife Refuge (9,250 acres) to the Southeast of NALFF. Snow Geese and other waterfowl are regularly observed loafing at both of these locations during peak migration. Surveys at NALFF included approximately 530 Snow Geese observed flying in numerous flocks during the migratory period high above the airfield. Canada Geese were observed on several occasions throughout the survey period flying across the airfield or feeding in nearby agricultural fields. There are three golf courses within five miles of NALFF and one (Battlefield Golf Course) within 10,000 feet to the West of NALFF and appears to provide plentiful food and a place for resident geese to molt from May to July (Appendix G and H).

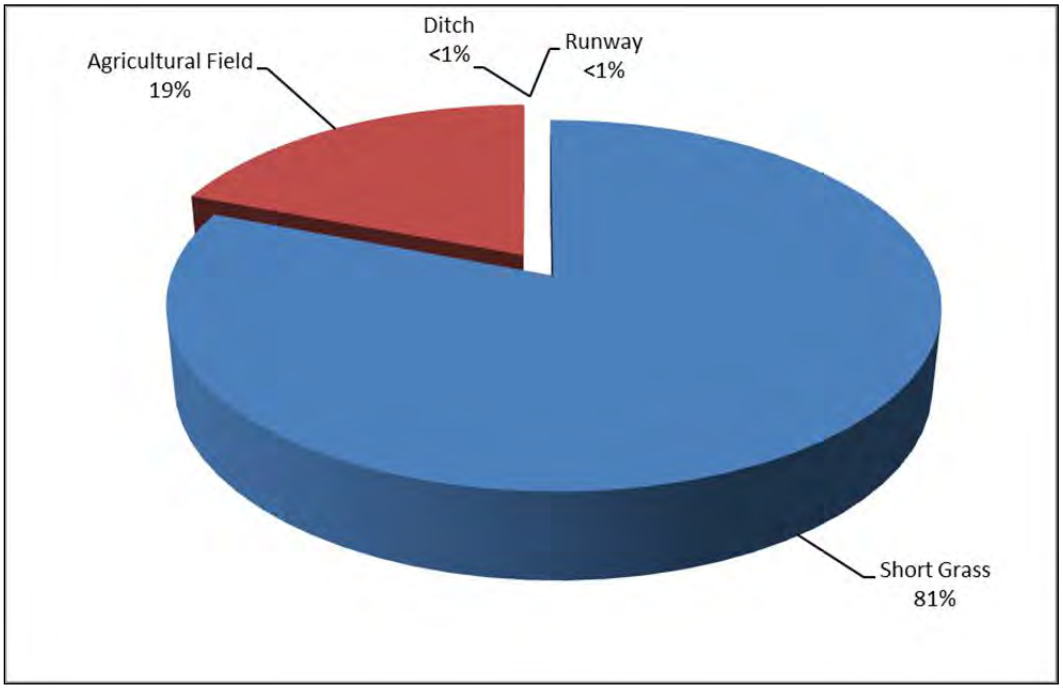

Figure 14: Waterfowl habitat use at NALFF, October 2011 through September 2012.

Management Recommendations

Canada Geese and Snow Geese should be considered the third greatest wildlife species threats to aviation safety at NALFF. Nationally, Canada Geese are ranked as an extremely high hazard to civil aviation safety, as 51% of aircraft strikes with geese resulted in damage from 1990 through 2007 (Dolbeer and Wright 2009). By comparison, Mallards are a very high hazard to aviation safety, but the damaging strike rate for Mallards is about half that of Canada Geese (Dolbeer and Wright 2009). Resident Canada Geese find many areas of suitable habitat around NALFF and have the potential to fly through critical airspace when traveling from roosting/loafing areas to feeding areas, considering the habitat in the area. There are several control methods that should be considered to reduce hazards from Canada Geese (and waterfowl in general).

Agricultural practices within five miles and on NALFF property include the harvest of soybeans, winter wheat, and corn. Winter wheat is a major attractant for waterfowl, in particular Canada Geese, and considerations should be given to eliminate the production of winter wheat on NALFF agricultural fields. Whenever and wherever possible, areas of standing water in the airfield should be eliminated by improving drainage, grading, or filling in low areas.

Recently, a linear ditch was constructed to divert water away from a nearby neighborhood (Appendix G, 3.1). One recommendation would be to suspend a wire grid over any area of water. Wire grids act as both a physical and visual barrier to prevent waterfowl from landing on the water. Installing stone rip-rap along the banks of drainage ditches may help to reduce waterfowl use of these areas, as well. Drainage ditches should be properly maintained, allowing water to effectively drain from the airfield and the ditches. Ditches can be maintained by: removal of vegetation slowing the flow, proper grading, removal of excess sediment, and use of herbicides to limit vegetation growth.

Vegetation management can be an important component for managing Canada Geese. Generally, it is recommended that airfields maintain grass at an intermediate height in the airfield (between 6 and 10 inches). It has long been thought that tall vegetation management in the airfield would deter Canada Geese since they often prefer to forage in areas of short grass, though there is limited scientific data on how Canada Geese react to tall vegetation management and studies have often produced conflicting results (Seamans et al. 2007, Barras and Seamans 2002, Washburn et al. 2007). Though more research is needed, studies suggests that a promising method of reducing Canada Goose usage of airfields is to use an endophyte-infected variety of tall fescue when re-seeding areas of an airport disturbed by tree removal, construction or renovation (Washburn et al. 2007). Research suggests that when consumed by wildlife, tall fescue produces a variety of adverse effects (taste aversion, physical distress) and is generally avoided (Washburn et al. 2007). When re-seeding disturbed areas of the airfield, NALFF should consider planting tall fescue and avoid grass mixtures containing millet so as not to provide a preferred food source for geese and other threatening bird species.

NALFF should adopt and maintain a "zero tolerance" policy towards waterfowl in and adjacent to the airfield, especially Canada Geese. Waterfowl species should be aggressively harassed to disperse them from the area. Harassment methods may include the use of pyrotechnics, horns, sirens, paintballs, and chasing with vehicles. NALFF should maintain its current migratory bird depredation permit from the USFWS to allow lethal take of waterfowl species that do not respond to harassment. Canada Geese may also be taken under the Control Order at Airports and Military Airfields (50 CFR §21.49), which allows take of Canada Geese on base property and other properties within a 3-mile radius of the airfield (with written permission of the landowner) from April 1 to September 15.

In order to further reduce threats from Canada Geese, NALFF should utilize control efforts beyond the airfield to base properties that provide attractive sources of food and cover. This control should be expanded to off base locations within 5 miles of the base (appendices G and H identify locations of wildlife attractants at 10,000 ft and 5 miles). A study conducted in New York by Seamans et al. (2009) indicated that resident Canada Geese remained within 3 miles (5 km) of their primary feeding and loafing areas around JFK International Airport. The WS program in NY reported that goose numbers at Rikers Island decreased annually after removal efforts from 2004 through 2007, and subsequently goose strikes at nearby LaGuardia Airport decreased by 80% (Seamans et al. 2009).

6.4 Pigeons/Doves

Pigeons/Doves were the fourth most hazardous guild identified at NALFF from October 2011 through September 2012 (Table 3). Rock Pigeons and Mourning Doves (*Zenaida macroura*) are the only two species observed at NALFF in this guild.

From October 2011 through September 2012, Pigeons/Doves were the fifth most abundant guild observed at NALFF (Appendix F). Pigeons were usually observed flying locally and passing, whereas Mourning Doves were usually observed feeding or flying locally around agricultural fields and areas of exposed soil. From 1981-2011, the only reported strike occurring at NALFF involving this guild was one Mourning Dove.

Attractants

Pigeons/Doves were observed most frequently in agricultural fields (Figure 15). Pigeons are attracted to the airfield to roost and nest on structures, while Mourning Doves prefer to feed in agricultural fields and bare ground or perch/loaf on fences. Pigeons and Doves were primarily seen flying locally 64% of the time across agricultural fields and around unpaved roads, looking for seeds and grit. Agricultural fields that were recently cultivated, especially corn fields, attracted greater numbers of both pigeons and doves.

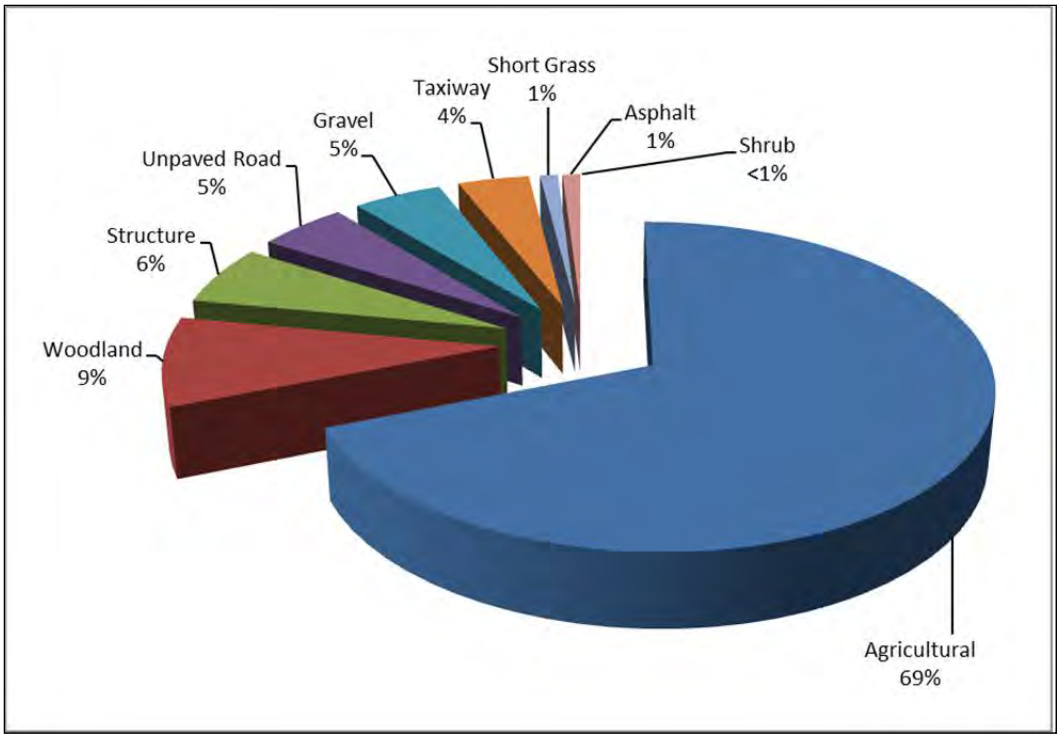

Figure 15: Pigeons/Doves habitat use at NALFF, October 2011 through September 2012.

Management Recommendations

Flocks of birds in this guild may be dispersed by using pyrotechnics, sirens, horns, or recorded distress calls. Persistent species that do not easily disperse should be removed lethally by shooting or trapping. Areas of bare ground that have been graded or re-seeded should be monitored for Mourning Dove activity. Control of pigeons does not require a permit, though control of Mourning Doves does require a Federal Migratory Bird Depredation Permit.

6.5 Blackbirds/Orioles and Starlings

Blackbirds/Orioles and Starlings were the fifth and sixth most hazardous guilds identified at NALFF from October 2011 through September 2012 (Table 3). European Starling and Common Grackle were ranked as moderate whereas Red-winged Blackbird and Brown-headed Cowbirds were assigned a low ranking. While these guilds do not contain any species that rank as an extremely high or very high hazard and control efforts are not often required, discussion is still warranted due to the number of observations during the study year.

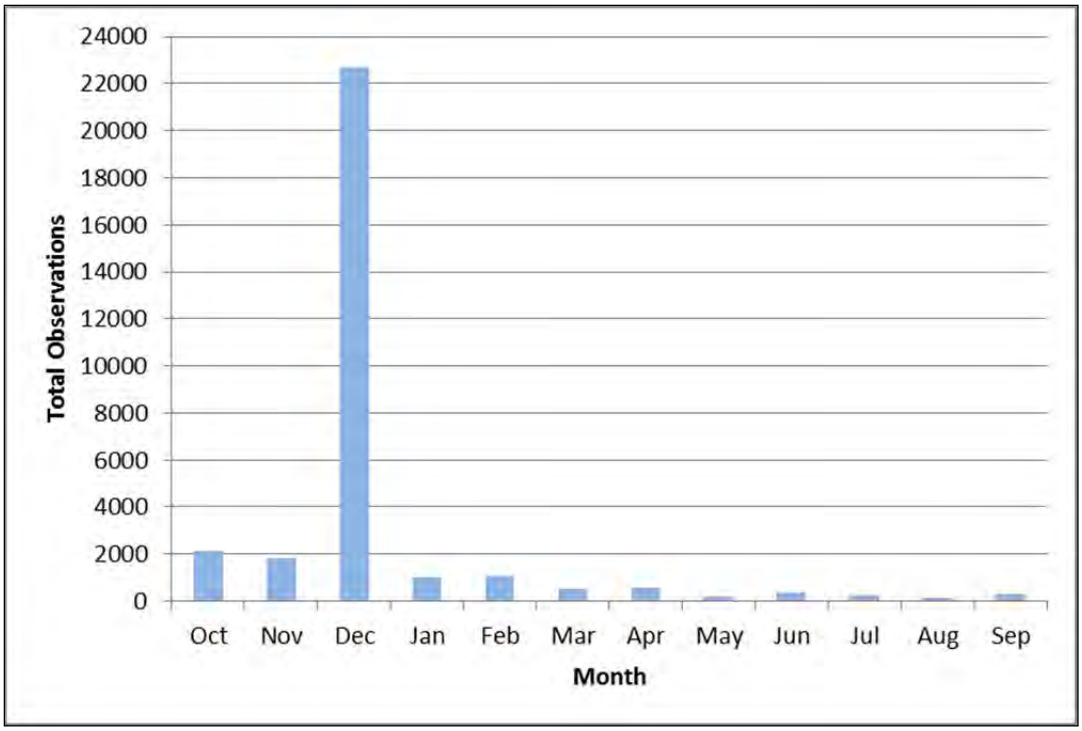

Figure 16: Blackbirds/Orioles and Starling Observations at NALFF, October 2011 through September 2012.

From October 2011 through September 2012, Blackbirds/Orioles were the most abundant guild observed at NALFF and starlings were second among all species (Appendix F). These species were mostly observed flying over short grass and agricultural areas, though European Starlings (*Sturnis vulgaris*) were commonly observed perched on structures throughout the airfield, particularly on the old aircraft and around quarterdeck area. None of these guilds have been involved in reported damaging strikes at NALFF since 1981 (Table 1). The greatest hazard these species pose to aviation is through their tendency to form large dense flocks that stay in almost continuous motion over short grass habitat near active runways. Figure 16 shows the increase in numbers during the winter months when dense flocks are most often observed as compared to the rest of the year. In June of 1996, a Belgian Hercules C-130 flying into Eindhoven Air Force Base in S. Netherlands struck a flock of European starlings, killing 34 people (Kitowski 2011).

Attractants

Species in these guilds are attracted to the airfield to feed in the large areas of open grassland and agricultural fields where they find abundant forage such as seeds, earthworms, and insects (Figure 17,18). There are many perching roosting locations utilized by these guilds such as buildings, static aircraft, communication equipment, fences, and radar facilities.

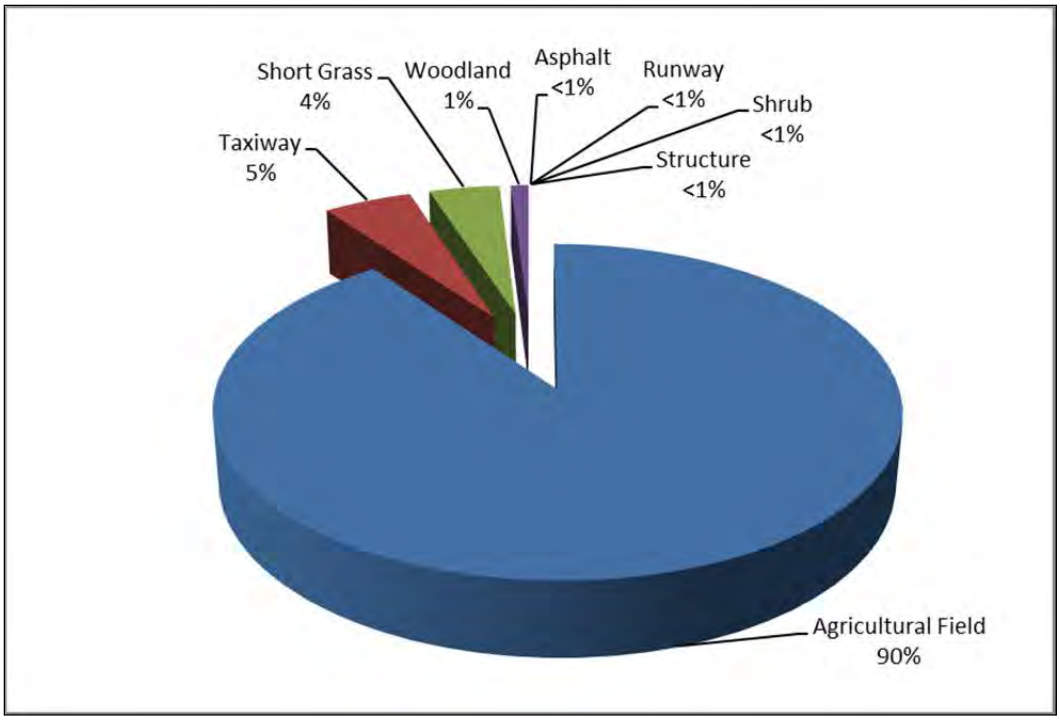

Figure 17: Blackbirds/Orioles habitat use at NALFF, October 2011 through September 2012.

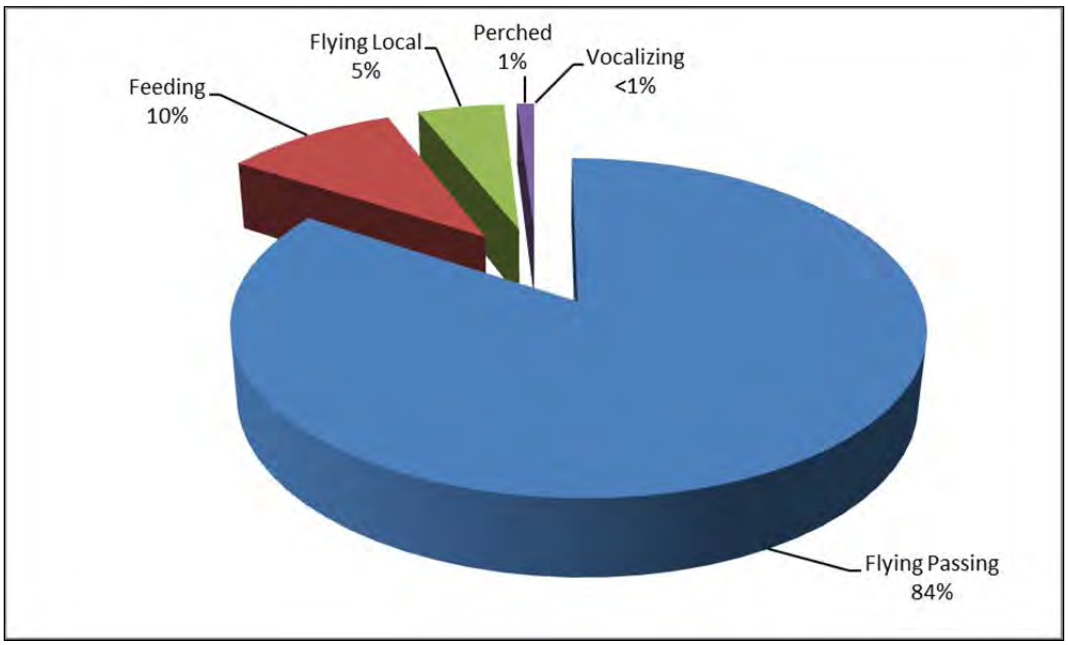

Figure 18: Blackbirds/Orioles activity on NALFF, October 2011 through September 2012.

Management Recommendations

Flocks of birds in these guilds may be dispersed by using pyrotechnics, sirens, horns, or recorded distress calls. Persistent species that do not easily disperse should be removed lethally by shooting and/or trapping under the FWS blackbird depredation order (50 CFR

21.43). Under this order, a permit is not necessary for the removal of blackbirds and crows causing damage or threats to human health and safety; however, it is required that all take and dispersal be reported. European starlings are not included in this order since they are an invasive/nuisance species and therefore do not require a permit. Grass management can be important for controlling these species. Grass that is tall enough to produce a seed head provides a food source and effective cover for species such as starlings and blackbirds, so grass in the airfield should be maintained at the recommended height of 6 to 10 inches (Dolbeer et al. 2011). Nest box traps can be used to manage populations of starlings in and around these areas.

6.6 Swallows

Swallows are listed as the seventh most hazardous guild identified at NALFF from October 2011 through September 2012 (Table 3). Surveys of swallows at NALFF are comprised of Tree Swallows, Barn Swallows and Purple Martins. Although these three species do not rank as high hazards to aviation safety from a perspective of reported damage, discussion is still warranted due to the number of observations during the study period.

From October 2011 through September 2012, swallows were the second most abundant guild observed at NALFF (Appendix F). Tree Swallows comprised over 93% (7,703 individuals) of this guild. This guild poses a high hazard to aviation in their feeding pattern and tendency to fly in large numbers across the airfield in search of food. From 1990- 2007, the FAA received 145 strikes involving tree swallows, 54 involved multiple tree swallows per incident becoming costly to airports in terms of mandatory aircraft damage inspections after swallow strikes, runway closings, and flight delays (Bernhardt et al. 2009).

Attractants

Species in this guild are attracted to NALFF and surrounding areas to feed on insects located over agricultural fields and fruiting trees, specifically bayberry (Figure 19). Surveys of NALFF show that bayberry trees are plentiful around the airfield, providing great foraging for swallows. Swallows were seen most often flying locally while feeding on insects (Figure 20). Swallows' feeding habits on insects on the airfield and agricultural fields occurs at a very low altitude, becoming a concern to landing and departing aircraft. Swallows also find the paved surfaces of the airfield perfect areas for loafing and resting during migrations.

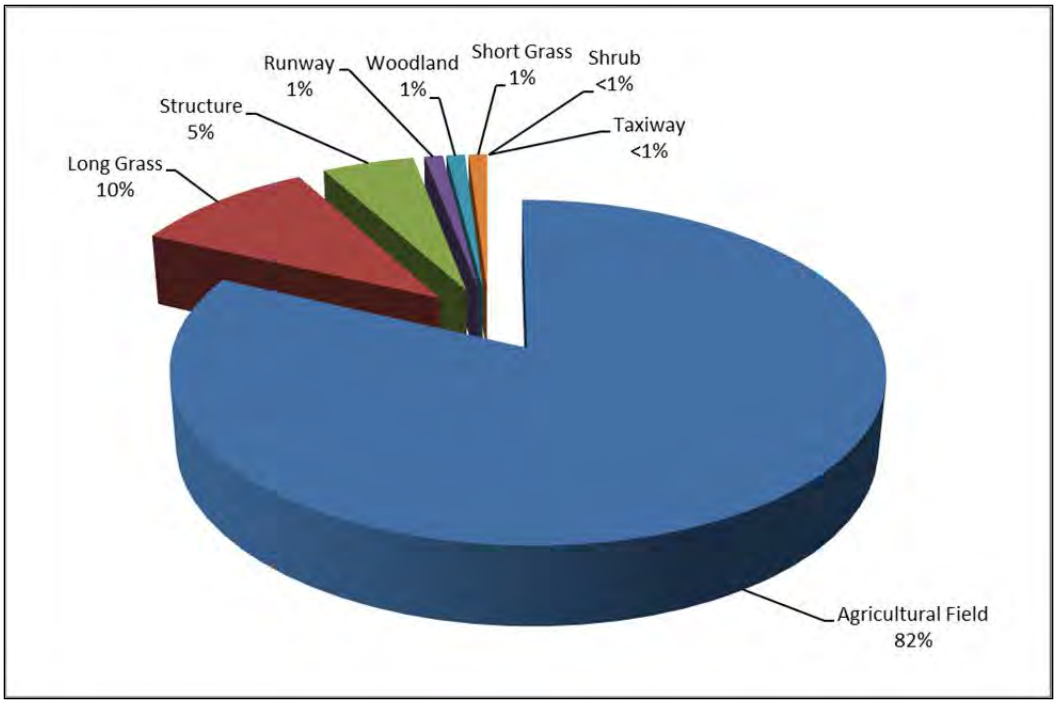

Figure 19: Swallow habitat use at NALFF, October 2011 through September 2012.

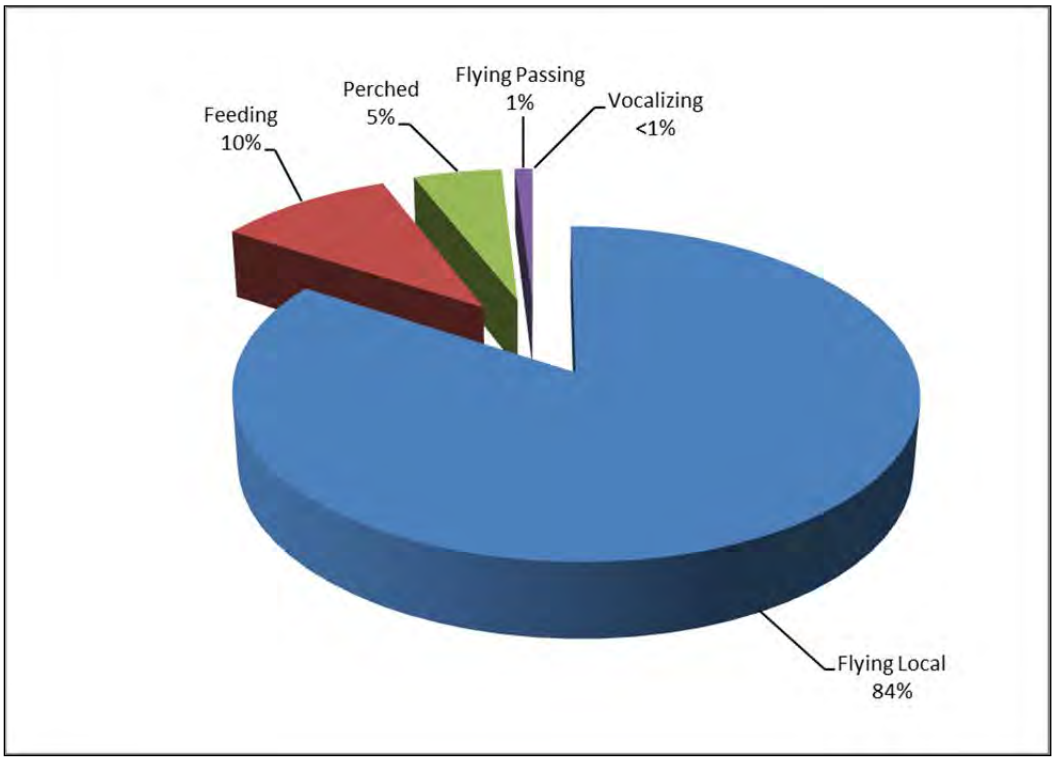

Figure 20: Swallow activity on NALFF, October 2011 through September 2012.

Management Recommendations

Flocks of birds in these guilds may be dispersed by using pyrotechnics, sirens, horns, or recorded distress calls. Persistent species that do not easily disperse may be removed

lethally by shooting. Shrubby habitat to include bayberry trees should be removed and graded or re-seeded to grass and mowed regularly. WS recommends that NALFF notify squadrons of the increased swallow activity at dusk due to fall migration. If possible, limits on flying should be set around dusk to help prevent bird strikes. WS recommends insecticide application to areas of short grass surrounding the airfield to remove insects attractive to swallows. Mowing of the grass tends to attract swallows to the airfield as well. WS recommends that mowing be conducted at night if possible, in order to cut down on stirring up insects during swallow feeding periods.

6.7 Small Mammals

Small mammals are attractive prey to most carnivorous mammals and predatory birds. In particular, small rodents offer a consistent diet for raptors, wading birds and carnivorous mammals. Rodent abundance is dependent upon habitat conditions, predation, dispersal rate, biological disturbance, and/or cyclic population eruptions (Fergus 2003).

Attractants

Figure 21 shows that regularly mowed or disturbed habitat, like short grass, prevents the buildup of dead vegetative (duff) layers that small mammals need for concealment and survival. Rodents are less likely to use or maintain a viable population in habitats without this duff layer due to the high rate of predation and exposure. Undisturbed habitats like secondary growth/shrubs provide excellent cover for small mammals (Table 4). High rodent populations can create an indirect hazard by attracting predators such as coyotes, fox and raptors. While hunting, these predators may create a direct threat to aviation. Rodents can also damage airfield structures due to their gnawing of wire cables which can lead to blackouts of critical airfield lighting and equipment.

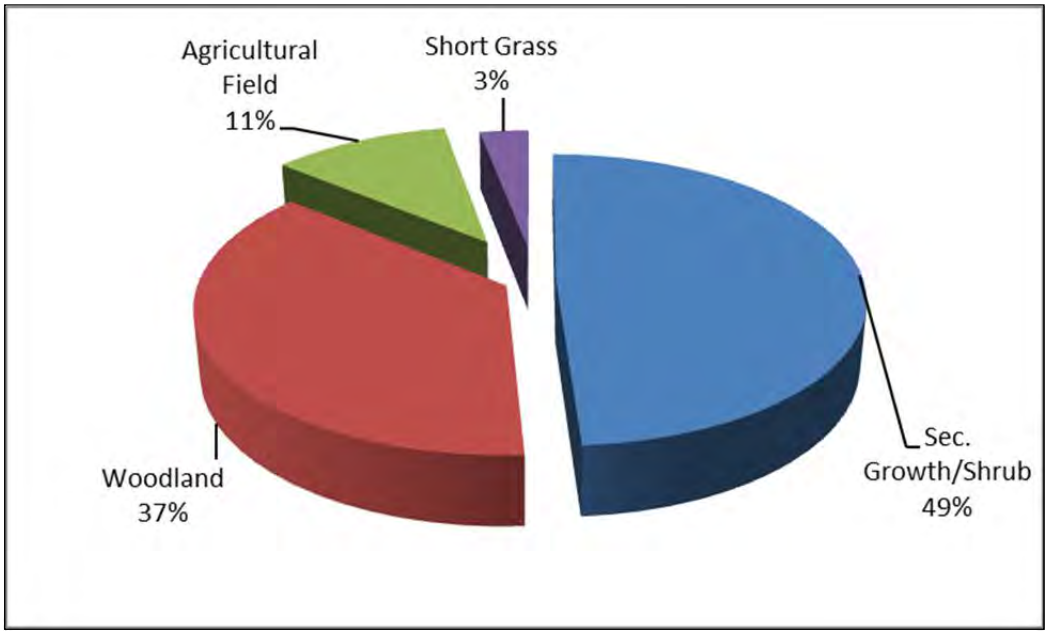

Figure 21: Small Mammal Habitat use at NALFF, fall 2011 and spring 2012.

The number of rodents captured per 100 adjusted trap nights (ATN) was significantly higher in secondary growth/shrub and woodland habitats as opposed to short grass (Table 4). This pattern indicates that the mowing height and frequency currently used at NALFF has been conducive to deterring small mammals from using short grass areas as habitat.

Table 4: Number of Small Mammals Captured per 100 adjusted trap nights (ATN) in fall 2011 and spring 2012 at NALFF.

Habitat Type	Fall Trapping 2011	Spring Trapping 2012	Average
Secondary Growth/Shrub	13	17.5	15.3
Woodland	6.7	14.1	10.4
Agricultural Field	3.6	2.1	2.9
Short Grass	0	1.4	0.7

Management Recommendations

The presence of small mammals in these secondary growth/shrub and woodland areas will be greatly reduced by removal of the trees, shrubs and secondary growth. Air operations management is currently removing areas of concern on the airfield that contain these two habitat types. WS recommends that these areas become part of the mowing and agricultural lease to prevent secondary growth from reoccurring. WS recommends that NALFF apply rodenticides to specific areas according to the Virginia Cooperative Extension pesticide management procedures to remove and deter small mammals from inhabiting areas where carnivores and raptors are actively feeding.

6.8 All Other Guilds

Appendix F lists all guilds and species observed at NALFF during wildlife surveys from October 2011 through September 2012. For all other guilds observed during wildlife surveys, many, if not all of the management recommendations listed for artiodactyls, raptors, waterfowl, pigeons/doves and swallows are applicable in reducing their threats to aviation safety. Many species utilize the same habitats, so management for one species will likely affect another. As discussed earlier in this section, habitat management and exclusion are the two most important components for reducing the threat of wildlife strikes at NALFF. Vegetation and water management will likely have the greatest impact for most bird species, while maintaining a perimeter fence will be most effective in reducing the presence of larger mammal species (such as deer and coyotes).

6.9 Threatened and Endangered Species

Appendix E lists species that are considered endangered, threatened, or of concern in the Commonwealth of Virginia. Species that may be encountered at NALFF include but are not limited to Gull-billed Tern, Roseate Tern, Upland Sandpiper, and Wilson's Plover.

7.0 DIRECT CONTROL

In addition to conducting a wildlife hazard assessment, WS also provided direct control services to NALFF from October 2011 through September 2012. Due to construction on the airfield, white-tailed deer was the only species directly controlled on the airfield during this study period. From October 2011 through September 2012, 295 deer were surveyed and 14 deer were removed.

8.0 RECOMMENDATIONS

In addition to placing an emphasis on the management of the species discussed in Section 6, WS recommends that the following actions are implemented at NALFF to improve wildlife hazard management at NALFF and further reduce the threat of wildlife/aircraft strikes:

Install a Security/Wildlife fence around the perimeter of the entire airfield

The Federal Aviation Administration (FAA) recommends that civil airports in areas of high deer populations install a 10 to 12 foot chain-link fence with outriggers supporting three strands of barbwire projecting away from the airfield. FAA also supports a 4 foot skirt of chain link fence attached at the bottom of the fence and buried at a 45 degree angle away from the airfield to exclude wildlife from digging or slipping under the fence. A properly installed wildlife fence will greatly improve safety and security of the airfield.

Update the NASO/NALFF BASH Plan (WHMP) Based on the WHA

NASO/NALFF's current BASH plan (NASOCEANAINST 3750.2B) was developed in 2008 by Geo-Marine, Inc. and was not based on a WHA. The plan provides the framework for the base to address wildlife hazards. The BASH plan lacks base specific details of wildlife hazards, and who, how and when the programs outlined in the plan will be conducted. It is recommended that the BASH plan be updated to reflect the information contained in this WHA.

Training of Airfield Personnel in Wildlife Hazard Management

FAA regulations require that civilian airport personnel who are responsible for implementing wildlife control measures are properly trained in wildlife hazard management by a qualified wildlife biologist [14 CFR Part 139.303 (c) and (e)]. NALFF currently does not have a formalized training. Formalized training topics should include: USN regulations, policies, and procedures; wildlife strike reporting; wildlife attractants; habitat management; species identification; safety; and hands-on demonstrations of wildlife management tools and techniques. It is recommended that NALFF develop formalized training for airfield personnel that may encounter wildlife on the airfield. The current BASH plan outlines this and WS recommends that NALFF develop and formalize a Bird Detection and Dispersal Team (BDDT).

Establish a Formal BASH Working Group

The current NASO/NALFF BASH Plan and the Navy Bird/Animal Aircraft Strike Hazard Program Implementing Guidance (CNICINST 3700, 7 Jul 2011) both outline the functions and personnel to be involved with the BASH Working Group (BWG). WS recommends that NALFF continue the current BWG in accordance with CNICINST 3700. The functions of this group are important, as it will facilitate greater sharing of information and cooperation among those who have a stake in managing wildlife hazards at NALFF.

Utilize the Wildlife Activity Log and Report Bird Strikes

It is recommended that operations personnel begin using a wildlife activity log to include information such as the number of birds involved, cover type, and location on the airfield. WS recommends that this log also be extended to other personnel such as the crash captain and federal firefighters at NALFF. This information can be useful in determining trends and prioritizing management objectives.

Bird strikes should be reported online via WESS and a sample submitted to the Smithsonian Feather ID Lab for positive identification. Evaluation of the WESS data base has shown a lack in bird strike reporting. WS has seen an increase in strike reporting since June 2010. It is important that aircrews conducting the majority of their operations at NALFF who encounter a bird strike report the strike as occurring at NALFF if the location of the strike is unknown. WS should continue training on proper strike reporting to airfield personnel and squadrons. Damage to aircraft following a strike or wildlife incidence is seldom recorded. WS recommends that NALFF formalizes a process for recording damage. Damage should include aircraft structural damage, aircraft down time, repair, cleaning, and all other costs associated with a wildlife incidence. WS recommends that NALFF work with the Naval Safety Center to ensure that the WESS data base is being updated with species identification and associated damages. This information is usually not available at the time a WESS report is initially submitted.

Maintain Necessary Permits to Control Wildlife

As stated previously, federal and state permits are necessary for lethal take of migratory bird species and state-managed species such as deer and turkeys. In addition, a federal permit is needed before Bald Eagles may be harassed from the airfield. NALFF currently holds a migratory bird depredation permit and a state permit. WS recommends that these permits be maintained to address wildlife species as necessary. WS also recommends NALFF obtain a Bald Eagle Harassment permit from the USFWS. Without this permit, Bald Eagles using the airfield cannot be harassed and may pose a serious aviation threat if left on or near the airfield.

Have Control Supplies on Hand

WS recommends that airfield personnel that are members of the BDDT who are responsible for wildlife hazard management are provided with adequate equipment

needed to disperse wildlife. Such devices may include pyrotechnics and launchers, propane cannons, and vehicles equipped with sirens and lights. WS recommends that BDDT members are properly trained in the safe use and storage of these devices.

Evaluate Potential Wildlife Hazards When Planning New Construction or Land Use Changes

NALFF has recently completed a major expansion and improvement project. It is critical to consider wildlife attractants during these planning phases. Several aspects to consider will be the planting of new vegetation, which may provide food to wildlife in the form of seeds and fruits, and the creation of water bodies or drainage basins that provide fresh water. NALFF airfield manager currently reviews airfield maintenance projects with WS for possible BASH concerns. WS recommends that this process continue and be expanded to all construction and maintenance projects on base property. In addition, adjacent off-site projects within 5 miles of the airfield such as: industrial development, road construction, recreational development, etc. need to be considered as potential wildlife attractant hazards and reviewed for potential wildlife attractants prior to budget commitments. If the review is conducted after the project budget is established, changes to the project are unlikely.

Continue to Monitor Wildlife Populations and Habitat Use Patterns in the Airfield

The intent of this WHA has been to document general occurrence, land-use patterns, and population characteristics of wildlife at NALFF. It must be realized that wildlife abundance and use patterns on airfields are affected by a host of variables that are rarely the same from year-to-year. Hence, conclusions based on wildlife populations and patterns during this study are only meant to be a guide and may or may not be consistent in subsequent years. Survey routes and methods were established in a manner that facilitates continued monitoring. Data from this study will provide a baseline for comparison in subsequent years and NALFF should continue to monitor wildlife populations by conducting monthly surveys using the same stations established in this assessment. While surveys conducted in subsequent years may not be conducted with the same frequency or intensity as this initial hazard assessment, they will still provide general insights into wildlife use patterns over time and enable NALFF to gauge the effectiveness of its control efforts.

Habitat Modification and Exclusion

As discussed in Section 6, habitat modification and exclusion are two of the most important components of a wildlife hazard management plan. NALFF airfield maintenance personnel have been diligent in maintaining grass in the airfield at the recommended height (6 to 10 inches), and WS recommends that regular mowing is continued. Grass management is seasonal, and frequency of mowing may need to be increased during growing season as resources permit. Woody vegetation growing in drainage ditches should be removed and these areas should be maintained to prevent creating thick, shrub-like habitat that can provide cover for small mammals and perching sites for raptors. Most ditches within the airfield have been allowed to become clogged

with woody vegetation. This not only attracts wildlife but prevents water from effectively draining from the airfield compounding the problem with areas of standing water and/or high water table within the airfield. These high water tables increase the chance of field equipment rutting the airfield when driving across or avoiding the area completely during mowing operations.

Because all species are attracted to water, areas of standing water should be eliminated where possible. Low lying areas should be filled or graded to improve drainage. Underground drainage culverts in the airfield should be inspected regularly and be maintained to reduce standing water following heavy rains.

Throughout the year and WHA, observations were made regarding the airfield improvement project that likely resulted in attracting certain species of wildlife to the airfield. Loose gravel and soil remained exposed for several months providing good habitat for Mourning Doves and Killdeer. Prior to re-opening, all areas of loose soil were re-graded, compacted, and seeded to insure stabilization of the soil. These areas must be maintained and re-graded as necessary.

Agricultural Practices

Agricultural crops can attract hazardous wildlife to the airfield. Consideration should be given to the crops that are planted and the agricultural practices used for their production. Cereal grain products should be avoided. These crops attract large numbers of waterfowl for forage. Agricultural practices should minimize tilling. Tilling exposes prey (i.e. insects, worms, etc.) that attract large numbers of gulls. Care should be taken during harvest to ensure excess amounts of grains are not spilled. If spills occur they should be cleaned up or buried.

Evaluation of Off Base Aviation Hazards and Seeking Landowner Cooperation

As discussed in Section 6, wildlife on properties near the airfield may pose serious threats to aviation safety at NALFF. The FAA recommends a separation distance of 5 statute miles between the farthest edge of the airports AOA and hazardous wildlife attractant if the attractant could cause hazardous wildlife movement into or across the approach or departure airspace (FAA AC 150/5200-33B). WS recommends that NALFF continues to identify areas within 5 miles of the airport that may provide roosting and/or foraging areas for birds that utilize the airspace at NALFF, especially Canada Geese. NALFF should approach these landowners to seek cooperation on removing these hazards. WS has identified several potential areas that attract hazardous wildlife within the approach/departure and circling airspace of NALF Fentress. A couple areas noted: water impoundment across Mount Pleasant Rd., agricultural fields (corn, soybeans, winter wheat), Battlefield, Signature at West Neck, Virginia Beach National and Stumpy Lake golf courses (Appendix G and H). Areas identified as potential hazards should be and/or continue to be evaluated for wildlife use and BASH mitigation procedures implemented to reduce hazards.

9.0 SUMMARY

Based on data collected during the WHA, records from the WESS wildlife strike database, and control efforts by WS and NALFF personnel, several species were identified that threaten aviation safety at NALFF. The guilds/group that are of most concern to aviation safety include deer, raptors, waterfowl, pigeons/doves, blackbirds/orioles, starlings, and swallows. Several management strategies may be implemented to reduce wildlife hazards at NALFF, including habitat modification, exclusion, harassment, and lethal removal of hazardous wildlife species. WS recommends that NALFF continues to take an active approach to wildlife hazard management, utilizing the information contained in this WHA to reduce wildlife hazards and provide a safe environment for aircraft operations.

CNIC INSTRUCTION 3700

From: COMMANDER, NAVY INSTALLATIONS COMMAND

Subj: NAVY BIRD/ANIMAL AIRCRAFT STRIKE HAZARD PROGRAM IMPLEMENTING GUIDANCE

Ref: (a) OPNAVINST 3750.6
(b) CNIC BASH Program Manual
(c) FAA Advisory Circular 150/5200-32 a of 22 Dec 04
(d) FAA Advisory Circular 150/5200-33 b of 28 Aug 07
(e) OPNAVINST 11010.20
(f) USDA/CNIC Work/Financial Plan

1. Purpose

a. To establish policy and procedures for implementing the Commander, Navy Installations Command (CNIC) Bird/Animal Aircraft Strike Hazard (BASH) Program.

b. To establish mandatory BASH event reporting and remains collection procedures in accordance with references (a), (b) and (c).

c. To establish BASH program procedures in accordance with reference (b) and consistent with reference (d).

2. Background

a. The Navy's first loss of life due to a bird strike occurred in 1914, coincidentally the same year it obtained its first aircraft. Since 1981, Naval Aviators have reported over 16,550 bird strikes, which resulted in over 440 aircraft mishaps, 250 foreign object damaged (FOD) engines and $372,000,000.00 in damage costs. Additionally, ten aircraft were destroyed along with one fatality. The Naval Safety Center's review of recent Navy BASH incidents found that the lack of an effective installation BASH program was a consistent contributing factor. The BASH program manages risk by addressing specific aviation safety hazards associated with

wildlife near airfields through coordination among all the entities supporting the aviation mission. The BASH program should also strive to effectively minimize secondary consequences of strikes, such as damage to aircraft, environmental cleanup due to aircraft crashes, and impairment of training. Success of the program, therefore, can be measured by the steady reduction and low recurrence rate of actual wildlife-to-aircraft strike events. Such success will be gained by the persistent application of dedicated resources, focused leadership support, execution of time-tested practices and procedures, effective monitoring programs, and institutionalized BASH training across aviation commands.

b. The goals of the guidance contained in this instruction are to increase the reporting and identification of strike events and to reduce BASH incidences at Navy airfields. These goals can be accomplished by reducing the quality and attractiveness of those airfields as habitats for identified problem wildlife, manage wildlife populations to minimize the potential for aircraft strikes, and through coordination with aircraft custodians and shore-based air operations personnel to improve the reporting and communications on both wildlife management and aircraft strikes.

3. Policy

a. CNIC is the Executive Agent, Budget Submitting Office, Program Manager, and Single Process Integrator for executing, monitoring and sustaining the BASH Program at all CNIC installations that conduct or support air operations.

b. This instruction is applicable to all CNIC commands that support fixed and rotary-wing air operations.

c. All Navy flying units that are tenants of CNIC commands shall report bird/wildlife strikes of known origin (e.g., bird remains found on an aircraft, bird remains found on the runway and correlated to a specific aircraft) in accordance with reference (a) and collect/forward remains in accordance with Appendix A-1 of reference (b).

d. All CNIC commands shall report all wildlife strikes in accordance with reference (a) and manage facilities in accordance with reference (b) and consistent with reference (d).

e. BASH manpower and equipment resourcing falls under the Chief Of Naval Operations (OPNAV) Shore Installation Readiness (N46) Base Operating Support (BOS) funding umbrella.

f. CNIC N3, as BASH Program Manager, is final authority for approval and submission to OPNAV N46 for BASH manpower and equipment resourcing requirements across the Navy shore enterprise.

g. Annual updates to those requirements beyond the basic equipment provided in appendix A-2 of reference (b) will be the province of Commanding Officers (CO) at air installations and air operations supporting facilities.

h. BASH incidents shall be reported, via the Web Enabled Safety System (WESS), in accordance with procedures contained in references (a) and (c).

4. Responsibilities

a. CNIC is responsible for execution and oversight of the BASH program.

b. Regional Commanders are responsible for execution and oversight of the BASH program in their regions.

c. COs are responsible for execution and oversight of the BASH program on installations that conduct or support air operations.

d. Air Operations Department Heads are responsible as the BASH program managers on installations that conduct or support air operations.

e. Public Works Officers (PWO) are responsible for ensuring BASH programs are supported by routine facility support services, maintenance, and management.

f. Environmental Program Directors (EPD) are responsible for ensuring BASH programs are compliant with all applicable state and federal environmental laws and regulations, and all applicable Department of Defense (DoD), Department of the Navy (DON) and U.S. Navy environmental policies, directives, and instructions.

g. Natural Resource Managers (NRM) are responsible for ensuring BASH programs are addressed in the installation Integrated Natural Resources Management Plan (INRMP) and compliant with all applicable state and federal natural resource laws and regulations as well as all applicable DoD, DON, and

U.S. Navy environmental policies, directives, and instructions related to natural resources.

5. Action

a. CNIC Headquarters shall:

(1) Assign N3 is the BASH program manager.

(2) Assign Air Operations Program Director (N32) as the executing agent for the CNIC BASH Program and will serve as principal point of contact to all agencies, internal or external, on matters involving the BASH Program. CNIC N32 shall:

(a) Resource CNIC air facilities to the recommended minimum equipment standards established in Appendix A-2 of reference (b).

(b) Centrally fund the United States Department of Agriculture (USDA) Animal and Plant Health Inspection Service (APHIS) Wildlife Services (WS) for biologists assigned to air operations departments to perform Integrated Wildlife Damage Management (IWDM) and monitoring efforts in support of the installation BASH plan.

(c) Manage BASH resource execution.

(d) Chair an annual DON BASH Working Group among major aviation stakeholders typically attended by representatives from fleet type commanders, Naval Safety Center, OPNAV Shore Readiness (N46), OPNAV Energy and Environmental Readiness (N45), Naval Facilities Engineering Command (NAVFAC), regional and installation air operations and natural resources personnel.

(e) Compile regional inputs and additional requirements inputs from air operations stakeholders at the annual BASH Working Group prior to final Program Objective Memoranda (POM) requirements submissions.

(f) Review BASH procedures, and formulate and submit budgetary planning documents to OPNAV N46 per the annual POM schedule.

(g) Conduct a formal review of this instruction every year.

(3) CNIC N4 shall:

(a) Ensure adequately trained NRMs, professional biologists, and biological technicians are available to support preparation and implementation of installation BASH plans.

(b) Ensure BASH programs are addressed in and compliant with installation INRMPs.

b. CNIC Regions shall:

(1) Regional Commanders shall charge the Regional Operations Officer (N3) with responsibility for execution oversight of BASH at the installations. In Regions with an Air Operations Program, the Operations Officer will typically appoint the Air Operations Program Director with responsibility for BASH management oversight.

(2) Regional Air Operations Program Directors shall:

(a) Support COs in establishment and reporting of BASH budget requirements for the annual POM submission cycle.

(b) Manage BASH financial execution.

(c) Monitor installation BASH program viability and BASH incident reporting.

(d) Ensure training for BASH personnel at the installations is in place and standardized.

(3) Regional Engineer Environmental Program Directors (N4) shall ensure that adequately trained NRMs, professional biologists, and biological technicians are available to support Air Department staffs in preparation and implementation of installation BASH plans.

c. CNIC Installations shall:

(1) COs of installations that conduct or support air operations shall:

(a) Issue a BASH plan and maintain its currency based on normal command review guidelines and interim changes to this instruction. The BASH plan shall, at a minimum, address the following:

1. Establishment of a BASH Working Group (BWG) to coordinate BASH issues and requirements across departments and tenants.

2. Identify bird/animal hazards to aviation in the local geographic environment. Hazards shall be identified by regular monitoring of wildlife and if necessary a Wildlife Hazard Assessment (WHA).

3. Establish BASH mitigation procedures (active and passive) relative to the identified hazards in accordance with reference (b) and consistent with reference (d).

4. Develop methods to monitor the effectiveness of the installation IWDM and associated BASH program elements to ensure changes are made as necessary. Data shall be collected and compared from one year to the next in order to document program effectiveness over time.

5. Determine how real time BASH information is made available to aviators as well as potential changes to flying operations based on current operating conditions.

6. Establish procedures for a rapid response capability to deal with emergent BASH issues that threaten daily operations.

7. Ensure compliance with all applicable state and federal environmental and natural resources laws and and regulations, and all applicable DoD, DoN and U.S. Navy environmental policies, directives, and instructions.

8. Address submittal of regular updates to the BWG for review. These reports shall detail methodology and results of all work completed as well as appropriate BASH management recommendations.

9. Training requirements for installation personnel involved with air operations to promote knowledge of BASH issues and to institutionalize standardized procedures for reporting incidents and collecting/forwarding remains.

10. Establish requirements for an annual BASH program self-assessment process that, at a minimum, incorporates appendix A-3 of reference (b).

(b) Institutionalize these procedures by ensuring training on reporting procedures is provided to all divisions and offices directly exposed to the execution of air operations.

(c) Ensure installation personnel are responsible for reporting bird/wildlife strikes of unknown origin (e.g., bird remains found on a runway and not correlated to a specific aircraft) in accordance with references (b) and (c).

(d) Ensure installation personnel collect and forward remains in accordance with Appendix A-1 of reference (b).

(2) Installation Air Operations Officer shall:

(a) Be the BASH Program Manager responsible for execution oversight of installation BASH plan. Serve as central point of contact for BASH coordination and planning with other departments, installation tenants, and the local community.

(b) Establish a WESS account for the mandatory reporting of all BASH incidents.

(c) Coordinate with aircraft custodians on the proper reporting, via WESS, and remains collection procedures of all bird/animal strikes of known origin in accordance with references (a), (b) and (c).

(d) Ensure bird/animal strikes of unknown origin (wildlife found on or near the runway) are reported, via WESS, to the Naval Safety Center in accordance with reference (b) and that any remains are appropriately packaged and forwarded to the Smithsonian Institution for positive identification in accordance with references (b) and (c).

(e) Ensure all wildlife strike reporting and identification data is provided to the members of the BWG and analyzed by the installation for development of future BASH reduction management strategies.

(f) Ensure aircraft reporting custodians receive assistance in their efforts to report strikes of known origin and forward remains.

(g) Provide local oversight of the USDA Wildlife Biologist, if one is assigned, and ensure regular coordination of efforts and strike identification with the installation NRM occur.

(h) Chair the BWG which will typically be staffed, dependent on local billets, by the Air Field Manager (AFM), PWO, Aviation Safety Officer (ASO), tenant Wing or Squadron ASOs (SSO/WSO), a USDA Wildlife Biologist, and representatives from Air Traffic Control, environmental department, Natural Resources, Public Affairs Office (PAO), and Community Plans and Liaison Officer (CPLO). Ensure installation PWOs, EPDs, and NRMs participate as key members in the BASH Working Group.

(i) At overseas installations where host nation maintains responsibility for BASH, coordinate with host nation to ensure U. S. Navy representation on airfield BASH Working Group (BWG), or its equivalent. To the extent host nation agreements require, provide cost sharing or direct support of the installation BASH program.

(3) Installation PWOs shall:

(a) Participate in the local BWG and in on-site technical reviews of installation BASH programs during periodic Naval Safety Center surveys.

(b) Provide facilities support services and maintenance (such as mowing, vegetation and landscape management, trash removal, facilities and sign maintenance, etc.) that correspond to mitigation procedures appropriate for hazards, in accordance with reference (b) and consistent with reference (d), in the local installation operational environment.

(c) Ensure BASH projects that exceed local approval authority are submitted in compliance with reference (e).

(4) Installation EPDs shall:

(a) Ensure BASH programs are in compliance with all applicable state and federal environmental laws and regulations including but not limited to the National Environmental Policy Act and the Clean Water Act.

(b) Ensure BASH programs are in compliance with all applicable DoD, DoN and U.S. Navy environmental policies, directives, and instructions including but not limited to DoD Instruction 4715.03 Natural Resources Conservation dated March 2011 and Chief of Naval Operations Instruction 5090.

(c) Participate in local BWG and in on-site technical reviews of installation BASH programs during periodic Naval Safety Center surveys.

(5) Installation NRMs shall:

(a) Be the BASH program manager on installations that do not have an Air Operations Officer.

(b) In the absence of an air operations funded USDA wildlife biologist, and in addition to other duties assigned, assist the Air Operations Officer in managing the BASH program.

(c) Ensure BASH programs and plans are in compliance with the INRMP and all applicable state and federal natural resource laws and regulations including but not limited to the Endangered Species Act, Migratory Bird Treaty Act, and Sikes Act.

(d) Coordinate INRMP revisions and updates with air operations.

(e) Coordinate and manage all applicable natural resources consultations and permits necessary to support the BASH program including but not limited to Army Corps of Engineer Section 404 permits, U.S. Fish and Wildlife Service (USFWS) Migratory Bird Depredation Permits, and Endangered Species Act Section 7 consultations.

(f) Ensure BASH program elements consider sustainable land management practices, adaptive management and scientifically sound monitoring techniques.

(g) Support the WHA and ensure data collected is able to be reproduced for annual monitoring and reporting requirements.

(h) Participate in the local BWG and in on-site technical reviews of installation BASH programs during periodic Naval Safety Center surveys. If requested, participate as a co-chair of the BWG.

(i) Coordinate with the air operations funded USDA wildlife biologist, if one is assigned.

(j) Assist with strike identifications.

(b) Participate in the local IWG.

5. Forms and Reports. BASH incidents shall be reported, via WESS, in accordance with procedures contained in references (a) and (c). Tenant aviation units shall send a copy of the WESS BASH report to the installation BASH Program Manager.

NEED FOR ASSISTANCE The United States Navy, Commander Navy Installations Command (CNIC) has requested that the United States Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services Program (APHIS WS) provide assistance to mitigate potential and realized wildlife hazards at United States Navy (USN) air stations in the continental United States and Hawaii.

Pursuant to this agreement between the (APHIS WS) and (CNIC), this Work/Financial Plan defines the basic objectives, plan of action, and budget for the APHIS Wildlife Services program to begin on 01 October 2012 for FY13 and continue for a period not to exceed 5 years. A new work and financial plan will be discussed between the parties prior to the initiation of the each subsequent FY for a period not to exceed 5 years.

The U.S. Department of Agriculture (USDA) is authorized to protect American agriculture and other resources from damage associated with wildlife. The primary authority for Wildlife Services (WS) is the Act of March 2, 1931 (46 Stat. 1468; 7 U.S.C.426-426b) as amended, and the Act of December 22, 1987 (101Stat. 1329-331, 7 U.S.C. 426c). Wildlife Services activities are conducted in cooperation with other Federal, State and local agencies; private organizations and individuals. Department/ agency cooperation between the USDA and DOD also is based on language contained in the Sikes Act (16 USC 670a-670o, 74 Stat. 1052), DOD Instruction 4150.07 (DOD Pest Management Program) and the memorandum of understanding (# 12-34-71-0007-MU) between the DOD and the USDA, Animal and Plant Health Inspection Service, Animal Damage Control (ADC; i.e., Wildlife Services).

The Animal and Plant Health Inspection Service (APHIS) WS program uses an Integrated Wildlife Damage Management (IWDM) approach (sometimes referred to as IPM or "Integrated Pest Management") in which a series of methods may be used or recommended to reduce wildlife damage. IWDM is described in Chapter 1, 1-7 of the Animal Damage Control Program Final Environmental Impact Statement (USDA, 1994). These methods include the alteration of cultural practices as well as habitat and behavioral modification to prevent damage. However, controlling wildlife damage may require that the offending animal(s) are killed or that the populations of the offending species be reduced.

I. OBJECTIVES/GOALS

To establish and continue an Integrated Wildlife Damage Management (IWDM) program incorporating direct assistance and technical recommendations at installations subject to this agreement and associated outlying fields including any private property deemed necessary for the mitigation of damage to naval aircraft operations in order to alleviate wildlife hazards to aircraft as well as for the protection of human health and safety. The secondary objective will be to reduce damage to property and natural resources caused by wildlife at the installations subject to this agreement.

APHIS WS is recognized as the appropriate agency to conduct wildlife hazard management at military installations as well as civilian airports to reduce wildlife hazards. APHIS WS has the expertise in IWDM to provide these services.

Various wildlife species have caused problems at military airports. Wildlife, especially birds within aircraft operating environment, has caused damage to aircraft and continue to pose a safety threat to aircrews. Species directly or indirectly response for damage to aircraft include but not limited to raptors and a wide assortment of passerines. Wildlife, not limited to deer, feral hogs, coyotes and jack rabbits can get onto runways and pose a threat to aircraft and property as well as interrupt take-offs and landings at these facilities.

Additional objectives include:

a. Supplement and enhance the overall Natural Resource Program (NRP) for installations subject to this agreement.

b. The IWDM program shall be compliant with the installation Integrated Natural Resources Management Plan (INRMP).

c. To monitor wildlife activity while evaluating the effectiveness of IWDM program efforts.

d. To facilitate the acquisition and renewal of an annual migratory bird depredation/salvage permit and state depredation permits, as needed.

e. To maintain a Web Enabled Safety System (WESS) account with the Naval Safety Center and assist in wildlife-strike reporting and monthly briefings on the status of the BASH program.

f. To assist with the review and revision of the installation BASH Plan to ensure updated, effective techniques are in place to reduce the threat of wildlife strikes to aircraft.

g. To assist in the collection, preparation and shipment of wildlife strike remains to the Smithsonian Institution for positive identification.

h. As directed by installation points of contact, evaluate off-station airfields frequented by military aircraft, where repeated strikes have occurred.

i. Serve as a member of the installation Bird Hazard Working Group.

j. To train USN personnel that may be part of the installation Bird Detection and Dispersal Team (BDDT) in accordance with Weapons Division Qualification/Certification program.

k. To train BDDT on use of active scare techniques, as well as placement of static wildlife deterrent devices.

l. To provide training to local squadrons detailing bird and animal strike hazards.

II. PLAN OF ACTION

APHIS WS will assign one full-time Wildlife Biologist at each installation (and where needed an additional wildlife specialist) subject to this agreement and will provide a vehicle, field supplies and equipment, unless otherwise noted in this work plan. APHIS WS personnel will conduct Wildlife Hazard Assessments and mitigate wildlife hazards at all facilities. The timing and initiation of assessments will be coordinated locally so as to not impact on-going mitigation efforts (e.g., installations where an outlying training field exists but main efforts are focused on the air station). Information collected from this effort will be used to inform and to prepare reporting requirements for installation BASH plans. IWDM activities will be performed on or near runways and primarily confined to the facility boundaries outlined in the work plan with periodic activities conducted offsite where mammals and birds pose a hazard to aircraft operations.

IWDM techniques for controlling birds include all appropriate methods such as, but not limited to, cage traps, decoy traps, pole traps, capture nets, pyrotechnics, pellet guns, firearms, Alpha Chloralose, Avitrol, DRC-1339, hand capture and various exclusion and harassment techniques. APHIS WS will be responsible for application of bird toxicants and will adhere to all chemical label restrictions. All pesticides will be stored onsite as designated by the installation commanding officer or at offsite APHIS WS facilities.

IWDM techniques for controlling mammals will include all appropriate methods such as, but not limited to, foothold traps, snares, calling/ shooting, shooting, cage traps and hand capture. Only APHIS WS, military security, or other designated personnel will remove captured animals. APHIS WS will be responsible for the application and maintenance of IWDM devices. All capture devices will be set to reduce the likelihood of non-target catches.

The installation will provide the APHIS WS employees assigned to this project with an area to dispose of carcasses, eggs and nesting material removed from the facilities outlined in this work plan. The Smithsonian Institution shall be contacted about shipment of certain species, collected from the depredated carcasses, to enhance bird strike identification and education.

III. STIPULATIONS AND RESTRICTIONS

a. All operations shall have the joint concurrence of APHIS WS and the Installation Commanding Officer.

   (1) APHIS WS personnel assigned to this project will remain under the direct supervision of APHIS WS.

   (2) Local oversight for this program will be the responsibility of the Installation Air Operations Officer. Ordnance / firearms will be approved by the Operations Officer / Airfield Manager and shall be registered with installation security

b. All APHIS WS activities must be performed in a manner that is complaint with all applicable local, state and federal environmental laws and regulations, and all applicable Department of Defense, Department of the Navy, and U.S Navy environmental policies, directives, and instructions. This includes but is not limited to such as the Endangered Species Act, Migratory Bird Treaty Act, Clean Water Act, DoD Instruction 4715.03 and OPNAV Instruction 5090.1C or latest version.

c. All APHIS WS activities shall be in accordance with CNICINST 3700 (dtd 7 JUL 2011).

d. Control on Private Lands: An agreement for Control of Animal Damage on Private Property (WS Form 12A) will be executed between APHIS WS and the landowner, lessee, or administrator before any APHIS WS work is conducted.

e. Control on Public Lands: An Agreement for Control of Animal Damage on Non-Private Property (WS Form 12C) or an appropriate National Environmental Policy Act (NEPA) document will be executed between APHIS WS and the public land administrator(s)/manager(s) before any APHIS WS work is conducted.

f. APHIS WS Biologist shall coordinate activities with the Natural Resource Program Manager, Air Operations Officer, and as appropriate local, state and federal officials.

g. APHIS WS will provide CNIC quarterly reports on program execution.

h. APHIS WS Biologists shall submit regular reports to the installation BWG for review. These reports shall be presented at a minimum every quarter and shall detail methodology; results of all work completed, and appropriate BASH recommendations. Additionally, reports shall include information and data collected during monitoring activities (for example but not limited to animal numbers, frequency of occurrence, spatial/temporal distributions, and supporting habitats.)

i. APHIS WS Biologists shall submit annual reports detailing the efforts of the past year. These reports shall compare monthly data, annual data, and associated trends. The report shall summarize IWDM actions and the depredation report needed for the MBTA Depredation Permit.

j. Release of any data collected in connection with this work plan shall be approved by the installation commanding officer after consulting with the public affairs office. This will not impede APHIS WS internal data collection activities and/or needs.

k. APHIS WS will use only APHIS WS employees. All APHIS WS employees will adhere to installation and APHIS WS guidelines/policies while conducting IWDM activities, and have successfully met APHIS firearm safety and other training standards as necessary.

l. The installation will provide APHIS WS employees with the appropriate security identification badges/passes and safety training to allow free movement within the facilities as outlined in the work plan. APHIS WS vehicles operating within the project area will be properly marked and equipped with an amber strobe light or lights provided by the installation. Naval Air Station personnel will provide escort in restricted areas when needed.

m. The installation will provide furnished office space, office/communications equipment and secure storage as well as pyrotechnic magazine(s) from which the work to be conducted under the work plan can be organized and implemented efficiently and safely. Office/communications equipment shall include computers, printers, telephone equipment, associated data lines and two-way radios to facilitate communications between APHIS WS and installation personnel.

n. Any equipment and supplies purchased under the terms of this agreement will remain the property of APHIS WS.

IV. EFFECTIVE DATES

The agreement shall commence on October 01, 2012, and the work plan/ financial plan shall be renewed annually for a term not to exceed five years or until modified or terminated by mutual consent of all parties. Additional installations will be considered as modifications to this agreement during an annual review to be done concurrent with the renewal process. This agreement may be cancelled by either party upon giving at least 90 days written notice to the other party. Fiscal year funding will be provided via MIPR prior to the commencement of the succeeding fiscal year (subject to funds availability).

V. ISSUANCE OF ORDER and AVAILABILITY OF FUNDING

This agreement is subject to CNIC's issuance of an order through a Military Interdepartmental Purchase Request (MIPR), DD Form 448, to the USDA/APHIS-WS. No work may be initiated, or any expenses incurred, until such time as the MIPR is received by USDA/APHIS-WS.

Funding for the continuation of this agreement is issued in anticipation of the enactment of the FY13 DOD Appropriations Act or passage of an FY13 Continuing Resolution Authority (CRA), and is subject to the provisions of whichever act becomes applicable. In the event of a Continuing Resolution Act for Fiscal Year 2013, funds provided herein are releasable only for the amount of time covered by any additional Continuing Resolution passed by Congress.

CNIC's obligation under this agreement is contingent upon the availability of appropriated funds. No legal liability on the part of CNIC, the Navy, or the Department of Defense for any payment may arise until funds are made available to CNIC.

VI. PREVIOUS AGREEMENTS

This agreement supersedes all previous agreements.

VII. PERSONNEL PERFORMANCE REVIEW

In the event, performance deficiencies arise with APHIS WS personnel, a performance review will be conducted by the local APHIS WS state program office. A formal request by the installation commanding officer will be made to the local APHIS WS state program office for deficiency resolution.

VIII. INSTALLATION APHIS WILDLIFE SERVICES BASH BUDGET FY13

The overall budget for this work plan/financial plan is $2,334,447. An estimated itemization of expenses is listed below. USDA/APHIS-WS may distribute costs between itemized categories at its discretion, subject to the standards, guidance, and limitations of DOD Financial Management Regulation (FMR), Volume 11A, Chapter 3, Section 306 and Volume 11A, Chapter 1.

Installations included in this agreement with one Biologist

a. NAS Whidbey Island
b. Naval Base Coronado – North Island
c. Naval Base Ventura County – Point Mugu
d. NAS Lemoore
e. NAS Fallon
f. NAS Corpus Christi
g. NAS Fort Worth
h. NAS Kingsville
i. NAS New Orleans
j. NAS Meridian
k. NAS Patuxent River
l. NAS Key West
m. NAS Pensacola

Installations included in this agreement with one Biologist and a Specialist

n. NAS Oceana and Naval Station Norfolk – Chambers Field
o. NAS Jacksonville and NAS Mayport
p. NAS Whiting Field
q. Pacific Missile Range Facility (PMRF)

Personnel (Salary - OPM rest of the U.S. base salary + average 20% locality adjustment + average 36% benefits)	
Wildlife Biologist (GS 9 at 17 installations)	$1,239,737
Wildlife Specialist (GS 7 at 4 installations)	$222,722
Supervisory and miscellaneous personnel (10%)	$146,246
Salaries	**$1,608,705**
Travel and miscellaneous training (e.g., Bird Strike Conference, etc.)	$69,500
Vehicle Usage (Lease, Mileage, Insurance)	$160,650
Equipment, and miscellaneous Supplies	$171,000
Logistics	**$401,150**
Sub-total	**$2,009,855**
Program Support (16.15%)	**$324,592**
Total FY13	**$2,334,447**
CNIC FY13 MIPR Total	**$2,334,447**

The distribution of the budget for this project financial plan may be varied by APHIS WS as necessary to accomplish the purpose of this agreement but may not exceed the TOTAL COST of $2,334,447 for FY13.

Funding is based on 100 percent utilization of both labor and non labor. Disposition of funds available due to program under utilization (e.g., vacant positions or hiring delays) will be jointly discussed between USDA and CNIC with a goal of utilizing funds to maximize delivery of service. FY14 through FY17 budgets will be negotiated by the parties, include a cost increase pursuant with the federally approved inflation rate and POM guidance, and be subject to the limitations in section V above, "Issuance of Order and Availability of Funding."

CHERRYL F. BARNETT
ENV. PROGRAM MANAGER

9. TYPE OF PERMIT
DEPREDATION AT AIRPORTS

10. LOCATION WHERE AUTHORIZED ACTIVITY MAY BE CONDUCTED
(1) NAVAL AIR STATION OCEANA, VIRGINIA BEACH, VA; (2) NAVAL AUXILIARY LANDING FIELD FENTRESS, CHESAPEAKE, VA; (3) CHAMBERS FIELD, NORFOLK, VA; (4) NAVAL STATION NORFOLK, NORFOLK, VA; (5) NAVAL AMPHIBIOUS BASE LITTLE CREEK, VIRGINIA BEACH, VA; and (6) NAVAL MEDICAL CENTER PORTSMOUTH, PORTSMOUTH, NH

11. CONDITIONS AND AUTHORIZATIONS:

A. GENERAL CONDITIONS SET OUT IN SUBPART D OF 50 CFR 13, AND SPECIFIC CONDITIONS CONTAINED IN FEDERAL REGULATIONS CITED IN BLOCK #2 ABOVE, ARE HEREBY MADE A PART OF THIS PERMIT. ALL ACTIVITIES AUTHORIZED HEREIN MUST BE CARRIED OUT IN ACCORD WITH AND FOR THE PURPOSES DESCRIBED IN THE APPLICATION SUBMITTED. CONTINUED VALIDITY, OR RENEWAL, OF THIS PERMIT IS SUBJECT TO COMPLETE AND TIMELY COMPLIANCE WITH ALL APPLICABLE CONDITIONS, INCLUDING THE FILING OF ALL REQUIRED INFORMATION AND REPORTS.

B. THE VALIDITY OF THIS PERMIT IS ALSO CONDITIONED UPON STRICT OBSERVANCE OF ALL APPLICABLE FOREIGN, STATE, LOCAL, TRIBAL, OR OTHER FEDERAL LAW.

C. VALID FOR USE BY PERMITTEE NAMED ABOVE.

D. You are authorized to take, temporarily possess, and transport the migratory birds specified below to relieve or prevent injurious situations impacting public safety. All take must be done as part of an integrated wildlife damage management program that emphasizes nonlethal management techniques. You may not use this authority for situations in which migratory birds are merely causing a nuisance.

(1) The following may be taken by firearm, with non-toxic shot:

- **(a) 50 of <u>each</u>: Herring gulls, Mallards, American Robins,Turkey Vultures, Black Vultures, Killdeers, Eastern Meadowlark, and Atlantic Brant,**
- **(b) 200 Ring-billed gulls,**
- **(c) 300 Laughing gulls,**
- **(d) 5 Cooper's Hawk,**
- **(e) 10 of <u>each</u>: Great Blue herons, Great Egrets and Northern Harrier,**
- **(f) 20 each: American Kestrel, Red-tailed Hawk, and Great Black-backed Gull,**
- **(g) 150 Canada Geese,**
- **(h) 100 Barn Swallow and Tree Swallows, in any species combination,**
- **(i) 100 Horned Larks,**
- **(j) 250 Mourning Doves.**

☒ ADDITIONAL CONDITIONS AND AUTHORIZATIONS ALSO APPLY

12. REPORTING REQUIREMENTS

ANNUAL REPORT DUE WITH NEXT RENEWAL FORM
Forms can be found at: <u>www.fws.gov/migratorybirds/mbpermits.html</u>

ISSUED BY: V. Brumbs

TITLE
CHIEF, MIGRATORY BIRD PERMIT OFFICE - REGION 5

DATE
05/30/2012

(2) The following active nests (including eggs) may be destroyed: 50 Mallard nests and 150 Canada Goose nests

State restrictions: Peregrine Falcons and other bird species are listed as Endangered or Threatened by Virginia State law and therefore may not be taken, unless otherwise authorized by the Virginia Department of Game and Inland Fisheries.

E. You are authorized in emergency situations only to take, trap, or relocate any migratory birds, nests and eggs, including species that are not listed in Condition D (except bald eagles, golden eagles, or endangered or threatened species) when the migratory birds, nests, or eggs are posing a direct threat to human safety. A direct threat to human safety is one which involves a threat of serious bodily injury or a risk to human life.

You must report any emergency take activity to your migratory bird permit issuing office, Hadley, Ma, 413-253-8424 (fax), within 72 hours after the emergency take action. Your report must include the species and number of birds taken, method, and a complete description of the circumstances warranting the emergency action.

F. You are authorized to salvage and temporarily possess migratory birds found dead or taken under this permit for (1) disposal, (2) transfer to the U.S. Department of Agriculture, (3) diagnostic purposes, (4) purposes of training airport personnel, (5) donation to a public charity (those suitable for human consumption), or (6) donation to a public scientific or educational institution as defined in 50 CFR 10.12. Any dead bald eagles or golden eagles salvaged must be reported within 48 hours to the National Eagle Repository at (303) 287-2110 and to the migratory bird permit issuing office at fax 413-253-8424. The Repository will provide directions for shipment of these specimens.

G. You may not salvage and must immediately report to U.S. Fish and Wildlife Service Law Enforcement any migratory birds that appear to have been poisoned, shot, or otherwise injured as the result of criminal activity.

H. You may use the following methods of take: (1) firearms; (2) nets; (3) ONLY USDA Wildlife Services may use registered animal drugs (excluding nicarbazin), pesticides and repellents; (4) falconry abatement; and (5) legal lethal and live traps (including pole traps). Birds caught live may be euthanized or transported and relocated to another site approved by the appropriate State wildlife agency, if required. When using firearms, you may use rifles or air rifles to shoot any bird when you determine that the use of a shotgun is inadequate to resolve the injurious situation. The use of any of the above techniques is at your discretion for each situation.

I. You may temporarily possess and stabilize sick and injured migratory birds and immediately transport them to a federally licensed rehabilitator for care.

J. The following subpermittees are authorized: **Employees of Regional Environmental Group Oceana; employees of the Natural Resources Program, Department of the Navy, Norfolk, VA; and employees of USDA/APHIS/Wildlife Services.** In addition, any other person who is (1) employed by or under contract to you for the activities specified in this permit, or (2) otherwise designated a subpermittee by you in writing, may exercise the authority of this permit.

K. You and any subpermittees must comply with the attached Standard Conditions for Migratory Bird Depredation Permits. **These standard conditions are a continuation of your permit conditions and must remain with your permit.**

G. A "No Feeding Policy" must be in place.

For Canada Geese Egg Addling or Nest Destruction you MUST register each year between January 1 and June 30 at: https://epermits.fws.gov/eRCGR. You must return to website and report your take before October 31 each year.

For suspected illegal activity, immediately contact USFWS Law Enforcement at: Richmond, VA 804-771-2883

Standard Conditions
Migratory Bird Depredation Permits
50 CFR 21.41

All of the provisions and conditions of the governing regulations at 50 CFR part 13 and 50 CFR part 21.41 are conditions of your permit. Failure to comply with the conditions of your permit could be cause for suspension of the permit. The standard conditions below are a continuation of your permit conditions and must remain with your permit. If you have questions regarding these conditions, refer to the regulations or, if necessary, contact your migratory bird permit issuing office. For copies of the regulations and forms, or to obtain contact information for your issuing office, visit: http://www.fws.gov/migratorybirds/mbpermits.html.

1. To minimize the lethal take of migratory birds, you are required to continually apply non-lethal methods of harassment in conjunction with lethal control.
   [*Note: Explosive Pest Control Devices (EPCDs) are regulated by the Bureau of Alcohol, Tobacco, Firearms, and Explosives (ATF). If you plan to use EPCDs, you require a Federal explosives permit, unless you are exempt under 27 CFR 555.141. Information and contacts may be found at http://www.atf.gov/explosives/how-to/become-an-fel.htm.*]

2. Shotguns used to take migratory birds can be no larger than 10-gauge and must be fired from the shoulder. You must use nontoxic shot listed in 50 CFR 20.21(j).

3. You may not use blinds, pits, or other means of concealment, decoys, duck calls, or other devices to lure or entice migratory birds into gun range.

4. You are not authorized to take, capture, harass, or disturb bald eagles or golden eagles, or species listed as threatened or endangered under the Endangered Species Act found in 50 CFR 17, without additional authorization.

   For a list of threatened and endangered species in your state, visit the U.S. Fish and Wildlife Service's Threatened and Endangered Species System (TESS) at: http://www.fws.gov/endangered.

5. If you encounter a migratory bird with a Federal band issued by the U.S. Geological Survey Bird Banding Laboratory, Laurel, MD, report the band number to 1-800-327-BAND or http://www.reportband.gov.

6. This permit does not authorize take or release of any migratory birds, nests, or eggs on Federal lands without additional prior written authorization from the applicable Federal agency, or on State lands or other public or private property without prior written permission or permits from the landowner or custodian.

7. Unless otherwise specified on the face of the permit, migratory birds, nests, or eggs taken under this permit must be:
   (a) turned over to the U.S. Department of Agriculture for official purposes, or
   (b) donated to a public educational or scientific institution as defined by 50 CFR 10, or
   (c) completely destroyed by burial or incineration, or
   (d) with prior approval from the permit issuing office, donated to persons authorized by permit or regulation to possess them.

8. A subpermittee is an individual to whom you have provided written authorization to conduct some or all of the permitted activities in your absence. Subpermittees must be at least 18 years of age. As the permittee, you are legally responsible for ensuring that your subpermittees are adequately trained and adhere to the terms of your permit. You are responsible for maintaining current records of who you have designated as a subpermittee, including copies of designation letters you have provided.

9. You and any subpermittees must carry a legible copy of this permit, *including these Standard Conditions*, and display it upon request whenever you are exercising its authority.

10. You must maintain records as required in 50 CFR 13.46 and 50 CFR 21.41. All records relating to the permitted activities must be kept at the location indicated in writing by you to the migratory bird permit issuing office.

11. Acceptance of this permit authorizes the U.S. Fish and Wildlife Service to inspect any wildlife held, and to audit or copy any permits, books, or records required to be kept by the permit and governing regulations.

12. You may not conduct the activities authorized by this permit if doing so would violate the laws of the applicable State, county, municipal or tribal government or any other applicable law.

(DPRD - 12/3/2011)

APPENDIX D

Commonwealth of Virginia VDGIF Official Kill Permit for NALF Fentress

58435

OFFICIAL KILL PERMIT

To Whom It May Concern:
Permission is herewith granted NAS OCEANA* (Name (landowner or lessee)) 757 433 2151 (Telephone)
800 OCEANA BLVD (Address) VIRGINIA BEACH (City) VA (State) 23460 (Zip) michael.f.wright@navy.mil (E-Mail)
and those persons named below: (State law prohibits persons convicted of wildlife violations from being designated as a shooter or carrying out the authorized activity for the landowner/lessee)
CO AUTHORIZED KILL PERMIT TEAM
NASO NATURAL RESOURCES STAFF
USDA WILDLIFE SERVICES STAFF

To kill unlimited (Quantity) (Bear, Beaver, Deer, Muskrat, Rabbit, Raccoon, Squirrel) (Circle appropriate species) damaging the property of NAS OCEANA*
in VA BEACH (County or City) for the period from 1 JAN 2013 to 31 DEC 2013
Time Restrictions: NONE - MAY KILL SUNDAYS / MAY TRAP AS REQUIRED
Damage control limited to the location described below or on the attachment. No one except those listed on this permit may assist or be present during the damage control activities. Additionally, the landowner/lessee acknowledges that all damage control operations will comply with local firearm ordinances. This permit authorizes the killing of wild animals pursuant to Sections 29.1-516, 29.1-517, 29-1-518, and 29.1-529 Code of Virginia. ~~Unless otherwise authorized on this permit, deer killed on this permit must be antlerless. No animals may be killed between 12:00 midnight Saturday and 12:00 midnight Sunday.~~ Permit is not valid unless signed by the landowner/lessee and the authorizing Department representative. Permit must be carried and available for inspection during damage control activities.
Has the landowner/lessee been issued a kill permit previously on the requested parcel? Yes ☒ No ☐
Has the parcel been hunted in the previous hunting season for deer or bear? Yes ☒ No ☐ Indicate the number of days hunted 90
How does the landowner/lessee plan to dispose of carcass(es) (*Required within 24 hours after killing a deer or bear*):
☒Burial ☒ Personal Use ☐ Charitable Organization ☒ Other CREMATION
The undersigned landowner/lessee agrees to the conditions of this permit and understands that failure to comply with these conditions may lead to its revocation or criminal prosecution.

Signature of Landowner or Lessee: _____ Date _____
Signature of Department Representative: TG Timmons Date 01/08/13

APPENDIX G

Wildlife Attractants on the Active Operating Area and within 10,000 feet, Naval Auxiliary Landing Field Fentress

NALF Fentress Wildlife Attractants on the Airfield Operating Area (AOA)

Specific areas surrounding NALF Fentress have been identified as significant wildlife attractants that pose a potential risk to aviation safety (Figure 22).

1. Airfield Drainage

    1.1. Observations of the AOA following long periods of heavy rain did not show any sign of standing water.

2. Vegetation Management

    2.1. 5 approach secondary growth and woodlands.
    2.2. 23 approach secondary growth and woodlands.
    2.3. Secondary growth and woodlands adjacent to the runway.
    2.4. Secondary growth and woodlands adjacent to the taxiway.

NALF Fentress Wildlife Attractants within 10,000 feet of Operating Area

3. Wetland Features

    3.1. Man-made linear pond in agricultural field (on Navy property).
    3.2. Wooded wetland (on Navy property).
    3.3. Two freshwater pond impoundments.
    3.4. Intracostal waterway/Saltwater marsh.

4. Agricultural Features

    4.1. Agricultural fields are the dominating land feature surrounding NALF Fentress.

5. Golf Courses

    5.1. Battlefield Golf Course.

Figure 22: Identified Wildlife Attractants on the AOA and within 10,000 feet of NALFF.

APPENDIX H

Wildlife Attractants within 5 miles,
Naval Auxiliary Landing Field Fentress

NALF Fentress Wildlife Attractants within 5 miles of Operating Area

Specific areas surrounding NALF Fentress have been identified as significant wildlife attractants that pose a potential risk to aviation safety (Figure 23). Numbers 1 and 2 were used to identify attractants on the active operating area and therefore were left off of this section.

3. Wetland Features

    3.01. Neighborhood pond impoundments.
    3.02. Intracoastal Waterway/Saltwater Marsh.
    3.03. Borrow pit.

4. Agricultural Features

    4.01. Agricultural fields are the dominating land feature surrounding NALF Fentress.

5. Golf Courses

    5.01. Signature at West Neck
    5.02. Virginia Beach National
    5.03. Stumpy Lake

Figure 23: Wildlife Attractants within 5 miles of NALFF.

(12) USDA Wildlife Hazard Assessment for NALF Fentress

1. Purpose. This instruction establishes an Integrated Wildlife Damage Management (IWDM) strategy as the foundation for the installation's daily bird/animal aircraft strike hazard (BASH) Plan and BASH Program. This instruction also provides the intra-departmental collaborative actions required to conduct daily BASH mitigation onboard Naval Air Station (NAS) Oceana and Naval Auxiliary Landing Field (NALF) Fentress. The NAS Oceana

BASH Program is an environmentally compatible animal mitigation strategy, developed to sustain an operational margin for aviation safety. The goal is to identify and sustain IWDM practices across each installation department with the BASH Program and BASH Plan responsibilities. The IWDM strategy works to synchronize BASH Program actions with the installation Integrated Natural Resources Management Plan (INRMP), the Installation Pest Management Plan (IPMP) and other pertinent installation environmental plans in accordance with references (a) through (w), and enclosures (1) through (12).

2. Cancellation. NASOCEANAINST 3750.2B and 3750.3.

3. Scope. The January 15, 2009 commercial A320 jetliner crash on the Hudson River in New York City might be the most public BASH-related aircraft mishap in recent history. From 1960 to the present, 333 military aircraft have been destroyed, killing 150 personnel due to bird/animal aircraft strikes. Consequently, airport bird and animal aircraft strike hazards that are left unmanaged are likely to damage and/or destroy aircraft, as well as pose a lethal threat to the aircrew that fly them.

To mitigate this unacceptable risk to aviation safety, this instruction will blend airport management best practices from the Federal Aviation Administration (FAA), Department of Defense (DOD), and Department of the Navy (DoN). This process will underpin the NAS Oceana BASH Program and define the airfield management practices utilized in the NAS Oceana IWDM and BASH cycles. The NAS Oceana BASH Program orchestrates each department's preparation for flight operations through the integration of grounds maintenance, wildlife habitat modification and wildlife harassment and depredation within the airport operations area.

The NAS Oceana BASH Program also represents a significant safety pillar in the NAS Oceana Safety Management System (SMS). The integration of the FAA's SMS and Safety Risk Management (SRM) methodology into this instruction to identifying potential aviation hazards at airports and defining mitigation strategies will focus and align the DoN's Operational Risk Management (ORM) practices into definable airport program actions and daily routines. These daily airport safety routines will be merged to manage airfield equipment, procedures, and personnel as a system greatly enhancing BASH Program awareness and effectiveness.

TABLE OF REVISIONS & CHANGES

NAS OCEANA INSTRUCTION	DATE SIGNED
BASH PROGRAM AND INSTALLATION BASH PLAN	4 Feb 14

CHANGE #	INTERIM CHANGE IMPLEMENTED	DATE APPROVED	SIGNATURE

1. BASH Program Definitions. The following terms and definitions apply to this instruction:

a. AFF. Airfield Facilities Division. The personnel responsible for transient line and airfield support. AFF is responsible for the parking and servicing of transient aircraft, and the airfield maintenance for visual landing aids and E-28 arresting gear.

b. AFM. Airfield Manager. The AFM is responsible for the maintenance and safe operation of the airfield.

c. AICUZ. Air Installation Compatible Use Zones. Land compatibility areas defined in relation to aircraft noise and flight patterns to provide the safest possible airport operation with existing surrounding communities.

d. AMC. Acceptable Maintenance Condition. Used in the airport wildlife hazard management plan, the AMC is the threshold to which a facility (land, water, building) characteristic can be allowed to deteriorate to before it becomes attractive to wildlife, defeating the protective measures put in place to effectively manage the wildlife hazards.

e. AOA. Airport Operations Area. The total surface area of the airport, to include all paved surfaces, and the areas bounded by the taxiway, takeoff, and landing surfaces.

f. AODO. Air Operations Duty Officer. 24-hour Airfield Operations representative located at Base Operations.

g. ARFF. Aircraft Rescue and Fire Fighting. The Fire and Emergency Services (F&ES) personnel that are specifically assigned to perform aircraft crash and rescue response at the airfield.

h. ASAP. Aviation Safety Awareness Program. The online aviation hazard reporting program sponsored by Commander, Naval Air Forces (CNAF).

i. ATC. Air Traffic Control Division. The personnel responsible for Radar Approach and Departure Control, Tower and Ground control of aircraft, and all movement of ground vehicles.

j. ATIS. Automatic Terminal Information Service. A radio broadcast to deliver non-controlling airport/terminal area meteorological and flight planning information in real-time.

k. Active Dispersal. Harassment techniques employed to disperse birds and/or animals from airfield and surrounding areas. Methods may include chase, pyrotechnics, bioacoustics, and depredation.

l. Aircraft Strike. Any contact between a bird and/or animal, and an aircraft, whether or not damage occurred. Any carcass within 250 feet of runway centerline, or 1,000 feet of a runway end, or on a taxiway or anywhere else on or off the AOA that has no compelling reason that death occurred any other way.

m. BDDT. BASH Detection and Dispersal Team. The trained and designated transient line airfield support crew who reports BASH Hazard Conditions and disperses problem birds and/or animals via harassment techniques – commonly vehicle chase, bioacoustic, or propane cannon operation. The BDDT can respond to immediate BASH threats as reported by the tenant commands, pilots, transient aircraft, and/or as observed by the Facility Watch Supervisor (FWS), AODO, or the airfield management staff.

n. BHC. Bird Hazard Condition. A bird hazard alert condition used to warn aircrew of bird activity. While BHC does not state animal aircraft strike hazards, the FAA uses BHCs to report all BASH concerns for standardization.

o. BHC Heavy. A heavy concentration of birds (more than 15 large or 30 small) on or immediately adjacent to the active runway or aircraft approach areas that present an immediate hazard to flight operations.

p. BHC Moderate. A BHC indicating moderate concentrations of birds (5-15 large or 15-30 small) is observable, and are in a location that represents a probable hazard to flight operations.

q. BHC Light. Sparse bird activity (less than BHC Moderate) on the airfield and/or AOA posing a low probability of aircraft striking hazard.

r. BMP. Best Management Practice. An identified procedure used to standardize a BASH Program element or outcome.

s. BWG. BASH Working Group. Local committee of base and unit offices tasked with the management of bird/animal aircraft strike hazards. Executes and makes recommendations to the BASH Program.

t. BASH. Bird/Animal Aircraft Strike Hazard. General term to describe bird/animal aircraft strike hazards and programs.

u. BASH Advisory. A radio transmission from ATC or aircrew reporting specific bird and/or animal hazard information. May be real time or disseminated in ATIS broadcasts.

v. Bioacoustics. Recorded tapes of bird and/or animal distress calls used by the Natural Resources department, the USDA WS division, and/or the BDDT to scare birds and/or animals off the airfield.

w. Depredation. Technique used to remove problem birds and animals permanently from the airfield and hangars when other scare tactics are ineffective. Methods may include shooting, trapping, and the use of registered toxicants. All lethal controls will be completed by the Natural Resources staff or USDA-Wildlife Services staff.

x. FIFRA. The Federal Insecticide, Fungicide, and Rodenticide Act. The predominant law governing herbicide, insecticide, pesticide, and rodenticide use.

y. Facility Watch Supervisor (FWS). The senior-most qualified air traffic control supervisor on watch, unless the entire facility is closed by official naval message.

z. Ground Electronics Maintenance Division (GEMD). The personnel responsible for airfield operation and maintenance of airport lighting control, radar operation, and airport communications systems.

aa. Integrated Natural Resources Management Plan (INRMP). A federal requirement under the Sike's Act, the INRMP is the long term environmental planning document used to guide installation management of natural resources to support the installation mission. This guidance ensures that natural resources conservation measures and military operations on the installation are integrated and consistent with federal and state stewardship and legal requirements.

bb. Natural Resources (NR). Installation department tasked to help actively and responsibly manage the natural resources on DOD lands. The Natural Resources Manager (NRM) is responsible to the Public Works Officer (PWO) via the Environmental Program Director (EPD).

cc. Propane Cannon. A stationary, non-projectile, sound producing device used to disperse birds.

dd. Pyrotechnics. Noise producing devices discharged from 6mm pistols, 15mm launchers or 12 gauge shotguns. Used by USDA-WS and NR to disperse birds away from runways and airfield.

ee. SA. Safety Assurance. A critical element of airport safety management systems. The SA process proactively identifies airport hazards and constructs blended hazard mitigation through improved procedural guidance, training, and airport program self-inspections.

ff. SFFO. Safe for Flight Operations. A condition of operational readiness for airfield operations. Performance of SFFO is a critical Safety Assurance link for the airfield safety management system.

gg. SMS. Safety Management Systems. SMS is the FAA's systematic approach to managing airport safety, including the necessary organizational structures, accountabilities, policies, and procedures.

hh. Snarge. The residue on an airplane after a bird/animal aircraft strike.

ii. SRM. Safety Risk Management. SRM is the core operational component of SMS, and is a four step process. At a minimum, SRM: Establishes a system for identifying safety hazards; establishes a systematic process to analyze hazards and their risks; provides regular assessment to ensure mitigations are effective; establishes and maintains records that document the airport's SRM processes.

jj. USDA-WS. The United States Department of Agriculture (USDA) Animal and Plant Health Inspection Service (APHIS) Wildlife Services (WS). A federal agency partnered with CNIC to provide daily BASH Program technical assistance, integrated wildlife damage management on the installation and provide BASH training to reinforce the integrated wildlife damage management practices necessary to provide sustainable levels of aviation safety.

kk. WESS. Web-Enabled Safety System. The Naval Safety Center's online aviation hazard reporting and data retrieval system. The U.S. Navy standard for reporting bird and/or animal aircraft near-misses and aircraft strikes.

2. BASH Program Framework. Any program as complex as BASH onboard a Naval Air Station requires a framework to coordinate the collaborative equities and action necessary to protect aircraft and personnel, while preserving the mission. Consequently, the BASH Program must provide a framework that, at a minimum, addresses the following:

a. Establishment of a BASH Working Group (BWG). Ensure BWG convenes quarterly to address seasonal migration, BASH adaptability and tenant awareness.

b. Identify wildlife aircraft strike hazards in the local geographical environment. Hazards shall be identified by regular monitoring of wildlife through the development and monitoring of a Wildlife Hazard Assessment on at least an annual basis.

c. Establish BASH mitigation procedures (active and passive) relative to the identified hazards.

d. Develop methods to monitor the effectiveness of the installation BASH program elements to ensure changes are made as

necessary. Data shall be collected and compared from one year to the next in order to measure program effectiveness over time.

e. Make real-time BASH data available to aircraft operating to and from the NAS Oceana and NALF Fentress facilities via ATIS.

f. Establish procedures for a BDDT to deal with emergent issues that threaten flight operations.

g. Ensure compliance with all applicable DOD and DoN policies and directives, as well as all federal, state, and local environmental laws and natural resource regulations and policies through the maintenance of the Installation Natural Resource Management Plan (INRMP).

3. Integrated Wildlife Damage Management Cycle. In eastern Virginia, there is an abundance of wildlife and a generally mild climate conducive to the migration of all bird types in and around the Chesapeake Bay Region. The geographic proximity of NAS Oceana and NALF Fentress to the Atlantic Ocean ensures they remain replete with all types of wildlife.

At NAS Oceana and NALF Fentress, wildlife presents a clear danger to the conduct of all types of aircraft operations. As such, NAS Oceana and NALF Fentress shall implement the Integrated Wildlife Damage Management (IWDM) Cycle, Plate 1, to identify and mitigate Bird/Animal Aircraft Strike Hazards (BASH) to flight operations. IWDM shall be used as the main strategic focus within the BASH Program by all departments, including tenant aviation activities, to form BASH Program actions.

a. Step One: Defining and Refining Wildlife Aviation Hazards. The NAS Oceana and NALF Fentress Wildlife Hazard Assessments (WHAs) and installation INRMP provide the biological science behind what kind of wildlife – insects, rodents, raptors, mammals – that make these air facilities home. By definition, the 2012 WHAs provide the baseline for initial installation hazardous wildlife management practices. A WHA is always under review to identify new wildlife species, and therefore, determine the need for possibly refining the methods for how hazardous wildlife management should be conducted. When discovered, these refinements will be considered by the BASH Working Group (BWG).

b. Step Two: Conduct Wildlife Habitat Evaluations. As the seasons change, wildlife change their feeding, nesting, reproduction, and hibernation patterns – subsequently changing their immediate hazard to aircraft operations in all three strategic priority zones. Step two involves the identification of seasonal changes and their effects on the overall BASH management of the existing habitat in strategic management zones

one, two, and three. This step is under constant evaluation, 365 days a year.

c. Step Three: Determine Wildlife Habitat Modifications. As the first two stages of the IWDM Cycle occur naturally, the existent habitat in strategic management zones one and two will be evaluated for effectiveness in accordance with BWG prescribed and approved modifications. These prescribed changes may be as simple as the introduction of wildlife harassment, changing the wildlife habitat to be less attractive, or as complicated as preparing infrastructure projects that require the review and approval of the BWG, and inclusion in the overall Wildlife Hazard Management Plan (WHMP) or its elements. This will be at the discretion of the Air Operations Officer and the BWG.

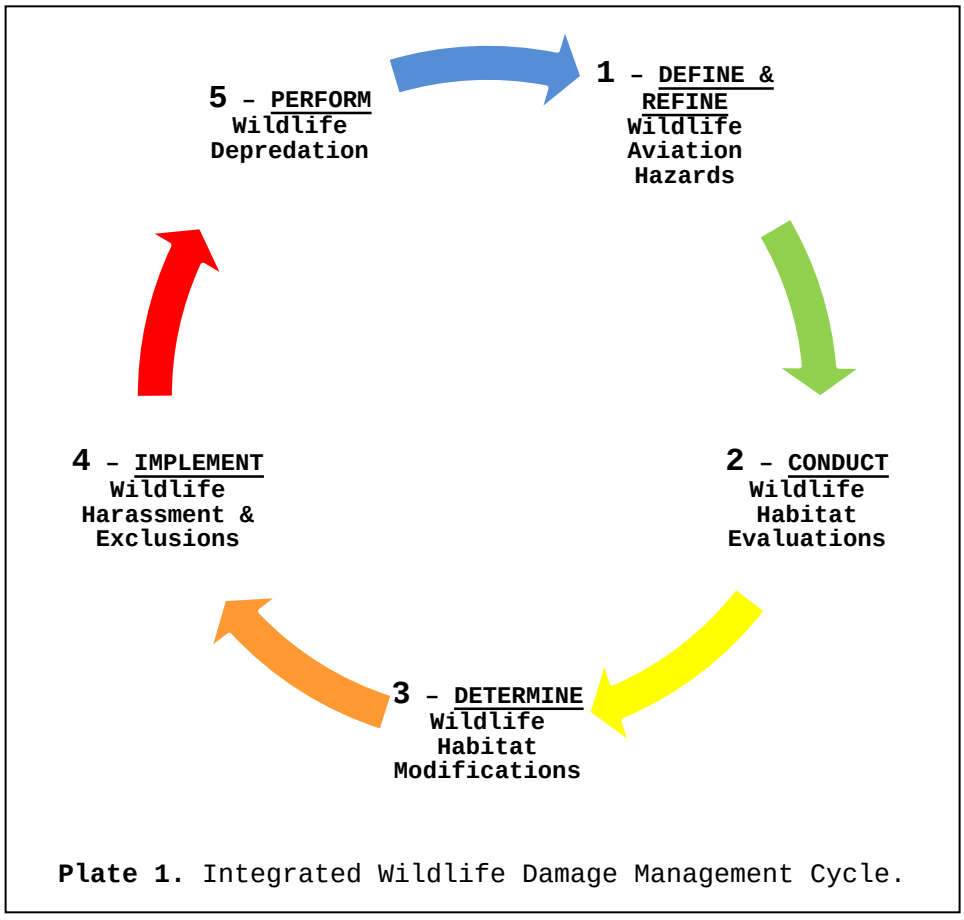

Plate 1. Integrated Wildlife Damage Management Cycle.

d. Step Four: Implement Wildlife Harassments and Exclusions. Implementing wildlife harassments includes the application of bioacoustic sounds, loud booming from propane cannons, bright lights, vehicles, man on foot, sirens, USDA-WS expended non-lethal pyrotechnics, etc. Also included in this category are wildlife deterrent devices that discourage the roosting, nesting, foraging, and other habits of wildlife. Direct harassment of hazardous wildlife is the preferred immediate wildlife hazard clearing methodology at NAS Oceana and

NALF Fentress. Unfortunately, some species become accustomed to the harassment methodologies, making step five, depredation, a required final step in managing wildlife hazards to aviation safety.

e. Step Five: Performing Wildlife Depredation. Step five in the IWDM Cycle is depredation. All depredation actions conducted at NAS Oceana and NALF Fentress shall be carried out by USDA and Natural Resources personnel, and only under the approved and appropriate wildlife harassment and depredation federal, state, and if necessary, local permits.

(1) Depredation. The removal of a species from the air facilities is the last resort in the IWDM Cycle, and is only determined to be the correct course of action if all other methodologies have failed to manage the wildlife hazard. There are, however, some instances when depredation is the only option available to make the flying environment safe.

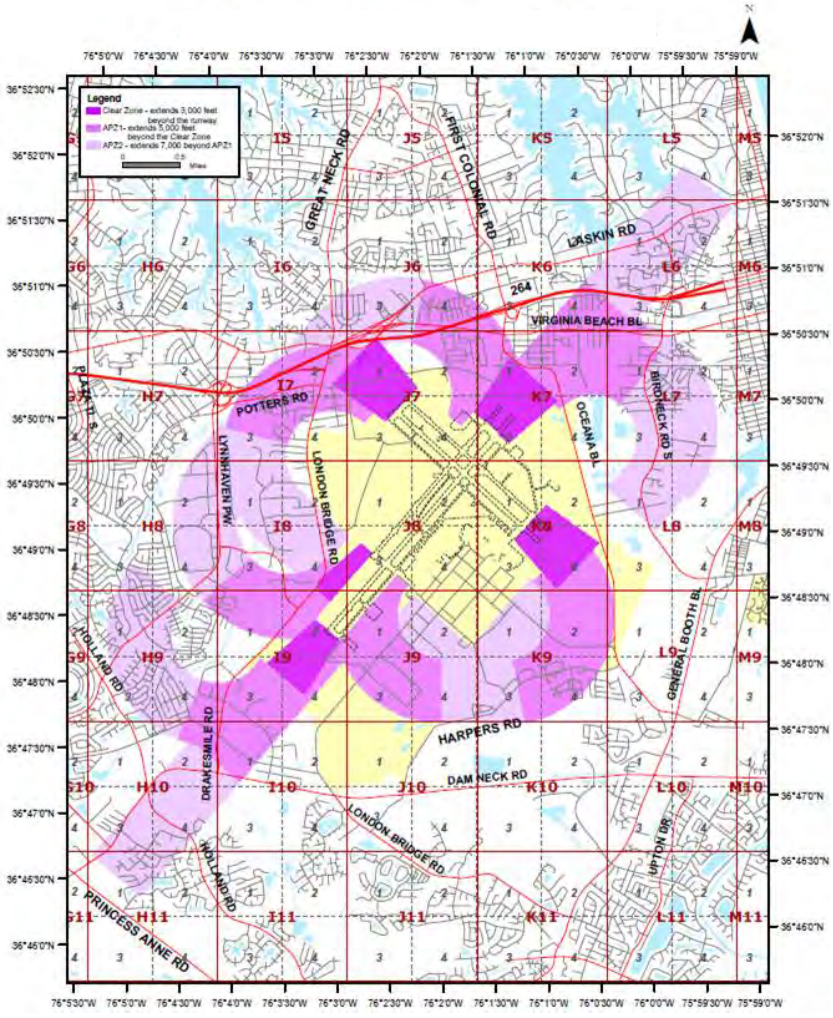

Plate 2. NAS Oceana AOA and control zones.

4. Wildlife Hazard Assessments. Through a Commander, Navy Installations Command (CNIC) initiative with the USDA-WS, a Wildlife Hazard Assessment (WHA) was completed for both NAS Oceana and NALF Fentress, enclosures (11) and (12). The WHAs provide accurate data on the types and numbers of wildlife observed at both airfields. The WHAs also document the indigenous wildlife's behaviors and habitat attractants. This biological data, in

conjunction with the INRMP data and requirements, produces the framework necessary to apply Operational Risk Management (ORM) to the airfields' BASH Program by defining a balance of reported BASH hazards from the observed daily and seasonal monitoring of the wildlife hazards for aircraft operating at or in the vicinity of NAS Oceana and NALF Fentress.

Both of the installation WHAs are focused on the Airport Operations Area (AOA), and the aircraft approach and departure corridors. The areas highlighted in yellow over the runway and taxiway surfaces in Plates 2 and 3 depict the primary AOAs for NAS Oceana and NALF Fentress, and the aircraft control zone areas in magenta.

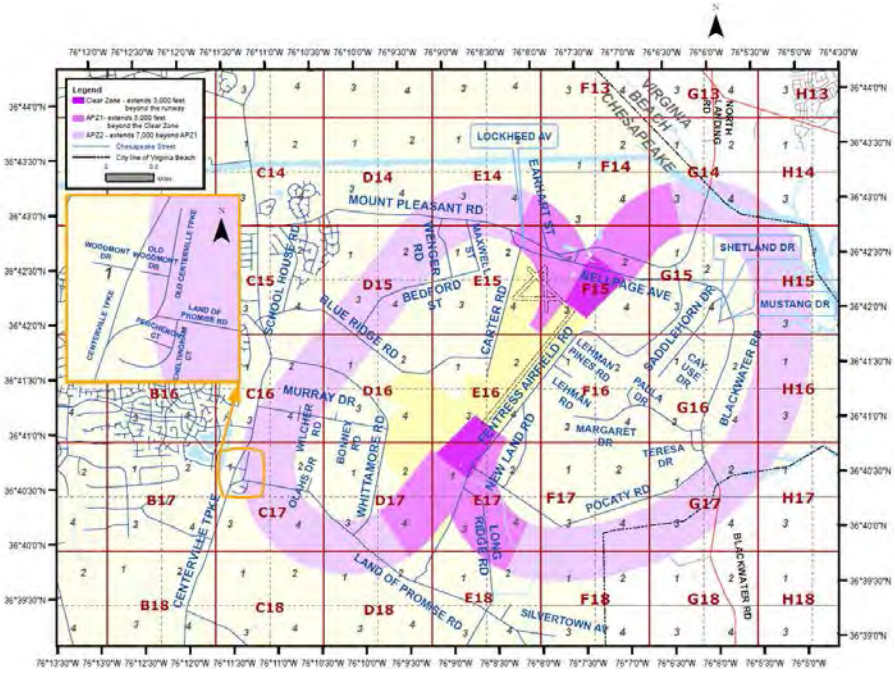

Plate 3. NALF Fentress AOA and control zones.

Currently there are over 300 turbine engined aircraft stationed at NAS Oceana to include 18 F/A-18 squadrons, T-34C turboprop aircraft, and a C-40 squadron. Due to the regionalization of DOD assets, every kind of propeller-driven, rotary-wing, turbine powered transport, and tactical jet aircraft in the DOD inventory routinely conduct aircraft operations from NAS Oceana and NALF Fentress each day. The FAA recommends that airports that primarily operate turbine engine powered aircraft follow a BASH plan that manages wildlife attractants based on a perimeter of 10,000 feet of separation distance from the AOA, Plate 4. This is not possible due to the geographic reality that NAS Oceana is situated within a 2 statute mile radius of the Atlantic Ocean. Also, significant portions of certain aircraft instrument approaches are actually located off-shore. As such, there will be areas suggested for BASH management that will always be out of the control of any BASH effort.

Accordingly, the IWDM practices for the Installation BASH Program are tailored to fit the existing geographical and

aeronautical constraints, focusing the primary wildlife damage management to the depicted AOAs and aircraft travel corridors. These are the areas that the NAS Oceana Installation BASH Program will prioritize into zones to establish the safest flying environment achievable.

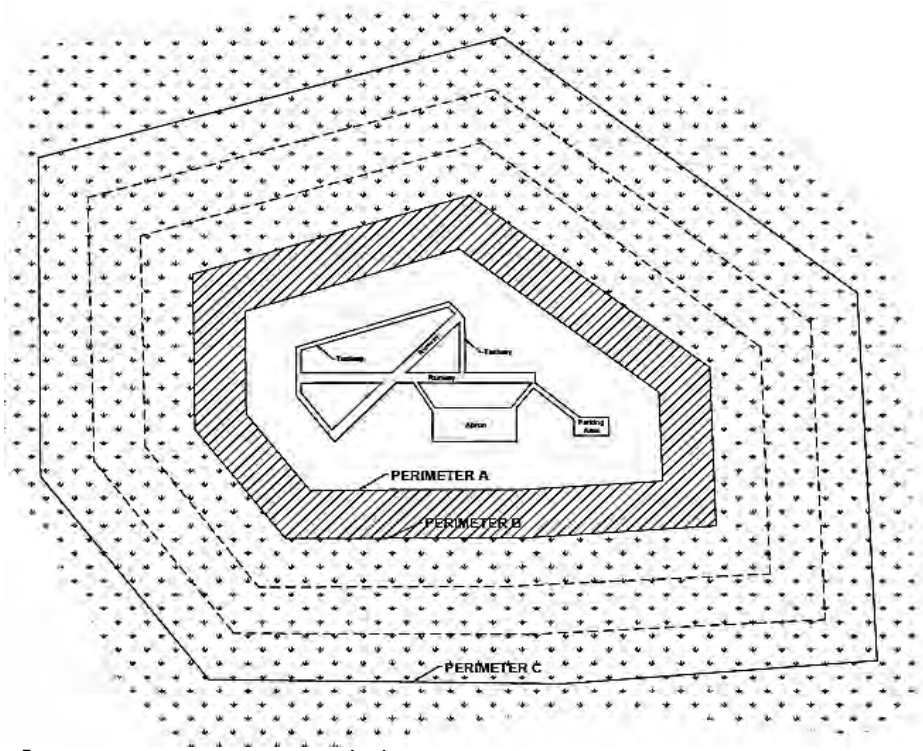

Plate 4. FAA recommended BASH attractants management zones.

5. BASH Strategic Priority Zones. Due to government property management constraints and geographic realities of the NAS Oceana and NALF Fentress air facilities locations, there will be three active BASH management priority zones that will implement the NAS Oceana BASH Program strategy:

a. First Strategic Priority Zone*:* Perimeter “A” represents the NAS/NALF AOAs.

b. Second Strategic Priority Zone*:* Perimeter “B” represents the Aircraft Control Zones on government property.

c. Third Strategic Priority Zone*:* Perimeter “C” represents the Aircraft Control Zones off government property.

References (a) through (j) underscore the fact that 90 percent of all aircraft strikes occur between the surface and 3,000’ Above Ground Level (AGL), with 78 percent occurring from the surface to 1,000’ AGL. Managing wildlife aircraft strike hazards requires managing not only wildlife habitats and attractants located on the airport’s operating surfaces, but also the land located under the primary flight paths of our military aircraft.

From time to time, this means that BASH Program activities will be proposed for IWDM operations outside the boundaries of our federal property, on a case-by-case basis. It is important to understand that successful IWDM is an ongoing process that slowly, over time, hardens our installation airfields against BASH hazards. The Commanding Officer will put forth all reasonable efforts to collaborate with the cities of Virginia Beach and Chesapeake to bring the highest level of BASH

awareness and sustain the most realistic, and continuous IWDM program possible.

6. BASH Operational Risk Management (ORM). The Naval Aviation Safety Program (NASP)requires the integration of the five-step ORM process for all aviation procedures and programs: 1-Identify Hazards; 2-Assess Hazards; 3-Make Risk Decisions; 4-Implement Controls; and 5-Supervise/Monitor for Necessary Changes. Proper ORM for the Installation BASH Program starts by identifying the wildlife risks to aircraft operations at the airfields. This is the function of the airfield WHAs. By applying proven IWDM methodologies based on the observed wildlife behavioral data in the WHAs, informed risk decisions can be made by deciding on the probability and severity of the risks of wildlife to flight operations. This is the methodology for the Installation BASH Plan to define the necessary risk mitigation steps of the NASP ORM and SMS SRM processes. The final ORM/SRM process is the responsibility and function of the BASH Working Group.

Note

The Air Operations/Assistant Air Operations Officer and Airfield Manager shall be notified any time local BASH conditions change to Heavy AND are judged to present an imminent threat to ongoing flight operations.

a. BHC Situational Awareness/Making Active Risk Decisions. In order to allow both airfield operators and aircraft operators to make acceptable real-time risk decisions, the BHC must be observed and reported to the aircraft operating at these airfields, with an understanding that the BHC is a report of a temporary condition, as wildlife is constantly in motion on the airfields. This process is completed through the following procedures:

(1) Establishing SFFO. At least twice in each 24-hour operational period, typically just after sunrise and just prior to sunset, the NAS Oceana and NALF Fentress airfields are “certified safe for flight operations (SFFO),” to include being assessed for BHCs. In addition, SFFO is “reset” after every significant weather event, aircraft emergency, and prior to each runway change. This ensures SMS Safety Assurance prior to airfield operations.

(a) During the SFFO period, for NAS Oceana, AFF and GEMD work together to perform the “airfield set-up” requested by the ATC FWS that is favorable based on existing and forecasted airfield meteorological conditions. AFF will adjust, as necessary, the visual landing aids to the duty runways, FOD check all runway and taxiway surfaces, and perform airfield arresting gear checks while GEMD adjusts and verifies airfield lighting, radio communications, and other essential airfield equipment checks.

(b) At NALF Fentress, a similar routine will be conducted, led by the NALF Fentress Airfield Maintenance Crew and ARFF duty crew.

(c) Once all Air Operations Divisions report their airfield checks are complete and satisfactory, the NAS Oceana FWS will report airfields are SFFO to the AODO. Integral to this SFFO report is the recommendation to the FWS of the initial BHC setting, based on observations from each airfield’s BDDT.

b. BHC Observation and Active Reporting. The Air Operations Officer, Air Traffic Control Facility Officer (ATCFO), AODO, FWS, or designated representative ensures hazardous conditions are reported. Declaration of a BHC will be based on the following:

(1) Visual observation of bird activity on or near airfield by Tower or BDDT personnel.

(2) Information relayed by ATC RADAR, airborne or taxiing aircraft.

(3) Observations relayed to Tower by any of the following personnel: AFF, weather observers, GEMD, Public Works airfield lighting technicians, FOD Sweepers, grass mowers, ARFF crews, security police, tenant squadrons, and transient aircraft crews, or any other personnel driving on the airfield.

c. BHC Airfield Settings. The following BHCs will be utilized at NAS Oceana and NALF Fentress to inform aircrew and support personnel of the currently observed bird threat to operations. Bird locations should be given with the condition code.

(1) BHC Heavy (Severe). Defined as heavy concentrations of birds (more than 15 large or 30 small) on or immediately adjacent to the active runway or aircraft approach areas that present an immediate hazard to flight operations. Active dispersal MUST BE CONSIDERED during this condition. BHC Heavy may also be declared when birds of any size or quantity present an immediate hazard.

****** WARNING ******

Landing or departing in condition HEAVY may result in aircraft damage from a bird strike.

(2) BHC Moderate. Defined as moderate concentrations of birds (typically 5-15 large or 15-30 small) observable in locations that present a probable hazard to flight operations. Positive actions may be required to disperse the birds away from the AOA.

(3) BHC Light. Sparse bird activity on and above the AOA (less than BHC Moderate) with a lower probability of aircraft striking hazard.

Note

Personnel making BHC reports may not necessarily follow the exact bird counts as mentioned, as flying birds must sometimes be estimated as a mass. As such, these numbers for BHCs are just a guide. If, in the judgment of the Tower Supervisor or Landing Signal Officer (LSO), the number of birds is less than those indicated for a specific BHC, but a hazard is believed to exist, a higher BHC may be declared. Example: Condition HEAVY may be declared if one Canada Goose is immediately adjacent to the active runway.

d. Seasonal BHC Phases. The seasonal migration as wildlife prepares for winter and spring causes a change in the otherwise normal wildlife activities, and populations. The FAA has completed several studies relating to the change of seasons effect on BASH conditions, references (c) and (i). As such, NAS Oceana and NALF Fentress will align BASH activities and aircraft notifications with seasonal changes as well to provide an additional ORM-layer of protection for our station and transient aircraft. Specifically:

(1) Passive Aircrew Notification: BASH Phase I. The Phase I portion of the year is the part of the season that occurs outside the normal migratory habits of the local indigenous wildlife species. This represents the portions of the year that are less likely to produce an abnormally high amount of BASH hazards to aircraft. This condition will be reported in the DOD FLIP publications for general flight planning purposes to all transient and local aircraft custodian activities.

(2) Passive Aircrew Notification: BASH Phase II. The Phase II portion of the year is the most active migratory periods of the year at NAS Oceana and NALF Fentress due to the high levels of wildlife migration of indigenous and transitory species. This has been determined to be the most likely periods of the year to produce a BASH event. This condition will be

reported in the DOD FLIP publications for general flight planning purposes to all transient and local aircraft custodian activities.

****** WARNING ******

During NAS Oceana and NALF Fentress BASH Phase II periods of the year, performing aircraft operations below 3,000' AGL within +/- 1 hour of local sunrise and sunset, when bird activity is generally at the highest statistical period for a bird strike with an aircraft, is not advisable. It is during these times

that airfield BASH prevention efforts may be overwhelmed, and ineffective at wildlife dispersal. Aircraft operating at or below 1,000' AGL should exercise extreme caution, and should only be of an operational necessity due to the increased potential of a bird strike event.

7. BASH Detection and Dispersal Team (BDDT). The primary responsibility for wildlife detection and dispersal falls under the control of the BDDTs for NAS Oceana and NALF Fentress. A trained BDDT will be established for each airfield to carry out detection and non-lethal dispersal activities. Lethal dispersal activities will only be carried out by the Natural Resources department and USDA-WS personnel, under the depredation permits issued by the U.S. Fish and Wildlife Service and Virginia Department of Game and Inland Fisheries (VDGIF).

a. Personnel Composition. The BDDT shall be comprised of personnel from NAS Oceana's transient line airfield support crew, NALF Fentress airfield maintenance personnel, the Airfield Manager (AFM), Public Works FOD Sweepers, and select Aircraft Rescue Fire Fighting (ARFF) personnel. While every person on the airfield or within the AOA has a responsibility to maintain BASH detection situational awareness, the BDDTs have the specific tasks of daily airfield monitoring and wildlife cataloging, as well as performing active dispersal for imminent BASH threats to flight operations.

b. Training Requirements. Each member of the BDDT must complete BASH Program familiarization training as defined by the FAA in reference (g). These requirements will be met through a USDA-WS approved IWDM training class, and on-the-airfield practical application of wildlife identification, harassment, and dispersal skills.

(1) Weapons Training. The NAS Oceana Security Department shall provide weapons and pyrotechnics training to U.S. Navy personnel that are determined to have a need to possess weapons currency to properly execute their assigned wildlife harassment and depredation responsibilities. As such, *not all BDDT members shall possess weapons qualifications or recurrency requirements*.

(2) The USDA-WS, as a separate federal agency, is responsible to obtain and maintain their weapons qualifications training and recurrency under USDA-WS guidelines, reference (b).

c. Initial Qualification. All prospective BDDT personnel that complete the airfield's USDA-WS approved IWDM training, and successfully demonstrate BDDT skills to correctly identify wildlife, and safely harass wildlife away from flight critical areas, shall be qualified BDDT personnel, and designated in writing by the Air Operations Officer. Qualified BDDT personnel should have training records to document their USDA-WS IWDM

training and BDDT qualifications.

d. Recurrency Training Requirements. All BDDT personnel will be required to complete 12-month recurrency IWDM training to maintain their qualifications, and to allow for BASH Program growth and adaptation to WHA observations, and WHMP adjustments in IWDM. BDDT initial and recurrent training provides an essential link in the Safety Assurance of NAS Oceana's SMS.

e. BDDT Designation and Currency. Air Operations will maintain a list of qualified and current BDDT members for monitoring by the BASH Working Group and the Natural Resources Manager to be kept along with installation official wildlife harassment and depredation permits.

f. Bioacoustic Harassment Equipment Operation. The BDDT will be trained to operate acoustic harassment equipment, to include sound making devices, and propane cannons. The Air Operations department will conduct training to operate this equipment in accordance with manufacturer's operating instructions, with additional operational risk management procedures in place, and approved by the Air Operations Officer.

g. Normal Routines. The BDDT will perform the following normal working routines:

(1) Be active on the airfield as needed and be on call 24 hours a day to carry out bird/animal strike hazard detection and dispersal activities. The BDDT shall have immediate access to bioacoustic equipment for wildlife dispersal (if required).

(2) Convey all BHC observations at NAS Oceana to the AODO and/or ATC FWS; at NALF Fentress, make BHC observations to the NALF Fentress Airfield Observers and the Squadron Landing Signal Officers.

(3) Report any bird and/or animal strike discovered on airfield. Report any changes in wildlife activity to the AODO.

(4) Create and maintain a wildlife remains collection kit to enable the efficient processing of animal remains for

identification.

(5) Have authority to request temporary taxiway/runway closure for imminent wildlife strike hazards.

8. Installation BASH Plan. The daily conduct of BASH activities and procedures required to manage current BASH conditions at NAS Oceana and NALF Fentress is called the Installation BASH Plan. The Installation BASH Plan works in tandem with the normal airfield maintenance routines to establish the BASH Airfield Safety Triangle, Plate 5, at the same time as the airfields are readied for normal flight operations, as specified in the following steps:

a. Step One – Assess and Set the Airfield BHCs. During the daily airfield SFFO preparation periods, at NAS Oceana, AFF will perform an assessment of existing BHCs on the airfield. At NALF Fentress, a similar routine is being conducted, led by the NALF Fentress OIC, the Airfield Maintenance Crew and ARFF duty crew. During each SFFO preparation period, the BDDT members for both airfields shall perform Step One of the BASH Airfield Safety Triangle, assessing and documenting their wildlife observations utilizing enclosures (2), (3), (4), (5), (6) and (7).

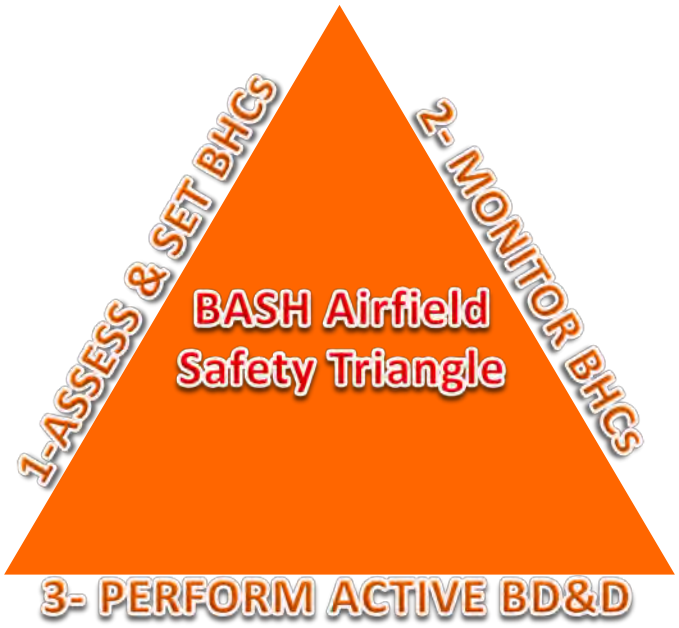

Plate 5. The BASH Airfield Safety Triangle.

Once all Air Operations Divisions report their BHC assessments, and both airfield checks are complete and satisfactory, the NAS Oceana FWS will report airfields are SFFO to the AODO, and begin or continue flight operations. At this time, the initial BHC is set, and the BASH Airfield Safety Triangle is established at both airfields, and flight operations commence or continue uninterrupted.

b. Step Two – Monitor the BHCs. Wildlife activities are dynamic. Wildlife is constantly transiting the airfield environment - foraging, loafing, feeding, etc. These dynamic activities are related to the time of day, the time of year, weather conditions, and habitat. This is why the BASH Safety Triangle must be re-established during all SFFO preparation periods.

As the day progresses, the BDDTs monitor the airfields and recommend changes to the airfields' BHC to the NAS Oceana FWS and AODOs as necessary based on actual wildlife observations.

c. Step Three – Perform Active BASH detection and dispersal (BD&D). From time to time, Active BD&D is necessary to respond to immediate wildlife incursions on the airfield.

When a wildlife incursion is observed, the BDDT will be activated to respond to the wildlife threat. A determination will be made by the BDDT Leader of what action needs to be taken

to lessen or disperse the menacing wildlife away from the flight path of aircraft in the airfield pattern. Once the wildlife hazards are dispersed, the BASH Airfield Safety Triangle must be reset by performing a new SFFO inspection period, and resetting the airfield BHC.

9. Aircraft Strike Categories and BASH Reporting Guidelines. Everyone involved in the conduct of aviation, including flight crews, aircraft maintenance personnel, and airfield support personnel, have a responsibility to report bird/animal strike events. U.S. Navy Aviation Squadrons must also remember to include squadron man-hours used to capture BASH cost per event, and report these events to the Naval Safety Center via WESS in accordance with reference (m).

There are differences in the management of civilian and military aircraft when it comes to BASH reporting. Reference (t) requires each U.S. Navy air-capable facility to "report all wildlife strikes in accordance with reference (m), manage all facilities in accordance with reference (s), and maintain procedural consistency with reference (e)."

To achieve both the spirit and intent of the FAA's and DoN's BASH Program safety goals, and to maintain an accurate Installation Wildlife Strike Record, the NAS Oceana BASH Program will blend the following existing FAA aircraft strike reporting guidelines, reference (d), with the following amplifying reporting clarifications, reference (m).

a. FAA Aircraft Strike Categories. The FAA defines that an aircraft wildlife strike has occurred when one or more of the following conditions occur:

(1) A pilot reports striking one or more birds or other wildlife during any taxi, takeoff, low level, or landing evolution

(2) Aircraft maintenance personnel identify aircraft damage as having been caused by a wildlife strike

(3) Personnel on the ground report seeing an aircraft strike one or more birds or other wildlife

(4) Bird or other wildlife remains, whether in whole or part, are found within 250 feet of a runway centerline, unless another reason for the animal's death is identified

(5) An animal's presence in the AOA has had a significant negative affect on a flight (aborted takeoff, landing waveoff, high-speed emergency stop, or aircraft leaving the paved surfaces to avoid collision with an animal)

Note

Aircrews are encouraged to report near-misses that involve evasive action or whenever the proximity of the miss is "too close for comfort."

b. BASH Reporting Guidelines. Post-flight aircraft inspections and follow-up reporting of bird and/or animal strikes are an essential and important part of the BASH program. Whenever possible, for all DoN Aircraft Custodians, Squadron Aviation Safety Officers are required to submit WESS reports for incidents involving their aircraft in accordance with reference (m). In general, if an aircraft strike occurs within the NAS Oceana/NALF Fentress AOAs, it shall be reported as a BASH incident for the airfield where the strike occurred. If the location of the strike is unknown, attribute the strike to the airfield where the aircraft spent most of its flight time below 1000' AGL. Data shows that nearly 80 percent of all strikes occur below this elevation.

(1) All aircraft operating at NAS Oceana and NALF Fentress shall notify their controlling authority as soon as able after a suspected BASH incident has occurred.

(a) Upon receiving notification from an aircraft that a suspected BASH incident has occurred, the NAS Oceana Tower Supervisor or NALF Fentress LSO or Airfield Observer will notify the NAS Oceana AODO. The AODO will dispatch the appropriate airfield BDDT to try and locate and/or collect any wildlife remains to give to the local U.S. Navy Aviation Squadron for processing and reporting.

(b) If the aircraft experiencing the strike in NAS Oceana airspace does not belong to a tenant squadron, then the wildlife sample will be gathered by the appropriate BDDT, and enclosure (3) shall be completed by that BDDT. The wildlife sample and the completed enclosure (3) will be delivered to the NAS Oceana Installation Aviation Safety Officer (ASO) to construct the required WESS report.

(c) Once the WESS report has been generated to document the wildlife strike, the sample and completed WESS report should be taken to the Natural Resources Manager, Public Works Department, building 800. The Natural Resources Manager (NRM) will ensure correct submission and reporting to the Smithsonian Institute.

Note

It is vitally important that the date and WESS Report serial number be included on the sample in case it gets separated from the report.

(d) If the strike is discovered by airfield personnel and the BASH aircraft is known, the AODO shall be informed to facilitate ATC contact with the aircrew in the suspected BASH incident aircraft.

(1) If a wildlife strike has resulted in animal remains on or near the active runway, SFFO will need to be reset for the airfield. To complete this action, the appropriate BDDT will be deployed to collect any available wildlife remains and FOD from the airfield surface, returning the flying environment to SFFO.

(2) Once the airfield is reset to SFFO, the BDDT will turn over the wildlife sample to the AODO for transfer to the local squadron for correct processing and WESS reporting. If the aircraft is not a tenant squadron, then the appropriate BDDT shall complete enclosure (3) and deliver the wildlife sample and the completed enclosure (3) to the NAS Oceana Installation ASO to construct the required WESS report.

(e) If the strike is discovered by airfield personnel and the BASH aircraft is unknown, the BDDT will be deployed to collect any available remains from the airfield surface, and will turn over the wildlife sample, with a completed enclosure (3), to the AODO for coordination with the NAS Oceana ASO to complete the aircraft strike report via WESS, in accordance with reference (m).

c. Triggering Wildlife Aircraft Strike. Reference (a) defines a “triggering strike” as:

(1) An aircraft that experiences multiple wildlife strikes

(2) An aircraft that experiences substantial damage from striking wildlife. Substantial damage is defined as damage or structural failure incurred by an aircraft that adversely affects the structural strength, performance, or flight characteristics of the aircraft and that would normally require major repair or replacement of the affected component(s)

(3) An aircraft experiences an engine ingestion of wildlife

(4) Wildlife of a size, or in numbers, capable of causing a wildlife strike triggering event is observed to have access to any airport flight pattern or aircraft movement area

Note

When an aircraft experiences a triggering wildlife strike at NAS Oceana or NALF Fentress, a BWG review of the Installation BASH Program, including associated WHMP criteria, and the BWG minutes of outstanding BASH Program discrepancies shall be completed utilizing enclosures (4) and (10).

After the Installation ASO has received a BASH Strike Report, enclosure (3), he/she shall make a determination to validate the wildlife strike as a triggering event in accordance with reference (a). If such a determination is made, the Installation ASO shall complete a Wildlife Strike Triggering Event Checklist, enclosure (4), and route to the members of the BWG for disposition.

10. Bird/Animal Remains Collection and Identification. All strike data is entered into Naval Safety Center data bases (WESS) to help track and identify BASH hazards. It is necessary to know which species are causing BASH strike problems so appropriate measures can be taken. Identification of bird remains is essential. Whenever bird remains are found, the following preservation procedures should be followed referencing enclosure (7):

a. Collect a sample of the remains and place in a zip lock bag. Use alcohol only, never bleach or water to collect snarge from aircraft surfaces. Even if sample is just a small part, feather or bloody smear, the species can be identified by the Smithsonian Institute Feather Identification Lab through microscopic and DNA techniques.

b. Approved BASH reporting forms for transient aircrew will be located at the AODO Watch Desk or NALF Fentress Quarterdeck. Once the approved BASH report is completed, the wildlife strike incident will be filed as a WESS report by the Installation ASO. A wildlife strike sample, along with the WESS report, will be submitted to the NRM for submission to the Smithsonian Institute.

c. Label both the bag and the form with the date, time, initials, and unit POC. Any other relevant information concerning the nature and circumstances of the aircraft wildlife strike will help refine the quality of the BASH report, and should be included.

d. Give form to AODO and place remains at the USDA-WS animal recovery station, as directed by the AODO.

e. Either USDA-WS personnel or the NRM are available to assist with bird/animal aircraft strikes sample collection, reporting, and submission requirements.

f. Carcasses will be placed at the USDA-WS animal collection station after the sample has been taken. Carcasses MUST be bagged and properly labeled PRIOR to deposit in the collection station. Disposal of carcasses will be handled through USDA-WS.

11. BASH Working Group (BWG). The BWG shall serve as the primary advisory group to the Installation Commanding Officer to help shape and guide installation BASH Program initiatives. The overarching agenda of the BWG is to manage the entire IWDM process, completing the critical ORM/SMS-SRM process: "supervise/monitor for necessary changes."

Note

In order for the Installation BASH Plan and Installation IWDM strategy to work effectively, the BWG must provide oversight and recommendations for consideration to Installation instructions, plans, working routines, or construction projects that may have an impact on wildlife populations and habitats. This mandatory prior coordination is especially important for actions that occur in or directly influence the First and Second BASH Strategic Priority Zones, Plate 4.

a. BWG Membership. The BWG membership will be constructed by skill set and constituency necessary to provide complete IWDM and BASH Program management for the installation's airfields. Whereas all BWG members are vital for proper BASH Program definition and execution, not all BWG members have daily BASH Program responsibilities assigned. These members may be requested to participate in the BWG on an 'as desired and/or required basis' by the Air Operations Officer, functioning to provide their expert advice for complete Installation BASH Program management. Group membership shall consist of:

(1) Air Operations Officer (Chair)

(2) Assistant Air Operations Officer (Co-Chair)

(3) Aviation Safety Officer (Co-Chair)

(4) USDA-WS Biologist(s) (as assigned)

(5) Airfield Manager

(6) Air Traffic Control Facility Officer

(7) Airfield Facilities Division Officer (as req'd)

(8) NALF Fentress Officer-in-Charge (as req'd)

(9) CSFWL Aviation Safety Officer

(10) CSFWL Maintenance Officer (as req'd)

(11) Installation Public Works Officer

(12) Installation Environmental Programs Director

(13) Installation Natural Resources Program Manager

(14) Staff Judge Advocate (as req'd)

(15) Security Officer (as req'd)

(16) Air Installation Compatible Use Zones (AICUZ) Manager (as req'd)

(17) Public Affairs Officer (as desired)

(18) City of Virginia Beach or Chesapeake representative(s) (as desired)

b. BWG Quarterly Meeting. The BWG shall hold a quarterly working meeting to assess the status of the Installation BASH Program. The BWG quarterly meeting agenda shall be published ahead of the meeting to allow members to prepare for the meeting with any research required to support ongoing BASH projects or plans.

c. BWG Installation Responsibilities. The BWG must review, monitor, adapt, and develop guidance that implements the Installation IWDM process.

(1) This key oversight extends to the installation Integrated Natural Resources Management Plan (INRMP), the installation Integrated Pest Management Plan (IPMP), and the four elemental plans that create the Installation Wildlife Hazard Management Plan (WHMP). The WHMP shall be constructed and reviewed utilizing historical reviews of wildlife habitat management, wildlife harassment, and wildlife depredation, in conjunction with enclosures (4) and (8).

(2) The BWG must establish requirements for an annual BASH Program self-assessment process in accordance with appendix A-3 of reference (s). This annual review checklist will include, at a minimum, the elements contained in enclosure (10).

(3) Oversee and approve changes to the training of the BDDT, conduct periodic BDDT qualification reviews, and perform inspections of the BASH Program using enclosure (10).

(4) The BWG is charged with the responsibility to review the currency and the demonstrated effectiveness of all Installation IWDM Cycle and BASH Program working guidances, during the performance of the installation annual BASH Program review, utilizing enclosures (9) and (10).

d. BWG actions for a Wildlife Strike Triggering Event. In the event of a wildlife strike triggering event, the BWG must perform a review of the Installation WHMP and BASH Program to determine if BASH program elements or procedures attributed to the aircraft wildlife strike event.

(1) Each wildlife strike at NAS Oceana and NALF Fentress requires the completion of the NAS Oceana BASH Strike Report. The Installation ASO is the lead agent to ensure the timely completion of all BASH Strike Reports, and to facilitate BWG reviews of wildlife strike triggering events. With the completion of each BASH Strike Report, the ASO shall determine if the wildlife strike meets the criteria for a wildlife strike triggering event.

(2) If the triggering event criteria are met, upon notification from the ASO, each member of the BWG shall:

(a) Complete the Wildlife Strike Triggering Event Checklist, enclosure (4), in accordance with reference (a), to determine if the current BASH Program Daily Routines and/or WHMP or component plans failed to meet adequate IWDM practices.

(b) The Installation ASO shall provide the membership of the BWG a copy of the wildlife strike triggering event specific BASH Strike Report, and a serialized enclosure (4) via email for BWG member review. BWG members are encouraged to request the ASO provide any/all BASH Program documentation to include copies of the Installation Wildlife Activity Logs necessary to facilitate a timely BWG review of the strike incident, and a comprehensive review of current BASH Program elements.

(c) The findings of each WHMP Triggering Event Review shall be coordinated by the Installation ASO, and reported to the Installation Commanding Officer via the Air Operations Officer. All BWG program reviews or BWG decisions shall be detailed in the installation BWG minutes for BASH program management. This continuous historical record will provide airport compliance with the Safety Risk Management elements of the airport SMS program, and help to develop improved BASH Program management practices for NAS Oceana and NALF Fentress.

12. Wildlife Hazard Management Plan (WHMP). The BWG shall research, develop, author, maintain, and monitor the Installation WHMP, utilizing enclosures (3), (4), (8), (9) and (10). The review cycle for the WHMP shall be every 12 months, at a minimum, and after each wildlife strike triggering event. The WHMP will consist of several key elements, and include, at a minimum:

a. Food/Prey Management Plan. This includes installation pest identification and management practices, hunting practices, garbage collection and disposal practices, and insect management.

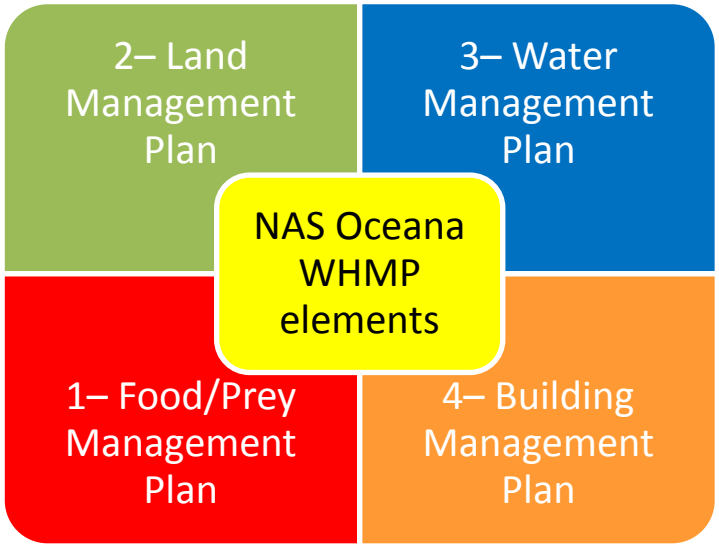

Plate 6. NAS Oceana WHMP elements.

b. Land Management Plan. This includes agricultural lease management and interaction, AOA vegetation, grass cutting, landscaping, drainage ditch vegetation management, and tree cutting.

c. Water Management Plan. This includes permanent water, wetlands, canals/ditches/streams, sewage, ponds, and ephemeral water (runways, taxiways, aprons), and other wet areas.

d. Building Management Plan. This includes all structures, inhabited / planned / abandoned, existing on the airfield, and within the AOA, as well as navigational, cell, water, and communications towers, and other roosting spots.

The goal of the WHMP will be to draw together the separate element plans with the Integrated Natural Resources Management Plan (INRMP) in order to provide a seamless, all installation participative BASH Plan that actively manages each contributing factor to wildlife habitat management and modification, resource protection, repelling and exclusion, and removal of installation BASH hazards. As such, the development of an integrated WHMP brings every installation department together in an orchestrated methodology that serves as the engine to continue productive BASH Program efforts indefinitely.

13. BASH Program Responsibilities. The responsibility assigned to the NAS Oceana and NALF Fentress departments for the content and conduct of the NAS Oceana BASH Program are as follows:

a. Installation Commanding Officer (ICO):

(1) Issue and maintain this instruction that creates the Installation BASH Program. The BASH Program shall detail the IWDM integration and sustainment actions, and a BASH plan used for daily BASH activities.

(2) Designate the Installation Air Operations Officer as the Installation BASH Program Manager.

(3) Review quarterly BWG meeting minutes to ensure ongoing BASH issues and working plans are being addressed and solved in an expeditious manner. Initiate regional coordination when required to address installation specific concerns.

(4) Direct an annual BASH Program self-assessment process in accordance with appendix A-3 of reference (s).

b. Air Operations Officer shall:

(1) Determine and direct all BASH abatement actions and training for NAS Oceana and NALF Fentress to include (at a minimum) all responsibilities, actions, and techniques applied in this instruction. Serve as the installation lead action officer, supported by all other departments in the completion of these duties, specifically:

(a) Be designated in writing as the Installation BASH Program Manager responsible for the execution and oversight of the installation BASH Plan. Serve as central point of contact for BASH coordination and planning with other installation departments, installation tenants, and the local community.

(b) Ensure a WESS account for the Installation is established for the mandatory reporting of all BASH incidents.

(c) Ensure aircraft reporting custodians receive assistance in their efforts to report strikes of known and unknown origin, to include remains collection and unknown remains forwarding procedures.

(d) Provide local oversight of the USDA-WS personnel, as assigned, and ensure regular coordination of USDA-WS BASH efforts with other installation departments is accomplished in order for the DOD/USDA IWDM-modeled Installation BASH Program to succeed. Utilize the USDA-WS personnel to complete installation and tenant BASH training standardization. Ensure a smooth working relationship between USDA-WS and all

installation departments required to support BASH efforts, to include regional NRM and legal support.

(e) Chair and facilitate the BWG. Utilize the expertise of the BWG to coordinate and perform periodic reviews of the BASH program to ensure BASH priorities are funded and completed in as timely a manner possible, utilizing enclosure (10). Ensure quarterly BWG Minutes are produced to sustain a focused Installation IWDM Cycle, and report the health of the Installation BASH Program to the ICO.

(f) Ensure BASH formal training requirements for installation personnel involved with air operations is completed and monitored. These training requirements will be different for the BWG, the BDDT, and tenant personnel. This training must include at a minimum: establishing and renewing BASH Program understanding, safe operation and storage of BASH devices (not to include pyrotechnics or weapons), BASH remains collection criteria and procedures, and correct BASH reporting procedures. This training shall be initial and annually recurrent.

c. Installation Aviation Safety Officer (ASO) shall:

(1) Co-Chair the installation BWG to support the Air Operations Officer. Utilize monthly installation Aviation Safety Council meetings to develop installation BASH awareness of this instruction among all participants in the BWG and among tenant commands. Tailor BASH awareness and provide tenant liaison to help gather BASH training requests from tenant commands.

(2) Establish a WESS account for the mandatory reporting of all BASH incidents.

(3) Coordinate with aircraft custodians on the proper reporting, via WESS, and remains collection procedures of all bird/animal strikes of known origin in accordance with references (d), (m), and (s).

(4) Ensure installation personnel are reporting bird/animal aircraft strikes of unknown origin (e.g., bird remains found on a runway and not correlated to a specific aircraft) in accordance with references (s) and (d). Ensure personnel collect and forward remains in accordance with Appendix A-1 of reference (s).

(5) Ensure bird/animal strikes of unknown origin (wildlife found on or near with runway) are reported, via WESS, to the Naval Safety Center in accordance with references (m) and (s). Ensure remains are appropriately packaged and forwarded to the Smithsonian Institution for positive identification per references (d) and (s).

(6) Produce quarterly BWG minutes to document IWDM and the Installation BASH Program. Report attendance of significant stakeholders in the quarterly BWG minutes. Track required initial and recurrent training by BWG, BDDT, and tenant commands as appropriate for installation BASH awareness. Distribute these minutes to ensure installation intra-departmental and tenant BASH awareness. Include available and required training opportunities, wildlife strike reporting results, and remains identification data to the quarterly BWG minutes, and ensure results are analyzed by the BWG for future BASH reduction management strategies.

(7) With the completion of each BASH Strike Report, the ASO shall perform a Wildlife Strike Triggering Event review in accordance with reference (a). If an aircraft wildlife strike event meets the 14 CFR 139.337 wildlife strike triggering event criteria, the membership of the BWG shall be provided a copy of the incident BASH Strike Report and the completed enclosure (4) in order to facilitate a timely BWG review of the strike incident, and a review of current BASH Program elements.

(8) Facilitate annual reviews of the Installation BASH Program utilizing enclosures (4), (9), and (10). The ASO shall ensure installation participation, BASH priority projects are reviewed, and all BASH training is scheduled and performed to support tenant commands.

(9) Assist USDA-WS and Airfield Facilities Division to obtain BASH bioacoustic wildlife harassment equipment for outfitting the BDDT. Monitor all BASH bioacoustic equipment for safe operating procedures, and general safe material conditions. Report discrepancies to the AFM for correction.

d. Airfield Manager shall:

(1) Lead the identification of BASH Program requirements for all airport facilities, runways, taxiways, aprons, drainage areas, and aircraft operations zones at NAS Oceana and NALF Fentress.

(2) Monitor grass height, drainage ditches, and any low areas on the airport surface, especially after rains. Maintain a priority list for facility corrective actions required in order to repair these areas in a fashion that is least attractive to wildlife.

(2) Participate in the Installation BWG. Ensure BWG membership develops practical guidance for the promulgation of the BASH Program as it relates to airfield facilities, planned construction, and daily and seasonal flight operations.

(3) Coordinate the implementation of each element of the Installation Wildlife Hazard Management Plan (WHMP) to ensure

all natural resource specific plans (water management, plant management, waste management, and land management) contain and/or consider the necessary requirements of IWDM.

(4) Coordinate with the Air Traffic Control Facility Officer (ATCFO) to develop and utilize an airfield BASH Hazard Condition (BHC) warning notification protocol. This protocol will ensure seamless routine updates to aircraft operating at NAS Oceana or NALF Fentress.

(5) Coordinate with the ATCFO to ensure the correct Air Traffic Control (ATC) and airfield maintenance operations protocols are maintained to respond to emergent BASH hazards on the NAS Oceana and NALF Fentress airfields as wildlife hazards occur.

(6) Assist USDA-WS in the design and fabrication of USDA-WS acceptable wildlife collection stations for use in temporarily storing wildlife remains discovered on the airfield.

e. Air Traffic Control Facility Officer shall:

(1) Serve as a member of the BWG.

(2) Coordinate with the AFM to develop and utilize an airfield BASH Hazard Condition (BHC) warning notification protocol to ensure BHCs are set at NAS Oceana or NALF Fentress when the airfields are made SFFO.

(3) Ensure seamless BHC notifications are made by appropriate ATC Division personnel to aircraft under ATC positive control via ATIS and Ground/Tower/Radar Control radio communications as BHCs change. This includes issuing flight advisory warnings for BHCs of Heavy (Severe).

(4) Coordinate with the AFM to ensure the correct ATC protocols are maintained to respond to emergent BASH hazards on the NAS Oceana and NALF Fentress airfields as wildlife hazards occur, utilizing the BDDT.

(5) Author and modify local ATC BASH flight safety routines utilizing the authority granted in reference (r) in the NAS Oceana ATC Facility Manual (FACMAN). Ensure the ATC FACMAN reflects the BASH protocols and individual personnel procedures to understand and operate the BASH Program for NAS Oceana and NALF Fentress. Include proper FAA ATC terminology and procedures for bird/animal strike hazard avoidance to the greatest extent possible.

(6) Prepare and maintain current the appropriate facility DOD Flight Information Program (FLIP) flight planning BASH notifications for the Air Operations Officer’s approval.

f. ATC Tower Supervisor shall:

(1) Under the supervision of the ATCFO and the Facility Watch Supervisor (FWS), the ATC Tower Supervisor shall issue BHC updates via ATIS.

(2) Issue BHC Heavy (Severe) Warnings directly to aircraft operating under positive control via radio communication.

(3) Temporarily suspend flight operations if a Heavy (Severe) BASH hazard exists that presents an immediate threat to flight safety, taking the following action in order of precedence:

(a) Attempt contact with USDA-WS personnel if present on the airfield during an emergent BASH event to disperse the wildlife hazard and prevent undue flight operations delays.

(b) If USDA-WS personnel are unavailable, the ATC Tower Supervisor shall contact the AODO to mobilize any or all of the BDDT to immediately disperse the wildlife hazard in order to expedite resumption of normal flight operations.

(4) Facilitate movement of the BDDT on the airfield to disperse bird/animal strike hazards on or near the runway as needed.

g. Air Operations Duty Officers shall:

(1) Activate the BDDT as may be necessary due to airfield observations, or when requested by the ATC Tower Supervisor to disperse emergent BASH hazards in order to resume uninterrupted flight operations.

(a) Notify the Air Operations Officer/Assistant Air Operations Officer and Airfield Manager any time active wildlife dispersal is underway that has caused a taxiway/runway closure or resulted in a temporary suspension of flight operations at NAS Oceana or NALF Fentress.

(2) Accept BASH reports at the Air Operations Duty Office on behalf of the ASO and USDA-WS in their absence. Provide approved BASH Report Forms and sample collection kits in the event personnel who discover wildlife remains on the airfield do not have a WESS account.

h. Airfield Facilities Division Officer shall:

(1) Provide Airfield Facilities Division personnel to assist installation Natural Resources department and USDA-WS

personnel in wildlife dispersal activities as primary members of the BDDT for NAS Oceana.

(2) Facilitate and ensure that BASH formal training requirements for installation personnel involved with air operations, to include the members of the BDDT, is completed and monitored. This training must include (at a minimum):

(a) Familiarization with BASH Program.
(b) Demonstrated understanding of the safe operation and storage of BASH devices (not to include pyrotechnics or weapons).
(c) BASH remains collection criteria and procedures, and correct BASH reporting procedures.
(d) Initial and annually recurrent training.

(3) Investigate all bird/animal strikes involving unknown aircraft. Collect and label all remains involved in the collision and turn into the USDA wildlife collection station for safe keeping until USDA-WS can take custody of the wildlife remains. Collect all known wildlife strike data for report of the BASH incident to turn in to the AODO, ASO, or USDA-WS personnel.

(4) Serve as a member or designate representative for the BWG.

(5) Monitor grass height and condition of drainage features, requirements for filling or street sweeping low areas that collect water following rain events and report requirements as necessary to the AFM.

i. NALF Fentress Officer-in-Charge shall:

(1) All NAS Oceana departments shall make every effort to maintain and support parallel facility compliance with this instruction as it applies to the NALF Fentress facility, to include but not limited to the implementation of the BASH Program, facility sustainment requirements, and BASH procedural and training support.

(2) The NALF Fentress Officer-in-Charge (OIC) shall be a member of the BWG.

(3) The NALF Fentress OIC shall provide airfield maintenance personnel for a BDDT at NALF Fentress.

(4) The NALF Fentress OIC shall work with the Airfield Facilities Division Officer to facilitate and ensure that BASH formal training requirements for NALF Fentress personnel involved with air operations, to include the members of the NALF Fentress BDDT, is completed and monitored. This training must include (at a minimum):

(a) Familiarization with BASH Program.
(b) Demonstrated understanding of the safe operation and storage of BASH devices (not to include pyrotechnics or weapons).
(c) BASH remains collection criteria and procedures, and correct BASH reporting procedures.
(d) Initial and annually recurrent training.

(5) The NALF Fentress OIC shall investigate all bird/animal strikes and collect all remains involved in the collision and turn into the NALF Fentress USDA wildlife collection station for safe keeping until USDA-WS can take custody of the wildlife remains. Collect all known wildlife strike data for report of the BASH incident to turn in to the AODO, ASO, or USDA-WS personnel.

(6) The NALF Fentress Airfield Observers and/or LSO at NALF Fentress may set BHCs based on bird activity near or above the runway at NALF Fentress.

(7) In BHC Heavy (Severe) or Moderate, the NALF Fentress OIC, or the Senior Fire Officer present (in his/her absence) shall determine whether to deploy the NALF Fentress BDDT to disperse the wildlife threat to immediate aircraft flight operations. If such a determination is made, the OIC or Senior Fire Officer present (in his/her absence) shall also notify the Air Operations chain of command at NAS Oceana via the AODO so that a determination can be made to deploy NRM or USDA-WS assets to NALF Fentress for IWDM activities.

(8) The NALF Fentress OIC shall maintain historical records of wildlife harassment conducted by the NALF Fentress BDDT for the NALF Fentress air facility, utilizing enclosure (2), to be included in the BWG quarterly minutes.

j. Installation Public Works Department. The Public Works Department plays a critical role in the overall success of the Installation BASH Program. As such, the Installation Public Works Officer shall ensure that the Installation BASH Program's IWDM methodologies are fully supported within the work division specialties in the Public Works Department as follows:

(1) Participate in the Installation BWG, to include on-site technical reviews of installation BASH programs during periodic Naval Safety Center surveys.

(2) Provide Regulatory Compliance. Be familiar with Federal law 14 CFR 139.337, reference (a), and other specific DOD, Naval Facilities Engineering Command (NAVFAC), and CNIC guidances. Enable timely BASH Program regulatory compliance advice to the BWG Chairman to help build and operate an Installation WHMP, to achieve successful installation INRMP and IWDM integration, and routinely support BASH Program actions.

(a) Review ongoing BASH Program actions to ensure that the program is in compliance with all applicable Federal, State, and Local laws and regulations including, but not limited to, the National Environmental Policy Act and the Clean Water Act, the Endangered Species Act, Migratory Bird Treaty Act, Sikes Act, and the Bald and Golden Eagle Protection Act.

(b) Ensure BASH Program actions are in compliance with all applicable DOD and DoN environmental policies, directives, and instructions including, but not limited to, DOD Instruction 4715.03 and references (k), (n), (p), and (q).

(3) Provide facilities support services and maintenance that correspond to mitigation procedures appropriate to support BASH requirements. Any project exceeding the limit of local approval authority shall be submitted to the Commander, Navy Region Mid-Atlantic and Commander, Navy Installations Command as appropriate for processing and approval.

(4) Coordinate the INRMP and IPMP revisions and annual addendum updates with the Air Operations Officer and the BWG to enable installation participation and input to CNIC regionally produced installation guidance or project planning that impacts the airport operations area, Plate 4. This coordination is critical to the IWDM strategy’s ability to succeed.

(5) Provide BASH Program support to assist installation USDA-WS Biologist(s), and in their absence, to the Air Operations Officer.

(6) Coordinate and manage all applicable natural resources consultations and permits necessary to support BASH Program requirements in a timely manner. These permits include, but are not limited to; U.S. Army Corps of Engineers (USACE) section 404 permits, U.S. Fish and Wildlife Service (USFWS) Migratory Bird Depredation Permits, and Endangered Species Act section 7 consultations.

(7) Through the BWG, ensure BASH Program elements, to include development, maintenance, and sustainment of the installation WHMP, consider sustainable land management practices, adaptive management and scientifically sound monitoring methodologies.

(8) Support WHA periodic updates to ensure data collected is able to be reproduced for monitoring and reporting requirements.

(9) Assist, when needed, in wildlife strike identification, and remains collection. Maintain historical installation wildlife aircraft strike records. Maintain historical records of depredation and wildlife dispersal for the installation properties.

(10) Submit wildlife strike samples to the Smithsonian Institution for positive identification as per references (d) and (s).

k. Installation Security Officer shall:

(1) Provide weapons and pyrotechnics training to U.S. Navy personnel who are determined by the BWG to have a need to possess weapons currency to properly execute their assigned wildlife harassment and depredation responsibilities. *Not all BDDT members shall possess weapons qualifications or recurrency requirements*.

(2) The USDA-WS personnel, as members of a separate federal agency, are responsible to obtain and maintain their weapons qualifications training and recurrency under USDA-WS guidelines, reference (b).

l. Aviation Tenant Commands shall:

(1) Collect a sample of bird remains following aircraft strikes in accordance with enclosure (7). Ensure a WESS report and samples are submitted to the NRM as accurate species identification is important for identifying aviation hazards.

Note

Incomplete wildlife aircraft strike reports weaken the entire aircraft safety chain. In order for the Installation BASH Plan and Installation IWDM strategy to work effectively, all tenant commands must comply with the OPNAV 3750.6, reference (m). Aircraft custodians shall report the costs associated with each BASH incident. By utilizing enclosure (3), detailed aircraft strike data will yield the right level of infrastructure support to the Installation.

(2) Ensure any applicable Installation BHCs, and other facility aviation flight planning ORM data is readily available to aircrews during mission planning.

(3) Issue specific guidance for units on:

(a) Procedures and restrictions to be followed under hazardous BHCs.

(b) Bird strike reporting, damaging and non-damaging.

(c) Bird remains collection and submission.

(4) When able, have a representative attend monthly aviation safety council meetings and disseminate BASH information to aircrews. Emphasis should be placed on the

importance of reporting all significant bird and animal activity that may pose an aircraft strike hazard.

(5) Provide membership to the Installation BWG as desired.

Ultimately, the BASH Program’s effectiveness is dependent upon the active participation of the Naval Air Station staff and the airfield users. Together, the threat of wildlife to naval aviation can be mitigated, one species, one habitat, and one season at a time.

BASH PROGRAM REFERENCE NAVIGATOR

References (a) through (w) have been chosen as a framework to define the technical sub-specialties required to adequately explore each area of performance to promulgate the NAS Oceana BASH Program. These references are extensive, and available upon request.

References

a. 14 CFR 139.337. 14 Code of Federal Regulations (CFR) is the U.S. federal law for Aeronautics and Space. Within 14 CFR is Federal Aviation Regulation (FAR) Part 139. This is the primary guidance for the conduct of flight operations in the U.S., specifically detailing the federal requirement for airport safety standardization and certification. FAR 139, Section 337 specifically details the requirements for airport Wildlife Hazard Assessments (WHAs), Wildlife Hazard Management Plans (WHMPs), and required actions and uses of these airport safety management documents.

b. USDA APHIS Agreement #34-WT-13-7100-0323-IA. This is the Work/Financial Plan for Bird/Animal Aircraft Strike Hazard (BASH) Support on Navy Installations agreement between the USDA-WS and CNIC. This details the requirement for IWDM integration, development of the BDDT, and specifies the IWDM work details that USDA-WS will provide CNIC to help integrate FAA required aviation safety practices with DoN safety practices.

c. FAA Manual: Wildlife Hazard Management at Airports. A complete study of the science and challenges of BASH written for the airport operator.

The FAA Advisory Circular 150 (Airports) Series. An FAA Advisory Circular is the FAA “version” of a DOD or US Navy “instruction.” These are signed out by the FAA Director as a direct interpretation of the U.S. CFR 14. The 150 Series defines every federal requirement that has been developed to effectively, safely, and completely manage airports under U.S. law.

d. 150/5200-32. “Reporting Wildlife Aircraft Strikes” - is the FAA wildlife strike reporting guidance.

e. 150/5200-33. “Hazardous Wildlife Attractants On or Near Airports” – is the FAA guidance for the proper utilization and maintenance of airport operations areas (i.e., airport property) as well as property near airports defined as up to 3 miles from the AOA.

f. 150/5200-34. “Construction or Establishment of Landfills Near Public Airports” – is the FAA guidance

identifying the need for municipal and commercial authorities to work with airport managers to police geographic areas near airports that may attract or harbor animals hazardous to safe aircraft operations, thereby defeating wildlife mitigation efforts within airport operations areas themselves.

g. 150/5200-36. “Qualification for Wildlife Biologist Conducting Wildlife Hazard Assessments and Training Curriculums for Airport Personnel Involved in Controlling Wildlife Hazards on Airports” – is the FAA guidance that details the processes required to build a WHA, WHMP, and provides standards for initial and recurrent BASH training for airfield management.

h. 150/5200-37. “Safety Management Systems for Airports” – is the FAA guidance how airports develop explicit, pro-active, and engaged processes to identify and quantify potential hazards and risks to airport safety – and how to manage these hazards and risks in a systematic, coherent, logical, and reasonable manner.

i. FAA Report: Wildlife Strikes 1990-2011. Released in July 2012, this FAA data has been gathered in conjunction with USDA Wildlife Services. It provides additional source documentation for the NAS Oceana WHA and BWG for formulation of BASH Program actions, and the development of the NAS Oceana WHMP.

j. FAA Eastern Region Bulletin AEA-03-10. This guidance provides the regulation bridge ahead of an under-development FAA AC specifically for WHMPs. The FAA divides the U.S. into regions. Each FAA Region HQ releases interim guidance once it is vetted, to permit airport and airspace management standardization ahead of finalized Federal Law. This FAA bulletin provides essential WHMP guidance, to include specific guidance for WHMP build, and review checklists.

k. DODINST 4150.07. “DOD Pest Management Program,” reflects U.S. Code of Federal Regulations, Title 7, Section 10 and 136 regarding the identification and management of pests onboard military installations.

l. OPNAVINST 3500.39. “Operational Risk Management (ORM),” provides the enabling logic to require an active risk assessment operational methodology. While designed not to inhibit flexibility, initiative, or accountability, ORM mandates U.S. Navy leadership accept no unnecessary risk. “If all detectable hazards have not been identified, then unnecessary risks are being accepted.”

m. OPNAVINST 3750.6. “Naval Aviation Safety Program,” which specifies the requirement to conduct aviation safety hazard reporting for Bird/Animal Aircraft Strike Hazards (BASH). The OPNAVINST 3750.6 introduces several ATC and facility safety

concepts and practices. This reference is a requirement specified in the NAVAIR 00-80T-114 (ATC NATOPS) as an inspection criteria for compliance.

n. OPNAVINST 5090.1. "Environmental Readiness Program Manual," requires the establishment of environmental policies that allow United States Navy forces to operate worldwide in an environmentally responsible manner, heeding federal, state, and local laws to achieve this goal. Included is the requirement to produce an Integrated Natural Resources Management Plan (INRMP), with an annual addendum to allow for the INRMP to be current. The INRMP then functions to serve as the National Environmental Protection Act (NEPA) bridge to define and approve any/all required land management uses onboard the installation, to include active support for the BASH program.

o. OPNAVINST 5530.13C. "Department of the Navy Physical Security Instruction for Conventional Arms, Ammunition, and Explosives (AA&E). This instruction specifies the AA&E requirements to safeguard the pyrotechnics and weapons utilized by NRM and USDA-WS for depredation.

p. OPNAVINST 6250.4. "Navy Pest Management Programs" reflects the DODI 4150.07 requirements, specifically defining NAVFAC and Natural Resource Management (NRM) to work directly to support installations development of practices and procedures that reflect and support all applicable laws necessary to manage installation environmental policies.

q. NAVFAC P-73 Volume II. "Real Estate Operations and Natural Resources Management Procedural Manual" provides the standing orders for influencing NRM's involvement in active management of Navy installations in support of BASH requirements.

r. NAVAIR 00-80T-114 (ATC NATOPS). This is the primary guidance from the U.S. Navy that defines the U.S. Navy aeronautical relationship with the FAA. This reference requires each Naval Air Facility to establish and maintain aviation safety programs and reporting compliance with the OPNAVINST 3500.39 and OPNAVINST 3750.6.

s. CNIC BASH Manual. This is Commander, Navy Installations Command's guidance to broadly define the basis, need, and foundational elements of each air installation's BASH Program. This CNIC Manual mirrors the USAF Pamphlet 91-212 "Bird/Wildlife Aircraft Strike Hazard (BASH) Management Techniques" in Navy language.

t. CNICINST 3700. This is the Commander, Navy Installations Command's guidance that mandates each air-capable installation shall have a BASH Program. The "Navy Bird/Animal Aircraft Strike Hazard Program Implementing Guidance," that delineates

the BASH Program's scope and responsibilities at the TYCOM, Regional, and each supporting BASH program element at the installation level, integrating DON and FAA guidance to manage airport hazards to aircraft operations.

u. CNICINST 3700.3. The "Airfield Management Operations Program" reference is included for Airfield Inspection continuity, and delineates Installation Commanding Officer and Air Operations Officer direct responsibilities.

v. NAS Oceana/NALF Fentress Integrated Natural Resources Management Plan (INRMP). The Installation INRMP is the long term environmental planning document used to guide installation management of natural resources to support the installation mission. This guidance ensures that natural resources conservation measures and military operations on the installation are integrated and consistent with federal and state stewardship and legal requirements.

w. NAS Oceana/NALF Fentress/Dam Neck Annex Integrated Pest Management Plan (IPMP). The Installation IPMP is the long range plan that integrates the management of pests that visit or live on the installation. This plan guides the use of herbicides, insecticides, pesticides, and rodenticides for pest management in accordance with federal FIFRA laws.

NAS OCEANA AIRCRAFT WILDLIFE STRIKE TRIGGERING EVENT CHECKLIST

There has been an aircraft wildlife strike triggering event at NAS Oceana or NALF Fentress. *The following checklist shall be utilized by the NAS Oceana BWG to conduct a review of the Installation BASH Program to determine if the present IWDM practices and WHMP are effective at sustaining an acceptable margin for aviation safety in accordance with 14 CFR 139.337.*

1. WESS STRIKE REPORT #	**2. Date of Strike**	**3. Aircraft Make/Model**
4. Airfield of Strike:	**5. Effect on Flight:**	
6. Synopsis of Triggering Event:		
7. BWG Member	**8. Email**	**9. Phone Number**

10.	**Triggering Event Discussion & Review Analysis**	**Vote T or F**
A	*Is there a current Wildlife Hazard Management Plan (WHMP) that outlines IWDM practices for NAS Oceana and NALF Fentress Airfields?*	
B	*During the Triggering Event, was the NAS Oceana BASH Airfield Safety Triangle in place?*	
C	*Review the last 12 months of wildlife strikes at this Airfield. Is there a trend in similar wildlife strikes that would suggest that the Land, Water, Food/Prey, or Building Management Plan components of the WHMP is being overwhelmed or is lacking in a particular IWDM practice?*	
D	*Is the presumed species of the wildlife strike a new wildlife hazard not yet identified for mitigation in the current Airfield Wildlife Hazard Assessment?*	
E	*Were there trained members of the BASH Detection & Dispersal Teams presently available at the Airfield at the time of the wildlife strike?*	
F	*Are there any previously identified BASH Program discrepancies that are still outstanding that if implemented, could have helped prevent this wildlife strike triggering event?*

WILDLIFE HAZARD MANAGEMENT PLAN (WHMP) BUILD CHECKLIST

The development of the Wildlife Hazard Management Plan (WHMP) is a critical link in the Installation BASH Program, as it provides the backbone to the Integrated Wildlife Damage Management (IWDM) strategy. Reference (a) directs the minimum content of a WHMP to seven elements. This enclosure is the template for constructing the Installation WHMP that will define all required WHMP actions for both the NAS Oceana and NALF Fentress airfields.

#	14 CFR Part 139.337 Requirements	NAS Oceana WHMP Elements
0	139.337(d), a brief summary of the airport WHA(s), airport topography, and wildlife attractants on and near the airport that define the necessity of an airport WHMP.	Both the NAS Oceana and NALF Fentress airfields will be described in the NAS Oceana WHMP, to include tenant aircraft activity. This description will be consistent with the NAS Oceana Airfield Master Plan.
	(e), based from actual wildlife hazard data compiled in the airfield WHAs, with the determination for the need of a WHMP made, a WHMP shall be constructed. Once completed, the WHMP shall be included as an integral part of the airport self-inspection program.	The NAS Oceana WHMP serves an integral role in the airport self-inspection process, and shall be included as an Appendix in the NAS Oceana Air Operations Manual, to provide for the required annual review cycle. The WHMP shall detail all actions required to actively alleviate wildlife aircraft strike hazards.
1	(f)(1), a list of the individuals having authority and responsibility for implementing each aspect of the WHMP.	The NASOCEANAINST 3750.4 defines the personnel that have BASH Program authority and responsibility. These same personnel will have WHMP Element tasks and authorities. WHMP decision making roles and authorities will be specified in the WHMP, and approved by the Commanding Officer.
2	(f)(2) a list that prioritizes the following actions identified in the WHA(s), with target dates for their initiation and completion.	The NAS Oceana and NALF Fentress WHAs identify each airfield's predominant wildlife species, their behaviors, and their food, water, and shelter/cover attractants. From these attractants, a categorized mitigation hierarchy can be developed, assigning Duties and Tasks across installation departments.

#	14 CFR Part 139.337 Requirements	NAS Oceana WHMP Elements
2	(f)(2) con't	These tasks will be prioritized from the three identified Strategic Priority Zones defined in the NASOCEANAINST 3750.4. With these tasks developed and assigned, a historical record can then be made to accurately track wildlife mitigations, pending and accomplished.
	(f)(2)(i) Wildlife population management;	Construct Species-Specific population Habitat Maps and species management plans for each Airfield Environment to help identify specific wildlife control BMPs/methodologies for: * Prioritized habitat modification * Resource protection * Repelling/Exclusion * Hazardous Wildlife Removal
	(f)(2)(ii) Habitat management;	The WHMP shall detail a Food & Prey Management Plan Appendix for the WHMP, providing a link for Installation Pest Management Plan/FIFRA elements and environmentally responsible wildlife control BMPs required to sustain aircraft flight operations. * Rodents / Rodenticide * Insects / Insecticide * Earthworms * Local Grain/Seed Types/Handouts * Garbage Receptacles/Disposal * Other prey

#	14 CFR Part 139.337 Requirements	NAS Oceana WHMP Elements
2	(f)(2)(ii) Habitat management, con't;	The WHMP shall detail a Land Management Plan for approved "installation land uses," land management techniques, and establishment of the FAA concept of "Acceptable Maintenance Condition (AMC)," and the development of an annual Airport Work Plan. * AOA Vegetation / Herbicides * Landscaping (Mowing, Pruning) * Agricultural Leases/Compatibility * Drainage Ditch (DD) Vegetation Management * DD – Sediment/Vegetation Removal * DD – Bank Protection * DD – Storm Debris Removal * DD – Repairing Structures/Slope
		The WHMP shall detail a Water Management Plan as a stand-alone Appendix to address: * Permanent Water * Wetlands * Canals/Ditches/Streams * Holding Ponds * Sewage Treatment

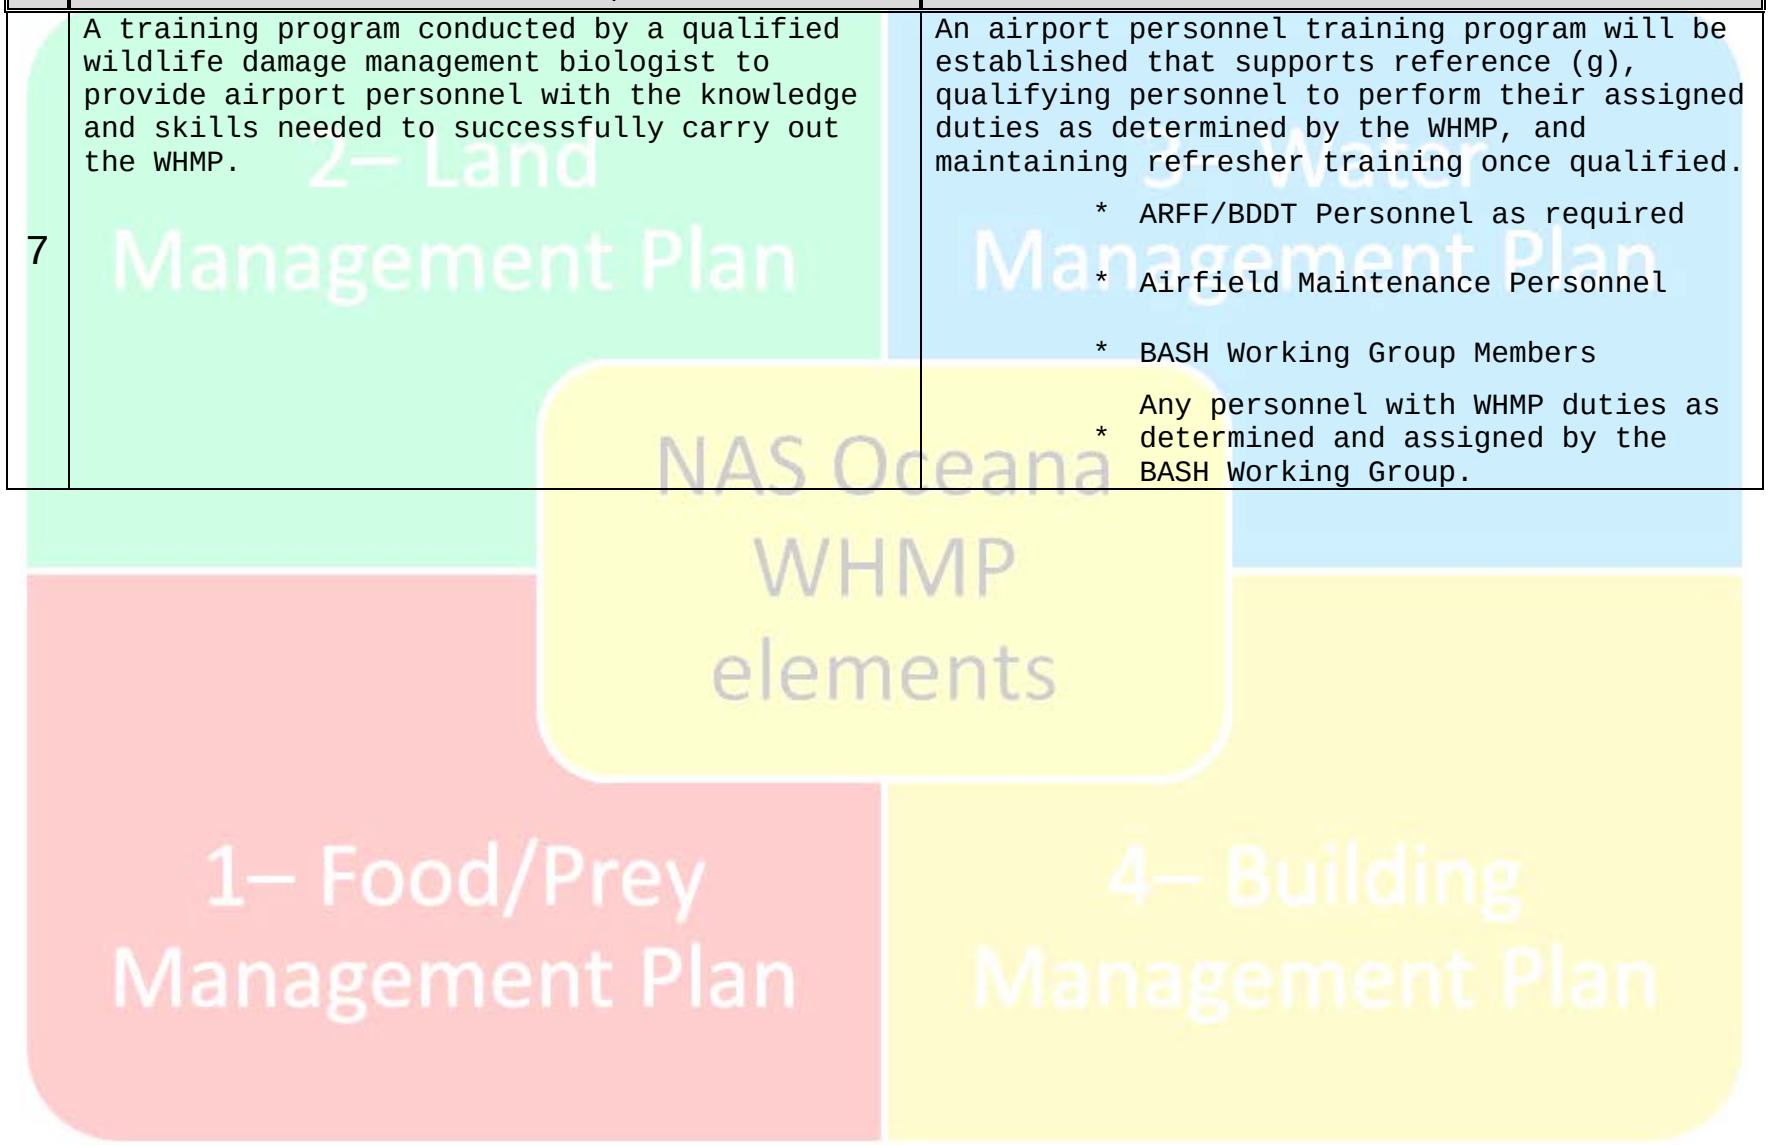
#	14 CFR Part 139.337 Requirements	NAS Oceana WHMP Elements
2	(f)(2)(ii) Habitat management, con't;	* Ephemeral Water (Taxiways, Runways, Aprons) * Other Water Areas/Wet Areas
		The WHMP shall detail a Building Management Plan as a stand-alone Appendix to address all buildings in the AOA or on the airfield property for nesting/roosting minimizations. * Airfield Structures in the AOA * Towers (navigation, cell, water, communications, etc.) * Abandoned structures * Planned construction. * AICUZ review of off-airfield property management practices that may be non-compatible with good BASH Program practices.
	(f)(2)(iii) Land use changes.	The Airport Master Plan should be reviewed by the BASH Working Group to assure that planned on-airfield property management practices are compatible with established BASH Program goals. * Develop a non-compatibility land use list to monitor and manage activities and property uses that attract wildlife, and defeat wildlife hazard mitigation efforts. * Ongoing Recordkeeping/NEPA Review

#	14 CFR Part 139.337 Requirements	NAS Oceana WHMP Elements
3	(f)(3) Permitting & Wildlife Control. Identify the requirements for all local, state, and federal wildlife control (harassment, trapping, and depredation) permits.	Here, the NAS Oceana WHMP should address each wildlife species determined to present a hazard as defined in the WHAs for each airfield, with a BMP for wildlife control assigned. Consideration must be given the chosen BMPs to clarify any/all Local, State, and Federal wildlife control permitting requirements; include copies of these permits in the WHMP. * F – Bald & Golden Eagle Protection Act * F – Endangered Species Act * F – Migratory Bird Treaty Act * F – Sikes Act * S – Commonwealth of Virginia * L – City of Chesapeake * L – City of Virginia Beach * F/S/L - Additional permitting for BMP identified pesticide, insecticide, rodenticide, herbicide uses.
4	(f)(4) Identification of resources the Airport will provide that will be required to implement the WHMP.	NAS Oceana's WHMP will identify the resources that each department will be required to provide to support IWDM at NAS Oceana and NALF Fentress, to include: * Personnel Tasking(s)

#	14 CFR Part 139.337 Requirements	NAS Oceana WHMP Elements
4	(f)(4) con't	* Dedicated time to surveying the airfields for WHMP element(s) wildlife control measures to determine effectiveness * Equipment (Mower guides, radios, guns, traps, propane cannons, exclusion devices, night vision aids, binoculars, etc. * Expendable supplies (pyrotechnics, plastic bags, labeling items) * Pesticides, Insecticides, Herbicides, Rodenticides, etc., and application equipment as needed * Installation Grid Maps * Vehicles * Any BWG approved item or resource not listed, but determined to be required to support the WHMP.
5	(f)(5) Procedures to be followed during flight operations have been established, that at a minimum includes:	The NASOCEANAINST 3750.4 uses the Daily BASH Plan and the BASH Airfield Safety Triangle to completely prepare/reset each airfield for use. Each active wildlife hazard control, personnel assignment, standing wildlife control action, and airfield ORM/SRM level of wildlife hazard awareness for airfield users is predetermined to create an active wildlife control environment to sustain uninterrupted flight operations.
	(f)(5)(i) Designation of personnel responsible for implementing active hazardous wildlife controls	* Personnel are designated 24 hours

#	14 CFR Part 139.337 Requirements	NAS Oceana WHMP Elements
5	(f)(5)(ii) Provisions identified for the conduct of physical inspections of the AOA and other areas critical to successfully manage known wildlife hazards before flight operations begin	* Duties and Tasks have been identified to establish airfield preflight inspections to set "Safe for Flight Operations (SFFO)." The SFFO period normally occurs each day during the observed wildlife peak times of 30 minutes +/- sunrise and sunset, after every major weather event, and after any active wildlife dispersal event on or near the runways or taxiways. * Documentation of wildlife activity is accomplished with the Wildlife Activity Log
	(f)(5)(iii) Wildlife control measures	* Active wildlife control measures are defined for both airfields, to include BHC setting, wildlife observations, as well as NRM, USDA-WS, and BDDT active dispersal and wildlife monitoring actions
	(f)(5)(iv) Ways to communicate effectively between personnel conducting wildlife control, or observing wildlife hazards and the air traffic control tower	* Airfield communications routines and communications hierarchy are defined, and practiced in accordance with FAA guidelines
6	(f)(6) Procedures to review and evaluate the WHMP every 12 consecutive months or following an event described in (b)(1), (b)(2), or (b)(3) of this section, including	Intervals for WHMP periodic and required reviews have been decided for each required circumstance according to federal law, and FAA guidelines.
	(f)(6)(i) The WHMP's effectiveness in dealing with known wildlife hazards on and in the airport's vicinity;	* The WHMP's effectiveness is assessed continually by the BWG quarterly, at a minimum.
	(f)(6)(ii) Aspects of the wildlife hazards described in the WHA that require reevaluation	* The WHA for each airfield is updated annually.

#	14 CFR Part 139.337 Requirements	NAS Oceana WHMP Elements
7	A training program conducted by a qualified wildlife damage management biologist to provide airport personnel with the knowledge and skills needed to successfully carry out the WHMP.	An airport personnel training program will be established that supports reference (g), qualifying personnel to perform their assigned duties as determined by the WHMP, and maintaining refresher training once qualified. * ARFF/BDDT Personnel as required * Airfield Maintenance Personnel * BASH Working Group Members * Any personnel with WHMP duties as determined and assigned by the BASH Working Group.



WILDLIFE HAZARD MANAGEMENT PLAN (WHMP) ANNUAL EVALUATION

The annual evaluation of the Wildlife Hazard Management Plan (WHMP) is a critical link in the Installation BASH Program, as it provides the backbone to the Integrated Wildlife Damage Management (IWDM) strategy. Reference (a) directs the minimum review periodicity of a WHMP. This enclosure is the "airport self-inspection" checklist for annual evaluation of the Installation WHMP for both the NAS Oceana and NALF Fentress airfields.

0	*Brief introduction describes the greatest hazards identified in the Wildlife Hazard Assessment (WHA)?* * (i.e. the most hazardous species, the highest priority attractants, highest priority habitats requiring wildlife control)		
	Plan follows the order of the 14 CFR 139.337 federal law, with section headings that include the regulation language as provided in the WHMP Build Checklist?		
	Procedures in the WHMP are concise and specific including who, what, when, and why WHMP elements are to be completed?		
1	*(f)(1) "A list of the individuals having authority and responsibility for implementing each aspect of the plan"* * Including decision-making roles and responsibilities for implementing the WHMP within the Chain of Command:		
	* Designation of responsibility for determining and responding to wildlife hazard conditions, for all hours of airfield operations?		
	* Reference to any mutual agreements on hazardous wildlife attractant coordination within BWG, planning or zoning authorities?		

#	Installation WHMP Contents	Y or N	Reviewer Comments
2	*(f)(2) "A list prioritizing the following actions identified in the wildlife hazard assessment and target dates for their initiation and completion?"* *(As prioritized in the WHA and/or based on ongoing wildlife data collection and analysis, long-term species-specific or attractant-specific measures with target dates for completion. Examples: Installation of deer-proof fence, grass management strategy, removal of specific attractants, trapping or other population control programs, off-airport cooperative management programs)* * (i) Wildlife population management		
	* (ii) Habitat Modification		
	* (iii) Land Use Changes		
3	*(f)(3) "Requirements for, and where applicable, copies of local, State, and Federal wildlife control permits?"* * If lethal control or use of pesticides is part of this WHMP, appropriate permits are needed and applicable regulations are cited. Note: Citation of applicable regulations only – transcript of regulations is not necessary.		
4	*(f)(4) "Identification of resources that the airport will provide that will be required to implement the WHMP?"* * Lists identifying what resources each department at NAS Oceana will be required to provide to support IWDM at each airfield.		

#	Installation WHMP Contents	Y or N	Reviewer Comments
5	*(f)(5) "Wildlife Control Procedures to be followed during flight operations that at a minimum includes:* * *(i) "Designation of personnel responsible for implementing the procedures?"* (Wildlife patrol staffing, position titles, hours of availability, hours of airport operation.)		
	(ii) "Provisions to conduct physical inspections of the aircraft movement areas and other areas critical to successfully manage known wildlife hazards before flight operations begin?" * Routine airfield inspection procedures including documentation of wildlife inspections and observations. These should include daily runway sweeps sufficient to detect and retrieve carcasses.		
	* *(iii) "Wildlife hazard control measures, including:"* Procedures for continuous monitoring of wildlife conditions on the airfield during times, seasons, and conditions with potential for wildlife activity as identified in the WHAs?		
	* Wildlife dispersal procedures including species or guild specific procedures for hazardous species identified in the WHA?		
	* Specific actions and/or criteria for courses of action to respond to unusually heavy wildlife activity, such as due to weather or seasonal migration?		

#	Installation WHMP Contents	Y or N	Reviewer Comments
5	*(iii) "Wildlife hazard control measures" - con't* * Any special procedures for wildlife control during periods of heavy air traffic?		
	(iv) "Ways to communicate effectively between personnel conducting wildlife control or observing wildlife hazards and the air traffic control tower * Training in communication procedures and airfield familiarization (139.303)?		
	* Equipment needed, such as radios, cell phones, and lights?		
	* Reference to mutually agreed upon procedures for wildlife dispersal that may require runway access or may impact air traffic?		
	* Procedures for immediate coordination and response to pilot-reported wildlife strikes or observations?		
	* Procedures for short-term heavy wildlife activity requiring airfield users reporting?		
6	*(f)(6) "Procedures to review and evaluate the WHMP every 12 consecutive months, or following a (b)(1), (b)(2), or (b)(3) event, including the following:"* (One or more meetings to formally review progress and challenges implementing the WHMP are documented; Any standardized monitoring procedures (i.e. wildlife surveys); Procedures for documenting communication coordination, and prevention of off-airport attractants; Procedures for reviewing and analyzing data (strikes, observations, control actions, and standardized surveys) frequently and long-term, such as for annual review and update.)		

#	Installation WHMP Contents	Y or N	Reviewer Comments
6	*(f)(6) con't* * *(i) The WHMP's effectiveness in dealing with known wildlife hazards on and in the vicinity of the airfields?*		
	* *(ii) Aspects of the wildlife hazards described in the WHA that should be reevaluated?*		
7	*(f)(7) "A training program conducted by a qualified wildlife damage management biologist to provide airport personnel with the knowledge and skills needed to successfully carry out the WHMP?"* * Certification that the training curriculum and instructor meet the FAA requirements of reference (g)?		
	* Procedures to document training participation?		
	* Training and documentation procedures to meet any additional training requirements, such as species identification, firearms safety, or pesticide application?		

NAS OCEANA BASH SELF-ASSESSMENT CHECKLIST

The NAS Oceana and NALF Fentress BASH Self-Assessment Checklist is provided in support of references (a), (s), and (t). The NAS Oceana BASH Self-Assessment Checklist shall be used, at a minimum, to guide each critical performance area to ensure BASH Program compliance. This checklist shall be reviewed and updated via quarterly BWG meetings.

Inspection Date:	Reviewer Name:	Email:

#	Installation BASH Program Element	Y or N	Reviewer Comments
3	**Surveys, con't.** * Are routine wildlife observation surveys conducted to support the refinement of the existing WHAs?		
	* Are essential wildlife hazard mitigation actions defined in the INRMP as wildlife attractants explained at every stage in the essential BASH elements (i.e., Land Management Plan, Water management Plan, Building Management Plan, Food/Prey (Pest) Management Plan) set forth in an installation WHMP?		
	* Have each of the Strategic Priority Zones been evaluated for potential corrective actions required to support BASH Program preparedness?		
	* Has the Public Works Officer, NRM, and/or Airfield Manager developed a methodology to track all required BASH discrepancies requiring correction, to include work orders, to enable the prioritization of BASH emergent and routine corrective actions?		
4	**Communications.** * Does the ASO provide and ensure BASH Awareness through monthly Aviation Safety Council meetings, BWG meetings, and through Installation and tenant outreach with posters, pictures, maps, planning data?		

#	Installation BASH Program Element	Y or N	Reviewer Comments
4	**Communications, con't.** * Does the ATC Tower Supervisor relay wildlife hazard information to aircraft operating in the local flying areas?		
	* Does the ATCFO ensure that daily BHC are issued from the ATC Control Tower, ATIS, and FLIP publications as required?		
	* Is there BASH awareness, wildlife reporting procedures, and remains collection training included in the Installation Airfield Vehicle Operators Course?		
	* Do all ATC personnel have a good understanding of their role in the air facilities BASH program?		
5	**Natural Resources Management.** * Does the NRM work diligently to support the BASH Program by actively managing the agricultural leases for the Air Facilities within the AOAs?		
	* Is the INRMP utilized by the BWG to measure effectiveness of presently planned BASH Program initiatives, evaluate planned construction and MILCON projects, to include active agricultural lease management and evaluation for wildlife attractants?		
	* Is the air facility hunting program managed using appropriate wildlife depredation and local/state hunting permits to support the BASH Program?		

#	Installation BASH Program Element	Y or N	Reviewer Comments
5	**Natural Resources Management, con't.** * Is there an ongoing effort with local land owners adjacent to the air facilities to help minimize wildlife attractants and thereby, decrease BASH potential?		
6	**Wildlife Control.** * Does each Air Facility maintain a BDDT that has completed mandatory initial and recurrent wildlife hazard training by USDA biologist(s) on the BASH Program? Is the BDDT for each air facility active, equipped with approved wildlife dispersal equipment, and maintain a deployable methodology for wildlife dispersal 24hrs a day?		
	* Is a USDA Wildlife Services biologist present on the air facilities? Has the biologist been afforded the opportunity to complete USDA Wildlife Services Airport Certification?		
	* Is the USDA allowed to participate in the BWG?		
	* Does the USDA Wildlife Services biologist participate with BASH outreach to tenant commands maintenance and aviation safety personnel through direct liaison and training at Safety Standdowns?		

#	Installation BASH Program Element	Y or N	Reviewer Comments
6	**Wildlife Control, con't.** * Does the USDA Wildlife Services biologist(s) work with the NRM to share responsibility in obtaining and maintaining all necessary harassment and depredation permits required to sustain the BASH Program in accordance with required U.S. Fish & Wildlife Service and Virginia Department of Game & Inland Fisheries (VDGIF) permits?		
	* Does the USDA Wildlife Services biologist(s) utilize reference (o) to properly control, store, and operate all BASH pyrotechnics and weapons required to perform harassment and depredation in accordance with required U.S. Fish & Wildlife Service and Virginia Department of Game & Inland Fisheries (VDGIF) permits?		

WILDLIFE HAZARD ASSESSMENT

For

NAVAL AIR STATION OCEANA

June 1, 2010 through May 31, 2011

Prepared by

United States Department of Agriculture

Animal and Plant Health Inspection Service

Wildlife Services

Timothy J. Linder, Wildlife Biologist

July 20, 2012

Table of Contents

EXECUTIVE SUMMARY

The United States Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services program (WS) conducted a 12-month wildlife hazard assessment (WHA) to identify wildlife hazards to aviation safety at Naval Air Station Oceana (NASO) from June 2010 through May 2011. To assess daily and seasonal patterns of wildlife use, we conducted bird surveys twice per month throughout the airfield and twenty-two night-time surveys to observe deer abundance and distribution. Data collected included species abundance, behavior, and habitat use. In addition, WS identified and monitored areas outside of the airfield that may attract hazardous wildlife species to NASO. Bird species observed were grouped into guilds (species that display similar behavioral characteristics) for analysis. Data collected during surveys were analyzed and compared with records from the Navy Safety Center Web Enabled Safety System (WESS) BASH database, control efforts by NASO and WS personnel, and a wildlife hazard ranking list (Dolbeer and Wright 2009) to identify the species that are most hazardous to aviation safety at NASO.

Based on information collected during the WHA, 1 mammal group and 7 guilds identified at NASO from June 2010 through May 2011 that presented the greatest threats to aviation safety. These group/guilds included deer, gulls, raptors (hawks, vultures, eagles), waterfowl (ducks and geese), pigeons/doves, crows/ravens, starlings, and blackbirds/orioles. Though blackbirds/orioles were the most abundant guild, deer were the most hazardous due to their large size, strike record, availability of habitat at or near NASO, and general abundance in the area. There were 4 species observed during the WHA that ranked as an extremely high hazard to aviation safety, and one species ranked as very high.

WS recommends a variety of methods to reduce or eliminate the threat of wildlife strikes from the group and guilds observed during the WHA. Habitat management can include: eliminating or excluding areas of standing water; vegetation management in the airfield; reducing or excluding bird perching/loafing areas; reducing abundance of prey species (such as small rodents and insects) in the airfield; installation of an Air Operations Area (AOA) fence, and ensuring that the perimeter fence is in good repair and prevents mammals such as deer from entering the airfield. WS also recommends harassment methods such as pyrotechnics, sirens, paintballs, propane cannons, and other acoustic dispersal devices to disperse birds from the airfield. Lethal control of hazardous species should be exercised when necessary utilizing firearms and/or traps. Permits for lethal control of species protected under federal and state laws should be maintained from the U.S. Fish and Wildlife Service and the Virginia Department of Game and Inland Fisheries.

Additional recommendations include updating the NASO's Bird/Animal Aircraft Strike Hazard (BASH) Plan, establishment of a formal BASH Working Group (BWG), establish a Bird Detection and Dispersal Team (BDDT), establish formal BASH training and evaluating potential wildlife hazards when planning new construction or land use changes. It is recommended that NASO continue to monitor wildlife abundance and habitat use in order to provide insight into wildlife use of the airfield and to gauge the effectiveness of control efforts.

1.0 INTRODUCTION

1.1 Purpose and Need for Action

Birds and other wildlife in the vicinity of airports are an increasing threat to aviation safety (Dolbeer et al. 2011). Since 1980, the Navy's national wildlife/aircraft strikes database accounted for 440 A, B, C and D Class-rated incidents that included two fatalities to Naval pilots and over $372 million dollars in damages (Naval Safety Center). Based on the Naval Safety Center analysis and statistics, the average damage cost over the last 31 years is one million dollars per month. It is estimated that wildlife/aircraft strikes cost the U.S. civil aviation industry more than $614 million annually, while worldwide the total cost is over $1.2 billion per year (Keirn et al. 2010). In addition to costly aircraft repairs and down time, wildlife strikes sometimes result in serious injury or death. In January 2009, the wildlife/aircraft strike issue was dramatically illustrated when U.S. Airways Flight 1549 crash landed in New York's Hudson River after ingesting Canada Geese into both engines shortly after takeoff from LaGuardia Airport (Dolbeer 2009). This incident has been referred to in the media as "The Miracle on the Hudson" since all 155 passengers and crew survived despite the aircraft being a total loss. Less than two weeks prior to this incident, eight people were killed and one was seriously injured when a helicopter transporting workers to an offshore site in Louisiana struck a Red-tailed Hawk and crashed into a marsh (Wright 2011).

The Commander, Naval Installations Command (CNIC) established the Navy Bird/Animal Strike Hazard Program Implementing Guidance (CNICINST 3700, Appendix A). The instruction establishes the guidance for all installations that conduct or support air operations to conduct a Wildlife Hazard Assessment (WHA). Although the U.S. Navy is not required to follow the regulations set down by the FAA, the Navy does implement the FAA's guidance and expertise whenever practical and appropriate.

The Federal Aviation Administration (FAA) is responsible for setting and enforcing the Federal Aviation Regulations (FAR) and policies to enhance public safety at civil airports. To ensure compliance with Code of Federal Regulations (CFR) 14 Part 139.337, the FAA requires certificated airports to conduct a wildlife hazard assessment (WHA), and if necessary, establish a wildlife hazard management plan (WHMP) when any of the following triggering events occur on or near an airport:

(1) An air carrier aircraft experiences multiple wildlife strikes;

(2) An air carrier aircraft experiences substantial damage from striking wildlife. As used in this paragraph, substantial damage means damage or structural failure incurred by an aircraft that adversely affects the structural strength, performance or flight characteristics of the aircraft and that would normally require major repair or replacement of the affected component;

(3) An air carrier aircraft experiences an engine ingestion of wildlife; or

(4) Wildlife of a size, or in numbers, capable of causing an event described above are observed to have access to any airport flight pattern or aircraft movement area.

The WHA must be conducted by a qualified wildlife biologist (see FAA Advisory Circular 150/5200-33B) and should include the following information:

(1) An analysis of the events or circumstances that prompted the assessment;

(2) Identification of the wildlife species observed and their numbers, locations, local movements, and daily and seasonal occurrences;

(3) Identification and location of features on and near the airport that attract wildlife;

(4) A description of wildlife hazards to air carrier operations; and

(5) Recommended actions for reducing identified wildlife hazards to air carrier operations.

Naval Air Station Oceana

In June 2010 NASO entered into a cooperative service with the United States Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services (hereafter referred to as WS) to initiate bird and deer surveys, evaluate current Wildlife Damage Management (WDM) program and provide direct control of hazardous wildlife using the airfield and hangars. In August 2010, CNIC entered into a cooperative service agreement with WS to conduct a WHA and to establish and continue an Integrated Wildlife Damage Management program (IWDM) at NASO. Oversight and direction of the IWDM will fall under direct supervision of the NAS Oceana Air Operations Department. Prior to 2010 a WHA had not been conducted at NASO. In March of 1999 Geo-Marine, Inc. provided NASO with a BASH Plan. This BASH Plan did not include a formal evaluation of airfield specific hazards.

1.2 Legal Authority of Wildlife Services

The U.S. Navy, Commander Navy Installations Command (CNIC) and the U.S. Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services program (WS) have entered into a Work/ Financial Plan where WS will provide assistance to mitigate potential and realized wildlife hazards at USN air stations in the continental United States (Appendix B). The Plan establishes WS as the appropriate agency to conduct wildlife hazard management at Navy installations.

The primary statutory authority by which WS operates is the Animal Damage Control Act of March 2, 1931, as amended (7 U.S.C. 426-426c; 46 Stat. 1468). WS has the authority to manage migratory bird damage as specified in the CFR. In addition, the Rural Development, Agriculture, and Related Agencies Appropriations Act of 1988

authorizes and directs the Secretary of Agriculture to cooperate with States, individuals, public and private agencies, organizations, and institutions in the control of nuisance mammals and birds deemed injurious to the public.

The Plan and legislation authorizes WS to conduct initial on-site investigations, biological assessments (short-term studies), WHA, and wildlife management techniques to assist USN air stations.

1.3 Legal Status of Wildlife Species

Most species of wildlife are protected by one or more Federal, State, and/or local laws and regulations. As such, several agencies may be responsible for implementation of these regulations and specific permits may be required prior to taking action to reduce wildlife threats to aviation safety.

Federal laws passed by Congress to protect wildlife include (but are not limited to) the Migratory Bird Treaty Act (MBTA), Bald and Golden Eagle Protection Act (BGEPA), and the Endangered Species Act (ESA). Federal wildlife laws are generally administered by the U.S. Fish and Wildlife Service (USFWS), which is the lead agency responsible for migratory birds protected under the MBTA, BGEPA, and ESA. The USFWS may issue depredation permits to take or harass migratory birds when those species are causing damage to various resources or threaten human health and safety (Appendix C).

The Commonwealth of Virginia defers to the Federal depredation permit for take of non-game migratory bird species, though a separate permit is required to take mammals and game bird species managed by the Virginia Department of Game and Inland Fisheries (VDGIF). As detailed in § 29.1-529 of the Code of Virginia, airport operators may obtain authorization from VDGIF to take wildlife (that are not federally protected) as necessary to protect aviation safety (Appendix D).

The Commonwealth of Virginia hosts a number of threatened and endangered (T&E) species that are granted protection under Federal and State regulations (Appendix E). Prior to conducting operational control work such as harassment, shooting, trapping, or habitat manipulation, the list of species of concern should be reviewed to ensure compliance with Federal and State regulations.

2.0 OBJECTIVES

The objectives of this WHA were to:

1. Identify wildlife species, numbers, locations, behavior, and habitat use in and around the airfield, with particular emphasis on species most hazardous to aircraft safety;
2. Identify and locate features on and in the vicinity of the airport that attract wildlife;
3. Describe wildlife hazards to aviation safety at NASO;
4. Provide NASO with management recommendations to reduce or eliminate wildlife hazards to aviation safety and serve as a basis for updating the current BASH Plan.

3.0 DESCRIPTION OF STUDY AREA

Figure 1: Aerial view of NASO (photo from GoogleEarth, 2010).

Naval Air Station Oceana is located within the City of Virginia Beach, VA. NASO's 4 runways, 2 sets of parallel runways (5R/23L, 5L/23R, 14R/32L, and 14L/32R), supported 76,296 aircraft operations in calendar year 2010. There are 19 squadrons based at NASO housing approximately 315 military aircraft. NASO property incorporates approximately 5,900 acres, of which 3,200 acres makeup the airfield. The airfield is comprised of open grassland (~920 acres), agricultural leases (~720 acres), woodlots, and areas of secondary growth (~1,560 acres). The woodlots are primarily comprised of mixed hardwoods and evergreens. The remaining 2,700 acres of base not included in the airfield are comprised of facility buildings, two 18-hole golf courses, woodlots, agricultural areas, wetland mitigation sites, and open, grasslands. A 7-foot fence with a three strand barbed-wire outriggers surrounds the perimeter of the base. NASO is bordered by a mixture of residential, woodland, industrial, agricultural, and open water areas.

4.0 METHODS

Data collection for the WHA began in June 1, 2010 and continued through May 31, 2011. Bird survey procedures were based on the North American Breeding Bird Survey methodology. Surveys were conducted twice per month for 12 months at 18 observation points on the airfield (Figure 2). The beginning observation point for each survey was randomly selected, with 2 repetitions of the survey route per day (1/2 hour after sunrise and 2-3 hours prior to dusk).

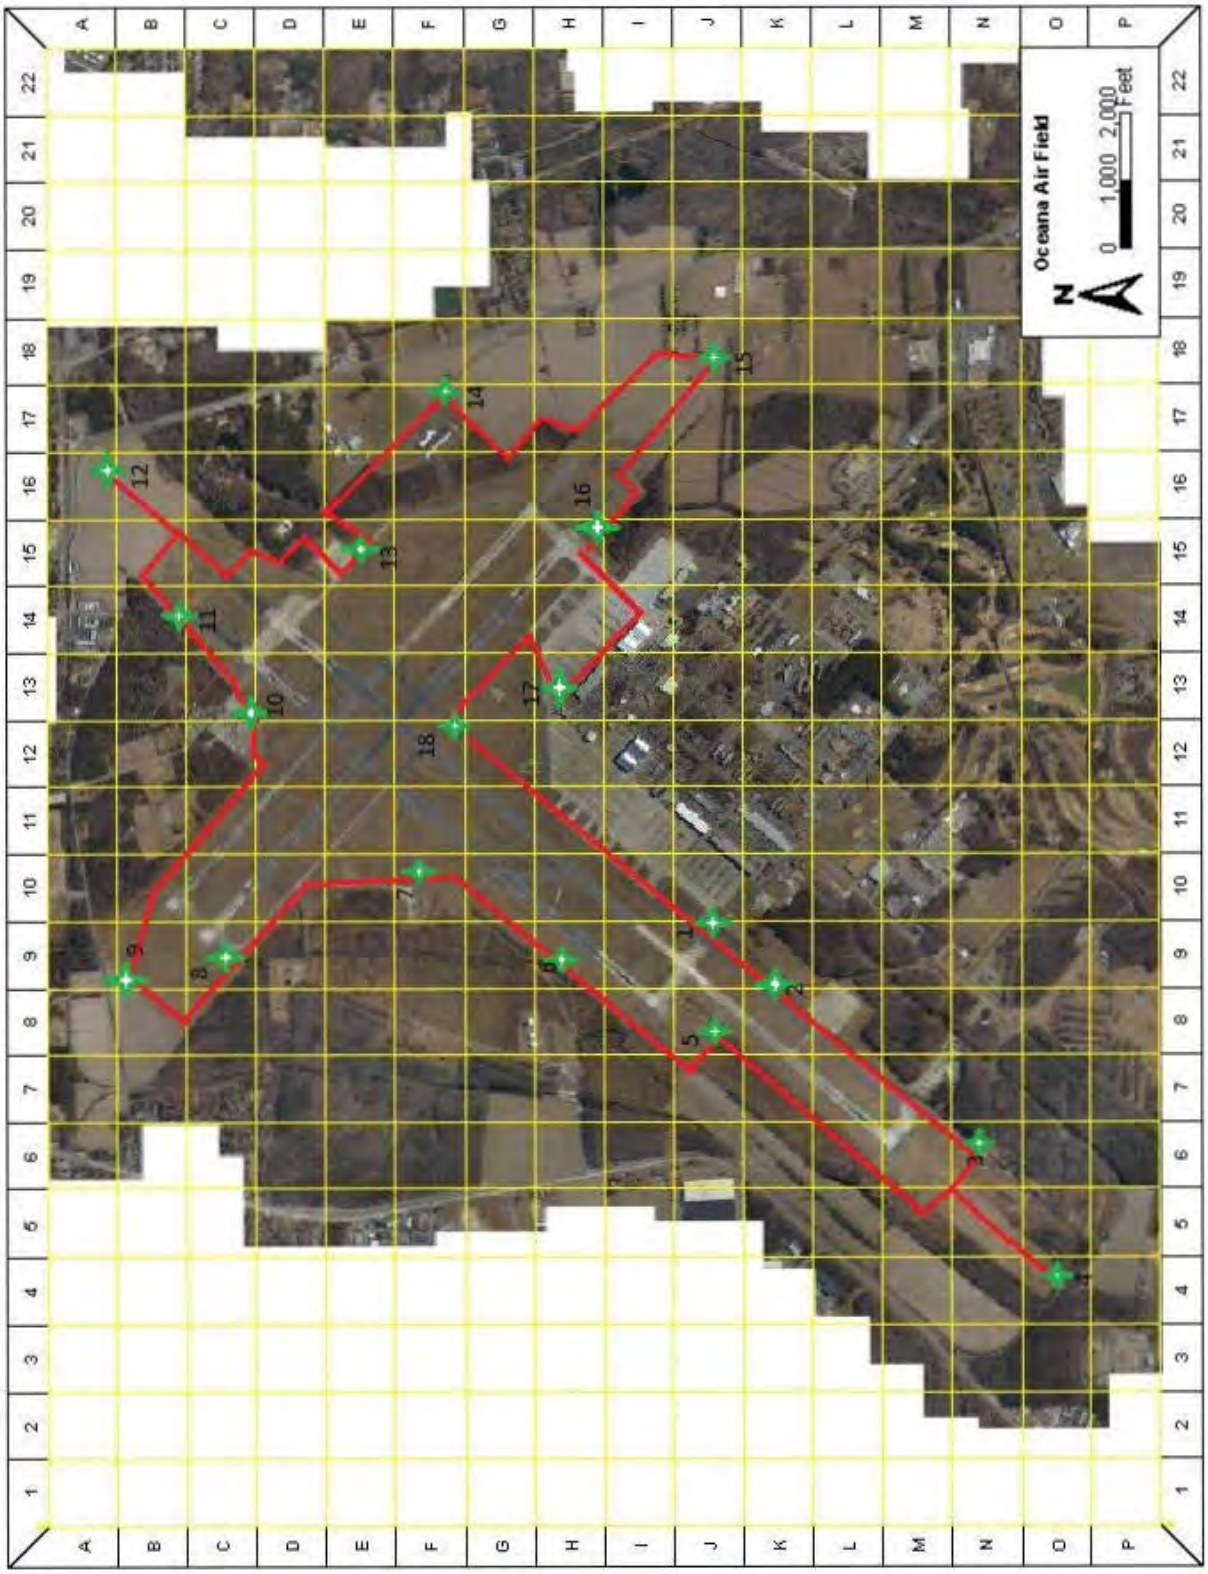

Figure 2: NAS Oceana Bird Observation Points and Survey Route.

Birds were observed from a vehicle for 3 minutes at each point, with approximately ¼ mile distance between points. At each observation point, the following data were recorded: weather, temperature, time, location, species, number observed, activity (behavior), habitat type, direction of flight, and comments on any other significant information (i.e., freshly mowed grass, approaching weather, change in flight activity, agricultural crop on fields, etc.). A map overlain with a 1000-foot grid system was used to record location. Bird species were located without the aid of binoculars, though binoculars were used to identify species that could not be readily identified with the naked eye or in low light conditions. Alpha species codes from the North American Bird Banding Manual were used to record birds observed during surveys.

In addition to bird surveys, 22 night-time deer surveys were conducted in the airfield over the course of the study period. Beginning 1 hour after sunset, night surveys were conducted by driving an established route 15.5 miles long around the airfield (Figure 3). Observations were made using spotlights and forward looking infra-red (FLIR) equipment to determine primarily deer, and other mammal use of the airfield. Information recorded included: weather, temperature, time, location, species, number observed, activity, and habitat type.

Data were analyzed with descriptive statistics and frequency distributions per month using the Wildlife Hazard Management Information System (WHMIS) software developed by WS to determine trends in species abundance, habitat use, and behavior. For analysis purposes, common species were categorized into groups or guilds. Species were placed into their respective guilds based on similar behavioral characteristics, not taxonomic relationships (although guilds often parallel taxonomic lines). This approach was selected because behavioral attributes play a significant role in predisposing some species of wildlife to collisions with aircraft. In addition, wildlife control strategies are often selected based on their ability to exploit an animal's specific behavior(s), therefore species that exhibit similar behaviors and life history attributes generally require similar control methods.

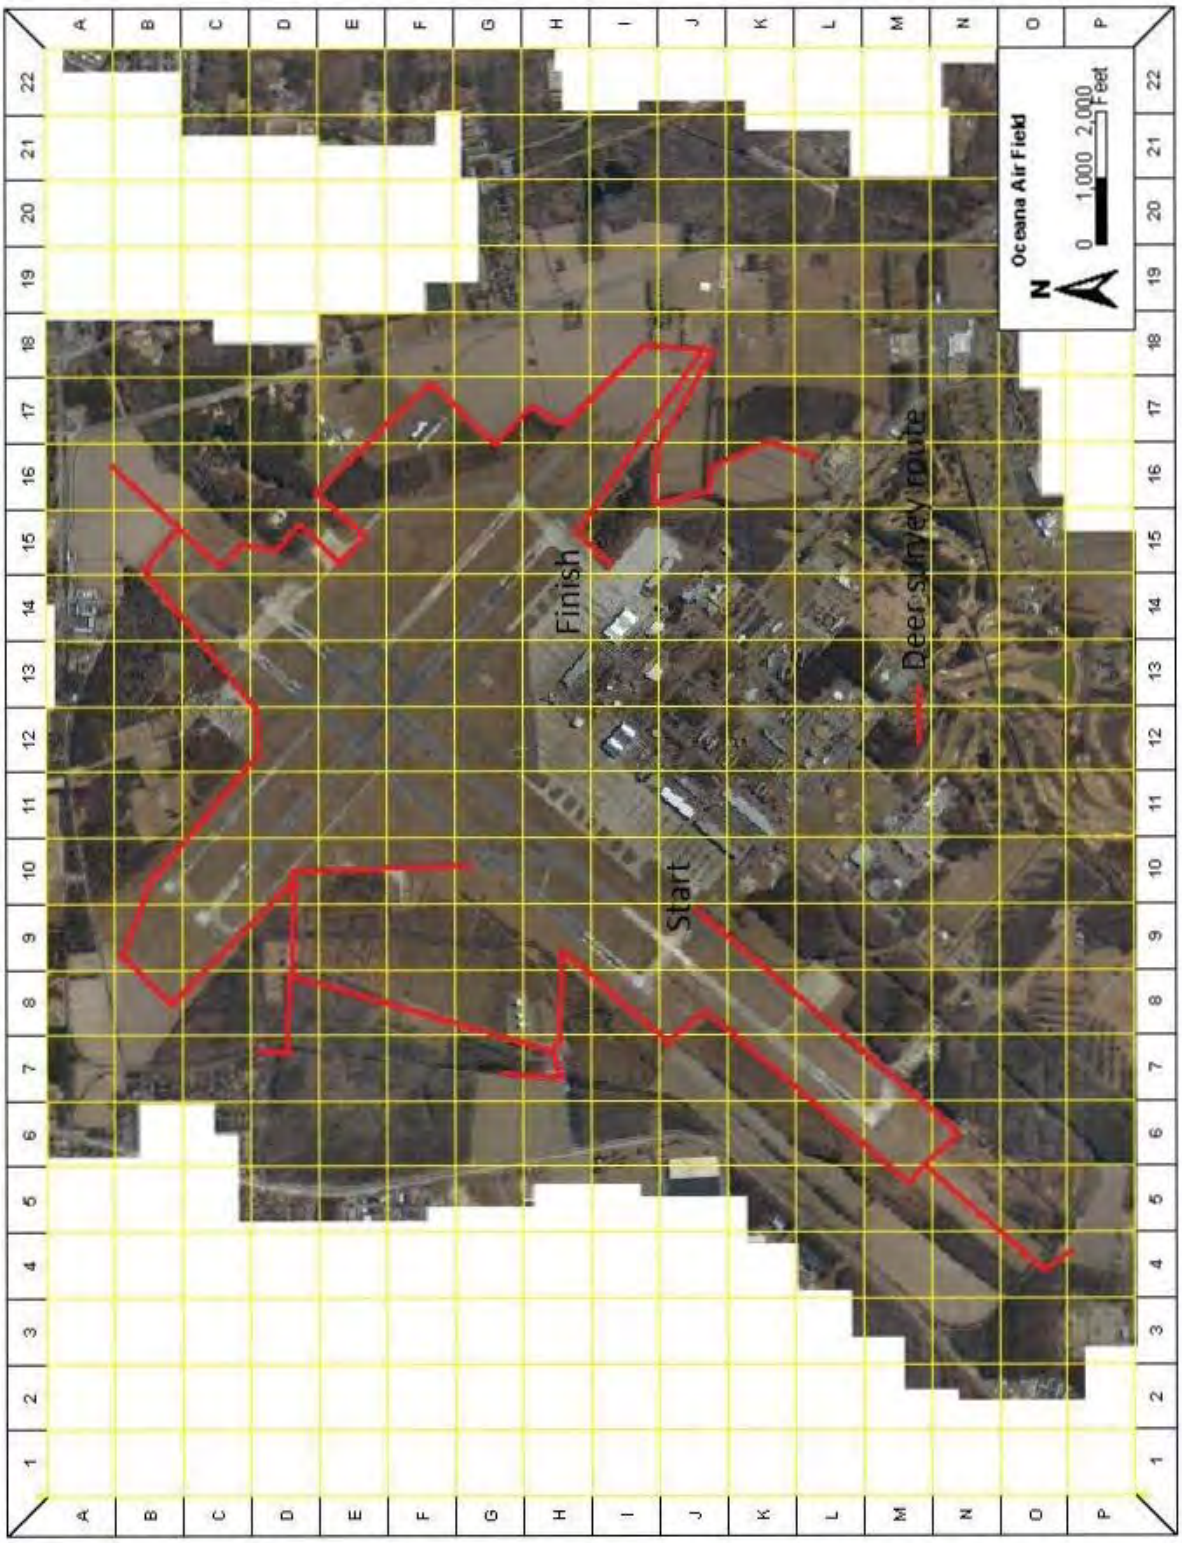

Figure 3: NAS Oceana Deer Survey Route.

5.0 RESULTS

5.1 Wildlife/Aircraft Strikes

According to criteria outlined in FAA Advisory Circular 150/5200-32A, a wildlife strike has occurred when:

1. A pilot reports striking 1 or more birds or other wildlife;
2. Aircraft maintenance personnel report aircraft damage as having been caused by a wildlife strike;
3. Personnel on the ground report seeing an aircraft strike 1 or more birds or other wildlife;
4. Bird or other wildlife remains, whether in whole or in part, are found within 250 feet of a runway centerline, unless another reason for the animal's death is identified; and
5. An animal's presence on the airport had a significant negative effect on a flight (i.e., aborted takeoff, aborted landing, high speed emergency stop, aircraft left pavement area to avoid collision with an animal, etc.).

Wildlife strike data provides valuable information about wildlife hazards on or near airfields, including the species that are struck, seasonal trends, and time of day when strikes occur. Nationwide, the number of reported wildlife strikes has shown a five-fold increase from 1990 through 2009 (Dolbeer et al. 2011). Despite the increase in reported strikes, the number of strikes resulting in damage during this same time period has declined by 21% (Dolbeer et al. 2011). This important fact is attributed to successful wildlife hazard management programs and improved reporting at many certificated airports (Dolbeer et al. 2011).

Data obtained from the Navy Safety Center WESS and Smithsonian Feather ID Lab revealed that there have been 327 reported wildlife strikes at NASO from 1981 through 2010 (Figure 4). Wildlife strikes peaked in 2010 with 45 reported strikes (Figure 4). The upward trend in wildlife strikes at NASO may be attributed to factors such as increases in wildlife populations, changing land uses on and adjacent to the airbase, and an increase in reporting. The Navy Safety Center estimates that only 25% of all strikes are reported. Much of the increase may be attributed to better reporting of wildlife strikes due to greater awareness of the wildlife strike issue and greater cooperation within the aviation industry to report strikes (Dolbeer et al. 2011).

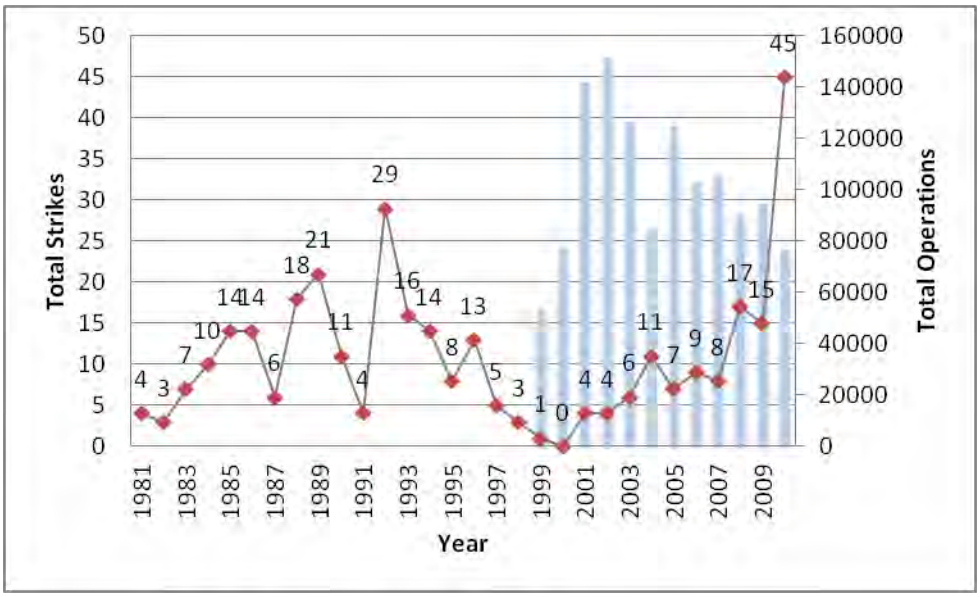

Figure 4: Reported wildlife strikes (1981-2010) and aircraft operations (1999-2010) at NASO.

Of the 327 reported strikes at NASO from 1981 through 2010, over 80% were unknown species (263), 11.9% involved birds (39), 7.3% were white-tailed deer (24), and less than 1% involved bats (1). Most of the unknown strike reports were bird species (270, or 82.5%). Of the strikes where the species was identified, white-tailed deer (24), and gulls (5) were the most frequently reported species. Consistent with national trends (Dolbeer et al. 2011), most strikes at NASO occur in the late summer through early fall (Figure 5). Strikes during these periods coincide with the dispersal of naïve juveniles and fall migration.

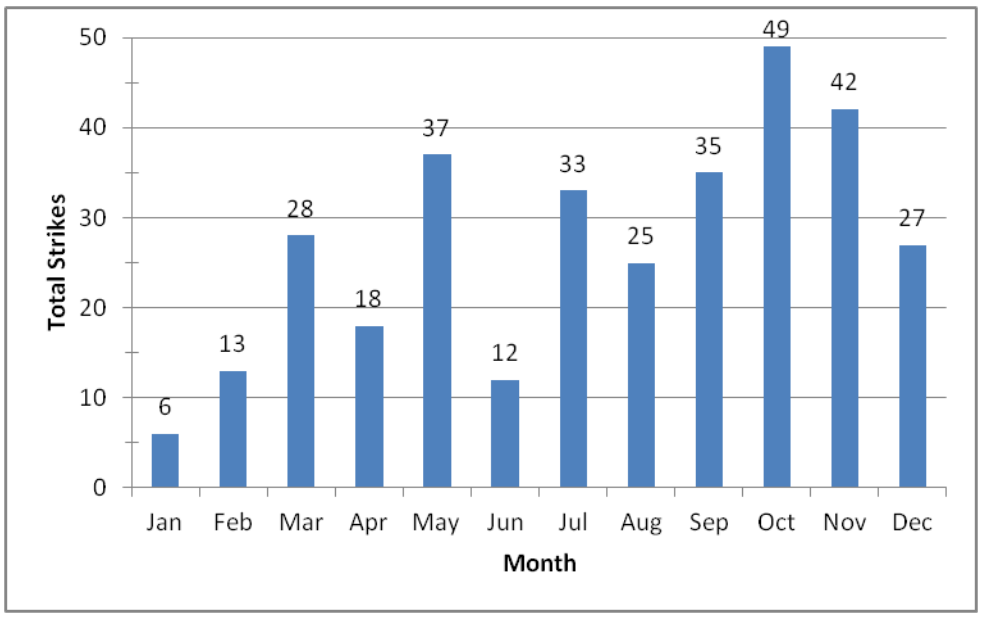

Figure 5: Number of strikes reported by month at NASO, 1981-2010.

For all strikes reported at NASO only 0.9% (3 of 327) reported damage >$10,000 (Table 1). All 3 strikes were * Class C Mishaps (1 deer $15,000, 1 deer $12,258, and 1 unknown gull $19,999).

Table 1: Strikes with reported damage at NASO, 1981-2010.

Species	N	A	B	C	Total
Unknown	263				263
White-tailed Deer	22			2	24

Damage Classes: N = No damage Reported or <$10,000
A = >$1,000,000
B = $200,000 to <$1,000,000
C = $10,000 to <$200,000

5.2 Wildlife Surveys

Birds

From June 2010 through May 2011, WS recorded 32,037 bird observations at NASO during bird surveys. Sixty-nine bird species representing 29 different bird guilds were observed throughout the study year (a complete table listing each guild and species observed throughout the study year may be found in Appendix F). The 6 most abundant guilds were Blackbirds/Orioles (15,454), Starlings (6,046), Waterfowl (1,701), Pigeons/Doves (1,571), Crows/Ravens (1,472), Meadowlarks (1,244), and Gulls (1,139. The 10 most abundant species observed are listed below[1]:

1.) European Starling (*Sturnus vulgaris*) = 6,046
2.) Canada Geese (*Branta canadensis*) = 1,618
3.) American Crow (*Corvus Brachyrincos*) = 1,472
4.) Eastern Meadowlark (*Sturnella magna*) = 1,244
5.) Mourning Dove (*Zenaida macroura*) = 952
6.) Laughing Gull (*Larus atricilla*) = 766
7.) Rock Pigeon (*Columba liva*) = 619
8.) Tree Swallow (*Tachycineta bicolor*) = 510
9.) Red-winged Blackbird (*Agelaius phoeniceus*) = 441
10.) Killdeer (*Charadrius vociferous*) = 432

Birds were observed in 14 different habitat types during surveys at NASO. Birds were most commonly observed utilizing the large, open areas of short grass (32%) that makeup the dominant habitat feature on the active airfield (Figure 6). Woodland areas were the next most commonly used habitat (21%), followed by structures (13%) such as towers, fences, and buildings where birds were often observed loafing.

Bird activity was classified into 12 categories: flying locally (short, random flights); perched (loafing on a structure); vocalizing; feeding (actively consuming food); standing; flying passing (flying in a continuous path beyond the survey area); loafing (staying in one area, on a structure for a length of time without engaging in another activity); towering (flying in a circular pattern, often while utilizing thermal currents); hawking insects (flying erratically while attempting to catch insects); walking; roosting (perched in a single location for the night); and swimming. Sixty-three percent of all observations fell into three activities: flying locally (31%), perched (19%) and vocalizing (13%) for all species during the study year (Figure 7).

[1] Total abundance is derived by summing all bird observations throughout the study year. Therefore, the total number of bird observations includes individuals that may have been present on the airfield day after day and were recorded on multiple occasions.

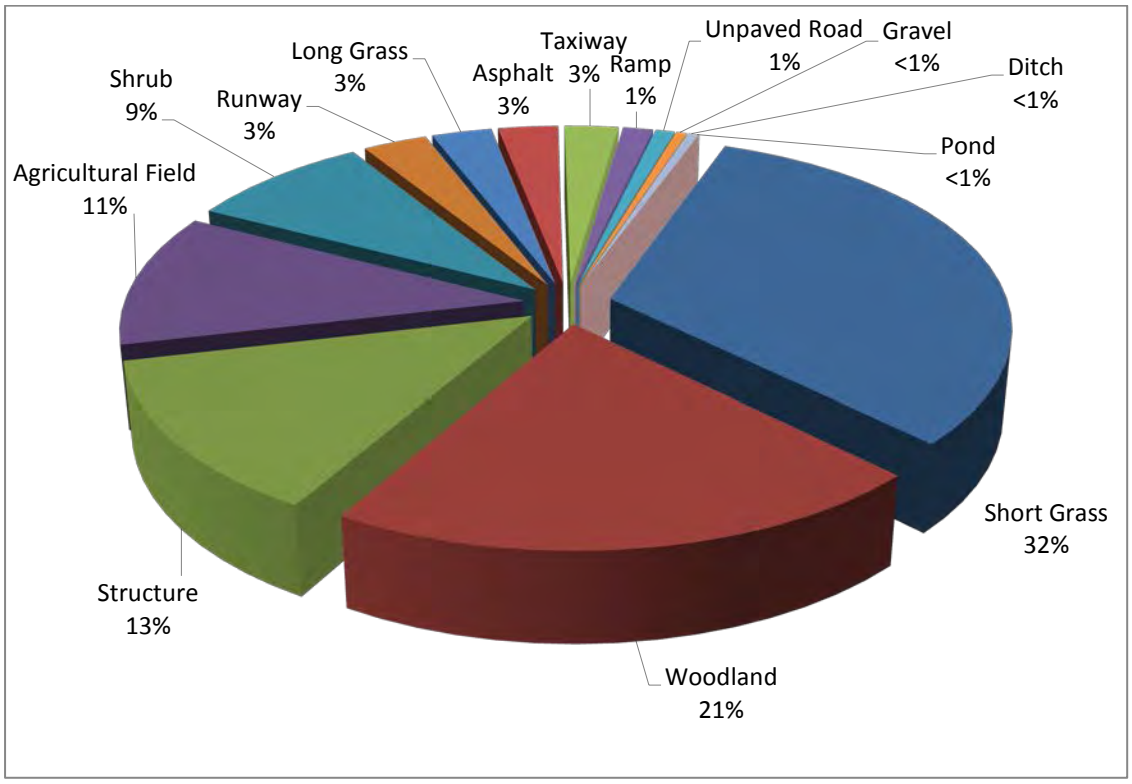

Figure 6: Habitat use by birds at NASO, June 2010 through May 2011.

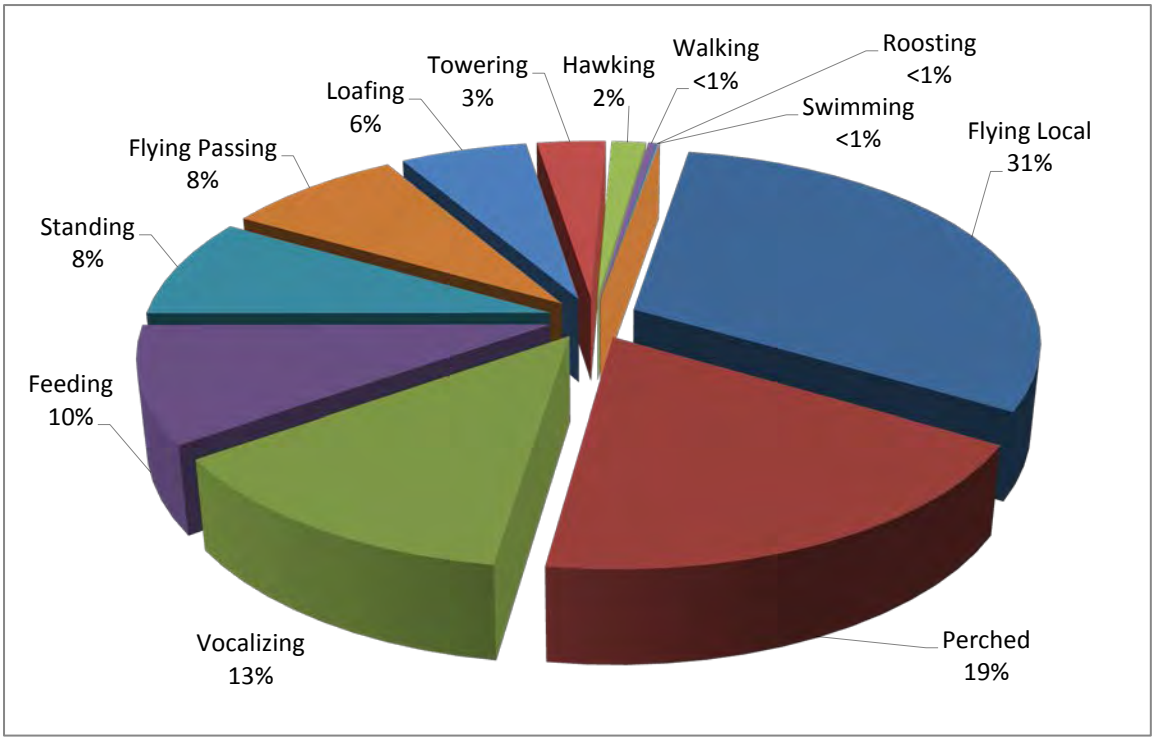

Figure 7: Bird activity at NASO, June 2010 through May 2011.

Mammals

WS completed 22 night surveys of the NASO airfield during the study year. Three hundred and seventy-nine medium to large mammals were observed during night surveys through the study year, with white-tailed deer (*Odocoileus virginianus*) being the most frequently observed species (Table 2). Observations recorded during night surveys may have been multiple observations of the same individuals throughout the survey year. Most mammal species were observed in the agricultural fields or in short grass (Table 2).

Table 2: Mammal species and cover type observed during night surveys at NASO.

Species	Ag. Fields	Grass, Short	Grass, long	Woodland	Shrub	Asphalt/Unpaved Road	Total
White-tailed Deer	143	134	31	28	29		**365**
Coyote	1	3				1	**5**
Red Fox			1	1		1	**3**
Gray Fox	2						**2**
Bobcat	1				1	1	**3**
Total	**147**	**137**	**32**	**29**	**30**	**3**	**378**

Small mammal surveys were not included in this WHA. Small mammal surveys are conducted bi-annually in the fall and spring to determine abundance and preferred habitat for species such as voles and mice inhabiting the airfield. The data is beneficial for evaluating predator-prey relationships on the airfield by comparing relative rodent abundance to wildlife activity and strike information. Small mammal surveys were conducted in the fall of 2011 and spring of 2012. The data collected from these surveys will be evaluated and included in the first annual update to this WHA.

6.0 DISCUSSION

Although almost all wildlife species commonly found at airports can pose some hazard to aircraft safety, not all species are equally hazardous to aviation (Dolbeer and Wright 2009). For example, bird species such as Canada Geese (*Branta canadensis*) are more likely to cause damage if struck by aircraft than species the size of a sparrow. Utilizing the FAA wildlife strike database, Dolbeer and Wright (2009) developed a ranking of 89 wildlife species that pose the greatest threats to aircraft safety. The ranking was based on the percentage of strikes causing damage to aircraft from 1990 through 2007, and species were classified into 6 hazard severity levels ranging from extremely high (>40% of strikes causing damage) to very low (<1% of strikes causing damage). Combined with wildlife surveys conducted locally at an airbase, this hazard ranking list can be used to prioritize management actions to species posing the greatest risk to aircraft safety (Dolbeer and Wright 2009).

Though there were 76 species observed from 29 different guilds and 4 mammal groups through the study year (Appendix F), for this discussion emphasis will be placed on those guilds/groups

that pose the greatest threats to aviation safety at NASO. For this analysis the following criteria was used:

Primary Consideration:

1. Number of individuals observed during surveys.
2. The individuals' associated hazard ranking according to Dolbeer and Wright.
3. Evaluation of NAS Oceana's strike record.

Secondary consideration was given for the following conditions:

- Location and behavior of individuals within each guild/group.
- Amount of control effort attributed to remove the specific hazard from the airfield (i.e. did the species easily disperse or not).

Using this information, guilds/groups were ranked in order of the threat level that they pose to aviation safety at NASO from the most severe to the least. This comparison helps to show that the most abundant species at an airfield (Blackbirds/Orioles, in this case) are not necessarily the most hazardous to aircraft safety due to abundance alone. The 8 guilds/group identified as most hazardous to aircraft safety at NASO from June 2010 through May 2011 were deer, Gulls, Raptors, Waterfowl, Pigeons/Dove, Crows/Ravens, Starlings, and Blackbirds/Orioles (Table 3), respectively. There were four species observed at NASO that rank as an extremely high hazard to aviation safety, one as very high, and six as a high hazard (Table 3). The following discussion and management recommendations will focus on the 8 most hazardous guilds/groups listed in Table 3. However, most if not all of the management recommendations (habitat modification, dispersal methods, etc.) will be effective for managing the majority of species observed at NASO.

Table 3: Guild hazard ranking and total observations at NASO, June 2010 through May 2011.

Guild/Group	Species	Hazard Level and percentage of strikes causing damage in the U.S.[1]	Total Observed at NASO[2]	Reported Strikes at NASO, 1981-2010	Strikes at NASO with reported damage, 1981-2010[3]
Artiodactyls	White-tailed Deer	Extremely High (82%)	365	24	2
Gulls	Laughing Gull	Moderate (7%)	766	0	0
	Ring-billed Gull	High (10%)	346	3	0
	Herring Gull	High (12%)	23	3	0
	Unknown Gull	n/a	4	1	1
	Totals		**1139**	**7**	**1**

Raptors	Red-tailed Hawk	High (17%)	279	2	0
	American Kestrel	Very Low (1%)	171	2	0
	Northern Harrier	Low (2%)	171	0	0
	Turkey Vulture	Extremely High (52%)	99	0	0
	Osprey	Very High (22%)	11	0	0
	Cooper's Hawk	n/a	8	0	0
	Bald Eagle	Extremely High (42%)	4	0	0
	Sharp-shinned Hawk	n/a	1	0	0

	Totals		**15454**	**1**	**0**

1. Ranking based on strike reports from 1990-2007 (Dolbeer and Wright 2009); "n/a" indicates that species was not individually ranked.
2. Total observations obtained by summing all observations during surveys (day and night) from June 2010-July 2011. Total may include individuals that were present day after day and were recorded on multiple occasions.
3. Reported damage >$10,000.

6.1 Artiodactyls

Artiodactyls (i.e., deer) rank as the most hazardous mammal species to aviation safety in the United States, with 82% of strikes resulting in damage from 1990 through 2007 (Dolbeer and Wright 2009). The large size of species such as White-tailed Deer and the percentage of strikes involving multiple animals make them especially hazardous to aircraft during the takeoff and landing phases of flight. From 1990 through 2009, Artiodactyls, primarily white-tailed deer, have been involved in 847 damaging strikes in the U.S., resulting in over $36 million in reported costs (Dolbeer et al. 2011).

General Abundance

Deer were the twelfth most abundant group observed at NASO from June 2010 through May 2011 (Appendix F). White-tailed deer (*Odocoileus virginianus*), the only species observed in this group, rank as an extremely high hazard to aviation safety, with 82% of strikes causing damage from 1990 through 2007 on civil airfields (Table 3, Dolbeer and Wright 2009). From 1981 through 2010 twenty-four deer were struck by aircraft at NASO, and account for two out of only three reported Class C mishaps (WESS Database) on base. A total of 365 deer were observed during 22 night surveys. Night surveys were conducted by driving a predetermined 15.5 mile route around the airfield, using spotlights and/or FLIR to locate deer. The initial two surveys in June of 2010 surveyed 61 and 66 deer. While the deer surveys in May of 2011 surveyed only five and seven deer, respectively. Large numbers of deer are routinely observed in areas surrounding the base property located outside the perimeter fence, on both Navy and private property.

Attractants

The NASO active airfield contains ideal habitat for deer, including agricultural fields, mature timber (especially white oak, a preferred food source), edge/shrub areas, emergent vegetation, and open grassland.

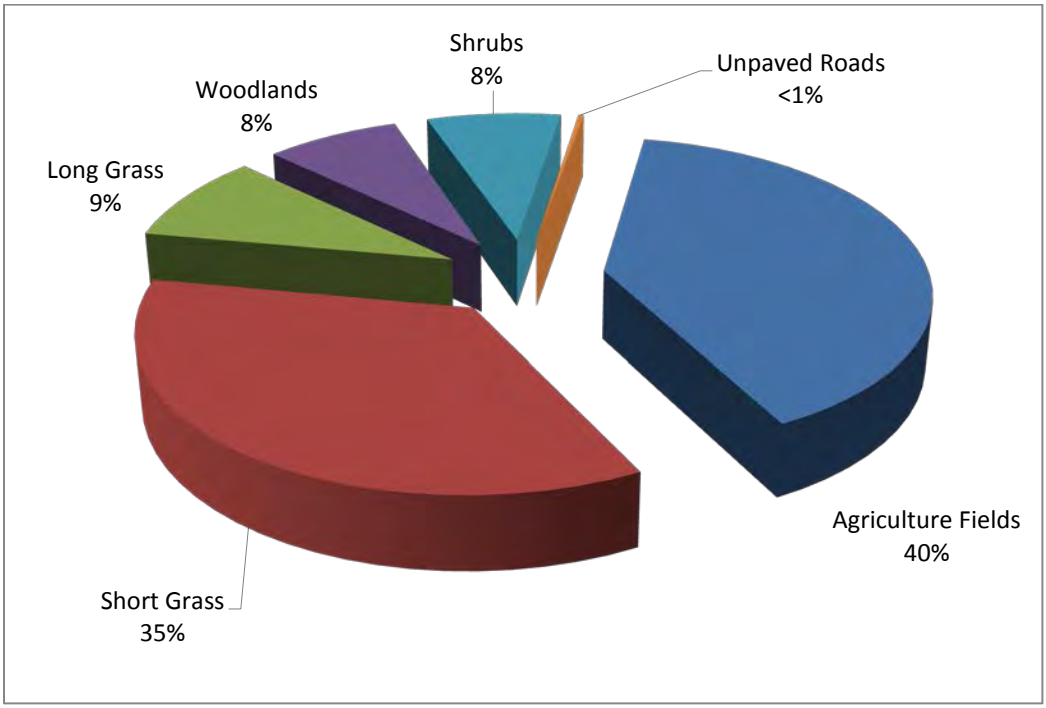

Figure 8: Deer habitat use at NASO, June 2010 through May 2011.

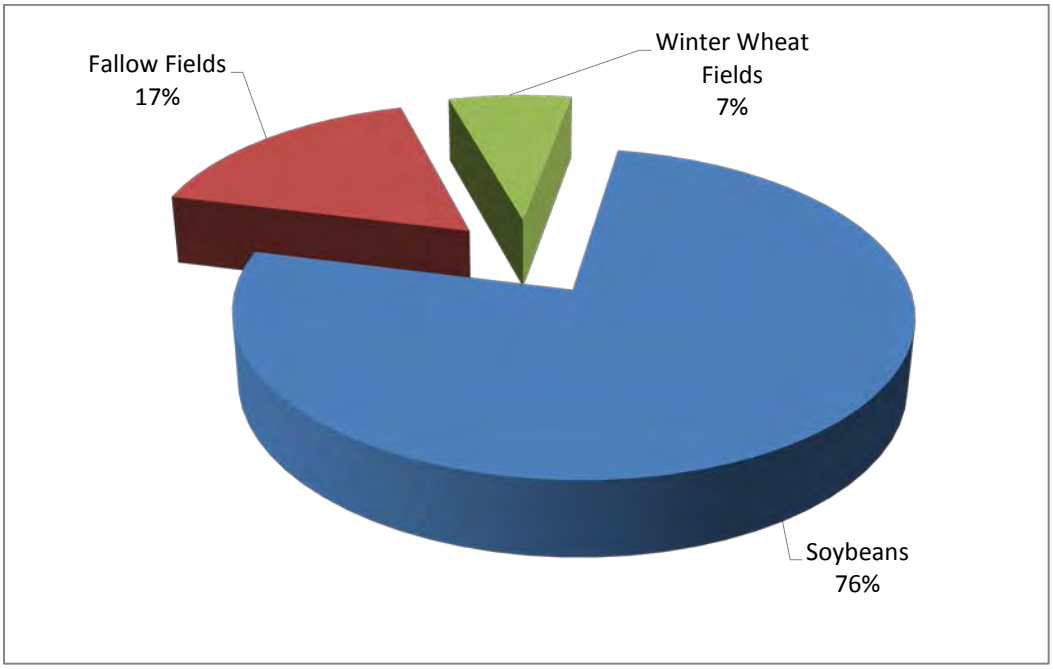

Figure 9: Deer agricultural field use at NASO, June 2010 through May 2011.

Deer were most often observed utilizing two habitat features at NASO: agricultural fields (40%) and short grass (35%, Figure 8). Soybeans accounted for 76% of all deer surveyed in agricultural fields (Figure 9).

NASO contains areas outside of the airfield within the base perimeter fence that contain ideal habitat for deer including: agricultural fields, mature timber, edge/shrub areas, emergent vegetation, wetland mitigation site, two 18-hole golf courses, and open grassland. Deer are often seen utilizing these habitat features by WS and base personnel. These areas outside of the airfield are not fenced off from the airfield. WS personnel have identified several travel corridors utilized by deer to gain access to the airfield (Figure 10). Travel corridors were identified by direct and indirect observations. The travel corridors are identified in yellow below.

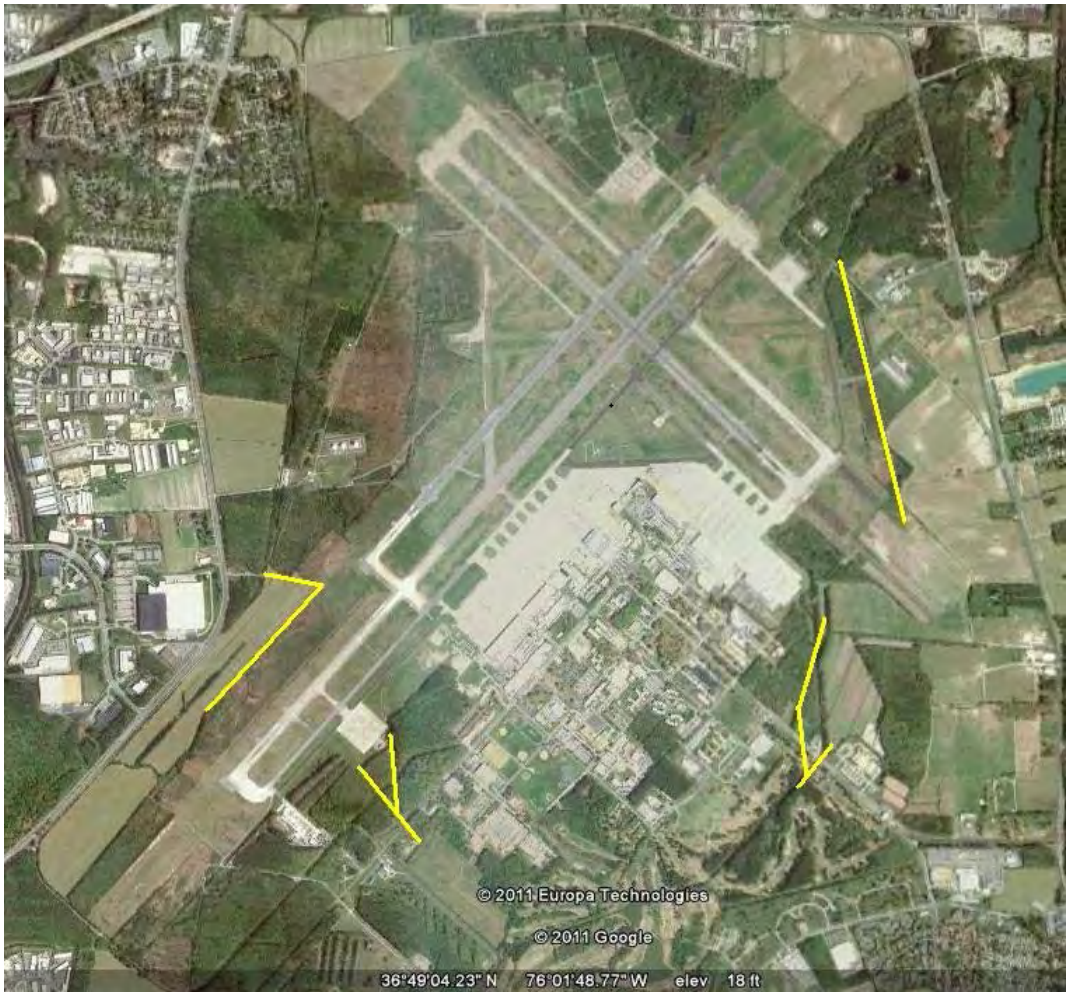

Figure 10: White-tailed deer travel corridors aerial view (photo from GoogleEarth, 2011).

Management Recommendations

Habitat management, installation of an airfield fence, maintenance of the perimeter fence, and removal of deer within the perimeter fence are the most important methods for reducing the threat of deer strikes at NASO. Airfield management is currently converting areas of optimal deer habitat (i.e. secondary growth and security cover) adjacent to the runways to maintained open grassland. After these areas have been cleared it is important that they are properly maintained (regular mowing) to prevent them from reverting back to woody habitat. This site conversion has decreased the number of deer observed in close proximity to runways. Airfield Operations is currently pursuing a Clear Zone Management Plan that will continue to reduce optimal deer habitat adjacent to runways.

The entire base perimeter fence should be inspected frequently. Any gaps large enough to allow deer and any medium sized mammals access to the base should be repaired immediately by installing bars, wire, stone, or patching with sections of fence. Gates should be inspected regularly and personnel should ensure that gates are secured tightly so that there are no spaces between or under gates, large enough to allow deer to pass

between or through them. Sections of fence that cross water drainage ditches/culverts should be inspected for possible deer access points. If these areas are large enough to allow deer access to the base they should be affixed with a swing gate or other similar devices that would allow high water to flow from the base while excluding deer to access.

NASO should continue to actively remove deer from the base. Removal is currently being accomplished through WS personnel and a base hunting program utilizing VDGIF Deer Population Reduction Program (DPOP). Currently, there are additional base properties that could utilize the DPOP program to reduce the deer threat to aviation safety and provide recreational opportunities for Navy personnel. These areas include old base housing, Boy Scout area, base property behind Natural Resource building located on Oceana Boulevard, and all other areas that could be hunted safely.

WS recommends that any deer present in the airfield be removed immediately via shooting or trapping. While not an immediate threat to aircraft safety, deer present on base property can and do gain access to the airfield. Deer on base, off of the airfield also serve as a source population for deer to annually disperse to the airfield. Lethal removal of deer requires a permit from the VDGIF, and it is recommended that NASO keep its permit current.

6.2 Gulls

From 1990 through 2009, gulls were the most frequently struck bird group in the United States (for strikes where the species was identified), with 24% of the 7,894 reported civil strikes resulting in damage (Dolbeer et al. 2011). Gulls threaten aircraft safety due to their tendency to form large flocks, size, flight characteristics, and their foraging and loafing behaviors.

General Abundance

While gulls were the seventh most abundant guild observed at NASO from June 2010 through May 2011 with 1,160 observations (Appendix F), 2 species observed at NASO in the gull guild pose a high risk to aviation safety (Table 3), making gulls the second most hazardous guild to aircraft safety at NASO (Table 3). As shown in Table 3, Laughing Gulls (*Larus atricilla*) were the most commonly observed species in the Gull guild, followed by Ring-billed Gulls (*Larus delawarensis*), Herring Gulls (*Larus argentatus*), and unknown gulls (i.e. gull species that could not be identified during the survey). Gulls were most often observed in or over agricultural and long grass areas of the airfield (Figure 11).

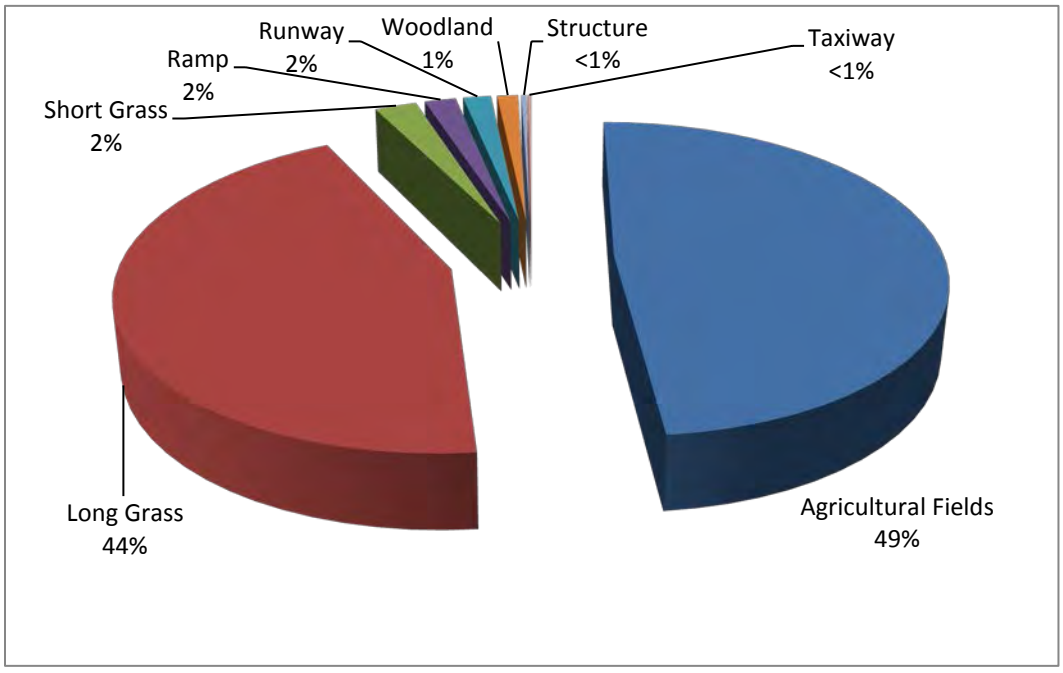

Figure 11: Gull habitat use at NASO, June 2010 through May 2011.

Gull use of agricultural fields occurred most frequently on or over winter wheat and fallow fields (Figure 12).

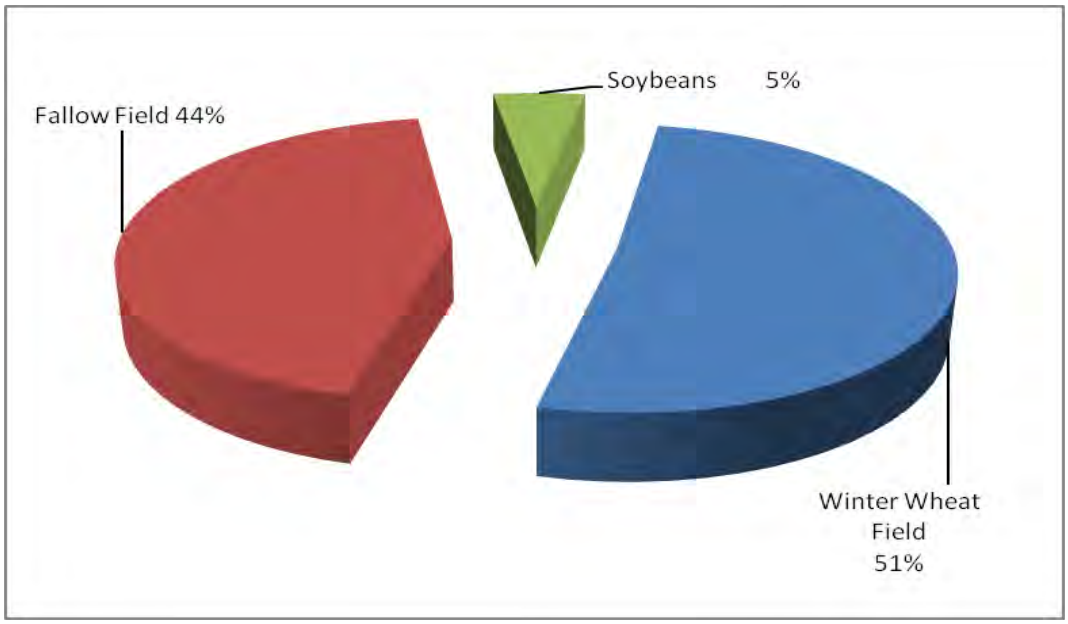

Figure 12: Gull agricultural habitat use at NASO, June 2010 through May 2011.
Flying locally, loafing and feeding accounting for 88% of all gull activity observed (Figure 13).

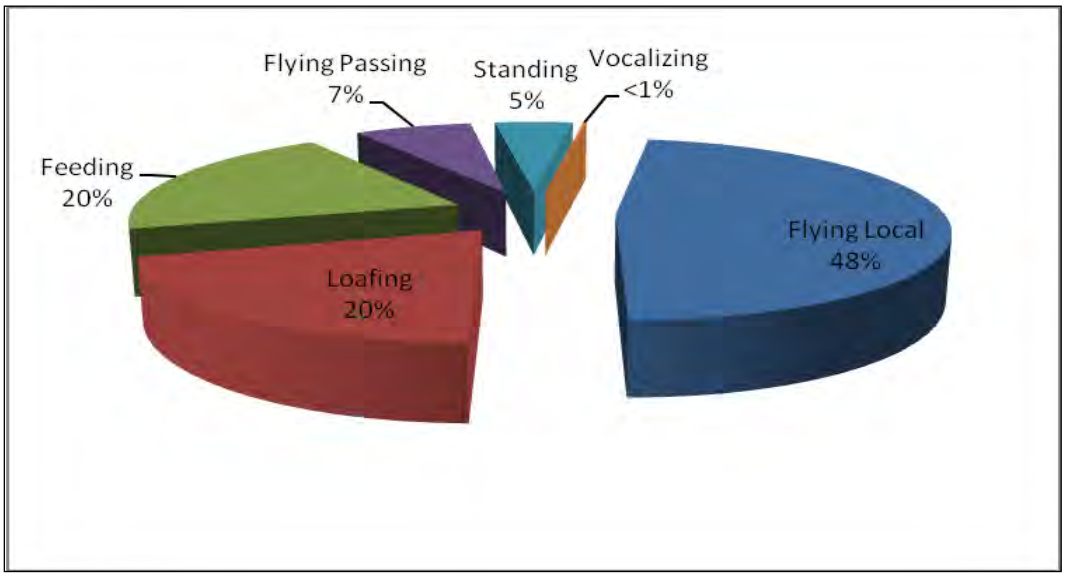

Figure 13: Gull activity at NASO, June 2010 through May 2011.

Attractants

Gulls are most commonly attracted to NASO during periods of inclement weather where they fly locally, loaf and forage throughout the airfield. During surveys gulls were observed over agricultural and long grass areas. Outside of these survey periods, WS personnel observed gulls using paved areas of the airfield. Gulls may find an abundance of food such as earthworms on and adjacent to taxiways and runways after rain events when the ground becomes saturated. This ground saturation forces earthworms to the surface. Thousands of gulls are also observed loafing and flying locally at a waste transfer station located on Virginia Beach Boulevard. This transfer station is located within one mile of the departure end of runway 32.

Management Recommendations

Although gulls were only the seventh most observed guild, gulls rank as the second most hazardous guild to aircraft safety at NASO for several reasons. From June 2010 through May 2011 WS personnel dispersed 6,565 gulls from the airfield (Table 4, Appendix G). Gulls are sporadically present on the airfield, but when present their numbers can be very high, and their habits during inclement weather (i.e. loafing/foraging on runways) make them very hazardous to aviation. Once dispersed gulls tend to tower over the area they were dispersed from, or move to other parts of the airfield increasing the time, effort and geographical area required to alleviate this threat.

As with many species, removing sources of water is an important component of gull management. Since large flocks of gulls are mostly observed at NASO during (and immediately following) periods of rain, improving drainage can help reduce pooling of water in low lying areas. Using sweepers to remove earthworms from paved areas after rainfall may help to reduce the number of gulls foraging in the airfield. Care should be taken to ensure that dumpsters and other waste disposal areas are covered to prevent

attracting gulls and any feeding of gulls by airport tenants or customers should be stopped immediately.

Gulls may be harassed from the airfield by a variety of methods, including vehicles, sirens, pyrotechnics, and propane cannons. Lethal removal of gulls should be implemented when dispersal efforts are insufficient, and as such the airfields migratory bird depredation permit should be kept current.

6.3 Raptors

Raptors (birds of prey) pose serious threats to aviation safety due to the larger size of many species and their flight behaviors. Some raptors may soar high over the airfield (eagles, vultures), other actively perch on structures in the airfield (Red-tailed Hawks and American Kestrels), while others may fly slowly close to the ground while hunting (harriers). From 1990 through 2009, raptors have been involved in 925 damaging wildlife strikes in the United States, resulting in almost $56 million in damages (Dolbeer et al. 2011). Since 1981, there have been 5 reported strikes involving raptors at NASO (Table 3).

General Abundance
Whereas raptors were the ninth most abundant guild observed at NASO from June 2010 through May 2011 with 744 observations (Appendix F), 2 species observed at NASO in the raptor guild pose an extremely high risk to aviation safety (Table 3), making raptors the third most hazardous guild to aviation safety (Table 3). As shown in Table 3, Red-tailed Hawks (*Buteo jamaicensis*) were the most commonly observed species in the raptor guild, followed by American Kestrels (*Falco sparverius*), Northern Harriers (*Circus cyaneus*), Turkey Vultures (*Cathartes aura*), Osprey (*Pandion haliaetus*), Cooper's Hawks (*Accipiter cooperii*), Bald Eagles (*Haliaeetus leucocephalus*), and Sharp-shinned Hawks (*Accipiter striatus*). Raptors were most often observed in or over short grass areas of the airfield (Figure 14).

Attractants
Raptors are attracted to the airfield at NASO by several features. Raptors find abundant prey (i.e., meadow voles, field mice, Eastern cottontails, etc.) in the grassland and woodland areas of the airfield. There are numerous perching sites such as navigation aids, lights, communication towers, trees, and radar facilities that may be utilized by raptors. Vultures are often observed towering on thermal updrafts high above the airfield. Mowing operations, road-killed animals, and deer shot but not retrieved provide abundant food sources for vultures in the area.

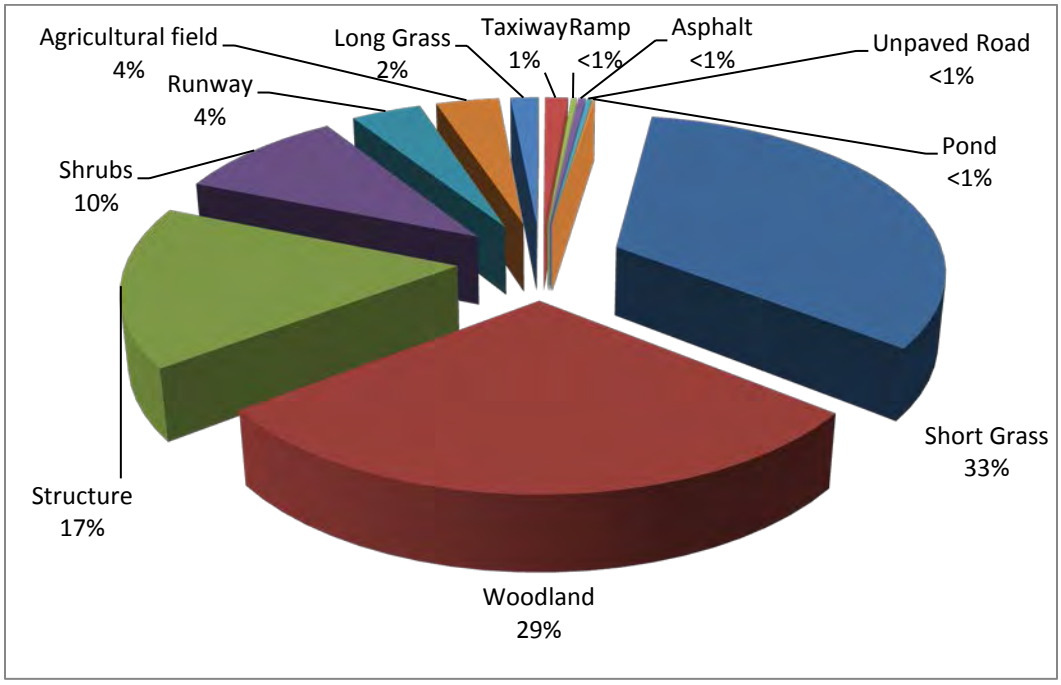

Figure 14: Raptor habitat use at NASO, June 2010 – May 2011.

Management Recommendations

To reduce the likelihood of strikes involving raptors, Blackwell and Wright (2006) suggest that management efforts in the airfield should be directed towards the availability of food and alteration of habitat used by raptors. The reduction of food sources such as rodents and carrion in the airfield is critical in controlling foraging by Red-tailed Hawks and vultures (Blackwell and Wright 2006). Reducing the number of small mammals in the airfield may be accomplished by a variety of methods, including trapping, shooting, or the use of rodenticides. Any animal carcasses found in or around the airfield should be removed and disposed of promptly to avoid attracting vultures. Turkey Vultures were noticeably more abundant following airfield mowing operations. During mowing, small mammals and snakes are often hit by the mower, leaving carcasses on the airfield.

Research has shown that small mammals use unmanaged areas of tall vegetation far more than disturbed areas (Barras and Seamans 2002, Blackwell and Wright 2006, Washburn and Seamans 2007), so frequent mowing can help to reduce small mammal abundance at airports (Barras and Seamans 2002), thereby reducing the availability of food for raptors. When possible, reducing the availability of locations where raptors may perch, roost, loaf, or nest is recommended. As such, NASO should consider the removal of trees and unused structures in the airfield (such as old utility poles). For structures that cannot be removed (i.e., signs, lights, towers, etc.), devices that exclude birds or make it difficult for their perching should be considered (such as spider wires, bird spikes, coil wire, etc.).

Raptor species must be harassed from the airfield whenever present using methods such as vehicles, horns, and pyrotechnics. Vultures commonly soar high above the airfield, making them difficult to disperse using 15mm pyrotechnics, given their limited range.

Devices with much greater range (such as CAPA rounds or 12-gauge shellcrackers) may be more useful for dispersing vultures. Lethal removal of some raptors may be necessary for persistent individuals, and as such NASO's depredation permit must be kept current to allow take of raptors. Lethal removal may include methods such as shooting or trapping. Though recently removed from the endangered species list, Bald Eagles are protected under the Bald and Golden Eagle Protection Act and are state threatened species, and a permit is required to simply harass eagles from the airfield. Eagles are becoming more abundant in the area around NASO and observations by base and WS personnel have increased in the past few years. NASO received a U.S. Fish and Wildlife Service Bald Eagle Depredation Permit in March of 2012 (Appendix C). The current permit is active for five years or until 2017, at this time it is recommended that the permit be renewed. All eagle dispersals conducted under this permit are required by the U.S. Fish and Wildlife Service to be documented and submitted at the end of each calendar year for the duration of the permit. Eagle activity is great in the areas immediately surrounding nests and any nesting attempts should be discouraged, and established nests should be removed promptly.

6.4 Waterfowl

Waterfowl can be particularly hazardous to aircraft safety due to their larger size and flocking behavior. In particular, Canada Geese have been responsible for some of the more serious wildlife strikes. In addition to the more recent "Miracle on the Hudson" event (see Section 1.1), 24 airmen were killed in 1995 when an Air Force AWACS aircraft crashed at Elmendorf Air Force Base in Alaska after striking a flock of Canada Geese (Wright 2011). From 1990 through 2009, waterfowl have been responsible for the greatest number of damaging strikes in the United States (1,503), resulting in over $144 million in losses (Dolbeer et al. 2011).

General Abundance

Waterfowl were the forth most abundant guild observed at NASO from June 2010 through May 2011 (Appendix F). Waterfowl rank as the forth most hazardous guild to aircraft safety at NASO (Table 3). Canada Geese (*Branta canadensis*) were the most commonly observed species in the waterfowl guild. Canada Geese are ranked as an extremely high hazard threat to aviation safety (Table 3). Canada Geese accounted for 95% of all observations in the Waterfowl guild. Canada Geese were observed year-round at NASO and were most abundant during the winter months when migrating birds wintered in the area. The number of Canada Goose observations during summer months supports a substantial resident (non-migratory) population. Other waterfowl species observed at NASO included American Brant (*Branta bernicla*), Tundra Swan (*Cygnus* columbianus), Hooded Merganser (*Lophodytes cucullatus*) and a single Mallard (*Anas platyrhynchos*). Although only a single Mallard was observed during surveys, WS personnel observed numerous Mallards during routine field activities, removing 21, and dispersing 54 individuals from the airfield (Appendix G). All Mallards were removed or dispersed from standing water.

Attractants

Utilization of short grass areas adjacent to runways and taxiways by Canada Geese occurred predominantly during May through July, coinciding with populations of resident geese. Tundra Swans were observed during migratory periods flying high over the airfield. Canada Geese were often observed by WS and NASO personnel feeding in grassy areas outside of the airfield on and off base. Resident Canada Geese were observed frequently utilizing ponds located on the Aero Pines Golf Course and the agricultural field located outside of the back gate.

Waterfowl are attracted to NASO and the surrounding area by several habitat features. There are many small bodies of water on and around the airport that provide a source of food and cover for waterfowl. Most of these bodies of water are small retention ponds and wetland mitigation sites that are the result of required Best Management Practices (BMP) for construction projects. These BMPs are found throughout the base and on the Aero Pines Golf Course. Three barrow pits are located along Oceana Boulevard just outside of the base. The barrow pits contain standing water, and are attractive to waterfowl. Agricultural fields on and off base outside of the active airfield are known to attract large numbers of foraging Canada Geese during the winter months.

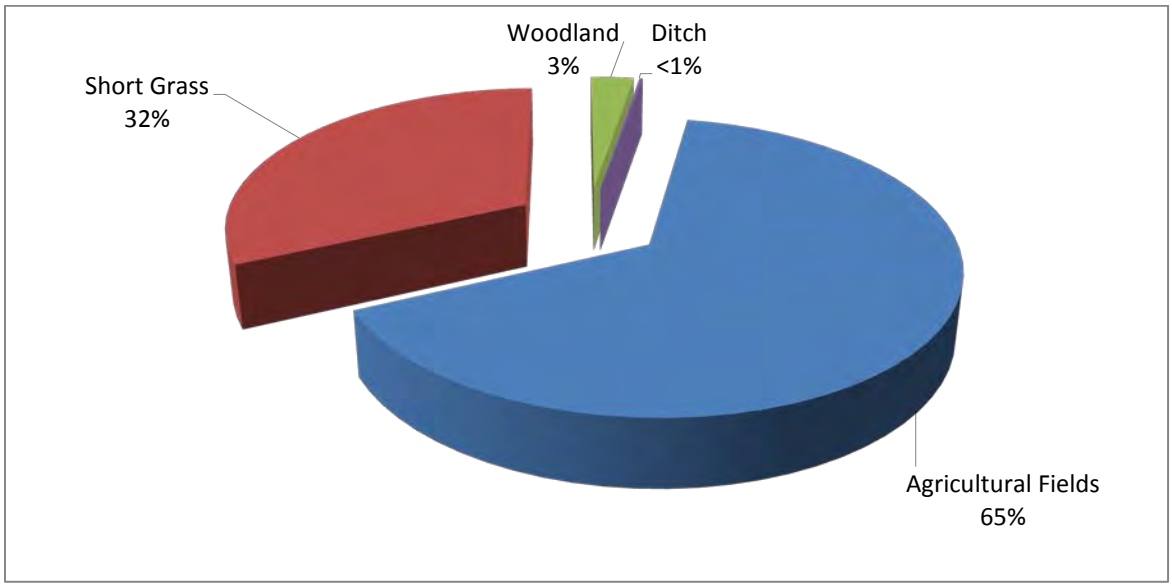

Figure 15: Waterfowl habitat use at NASO, June 2010 – May 2011.

Waterfowl were most often observed utilizing two habitat features at NASO: agricultural fields and short grass (Figure 15). Agricultural fields were utilized the most with winter wheat accounting for 85% of the utilization (Figure 16). Utilization of winter wheat occurred predominantly by Canada Geese and American Brant during December through March.

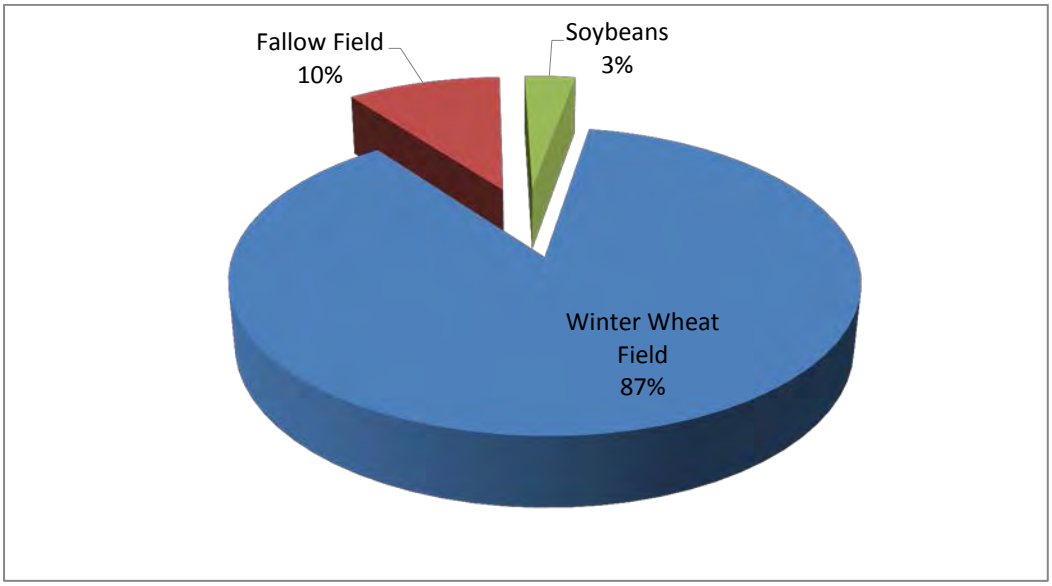

Figure 16: Waterfowl agricultural habitat use at NASO, June 2010 through May 2011.

Management Recommendations

Canada Geese should be considered the second greatest wildlife species threat to aviation safety at NASO. Nationally, Canada Geese are ranked as an extremely high hazard to civil aviation safety, as 51% of aircraft strikes with geese resulted in damage from 1990 through 2007 (Dolbeer and Wright 2009). By comparison, Mallards are ranked as a very high hazard to aviation safety, but the damaging strike rate for Mallards is about half that of Canada Geese (Dolbeer and Wright 2009). Resident Canada Geese find many areas of suitable habitat all around NASO and regularly fly through critical airspace when traveling from roosting/loafing areas to feeding areas. There are several control methods that should be considered to reduce hazards from Canada Geese (and waterfowl in general).

Winter wheat was the largest single attractant for geese during winter months on base property. Consideration should be given to eliminate the production of winter wheat on NASO agricultural fields. Whenever and wherever possible, areas of standing water in the airfield should be eliminated by improving drainage, grading, or filling in low areas. In the airfield, the wet areas of most concern are located at the approach and departure ends of runways 32R and 32L. Other areas of concern that contain standing water adjacent to the airfield include the barrow pits located along Oceana Boulevard, ponds located on the Aero Pines Golf Course, and Aero Pines wetland mitigation site. A permit may be required prior to disturbing/altering some wet areas, so coordination with the U.S. Army Corps of Engineers (ACOE) may be necessary. For areas that cannot be drained (such as BMPs), it may be useful to suspend a wire grid over ponds that may act as both a physical and visual barrier to prevent waterfowl from landing on the water. Installing stone rip-rap along the banks of BMPs or drainage ditches may help to reduce waterfowl use of these areas, as well.

Drainage ditches should be properly maintained, allowing water to effectively drain from the airfield and the ditches. Ditches can be maintained by: removal of vegetation slowing the flow, proper grading, removal of excess sediment, and use of herbicides to limit vegetation growth.

Vegetation management can be an important component for managing Canada Geese. Generally, it is recommended that airfields maintain grass at an intermediate height in the airfield (between 6 and 10 inches). It has long been thought that tall vegetation management in the airfield would deter Canada Geese since they often prefer to forage in areas of short grass, though there is limited scientific data on how Canada Geese react to tall vegetation management and studies have often produced conflicting results (Seamans et al. 2007, Barras and Seamans 2002, Washburn et al. 2007). Though more research is needed, studies suggests that a promising method of reducing Canada Goose use of airfields is to use an endophyte-infected variety of tall fescue when re-seeding areas of an airport disturbed by tree removal, construction or renovation (Washburn et al. 2007). Research suggests that when consumed by wildlife, tall fescue produces a variety of adverse effects (taste aversion, physical distress) and is generally avoided (Washburn et al. 2007). When re-seeding areas of the airfield, NASO should consider planting tall fescue and avoid grass mixtures containing millet or ryegrass so as not to provide a preferred food source for geese and other hazardous bird species.

NASO should adopt and maintain a "zero tolerance" policy towards waterfowl in and adjacent to the airfield, especially Canada Geese. Waterfowl species should be aggressively harassed to disperse them from the area. Harassment methods may include the use of pyrotechnics, horns, sirens, paintballs, and chasing with vehicles. NASO should maintain its current migratory bird depredation permit from the USFWS to allow lethal take of waterfowl species that do not respond to harassment. Canada Geese may also be taken under the Control Order at Airports and Military Airfields (50 CFR §21.49), which allows take of Canada Geese on base property and other properties within a 3-mile radius of the airfield (with written permission of the landowner) from April 1 to September 15.

In order to further reduce threats from Canada Geese, NASO has expanded control efforts beyond the airfield to base properties that provide attractive sources of food and cover. This control should be expanded to off base locations within 3 miles of the base. A study conducted in New York by Seamans et al. (2009) indicated that resident Canada Geese remained within 3 miles (5 km) of their primary feeding and loafing areas around JFK International Airport, and this trend seems to be reflected in the areas around NASO. The WS program in NY reported that goose numbers at Rikers Island decreased yearly after removal efforts from 2004 through 2007, and subsequently goose strikes at nearby LaGuardia Airport decreased by 80% (Seamans et al. 2009).

6.5 Pigeons/Doves,

Pigeons/Doves were the fifth most hazardous guild identified at NASO from June 2010 through July 2011 (Table 3). Although Rock or feral Pigeons (*Columba livia*) rank as only a high hazard to aircraft, Pigeons are also a hazard to aircraft located in hangars due to fecal contamination. Fecal contamination of aircraft has been reported to cause corrosion of critical aircraft instruments. Rock Pigeons and Mourning Doves (*Zenaida macroura*) are the only two species observed at NASO in this guild.

From June 2010 through May 2011 Pigeons/Doves were the third most abundant guild observed at NASO (Appendix F). Pigeons were usually observed perched on hangars, while Morning Doves were usually observed perched on the perimeter fences to the blue ramp area and VACAPS. From 1981-2010 the only reported strike occurring at NASO involving this guild was one Morning Dove.

Attractants

Pigeons/Doves were observed most frequently utilizing structures followed by agricultural fields (Figure 17). Pigeons are attracted to the airfield to roost and nest on structures, while Mourning Doves prefer to feed in agricultural fields or perch/loaf on fences.

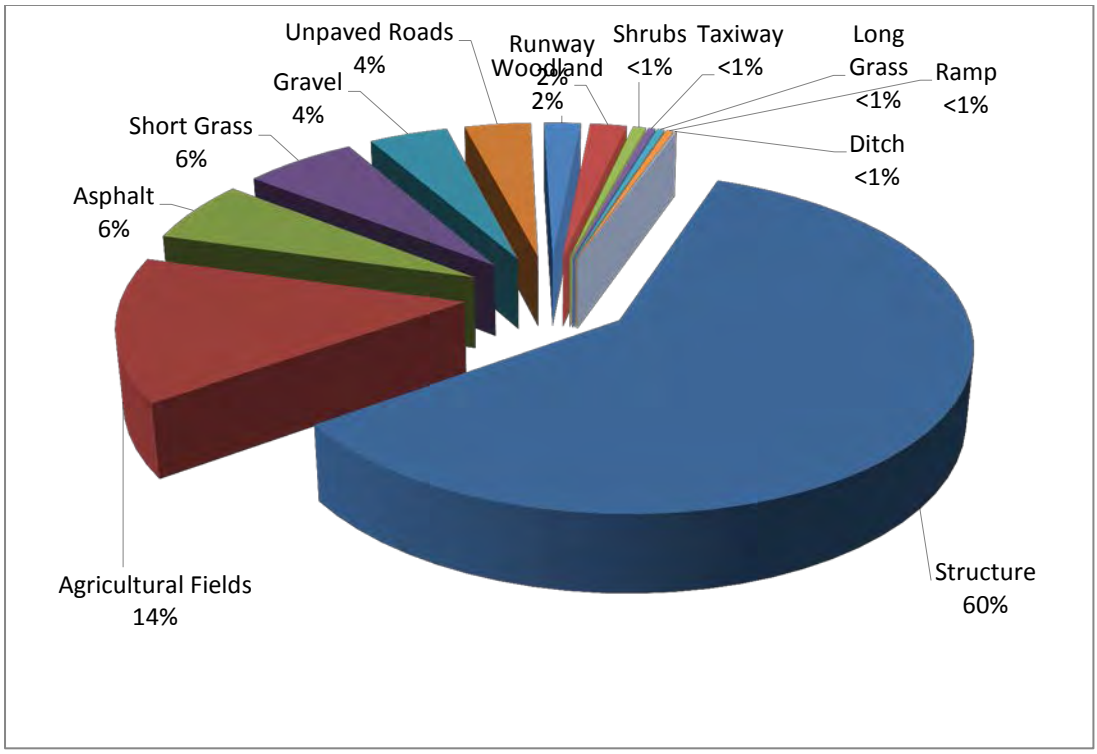

Figure 17: Pigeons/Doves habitat use at NASO, June 2010 – May 2011.

Management Recommendations

Flocks of birds in these guilds may be dispersed by using pyrotechnics, sirens, horns, or recorded distress calls. Persistent species that do not easily disperse should be removed lethally by shooting or trapping. The most effective means to remove pigeons from

hangars is through trapping. Shooting should not be conducted in any hangars containing aircraft. Control of pigeons does not require a permit, though control of Mourning Doves does require a Federal Migratory Bird Depredation Permit. Mourning Doves are especially attracted to areas of bare ground and old pavement. These areas provide ideal areas for foraging and obtaining grit. Bare ground areas that have been graded or re-seeded should be monitored for Mourning Dove activity. WS noticed large numbers of doves utilizing the old ramp area north of runway 32L and 5R intersection. WS recommends that areas of old pavement no longer needed for airfield operations are removed and all areas of bare ground be re-seeded. Activities at the stables should be evaluated for accidental feeding of pigeons and other wildlife. All feed should be maintained in closed containers and any spilled feed cleaned up. Even with all these measures in place the birds (pigeons and blackbirds) will always be attracted to this area due to the availability of undigested grains present in the horse manure. Other places of concern are any areas where the manure is spread mechanically.

6.6 Crows/Ravens, Starlings, and Blackbirds/Orioles

Crows/Ravens, Starlings, and Blackbirds/Orioles were the sixth, seventh, and eighth most hazardous guilds identified at NASO from June 2010 through May 2011 (Table 3). One species within these guilds, the American Crow is ranked as high, while two other species the European Starling and Common Grackle were ranked as moderate and a low ranking was given to the red-winged Blackbird and Brown-headed Cowbird. While these guilds do not contain any species that rank as an extremely high or very high hazard and control efforts are often required, due to the large number of individuals observed on the airfield.

From June 2010 through May 2011, Blackbirds/Orioles were the most abundant guild observed at NASO, starlings were second, and Crows/Ravens were the fifth most abundant (Appendix F). These species were mostly observed flying locally over short grass and agricultural areas, though European Starlings (*Sturnis vulgaris*) were commonly observed perched on structures throughout the airfield. None of these guilds have been involved in reported damaging strikes at NASO since 1981 (Table 3). The greatest hazard these species pose to aviation is through their tendency to form large dense flocks that stay in almost continuous motion over short grass habitat near runways.

Attractants
Species in these guilds are attracted to the airfield to feed in the large areas of open grassland agricultural fields where they find abundant forage such as seeds, earthworms, and insects. There are many perching roosting locations utilized by these guilds such as hangars, buildings, communication equipment, fences, and radar facilities.

Management Recommendations
Flocks of birds in these guilds may be dispersed by using pyrotechnics, sirens, horns, or recorded distress calls. Persistent species that do not easily disperse should be removed lethally by shooting and/or trapping. The control of crows, starlings, and blackbirds does not require a Federal permit. Grass management can be important for controlling these

species. Grass that is tall enough to produce a seed head provides a food source and effective cover for species such as starlings and blackbirds, so grass in the airfield should be maintained at the recommended height of 6 to 10 inches (Dolbeer et al. 2011). Starlings using structures such as hangars for roosting locations can be excluded by keeping doors/windows closed and repairing any holes in the structure that allow birds to access the building. Nest traps, mist nets and toxicants may also be used to reduce the population of starlings utilizing these structures.

6.7 All Other Guilds

Appendix F lists all guilds and species observed at NASO during wildlife surveys from June 2010 through May 2011. For all other guilds observed during wildlife surveys, many if not all of the management recommendations listed for waterfowl, raptors, artiodactyls, and gulls are applicable in reducing their threats to aviation safety. Many species utilize the same habitats, so management for one species will likely affect another. As discussed earlier in this section, habitat management and exclusion are the two most important components for reducing the threat of wildlife strikes at NASO. Vegetation and water management will likely have the greatest impact for most bird species, while maintaining the perimeter fence will be most effective in reducing the presence of larger mammal species (such as deer and coyotes).

6.8 Threatened and Endangered Species

Appendix E lists species that are considered endangered, threatened, or of concern in the Commonwealth of Virginia. Of the species observed at NASO during the survey period, Bald Eagles and Upland Sandpiper are the only species appearing on the list, classified as State Threatened and a Federal Species of Concern. Strike records report one Upland Sandpiper has been struck at NASO. Six Upland Sandpipers were observed during wildlife surveys, and WS personnel have observed others during periods of migration.

7.0 CONTROL ACTIVITIES

In addition to conducting a wildlife hazard assessment, WS also provided direct control services to NASO from June 2010 through May 2011. Table 4 lists species within guilds that were removed or dispersed to protect aviation safety at NASO by WS.

Table 4: Species or Guilds removed or dispersed by WS at NASO, June 2010 – May 2011.

Guild/Group	Guild Hazard Ranking at NASO	# Removed[1]	# Dispersed[1]
Artiodactyls (i.e. White-tailed Deer)	1	138	0[2]
Gulls	2	11	7,643
Raptors	3	13	87
Waterfowl	4	51	5,399
Pigeons/Doves	5	310	276
Crows/Ravens	6	3	45
Starlings	7	99	382
Blackbirds/Orioles	8	61	5,450
All other Birds	N/A[3]	9	20
All other Mammals	N/A[3]	68	2
Totals	**-**	**763**	**19,304**

1. Total species removed and dispersed obtained by summing all activities conducted by WS personnel from June 2010-May 2011.
2. Deer were not considered dispersed from the airfield.
3. All other bird and mammal guilds were not ranked and are combined.

Artiodactyls

WS personnel removed 138 deer from NASO base property from June 2010 through May 2011 including 15 deer from Aeropines Golf Course. The other 123 deer were removed from the airfield. The initial two deer surveys conducted in June of 2010 surveyed 61 and 66 deer, while the two surveys in May 2011 surveyed 5 and 7 deer. Figure 18 below shows all deer survey numbers and cumulative deer removal.

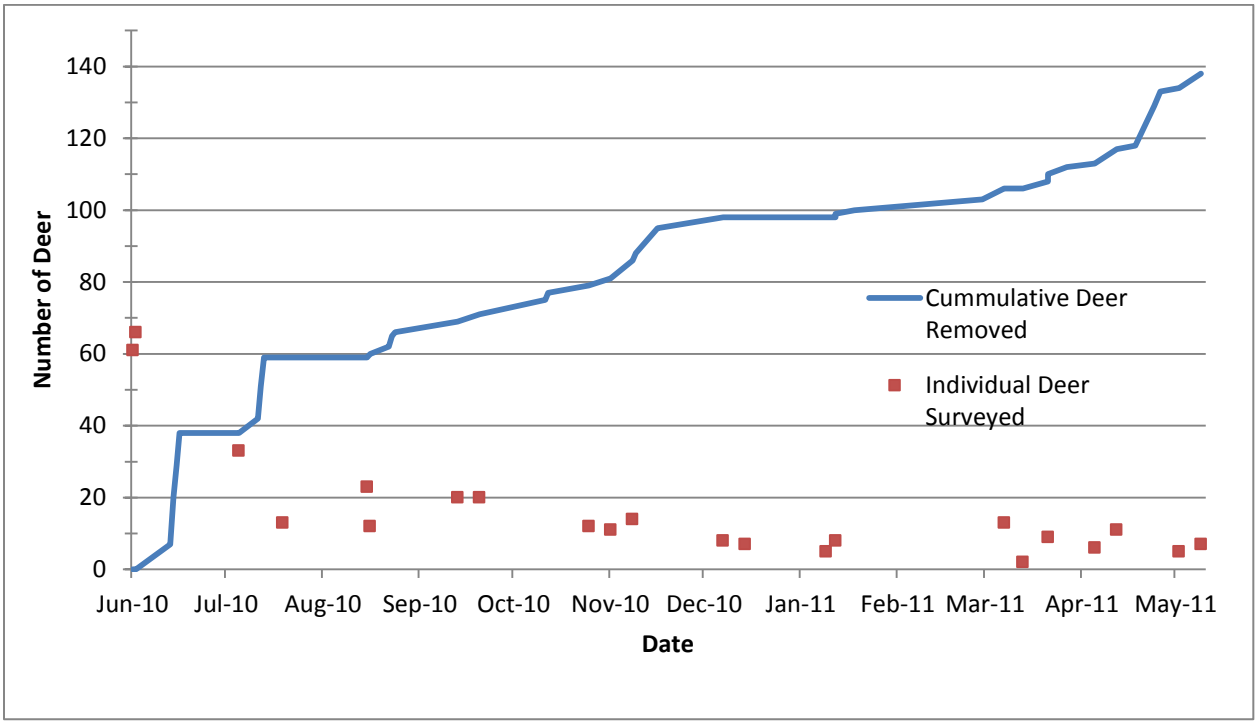

Figure 18: Deer surveyed and removed from NASO by WS personnel from June 2010 – May 2011.

Birds

WS dispersed 19,302 and removed 557 individual birds from the airfield (Table 4). The top 8 species dispersed from the airfield are listed below and Appendix G contains all species removed and dispersed from the airfield that fall in the eight most hazardous guilds/groups identified at NASO.

WS personnel responded to complaints of pigeons in hangars causing corrosion damage to aircraft by trapping and removing 276 pigeons from September 2010 through November 2011. Pigeons were not surveyed utilizing the hangars again after trapping.

8.0 RECOMMENDATIONS

In addition to placing an emphasis on the management of the species discuss in Section 6, WS recommends that the following actions are implemented at NASO to improve wildlife hazard management at NASO and further reduce the threat of wildlife/aircraft strikes:

Install a Security/Wildlife fence around the perimeter of the entire airfield

The Federal Aviation Administration (FAA) recommends that civil airports in areas of high deer populations install a 10 to 12 foot chain link fence with outriggers supporting three strands of barbwire projecting away from the airfield. FAA also supports a 4 foot skirt of chain link fence attached at the bottom of the fence and buried at a 45 degree

angle away from the airfield to exclude wildlife from digging of slipping under the fence. A properly installed wildlife fence will greatly improve safety and security of the airfield.

Update the NASO BASH Plan (WHMP) Based on the WHA

NASO's current BASH plan (NASOCEANAINST 3750.2B) was developed in 2008 by Geo-Marine, Inc. and was not based on a WHA. The plan provides the framework for the base to address wildlife hazards. The BASH plan lacks base specific details of wildlife hazards, and who, how and when the programs outlined in the plan will be conducted. It is recommended that the BASH plan be updated to reflect the information contained in this WHA.

Training of Airfield Personnel in Wildlife Hazard Management

FAA regulations require that civilian airport personnel who are responsible for implementing wildlife control measures are properly trained in wildlife hazard management by a qualified wildlife biologist [14 CFR Part 139.303 (c) and (e)]. NASO currently does not have a formalized training. Formalized training topics should include: USN regulations, policies, and procedures; wildlife strike reporting; wildlife attractants; habitat management; species identification; safety; and hands-on demonstrations of wildlife management tools and techniques. It is recommended that NASO develop formalized training for airfield personnel that may encounter wildlife on the airfield. The current BASH plan outlines this in the form of a Bird Detection and Dispersal Team (BDDT).

Establish a Formal BASH Working Group

The current NASO BASH Plan and the Navy Bird/Animal Aircraft Strike Hazard Program Implementing Guidance (CNICINST 3700, 7 Jul 2011) both outline the functions and personnel to be involved with the BASH Working Group (BWG). WS recommends that NASO establish a BWG in accordance with CNICINST 3700. The formation of this group is important, as it will facilitate greater sharing of information and cooperation among those who have a stake in managing wildlife hazards at NASO.

Continue to Seek Cooperation from Adjacent Property Owners

As discussed in Section 6, wildlife on properties near the airport pose serious threats to aviation safety at NASO. WS recommends that NASO continues to identify areas within 3 miles of the airport that may provide roosting and/or foraging areas for birds that utilize the airspace at NASO, especially Canada Geese. NASO should approach these landowners to seek cooperation for the removal of these hazards.

Utilize the Wildlife Activity Log and Report Bird Strikes

Airfield Operations personnel currently use the airfield wildlife activity database to record occasional instances of wildlife activity on the airfield. It is recommended that operations personnel continue to increase the accuracy of the wildlife activity records.

WS recommends that this log also be extended to other personnel including AFF, GEMD and Tower. WS recommends that the wildlife activity log be modified to include additional information that is currently not recorded, such as the number of birds involved, cover type, and location on the airfield. This information can be useful in determining trends and prioritizing management objectives.

Bird strikes should be reported online via WESS and a sample submitted to the Smithsonian Feather ID Lab for positive identification. Evaluation of the WESS data base has shown a lack in bird strike reporting. WS have seen an increase in strike reporting since June 2010. WS should continue training on proper strike reporting to airfield personnel and squadrons. Damage to aircraft following a strike or wildlife incidence is seldom recorded. WS recommends that NASO formalizes a process for recording damage. Damage should include aircraft structural damage, aircraft down time, repair, cleaning, and all other costs associated with a wildlife incidence. WS recommends that NASO work with the Naval Safety Center to ensure that the WESS data base is being updated with species identification and associated damages. This information is usually not available at the time a WESS report is initially submitted.

Maintain Necessary Permits to Control Wildlife

As stated previously, federal and state permits are necessary for lethal take of migratory bird species and state-managed species such as deer and turkeys. In addition, a federal permit is needed before Bald Eagles may be harassed from the airfield. NASO currently holds a migratory bird depredation permit, a state permit, and a Bald Eagle harassment permit. WS recommends that these permits be maintained to address wildlife species as necessary. If eagle nests are established, an amendment to the existing permit for base property or a new permit for neighboring property will need to be obtained for immediate removal of the nest.

Have Control Supplies on Hand

WS recommends that airfield personnel that are members of the BDDT who are responsible for wildlife hazard management be provided adequate equipment needed to disperse wildlife and adequate storage for this equipment, especially pyrotechnics. Such devices may include pyrotechnics and launchers, propane cannons, and vehicles equipped with sirens and lights. WS recommends that BDDT members are properly trained in the safe use and storage of these devices.

Evaluate Potential Wildlife Hazards When Planning New Construction or Land Use Changes

NASO is constantly undergoing expansion and improvement projects. It is critical to consider wildlife attractants during these planning phases. Several aspects to consider will be the planting of new vegetation, which may provide food to wildlife in the form of seeds and fruits and the creation of water bodies or drainage basins that provide fresh water. NASO's airfield manager currently reviews airfield maintenance projects with

WS for possible BASH concerns. WS recommends that this continue and be expanded to all construction and maintenance projects on base property. In addition, adjacent off-site projects, industrial development, road construction, recreational development, etc. need to be considered as potential wildlife attractant hazards and dealt with accordingly.

Continue to Monitor Wildlife Populations and Habitat Use Patterns in the Active Airfield

The intent of this WHA has been to document general occurrence, land-use patterns, and population characteristics of wildlife at NASO. It must be realized that wildlife abundance and use patterns on airfields are affected by a host of variables that are rarely the same from year-to-year. Hence, conclusions based on wildlife populations and patterns during this study are only meant to be a guide and may or may not be consistent in subsequent years. Survey routes and methods were established in a manner that facilitates continued monitoring. Data from this study will provide a baseline for comparison in subsequent years and NASO should continue to monitor wildlife populations by conducting monthly surveys using the same stations established in this assessment. While surveys conducted in subsequent years may not be conducted with the same frequency or intensity as this initial hazard assessment, they will still provide general insights into wildlife use patterns over time and enable NASO to gauge the effectiveness of its control efforts.

Habitat Modification and Exclusion

As discussed in Section 6, habitat modification and exclusion are two of the most important components of a wildlife hazard management plan. NASO airfield maintenance personnel have been diligent in maintaining grass in the airfield at the recommended height (6 to 10 inches), and WS recommends that regular mowing is continued. Grass management is seasonal, and frequency of mowing may need to be increased during growing season as resources permit. Woody vegetation growing in drainage ditches should be removed and these areas should be maintained to prevent creating thick, shrub-like habitat that can provide cover for small mammals and perching sites for raptors. Most ditches within the airfield have become clogged with woody vegetation. This not only attracts wildlife but prevents water from effectively draining from the airfield compounding the problem with areas of standing water within the airfield. The resulting saturated soils increase the chance of field equipment rutting the airfield when driving across or avoiding the area completely during mowing operations.

Because all species are attracted to water, areas of standing water should be eliminated where possible. Low lying areas should be filled or graded to improve drainage. Underground drainage culverts in the airfield have failed in areas creating extended periods of standing water following heavy rains. WS recommends NASO continue with their plans to repair/replace all non-functioning drainage systems.

The entire perimeter fence should be inspected periodically for any areas that may allow larger mammals to enter the airfield. Any gaps discovered in or under the fence should

be repaired immediately using bars, wire, or sections of fence to patch the area. Where wildlife are crawling under fences, it may be useful to install stone rip-rap along the bottom of the fence to prevent digging. If this is not sufficient, installing an "apron" of woven-wire or chain-link fence on the bottom of the perimeter fence that extends several feet out can help to prevent digging. Specific habitat features that require attention are detailed in Appendix H. A list of habitat management sites should be maintained and progress toward resolving these hazards should be discussed in working group meetings and documented in annual monitoring reports.

Agricultural Practices

Agricultural crops can attract hazardous wildlife to the airfield. All approach/departure corridors on NASO contain agricultural fields. The WHA has shown that these fields attract wildlife (e.g. geese) to the airfield. Consideration should be given to the crops that are planted and the agricultural practices used for their production. Cereal grain products should be avoided. These crops attract large numbers of waterfowl for forage. Agricultural practices should minimize tilling. Tilling exposes large numbers of forage (i.e. insects, worms, etc.) that attract large numbers of gulls. Care should be taken during harvest to ensure excess amounts of grains are not spilled. If spills occur they should be cleaned up.

The FAA recommends a distance of 5 statute miles between the farthest edge of the airfield and the hazardous wildlife attractant if the attractant could cause hazardous wildlife movement into or across the approach or departure airspace.

Evaluation of Off Base Aviation Hazards

The FAA recommends a separation distance of 5 statute miles between the farthest edge of the airports AOA and hazardous wildlife attractant if the attractant could cause hazardous wildlife movement into or across the approach or departure airspace (FAA AC 150/5200-33B). WS has identified several potential areas that attract hazardous wildlife within the approach/departure and circling airspace of NAS Oceana. These areas include: several barrow pits located along Oceana Blvd, Owl's Creek Golf Course, and a waste transfer station located on Virginia Beach Blvd. WS recommends that potential hazards surrounding the airfield be identified. Areas identified as potential hazards should be evaluated and BASH mitigation procedures implemented to reduce hazards.

9.0 SUMMARY

Based on data collected during the WHA, records from the WESS wildlife strike database, and control efforts by WS and NASO personnel, several species were identified that threaten aircraft safety at NASO. The guilds/group that are of most concern to aircraft safety include deer, gulls, raptors, waterfowl, pigeons/doves, crows, starlings, and blackbirds. Several management strategies may be implemented to reduce wildlife hazards at NASO, including habitat modification, exclusion, harassment, and lethal removal of hazardous wildlife species. WS

recommends that NASO continues to take an active approach to wildlife hazard management, utilizing the information contained in this WHA to reduce wildlife hazards and provide a safe environment for aircraft operations.

TABLE OF APPENDICES

EXECUTIVE SUMMARY

The United States Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services program (WS) conducted a 12-month wildlife hazard assessment (WHA) to identify wildlife hazards to aviation safety at Naval Auxiliary Landing Field Fentress (NALFF), an outlying airfield associated with Naval Air Station Oceana (NASO), from October 2011 to September 2012. Airfield bird surveys were conducted twice per month. Twenty-four night-time surveys of the airfield were also conducted to observe deer and other mammals' use of this area. Data collected included species abundance, behavior, and habitat use. Small mammal surveys were conducted in the fall of 2011 and spring of 2012 to determine species abundance in four different habitat types. In addition, WS identified and monitored areas outside of the airfield that may attract hazardous wildlife species to NALFF. Bird species observed were grouped into guilds (species that display similar behavioral characteristics) for analysis. Data collected during surveys were analyzed and compared with records from the Navy Safety Center Web Enabled Safety System (WESS) BASH database, control efforts by NALFF and WS personnel, and a wildlife hazard ranking list (Dolbeer and Wright 2009) to identify the species that are most hazardous to aviation safety at NALFF.

Based on information collected during the WHA, 1 mammal group and 7 bird guilds identified at NALFF from October 2011 through September 2012 presented the greatest threats to aviation safety. These group/guilds included deer, raptors (hawks, vultures, eagles), waterfowl (ducks and geese), pigeons/doves, blackbirds/orioles, starlings and swallows. Though blackbirds/orioles were the most abundant guild, deer were the most hazardous due to their large size, strike record, availability of habitat at or near NALFF, and general abundance in the area. There were 6 species within these group/guilds that were observed during the WHA that ranked as an extremely high hazard to aviation safety, and one species that ranked very high.

WS recommends a variety of methods to reduce or eliminate the threat of wildlife strikes from the group and guilds observed during the WHA. Habitat management can include: eliminating or excluding wildlife from areas of standing water; vegetation management in the airfield; reducing or excluding birds from perching/loafing areas; reducing abundance of prey species (such as small rodents) in the airfield; and installation and maintenance of a perimeter fence to prevent mammals such as deer from entering the airfield. WS also recommends harassment methods such as pyrotechnics, sirens, paintballs, and propane cannons to disperse birds from the airfield. Lethal control of hazardous species should be exercised when necessary utilizing firearms or traps. Permits for lethal control of species protected under federal and state laws should be maintained from the U.S. Fish and Wildlife Service and the Virginia Department of Game and Inland Fisheries as appropriate.

Additional recommendations include updating the NASO's/NALFF's Bird/Animal Aircraft Strike Hazard (BASH) Plan, establishment of a formal BASH Working Group (BWG), establish a Bird Detection and Dispersal Team (BDDT), establish formal BASH training and evaluating potential wildlife hazards when planning new construction or land use changes. It is recommended that NALFF continue to monitor wildlife abundance and habitat use in order to provide insight into wildlife use of the airfield and to gauge the effectiveness of control efforts.

4.0 INTRODUCTION

4.1 Purpose and Need for Action

Birds and other wildlife in the vicinity of airports are an increasing threat to aviation safety (Dolbeer et al. 2011). Since 1980, the Navy's national wildlife/aircraft strike database accounted for 440 A (> $1,000,000 in damages), B ($200,000 to < $1,000,000), C ($10,000 to < $200,000) and D (<$10,000) Class-rated incidents that included two fatalities to Naval pilots and over $372 million dollars in damages (Naval Safety Center). Based on the Naval Safety Center analysis and statistics, the average damage cost over the last 31 years is one million dollars per month. It is estimated that wildlife/aircraft strikes cost the U.S. civil aviation industry more than $614 million annually, while worldwide the total cost is over $1.2 billion per year (Keirn et al. 2010). In addition to costly aircraft repairs and down time, wildlife strikes sometimes result in serious injury or death. In January 2009, the wildlife/aircraft strike issue was dramatically illustrated when U.S. Airways Flight 1549 crash landed in New York's Hudson River after ingesting Canada Geese into both engines shortly after takeoff from LaGuardia Airport (Dolbeer 2009). This incident has been referred to in the media as "The Miracle on the Hudson" since all 155 passengers and crew survived despite the aircraft being a total loss. Less than two weeks prior to this incident, eight people were killed and one was seriously injured when a helicopter transporting workers to an offshore site in Louisiana struck a Red-tailed Hawk and crashed into a marsh (Wright 2011).

The Commander, Naval Installations Command (CNIC) established the Navy Bird/Animal Strike Hazard Program Implementing Guidance (CNICINST 3700, Appendix A). This instruction establishes the guidance for all installations that conduct or support air operations to conduct a Wildlife Hazard Assessment (WHA). Although the U.S. Navy is not required to follow the regulations set down by the FAA, the Navy does implement the FAA's guidance and expertise whenever practical.

The Federal Aviation Administration (FAA) is responsible for setting and enforcing the Federal Aviation Regulations (FAR) and policies to enhance public safety at civil airports. To ensure compliance with Code of Federal Regulations (CFR) 14 Part 139.337, the FAA requires certificated airports to conduct a wildlife hazard assessment (WHA), and if necessary, establish a wildlife hazard management plan (WHMP) when any of the following triggering events occur on or near an airport:

(1) An air carrier aircraft experiences multiple wildlife strikes;

(2) An air carrier aircraft experiences substantial damage from striking wildlife. As used in this paragraph, substantial damage means damage or structural failure incurred by an aircraft that adversely affects the structural strength, performance or flight characteristics of the aircraft and that would normally require major repair or replacement of the affected component;

(3) An air carrier aircraft experiences an engine ingestion of wildlife; or

(4) Wildlife of a size, or in numbers, capable of causing an event described above are observed to have access to any airport flight pattern or aircraft movement area.

The WHA must be conducted by a qualified wildlife biologist (see FAA Advisory Circular 150/5200-33B) and should include the following information:

(1) An analysis of the events or circumstances that prompted the assessment;

(2) Identification of the wildlife species observed and their numbers, locations, local movements, and daily and seasonal occurrences;

(3) Identification and location of features on and near the airport that attract wildlife;

(4) A description of wildlife hazards to air carrier operations; and

(5) Recommended actions for reducing identified wildlife hazards to air carrier operations.

Naval Auxiliary Landing Field Fentress

In June 2010, Natural Resources MidAtlantic entered into a cooperative service agreement with the United States Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services Program (hereafter referred to as WS) to initiate bird and deer surveys, evaluate the current Wildlife Damage Management (WDM) program, and provide direct control of hazardous wildlife using the airfield. In August 2010, CNIC entered into a cooperative service agreement with WS to conduct a WHA and to establish and continue an Integrated Wildlife Damage Management program (IWDM) at NALFF. Oversight and direction of the IWDM will fall under direct supervision of the NAS Oceana Air Operations Department. In March of 1999, Geo-Marine, Inc. provided NASO/NALFF with a BASH Plan. This BASH Plan did not include a formal evaluation of airfield specific hazards.

Starting in December of 2011, NALFF underwent complete renovation, remaining closed through October 2012. The taxiway and runway were completely reconstructed, lighting and signs were replaced, and buildings were reconstructed.

4.2 Legal Authority of Wildlife Services

The U.S. Navy, Commander Navy Installations Command (CNIC) and the U.S. Department of Agriculture, Animal and Plant Health Inspection Service, Wildlife Services program (WS) have entered into a Work/ Financial Plan where WS will provide assistance to mitigate potential and realized wildlife hazards at USN air stations in the continental United States (Appendix B). The Plan establishes WS as the appropriate agency to conduct wildlife hazard management at Navy installations.

The primary statutory authority by which WS operates is the Animal Damage Control Act of March 2, 1931, as amended (7 U.S.C. 426-426c; 46 Stat. 1468). WS has the authority to manage migratory bird damage as specified in the CFR. In addition, the Rural Development, Agriculture and Related Agencies Appropriations Act of 1988 authorizes and directs the Secretary of Agriculture to cooperate with States, individuals, public and private agencies, organizations and institutions in the control of nuisance mammals and birds deemed injurious to the public.

The Plan and legislation authorize WS to conduct initial on-site investigations, biological assessments (short-term studies), WHA, and wildlife management techniques to assist USN air stations.

4.3 Legal Status of Wildlife Species

Most species of wildlife are protected by one or more Federal, State, and/or local laws and regulations. As such, several agencies may be responsible for implementation of these regulations and issuance of specific permits may be required prior to taking action to reduce wildlife threats to aviation safety.

Federal laws passed by Congress to protect wildlife include (but are not limited to) the Migratory Bird Treaty Act (MBTA), Bald and Golden Eagle Protection Act (BGEPA), and the Endangered Species Act (ESA). Federal wildlife laws are generally administered by the U.S. Fish and Wildlife Service (USFWS), which is the lead agency responsible for migratory birds protected under the MBTA, BGEPA, and ESA. The USFWS may issue depredation permits to take or harass migratory birds when those species are causing damage to various resources or threaten human health and safety (Appendix C).

The Commonwealth of Virginia defers to the Federal depredation permit for take of non-game migratory bird species, though a separate permit is required to take mammals and game bird species managed by the Virginia Department of Game and Inland Fisheries (VDGIF). As detailed in § 29.1-529 of the Code of Virginia, airport operators may obtain authorization from VDGIF to take wildlife (that are not federally protected) as necessary to protect aviation safety (Appendix D).

The Commonwealth of Virginia hosts a number of threatened and endangered (T&E) species that are granted protection under Federal and State regulations (Appendix E). Prior to conducting operational control work such as harassment, shooting, trapping, or habitat manipulation, the list of species of concern should be reviewed to ensure compliance with Federal and State regulations.

5.0 OBJECTIVES

The objectives of this WHA were to:

5. Identify wildlife species, numbers, locations, behavior and habitat use in and around the airfield, with particular emphasis on species most hazardous to aviation safety;

6. Identify and locate features on and in the vicinity of the airfield that attract wildlife;
7. Describe wildlife hazards to aviation safety at NALFF;
8. Provide NALFF with management recommendations to reduce or eliminate wildlife hazards to aviation safety and serve as a basis for updating the current BASH Plan.

6.0 DESCRIPTION OF STUDY AREA

Figure 1: Aerial view of NALFF (photo from Google Earth, 2010).

NALFF is located within Chesapeake, VA. NALFF has one operational runway (5/23), supporting day and night Field Carrier Landing Practice (FCLP) operations by US Navy and US Marine Corps F/A 18 Hornet, F/A 18 Super Hornet and E-2/C-2 Hawkeye, supporting 42,688 day and 50,132 night aircraft operations in calendar year 2010. The runway was closed in December 2011 for complete reconstruction and became fully operational in October 2012. The airfield also includes 8 Landing Zones (LZ's), primarily supporting H-60 and H-53 helicopters. For calendar year 2010, 496 LZ operations were conducted. The NALFF property incorporates approximately 3,000 acres, comprised of open, mowed grassland (296 acres), agricultural leases (~860 acres), woodlots and areas of secondary growth (~1850 acres). The woodlots are primarily comprised of mixed hardwoods, forested swamps and evergreens. A 7-foot fence with a three strand barbed-wire outrigger surrounds the buildings on base, though there is no perimeter or aircraft operating area (AOA) fence present. NALFF is surrounded by agricultural and residential property. To the North and East of the airfield lies the Intracoastal Waterway, connecting the Atlantic Ocean and James River.

7.0 METHODS

Data collection for the WHA began October 1, 2011 and continued through September 30, 2012.

Bird Surveys

Bird survey procedures were based on the North American Breeding Bird Survey methodology. Surveys were conducted twice per month for 12 months at 11 observation points on the airfield (Figure 2). The beginning observation point for each survey was randomly selected, with 2 repetitions of the survey route per day (1/2 hour after sunrise and 2-3 hours prior to dusk).

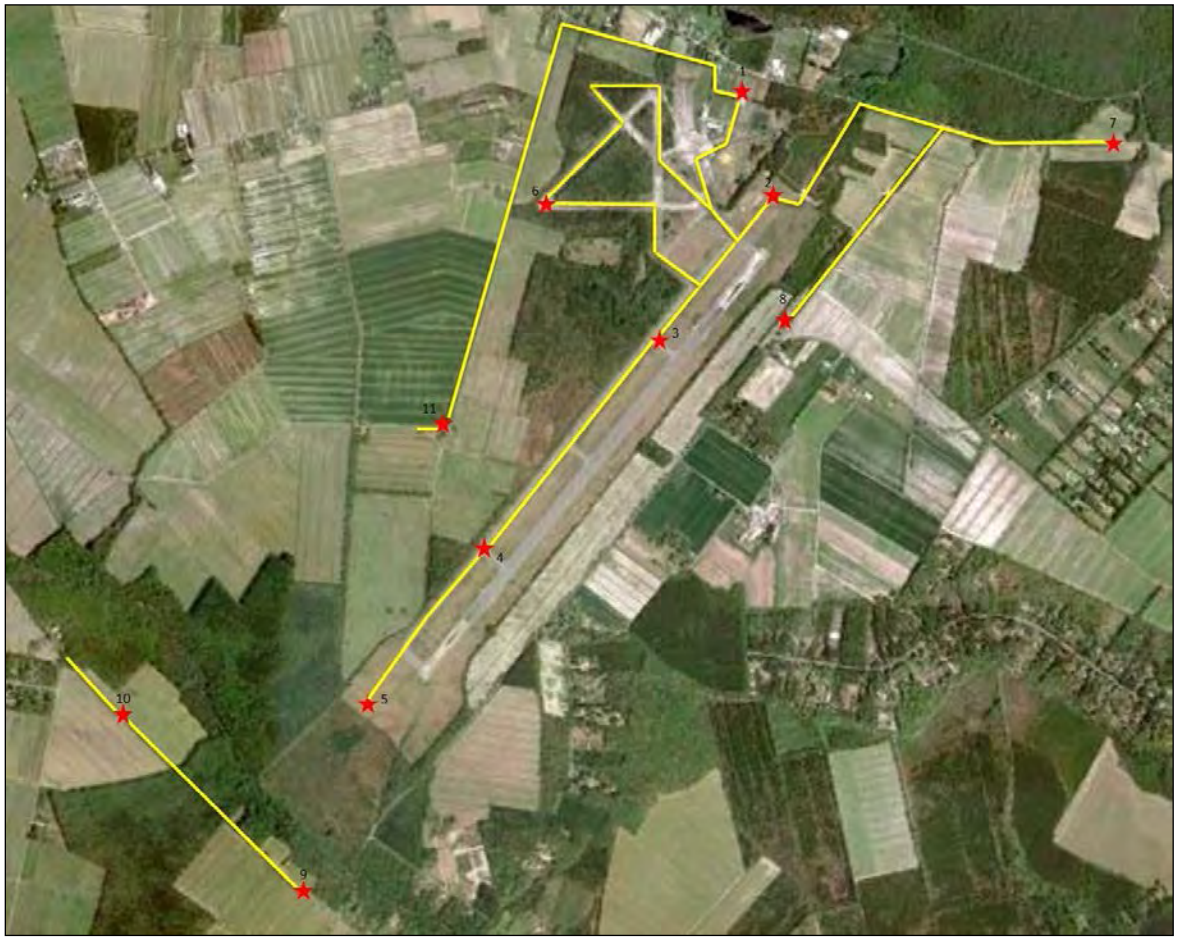

Figure 2: NALFF Bird Observation Points and Survey Route.

Birds were observed from a vehicle for 3 minutes at each point, with approximately ¼ mile distance between points. Between each observation point and at each point, the following data were recorded: weather, temperature, time, location, species, number observed, activity (behavior), habitat type, direction of flight, and comments on any other significant information (e.g., freshly mowed grass, approaching weather, change in flight activity, agricultural crop on fields, etc.). A map overlain with a 1,000-foot grid system was used to record location. Bird species were located without the aid of binoculars, though binoculars were used to identify

species that could not be readily identified with the naked eye or in low light conditions. Alpha species codes from the North American Bird Banding Manual were used to record birds observed during surveys.

Spotlight Surveys

In addition to bird surveys, 24 night-time spotlight surveys were conducted on the airfield over the course of the study period. Beginning 1 hour after sunset, night surveys were conducted by driving an established route approximately 8 miles long around the airfield (Figure 3). Observations were made using spotlights and forward looking infra-red (FLIR) equipment to determine primarily deer and other mammal use of the airfield. Information recorded included: weather, temperature, time, location, species, number observed, activity, and habitat type.

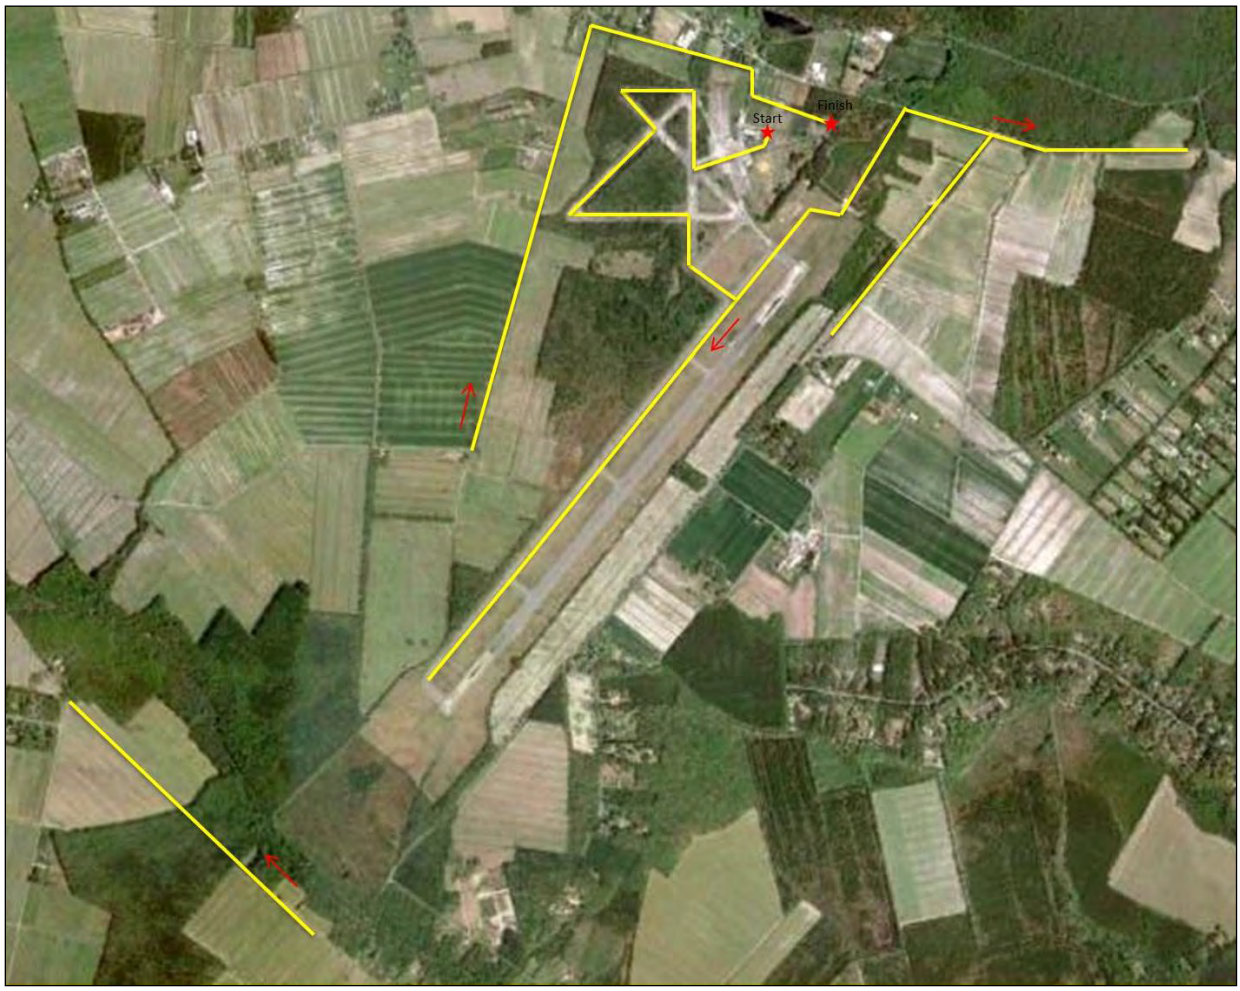

Figure 3: NALFF Spotlight Survey Route.

Small Mammal Surveys

Small mammal surveys were conducted in the fall of 2011 and spring of 2012 to determine abundance and habitat associations for species such as voles and mice inhabiting the airfield. Trapping sessions occurred in the spring and fall seasons over a three night period. Eight plot

areas were randomly selected within airfield study areas. Plots consisted of 25 snap-traps in a 5x5 grid spaced ten yards apart within each sample area. Sample areas consisted of 4 different habitat types; short grass, woodland, secondary growth/shrub, and agricultural field. Each trap was checked for three consecutive days and traps were re-baited, if necessary. Data recorded included: date, weather, study plot, number of species captured, number of sprung traps without capture, number of unsprang traps, and the number of missing traps. Capture-per-unit-effort was calculated for each trap session.

Data Analysis

Data were analyzed with descriptive statistics and frequency distributions per month using the Wildlife Hazard Management Information System (WHMIS) software developed by WS to determine trends in species abundance, habitat use, and behavior. For analysis purposes, common species were categorized into groups or guilds. Species were placed into their respective guilds based on similar behavioral characteristics, not taxonomic relationships (although guilds often parallel taxonomic lines). This approach was selected because behavioral attributes play a significant role in predisposing some species of wildlife to collisions with aircraft. In addition, wildlife control strategies are often selected based on their ability to exploit an animal's specific behavior(s), therefore species that exhibit similar behaviors and life history attributes generally require similar control methods.

5.0 RESULTS

5.1 Wildlife/Aircraft Strikes

According to criteria outlined in FAA Advisory Circular 150/5200-33A, a wildlife strike has occurred when:

6. A pilot reports striking 1 or more birds or other wildlife;
7. Aircraft maintenance personnel report aircraft damage as having been caused by a wildlife strike;
8. Personnel on the ground report seeing an aircraft strike 1 or more birds or other wildlife;
9. Bird or other wildlife remains, whether in whole or in part, are found within 250 feet of a runway centerline, unless another reason for the animal's death is identified; and
10. An animal's presence on the airport had a significant negative effect on a flight (i.e., aborted takeoff, aborted landing, high speed emergency stop, aircraft left pavement area to avoid collision with an animal, etc.).

Wildlife strike data provide valuable information about wildlife hazards on or near airfields, including the species that are struck, seasonal trends, and time of day when strikes occur. Nationwide, the number of reported wildlife strikes has shown a five-fold increase from 1990 through 2009 (Dolbeer et al. 2011). Despite the increase in reported strikes, the number of strikes resulting in damage during this same time period has declined by 21% (Dolbeer et al. 2011). This important fact is attributed to successful wildlife hazard management programs at many FAA certificated airports (Dolbeer et al. 2011).

Data obtained from the Navy Safety Center WESS and Smithsonian Feather ID Lab revealed that there have been 170 reported wildlife strikes at NALFF from 1981 through 2011 (Figure 4). Wildlife strikes peaked in 2010 with 26 reported strikes (Figure 4). The upward trend in wildlife strikes at NALFF may be attributed to factors such as increases in wildlife populations, changing land uses on and adjacent to the airbase, an increase in reporting, as well as more strikes being attributed to NALFF as opposed to NASO in accordance with the number of operations and flight time at that specific airfield. The Navy Safety Center estimates that only 25% of all strikes are reported. Much of the increase may be attributed to better reporting of wildlife strikes due to greater awareness of the wildlife strike issue and greater cooperation within the aviation industry to report strikes (Dolbeer et al. 2011).

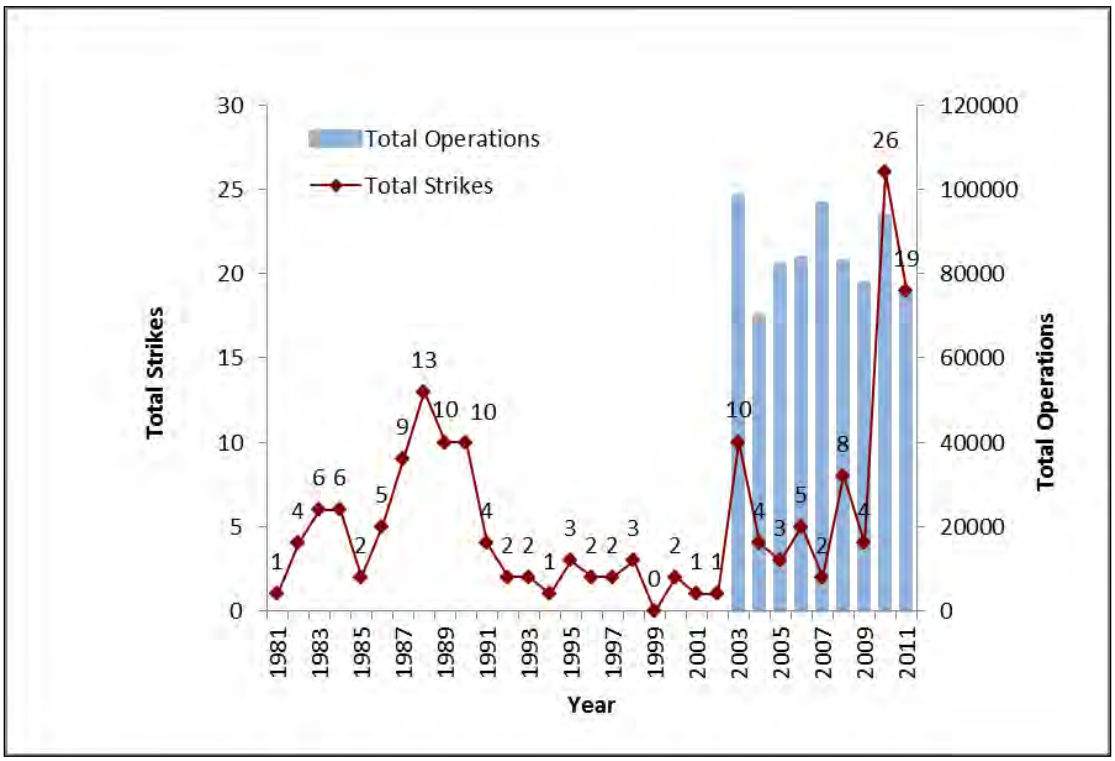

Figure 4: Reported wildlife strikes (1981-2011) and aircraft operations (2003-2011) at NALFF.

Of the 170 reported strikes at NALFF from 1981 through 2011, over 86% were unknown (146), 10% involved birds (17), 2% were white-tailed deer (3), and 2% involved bats (3). Most of the unknown strike reports were bird species (146, or 86%). Of the strikes where the species was identified, Yellow-rumped Warbler (5), Vesper Bats (3) and white-tailed deer (3) were the most frequently reported species. Consistent with national trends (Dolbeer et al. 2011), most strikes at NALFF occur in the late summer through early fall (Figure 5). Strikes during these periods coincide with the dispersal of naïve juveniles and fall migration.

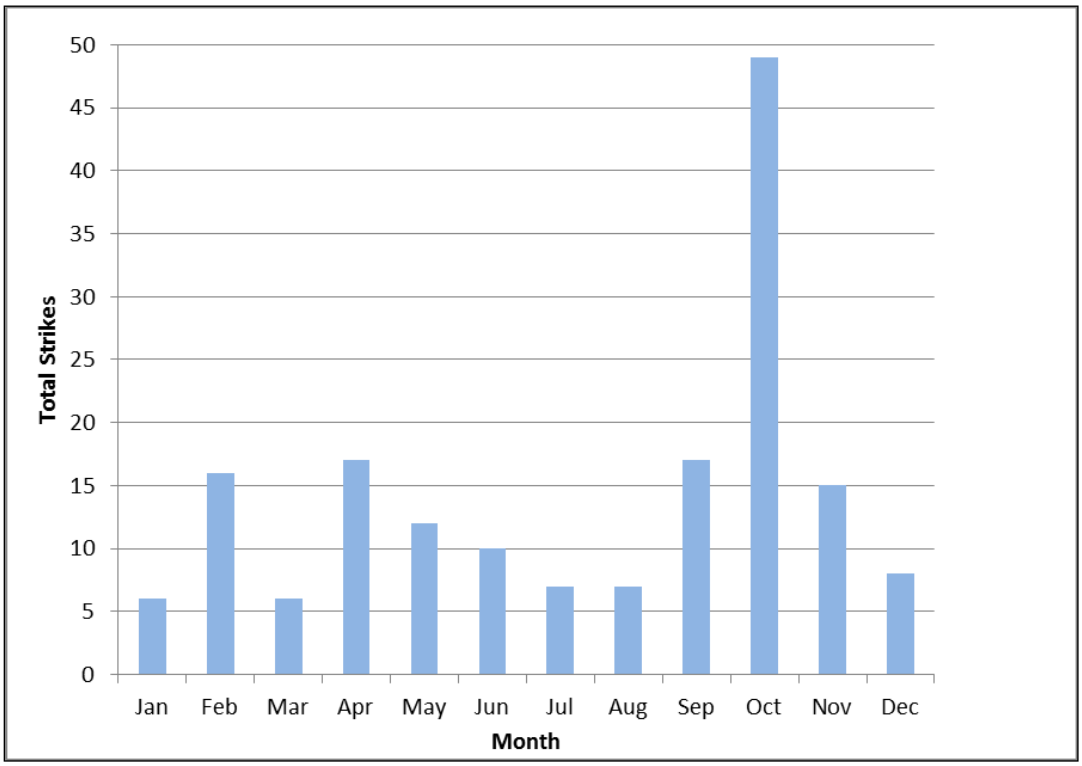

Figure 5: Number of strikes reported by month at NALFF, 1981-2011.

For all strikes reported at NALFF only 3.5% (6 of 170) reported damage >$10,000 (Table 1). All 6 strikes were * Class C Mishaps (1 deer $179,484, 1 Lesser Scaup $125,039 and 4 unknowns which individually totaled $47,842, $34,131, $15,000 and $13,500, respectively).

Table 1: Strikes with reported damage at NALFF, 1981-2011.

Species	N	A	B	C	Total
Unknown	142			4	146

Ruby-crowned Kinglet (*Regulus calendula*)	1				
Virginia Opossum (*Didelphis virginiana*)	1				
Total	**164**	**0**	**0**	**6**	**170**

Damage Classes: N = No damage Reported or <$10,000
A = >$1,000,000
B = $200,000 to <$1,000,000
C = $10,000 to <$200,000

5.2 Wildlife Surveys

Bird Surveys

From October 2011 through September 2012, WS recorded 44,448 bird observations at NALFF during bird surveys. Sixty-seven bird species representing 26 different bird guilds were observed throughout the study year (a complete table listing each guild and species observed throughout the study year may be found in Appendix F). The 6 most abundant guilds were Blackbirds/Orioles (27,252), Swallows (8,325), Starlings (3,801), Thrushes (1,075), Pigeons/Doves (880), Waterfowl (715), and Warblers (595). The 10 most abundant species observed are listed below[2]:

10.) Mixed Blackbirds = 25,918
11.) Tree Swallows (*Tachycineta bicolor*) = 7,703
12.) European Starling (*Sturnus vulgaris*) = 3,801
13.) Red-winged Blackbird (*Agelaius phoeniceus*) = 1,074
14.) American Robin (*Turdus migratorious*) = 1,064
15.) Yellow-rumped Warbler (*Dendroica coronata*) = 578
16.) Rock Pigeon (*Columba liva*) = 551
17.) Snow Goose (*Chen caerulescens*) = 530
18.) Eastern Meadowlark (*Strunella magna*) = 474
10.) Purple Martin (*Progne subis*) = 464

Birds were observed in 13 different habitat types during surveys at NALFF. Birds were most commonly observed utilizing the large, agricultural fields (76%) that makeup the dominant habitat feature around the airfield. Short grass areas were the next most commonly used habitat (8%), followed by structure (6%) such as power lines, towers, fences, buildings and old aircraft where birds were often observed perching (Figure 6). Bird activity was classified into 11 categories: flying passing (flying in a continuous path beyond the survey area); flying locally (short, random flights); feeding (actively consuming food); perched (loafing on a structure); vocalizing; standing; towering (flying

[2] Total abundance is derived by summing all bird observations throughout the study year. Therefore, the total number of bird observations includes individuals that may have been present on the airfield day after day and were recorded on multiple occasions.

in a circular pattern, often while utilizing thermal currents); walking; loafing (staying in one area, not on a structure for a length of time without engaging in another activity); hawking insects (flying erratically while attempting to catch insects) and running. Ninety percent of all observations fell into three activities: flying passing (54%), flying locally (24%) and feeding (12%) for all species during the study year (Figure 7).

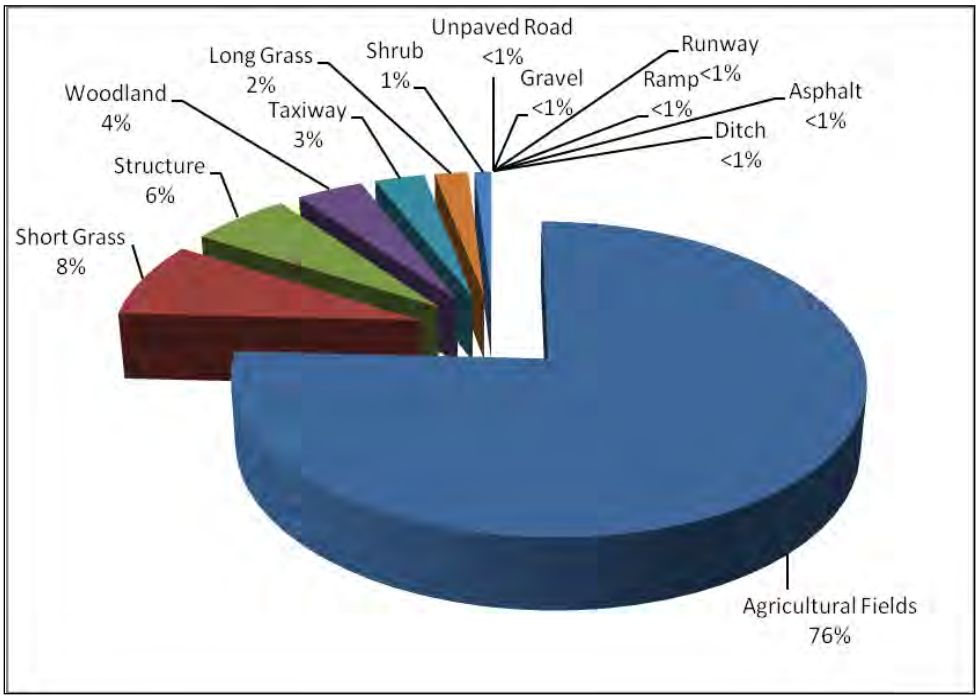

Figure 6: Habitat use by birds at NALFF, October 2011 through September 2012.

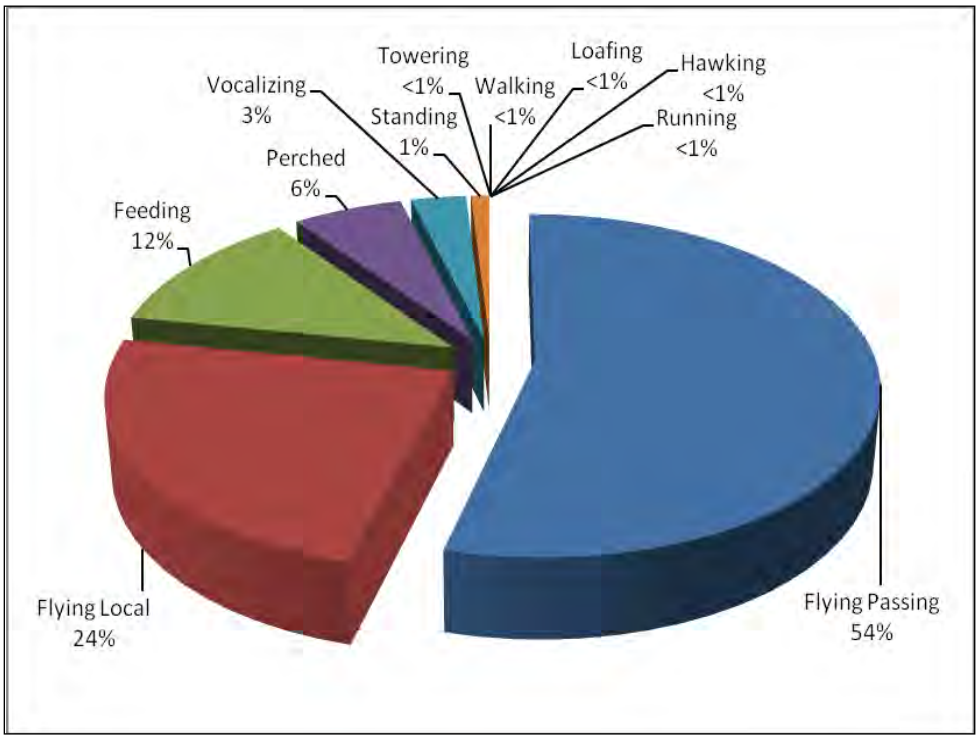

Figure 7: Bird activity at NALFF, October 2011 through September 2012.

Spotlight Surveys

WS completed 24 night spotlight surveys of the NALFF airfield during the study year. Three hundred-forty medium to large-sized mammals were observed during night surveys, with white-tailed deer (*Odocoileus virginianus*) being the most frequently observed species (Table 2). Observations recorded during night surveys may have been multiple observations of the same individuals throughout the survey year. Most mammal species were observed in the agricultural fields or in short grass (Table 2).

Table 2: Mammal species and cover type observed during night surveys at NALFF.

Species	Ag. Fields	Grass, Short	Woodland	Unpaved Road	Grass, Long	Shrub	Ramp/ Ditch	Total
White-tailed Deer	216	51	15	4	6	3	0	**295**
Coyote	3	0	0	0	0	0	0	**3**
Red Fox	1	0	2	0	0	0	1	**4**
Gray Fox	1	3	0	0	0	0	0	**4**
Raccoon	10	0	5	0	0	1	2	**18**
Rabbit	1	0	0	4	0	0	0	**5**
Opossum	7	1	1	2	0	0	0	**11**
Total	**239**	**55**	**23**	**10**	**6**	**4**	**3**	**340**

Small Mammal Surveys

Airfield small mammal surveys were conducted in November 2011 (fall trapping session) and May 2012 (spring trapping session). Species captured during the trapping sessions included: northern short-tailed shrew (*Blarina brevicauda*, 33%), peromyscus species (32%), least shrew (*Cryptotis parva*, 21%), meadow vole (*Microtus pensylvaticus*, 13%) and hispid cotton rat (*Sigmodon hispidus*, 1%). Capture rates were greater during the spring when compared to the fall trapping sessions (Figure 8). Small mammals were most often captured in secondary growth/shrub (49%) and woodland (37%) habitats.

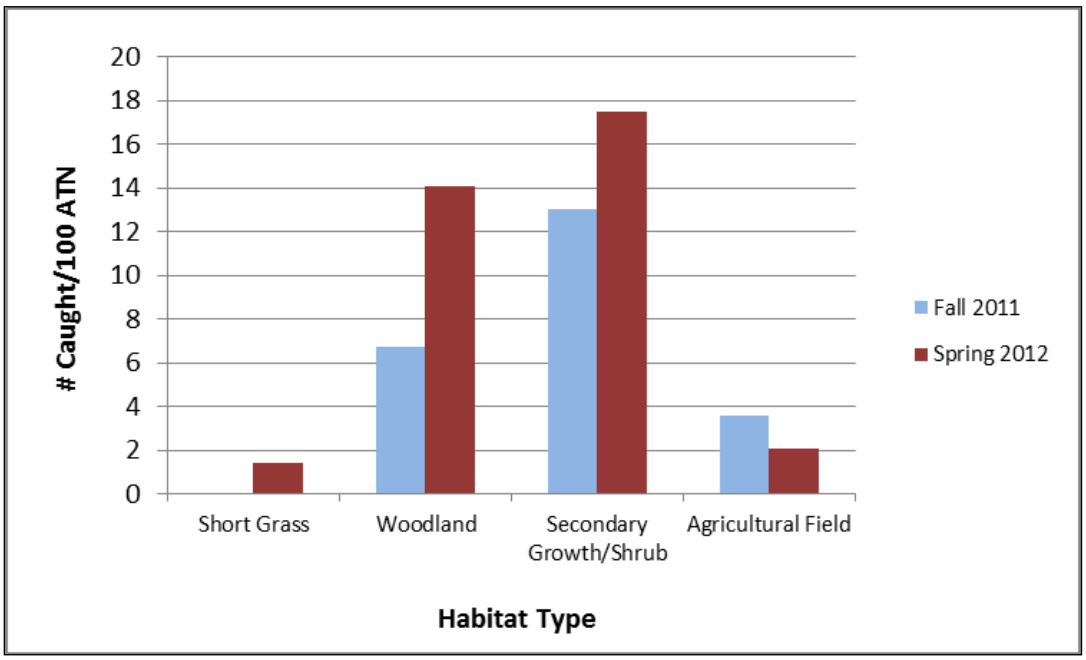

Figure 8: Catch-per-unit-effort of rodents captured for each habitat type at NALFF, fall 2011 and spring 2012.

6.0 DISCUSSION

Although almost all wildlife species commonly found at airports can pose some hazard to aviation safety, not all species are equally hazardous to aviation (Dolbeer and Wright 2009). For example, bird species such as Canada Geese (*Branta canadensis*) are more likely to cause damage if struck by aircraft than species the size of a sparrow. Utilizing the FAA wildlife strike database, Dolbeer and Wright (2009) developed a ranking of 89 wildlife species that pose the greatest threats to aviation safety. The ranking was based on the percentage of strikes causing damage from aircraft from 1990 to 2007, and species were classified into 6 hazard severity levels ranging from extremely high (>40% of strikes causing damage) to very low (<1% of strikes causing damage). Combined with wildlife surveys conducted locally at an airbase, this hazard ranking list can be used to prioritize management actions to species posing the greatest risk to aviation safety (Dolbeer and Wright 2009). As of 2011, DeVault et. al developed a new process

for identifying the hazard level ranking of wildlife if struck as opposed to species that caused the most damage. The effects of avian body mass, body density, and group size on relative hazard scores was assessed, and a ranking was developed (DeVault et al 2011). Even though the process has been updated, the species that pose the greatest risk remained the same.

Though 67 species were observed from 26 different guilds and 7 mammal groups through the study year (Appendix F), for this discussion emphasis will be placed on those guilds/groups that pose the greatest threats to aviation safety at NALFF. For this analysis the following criteria were used:

Primary Consideration:

1. Number of individuals observed during surveys.
2. The individuals' associated hazard ranking according to Dolbeer and Wright.
3. Evaluation of NALF Fentress' strike record.

Additional consideration was given for the following conditions:

- Location and behavior of individuals within each guild/group.
- Amount of control effort required to remove the specific hazard from the airfield (i.e. did the species easily disperse or not).

Using this information, guilds/groups were ranked in order of the threat level that they pose to aviation safety at NALFF from the most severe to the least. This comparison helps to show that the most abundant species on an airfield (Blackbirds/Orioles, in this case) are not necessarily the most hazardous to aviation safety due to abundance alone. The 7 guilds/groups identified as most hazardous to aviation safety at NALFF from October 2011 through September 2012 were deer, Raptors, Waterfowl, Pigeons/Doves, Blackbird/Orioles, Starlings, and Swallows (Table 3). There were six species observed at NALFF that rank as an extremely high hazard to aviation safety, one as very high, and two as a high hazard (Table 3). The following discussion and management recommendations will focus on the 7 most hazardous guilds/groups listed in Table 3. However, most if not all of the management recommendations (habitat modification, dispersal methods, etc.) will be effective for managing the majority of species observed at NALFF.

Table 3: Guild hazard ranking and total observations at NALFF, October 2011 - September 2012.

Guild/Group	Species	Hazard Level and percentage of strikes causing damage in the U.S.[1]	Total Observed at NALFF[2]	Reported Strikes at NALFF, 1981-2010	Strikes at NALFF with reported damage, 1981-2010[3]
Artiodactyls	White-tailed Deer	Extremely High (82%)	295	3	1
Raptors	Turkey Vulture	Extremely High (52%)	126	0	0
	Red-tailed Hawk	High (17%)	49	0	0
	American Kestrel	Very Low (1%)	11	0	0
	Black Vulture	Extremely High (51%)	9	0	0
	Northern Harrier	Low (2%)	7	0	0
	Cooper's Hawk	n/a	7	0	0
	Bald Eagle	Extremely High (42%)	2	0	0
	Sharp-shinned Hawk	n/a	1	0	0
	Totals		**212**	**0**	**0**
Waterfowl	Snow Goose	Extremely High (51%)	530	0	0
	Canada Geese	Extremely High (51%)	141	0	0
	Tundra Swan	n/a	43	0	0
	Mallard	Very High (26%)	1	0	0
	Totals		**715**	**0**	**0**
Pigeons/Doves	Rock Pigeon	High (12%)	551	0	0
	Mourning Dove	Moderate (4%)	329	1	0
	Totals		**880**	**1**	**0**
Blackbird/Orioles	Mixed Blackbirds	n/a	25,918	0	0

	Red-winged Blackbird	Low (3%)	1,074	0	0
	Common Grackle	Moderate (9%)	251	0	0
	Brown-headed Cowbird	Low (2%)	9	0	0
	Totals		**27,252**	**0**	**0**

Table 3 continued: Guild hazard ranking and total observations at NALFF, October 2011 - September 2012.

Guild/Group	Species	Hazard Level and percentage of strikes causing damage in the U.S.[1]	Total Observed at NALFF[2]	Reported Strikes at NALFF, 1981-2010	Strikes at NALFF with reported damage, 1981-2010[3]
Starlings	European Starlings	Moderate (4%)	3,801	0	0
Swallows	Tree Swallow	Very Low (0%)	7,703	0	0
	Purple Martin	Low (3%)	464	0	0
	Barn Swallow	Very Low (1%)	158	0	0
	Totals		**8,325**	**0**	**0**

4. Ranking based on strike reports from 1990-2007 (Dolbeer and Wright 2009); "n/a" indicates that species was not individually ranked.
5. Total observations obtained by summing all observations during surveys (day and night) from October 2011-September 2012. Total may include individuals that were present day after day and were recorded on multiple occasions.
6. Reported damage >$10,000.

6.1 Artiodactyls

Artiodactyls (i.e., deer) rank as the most hazardous mammal species to aviation safety in the United States, with 93% of strikes resulting in damage from 1990 through 2009 (Dolbeer et al. 2011). The large size of species such as white-tailed deer and the percentage of strikes involving multiple animals make them especially hazardous to aircraft during the takeoff and landing phases of flight. From 1990 through 2009, Artiodactyls, primarily white-tailed deer, have been involved in 847 damaging strikes in the U.S., resulting in over $36 million in reported costs (Dolbeer et al. 2011).

General Abundance

Deer were the ninth most abundant group observed at NALFF from October 2011 through September 2012 (Appendix F). White-tailed deer (*Odocoileus virginianus*), the

only species observed in this group, rank as an extremely high hazard to aviation safety, with 82% of strikes causing damage from 1990 through 2007 on civil airfields (Table 3, Dolbeer and Wright 2009). From 1981 through 2011, three deer were struck by aircraft at NALFF, and account for one out of 6 reported Class C mishaps (WESS Database) on base. A total of 295 deer were observed during 24 night surveys. Night surveys were conducted by driving a predetermined 8 mile route around the airfield, using spotlights and/or FLIR to locate deer. Deer observations ranged from 3 to 25 animals, with an average of 12 seen per survey. A major contributing factor to the variation in deer surveyed was due to the agricultural practices present on NALFF property. Corn fields throughout the summer drastically decreased visibility of deer present in the agricultural fields. Also, a lack of perimeter fence allows white-tailed deer to move in and out of the airfield and surrounding agricultural areas of NALFF at will.

Attractants

The NALFF airfield and surrounding habitats are ideal for deer, including agricultural fields (corn, soybeans), mature timber (especially white oak, a preferred food source), edge/shrub areas, wetlands, and open grassland.

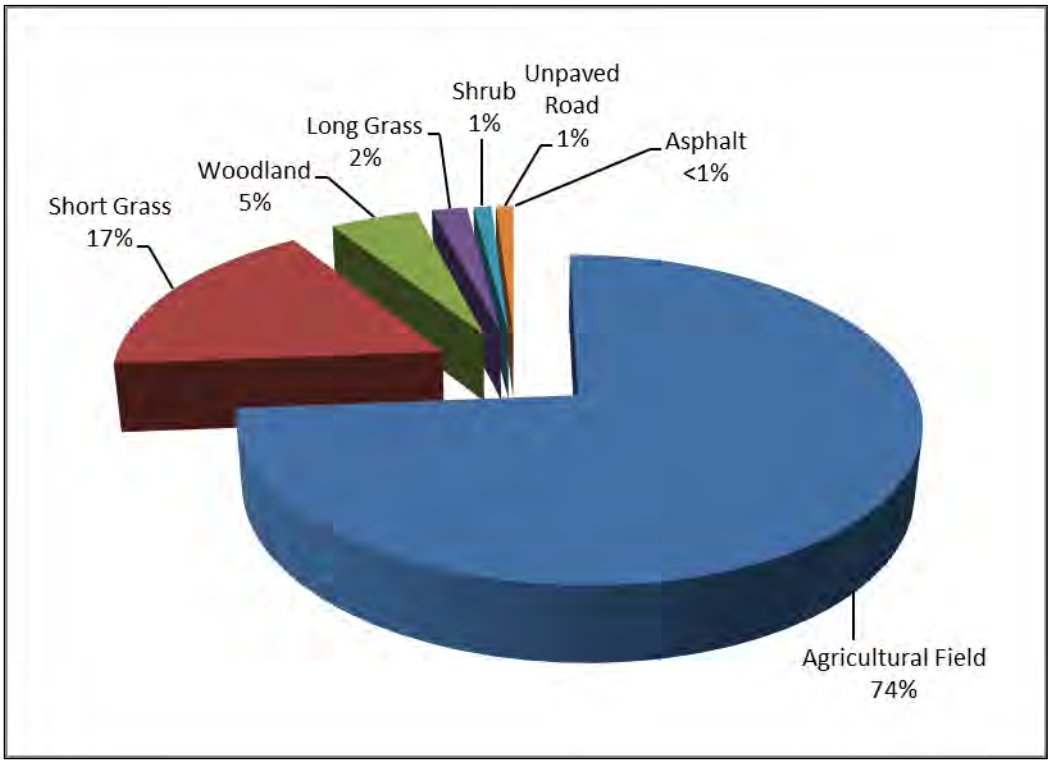

Figure 9: Deer habitat use at NALFF, October 2011 through September 2012.

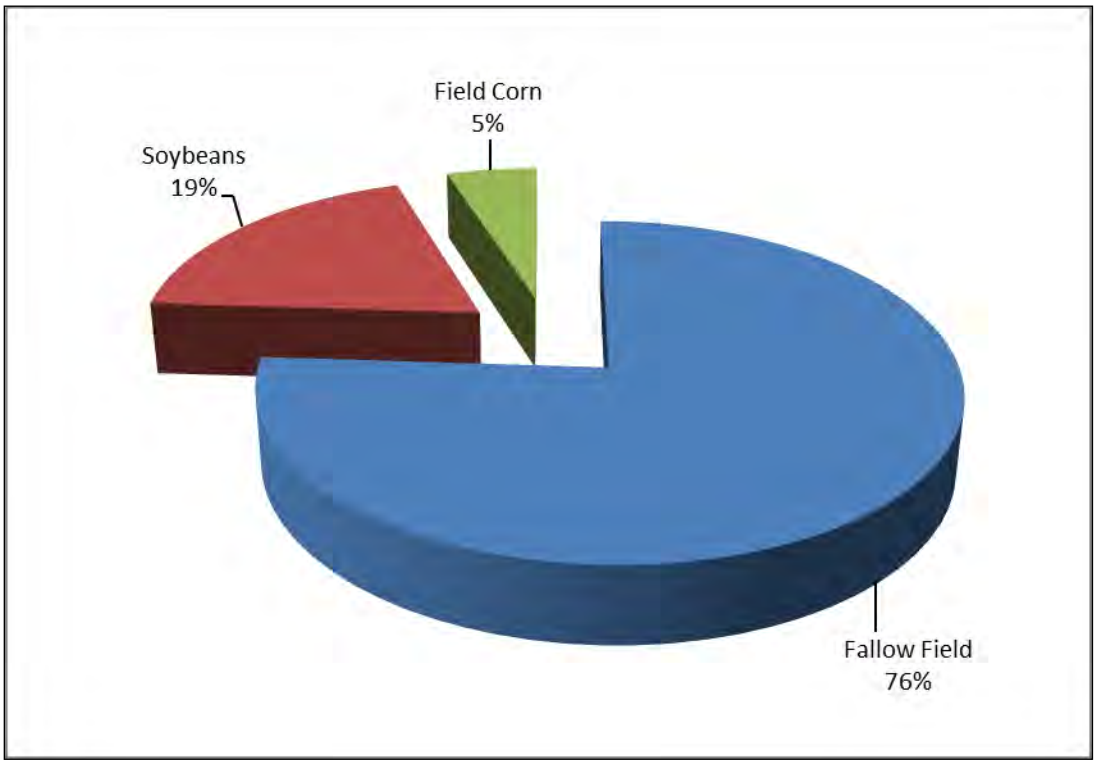

Figure 10: Deer agricultural field use at NALFF, October 2011 - September 2012.

Deer were most often observed utilizing agricultural fields (74%) at NALFF (Figure 9). Fallow fields accounted for 76% of all deer surveyed in agricultural fields (Figure 10). Visibility of fallow fields is much greater in comparison to a field with crops, most likely resulting in a higher percentage of deer observed. Fallow fields are identified as an agricultural field that is not planted with any crops. Agricultural fields were planted in soybeans and corn, both of which were harvested throughout the study period.

NALFF contains areas outside of the airfield on base property that contain ideal habitat for deer including: agricultural fields, mature timber, edge/shrub areas, wetland areas and open grassland. Deer were often seen utilizing these habitat features by WS and base personnel. With no perimeter fence installed, deer are free to roam across the airfield with no restrictions.

Figure 11: White-tailed deer removal focus area at NALFF.

Management Recommendations

The best recommendation for NALFF to decrease and limit deer activity on the airfield involves the installation of a 10-12 foot perimeter fence with three strands of barbed wire attached to outriggers. This is the most effective method for reducing the threat of deer strikes at NALFF. Once installed, it is necessary that the entire fence be inspected frequently for damage and gaps. Habitat management and removal of deer on the airfield and nearby navy property are also major components to reducing the threat. Airfield management is currently converting areas of optimal deer habitat (i.e., secondary growth and security cover) adjacent to the runways to maintained open grassland or agricultural fields. Airfield Operations is currently pursuing a Clear Zone Management Plan that will target travel corridors and continue to reduce optimal deer habitat adjacent to runways and taxiways.

NALFF should continue to actively remove deer from the base. This is currently being accomplished through WS personnel and a base hunting program utilizing VDGIF Deer Population Reduction Program (DPOP). Removal activities should be focused on the area denoted in Figure 11.

WS recommends that any deer present in the airfield be removed immediately via shooting or trapping. While not an immediate threat to aviation safety, deer present on

base property can and do gain access to the airfield. Deer on base, off of the airfield also serve as a source population for deer to annually disperse to the airfield. Lethal removal of deer requires a permit from the VDGIF, and it is recommended that NALFF maintain its permit current.

6.2 Raptors

Raptors (birds of prey) pose serious threats to aviation safety due to the larger size of many species and their flight behaviors. Some raptors may soar high over the airfield (eagles, vultures), others perch on structures in the airfield (Red-tailed Hawks and American Kestrels), while others may fly slowly close to the ground while hunting (harriers). From 1990 through 2009, raptors have been involved in 925 damaging wildlife strikes in the United States, resulting in almost $56 million in damages (Dolbeer et al. 2011).

General Abundance
Although raptors were the ninth most abundant guild observed at NALFF from October 2011 through September 2012 with 212 observations (Appendix F), 3 species observed at NALFF in the raptor guild pose an extremely high risk to aviation safety, making raptors the second most hazardous guild to aviation safety at NALFF (Table 3). As shown in Table 3, Turkey Vultures (*Cathartes aura*) were the most commonly observed species in the raptor guild, followed by Red-tailed Hawk (*Buteo jamaicensis*), American Kestrel, (*Falco sparverius*), Black Vulture (*Coragyps atratus*), Cooper's Hawk (*Accipiter cooperii*), Northern Harrier (*Circus cyaneus*), Bald Eagle (*Haliaeetus leucocephalus*), and Sharp-shinned Hawk (*Accipiter striatus*). Raptors were most often observed flying locally 46% of the time in or over woodland areas and agricultural fields at NALFF (Figure 12).

Attractants
Raptors are attracted to the airfield at NALFF by several features. Raptors find abundant prey (e.g., meadow voles, field mice, Eastern cottontails, etc.) in the grassland, agricultural field and woodland areas of the airfield. There are numerous perching sites such as navigation aids, lights, communication towers, trees, and radar facilities that may be utilized by raptors. Vultures are often observed towering on thermal updrafts high above the airfield. Mowing operations and road-killed animals provide abundant food sources for vultures in the area.

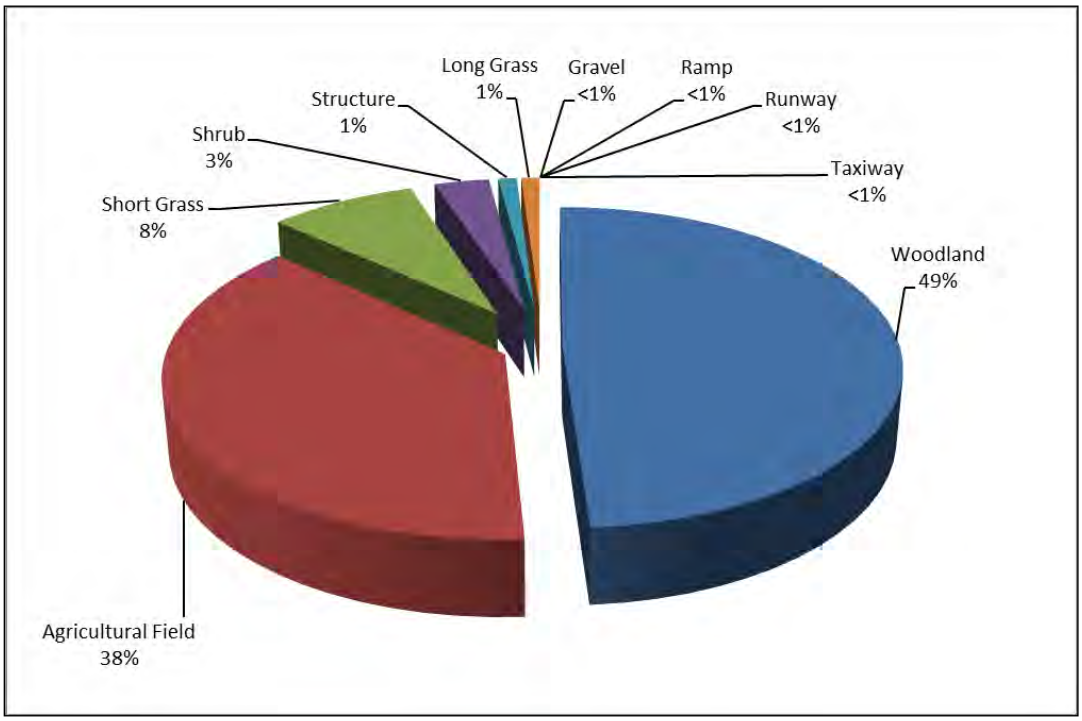

Figure 12: Raptor habitat use at NALFF, October 2011 through September 2012.

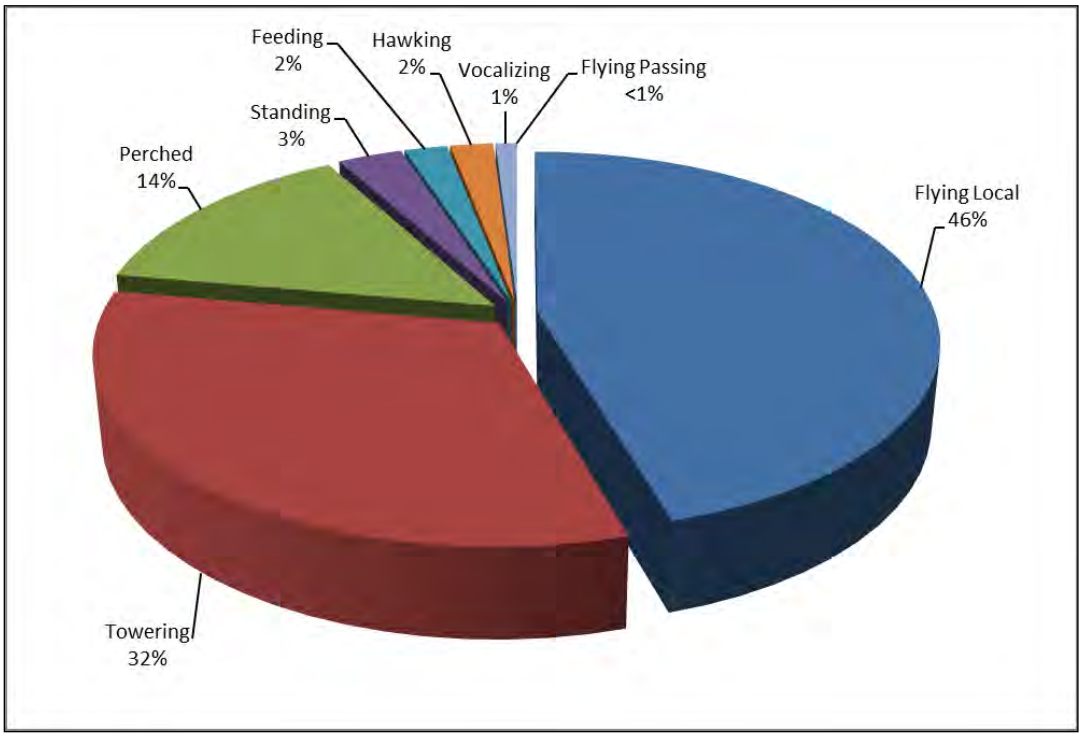

Figure 13: Raptor activity on NALFF, October 2011 through September 2012.

Management Recommendations

To reduce the likelihood of aircraft strikes involving raptors, Blackwell and Wright (2006) suggested that management efforts in the airfield should be directed towards the availability of food and alteration of habitat used by raptors. The reduction of food sources such as rodents and carrion in the airfield is critical in controlling foraging by Red-tailed Hawks and vultures (Blackwell and Wright 2006). Reducing the number of small mammals in the airfield may be accomplished by a variety of methods, including frequent mowing and/or the use of rodenticides. Any animal carcasses found in or around the airfield should be removed and disposed of promptly to avoid attracting vultures. Mowing practices should remain consistent throughout the summer to prevent vegetation from reaching heights attractive to small rodents, decreasing the amount of scavenging by Turkey Vultures and other birds of prey.

Research has shown that small mammals use unmanaged areas of tall vegetation far more than disturbed areas (Barras and Seamans 2002, Blackwell and Wright 2006, Washburn and Seamans 2007), so frequent mowing can help to reduce small mammal abundance at airports (Barras and Seamans 2002), reducing the availability of food for raptors. When possible, reducing the availability of locations where raptors may perch, roost, loaf, or nest is recommended. As such, NALFF should consider the removal of trees and unused structures in the airfield. For structures that cannot be removed (i.e., signs, lights, towers, etc.), devices that exclude birds or make it difficult for their perching should be considered (such as spider wires, bird spikes, coil wire, etc.).

Raptor species must be harassed from the airfield whenever present using methods such as vehicles, horns, and pyrotechnics. Vultures commonly soar high above the airfield, making them difficult to disperse using 15mm pyrotechnics, given their limited range. Devices with much greater range (such as CAPA rounds or 12-gauge shellcrackers) may be more useful for dispersing vultures. Lethal removal of some raptors may be necessary for persistent individuals, and as such NALFF's depredation permit must be kept current to allow take of raptors. Lethal removal may include methods such as shooting or trapping. Though recently removed from the endangered species list, Bald Eagles are protected under the Bald and Golden Eagle Protection Act and a permit is required to simply harass eagles from the airfield. Eagles are periodically observed around the airfield environment. The intracoastal waterway to the North and East of the airfield is a major attractant for eagles, and falls within the 5 mile radius of the airfield. NALFF has submitted an application for this dispersal permit and it is recommended that the permit be kept current once obtained.

6.3 Waterfowl

Waterfowl can be particularly hazardous to aviation safety due to their larger size and flocking behavior. In particular, Canada Geese have been responsible for some of the more serious wildlife strikes. In addition to the more recent "Miracle on the Hudson" event (see Section 1.1), 24 airmen were killed in 1995 when an Air Force AWACS aircraft crashed at Elmendorf Air Force Base in Alaska after striking a flock of Canada Geese (Wright 2011). From 1990 through 2009, waterfowl have been responsible for the

greatest number of damaging strikes in the United States (1,503), resulting in over $144 million in losses (Dolbeer et al. 2011).

General Abundance

Waterfowl were the sixth most abundant guild observed at NALFF from October 2011 through September 2012 (Appendix F). Waterfowl rank as the third most hazardous guild to aviation safety at NALFF (Table 3). Snow Geese (*Chen caerulescens*) are ranked as an extremely high hazard threat to aviation safety (Table 3) and accounted for the majority of waterfowl observed, but only occurred one time in February 2012. Other waterfowl observed at NALFF included Canada Geese (six observations), Tundra Swans (*Cygnus columbianus*) (one observation) and a single Mallard (*Anas platyrhynchos)* making up the rest of the waterfowl guild. Waterfowl observations were not common in terms of number of observations on NALFF property, most likely due to a lack of water, and were seen flying passing above or in the vicinity of the airfield during bird surveys 85% of the time (Figure 14).

Attractants

The Chesapeake/Virginia Beach area is within the Atlantic Flyway and home to a major stopover area for migrating waterfowl in Back Bay National Wildlife Refuge (9,250 acres) to the Southeast of NALFF. Snow Geese and other waterfowl are regularly observed loafing at both of these locations during peak migration. Surveys at NALFF included approximately 530 Snow Geese observed flying in numerous flocks during the migratory period high above the airfield. Canada Geese were observed on several occasions throughout the survey period flying across the airfield or feeding in nearby agricultural fields. There are three golf courses within five miles of NALFF and one (Battlefield Golf Course) within 10,000 feet to the West of NALFF and appears to provide plentiful food and a place for resident geese to molt from May to July (Appendix G and H).

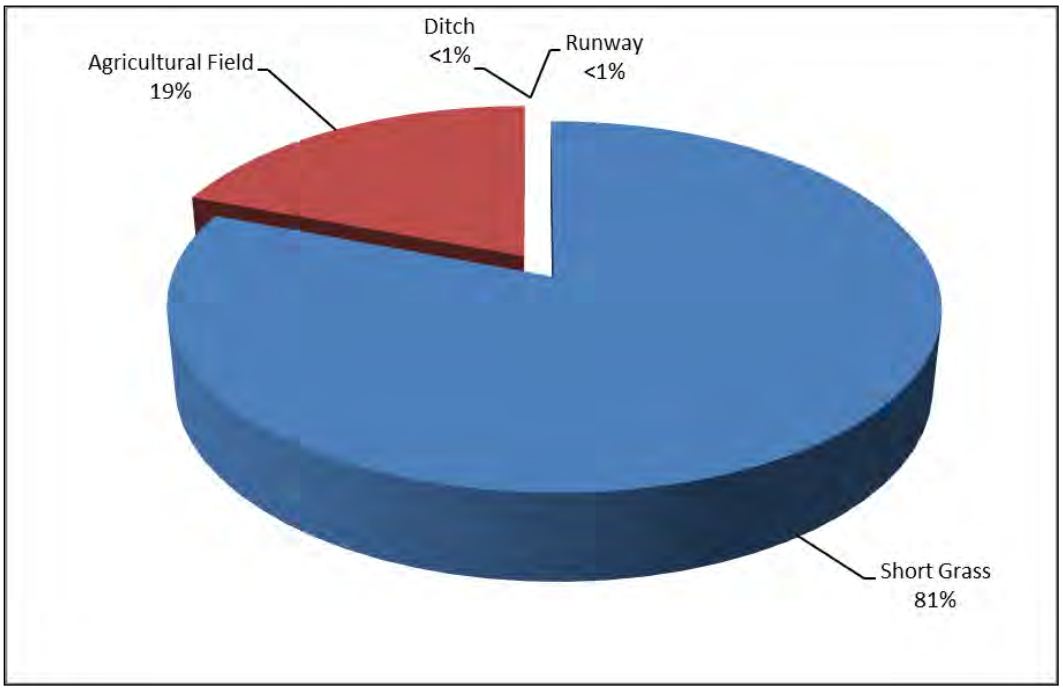

Figure 14: Waterfowl habitat use at NALFF, October 2011 through September 2012.

Management Recommendations

Canada Geese and Snow Geese should be considered the third greatest wildlife species threats to aviation safety at NALFF. Nationally, Canada Geese are ranked as an extremely high hazard to civil aviation safety, as 51% of aircraft strikes with geese resulted in damage from 1990 through 2007 (Dolbeer and Wright 2009). By comparison, Mallards are a very high hazard to aviation safety, but the damaging strike rate for Mallards is about half that of Canada Geese (Dolbeer and Wright 2009). Resident Canada Geese find many areas of suitable habitat around NALFF and have the potential to fly through critical airspace when traveling from roosting/loafing areas to feeding areas, considering the habitat in the area. There are several control methods that should be considered to reduce hazards from Canada Geese (and waterfowl in general).

Agricultural practices within five miles and on NALFF property include the harvest of soybeans, winter wheat, and corn. Winter wheat is a major attractant for waterfowl, in particular Canada Geese, and considerations should be given to eliminate the production of winter wheat on NALFF agricultural fields. Whenever and wherever possible, areas of standing water in the airfield should be eliminated by improving drainage, grading, or filling in low areas.

Recently, a linear ditch was constructed to divert water away from a nearby neighborhood (Appendix G, 3.1). One recommendation would be to suspend a wire grid over any area of water. Wire grids act as both a physical and visual barrier to prevent waterfowl from landing on the water. Installing stone rip-rap along the banks of drainage ditches may help to reduce waterfowl use of these areas, as well.

Drainage ditches should be properly maintained, allowing water to effectively drain from the airfield and the ditches. Ditches can be maintained by: removal of vegetation slowing the flow, proper grading, removal of excess sediment, and use of herbicides to limit vegetation growth.

Vegetation management can be an important component for managing Canada Geese. Generally, it is recommended that airfields maintain grass at an intermediate height in the airfield (between 6 and 10 inches). It has long been thought that tall vegetation management in the airfield would deter Canada Geese since they often prefer to forage in areas of short grass, though there is limited scientific data on how Canada Geese react to tall vegetation management and studies have often produced conflicting results (Seamans et al. 2007, Barras and Seamans 2002, Washburn et al. 2007). Though more research is needed, studies suggests that a promising method of reducing Canada Goose usage of airfields is to use an endophyte-infected variety of tall fescue when re-seeding areas of an airport disturbed by tree removal, construction or renovation (Washburn et al. 2007). Research suggests that when consumed by wildlife, tall fescue produces a variety of adverse effects (taste aversion, physical distress) and is generally avoided (Washburn et al. 2007). When re-seeding disturbed areas of the airfield, NALFF should consider planting tall fescue and avoid grass mixtures containing millet so as not to provide a preferred food source for geese and other threatening bird species.
NALFF should adopt and maintain a "zero tolerance" policy towards waterfowl in and adjacent to the airfield, especially Canada Geese. Waterfowl species should be aggressively harassed to disperse them from the area. Harassment methods may include the use of pyrotechnics, horns, sirens, paintballs, and chasing with vehicles. NALFF should maintain its current migratory bird depredation permit from the USFWS to allow lethal take of waterfowl species that do not respond to harassment. Canada Geese may also be taken under the Control Order at Airports and Military Airfields (50 CFR §21.49), which allows take of Canada Geese on base property and other properties within a 3-mile radius of the airfield (with written permission of the landowner) from April 1 to September 15.

In order to further reduce threats from Canada Geese, NALFF should utilize control efforts beyond the airfield to base properties that provide attractive sources of food and cover. This control should be expanded to off base locations within 5 miles of the base (appendices G and H identify locations of wildlife attractants at 10,000 ft and 5 miles). A study conducted in New York by Seamans et al. (2009) indicated that resident Canada Geese remained within 3 miles (5 km) of their primary feeding and loafing areas around JFK International Airport. The WS program in NY reported that goose numbers at Rikers Island decreased annually after removal efforts from 2004 through 2007, and subsequently goose strikes at nearby LaGuardia Airport decreased by 80% (Seamans et al. 2009).

6.4 Pigeons/Doves

Pigeons/Doves were the fourth most hazardous guild identified at NALFF from October 2011 through September 2012 (Table 3). Rock Pigeons and Mourning Doves (*Zenaida macroura*) are the only two species observed at NALFF in this guild.

From October 2011 through September 2012, Pigeons/Doves were the fifth most abundant guild observed at NALFF (Appendix F). Pigeons were usually observed flying locally and passing, whereas Mourning Doves were usually observed feeding or flying locally around agricultural fields and areas of exposed soil. From 1981-2011, the only reported strike occurring at NALFF involving this guild was one Mourning Dove.

Attractants

Pigeons/Doves were observed most frequently in agricultural fields (Figure 15). Pigeons are attracted to the airfield to roost and nest on structures, while Mourning Doves prefer to feed in agricultural fields and bare ground or perch/loaf on fences. Pigeons and Doves were primarily seen flying locally 64% of the time across agricultural fields and around unpaved roads, looking for seeds and grit. Agricultural fields that were recently cultivated, especially corn fields, attracted greater numbers of both pigeons and doves.

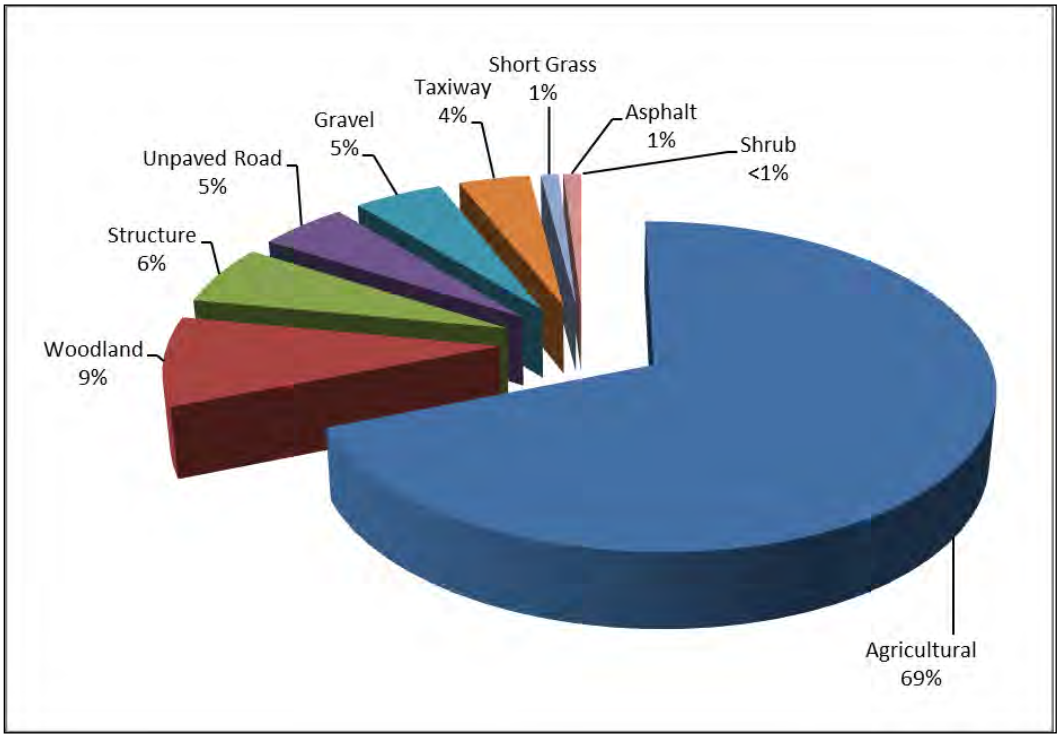

Figure 15: Pigeons/Doves habitat use at NALFF, October 2011 through September 2012.

Management Recommendations

Flocks of birds in this guild may be dispersed by using pyrotechnics, sirens, horns, or recorded distress calls. Persistent species that do not easily disperse should be removed

lethally by shooting or trapping. Areas of bare ground that have been graded or re-seeded should be monitored for Mourning Dove activity. Control of pigeons does not require a permit, though control of Mourning Doves does require a Federal Migratory Bird Depredation Permit.

6.5 Blackbirds/Orioles and Starlings

Blackbirds/Orioles and Starlings were the fifth and sixth most hazardous guilds identified at NALFF from October 2011 through September 2012 (Table 3). European Starling and Common Grackle were ranked as moderate whereas Red-winged Blackbird and Brown-headed Cowbirds were assigned a low ranking. While these guilds do not contain any species that rank as an extremely high or very high hazard and control efforts are not often required, discussion is still warranted due to the number of observations during the study year.

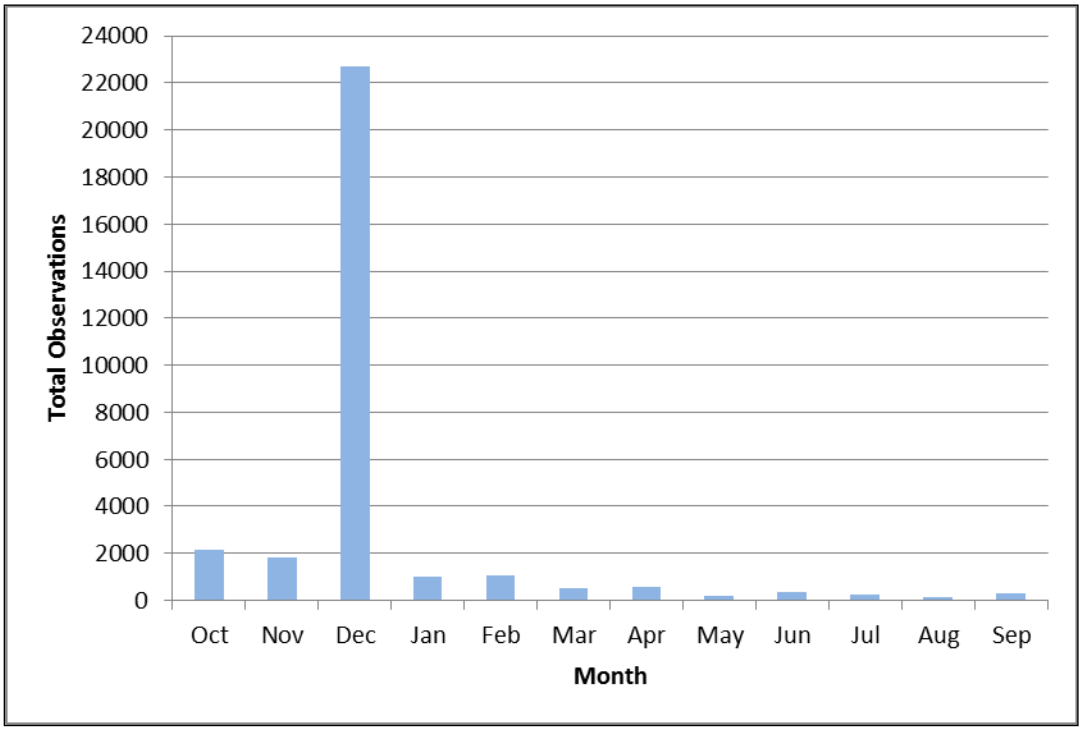

Figure 16: Blackbirds/Orioles and Starling Observations at NALFF, October 2011 through September 2012.

From October 2011 through September 2012, Blackbirds/Orioles were the most abundant guild observed at NALFF and starlings were second among all species (Appendix F). These species were mostly observed flying over short grass and agricultural areas, though European Starlings (*Sturnis vulgaris*) were commonly observed perched on structures throughout the airfield, particularly on the old aircraft and around quarterdeck area. None of these guilds have been involved in reported damaging strikes at NALFF since 1981 (Table 1). The greatest hazard these species pose to aviation is through their tendency to form large dense flocks that stay in almost continuous motion over short

grass habitat near active runways. Figure 16 shows the increase in numbers during the winter months when dense flocks are most often observed as compared to the rest of the year. In June of 1996, a Belgian Hercules C-130 flying into Eindhoven Air Force Base in S. Netherlands struck a flock of European starlings, killing 34 people (Kitowski 2011).

Attractants

Species in these guilds are attracted to the airfield to feed in the large areas of open grassland and agricultural fields where they find abundant forage such as seeds, earthworms, and insects (Figure 17,18). There are many perching roosting locations utilized by these guilds such as buildings, static aircraft, communication equipment, fences, and radar facilities.

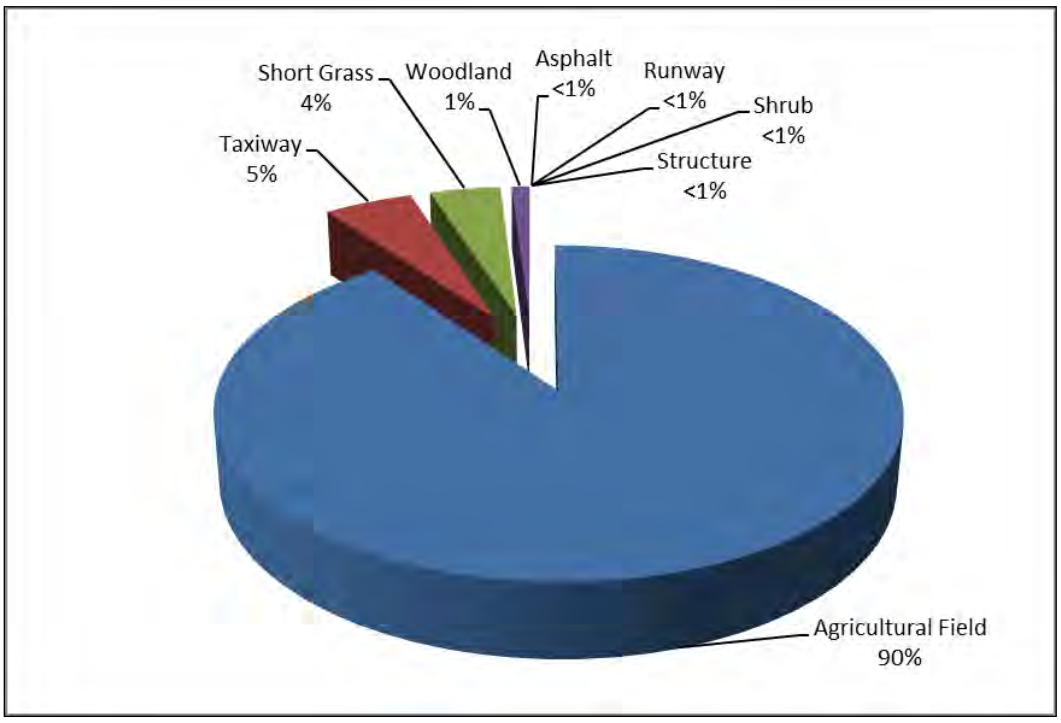

Figure 17: Blackbirds/Orioles habitat use at NALFF, October 2011 through September 2012.

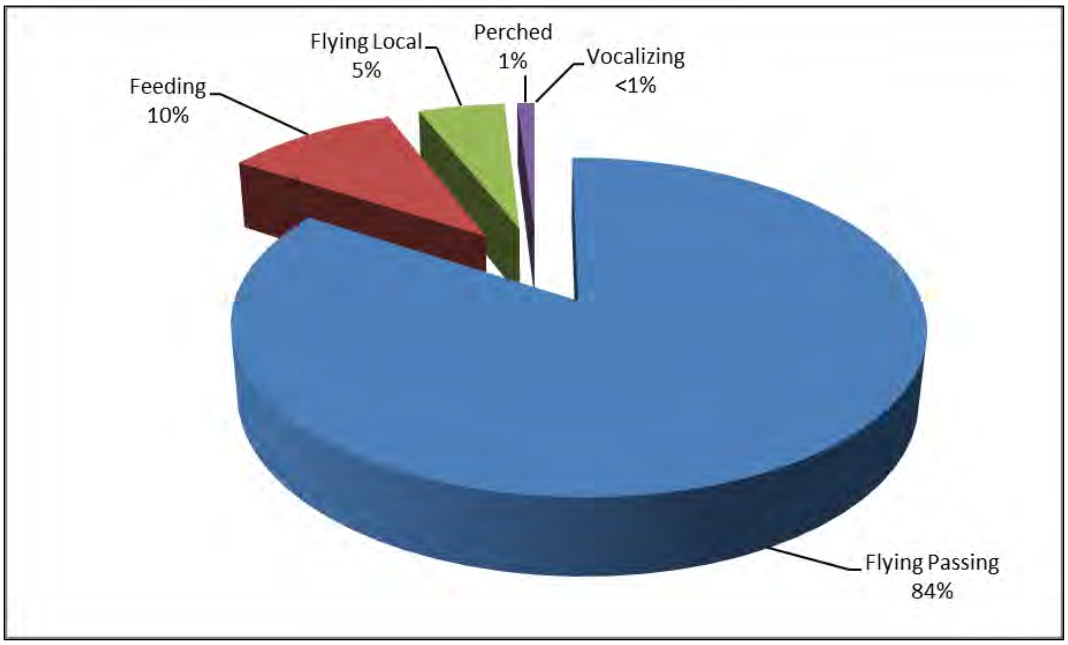

Figure 18: Blackbirds/Orioles activity on NALFF, October 2011 through September 2012.

Management Recommendations

Flocks of birds in these guilds may be dispersed by using pyrotechnics, sirens, horns, or recorded distress calls. Persistent species that do not easily disperse should be removed lethally by shooting and/or trapping under the FWS blackbird depredation order (50 CFR 21.43). Under this order, a permit is not necessary for the removal of blackbirds and crows causing damage or threats to human health and safety; however, it is required that all take and dispersal be reported. European starlings are not included in this order since they are an invasive/nuisance species and therefore do not require a permit. Grass management can be important for controlling these species. Grass that is tall enough to produce a seed head provides a food source and effective cover for species such as starlings and blackbirds, so grass in the airfield should be maintained at the recommended height of 6 to 10 inches (Dolbeer et al. 2011). Nest box traps can be used to manage populations of starlings in and around these areas.

6.6 Swallows

Swallows are listed as the seventh most hazardous guild identified at NALFF from October 2011 through September 2012 (Table 3). Surveys of swallows at NALFF are comprised of Tree Swallows, Barn Swallows and Purple Martins. Although these three species do not rank as high hazards to aviation safety from a perspective of reported damage, discussion is still warranted due to the number of observations during the study period.

From October 2011 through September 2012, swallows were the second most abundant guild observed at NALFF (Appendix F). Tree Swallows comprised over 93% (7,703

individuals) of this guild. This guild poses a high hazard to aviation in their feeding pattern and tendency to fly in large numbers across the airfield in search of food. From 1990- 2007, the FAA received 145 strikes involving tree swallows, 54 involved multiple tree swallows per incident becoming costly to airports in terms of mandatory aircraft damage inspections after swallow strikes, runway closings, and flight delays (Bernhardt et al. 2009).

Attractants

Species in this guild are attracted to NALFF and surrounding areas to feed on insects located over agricultural fields and fruiting trees, specifically bayberry (Figure 19). Surveys of NALFF show that bayberry trees are plentiful around the airfield, providing great foraging for swallows. Swallows were seen most often flying locally while feeding on insects (Figure 20). Swallows' feeding habits on insects on the airfield and agricultural fields occurs at a very low altitude, becoming a concern to landing and departing aircraft. Swallows also find the paved surfaces of the airfield perfect areas for loafing and resting during migrations.

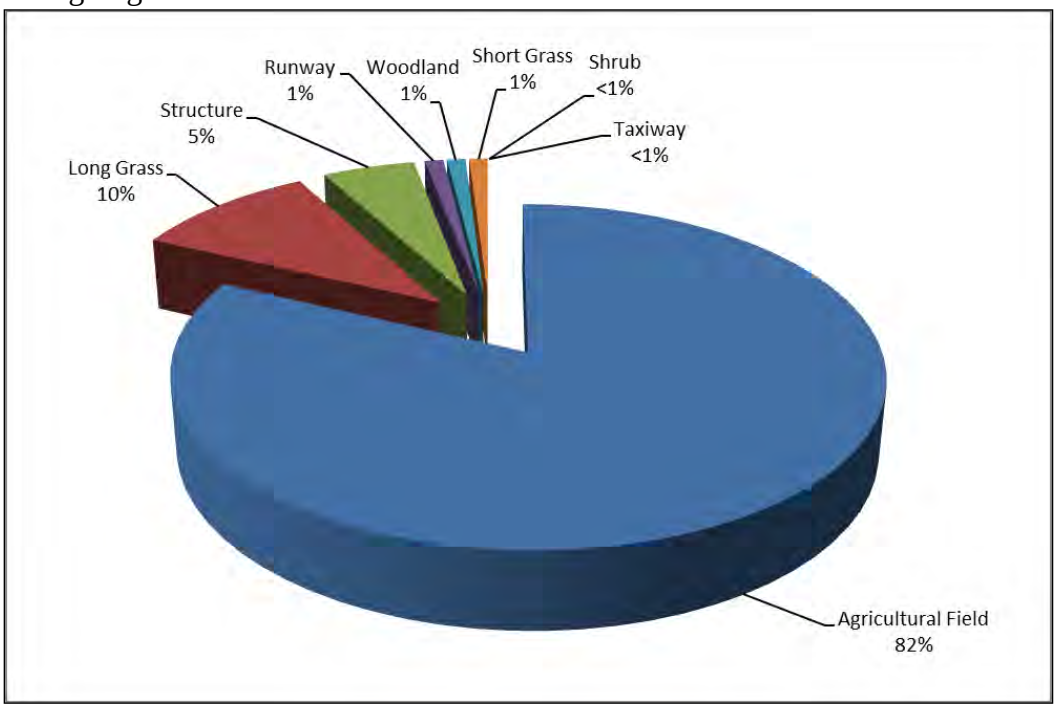

Figure 19: Swallow habitat use at NALFF, October 2011 through September 2012.

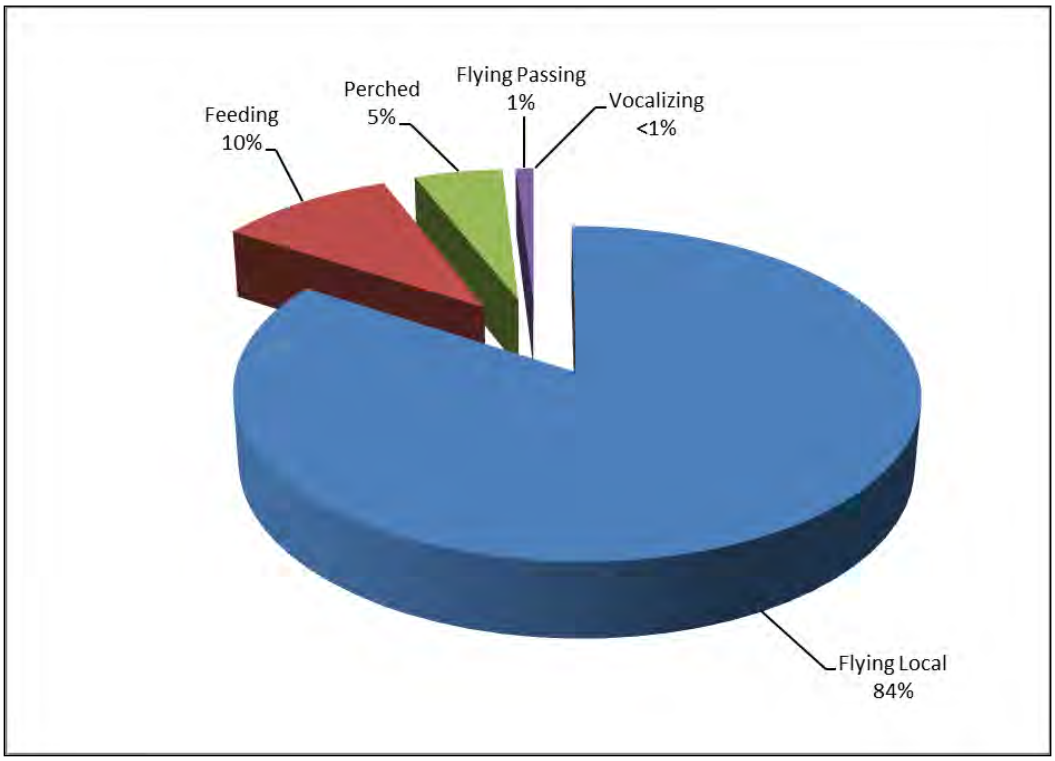

Figure 20: Swallow activity on NALFF, October 2011 through September 2012.

Management Recommendations
Flocks of birds in these guilds may be dispersed by using pyrotechnics, sirens, horns, or recorded distress calls. Persistent species that do not easily disperse may be removed lethally by shooting. Shrubby habitat to include bayberry trees should be removed and graded or re-seeded to grass and mowed regularly. WS recommends that NALFF notify squadrons of the increased swallow activity at dusk due to fall migration. If possible, limits on flying should be set around dusk to help prevent bird strikes. WS recommends insecticide application to areas of short grass surrounding the airfield to remove insects attractive to swallows. Mowing of the grass tends to attract swallows to the airfield as well. WS recommends that mowing be conducted at night if possible, in order to cut down on stirring up insects during swallow feeding periods.

6.7 Small Mammals

Small mammals are attractive prey to most carnivorous mammals and predatory birds. In particular, small rodents offer a consistent diet for raptors, wading birds and carnivorous mammals. Rodent abundance is dependent upon habitat conditions, predation, dispersal rate, biological disturbance, and/or cyclic population eruptions (Fergus 2003).

Attractants
Figure 21 shows that regularly mowed or disturbed habitat, like short grass, prevents the buildup of dead vegetative (duff) layers that small mammals need for concealment and survival. Rodents are less likely to use or maintain a viable population in habitats

without this duff layer due to the high rate of predation and exposure. Undisturbed habitats like secondary growth/shrubs provide excellent cover for small mammals (Table 4). High rodent populations can create an indirect hazard by attracting predators such as coyotes, fox and raptors. While hunting, these predators may create a direct threat to aviation. Rodents can also damage airfield structures due to their gnawing of wire cables which can lead to blackouts of critical airfield lighting and equipment.

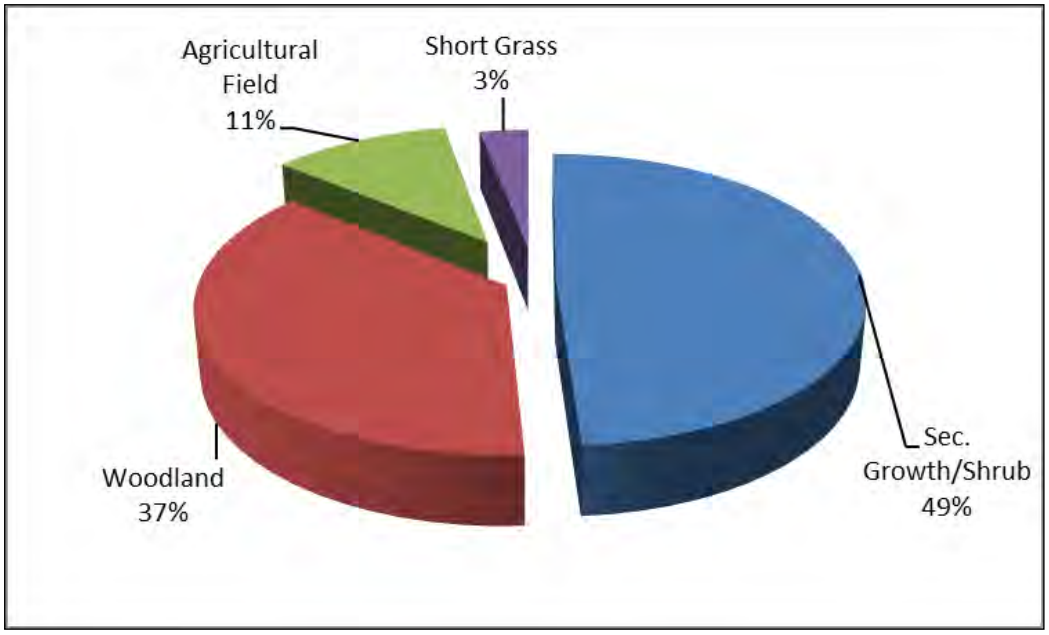

Figure 21: Small Mammal Habitat use at NALFF, fall 2011 and spring 2012.

The number of rodents captured per 100 adjusted trap nights (ATN) was significantly higher in secondary growth/shrub and woodland habitats as opposed to short grass (Table 4). This pattern indicates that the mowing height and frequency currently used at NALFF has been conducive to deterring small mammals from using short grass areas as habitat.

Table 4: Number of Small Mammals Captured per 100 adjusted trap nights (ATN) in fall 2011 and spring 2012 at NALFF.

Habitat Type	Fall Trapping 2011	Spring Trapping 2012	Average
Secondary Growth/Shrub	13	17.5	15.3
Woodland	6.7	14.1	10.4
Agricultural Field	3.6	2.1	2.9
Short Grass	0	1.4	0.7

Management Recommendations

The presence of small mammals in these secondary growth/shrub and woodland areas will be greatly reduced by removal of the trees, shrubs and secondary growth. Air operations management is currently removing areas of concern on the airfield that contain these two habitat types. WS recommends that these areas become part of the mowing and

agricultural lease to prevent secondary growth from reoccurring. WS recommends that NALFF apply rodenticides to specific areas according to the Virginia Cooperative Extension pesticide management procedures to remove and deter small mammals from inhabiting areas where carnivores and raptors are actively feeding.

6.8 All Other Guilds

Appendix F lists all guilds and species observed at NALFF during wildlife surveys from October 2011 through September 2012. For all other guilds observed during wildlife surveys, many, if not all of the management recommendations listed for artiodactyls, raptors, waterfowl, pigeons/doves and swallows are applicable in reducing their threats to aviation safety. Many species utilize the same habitats, so management for one species will likely affect another. As discussed earlier in this section, habitat management and exclusion are the two most important components for reducing the threat of wildlife strikes at NALFF. Vegetation and water management will likely have the greatest impact for most bird species, while maintaining a perimeter fence will be most effective in reducing the presence of larger mammal species (such as deer and coyotes).

6.9 Threatened and Endangered Species

Appendix E lists species that are considered endangered, threatened, or of concern in the Commonwealth of Virginia. Species that may be encountered at NALFF include but are not limited to Gull-billed Tern, Roseate Tern, Upland Sandpiper, and Wilson's Plover.

7.0 DIRECT CONTROL

In addition to conducting a wildlife hazard assessment, WS also provided direct control services to NALFF from October 2011 through September 2012. Due to construction on the airfield, white-tailed deer was the only species directly controlled on the airfield during this study period. From October 2011 through September 2012, 295 deer were surveyed and 14 deer were removed.

8.0 RECOMMENDATIONS

In addition to placing an emphasis on the management of the species discussed in Section 6, WS recommends that the following actions are implemented at NALFF to improve wildlife hazard management at NALFF and further reduce the threat of wildlife/aircraft strikes:

Install a Security/Wildlife fence around the perimeter of the entire airfield

The Federal Aviation Administration (FAA) recommends that civil airports in areas of high deer populations install a 10 to 12 foot chain-link fence with outriggers supporting three strands of barbwire projecting away from the airfield. FAA also supports a 4 foot

skirt of chain link fence attached at the bottom of the fence and buried at a 45 degree angle away from the airfield to exclude wildlife from digging or slipping under the fence. A properly installed wildlife fence will greatly improve safety and security of the airfield.

Update the NASO/NALFF BASH Plan (WHMP) Based on the WHA

NASO/NALFF's current BASH plan (NASOCEANAINST 3750.2B) was developed in 2008 by Geo-Marine, Inc. and was not based on a WHA. The plan provides the framework for the base to address wildlife hazards. The BASH plan lacks base specific details of wildlife hazards, and who, how and when the programs outlined in the plan will be conducted. It is recommended that the BASH plan be updated to reflect the information contained in this WHA.

Training of Airfield Personnel in Wildlife Hazard Management

FAA regulations require that civilian airport personnel who are responsible for implementing wildlife control measures are properly trained in wildlife hazard management by a qualified wildlife biologist [14 CFR Part 139.303 (c) and (e)]. NALFF currently does not have a formalized training. Formalized training topics should include: USN regulations, policies, and procedures; wildlife strike reporting; wildlife attractants; habitat management; species identification; safety; and hands-on demonstrations of wildlife management tools and techniques. It is recommended that NALFF develop formalized training for airfield personnel that may encounter wildlife on the airfield. The current BASH plan outlines this and WS recommends that NALFF develop and formalize a Bird Detection and Dispersal Team (BDDT).

Establish a Formal BASH Working Group

The current NASO/NALFF BASH Plan and the Navy Bird/Animal Aircraft Strike Hazard Program Implementing Guidance (CNICINST 3700, 7 Jul 2011) both outline the functions and personnel to be involved with the BASH Working Group (BWG). WS recommends that NALFF continue the current BWG in accordance with CNICINST 3700. The functions of this group are important, as it will facilitate greater sharing of information and cooperation among those who have a stake in managing wildlife hazards at NALFF.

Utilize the Wildlife Activity Log and Report Bird Strikes

It is recommended that operations personnel begin using a wildlife activity log to include information such as the number of birds involved, cover type, and location on the airfield. WS recommends that this log also be extended to other personnel such as the crash captain and federal firefighters at NALFF. This information can be useful in determining trends and prioritizing management objectives.

Bird strikes should be reported online via WESS and a sample submitted to the Smithsonian Feather ID Lab for positive identification. Evaluation of the WESS data base has shown a lack in bird strike reporting. WS has seen an increase in strike reporting since June 2010. It is important that aircrews conducting the majority of their operations at NALFF who encounter a bird strike report the strike as occurring at NALFF if the location of the strike is unknown. WS should continue training on proper strike reporting to airfield personnel and squadrons. Damage to aircraft following a strike or wildlife incidence is seldom recorded. WS recommends that NALFF formalizes a process for recording damage. Damage should include aircraft structural damage, aircraft down time, repair, cleaning, and all other costs associated with a wildlife incidence. WS recommends that NALFF work with the Naval Safety Center to ensure that the WESS data base is being updated with species identification and associated damages. This information is usually not available at the time a WESS report is initially submitted.

Maintain Necessary Permits to Control Wildlife

As stated previously, federal and state permits are necessary for lethal take of migratory bird species and state-managed species such as deer and turkeys. In addition, a federal permit is needed before Bald Eagles may be harassed from the airfield. NALFF currently holds a migratory bird depredation permit and a state permit. WS recommends that these permits be maintained to address wildlife species as necessary. WS also recommends NALFF obtain a Bald Eagle Harassment permit from the USFWS. Without this permit, Bald Eagles using the airfield cannot be harassed and may pose a serious aviation threat if left on or near the airfield.

Have Control Supplies on Hand

WS recommends that airfield personnel that are members of the BDDT who are responsible for wildlife hazard management are provided with adequate equipment needed to disperse wildlife. Such devices may include pyrotechnics and launchers, propane cannons, and vehicles equipped with sirens and lights. WS recommends that BDDT members are properly trained in the safe use and storage of these devices.

Evaluate Potential Wildlife Hazards When Planning New Construction or Land Use Changes

NALFF has recently completed a major expansion and improvement project. It is critical to consider wildlife attractants during these planning phases. Several aspects to consider will be the planting of new vegetation, which may provide food to wildlife in the form of seeds and fruits, and the creation of water bodies or drainage basins that provide fresh water. NALFF airfield manager currently reviews airfield maintenance projects with WS for possible BASH concerns. WS recommends that this process continue and be expanded to all construction and maintenance projects on base property. In addition, adjacent off-site projects within 5 miles of the airfield such as: industrial development, road construction, recreational development, etc. need to be considered as potential wildlife attractant hazards and reviewed for potential wildlife attractants prior to budget

commitments. If the review is conducted after the project budget is established, changes to the project are unlikely.

Continue to Monitor Wildlife Populations and Habitat Use Patterns in the Airfield

The intent of this WHA has been to document general occurrence, land-use patterns, and population characteristics of wildlife at NALFF. It must be realized that wildlife abundance and use patterns on airfields are affected by a host of variables that are rarely the same from year-to-year. Hence, conclusions based on wildlife populations and patterns during this study are only meant to be a guide and may or may not be consistent in subsequent years. Survey routes and methods were established in a manner that facilitates continued monitoring. Data from this study will provide a baseline for comparison in subsequent years and NALFF should continue to monitor wildlife populations by conducting monthly surveys using the same stations established in this assessment. While surveys conducted in subsequent years may not be conducted with the same frequency or intensity as this initial hazard assessment, they will still provide general insights into wildlife use patterns over time and enable NALFF to gauge the effectiveness of its control efforts.

Habitat Modification and Exclusion

As discussed in Section 6, habitat modification and exclusion are two of the most important components of a wildlife hazard management plan. NALFF airfield maintenance personnel have been diligent in maintaining grass in the airfield at the recommended height (6 to 10 inches), and WS recommends that regular mowing is continued. Grass management is seasonal, and frequency of mowing may need to be increased during growing season as resources permit. Woody vegetation growing in drainage ditches should be removed and these areas should be maintained to prevent creating thick, shrub-like habitat that can provide cover for small mammals and perching sites for raptors. Most ditches within the airfield have been allowed to become clogged with woody vegetation. This not only attracts wildlife but prevents water from effectively draining from the airfield compounding the problem with areas of standing water and/or high water table within the airfield. These high water tables increase the chance of field equipment rutting the airfield when driving across or avoiding the area completely during mowing operations.

Because all species are attracted to water, areas of standing water should be eliminated where possible. Low lying areas should be filled or graded to improve drainage. Underground drainage culverts in the airfield should be inspected regularly and be maintained to reduce standing water following heavy rains.

Throughout the year and WHA, observations were made regarding the airfield improvement project that likely resulted in attracting certain species of wildlife to the airfield. Loose gravel and soil remained exposed for several months providing good habitat for Mourning Doves and Killdeer. Prior to re-opening, all areas of loose soil were

re-graded, compacted, and seeded to insure stabilization of the soil. These areas must be maintained and re-graded as necessary.

Agricultural Practices

Agricultural crops can attract hazardous wildlife to the airfield. Consideration should be given to the crops that are planted and the agricultural practices used for their production. Cereal grain products should be avoided. These crops attract large numbers of waterfowl for forage. Agricultural practices should minimize tilling. Tilling exposes prey (i.e. insects, worms, etc.) that attract large numbers of gulls. Care should be taken during harvest to ensure excess amounts of grains are not spilled. If spills occur they should be cleaned up or buried.

Evaluation of Off Base Aviation Hazards and Seeking Landowner Cooperation

As discussed in Section 6, wildlife on properties near the airfield may pose serious threats to aviation safety at NALFF. The FAA recommends a separation distance of 5 statute miles between the farthest edge of the airports AOA and hazardous wildlife attractant if the attractant could cause hazardous wildlife movement into or across the approach or departure airspace (FAA AC 150/5200-33B). WS recommends that NALFF continues to identify areas within 5 miles of the airport that may provide roosting and/or foraging areas for birds that utilize the airspace at NALFF, especially Canada Geese. NALFF should approach these landowners to seek cooperation on removing these hazards. WS has identified several potential areas that attract hazardous wildlife within the approach/departure and circling airspace of NALF Fentress. A couple areas noted: water impoundment across Mount Pleasant Rd., agricultural fields (corn, soybeans, winter wheat), Battlefield, Signature at West Neck, Virginia Beach National and Stumpy Lake golf courses (Appendix G and H). Areas identified as potential hazards should be and/or continue to be evaluated for wildlife use and BASH mitigation procedures implemented to reduce hazards.

9.0 SUMMARY

Based on data collected during the WHA, records from the WESS wildlife strike database, and control efforts by WS and NALFF personnel, several species were identified that threaten aviation safety at NALFF. The guilds/group that are of most concern to aviation safety include deer, raptors, waterfowl, pigeons/doves, blackbirds/orioles, starlings, and swallows. Several management strategies may be implemented to reduce wildlife hazards at NALFF, including habitat modification, exclusion, harassment, and lethal removal of hazardous wildlife species. WS recommends that NALFF continues to take an active approach to wildlife hazard management, utilizing the information contained in this WHA to reduce wildlife hazards and provide a safe environment for aircraft operations.

CHIEF, MIGRATORY BIRD PERMIT OFFICE - REGION 5

Permittee:

U.S. NAVY, NAVFAC MIDLANT
ATTN: TAYLOR AUSTIN
93240 VIRGINIA & TAUSSING AVE.
BLDG Z-144, 2ND FLR RM 214
NORFOLK, VA 23511

Name and Title of Principal Officer:
TAYLOR S. AUSTIN - NATURAL RESOURCES REGIONAL MANAGER

Authority: Statutes and Regulations: 16 USC 703-712; 50 CFR Part 13, 50 CFR 21.41.

Location where authorized activity may be conducted:
(1) NAVAL AIR STATION OCEANA, VIRGINIA BEACH, VA; (2) NAVAL AUXILIARY LANDING FIELD FENTRESS, CHESAPEAKE, VA;
(3) CHAMBERS FIELD, NORFOLK, VA; (4) JOINT EXPEDITIOMARY BASE LITTLE CREEK

Reporting requirements:

ANNUAL REPORT DUE WITH NEXT RENEWAL or IF NOT RENEWING 30 days after permit expiration even if you had no activity. Forms at: <http://www.fws.gov/forms/3-202-9.pdf>

Conditions and Authorizations:

A. General conditions set out in Subpart B of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

B. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local tribal, or other federal law.

C. Valid for use by permittee named above

D. You are authorized to take, temporarily possess, and transport the migratory birds specified below to relieve or prevent injurious situations impacting public safety. All take must be done as part of an integrated wildlife damage management program that emphasizes nonlethal management techniques. You may not use this authority for situations in which migratory birds are merely causing a nuisance.

(1) The following may be taken by firearm, with non-toxic shot:

(a) 475 Canada Geese

(b) 450 Mourning doves
(c) 400 Laughing gulls
(d) 300 Ring-billed gulls
(e) 130 Killdeer
(f) 80 Barn Swallows
(g) 75 EACH: American Robins and Eastern Meadowlarks, Turkey Vultures
(h) 60 Herring gulls
(i) 55 Black Vultures
(j) 50 EACH: Great Black-backed Gulls, Mallard, Atlantic Brant,
(k) 40 Tree Swallows
(l) 25 EACH: Great Blue herons, Black Skimmer ,
(m) 20 Double-crested cormorants,
(n) 15 EACH: Osprey, Northern Mockingbird
(o) 10 EACH: Great Egret, Purple Martin
(p) 5 EACH: Brown Pelican, Caspian Tern, Common Tern, Foster's Tern, Royal Tern

(2) The following may be shot with a firearm or captured with Bal chatri, pole trap, a Swedish Goshawk trap:

(a) 50 Red-tailed hawks
(b) 40 American kestrel,
(c) 20 Northern Harrrier
(d) 12 Cooper's hawks,
(e) 5 Sharp-shinned hawks

(3) The following may be trapped and relocated:

(a) 15 Osprey,

(4) The following active nests (including eggs) may be destroyed:
(a) 65 Canada Goose,
(b) 15 Barn Swallow,
(c) 10 Osprey

State restrictions: Peregrine Falcons are listed as Endangered by Virginia State law and therefore may not be taken.

E. You are authorized in emergency situations only to take, trap, or relocate any migratory birds, nests and eggs, including species that are not listed in Condition D (except bald eagles, golden eagles, or endangered or threatened species) when the migratory birds, nests, or eggs are posing a direct threat to human safety. A direct threat to human safety is one which involves a threat of serious bodily injury or a risk to human life.

You must report any emergency take activity to your migratory bird permit issuing office, Hadley, Ma, 413-253-8424 (fax), within 72 hours after the emergency take action. Your report must include the species and number of birds taken, method, and a complete description of the circumstances warranting the emergency action.

F. You are authorized to salvage and temporarily possess migratory birds found dead or taken under this permit for (1) disposal, (2) transfer to the U.S. Department of Agriculture, (3) diagnostic purposes, (4) purposes of training airport personnel, (5) donation to a public charity (those suitable for human consumption), or (6) donation to a public scientific or educational institution as defined in 50 CFR 10.12. Any dead bald eagles or golden eagles

salvaged must be reported within 48 hours to the National Eagle Repository at (303) 287-2110 and to the migratory bird permit issuing office at fax 413-253-8424. The Repository will provide directions for shipment of these specimens.

G. You may not salvage and must immediately report to U.S. Fish and Wildlife Service Law Enforcement any migratory birds that appear to have been poisoned, shot, or otherwise injured as the result of criminal activity.

H. You may use the following methods of take: (1) firearms; (2) nets; (3) ONLY USDA Wildlife Services may use registered animal drugs (excluding nicarbazin), pesticides and repellents; (4) falconry abatement; and (5) legal lethal and live traps (including pole traps). Birds caught live may be euthanized or transported and relocated to another site approved by the appropriate State wildlife agency, if required. When using firearms, you may use rifles or air rifles to shoot any bird when you determine that the use of a shotgun is inadequate to resolve the injurious situation. The use of any of the above techniques is at your discretion for each situation.

I. You may temporarily possess and stabilize sick and injured migratory birds and immediately transport them to a federally licensed rehabilitator for care.

J. The following subpermittees are authorized: **Employees of the Department of the Navy; and employees of USDA/APHIS/Wildlife Services.** In addition, any other person who is (1) employed by or under contract to you for the activities specified in this permit, or (2) otherwise designated a subpermittee by you in writing, may exercise the authority of this permit.

K. You and any subpermittees must comply with the attached Standard Conditions for Migratory Bird Depredation Permits. **These standard conditions are a continuation of your permit conditions and must remain with your permit.**

G. A "No Feeding Policy" must be in place.

For Canada Geese Egg Addling or Nest Destruction you MUST register each year between January 1 and June 30 at: https://epermits.fws.gov/eRCGR. You must return to website and report your take before October 31 each year.

CAD # 1612036161

OFFICIAL KILL PERMIT

To Whom It May Concern:
Permission is herewith granted NAS Oceana * (Name (landowner or lessee)) 757 433-2151 (Telephone)

800 Oceana Blvd (Address) | Va Beach (City) | Va (State) | 23460 (Zip) | (E-Mail)

and those persons named below: (State law prohibits persons convicted of wildlife violations from being designated as a shooter or carrying out the authorized acrtivity for the landowner/lessee).

CO Authorized Kill Permit Team
NASO Natural Resources Staff
USDA Wildlife Services Staff

To kill UNLIMITED (Quantity) (Bear, Beaver, Deer, Muskrat, Rabbit, Raccoon, Squirrel) (Circle appropriate species) damaging the property of NAS Oceana. *

in Va Beach (County or City) for the period from 01/01/17 to 12/31/17

Time Restrictions: None - May Kill on Sunday and Trap as required

Damage control limited to the location described below or on the attachment. No one except those listed on this permit may assist or be present during the damage control activities. Additionally, the landowner/lessee acknowledges that all damage control operations will comply with local firearm ordinances. This permit authorizes the killing of wild animals pursuant to Sections 29.1-516, 29.1-517, 29.1-518, and 29.1-529 Code of Virginia. Unless otherwise authorized on this permit, deer killed on this permit must be anterless. Permit is not valid unless signed by the landowner/lessee and the authorizing Department representative. Permit must be carried and available for inspection during damage control activities.

Has the landowner/lessee been issued a kill permit previously on the requested parcel? Yes ☑ No ☐
Has the parcel been hunted in the previous hunting season for deer or bear? Yes ☑ No ☐ Indicate the number of days hunted: ___
How does the landowner/lessee plan to dispose of carcass(es) *(Required within 24 hours after killing a deer or bear)*:
Burial ☑ Personal Use ☑ Charitable Organization ☑ Other ___

The undersigned landowner/lessee agrees to the conditions of this permit and understands that failure to comply with these conditions may lead to its revocation or criminal prosecution. PWO, CDR Rockwell

Signature of Landowner or Lessee: _____ 13 Dec 16 (Date)

Signature of Department Representative: _____ 12/21/16 (Date)

WILD-4 (5/14)

§ 29.1-529. Killing of deer, elk or bear damaging fruit trees, crops, livestock, or personal property; wildlife creating a hazard to aircraft or motor vehicles.

A. Whenever deer, elk or bear are damaging fruit trees, crops, livestock or personal property utilized for commercial agricultural production in the Commonwealth, the owner or lessee of the lands on which such damage is done shall immediately report the damage to the Director or his designee for investigation. If after investigation the Director or his designee finds that deer or bear are responsible for the damage, he shall authorize in writing the owner, lessee or any other person designated by the Director or his designee to kill such deer or bear when they are found upon the land upon which the damages occurred. However, the Director or his designee shall have the option of authorizing non-lethal control measures rather than authorizing the killing of elk or bear, provided that such measures occur within a reasonable period of time; and whenever deer cause damage on parcels of land of five acres or less, except when such acreage is used for commercial agricultural production, the Director or his designee shall have discretion as to whether to issue a written authorization to kill the deer. The Director or his designee may limit such authorization by specifying in writing the number of animals to be killed and duration for which the authorization is effective and may in proximity to residential areas and under other appropriate circumstances limit or prohibit the authorization between 11:00 p.m. and one-half hour before sunrise of the following day. The Director or his designee issuing these authorizations shall specify in writing that only antlerless deer shall be killed, unless the Director or his designee determines that there is clear and convincing evidence that the damage was done by deer with antlers. Any owner or lessee of land who has been issued a written authorization shall not be issued an authorization in subsequent years unless he can demonstrate to the satisfaction of the Director or his designee that during the period following the prior authorization, the owner or his designee has hunted bear or deer on the land for which he received a previous authorization.

B. Subject to the provisions of subsection A, the Director or his designee may issue a written authorization to kill deer causing damages to residential plants, whether ornamental, noncommercial agricultural, or other types of residential plants. The Director may charge a fee not to exceed actual costs. The holder of this written authorization shall be subject to local ordinances, including those regulating the discharge of firearms.

C. Whenever wildlife is creating a hazard to the operation of any aircraft or to the facilities connected with the operation of aircraft, the person or persons responsible for the safe operation of the aircraft or facilities shall report such fact to the Director or his designee for investigation. If after investigation the Director or his designee finds that wildlife is creating a hazard, he shall authorize such person or persons or their representative to kill wildlife when the wildlife is found to be creating such a hazard. As used in this subsection, the term"wildlife" shall not include any federally protected species.

D. Whenever deer are creating a hazard to the operation of motor vehicle traffic within the corporate limits of any city or town, the operator of a motor vehicle or chief law-enforcement officer of the city or town may report such fact to the Director or his designee for investigation. If after investigation the Director or his designee finds that deer are creating a hazard within such city or town, he may authorize responsible persons, or their representatives, to kill the deer when they are found to be creating such a hazard.

E. Whenever deer are damaging property in a locality in which deer herd population reduction has been recommended in the current Deer Management Plan adopted by the Board, the owner or lessee of the lands on which such damage is being done may report such damage to the Director or his designee for investigation. If after investigation the Director or his designee finds that deer are responsible for the damages, he may authorize in writing the owner, lessee or any other person designated by the Director or his designee to kill such deer when they are found upon the land upon which the damages occurred. The Director or his designee also may limit such authorization by specifying in writing the number of animals to be killed and the period of time for which the authorization is effective. The requirement in subsection A of this section, that an owner or lessee of land demonstrate that during the period following the prior authorization deer or bear have been hunted on his land, shall not apply to any locality that conducts a deer population control program authorized by the Department.

F. The Director or his designee may revoke or refuse to reissue any authorization granted under this section when it has been shown by a preponderance of the evidence that an abuse of the authorization has occurred. Such evidence may include a complaint filed by any person with the Department alleging that an abuse of the written authorization has occurred. Any person aggrieved by the issuance, denial or revocation of a written authorization can appeal the decision to the Department of Game and Inland Fisheries. Any person convicted of violating any provision of the hunting and trapping laws and regulations shall be entitled to receive written authorization to kill deer or bear. However, such person shall not (i) be designated as a shooter nor (ii) carry out the authorized activity for a person who has received such written authorization for a period of at least two years and up to five years following his most recent conviction for violating any provisions of the hunting and trapping laws and regulations. In determining the appropriate length of the restriction, the Director shall take into account the nature and severity of the most recent violation and of any past violations of the hunting and trapping laws and regulations by the applicant. No person shall be designated as a shooter under this section during a period when such person's hunting license or privileges to hunt have been suspended or revoked.

G. The Director or his designee may authorize, subject to the provisions of this section, the killing of deer over bait within the political boundaries of any city or town, or any county with a special late antlerless season, in the Commonwealth when requested by a certified letter from the governing body of such locality.

H. The parts of any deer or bear killed pursuant to this section or wildlife killed pursuant to subsection C shall not be used for the purposes of taxidermy, mounts, or any public display unless authorized by the Director or his designee. However, the meat of any such animal may be used for human consumption. The carcass and any unused meat of any such animal shall be disposed of within 24 hours of being killed. Any person who violates any provision of this subsection is guilty of a Class 3 misdemeanor.

I. It is unlawful to willfully and intentionally impede any person who is engaged in the lawful killing of a bear or deer pursuant to written authorization issued under this section. Any person convicted of a violation of this subsection is guilty of a Class 3 misdemeanor.

9 TYPE OF PERMIT
EAGLE DEPREDATION

10 LOCATION WHERE AUTHORIZED ACTIVITY MAY BE CONDUCTED
Naval Air Station Oceana Property, Virginia Beach, VA

11 CONDITIONS AND AUTHORIZATIONS

A GENERAL CONDITIONS SET OUT IN SUBPART D OF 50 CFR 13, AND SPECIFIC CONDITIONS CONTAINED IN FEDERAL REGULATIONS CITED IN BLOCK #2 ABOVE, ARE HEREBY MADE A PART OF THIS PERMIT. ALL ACTIVITIES AUTHORIZED HEREIN MUST BE CARRIED OUT IN ACCORD WITH AND FOR THE PURPOSES DESCRIBED IN THE APPLICATION SUBMITTED. CONTINUED VALIDITY, OR RENEWAL, OF THIS PERMIT IS SUBJECT TO COMPLETE AND TIMELY COMPLIANCE WITH ALL APPLICABLE CONDITIONS, INCLUDING THE FILING OF ALL REQUIRED INFORMATION AND REPORTS

B. THE VALIDITY OF THIS PERMIT IS ALSO CONDITIONED UPON STRICT OBSERVANCE OF ALL APPLICABLE FOREIGN, STATE, LOCAL, TRIBAL, OR OTHER FEDERAL LAW

C. VALID FOR USE BY PERMITTEE NAMED ABOVE

D. You are authorized to use non-lethal scare devices, scare tactics or frightening devices to move or disperse **Bald eagles** endangering human safety due to a high risk of a serious bird strike to landing and departing aircraft. You are authorized to use airhorns, pyrotechnics, and drive vehicles with horns as necessary to scare eagles. Pyrotechnics must not be shot directly at the eagles.

E. You must make a continuous effort to eliminate attractants and other physical properties that may draw eagles to airport property.

F. This permit does not authorize the killing, injury or capture of any eagle or the destruction of any young or nests.

G. This permit does not authorize the disturbance of eagles at active nest sites that contain eggs or young or nests.

H. You must notify the permit issuing office at telephone 413-253-8643 within 48 hours of any injury or death of any eagle during project activities.

I. The following subpermittees are authorized: Naval Air Station Oceana flight safety personnel or environmental staff and *employees of USDA/APHIS/Wildlife Services*. In addition, any other person who is (1) employed by or under contract to you for the activities specified in this permit, or (2) otherwise designated a subpermittee by you in writing, may exercise the authority of this permit.

J. You must submit a report of activities conducted under this permit to the USFWS, Migratory Bird Permit Office, P.O. Box 779, Hadley, MA, 01035, by the due date specified on the face of the permit. The report form, 3-202-11, is available at: http://www.fws.gov/forms/3-202-11.pdf.

K. You must comply with the attached Standard Conditions for Eagle Depredation Permits. **These standard conditions are a continuation of your permit conditions *and must remain with your permit.***

For suspected illegal activity, immediately contact USFWS Law Enforcement at: Richmond, VA/DC 804-771-2883

☒ ADDITIONAL CONDITIONS AND AUTHORIZATIONS ALSO APPLY

12 REPORTING REQUIREMENTS

ANNUAL REPORT DUE 1/31, PER STANDARD CONDITION (J) OF THIS PERMIT
USFWS Forms can be found at: <http://www.fws.gov/migratorybirds/mbpermits.html>

ISSUED BY	TITLE	DATE
	CHIEF, MIGRATORY BIRD PERMIT OFFICE - REGION 5	03/21/2012

Standard Conditions
Eagle Depredation Permits
50 CFR 22.23

All of the provisions and conditions of the governing regulations at 50 CFR part 13 and 50 CFR part 22.23 are conditions of your permit. Failure to comply with the conditions of your permit could be cause for suspension of the permit. The standard conditions below are a continuation of your permit conditions and must remain with your permit. If you have questions regarding these conditions, refer to the regulations or, if necessary, contact your migratory bird permit issuing office. For copies of the regulations and forms, or to obtain contact information for your issuing office, visit: http://www.fws.gov/migratorybirds/mbpermits.html.

1. Unless otherwise specified on the face of this permit, you may not lethally take any bald eagle or golden eagle under this permit. Eagles may be taken only by the method(s) specified on the face of your permit. [*Note: Explosive Pest Control Devices (EPCDs) are regulated by the Bureau of Alcohol, Tobacco, Firearms, and Explosives (ATF). If you plan to use EPCDs, you require a Federal explosives permit, unless you are exempt under 27 CFR 555.141. Information and contacts may be found at* www.atf.gov/explosives/how-to/become-an-fel.htm.]

2. If you encounter an eagle with a Federal band issued by the U.S. Geological Survey Bird Banding Laboratory, Laurel, MD, report the band number to 1-800-327-BAND (2263) or http://www.reportband.gov.

3. This permit does not authorize take or release of any bald eagle or golden eagle on Federal lands without additional prior written authorization from the applicable Federal agency, or on State lands or other public or private property without prior written permission or permits from the landowner or custodian.

4. Unless otherwise specified on the face of the permit, any bald eagle or golden eagle taken under this permit must be promptly turned over to a U.S. Fish and Wildlife Service (Service) agent or other wildlife law enforcement officer designated on the face of the permit.

5. Any person exercising the authorities of this permit must carry a legible copy of this permit, *including these Standard Conditions*, and display it upon request to any State or Federal officer when exercising its authority.

6. You must maintain records as required in 50 CFR 13.46. All records relating to the permitted activities must be kept at the location indicated in writing by you to the migratory bird permit issuing office.

7. Acceptance of this permit authorizes the Service to inspect any wildlife held, and to audit or copy any permits, books, or records required to be kept by the permit and governing regulations.

8. You may not conduct the activities authorized by this permit if doing so would violate the laws of the applicable State, county, municipal or tribal government or any other applicable law.

COMNAVREG MIDLANT INSTRUCTION 11015.3

Subj: NATURAL RESOURCES MANAGEMENT FOR FISH AND WILDLIFE, FERAL ANIMALS, INVASIVE SPECIES, AND CERTAIN PESTS

Ref: (a) E.O. 13112
(b) NAVFAC P-73, Vol. II
(c) OPNAVINST 5090.1 (Series)
(d) 18 U.S. Code § 42
(e) 16 U.S. Code §§ 703-704
(f) 16 U.S. Code §§ 668-668c
(g) 16 U.S. Code § 1361, *et seq.*
(h) 50 C.F.R. pt. 10
(i) 50 C.F.R. pt. 21
(j) SECNAVINST 6401.1 (Series)
(k) NASOCEANAINST 3750.2 (Series)

1. Purpose. To prescribe procedures and assign responsibility for management and control of fish and wildlife, feral animals, invasive species, and certain pests within Commander, Navy Region, Mid-Atlantic (COMNAVREG MIDLANT) Area of Responsibility (AOR). This includes the areas of Naval Weapons Station (WPNSTA), Yorktown (including Cheatham Annex); Naval Air Station (NAS), Oceana (including Naval Auxiliary Landing Field [NALF] Fentress, Camp Pendleton, and Dam Neck Annex); Naval Station (NAVSTA), Norfolk (including St. Julien's Creek Annex and St. Helena Annex); Naval Support Activity (NAVSUPPACT), Norfolk (including Northwest Annex); Naval Amphibious Base (NAVPHIBASE), Little Creek; Fleet and Industrial Supply Center (FISC), Norfolk (Craney Island Fuel Depot and Yorktown Fuel Terminal); and Norfolk Naval Shipyard (NAVSHIPYD Norfolk), Portsmouth, VA (only New Gosport Annex, Scott Center Annex, and South Gate Annex).

2. Policy

a. Per references (a) through (c), the Navy is authorized to take measures to control invasive species.

b. References (d) through (g), the Lacey, Migratory Bird Treaty, Eagle Protection, and Marine Mammal Protection Acts, respectively, protect designated wildlife and control activity involving protected wildlife parts. Violations of these statutes may result in criminal prosecution. Regulations contained in references (h) and (i) implement reference (e) and list species protected by Federal law. Reference (j) describes government responsibility for preventing injury and diseases from animals.

3. Definitions

a. Per reference (a), an "invasive species" is a species that is non-native (or alien to the ecosystem under consideration), and whose introduction causes, or is likely to cause harm to economic, environmental, or human health.

b. Per reference (e), "take" means to pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to pursue, hunt, shoot, wound, kill, trap, capture, or collect.

c. Per reference (c), "pest" refers to any organism (except for microorganisms that cause human or animal diseases) that adversely affects the well-being of humans or animals, attacks real property, supplies, equipment or vegetation, or is otherwise undesirable.

d. Per reference (j), "feral" refers to wild animals and unowned dogs, cats, or other domestic animals.

4. Responsibilities

a. Regional Engineer. The Commanding Officer, Navy Public Works Center/Regional Engineer (PWC/RE), Norfolk, as the Regional Environmental Program Manager, is responsible for management and control of, and for providing services pertaining to, fish and wildlife, feral animals, invasive species, and pests. On behalf of COMNAVREG MIDLANT, the Regional Engineer obtains natural resources permits required by Federal law to carry out this program. Regional Engineer authority, in natural resources matters, may be sub-delegated to a properly trained Regional Natural Resources Program Manager, under the supervision of the Regional Environmental Group Head.

(1) Environmental Services Desk. The PWC/RE Environmental Group provides pest management services through the Environmental Services Department. In addition, the Environmental Services Department responds to routine service calls for removal of non-migratory birds and control of feral animals. These services may be requested through the Environmental Services Desk at (757) 444-7528 during working hours and (757) 444-3477 after hours. Requests for services involving animals, such as sea turtles, marine mammals, game animals and migratory birds or raptors, not under the purview of the Environmental Services Department, will be referred by Service Desk personnel to Natural Resources Managers.

(2) Natural Resources Specialists. Under the direction of the Regional Natural Resources Program Manager, installation Natural Resource Specialists use integrated management practices and procedures to manage fish and wildlife and control certain feral, nuisance and invasive species. Per reference (k), Natural Resources personnel also develop and execute depredation and

dispersal procedures for Bird Animal/Aircraft Strike Hazard (BASH) purposes, and personally supervise these activities when lethal methods are required. Natural Resources Managers, and all other PWC/RE personnel involved in lethal control activities, must be properly trained and duly certified for all weapons employed in accordance with applicable regulations. These personnel are located in Storefront Compliance Departments of the Regional Environmental Group. Natural Resources personnel will also identify bird and/or other animal remains associated with aircraft mishaps in accordance with reference (k).

(3) Conservation Officers. Under the direction of Natural Resources Managers, Conservation Officers enforce fish and wildlife and other natural resources laws and regulations. They may conduct field inspections and employ approved control methods for certain species. Control measures include, but are not limited to, live trapping, relocation, and lethal methods. Conservation Officers also perform wildlife forensic investigations and respond to wildlife damage complaints.

(4) Regional Natural Resources Managers. Regional natural resources managers shall:

(a) Provide direction to natural resources managers and game wardens regarding the management of fish and wildlife and the control of feral animals, invasive species, and pests.

(b) Ensure appropriate approval and procedures are in place to properly issue, store, carry, and use firearms.

(c) Ensure the natural resource manager and game warden weapons qualifications cards are certified and remain current.

(d) Coordinate with local and regional security for required range time, qualifications, and DoD training as needed.

b. NAVSHIPYD Norfolk. Pest control services for NAVSHIPYD Norfolk are currently provided through government contract; these services may be requested through LANTNAVFACENGCOM at (757) 396-5121, extension 200.

c. Security Officers. Security Officers respond to emergency wildlife complaints and requests for services. Security Officers are an after-hours emergency contact point for Natural Resources Managers, Conservation Officers, and pest management personnel. Within existing resources and according to established training priorities, Security Officers also assist Natural Resources personnel in obtaining required weapons qualifications.

d. Airfield Facilities Division Officer. All bird/animal strikes should be investigated and reported in accordance with reference (k). Animal remains will be collected by the Airfield Facilities Division Officer and placed in appropriate BASH freezers located in Building 102 at NAS Oceana and LP-167 at Chambers Field, NAVSTA Norfolk.

e. Aviation Squadrons. All bird strikes must be reported in accordance with reference (k). Airfield Facilities or Natural Resources should be immediately contacted following any strike to ensure bird/animal remains are collected and identified.

5. Review. The Regional Natural Resources Program Manager is responsible for review and update of this instruction.

Subj: POLICY LETTER PREVENTING FERAL CAT AND DOG POPULATIONS ON NAVY PROPERTY

Ref: (a) SECNAVINST 6401-1A, of 16 Aug 94, Veterinary Health Services
(b) AFPMB TIM #37, Guidelines for Reducing Feral/Stray Cat Populations on Military Installations in the United States
(c) OPNAVINST 6250.4B, dtd 27 Aug. 1998, Pest Management Programs
(d) Executive Order 13112 of 3 Feb 1999, Invasive Species

1. This letter clarifies the application of reference (a) regarding the prevention of free roaming (also called wild, feral or stray) cat and dog populations on Navy installations. The objective is to prevent injury or disease to Navy personnel, and eliminate adverse impacts on native wildlife. It requires Navy commands to institute pro-active pet management procedures in order to prevent establishment of free roaming cat and dog populations. Free roaming cats and dogs pose a potential public health threat to personnel on Navy installations, and they pose a threat to wildlife including endangered species and migratory birds.

2. Existing policy at Paragraph 4-2c(4) of reference (a) states "Dogs, cats, and other privately-owned or stray animals will not be permitted to run at large on military reservations." Consistent with this policy, Navy commands must ensure the humane capture and removal of free roaming cats and dogs. Consistent with this requirement, Trap/Neuter/Release (TNR) programs will no longer be established on Navy land. All existing TNR programs on Navy land must be terminated no later than 1 January 2003.

3. Responsible pet ownership is a key factor in eliminating free roaming cat and dog populations. In consultation with supporting Army Veterinary Office, installations shall implement appropriate pet management measures to preclude establishment

of feral cat/dog populations, including, but not limited to the following:

Require installation residents to keep and feed pet animals indoors or under close supervision when outdoors (such as on leash and collar or other physical control device - cage, fenced yard etc.).

Encourage neutering or spaying of cats and dogs before they reach reproductive age (exceptions to this policy can be made on a case by case basis as determined by the Installation Commander).

Require routine vaccinations of cats and dogs for rabies and other diseases as required by federal, state and local laws and ordnances. A current vaccination record is required at time of registration of pets.

Require microchipping registration (or other system of pet identification approved by supporting veterinary office) of all pet cats and dogs brought onto installations. Installation residents must register cats and dogs and have pets wear registration or identification tags at all times.

Prohibit the feeding of feral animals on the installation.

Provide educational materials to pet owners regarding installation regulations and general pet management.

Enforce prohibition of abandonment of animals on installations.

Comply with all humane and animal control regulations at the federal, state and local level (and their equivalents in host nation countries).

Navy installations in Europe that do not have a supporting veterinary office contact 100th Medical Detachment (VA HQ) (011) 49-622-177-2868; for all other locations that do not have a supporting veterinary office the POC is the VETCOM HQ, Commander (210) 221-6522.

Subj: POLICY LETTER PREVENTING FERAL CAT AND DOG POPULATIONS ON NAVY PROPERTY

4. Effective prevention, management and elimination of feral cat and dog populations requires close coordination and cooperation between natural resources, pest management, security, veterinary, and housing personnel to develop and implement an effective and humane program. Reference (b) provides information for preventing free roaming cat populations on military installations. General pest management guidelines are detailed in reference (c). Every effort should be made to work with other federal, state and local agencies to support reference (a) and reference (d) by eliminating free roaming cat and dog populations on Navy land. Navy commands should work with local animal control agencies to determine the best approach for the ultimate disposition of the captured animals. Every effort should be made, if practical, to find homes for adoptable feral cats and dogs.

5. My point of contact on this issue is Mr. Joe Cook, CNO N456M, at (703) 602-5335, or DSN 332-5335.

Table of Contents

Plan developed in accordance with the 2009 Guidance for Implementation of Federal Wildland Fire Management Policy. Some verbiage in this document is taken directly from this guidance document.

DEFINITION: Wildland fire is a general term describing any non-structure fire that occurs in the wildland. There are two categories of wildland fire: wildfire and prescribed fire. Wildfire includes unplanned fire ignitions or prescribed fires that are declared wildfires (fires outside of planned management prescriptions). Prescribed fire ignitions are planned. Prescribed, or controlled, burning is defined as skillfully applying fire to forest and grassland fuels, in a definite place, for a specific purpose, and under exacting conditions to achieve management objectives.

BURN TECHNIQUES: For the purposes of this plan, all burning will be accomplished utilizing a combination of strip-head fire and backing fire techniques as appropriate.

PURPOSE/JUSTIFICATION: The main objectives of controlled burning are to reduce forest fuel (i.e. pine needles, fallen wood, leaves, etc.) accumulations and thick understory, improve wildlife habitat, reduce potential for an uncontrollable fire, and to maintain vegetation in compliance with security and runway requirements. Prescribed burning may be used also as a form of site preparation for planting.

Objective 1: Implement hazard reduction prescribed burning within areas that are designated in accordance with national fire management parameters.
Rational for Objective: Hazard reduction prescribed burning reduces the amounts of fuels in the forest. This would reduce the probability of major fires of long duration, which are difficult and expensive to suppress, as well as pose a greater threat to human health and private & government properties.
Strategies:
• Implement hazard reduction burns within designated areas.
• Participate in wildland urban interface programs that support reduction of fuel accumulations and development of fire breaks where off-base development and smoke-sensitive locations are threatened by base wildfires.

Objective 2: Implement sustainable ecosystem based habitat management prescribed burning within areas that are designated in accordance with national fire management parameters.
Rational for Objective: Hazard reduction and ecological enhancement prescribed burning alters the vegetation structure to either reduce or enhance wildlife and plant species as dictated by the installation's Integrated Natural Resources Management Plan (INRMP). Objective would support such INRMP programmatic areas as invasive species control, ecological restoration, bird/animal aircraft strike hazard species control, protected species management, etc.
Strategies:
• Implement hazard wildlife habitat reduction burns within designated areas.
• Implement restoration/enhancement burns within designated areas.

TIME FRAME/SEASON: Virginia State Code 10.1-1142-B designates the period from February 15 to April 30 as fire season. Due to other Navy directives the Navy cool season burning dates run from 01 Feb to 15 April. The general public is prohibited from any burning before 1600 hours. Federal facilities are exempt from state law due to exclusive jurisdiction, but should comply with the intent of the law. Although NAS Oceana may at some point need to perform a growing season burn for specific management purposes, every effort will be made to burn during the cool season.

The Bases will follow Virginia sanctioned burn bans. Exceptions can be made upon approval by the Bases' Commanding Officer (CO). The CO may re-instate burning privileges under the federal lands exclusive jurisdiction.

Air quality issues in the Hampton Roads area, as in most urban areas, are most often felt during the summer months, which are characterized by hot, humid weather, and the accompanying stagnant air mass. These conditions are typically unfavorable for prescribed burning. The environmental conditions make burning difficult, the desired effects of prescribed fire treatments are harder to achieve, and smoke management parameters, which are a key component of prescribed fire burn planning, generally prohibit burning during these times of year (2006 USFWS GDSNWR).

PLAN APPROVAL: This plan is part of the Integrated Natural Resources Management Plan (INRMP). Upon signature of this plan it will be adopted into the INRMP as an approved plan and no further signatory approvals will be required beyond the signatures on the INRMP. In the event that there are major changes specific to the Fire Plan and not to the INRMP in general, the fire plan will be revised and new signatures will be required on the plan before updating the INRMP with the revision.

NEPA REVIEW: As the Prescribed Burn and Smoke Management Plan Units were reviewed under the INRMP's associated Environmental Assessment (EA), no additional NEPA review is required. In the event that new burn areas are added to the Burn Plan additional NEPA review will be required prior to Plan approval and inclusion in the INRMP.

Restrictions on when and how to burn are tied to multiple variables to include but are not limited to: military mission requirements; National Environmental Policy Act (NEPA); Threatened and Endangered Species (T&E) considerations; Migratory Bird Treaty Act (MBTA); water quality and impacts on riparian areas; administrative constraints imposed by Congress (e.g., roadless and wilderness area designations); impacts on archeological resources; smoke management program requirements; and other state or federal environmental or forestry regulations.

SMOKE MANAGEMENT PLAN: Each Burn Area will specify required conditions upon which burning may take place to minimize impacts to identified downwind sensitive smoke receptors (Appendix D). These sensitive targets include hospitals, nursing homes; interstate or other major

high-speed highways, runways, and heavily populated areas. Target areas around NAS Oceana include Interstate 264 to the North, and heavily populated areas to the west and north of the installation. Target areas on NAS Oceana include the airfield, Tomcat Boulevard and Hornet Drive, the Branch Medical Facility and the Married Officers Quarters (MOQ) and Bachelors Officers Quarters (BOQ). Sensitive areas around and on board NALF Fentress include Mount Pleasant Road, Fentress Airfield Road, and the Operations building 100. Areas surrounding and on board Dam Neck Annex that are considered smoke sensitive include Dam Neck Road, the Medical Dental Facility, the MOQ and Combined Bachelors Quarters, the Navy Lodge, and densely populated areas to the south (Sandbridge) and to the west including Ocean Lakes Elementary School.

Each burn area plan includes the following details:

- Reason for burn.
- Required weather conditions including direction and speed of surface and transport winds.
- Required mixing height.

Preferred wind direction will be indicated in the description of the burn areas and in Appendix D. Weather conditions will be checked for appropriate burning conditions commencing 24 hours prior until the onset of burning. Given that general weather conditions are appropriate for burning, the areas to be burned each day will be decided upon based on wind direction and any air operations restrictions. Air operations restrictions are determined by contacting the Air Operations Officer. Additionally, the following burn area descriptions contain a priority listing of High, Med. or Low to be used in the decision making process on the day of a burn. Although these areas have been prioritized, weather and site conditions may direct prescribed burning to lower priority areas. Note that certain low priority areas may be burned in advance of higher priority areas to provide crew training, to test communication procedures and test equipment. Some of these areas are smaller than high priority burn areas and are located in accessible and secure locations.

The size of the designated burn areas has been kept relatively small to help reduce emission generation during a given burn event.

DESCRIPTION OF BURN AREAS:

Burn Areas are listed in order of burn priority for the year (the first burn area listed is the #1 priority burn for the year, the second listed is the #2 priority burn for the year, etc.). Burn priority rankings were established through coordination with Base Ops, Planning, and Natural Resources.

Acreages and mapped areas for burn units have been updated, as such some information may differ from what was reported in past burn plans.

Locations of proposed burn areas are shown in Appendices A and B. A consolidated burn prescription chart is located in Appendix D. A burn history chart is provided in Appendix K. Future plans for the prescribed burning program are located in Appendix I.

NAS Oceana:

Burn Area 4-7 is a 54.14 acre parcel located in hunting areas 4 through 7 (Appendices A, B, and C). This site is recommended for burning to: facilitate control of *Phragmites* and 3 acres of Warm Season Grasses (WSG); to maintain vegetation in compliance with airfield height restrictions; and to reduce BASH. The burn area is located 400 feet west of NAS Oceana runway 5R and 1000 feet south of 5L. The burn areas are bounded: on the north/northeast and east/southeast by mowed airfield clearzone; on the south/southwest by a maintained bulldozed firebreak; and on the west by a ditch with agricultural fields as secondary containment (Appendices A, B, and C). Close coordination with NAS Oceana Air Operations will prevent impedance to aircraft using adjacent runways. Annual burning will facilitate compliance with airfield vegetation height requirements and reduce BASH potential. This area was burned in 2006 and again in January 2007. Weather conditions and staff availability prevented burning from occurring in 2008. Burning can proceed with wind direction between 270° to 30° and a mixing height of 1,640 feet. (Priority: High)

Burn Area 47 is a 22.01 acre site consisting of early successional woods and WSG plots (Appendices A, B, and C). Boulevard. The area is located between the NAS Oceana skeet range and the MWR long-term storage area, approximately 1600 feet south and west of the intersection of Potters Road and Mitcher Blvd. Active or abandoned concrete roads and the runway clearzone define most boundaries and act as firebreaks. A ditch along the NE boundary acts as a secondary firebreak. The site was drumchopped in 1997 to meet airfield clearzone height restrictions and receives periodic burn or mowing treatments to maintain it. Burning will economically prepare the site for development of a wildlife management area, maintain airfield vegetation height requirements and remove undesirable pioneer plant species. In 1998, 10 acres of native warm season grasses (WSG) were planted and added to this parcel for burning. This area is located on the fringe of the airfield clearzone by runway 14L. The warm season grass portion of this area was last burned in 2006. In 2008 the MWR skeet range installed a new fence which altered the boundary of this parcel reducing the acreage from 51.80 acres to the current 22.01 acres. Burning can proceed with wind direction between 300° to 30° and a mixing height of 1,640 feet. (Priority: High)

Burn Area 41/41A is a 21.94/4.03 acre site, respectively, and consists of hunting area 41, a portion of the airfield clearzone planted in WSG in 1998, and an adjacent field to the northeast (Appendices A, B, and C). The area is located 1800 feet west of Oceana Boulevard and 400 feet northeast of the approach end of Runway 32R. Burning will facilitate compliance with airfield vegetation height requirements and maintenance of portions of the area in an early successional stage. The adjacent field east of the ditch (area 41A) was added this year in an attempt to reduce deer bedding locations in close proximity to the runway. Area 41 is bounded: on the east and south

by a wide drainage ditch; on the north by paved road; and on the west by the mowed clearzone area. Either taxiway or agricultural fields act as secondary containment on the west, east and south sides of the burn area. Area 41A is bounded: on the west by a drainage ditch; on the southeast by agricultural fields; and on the northeast by a security fence mowed boundary. The south end of 41 (~8 acres) was successfully burned in 2008. As typical of "wildland" prescribed burning, the area burned in a patch-work manner (meaning some areas burned and others did not, with in the entire burn area). Burning can proceed with wind direction between 300° to 120° and a mixing height of 1,640 feet. (Priority: High)

Burn Area 53 is a 43.61 acre site located within hunting areas 52 and 53 and a portion of hunting area 54 (Appendices A, B, and C). Area 53 is an abandoned field approximately 1500 feet south of the approach end of NAS Oceana runway 5R. Area 54 contains *Phragmites* in the northwestern portion and will be burned for the control of this invasive species. Hunting area 53 contains grasses, early successional shrubs and/or small trees and has been partially burned annually from 1993 to 2007. Prescribed burning facilitates compliance with airfield vegetation height requirements and maintains the field in an early successional stage. The field is bounded: on the north/northeast by a paved road network; on the east by a combination of ditch and dirt road/plowed firebreak; on the south/southwest by a gravel road (former railroad track); and on the west by a mowed portion of the airfield clearzone. This area was burned in 2006. The northern end of this area was successfully burned in February of 2007. Burning can proceed with wind direction between 270° to 30° and a mixing height of 1,640 feet. (Priority: High)

Burn Area 9 is a 9.15 acre parcel adjacent to hunting area 9. It is located approximately 600 feet northwest of the approach end of Runway 5L (Appendices A, B, and C). The area was drumchopped in 1997 and 1998 to meet airfield height restrictions and a portion of the area was planted in WSG. It is recommended that this site be burned annually as routine maintenance. A successful burn was completed in January of 2007. The area is bounded: on the north, east, and west sides by a combination of mow and till firebreaks and ditches; and on the south by an agricultural field. Secondary containment on the east side includes the mowed airfield clearzone. This area was burned in 2006. Burning can proceed with wind direction between 270° to 30° and a mixing height of 1,640 feet. (Priority: High)

Burn Area 31 is a 2.24 acre plot on the southwest corner of hunting area 31 and southeast corner of hunting area 30(Appendices A, B, and C). This area is located in the airfield clearzone for runway 23R and was burned in 2006. This area is burned to maintain compliance with airfield vegetation height requirements. Firebreaks consist of the clearzone to the south and east and a maintained firebreak to the north and west. Burning can proceed with wind direction between 270° to 90° and a minimum mixing height of 1,640 feet. (Priority: High)

Burn Area 32 is a low-lying 1.65 acre plot of an invasive species called Tree of Heaven (Appendices A, B, and C). This site is being burned to maintain airfield vegetation height

requirements and control invasive species. Firebreaks consist of the clearzone to the north, south, and west, and the horse trail to the east. Burning can proceed with wind direction between 0° to 60° and a minimum mixing height of 1,640 feet. (Priority: High)

Burn Area 42 is 17.61 acre parcel located in hunting area 42 (Appendices A, B, and C). A 4.5 acre portion of this site was drumchopped in 1997. It is recommended that this area be burned annually for maintenance. The area is bounded: on the west and south by a combination of ditches, agricultural land, and mowed field; and on the north and east by mowed airfield clearzone. This area was burned in 2004. Burning can proceed with wind direction between 270° to 0° and a mixing height of 1,640 feet. (Priority: High)

Burn Area 11-21 is a 121.14 acre parcel located within the hunting area complex north of the fuel farm (Appendices A, B, and C). This area was timbered in 1998-99 and consists of nine hunting areas numbered 11-13 and 16-21. Burning can: facilitate establishment of a primarily pine forest community; benefit wildlife; reduce fuel load; and maintain a thin stand density for maintenance of line-of-sight and radio communications. The area is bounded: on the west by a paved road, 'Sludge Road'; on the east by a plowed (mow/till) line with the mowed airfield clearzone and and existing drainage ditch as a secondary containment; and on the north and south of each unit with plowed (mow/till) firebreaks. In 2004 hunt areas 14, 16 and 18 were burned. In 2005 hunting areas 12, 13, 19 and 20 were burned. In 2006 hunting areas 20, 19, 18, 17, 16, were burned. March 2007 area 11 was burned. During the 2007 burn complications/control issues were encountered and required additional assistance. Recognizing the high visibility of burning in the fuel farm area, the Navy Regional Fire and Emergency Services will provide backup during the initial burning of the most southern unit (area 21) until complete. After completion of this burn, this area will provide sufficient black line to ensure the security of the fuel farm area. Burning can proceed with wind direction between 180° and 270° or between 0° and 30° with a minimum mixing height of 1,640 feet to prevent smoke impacts to adjacent sensitive areas (London Bridge Road and the airfield). (Priority: Med.)

Burn Area 30 is a 3.32 acre site that has recently been fenced in as part of the skeet range/MWR facility area (Appendices A, B, and C). This area is not scheduled to be burned in 2009 and is under consideration for complete removal from the prescribed burn program.

Burn Area 33 is a 2.01 acre site located north of FACSFACVACAPES in hunting areas 33 and 35 (Appendices A, B, and C). It is on top of a 1995 restoration area and planted in WSGs and other small shrubs. Burning will maintain this site in a scrub/shrub habitat for wildlife improvements and reduced fuel load. The area is bounded: on the south and east by a hard packed dirt road; and on the north and west by a combination of ditches, trails, and plowed (mox & till) firebreaks. An initial burn occurred in 2001. The site was burned again in 2006. Burning can proceed with wind direction between 0° and 90° with a minimum mixing height of 1,640 feet to

prevent smoke impacts to adjacent sensitive areas (Oceana Boulevard and approach end of RW 23). (Priority: Low)

Burn Area OP is a 3.51-acre parcel immediately north of Oceana Pond (Appendices A, B, and C). The area consists mostly of old abandoned fields but in the past has been used as an unplanned dumpsite for wood debris. A 2008 USACE wetland survey has indicates that the majority of this area has converted to wetland habitat. A 2008 survey by installation staff regarding specific invasive species has indicated that phragmites has established on this site as well. Until a plan of action for controlling invasive species on site is established no burning will commence in this burn unit. This area was first burned in 2001. Once burning is allowed, burning can proceed with wind direction between 270° and 30° and a minimum mixing height of 1,640 feet. (Priority: Low)

NALF Fentress:

Burn Area 5/5A is a 21.51/40.32 acre site, respectively located at the south end of runway 5 in hunting area 5 (Appendices A, B, and C). This site was a 15-year old loblolly pine stand. Timber clearing of this area occurred in 2004 to meet airfield approach clearance requirements. This area has a dense understory of switchcane. Prescribed burning will: prevent re-invasion of hardwoods; reduce fuel loading; and improve habitat for several state listed rare animal species. Firebreaks consist of the airfield clearzone to the north, access roads on the east and west and a 30-foot bulldozed firebreak to the south. Pocaty Creek provides secondary containment to the south. Burning can proceed with wind direction between 300 degrees and 240 degrees with a minimum mixing height of 1640 feet. (Priority: Medium, Rotation: 3 years)

Burn Area B-6 is a 21.66 acre site located directly south of the TACAN in hunting area B-5 (Appendices A, B, and C). This site was cleared in 1998-99 for line-of-sight clearance from the TACAN to the runway. This area will be burned to maintain vegetation height requirements and to reduce fuel loading. Firebreaks consist of agricultural fields to the west, the clearzone and a drainage ditch to the east and plowed firebreaks, which will be installed prior to burning, to the north and south. Burning can proceed with wind direction between 60° and 230° with a minimum mixing height of 1,640 feet. (Priority: Med.)

Burn Area 21 is an 18.12 acre site located at the approach end of NALF Fentress runway 23 in hunting areas 20 and 21 (Appendices A, B, and C). Half of the area was cleared in 1995 as part of the airfield clearzone maintenance and a portion was cleared in 2003. The burn will maintain this area in compliance with clearzone requirements and provide wildlife benefits. Firebreaks will be established along the north, west, south and east ends of the burn area prior to burning. The runway clearzone also provides a firebreak along the south boundary. Burning can proceed with wind direction between 180° and 60° with a minimum mixing height of 1,640.
(Priority: High)

Burn Area 2 is a 57.12 acre parcel of loblolly pine located north of burn area 3 in hunting areas 2 and 1 (Appendices A, B, and C). Approximately 30 acres of this area received pre-commercial pine thinning in the spring of 1997 and a prescribed burn in 1998,1999, 2001, 2003, 2004, and 2006. The section of woods north of this area was cleared in 2004. Prescribed burning will prevent re-invasion of hardwoods in this stand and reduce the fuel loading in the remaining 20 acres. This area will be burned in two sections with a firebreak dividing the ~20 and ~30 acre plots. Firebreaks have been established on the north, northeast and south sides of this tract. Fentress Airfield Road will serve as a firebreak on the east and agricultural fields will provide a break on the west. Burning can proceed with wind direction between 30° and 180° with a minimum mixing height of 1,640 feet. (Priority: High)

Burn Area 3 is a 74.75 acre parcel of prior converted croplands located 3500 feet east of the approach end of NALF Fentress Runway 23 and approximately 800 feet north of Fentress Airfield Road in hunting areas 3 and 4 (Appendices A, B, and C). These fields contain grasses, early successional shrubs and near-mature pine and hardwood trees. This area will be burned for wildlife management and to alleviate competition to pine species. Drainage ditches bound the area to the south. Agricultural fields serve as firebreaks to the west and north. Plowed firebreaks and Fentress Airfield Road contain this area on the east. This area was burned in 2004. Burning can proceed with wind direction between 30° and 180° with a minimum mixing height of 1,640 feet. (Priority: Med.)

Burn Area 19 is a 22.93 acre parcel located east of burn area B-2 and inside the old taxiway in hunting area 19 (Appendices A, B, and C). Burning is prescribed to improve timber stand quality. The old taxiway will serve as the firebreak to the north, south, east and west. Burning can proceed with wind direction between 270° and 60° with a minimum mixing height of 1,640.
(Priority: Med.)

Burn Area B-2 is a 23.48 acre S-shaped timber stand of Loblolly Pine located east of Carter Rd. and south of Mt. Pleasant Rd. in hunting area B-2 (Appendices A, B, and C). Prescribed burning is being used to improve the quality of the timber, the appearance and wildlife habitat. Firebreaks include the tarmac to the east and agricultural fields to the north, south, and west. Burning can proceed with wind direction between 300° and 60° with a minimum mixing height of 1,640. (Priority: Low)

Dam Neck Annex:

Over several years DNA has not received the desired prescribed burning attention, due to weather conditions and staff availability issues. DNA burn areas need to be reassessed before burning is initiated, DNA will not undergo prescribed burning in 2009. Appropriate areas may

be mowed to maintain desired habitat structure. A general map of the past burn areas is located in Appendix A. For further information regarding any of these sites please contact the installation Natural Resources Manager.

RESPONSIBILITIES:

Training requirements for individuals involved with the prescribed burning program are located in Appendices G & H.

NAVFAC MidLant Regional Natural Resources Managers:

1. Act as or designate an appropriately trained person to act as burn boss and conduct the safety brief for any given burn.
2. Supervise burning procedures on the day of the burn (acting burn boss).
3. Release burn crew from burn site after mop-up (acting burn boss).
4. Review the burn plan.
5. Provide technical assistance.

NAS Oceana Natural Resources Specialist:

1. Develop prescribed burn plan.
2. Coordinate personnel and equipment prior to burn.
3. Conduct post-burn evaluation.
4. Notify chain-of-command and concerned parties prior to burning.
5. Provide 4 portable radios with access to Security and Fire Dept. frequencies.
6. Establish firebreaks.
7. Maintain training log of crew/personnel members (Appendix H)

NAS Oceana Public Works Officer:

1. Review prescribed burn plan.

Air Operations:

1. Coordinate burning requirements with flight traffic patterns.
2. Notify burn crew if smoke interferes with flight operations.

Navy Region Mid-Atlantic Fire and Emergency Services:

1. Provide standby fire crew in case of emergency.
2. Coordinate available assistance from the local fire department.
3. If requested by the Natural Resources Manager, make hourly site inspections for three consecutive hours after burn crew personnel have secured the burn site.

NAS Oceana/NALF Fentress/Dam Neck Annex Security Department:

1. Provide traffic control in the event of emergencies or impaired visibility due to smoke.

2. Liaison with NALF Fentress and the Chesapeake Police Department for law enforcement support in accordance with the memorandum of understanding between the City of Chesapeake and NAS Oceana.

NAS Oceana Public Affairs:

1. Provide burn information to inquiring individuals, nearby residents, and the news media if requested.

REQUIRED WEATHER CONDITIONS:

The following conditions must be met before burning is initiated (Appendix D):

- No significant rain three to seven days prior to burning.
- Winds of 10 mph or less with gusts no higher than 15 mph.
- Preferred relative humidity of 30 to 50 percent.
- Preferred temperature of 20 to 50 degrees F.
- Front no less than four hours distant.
- Specific wind direction may be required to reduce smoke (see burn area description section of plan or Appendix D).
- Per the Virginia Department of Forestry, no prescribed burning will occur above the 500 CSI (Cumulative Severity Index) maximum, which will be checked prior to burning commencement.

BURN PREPARATION:

Notification:

All concerned parties in the notification section of this plan will be contacted and informed of the necessary details specific to the proposed burn (Appendix F). Weather and air operations are the controlling factors and will generally limit coordination to less than 24 hours and almost always less than one week prior to burning.

Fire Breaks:

Establishment of fire control breaks is discussed in the preceding burn area descriptions. Secondary firebreaks, consisting of roads, runways, ditches, clearzones, and agricultural fields are located around all burn areas, which further prevent fire from escaping outside of Navy property as well as protect structures on board the installations.

Personnel/Materials:
A list of work crew personnel and equipment needed to control the burn is contained in the equipment section of this plan and Appendices E and F.

Required Clothing:
A list of required field clothing is contained in the personal protection equipment section of this plan (Appendix E).

Day of Burn Procedures:

1. Obtain current weather and burn forecast information.
   - Virginia Department of Forestry; (757) 465-6840; www.state.vipnet.org/dof/index.html
   - National Oceanic and Atmospheric Administration; www.nws.noaa.gov/
   - NAS Oceana (latest observation); (757) 433-2177/433-2274
2. Notify all concerned parties prior to and immediately after burning.
3. Conduct a briefing by the Burn Boss covering the following items:
   - Burn objectives
   - Techniques to be used
   - Safety
   - Burn boundaries
   - Radio transmission signals
   - Use of fire tools
   - Chain of Command: natural resources staff, headed by the burn boss, gives direction to the work crew. Natural resources staff will remain in radio contact with the tower and fire department should there be any issues that arise requiring a halt to or redirection of the burning operation. Such direction may be given by the Commanding Officer (Command Duty Officer in the absence of the CO), Air Operations, or the Public Works Officer.
4. Burn in accordance with burn plan prescriptions recording appropriate information throughout the burn.

Note: Example data sheets for tracking and recording information are provided in Appendix J.

Burn Completion:
When all open flames within 25 feet of the burn perimeter and all smoldering material are extinguished, and the burn has been completed to the satisfaction of the burn boss, he/she may release the burn crew from the site. If requested, by the Regional Natural Resources Manager or designated burn boss, the Navy Regional Fire and Emergency Services and/or NALF Fentress field crews will make hourly site inspections for three consecutive hours after the burn crew has secured

the site. Burn crew personnel should be called back only if fire escapes the burn perimeter or open flames persist within 100 feet of the burn perimeter during winds over 25 mph.

Post Burn Evaluation:
Each burn event will be evaluated in respect to the following questions:

- Was there adherence to the burn plan?
- Were pre-burn preparations made?
- Were conditions of weather, fuel and fire behavior within planned limits?
- Was the burning technique employed correctly?
- Was the fire confined by the fire control breaks?
- Did any accidents or near accidents occur?
- What were the environmental effects on soil, air, vegetation, water and wildlife?
- Were objectives met?
- Were costs comparable with benefits derived?

Note: Example data sheets for tracking and recording information are provided in Appendix J.

EMERGENCY ACTION:

1. In the event of an emergency, when called for assistance, the Fire Chief will assume command of the scene and will coordinate extinguishment of the fire using a unified command with all resources needed to control the incident:
    a. Fire chief to be briefed by the Burn Boss/wildland fire fighting expert. Briefing will include discussion of onsite wildland fire personnel, weather information, and wildland fire fighting techniques. The Burn Boss will be incorporated as part of the unified command;
    b. Stop lighting new sections but let the existing fire continue to burn. However, under certain conditions, and in coordination with the Fire Department, backfires may be used to help control or extinguish fires.
    c. Continue normal burning procedures.
2. In case of a fire escape that cannot be controlled by the burn crew and the Navy Regional Fire and Emergency Services, the following will be contacted for assistance (the call for additional resources will only be made by the incident commander): (Appendix F has additional contact information for these offices)
    a. Virginia Department of Forestry (757) 365-6209
    b. Virginia Beach Fire Department (757) 385-5000
    c. Chesapeake Fire Department Dispatch (757) 382-6165

"WATCH OUT" SITUATIONS:

IF ANY OF THE FOLLOWING CONDITIONS EXISTS, THE BURN WILL BE HALTED AND EXISTING FIRE WILL BE PLOWED OUT:

- Fire behaves erratically.
- Spot fires occur and are difficult to control.
- Winds shifting or other unforeseen changes in weather.
- Smoke not dispersing as predicted.
- Public Roads or sensitive areas 'smoked in'.
- Burn does not comply with all laws, regulations and standards.
- Large fuels igniting and burning, not enough personnel available to secure before dark, and likely to 'smoke in' sensitive areas

	High priority
	Medium priority
	Low priority

APPENDIX E
CREW AND EQUIPMENT:
Burn Plan Work Crew and Materials Needed

1. Minimum of 8 personnel made up of active duty/retired military, DoD civilians or other personnel under DoD cooperative agreements.
2. Minimum of 4 portable radios.
3. Backpack pumps.
4. Fire tools (flappers, rakes, shovels).
5. 4 drip torches.
6. Matches, fuel and mixing container.
7. Compass.
8. First aid kits.
9. Maps and/or aerial photographs.
10. Fireproof clothing and boots.
11. Water coolers and cups.
12. Personal Protective Equipment (PPE)

Required Personal Protective Equipment (PPE)

1. Hardhat.
2. Leather gloves.
3. Bandanna or other smoke inhalant protection.
4. Leather boots.
5. Nomex fire proof or 100% cotton clothing.

Natural Resources Prescribed Burn Equipment Inventory

17. Command Duty Officer – Quarter Deck	

Burn Crew Contact Information

Made up of active duty/retired military, DoD civilians, State and Federal Cooperators. Each person identified will receive a pre-fire briefing to go over safety procedures, burn plan of action, job descriptions, general prescribed burning training, etc. The prescribed burning program is supported by the base CO and the NAVFAC MidLant Env Director. All people participating in burning activities must first get approval from their supervisors to aide this program. This list is every changing and will be updated as information becomes available (current list maintained by the NASO Natural Resources Manager).

Crew Member	Crew C-Phone	Contact Name	Relation	Contact Phone

APPENDIX G
PRESCRIBED BURN FIRE FIGHTER TRAINING REQUIREMENTS:

The training program is currently under construction. There is currently no official Navy identified mechanism for obtaining the core and refresher training portions of these requirements. Because of this issue core and refresher training is being phased into the training requirements. There is NO substitution for taking the advanced training (as appropriate) or the burn day training. Once the training program is finalized, there will be no substitutions for taking core, refresher, and burn day trainings. Our goal is to promote safety through training and actions.

Core Training

Required for all new prescribed burn fire-fighters (and those old fire-fighters that have not taken the course), one time course:

1. I-100, all online (<http://training.nwcg.gov/courses.html>)
2. S-110, all online (<http://training.nwcg.gov/courses.html>)
3. S-190 (<http://training.nwcg.gov/courses.html>)
4. S-130, online & field day components (<http://training.nwcg.gov/courses.html>)

Advanced Training

Required for all prescribed burn Burn Bosses, one time course:

1. Virginia Dept of Forestry Prescribed Burn Certification Course

Refresher Training

Required annually for ALL prescribed burn fire-fighters who have completed Core and/or Advanced Training:

1. Annual Refresher Course
    a. *Note: Advanced training course can substitute for refresher training during a given year.*
    b. *Refresher Training is not required for potential prescribed burn fire-fighters taking the Core Training courses for the 1st time. Refresher Training will be required for following years.*

Burn Day Training/Briefing

Required for all prescribed burn fire-fighters that will be participating in that particular day's burn. This training will temporarily substitute for core and refresher training until the training program is finalized. Fire-fighters who miss the burn day training will not burn on that day. Burn Day training will be provided by the burn boss or burn boss identified support personnel.

Certificates of completion and contact information for each individual should be forwarded to the Installation Natural Resources Program Manager and the Assistant Fire Chief in Charge of Training. Copies will be stored in the prescribed burning training documentation files.

APPENDIX H

Name	I-100	S-110	S-190	S-130	VDOF Cert	Annual Refresher	Comments

APPENDIX I
FUTURE PLANS FOR PRESCRIBED BURNING PROGRAM:

1. Establish Cooperative Agreements with state, city, and federal agencies as appropriate to provide services to support prescribed burning activities. The need to set up cooperative agreements is warranted because the NAVY does not have a dedicated large pool of prescribed-burn/wildland fire fighters available to carry out base specific burning requirements. In southeastern Hampton Roads, VA the days available to burn are limited due to weather restrictions, smoke management restrictions (Urban Area influences), species/habitat restrictions, etc. The various restrictions coupled with a small pool of people to conduct burns results in many burn objectives not being met for all bases in Hampton Roads, VA.

2. Conduct habitat and fire management assessments for NASO, NASO DNA, and NALFF with State and Federal Wildlife agencies, as appropriate. Many burn areas have not been burned as originally scheduled as such these areas have become overgrow or have accumulated heavy fire fuels. Given this knowledge these areas will require additional work to get them under control for safe burning conditions and into intended habitat structure.

3. Develop and implement a mandatory training program for people assisting with prescribed burning activities on Navy Property in Hampton Roads, VA. (Appendix G)

4. Research programs which may have funding available in support of prescribed burning initiatives (i.e. Forestry Program, Base Operations, etc.).

IV. Screening for Smoke Sensitive Targets

Use double 30 degree template. Attach map.

A. None within 20 miles: Proceed with burn, follow recommendations to reduce smoke impact for all forestry burns. (located in VA Smoke Management Guide)

B. Target(s) within 10 to 20 miles: The following minimum conditions must be met, and the above mentioned recommendations should also be followed.

Mixing Height: 500 meters (1,640 ft.)

Ventilation Factor of 2,000
[Mixing Height (meters) X Transport Wind Speed (meters/sec)]

C. Target(s) within 10 miles:

SPECIAL CAUTION IS NECESSARY

All of the conditions in A and B above must be met and the following should be considered. The distance to the target, nature of the target, size of the burn, amount and nature of the fuel, fuel moisture, topography, and presence of organic soil. These factors along with the meteorological conditions all combine to determine the quantity and duration of the smoke produced.

An alternative to burning may need to be prescribed unless conditions change allowing the potential target(s) to not be impacted by the smoke from your burn.

V. Other Considerations

A. Department of Forestry Regional office notified, as well as county fire department dispatcher.

B. Home owners within 1,000 feet. (Permission required through the Emission Standards for Open Burning according to the State Air Pollution Control Board.)

C. Local Ordinances and the Forest Fire Laws of Virginia.

D. Keep fires out of large piles of debris and sawdust piles which may produce smoke for extended periods of time. It is DOF policy not to burn bulldozed piled debris as a site preparation method.

E. If smoke does cross a road you need to place a flag person at both ends with radio communications.

F. Burn to be completed 1 hour prior to sunset.

G. What are the fuel conditions and characteristics? _____

NWCG PRESCRIBED FIRE GO/NO-GO CHECKLIST

Yes	No	Questions
		Are ALL fire prescription elements met?
		Are ALL smoke management specifications met?
		Has ALL required current and projected fire weather forecast been obtained and are they it favorable?
		Are ALL planned operations personnel and equipment on-site, available, and operational?
		Has the availability of ALL contingency resources been checked, and are they available?
		Have ALL personnel been briefed on the project objectives, their assignment, safety hazards, escape routes, and safety zones?
		Have all the pre-burn considerations identified in the prescribed fire plan been completed or addressed?
		Have ALL the required notifications been made?
		Are ALL permits and clearances obtained?
		In your opinion, can the burn be carried out according to the prescribed fire plan and will it meet the planned objective?

If all the questions were answered "YES" proceed with a test fire. Document the current conditions, location, and results

NWCG AGENCY ADMINISTRATOR GO/NO-GO PRE-IGNITION APPROVAL

Prescribed Fire Name: _____ Date: _____

Instructions: The Agency Administrator's Go/No-Go Pre-Ignition Approval is the intermediate planning review process (i.e., between the Prescribed Fire Complexity Rating System Guide and Go/No-Go Checklist) that should be completed before a prescribed fire can be implemented. The Agency Administrator's Go/No-Go Pre-Ignition Approval evaluates whether compliance requirements, prescribed fire plan elements, and internal and external notifications have been completed and expresses the Agency Administrator's intent to implement the prescribed fire plan. If ignition of the prescribed fire is not initiated prior to expiration date determined by the Agency Administrator, a new approval will be required.

Yes	No	Key Element Questions
		Is the prescribed fire plan up to date? *Hints: changes, amendments, seasonality.*
		Have all compliance requirements been completed? *Hints: cultural, threatened and endangered species, smoke management, NEPA.*
		Is risk management in place and the residual risk acceptable? *Hints: Prescribed Fire Complexity Rating Guide completed with rational and mitigation measures identified and documented.*
		Will all elements of the prescribed fire plan be met? *Hints: Preparation work, mitigation, weather, organization, prescription, contingency resources.*
		Have all internal and external notifications and media releases been completed?
		Are key agency staff fully briefed and understand prescribed fire implementation?
		Other: _____

Recommended by: _____ Date: _____
FMO/Prescribed Fire Burn Boss

Approved by: _____ Date: _____
Agency Administrator

Approval expires (date): _____

(16) Dove Hunting on NAS Oceana, NALF Fentress, and NAVSUPPACT Norfolk, Northwest Annex
(17) Trapping at NAS Oceana, NALF Fentress, Dam Neck Annex, and NAVSUPPACT Norfolk, Northwest Annex

1. Purpose. To regulate hunting and trapping on board Naval Weapons Station (WPNSTA), Yorktown, including Cheatham Annex; Naval Air Station (NAS), Oceana, including Dam Neck Annex and Naval Auxiliary Landing Field (NALF), Fentress; and Naval Support Activity (NAVSUPPACT), Norfolk, Northwest Annex.

2. Cancellation. NSGANWINST 11015.2D; COMNAVREGMIDLANTINST 11015.2.

3. Policy

a. Reference (a) requires sustainable, multi-purpose use of natural resources on naval installations, consistent with combat readiness. These uses can include hunting and trapping and must conform to safety and security requirements and provide for public access.

b. Reference (b) requires compliance with Federal and State hunting laws, prescribes that State hunting licenses must be obtained if State law authorizes licenses for non-resident active duty personnel on the same terms as residents, and grants access to Naval installations by State wildlife management officials.

c. Reference (c) implements reference (a), providing, among other things, for public access to naval installations, unless a specific determination is made that safety or security reasons prohibit, or carrying capacity of wildlife resources precludes such access. Reference (c) also provides that hunting and trapping fees collected pursuant to reference (a) shall be used only to defray the costs of wildlife management programs at the installation collecting the fees. Collection, handling, and disbursement of funds shall comply with requirements prescribed by Commander, Naval Facilities Engineering Command (COMNAVFACENGCOM) and the Regional Comptroller Office.

d. Hunting and trapping on board WPNSTA Yorktown and Cheatham Annex; NAS Oceana, Dam Neck Annex, and NALF Fentress; and NAVSUPPACT Norfolk, Northwest Annex shall comply with references (d) or (e), Virginia and/or North Carolina hunting and trapping laws and regulations per reference (f). The U.S. Fish and Wildlife Service regulations pertain to endangered and threatened species and migratory birds per reference (g), the Navy's Natural Resources Program instruction. Reference (h) places special limits on hunting and trapping in the vicinity of explosives handling and storage areas.

e. Hunting and trapping safety, to include the security of personnel, operations, and facilities, are matters within the authority and responsibility of Installation Commanders (ICs). Suspected violations of Federal and State statutes and regulations shall be reported to the cognizant Natural Resources Manager or to Naval law enforcement personnel. These violations will be investigated with a view to referral to the United States Attorney or, depending on the nature of the suspected violation, to Virginia civil authorities. Other suspected violations of this Instruction, not amounting to a violation of Federal or State law, shall be investigated and forwarded to the cognizant IC for disposition. As required by reference (c), investigation and enforcement may be conducted only by properly trained Federal

and State personnel under the direction of, or in coordination with, Natural Resources Managers. Enclosure (1) pertains.

f. Hunting and trapping related incidents involving personal injury or property damage, especially those with potential to result in claims for or against the Government, shall be investigated and adjudicated as per reference (i). ALL HANDS ARE REMINDED TO REPORT SUCH INCIDENTS PROMPTLY. Initial reports of the occurrence of personal injury or property damage may be made by the most expeditious means available to Natural Resources Managers, Hunt Captains, security, medical emergency, or law enforcement personnel, Command Duty Officers (CDOs), and others in the IC chain of command.

g. Acceptance of a permit to hunt or trap on board any Commander, Navy Region, Mid-Atlantic (COMNAVREG MIDLANT) installation constitutes consent to inspection at any time by Navy, Federal, and State authorized personnel for purposes of safety, security, and/or compliance with the statutes and regulations referenced in this instruction. Enclosure (2) will so specify.

4. Responsibilities

a. Regional Engineer (PWC Norfolk)

(1) Natural Resources Manager. The Natural Resources Managers are responsible for managing fish and wildlife resources to include control of game harvesting and the designation of hunting/trapping areas. The Natural Resources Managers and Conservation Officers resolve disputes involving ownership of harvested game and enforce all Federal, State, and local game laws and regulations.

Subject to 10 U.S. Code § 1588, Natural Resources Managers are authorized to accept voluntary services in support of hunting and trapping-related natural resources programs, functions, and activities. This includes, without limitation, Hunt Captains at WPNSTA Yorktown, operating and maintaining the archery range at NAS Oceana (Building 78), conducting hunter qualification programs, and investigating alleged violations of hunting and trapping laws and regulations.

(2) Designated Conservation Officers. Conservation Officers are trained personnel assigned to the Regional Engineer's storefront compliance departments who, acting under the Natural Resources Managers, are responsible for enforcing Federal, State, and local wildlife laws and regulations. Conservation Officers are authorized to conduct game and hunter

inspections to determine compliance with all applicable laws, regulations, and policies.

b. Regional Public Safety Program Manager. Security Officers at NAS Oceana; NAVSUPPACT Norfolk, Northwest Annex; and WPNSTA Yorktown will provide hunter check-in and check-out assistance and support Natural Resources Managers and Conservation Officers with law enforcement issues upon request.

c. Hunters and Trappers. Acceptance of a permit to hunt or trap on board a COMNAVREG MIDLANT installation constitutes consent to abide by Federal and State statutes and regulations incorporated herein by reference, and directives of Natural Resources Managers, Hunt Captains, and Conservation Officers. Enclosure (2) will so specify.

5. General

a. Authorized Personnel. For reasons of safety, security, and resource carrying capacity, only the following persons are authorized to hunt and trap on WPNSTA Yorktown, Cheatham Annex; NAS Oceana, NALF Fentress, and Dam Neck Annex; and NAVSUPPACT Norfolk, Northwest Annex:

(1) Active duty military personnel and their dependents.

(2) Retired military personnel and their dependents.

(3) Federal civilian employees at COMNAVREG MIDLANT installations and their dependents.

(4) Reservists and their dependents.

(5) Retired Federal civilian employees at the installation from which they retired.

(6) The above-listed authorized personnel may sponsor one guest while hunting white-tailed deer or turkey, or two guests while hunting small game. Additional security measures may be required for guests to hunt. Contact appropriate Natural Resources staff for details: WPNSTA Yorktown (757) 887-7605, NAS Oceana/NALF Fentress/Dam Neck Annex (757) 433-2151, and NAVSUPPACT Norfolk, Northwest Annex (757) 421-8043.

(7) In instances where demand for a hunting activity exceeds availability, active duty personnel will be assigned to available slots prior to other applicants.

b. Hunting Equipment

(1) General. Shotguns, bows and arrows may be brought onto a station only by those given permission to hunt and then only the day of an authorized hunt. At WPNSTA Yorktown and Cheatham Annex, off-station residents must have permission in advance from the Security Officer to bring weapons on board for practicing, qualifying, etc. on days other than hunting days. Off-station residents will remove weapons from the station immediately upon securing from hunting or checking out from the Hunt Station.

(2) Firearms

(a) The use of centerfire and rimfire rifles or handguns for hunting is prohibited on all installations covered under this instruction.

(b) Shotguns may be used for deer hunting at designated areas on WPNSTA Yorktown; Cheatham Annex; NALF Fentress; Dam Neck Annex; and NAVSUPPACT Norfolk, Northwest Annex and for small game hunting at all installations covered under this instruction. With the exception of waterfowl, there is no small game hunting on Dam Neck Annex. There is no squirrel hunting on NAVSUPPACT Norfolk, Northwest Annex.

(c) Shotguns must be 10-gauge or less, the magazines of which have been cut off or plugged so the gun will hold no more than three shells - chamber and magazine combined. A minimum 20-gauge is required for deer hunting.

(d) Muzzleload firemarms for the special NAS Oceana, NALF Fentress and Dam Neck Annex, and NAVSUPPACT Norfolk, Northwest Annex hunts shall comply with current Virginia or North Carolina regulations.

(e) It is prohibited to transport a loaded firearm in a vehicle or to carry a loaded firearm on a hard surface road.

(3) Ammunition

(a) Shot size #7½ or less must be used for doves and upland birds. Waterfowl hunters must use steel or other federally-approved non-toxic alternatives to lead shot. Recommended shot size for waterfowl is BB through #6.

(b) Shot size #6 or less is authorized for rabbits, squirrels, and small game other than doves or upland birds.

(c) Buckshot (#1, 0, 00, and 000) is permitted for deer only on WPNSTA Yorktown, Cheatham Annex, NALF Fentress, and Dam Neck Annex. Shotgun slugs are permitted only on NAVSUPPACT Norfolk, Northwest Annex pending hunter qualification with this ammunition.

(d) Turkey hunters are restricted to shot size between #2 and #6.

(4) Archery. Equipment for deer hunting at all locations must be hand-held and hand-drawn (release aids are permitted). Archery equipment shall conform to all applicable regulations in references (d) or (e).

c. Safety/Security Requirements

(1) Hunter Safety

(a) All firearm hunters must have attended a hunter safety course approved by the Virginia Game Division. Proof of successful completion must be presented upon purchase of installation hunting permits.

(b) All bowhunters at NAS Oceana, NALF Fentress, and Dam Neck Annex must produce a certificate of completion from an International Bowhunter Education Program (IBEP) safety course at the time of station permit purchase or during proficiency qualifications. IBEP is strongly recommended for bowhunters at WPNSTA Yorktown and Cheatham Annex.

(2) Blaze Orange

(a) All deer hunters are required to wear blaze orange while walking to and from their stand and while pursuing wounded game. In addition, bowhunters and muzzleload hunters must adhere to all applicable blaze orange requirements specified in references (d) or (e) during the regular firearms season. Outside the regular firearms season, and while on stand, bowhunters and muzzleload hunters must display solid blaze orange material (at least 100 square inches) at shoulder level within arms reach and visible from 360 degrees.

(b) Small game hunters are required to wear applicable blaze orange in accordance with references (d) or (e). Blaze orange is not required while dove or waterfowl hunting, or during the spring turkey season.

(c) During deer and small game season, trappers are required to follow blaze orange requirements as specified above.

(3) Vehicles/Parking

(a) WPNSTA Yorktown and Cheatham Annex. During shotgun deer season at WPNSTA Yorktown, designated Hunt Captains will transport hunters to their hunting area. Each Hunt Captain is responsible for the conduct and safety of his or her group and shall make sure the members of the group follow Federal and State regulations and this instruction. During other seasons, two personal operating vehicles (POVs) will be allowed per hunting area. The Natural Resources staff will register the vehicles and provide a dashboard pass the morning of the hunt authorizing POV entry into the restricted area. During all hunting seasons at Cheatham Annex, designated vehicle parking areas will be described during the indoctrination brief, and vehicle parking passes will be distributed. Hunting while parked in other than designated areas, or failure to display a parking pass while hunting, is prohibited. All parking passes must be returned to Natural Resources when checking out at the conclusion of the hunt.

(b) NAS Oceana, NALF Fentress, Dam Neck Annex and NAVSUPPACT Norfolk, Northwest Annex. Designated vehicle parking areas will be described during the required indoctrination. Vehicle parking passes will be distributed at hunter check-in. Parking in other areas, or without a displayed parking pass, is prohibited.

(4) General

(a) Drive-hunting deer, using hunters as drivers, without permission is prohibited. The Natural Resources Manager may organize and execute man-drives in situations where he deems population management is necessary.

(b) It is prohibited to hunt, carry a loaded weapon, or discharge a weapon within 150 yards of an occupied structure or horse trail, or within 200 yards of exposed working personnel, recreation areas, buffer zones, or roads. Hunting over horse trails is authorized at WPNSTA Yorktown, as trail-riding is not permitted on hunt days.

(c) Hunting or trapping while in possession or under the influence of alcohol, as defined by State law, or of any substance prohibited by Federal or State law, is likewise prohibited. Appropriate action will be taken to address personal accountability for all instances of alcohol and substance abuse. Similarly, smoking is prohibited in all hunting areas and in all Government buildings.

d. Dog Use and Training

(1) Training. As noted in reference (d), the training of dogs-on-live-wild-animals is considered hunting and is unlawful during the closed season.

(2) NAS Oceana, NALF Fentress, Dam Neck Annex and NAVSUPPACT Norfolk, Northwest Annex. Dogs shall not be used to hunt white-tailed deer. Dogs are permitted for use by small game hunters on NAS Oceana, NALF Fentress and NAVSUPPACT Norfolk, Northwest Annex and must be in control of the handler at all times.

(3) WPNSTA Yorktown and Cheatham Annex. Dogs may be used to hunt deer and small game only if approved in advance by the Natural Resources Manager.

(4) Waterfowl. Use of retrieving dogs is permitted and encouraged for waterfowl hunters on Dam Neck Annex although they will not be allowed to roam freely outside hunting locations.

(5) Vaccinations/Ownership. All hunting dogs must have current vaccinations and owner identification on the animal's collar.

e. Tree-Stands. Permanent tree-stands, or those affixed to trees by screws or nails, may be provided at WPNSTA Yorktown, Cheatham Annex, or NAVSUPPACT Norfolk, Northwest Annex. In addition, disabled veterans may contact the Natural Resources Staff at WPNSTA Yorktown regarding the availability of a wheelchair accessible tree stand. Use of this stand is reserved for disabled veterans, but the application process is the same for hunting in general. Permanent stands are prohibited on other COMNAVREG MIDLANT installations. Pruning of small limbs (less than two inches in diameter) is permitted around temporary tree-stands for safe bow limb clearance. Removal of large limbs or trees for creation of shooting lanes is prohibited. All temporary tree-stands, which must be clearly marked with the owner's name and permit number, are to be removed no later than 30 days from the completion of the hunting season.

f. Protected Wildlife. Protected wildlife, as defined by reference (f), such as songbirds, hawks, owls, eagles, gulls, herons, egrets, and vultures shall not be hunted or trapped at any time. Killing, capturing, or harassing other non-game species is prohibited. There shall be no open season on any wildlife except as specified by references (d) or (e) and this instruction.

g. Wildlife Harassment. Unless specifically needed to maintain flightline safety, wildlife harassment is prohibited at all installations.

h. Spotlighting. It is unlawful for any person to cast the rays of an artificial light as a hunting or trapping aid on any station field or woodland area at any time except for routine census checks conducted by the Natural Resources Manager.

i. Injured Wildlife. Injured wildlife shall be immediately reported to the Natural Resources Manager for determination of disposition. Hunters are required to make every possible effort to retrieve wounded deer. On NAS Oceana and NAVSUPPACT Norfolk, Northwest Annex, if a wounded deer is lost, hunters shall notify security. The Natural Resources Manager, Conservation Officers, Hunt Captains, and hunting and trapping program volunteers may offer assistance in tracking, if required.

6. Procedures

a. Hunting Licenses. Each hunter must possess a valid Virginia or North Carolina hunting license as appropriate. A big game license is required for deer and turkey hunting, and a migratory bird stamp and a Virginia Harvest Information Program (HIP) number is required for hunting waterfowl and other migratory birds.

b. Station Permits. In addition to a valid hunting license, a current station hunting permit is required of all persons who hunt or trap on board installations covered under this instruction. Each station permit will cover all authorized small and big game hunting allowed on the installation during the current hunting season. Annual permits are valid concurrent with the hunting licenses from 1 July through 30 June. Additional information on permits and hunting dates is available on the Navy Public Works Center (PWC) Norfolk website, www.norfolk.navy.mil/pwc.

(1) WPNSTA Yorktown and Cheatham Annex. All hunters on WPNSTA Yorktown or Cheatham Annex must possess a WPNSTA Yorktown Hunting Permit. Permits may be obtained for $10 from WPNSTA Yorktown Morale, Welfare and Recreation (MWR), Building 705, and Cheatham Annex MWR, Building 130. This permit covers all small and big game hunting on either unit.

(2) NAS Oceana, NALF Fentress, Dam Neck Annex, and NAVSUPPACT Norfolk, Northwest Annex. All hunters on NAS Oceana, NALF Fentress, Dam Neck Annex, or NAVSUPPACT Norfolk, Northwest Annex must obtain a NAS Oceana Hunting Permit. Hunting and

trapping permits are obtainable only from the Regional Engineer, Oceana Compliance Department staff located at the Natural Resources Center (NRC), Building 78, or Building 404 at NAVSUPPACT Norfolk, Northwest Annex. Permits are available for sale at all scheduled proficiency qualifications and indoctrinations. The cost for a hunting, trapping, or range-only permit is $20 per season. Purchase of a season permit allows use of the Archery Range at the NRC and covers all small game, big game, and waterfowl hunting on these installations.

(3) Upon submitting an application to hunt, individuals shall be required to sign a general release statement that relieves the Federal Government of liability in case of accident or injury. Individuals are responsible for having read and understood all applicable Federal, State, local and installation hunting regulations.

(4) All guests must adhere to application procedures specified in enclosure (2), obtain a valid installation hunting permit, and comply with all applicable qualifications as outlined below. Guests are the responsibility of their sponsor while hunting.

(5) For individuals under 18 years of age, a parent or legal guardian must sign the hunting application. Minors are the responsibility of their adult sponsor who holds a valid hunting permit. Dependents under the age of 12 must be in the same stand or in direct contact with the parent or legal guardian at all times while hunting.

c. Qualifications. Persons wishing to hunt deer with archery equipment, or muzzleloading rifles, or use shotgun slugs at NAVSUPPACT Norfolk, Northwest Annex, must complete an annual proficiency qualification. There is no qualification required of shotgun hunters not utilizing slugs. Qualification dates and times will be announced during the first weeks of August and September in installation plans of the week (POW) and will also be posted at the NAS Oceana NRC, Building 78; WPNSTA Yorktown Hunt Station, Building 53; and Cheatham Annex MWR, Building 130. Standards are provided in enclosure (3).

d. Site-specific Hunting Procedures. Enclosures (4) through (17) detail specific procedures for hunting various types of game at COMNAVREG MIDLANT installations.

7. Enforcement. On bases covered herein, Navy regulations, and Federal, State, and local game laws are enforced by Natural Resources Management personnel acting as Station Conservation Officers by authority of the IC. They have the power to

apprehend and arrest all violators of Federal, State, and station game laws and regulations. In addition, they have the authority to dismiss any hunter in violation of this instruction or whomever they consider unsafe for any reason. All violations of this instruction or other applicable laws and regulations shall be reported to the Installation Natural Resources Manager or Security Officer.

8. Review Authority. The Regional Engineer's Natural Resources Program Manager is responsible for the reviewing and updating of this instruction.

G. E. EICHERT
Chief of Staff

Distribution: www.cnrma.navy.mil

STATION PERMIT SUSPENSION/REVOCATION

A-1 POLICY. The privilege of hunting on COMNAVREG MIDLANT installations is governed by the IC of the appropriate installation.

A-2 AUTHORITY. The Natural Resources Manager and Conservation Officer(s) shall enforce regulations and have the authority to suspend or revoke hunting privileges as appropriate.

A-3 VIOLATIONS. The following is a list of common violations and administrative actions that may be taken against personnel who violate applicable State and Federal hunting and trapping laws and regulations, and this instruction. Permit suspensions may be in addition to criminal prosecution and/or prosecution through the Uniform Code of Military Justice. Suspensions are measured in "hunting days from date of violation." Penalties for the second offense are indefinite revocation of hunting privileges. ICs have unlimited authority to control access to their installations and provide for the safety and security thereof. Penalties for the first offense are listed below:

VIOLATION	ACTION
Violation of parking requirements, or parking in an unauthorized area	10 Days
Guest not accompanied by sponsor	30 Days
Violation of blaze orange requirements	30 Days
Littering	30 Days
First violation of any station regulation, not a violation of State regulations	30 Days
Violation of station permit procedures	60 Days
Unauthorized stocking or release of domesticated or wild animals	60 Days
Violation of check-in or check-out procedures	TERMINATION FOR SEASON
Hunting on unauthorized days	TERMINATION FOR SEASON
Hunting in unauthorized areas or unauthorized movement into other hunting areas or stands	TERMINATION FOR SEASON
Second violation of any station regulation, not a violation of State regulations	1 Year
Violation of any State or Federal Wildlife Statute	PERMANENT HUNTING BAN
Use of unauthorized weapons or ammunition	PERMANENT HUNTING BAN

HUNTING APPLICATION INSTRUCTIONS

1. General. Print or type all required information except for signature. All information must be included. Applications must be mailed (or FAXED) and received at the following address by dates specified on the application. Late applications will not be considered unless available slots remain unfilled. **A photocopy of applicable military or Department of Defense (DOD) civilian identification, and hunter safety or IBEP card must be submitted with the application.**

For WPNSTA Yorktown or Cheatham Annex hunts:

Navy Public Works Center/Regional Engineer (Code 950)
9742 Maryland Avenue
Norfolk, VA 23511-3095

FAX: (757) 887-4478

2. Season. Check only one box per application. **If you wish to submit an application for more than one type of hunting, separate applications must be submitted.** Applications with more than one box checked in this section will be discarded.

3. Preferred Hunting Date. List preferred hunting dates. Available hunting dates may change for each calendar year based on State regulations and installation requirements. Go to **www.norfolk.navy.mil/pwc** for available dates or contact the Natural Resources Manager at WPNSTA Yorktown, (757) 887-7605.

4. Applicant Information. Print all information, including address and zip code. Ensure a block designating military or civilian is checked. List current station hunting permit number, if obtained.

5. Name of Guest. Eligible personnel may sponsor one guest while hunting deer or turkey. Guests must adhere to all application procedures, obtain an installation hunting permit and comply with all applicable qualifications. If an applicant is approved, the sponsored guest is also selected to hunt on that day. Include photocopy of guests hunter safety card.

6. Signature (Required). By signing page one of enclosure (2), applicants acknowledge they have read and understood this instruction and all applicable State and Federal hunting laws.

QUALIFICATION PROFICIENCY STANDARDS

1. BOWHUNTING

a. Archers shall be permitted up to three qualifying attempts per year. All attempts can be made on the same day if so desired.

b. Archers shall shoot two arrows each at three designated targets. Six arrows are required for any qualifying attempt. Qualification distances shall not exceed 25 yards.

c. On each target, one of two arrows must land inside a marked kill-zone. The shaft of an arrow breaking the line is a valid shot.

d. Arrows must be tipped with hunting broadheads, and equipment must be that to be used during the hunting season. All broadheads and shafts must match and be numbered with the last four digits of the archer's Social Security Number. Archers using mechanical broadheads can qualify with field points provided mechanical broadheads are presented at the qualification and used during the hunting season.

e. The bow hunting range shall be closed 30 minutes prior to all qualifications. No practice shots are allowed prior to the qualification period.

2. MUZZLELOADER/SHOTGUN SLUG

a. Participants shall be permitted one qualifying attempt per day. If more than one qualification shoot is scheduled for the year, shooters may attempt an additional qualification on the second day, within allotted range time, after all first time qualifiers have been given an initial attempt.

b. Participants may shoot up to three shots at the target from a bench rest distance of 50 yards. A 9" diameter target will have an internal 3½" diameter inner ring. Any shot inside the inner ring will be scored as 75 points and any in the outer ring will be scored as 50 points. Qualification consists of a minimum 125 point score. A shot breaking the edge of either ring is a valid shot.

c. Equipment used in qualifying shall be the same as that used for hunting.

d. No practice rounds permitted.

DEER HUNTING ON NAS OCEANA OR DAM NECK ANNEX

1. Season Dates/Hunting Hours. Unless specifically restricted by Natural Resources staff, seasons and hours will conform to those in reference (d). There shall be no hunting at NAS Oceana during, and two days prior to, the annual air show.

2. Area Closures. The Natural Resources Manager and/or the Security Officer may close specific areas at any time. Such announcements will be posted at NAS Oceana Security, Building 320 and at the Naval Resources Center (NRC), Building 78.

3. Indoctrination Brief. All persons wishing to hunt deer are required to attend an indoctrination brief given by the Natural Resources staff. This brief will help hunters familiarize themselves with hunting areas, base regulations, and all procedures not covered herein. These procedures are enforceable as indicated by enclosure (1). Dates for indoctrination will be posted at the NRC, Building 78, and in the NAS Oceana POW beginning in August.

4. Check-in Procedures

a. Each hunter shall sign-out at NAS Oceana Security, Building 320, for a specific area immediately before going into the field for hunting or scouting. Hunters may sign-out for an area as early as 1½ hours prior to sunrise. Hunters must report to the check station within 1½ hours after sunset of that hunting day or forfeit hunting privileges for the season. A hunter may not proceed to another hunting area without signing back-in and then back-out for the new area. Log forms must be completed at the end of each day's hunt. This includes information on hours hunted, game seen and harvested, and hunter identification.

b. Only one hunter shall be allowed in each hunting area for deer hunting unless a hunter is sponsoring a guest or hunters have prearranged with each other to hunt in the area. Hunters who plan to hunt in the same area must all be present at the time of check-in for an area.

c. Hunters shall be issued parking passes upon check-in for hunting areas. The parking pass must be displayed on the vehicle dashboard.

5. Permits/Application Process. No application other than purchase of the required State license and installation hunting permit is required.

6. Scouting

a. Scouting is permitted at any time during the year for individuals with a valid hunting permit. Scouting shall be

closed two weeks prior to the opening day of the regularly scheduled deer season, and may be closed at other times by the Natural Resources Manager or NAS Oceana Security Officer.

b. Individuals wishing to scout must report to NAS Oceana Security, Building 320, and check-out under the same procedures for hunting outlined above.

7. Handling of Harvested Game. Hunters may field-dress deer off station or in wooded areas where animals were harvested. No field-dressing is permitted within 200 yards of occupied buildings, roads, horse trails, agricultural areas, or within Airfield Clear Zone Boundaries.

8. Game Check-In. Per reference (d), a hunter harvesting a deer shall immediately attach the appropriate big game tag from their license or Deer Management Assistance Program (DMAP) tag to the animal before moving it from the place of kill. Successful hunters must contact the Natural Resource Manager (433-3461 or 433-2151 until 1600) to be issued a Virginia Department of Game and Inland Fisheries (VDGIF) Check Card and for collection of biological data from the animal. After 1600, the Natural Resources Manager may be contacted through NAS Oceana Security (433-3103). All check-in of deer will occur at the NAS Oceana NRC, Building 78.

DEER HUNTING ON NALF FENTRESS

1. Season Dates/Hunting Hours. Hunting at NALF Fentress is during the general Chesapeake firearms season unless otherwise designated by the Natural Resources Manager. Unless specifically restricted by Natural Resources staff, seasons and hours will conform to reference (d).

2. Area Closures. The Natural Resources Manager and/or Security Officer may close specific areas at any time. Such announcements will be posted at the Crash Captain's Watch Desk, Building 100, and the NAS Oceana NRC, Building 78.

3. Indoctrination Brief. All persons wishing to hunt deer are required to attend an indoctrination brief given by the Natural Resources staff. This brief will help hunters familiarize themselves with hunting areas, base regulations, and all procedures not covered herein. Dates for indoctrination will be posted at the NAS Oceana NRC, Building 78, NALF Fentress, Building 100, and in the NAS Oceana POW beginning in August.

4. Check-In Procedures. Hunters shall sign-out for a specific area as early as 1½ hours prior to sunrise at the Crash Captain's Watch Desk, NALF Fentress, Building 100, immediately before going into the field for hunting or scouting. Hunters must report to Building 100 within 1½ hours after sunset of that hunting day and complete a log form or forfeit hunting privileges for the season. A hunter may not proceed to another hunting area without signing back-in and then back-out for the new area.

5. Permits/Application Process. No application other than purchase of the required State license and installation hunting permit is required.

6. Scouting. Individuals wishing to scout must report to the Crash Captain, Building 100, and check-out for an area under the same procedures for hunting outlined above.

7. Handling of Harvested Game. Hunters may field-dress deer off station or in wooded areas where animals were harvested. No field-dressing is permitted within 200 yards of occupied buildings, roads, agricultural areas, or within Airfield Clear Zone Boundaries.

8. Game Check-In. Per reference (d), a hunter harvesting a deer shall immediately attach the appropriate big game tag from their license or DMAP tag to the animal before moving it from the place of kill. Successful hunter must contact the Natural Resource Manager (433-3461 or 433-2151 until 1600) to be issued a VDGIF Check Card and for collection of biological data from the animal. After 1600, the Natural Resources Manager may be contacted through NAS Oceana Security (433-3103). All check-in of deer will occur at the NAS Oceana NRC, Building 78.

DEER HUNTING ON WPNSTA YORKTOWN

1. Season Dates/Hunting Hours. Hunting is permitted only on Saturdays or specified Holidays that fall within the established Virginia hunting seasons, or on other dates within the established seasons as authorized by the Commanding Officer. The hunting day will be in accordance with reference (d), or as otherwise directed by the Natural Resources staff. A list of hunting days will be announced annually during the first week of August and September in the WPNSTA Yorktown POW and will also be posted at the WPNSTA Yorktown Hunt Station, Building 53, and Cheatham Annex MWR, Building 130.

2. Area Closures. The Natural Resources Manager and/or the Security Officer may close specific stands or areas at any time. Such announcements will be made during the Indoctrination Brief.

3. Indoctrination Brief. On the morning of the hunt, all hunters must first check-in by 0500 with the Natural Resources personnel at the WPNSTA Yorktown Hunt Station, Building 53, before proceeding to their assigned hunt area. Hunters will be given an indoctrination brief, assigned a marked stand, and taken to their assigned hunting stand by a designated Hunt Captain.

4. Check-In Procedures. Hunters shall remain within their assigned area. No hunter will be permitted to leave the stand unless the Hunt Captain is with them, except to return to the drop-off point, and/or collect and field-dress harvested game. No hunter shall solicit or accept a ride back to the Hunt Station by any individual other than their Hunt Captain. During the early archery season, all bowhunters will assemble at the WPNSTA Yorktown Hunt Station where they are scheduled to hunt at a time directed by the Natural Resources staff.

5. Permits/Application Process. In addition to the State license and installation permit, anyone wishing to hunt at WPNSTA Yorktown shall fill-out enclosure (2) and submit by stated application deadlines and according to directions. A drawing to select participants for each hunt will be held and successful applicants notified. In the event that all hunting spaces are not filled, the Natural Resources Manager may accept late applications.

6. Scouting. There is no scouting permitted on WPNSTA Yorktown.

7. Handling of Harvested Game. Hunters may retrieve and field-dress any deer taken within direct line-of-sight of their assigned stand. If a wounded animal leaves direct line-of-sight, the hunter should wait for arrival of a designated Hunt Captain before pursuing.

8. Game Check-In. Upon return from the hunting area, all hunters shall check-in at the Hunt Station, Building 53. Successful hunters will then report kills and exchange their license tab for an official VDGIF Check Card.

DEER HUNTING ON CHEATHAM ANNEX

1. Season Dates/Hunting Hours. Hunting is permitted on Wednesday beginning at 1200 and on Saturdays, or specified Holidays that fall within the established Virginia hunting seasons, or on other dates within the established seasons as authorized by Commanding Officer, WPNSTA Yorktown. The hunting hours will be in accordance with reference (d), or as otherwise directed by the Natural Resources staff. A list of hunting days will be announced annually during the first week of August and September in the WPNSTA Yorktown POW and will also be posted at the WPNSTA Yorktown Hunt Station, Building 53, and Cheatham Annex MWR, Building 130.

2. Area Closures. The Natural Resources Manager and/or the Security Officer may close specific stands or areas at any time. Adjustments to hunting days/hours may be made by the Natural Resources Manager as required. Such announcements will be made during the indoctrination brief.

3. Indoctrination Brief. Selected hunters shall assemble at a location specified by the Natural Resources Staff by 1130 Wednesdays or by 0430 on Saturdays on their scheduled hunt day. Hunters will be given an indoctrination brief, and be assigned a hunting area. Hunters will be issued a parking pass and map of their assigned hunt area showing the boundaries and the designated parking area, and at that point, may proceed to the field.

4. Check-In Procedures

a. Hunters shall remain within their assigned area. Hunters must check out in person at the conclusion of their hunt, no later than 1½ hours after sunset of that hunting day or as otherwise directed by the Natural Resources staff, or forfeit hunting privileges for the season. A hunter may not proceed to another hunting area without clearance from the Natural Resources staff. Temporary tree stands shall be removed from the woods at the conclusion of each hunt day.

b. Only one hunter will be allowed in each hunting area, except that individuals under 16 years of age may occupy the same area as their sponsor, but only one bow or gun will be allowed in each area.

5. Permits/Application Process. In addition to the State license and installation permit, anyone wishing to hunt at Cheatham Annex shall fill out enclosure (2) and submit by deadline dates, according to directions. A drawing to select participants for each hunt will be held and successful applicants notified. In the event not all hunting spaces are filled, the Natural Resources Manager may accept late applications.

6. Scouting. Scouting will be permitted in advance of the early archery season by contacting the WPNSTA Yorktown, Security Officer.

7. Handling of Harvested Game. All deer shall be field-dressed in the wooded area where the animal was harvested. Hunters may not pursue wounded animals beyond the boundaries of their assigned hunt area without permission from the Natural Resources staff.

8. Game Check-In. Per reference (d), a hunter harvesting a deer shall immediately attach the appropriate big game tag from his or her license or DMAP tag to the animal before moving it from the place of kill. All deer harvested must be checked in, at which time hunters will exchange their license tab for an official VDGIF Check Card.

DEER HUNTING ON NAVSUPPACT NORFOLK, NORTHWEST ANNEX

1. Season Dates/Hunting Hours. Hunting at NAVSUPPACT Norfolk, Northwest Annex is on Tuesdays, Thursdays, and Saturdays during the general Chesapeake or Currituck County firearms season unless otherwise designated by the Natural Resources Manager. Unless specifically restricted by Natural Resources staff, seasons and hours will conform to those listed in references (d) and (e).

2. Area Closures. The Natural Resources Manager and/or the Security Officer may close specific stands or areas at any time. Such announcements will be made during the indoctrination brief. MWR is responsible for notifying Natural Resources personnel and the Security Officer one week prior to scheduling use of campground areas.

3. Indoctrination Brief. All persons wishing to hunt deer are required to attend an indoctrination brief given by the Natural Resources staff. This brief will help hunters familiarize themselves with hunting areas, base regulations, and all procedures not covered in this instruction. Dates for indoctrination will be posted at the NAS Oceana NRC, Building 78, Northwest Annex, Building 404, and in the Northwest Annex POW beginning in August.

4. Check-In Procedures. Hunters shall sign-out for a specific area as early as 1½ hours prior to sunrise at Building 145, Northwest Annex, Security immediately before going into the field for hunting or scouting. Hunters must report to Building 145 within 1½ hours after sunset of that hunting day and complete a log form, or forfeit hunting privileges for the season. A hunter may not proceed to another hunting area without signing back-in and then back-out for the new area.

5. Permits/Application Process. No application other than purchase of the required State license and installation hunting permit is required.

6. Scouting. Individuals wishing to scout must report to Building 145, Security Office, and check-out for an area under the same procedures for hunting outlined above.

7. Handling of Harvested Game. Hunters may field-dress deer off station or in wooded areas where animals were harvested.

8. Game Check-In. Per references (d) and (e), a hunter harvesting a deer shall immediately attach the appropriate big game tag from their license or DMAP tag to the animal before moving it from the place of kill. Successful hunters must contact the Natural Resource Manager (421-8043 until 1600) to be issued a VDGIF Check Card and for collection of biological data from the animal. After 1600, the Natural Resources Manager may be contacted through Northwest Annex, Security (421-8000). All check-in of deer will occur at the game check station, Building 295.

WATERFOWL HUNTING ON DAM NECK ANNEX

1. Season Dates/Hunting Hours. Waterfowl seasons will be in accordance with all State and/or Federal seasons. All Federal bag limits and other migratory waterfowl regulations apply.

2. Blinds/Area Closures. Waterfowl hunters will be allowed to hunt only from duck blind locations maintained by the Natural Resources Manager. Blind locations will be posted at NAS Oceana, Security, Building 320, and the NRC, Building 78. Hunters may not hunt from shore, boats, or any area other than authorized blind locations. The Natural Resources Manager and/or the Security Officer may close specific blinds at any time. Such announcements will be posted at the Security Office, Building 320.

3. Check-in Procedures. Blinds will be drawn on a first-come basis on the opening day of each split season and the following Wednesdays and Saturdays during the season. Blind reservations shall not be accepted. Waterfowl hunters must check-out blinds at NAS Oceana, Security, Building 320, on the day they are hunting no earlier than 1½ hours before sunrise. Hunters must check-in with Security no later than one hour after sunset.

4. Permits/Application Process. All waterfowl hunters must have a Federal migratory duck stamp and Harvest Information Program (HIP) number in addition to their State hunting license and station permit.

5. Game Check-In. Upon return from the hunting area, all hunters shall check-in at the Security Office to turn in parking passes and report harvest information.

6. Restrictions. Boats used for waterfowling may be propelled by gasoline engines in Redwing Lake only; however, "no wake" limitations will be strictly enforced. Boats are not permitted on Lake Tecumseh unless written permission is obtained from the private landowner. For boating and personal safety, no more than four hunters are permitted to hunt from a duck blind.

SPRING TURKEY (GOBBLER) SEASON ON WPNSTA YORKTOWN

1. Season Dates/Hunting hours. Hunting is permitted on WPNSTA Yorktown on Saturdays during the established Virginia Spring Hunting Season for bearded birds only. All Virginia bag limits and regulations apply. The hunting day will be from 30 minutes before sunrise until 1200.

2. Indoctrination Brief. Selected hunters are to assemble at the Hunt Station, Building 53, on their scheduled hunt day at a time directed by the Natural Resources Manager. Hunters will be briefed and assigned a hunting area prior to going into the field.

3. Permits/Application Process. Due to security concerns, turkey hunting at WPNSTA Yorktown is restricted to Yorktown personnel only. There are a limited number of spaces available on each hunting day. Yorktown personnel wishing to hunt turkey at WPNSTA Yorktown shall fill-out enclosure (2) and submit according to directions. A drawing to select participants for each hunt will be held and successful applicants notified. A State license and installation permit is also required.

4. Game Check-In. Upon return from the hunting area, all hunters shall check-in at the Hunt Station, Building 53. Successful hunters will then report kills and exchange their license tab for an official VDGIF Check Card.

5. Restrictions. Electric callers are prohibited, as are dogs and organized drives.

SPRING TURKEY (GOBBLER) SEASON ON CHEATHAM ANNEX

1. Season Dates/Hunting hours. Hunting is permitted on Cheatham Annex on Wednesdays and Saturdays during the established Virginia Spring Hunting Season for bearded birds only. All Virginia bag limits and regulations apply. The hunting day will be from 30 minutes before sunrise until 1200.

2. Indoctrination Brief. Selected hunters shall assemble at the WPNSTA Yorktown Hunt Station, Building 53, on their scheduled hunt day at a time directed by the Natural Resources staff. Hunters will be given an indoctrination brief, and be assigned a hunt area. Hunters will be issued a parking pass and map of their assigned hunt area showing the boundaries, and at that point, may proceed to Cheatham Annex.

3. Permits/Application Process. There are a limited number of spaces available on each hunting day. Anyone wishing to hunt turkey at Cheatham Annex shall fill out and submit enclosure (2). Drawings to select participants for each hunt will be held and successful applicants notified. A State license and installation permit is also required.

4. Game Check-In. Hunters must remain within their assigned area. Hunters must check-out in person at the conclusion of their hunt, no later than 1230 or as directed by the Natural Resources staff, or forfeit hunting privileges for the season. A hunter may not proceed to another hunting area without clearance from the Natural Resources staff.

5. Restrictions. Electric callers are prohibited, as are dogs and organized drives.

6. Scouting. Scouting will be permitted in advance of the spring gobbler season by contacting the Cheatham Annex, Security Department.

SMALL GAME HUNTING ON NAS OCEANA

1. Season Dates/Hunting Hours. The small game season includes squirrel, rabbit, quail, dove, woodcock, and other species as authorized by Virginia game regulations. Virginia regulations regarding bag limits, seasons, and hours will be followed.

2. Area Closures. Except for dove hunting, small game areas will be open on Saturdays only during the regular small game season. While open to small game hunting, all deer hunting areas within the small game area will be closed. Open small game hunting areas will be posted at NAS Oceana, Security, Building 320, and the NRC, Building 78. The Natural Resources Manager and/or Security Officer may close specific areas at any time. Such announcements will be posted at NAS Oceana, Security, Building 320, and outside the NRC, Building 78.

3. Indoctrination Brief. Although an indoctrination brief is not required for small game hunters, all hunters should be familiar with hunting area boundaries and parking areas prior to hunting.

4. Check-In Procedures. Each hunter shall sign-out at Security, Building 320, for a specific area immediately before going into the field for hunting. Hunters may sign-out for an area as early as sunrise. Only one hunting party, consisting of up to four hunters, shall be allowed in a small game hunting area at any one time. To reduce pressure on game species, only two hunting parties shall be allowed in any small game area per day. Reservation of hunting areas shall not be accepted. Hunters shall be issued parking maps and parking passes upon check-in for hunting areas. The parking pass must be displayed on the vehicle dashboard. Upon return from the hunting area, all hunters shall check-in at the Security Office by sunset of that hunting day, complete the log form, and turn in parking passes.

5. Permits/Application Process. No application other than purchase of the required State license and installation hunting permit.

SMALL GAME HUNTING ON NALF FENTRESS

1. Season Dates/Hunting Hours. The small game season includes squirrel, rabbit, quail, dove, woodcock, and other species as authorized by Virginia game regulations. Virginia regulations regarding bag limits and seasons will be followed.

2. Area Closures. Small game areas will be open only after the general Chesapeake firearm season for deer is over. Except for dove hunting, hunting is permitted on Saturdays only during the regular small game season. The Natural Resources Manager and/or Security Officer may close specific areas at any time. Such announcements will be posted at the Crash Captain's Watch Desk, Building 320. These announcements will also be posted outside the NRC, Building 78.

3. Indoctrination Brief. An indoctrination brief is not required for small game hunters although all hunters should be familiar with hunting area boundaries and parking areas.

4. Check-In Procedures. Each hunter shall sign-out at the Crash Captain's Watch Desk, Building 100, for a specific area immediately before going into the field for hunting. Hunters may sign-out for an area as early as sunrise. To reduce pressure on game species, only one hunting party, consisting of up to four hunters, shall be allowed in a small game hunting area per day. Reservation of hunting areas shall not be accepted. Hunters shall be issued parking maps and parking passes upon check-out of a hunting area. The parking pass must be displayed on the vehicle dashboard. Hunters may only hunt in the area in which they have signed-out. Prior to hunting in another area, hunters are required to report back to the Crash Captain, Building 100, and turn-in hunting and parking passes. Hunters must report to Building 100 by sunset of that hunting day or forfeit hunting privileges for the season. Log forms must be completed at the end of each day's hunt. This includes information on hours hunted, game seen and harvested, and hunter identification.

5. Application Process. No application other than purchase of the required State license and installation hunting permit.

SMALL GAME HUNTING ON NAVSUPPACT NORFOLK, NORTHWEST ANNEX

1. Season Dates/Hunting Hours. The small game season includes rabbit, quail, dove, woodcock, and other species as authorized by Virginia or North Carolina game regulations. Virginia and/or North Carolina regulations regarding bag limits and seasons will be followed.

2. Area Closures. Small game areas will be open only on Saturdays after the general Chesapeake and Currituck firearm seasons for deer are over. Except for dove hunting, hunting is permitted on Saturdays only during the regular small game season. The Natural Resources Manager and/or Security Officer may close specific areas at any time. Such announcements will be posted at Building 145, Security, and outside the NAVSUPPACT Norfolk, Northwest Annex, Environmental Office, Building 404.

3. Indoctrination Brief. An indoctrination brief is not required for small game hunters although all hunters should be familiar with hunting area boundaries and parking areas.

4. Check-In Procedures. Each hunter shall sign-out at Building 145, Security, for a specific area immediately before going into the field for hunting. Hunters may sign-out for an area as early as sunrise. To reduce pressure on game species, only one hunting party, consisting of up to four hunters, shall be allowed in a small game hunting area per day. Reservation of hunting areas shall not be accepted. Hunters shall be issued parking maps and parking passes upon check-out of a hunting area. The parking pass must be displayed on the vehicle dashboard. Hunters may only hunt in the area in which they have signed-out. Prior to hunting in another area, hunters are required to report back to Building 145, Security, and turn in hunting and parking passes. Hunters must report to Building 145 by sunset of that hunting day or forfeit hunting privileges for the season. Log forms must be completed at the end of each day's hunt. This includes information on hours hunted, game seen and harvested, and hunter identification.

5. Application Process. No application other than purchase of the required State license and installation hunting permit.

SMALL GAME HUNTING ON WPNSTA YORKTOWN

1. Season Dates/Hunting Hours. Hunting is permitted only on Saturdays or specified Holidays prior to and immediately after the general firearms season for deer, which fall within the established Virginia hunting seasons, or on other dates within the established seasons as authorized by the Commanding Officer.

The hunting day will be in accordance with reference (d), or as otherwise directed by the Natural Resources staff. The small game season includes squirrel, rabbit, quail, dove, woodcock, and other species as authorized by Virginia game regulations. Virginia regulations regarding bag limits and seasons will be followed. While dove hunting is permitted on scheduled small game hunt days on WPNSTA Yorktown during the regular dove season, organized hunts are not planned.

2. Area Closures. The Natural Resources Manager will determine open areas.

3. Indoctrination Brief. Small game hunters are to assemble at the Hunt Station, Building 53, of the WPNSTA Yorktown unit on scheduled hunting days at a time directed by the Natural Resources Manager. Hunters will be briefed and assigned a hunting area prior to going into the field.

4. Check-in Procedures. Hunters are to assemble at the Hunt Station at the WPNSTA Yorktown unit where they will be briefed and assigned an area in which to hunt.

5. Application Process. No application, other than purchase of the required State license and installation hunting permit, is required. All hunters planning to hunt doves or woodcock must have a HIP number in addition to their State hunting license and station permit.

6. Game Check-In. All hunters will check back in at the Hunt Station before leaving for the day.

DOVE HUNTING ON NAS OCEANA, NALF FENTRESS, AND NAVSUPPACT NORFOLK, NORTHWEST ANNEX

1. Season Dates/Hunting Hours. Dove may be hunted on NAS Oceana, NALF Fentress, and NAVSUPPACT Norfolk, Northwest Annex on Tuesdays, Thursdays, Saturdays, and designated Holidays during the open seasons. Bag limits, seasons, and times are subject to annual change.

2. Area Closures. Availability of open fields is dependent on various factors including weather, crop type, and maturity. The Natural Resources Manager will be responsible for determining field availability and rotation schedule. Dove field locations change from year to year. For NAS Oceana, locations shall be posted at Security, Building 320, and the NRC, Building 78. For NALF Fentress, locations shall be posted at the Crash Captain's Watch Desk, Building 100. For NAVSUPPACT Norfolk, Northwest Annex, locations will be posted at Buildings 145 and 404. Hunter quotas may be assigned to each area for dove hunting. These quotas shall be posted, if applicable, at the Hunter Check Station.

3. Indoctrination Brief. An indoctrination brief is not required for small game hunters although all hunters should be familiar with hunting area boundaries and parking areas.

4. Check-in Procedures. Due to high response for opening day of the season, all NAS Oceana check-in for that day will be conducted at the NRC, Building 78. Hunter quotas and areas will be assigned at this time. Hunting check-in after that day will be at Building 320. NALF Fentress hunters will check-in at Building 100, and NAVSUPPACT Norfolk, Northwest Annex hunters will check-in at Building 145. Upon return from the hunting area, all hunters shall check-in at the Security Office or the Crash Captain's Watch Desk, NALF Fentress to turn in parking passes and report harvest.

5. Permit/Application Process. All dove hunters must have a HIP number in addition to their State hunting license and station permit.

TRAPPING AT NAS OCEANA, NALF FENTRESS, DAM NECK, OR NAVSUPPACT NORFOLK, NORTHWEST ANNEX

1. Season Dates/Hunting Hours. Trappers must abide by State laws, this instruction, and any other special regulation announced by the Natural Resources Manager.

2. Area Closures. The Natural Resources Manager will designate trapping areas and, in coordination with the Security Officer, may restrict access to these areas.

3. Check-In Procedures. Prior to checking traps, trappers must check-in at the Security Watch Desk, Building 320, NAS Oceana, Building 551, Dam Neck Annex, or Crash Captain's Watch Desk, Building 100, NALF Fentress.

4. Permit/Application Process. Any person wishing to trap furbearers must register and submit a request for area assignment with the NAS Oceana Natural Resources Manager. Trappers may request trapping areas on or after 1 October of each year. Drawings for trapping areas shall be held when it is anticipated that the demand for areas exceeds quotas.

5. Restrictions

a. A nonferrous metal tag bearing the trapper's name and address must be attached to each trap. Traps not marked risk confiscation by the Conservation Officer or Natural Resources Manager.

b. Traps must be checked at least daily.

c. No steel trap or snare shall be set within 200 yards of a residence or within a designated Special Services area, such as the picnic area or Boy Scout camping area.

d. The use of body-gripping traps with a jawspread in excess of 7½" is prohibited except when such traps are completely covered by water.

e. It is prohibited to set above the ground any steel trap with teeth set upon the jaws or with a jaw spread exceeding 6½", or any body-gripping trap with a jaw spread in excess of 5", baited with any lure or scent likely to attract a dog.

f. No trap or snare may be set in hunting areas on days that rabbit, quail, or dove are hunted unless traps remain covered by at least 6" of water at all times.

g. Dens or houses of furbearers may not be disturbed.

h. Trappers must report weekly catch in writing during the season to the Natural Resources Manager. Trappers should provide information on sex, weight, and condition for each animal taken.

i. Animal carcasses shall be disposed of off station. Any trapper caught disposing of carcasses on station shall lose all trapping privileges.

NAS OCEANA/NASO DAM NECK ANNEX/NALF FENTRESS/NSAHR NORTHWEST ANNEX

DEER HUNTING RULES AND REGULATIONS

2015-2016 SEASON

SHOW SOMEONE THE JOY OF HUNTING THIS YEAR.
HAVE FUN, BE SAFE AND FOLLOW THE RULES!

TABLE OF CONTENTS

REMINDERs:

- *Private Firearms Registration REQUIRED for ALL Personal Weapons Brought on Installation including in association with Hunting, Trapping, Fishing and Archery Range Shooting.*
- *Hunters must follow all State and Base Hunting Regulations/Instructions. Base regulations cannot be more lenient than the State Regulations; however Base regulations can be and are stricter than State Regulations. Be sure to be in compliance with both sets of regulations.*
- *Dogs are not authorized for the use of hunting deer on base.*
- *Coyotes may be taken at NASO in accordance with State Laws.*
- *Sunday hunting has not been authorized for the 2015-2016 hunting seasons.*

CHANGES AND UPDATES:

- ***Private Firearms Registration REQUIRED for ALL Personal Firearms/Weapons Brought on Installation. See Section IV. of this document for details.***
- *Please be sure to obtain the most Current Version of the hunting area Maps, prior to commencing your hunt. Hunting areas/stands, parking locations and access roads are being updated.* ***Current Maps will be available at the Natural Resources Center on Oceana Blvd (Bldg 78) and will posted to the websites identified in section XVII. of this document as soon as possible.***
- ***NALFF Hunting areas 18, B-4, and B-5have been closed to hunting*** *until this area is no longer classified as an UXO area.*
- ***NASO DNA Hunting area 25 has been closed to hunting*** *until this area is no longer classified as an UXO area.*
- ***NALFF Hunting areas 10, 20, 21, and B-1 have been impacted due to Tree Removal Activities*** *and may no longer have trees available for establishing required safe tree stand heights and locations for elevated shooting requirements. Please scout these areas accordingly.*
- ***YOUTH Hunt, 26 Sept 2015. NSAHR NWA, Virginia Side ONLY****, will be participating in the VA Youth and Apprentice Deer Hunting Day. All State and Installation Regulations Apply.*

I. CHECK OUT AND CHECK IN OF A HUNTING AREA:

- NAS Oceana (NASO) and NASO Dam Neck Annex (DNA) hunters must check out a hunting area from NASO Security, Bldg 320.
- NALF Fentress (NALFF) hunters must check out a hunting area from NALFF Quarterdeck, Bldg 100.
- NSAHR Northwest Annex (NWA) hunters must check out a tree stand from NWA Quarterdeck, Bldg 145. Hunting is by tree stand number and not area at NWA.
- Checking out an area or tree stand is allowed 1 ½ hours before sunrise and you must be checked back in 1 ½ hours after sunset. Check posted sunrise/sunset times.
- You can only check out an area if you intend to hunt.
- Scouting is authorized during preseason scouting, during hunting season, and on Sundays during hunting season. Must check in/out areas as if hunting.
- Checking areas out in the morning before work and then keeping it checked out all day for an evening hunt is not authorized.
- Random checks will be conducted by the Conservation Law-enforcement Officer (a.k.a. Game Warden).
- Check out process:
    1. Give your base hunting pass to Security or the Quarterdeck watch and tell them what area or tree stand you would like to hunt.
    2. Provided the area or tree stand is not checked out, you will receive a laminated parking pass, a laminated hunting pass (to be kept on your person while in the field) and a key if gate entry is required. Parking for areas 1-13 at DNA requires access via a gate that has a combination lock on it. Ask for the combination if you are hunting one of those areas. All locks must be "piggy backed" so that base contract workers, Security, Fire, etc. have access through the gates as well as hunters. This involves linking locks together to the chain in a manner that allows all locks to be opened and access granted through the gate. (Example: Chain end 1 connects to lock 1, lock 2 connects to lock 1 and chain end 2 connects to lock 2.)
    3. Security or the Quarterdeck watch will place your base hunting pass on the hunter check out board for accountability purposes.
    4. You must sign out the area or tree stand in the logbook provided and write down your name, base pass number, hunting area or tree stand and Deer Management Assistance Program (DMAP) or Deer Population Reduction Program (DPOP) tag number, if you requested one.
- If you get a DMAP or DPOP tag, and do not use it to tag an animal, you must turn it back in when you go to check in from your area. Do not keep it. DMAP and DPOP tags are for ANTLERLESS DEER ONLY.
- When you go to check back in from your area or tree stand, return the parking pass, hunting area pass, access key and DMAP or DPOP tag if you had one. Sign "in" in the logbook by writing down the time you returned and Security or the Quarterdeck watch will return your base hunting pass. Security may ask you for a form of identification to ensure you get the correct permit. **Verify that you receive your own hunting permit back from Security.**
- If you killed a deer, let Security or the Quarterdeck watch know and they will page the duty beeper/phone so you can go and check in your deer. If

you used a DMAP or DPOP tag to tag your animal, let Security or the Quarterdeck watch know so they don't expect you to turn the DMAP or DPOP tag back in. DMAP and DPOP tags are for Antlerless deer only. **If you harvest more than one doe you must be issued an additional DMAP or DPOP tag from Security. Every antlerless deer killed must be checked in with a DMAP or DPOP Tag until all base DMAP or DPOP tags have been exhausted.**

- For gun hunting, if more than one person is going to hunt in an area or tree stand, the area must be checked out at the same time to both hunters.

II. STAND AND BLIND REGULATIONS:

1. Lock on, chain on and ladder stands are authorized and must be stenciled clearly with your last name, base permit number and phone number.
2. Screw in steps and removable ladder steps are authorized. No large nails or spikes may be driven into the tree where your stand is located.
3. Tree stands may be hung during the scouting season or on the day that you hunt and can be left up all season.
4. Tree stands, screw in steps and ladder steps must be removed within 30 days after the season ends.
5. Tree stands must be placed at least 12' off the ground.
6. Ground blinds are authorized and may be used for bow hunting only.
7. All gun hunting (shotgun or muzzleloader) and crossbow hunting must be done from a tree stand. No shooting from the ground with any type of gun or crossbow.
8. Permanent tree stands may still be in place at NASO, DNA, and NALFF. These stands are not maintained, may be unsafe, and are not authorized for use. **Do Not USE these stands.**
9. NWA has permanent stands that are maintained on a regular basis. These stands **ARE** authorized for use. Stands are identified on the base hunting map for checkout. Stands that have been designated unsafe will not be authorized for check out regardless of if they are identified on the map. Before utilizing a permanent stand, ensure the tree stand ID number on the stand matches the tag issued to you at check-in and matches the current Hunt Stand Map. Do not use permanent tree stands that have not been issued to you.

III. PARKING AND SERVICE ROAD USE:

1. Park in designated areas only. Place parking pass in the front window of your vehicle. Parking areas are marked by a 12" by 12" yellow sign that will be attached in plain site on a tree, fence or post.
2. Locations of parking areas are designated on the base hunting maps. Do not park in front of any locked gates or park in such a fashion that will block access (i.e., to roads, buildings, etc.).
3. Service roads are not to be driven on, except to get to designated parking areas. Only authorized vehicles for Official Government Business are authorized to utilize these roads.
4. You may not drive on a service road with your vehicle to go pick up game that you may have harvested.
5. You may walk on service roads to get to and from your hunting area or tree stand.
6. Deer hauling carts are authorized for use on service roads.

IV. WEAPONS REGULATIONS:

- **REGISTRATION:**
  Starting 01 January 2015 no hunters will be allowed on the installations with a personal firearm/weapon that has not been registered with Navy Security.
  a. To register your weapon please fill out the registration paperwork found in the enclosures of COMNAVREGMIDLANTINST 5820.2 and take it to NAS Oceana Security, Bldg 320, for processing.
  b. Once Security has completed the review of the paperwork and you have met all of the requirements to be authorized to carry a weapon on the installation you will be issued a CNRMA Regional Security Directorate Authorization to Carry Private Firearms permit/card.
  c. You will need to have this card with you whenever you are carrying your weapon on the installation.
  d. You will need to present this card to Gate Guards when accessing an installation.
  e. You will need to present this card when approached by law enforcement officers.
  f. You will need to present this card at each weapons qualification event.
  g. If you do not have this card with you and you have your weapon on base you are subject to penalties as defined in COMNAVREGMIDLANTINST 5820.2, and NASOINST 8000.16B.
  h. There will not be a sign-up list to attend the 2015-2016 Hunting Weapons Qualifications that will allow you access with an Unregistered Weapon.
- **NASO (NAS Oceana):**
  a. ***No shotguns!***
  b. Muzzleloader, Bow and Crossbow only.
    i. Archery equipment must be hand-held and hand-drawn (release aids are permitted).
    ii. Muzzleloader must be .45 caliber or larger, loaded from the muzzle of the gun. Muzzleloader hunting is authorized 6 days a week during state approved seasons in **DESIGNATED AREAS ONLY**. Follow State Hunting Regulations regarding Authorized Muzzleloader weapon utilization.
- **DNA (NASO Dam Neck Annex):**
  a. Bow, Shotgun, Muzzleloader and Crossbow are authorized.
    i. Archery equipment must be hand-held and hand-drawn (release aids are permitted).
    ii. Shotguns must be 20-gauge or larger and used with buckshot (#1, 0, 00, and 000) only. **NO SLUGS!**
    iii. Muzzleloader must be .45 caliber or larger, loaded from the muzzle of the gun. Muzzleloader hunting is authorized 6 days a week during state approved seasons in **DESIGNATED AREAS ONLY**. Follow State Hunting Regulations regarding Authorized Muzzleloader weapon utilization.
- **NALFF (NALF Fentress):**
  a. Bow, Shotgun, Muzzleloader, and Crossbow are authorized.

i. Archery equipment must be hand-held and hand-drawn (release aids are permitted).
ii. Shotgun must be 20-gauge or larger and are authorized with buckshot (#1, 0, 00, and 000) or slugs **(must qualify with slugs).**
iii. Muzzleloader must be .45 caliber or larger, loaded from the muzzle of the gun. Muzzleloader hunting is authorized 6 days a week during state approved seasons in **DESIGNATED AREAS ONLY**. Follow State Hunting Regulations regarding Authorized Muzzleloader weapon utilization.

- **NWA (NSAHR Northwest Annex):**
  a. Bow, Shotguns, Muzzleloader and Crossbow are authorized.
    i. Archery equipment must be hand-held and hand-drawn (release aids are permitted).
    ii. Shotgun must be 20-gauge or larger and are authorized with buckshot (#1, 0, 00, and 000) or slugs **(must qualify with slugs).**
    iii. Muzzleloader must be .45 caliber or larger, loaded from the muzzle of the gun. Muzzleloader hunting is authorized 6 days a week during state approved seasons in **DESIGNATED AREAS ONLY**. Follow State Hunting Regulations regarding Authorized Muzzleloader weapon utilization.
- **The use of centerfire and rimfire rifles or handguns for hunting is prohibited on all bases.**
- Shotguns, muzzleloaders, bows and crossbows are allowed on base as long as you have your base hunting permit with you and the make, model and serial number of the weapon is written on the back of your base hunting permit.
- Extensions to increase shell holding capabilities of a weapon is **NOT** authorized. Weapon shell loading is limited to the weapon's original manufacturer's holding capacity, for deer hunting. The three shell rule still applies to migratory birds. Guns must be completely unloaded while transiting on and off base and walking to and from your hunting area. Load only after getting in your tree stand.
- **No smokeless powder authorized in any type of muzzleloader hunting!**
- Muzzleloaders must be uncapped but may be loaded with powder and a bullet while transiting on and off base. The cap/primer must be removed while going to and from your hunting area. Install the cap/primer only after you get into your tree stand.
- **All weapons when not in use must be secured inside of a locked vehicle or locked camper shell/truck bed cover and not left in plain sight.**

V. QUALIFICATIONS AND LICENSING REQUIREMENTS:

1. All hunters must attend base Hunter Indoctrination (INDOC) annually. This 45 minute indoctrination is normally held at the CNATTU auditorium three times before hunting season starts (August – September). 1 additional INDOC will be held at NWA. Attending this indoctrination will allow you to hear all changes to the rules and regulations during the past year. INDOC will allow you to hunt with a shotgun using buck shot at DNA, NALFF or NWA (once you have acquired the base hunting permit from MWR and the appropriate state permits). See the posted Annual Training and Qualifications Calendar for dates, times, and locations for all Base required training and weapons qualifying.
2. All muzzleloader hunters must qualify yearly at a 50 yard target.

- Muzzleloader qualifications are held at the DNA shooting range twice a year before the season starts.
- Each hunter must score 150 points and is allowed three shots. Each bull's eye shot is worth 75 points and each shot on the paper plate not in the bull's eye is worth 50 points.
- Once you qualify with a muzzleloader you will be able to hunt any base that allows muzzleloader hunting.

3. All bow hunters must qualify yearly.
   - Bow qualifications are held several times before the hunting season starts and once after the season starts.
   - Your equipment will have a safety inspection performed on it by a board member prior to qualification. Your arrows must be marked with the last four digits of your social Security number in permanent ink or etched on the shaft. The same applies during hunting season.
   - Four deer targets will be placed at different distances from the stand at the Natural Resource Center. Targets will range from a nearly straight down shot out to approximately 25 yards.
   - Each prospective bow hunter will get two shots at three of the deer targets and must put one arrow in the kill zone as determined by the board member present.
   - Three attempts are allowed to qualify.
   - You must have 6 arrows and 6 broad heads of the same type to attempt the bow qualification.
4. All crossbow hunters must qualify yearly.
   - Crossbow qualifications are held several times before the hunting season starts and one after the season starts.
   - Your equipment will have a safety inspection performed on it by a board member prior to qualification. Your arrows must be marked with the last four digits of your social Security number in permanent ink or etched on the shaft. The same applies during hunting season.
   - Four deer targets will be placed at different distances from the stand at the Natural Resource Center. Targets will range from a nearly straight down shot out to approximately 25 yards.
   - Each prospective crossbow hunter will get two shots at three of the deer targets and must put one arrow in the kill zone as determined by the board member present.
   - Three attempts are allowed to qualify.
   - You must have 6 arrows and 6 broad heads of the same type to attempt the crossbow qualification.
5. Shotgun slug hunters must qualify yearly at a 50 yard target.
   - Slug qualifications are held at the DNA shooting range twice a year before the season begins (completed at the same time as the Muzzleloader qualification).
   - Each hunter must score 150 points. Each bull's eye is worth 75 points and each shot on the paper plate not on the bull's eye is worth 50 points.
   - Each person is allowed three shots.
   - Once you qualify with a slug you will be able to hunt NWA and NALFF as these are the bases in the area that allow hunting with slugs.
6. Each hunter must purchase a base hunting pass from the ITT ticket Office at NASO or DNA, ($20), a license to hunt in VA (from an authorized state license vendor), and a state big game hunting license (from an authorized state license vendor) with the appropriate bow, crossbow and muzzleloader stamps if you intend to hunt with those types of weapons on base.

7. Every hunter must present a Hunter's Safety course card (any state will do, all bow and crossbow hunters must present a Bow Hunter safety course card, and after 01 Jan 2015 all hunters must present their CNRMA Regional Security Directorate Authorization to Carry Private Firearms card prior to having a board member stamp your base hunting pass. Before you can hunt, a board member must stamp the back of your base hunting pass with a "deer hunter", "archery", "muzzleloader," "slug" or "crossbow" stamp, depending on what weapon(s) you qualified and with which you intend to use for hunting. The "deer hunter" stamp is used if you are a shotgun hunter only, using buck shot only at NALFF, DNA or NWA.
8. On the back of your base hunting pass, you must write the make, model and serial number of each weapon with which you qualified. The hunting pass must be laminated with the lamination paper provided by the board member after your pass has been fully stamped and approved.
9. **You cannot qualify with more than one muzzleloader or one slug shotgun. You can only qualify with one compound bow. In addition to the one compound bow, you can qualify with one other type of bow i.e. recurve and can hunt with both during the season. You may qualify with only one crossbow.**

VI. TRACKING:

1. If you cannot find an animal after shooting it on an evening hunt and further tracking is required, you must contact Security or the Quarterdeck within 1 ½ hours after sunset.
2. If you are unable to find your animal within 2 hours after sunset inform Security you have wounded an animal and need to red tag the area. They will place a red tag on the area so it cannot be checked out the following morning by another hunter.
3. Once you red tag an area you must return the following morning, check out the area that was red tagged to continue tracking your animal.
4. No weapons are allowed back in your hunting area while tracking an injured animal.
5. Tracking time will be allowed until 1200 hours on the day you checked out the area for tracking purposes.
6. If the animal you are tracking goes outside of your area, you must red tag that area. Do not track into another area if you do not have it checked out.
7. You may retrieve a harvested animal that runs into any open field adjacent to the area you are hunting, except if it is part of an airfield/runway clearing or part of another hunting area.
8. Do NOT enter Airfield/Runway Clearings. If your deer runs out and drops in the airfield clearing area, notify the Security Office Immediately, so that the appropriate Natural Resources Staff can assist you with obtaining your animal.

VII. CHECKING IN GAME:

1. All area bases that allow hunting operate under the guidance of the Deer Management Assistance Program (DMAP) or the Deer Population Management Program/Damage Control Assistance Program (DPOP/DCAP); therefore, all deer killed on area bases must be checked in. NASO participates in DPOP/DCAP. DNA, NALFF, and NWA participate in DMAP.
2. If you killed a deer, let Security or the Quarterdeck watch know and they will page the duty beeper/phone so you can go and check in your deer. If you used a DMAP or DPOP tag to tag your animal, let Security or the Quarterdeck watch know so they don't expect you to turn the DMAP or DPOP

tag back in. DMAP and DPOP tags are for Antlerless deer only. **If you harvest more than one doe you must be issued an additional DMAP or DPOP tag from Security. Every antlerless deer killed must be checked in with a DMAP or DPOP Tag until all base DMAP or DPOP tags have been exhausted.**

3. All deer shot on NASO, DNA and NALFF will be checked in at the NASO Natural Resource Center (NRC), Bldg 78 (across from the horse stables).
4. All deer shot at NWA will be checked in at the Deer Check Station, Bldg 295.
5. The check-in process will consist of a SQMB member, Natural Resources authorized volunteer, a Conservation Law-enforcement Officer, or other Navy Natural Resources Program staff member (whoever is on duty at the time) removing the deer jaw bone, weighing the deer and taking down other information required in support of the DMAP program. Normally the process takes about 10 minutes.
6. To check your deer in with the state of Virginia, call 1-866-GOT-GAME prior to arriving at the NRC building to help expedite the process. Have your confirmation number available prior to checking in your animal, if possible. Remember to correctly select DMAP or DPOP as appropriate.
7. Whether a buck or doe, leave all genitals on the deer you shoot to ensure proper sex identification.

VIII. HUNTING SEASON DATES:

- **NASO and DNA, Regular Deer Hunting Season:** will be 01 OCT 2015 – 02 JAN 2016.
  - Hunting Only Occurs Monday-Saturday during authorized seasons.
    - Note: Small Game Hunting is authorized on Saturdays at NASO ONLY.
  - Archery Seasons are 03 Oct 2015 – 13 Nov 2015 and 01 Dec 2015 – 02 Jan 2016. Archery is also authorized during firearm and muzzleloader seasons. **A Bow Permit is required for later Archery season.**
  - General Firearms season is 01 Oct 2015 – 30 Nov 2015.
  - Late Muzzleloader Season is 12 Dec 2015 – 02 Jan 2016.
- **NASO ONLY, Extended Deer Hunting Season:** will be from 03 JAN 2016 – 28 FEB 2016. (Muzzleloader, bow and crossbow will be allowed six days a week (Mon-Sat) in designated areas for harvest of antlerless deer only.)
- **NALFF Deer Hunting Season:** will be 01 OCT 2015 – 02 JAN 2016.
  - Hunting Only Occurs Monday-Saturday during authorized seasons.
    - Note: During Late Muzzleloader Season Saturdays are reserved for Small Game Hunting ONLY.
      - **NO Squirrel Hunting at Anytime!**
  - Archery Seasons are 03 Oct 2015 – 13 Nov 2015 and 01 Dec 2015 – 02 Jan 2016. Archery is also authorized during firearm and muzzleloader seasons. **A Bow Permit is required for later Archery season.**
  - General Firearms season is 01 Oct 2015 – 30 Nov 2015.
  - Late Muzzleloader Season is 12 Dec 2015 – 02 Jan 2016.
    - During Late Muzzleloader Season, bow, crossbow, and muzzleloader will be allowed Monday-Friday ONLY.
    - **During Late Muzzleloader Season Saturdays are reserved for Small Game Hunting ONLY.**
- **NWA Deer Hunting Season:** will be 01 OCT 2015 – 02 JAN 2016 (VA side); 12 SEP 2015 - 01 JAN 2016 (NC side)
  - Hunting Only Occurs on Monday, Tuesday, Thursday, and Saturdays during authorized seasons.

        - Note: Small Game Hunting is only authorized after the deer hunting season, only on Saturdays, and only on VA side.
            - **NO Squirrel Hunting at Anytime!**
    - Virginia Side:
        - Archery Seasons are 03 Oct 2015 – 13 Nov 2015 and 01 Dec 2015 – 02 Jan 2016. Archery is also authorized during firearm and muzzleloader seasons. **A Bow Permit is required for later Archery season.**
        - General Firearms season is 01 Oct 2015 – 30 Nov 2015.
        - Late Muzzleloader Season is 12 Dec 2015 – 02 Jan 2016.
    - North Carolina Side:
        - Archery Season is 12 Sep 2015 – 02 Oct 2015.
            - Archery is authorized during both Muzzleloader and Gun Seasons.
        - Muzzleloader Season is 03 Oct 2015 to 16 Oct 2015.
        - Gun Season is 17 Oct 2015 – 01 Jan 2016.
- **NWA Youth Deer Hunt:** will be 26 Sep 2015 (VA side ONLY.)
- **Scheduled Hunting Closures During Authorized Seasons (NO Hunting, Unless Otherwise Authorized):**
    - Sundays (Scouting is authorized)
    - Thanksgiving Day (NWA may authorize until Noon)
    - Christmas Day

IX. HUNTING AREA LOCATIONS and RESTRICTIONS:

- NWA is the only base which utilizes permanent tree stands when assigning certain hunting locations.
- **Hunting area boundaries without assigned permanent tree stands** are identified by a red/white/red band marked with spray paint on a series of trees. This marked tree line defines your hunting area boundary.
- **#of Hunters Per Hunting Area:**
    - A maximum of 2 muzzleloader hunters per area is authorized. Check-in must be at the same time.
    - A maximum of 4 bow hunters per area is authorized.
    - 1 muzzleloader hunter and 1 bow hunter in the same area is authorized. Check in must be at the same time.
    - A maximum of 2 Shot-gun hunters per area is authorized. Check-in must be at the same time.
- Know your area boundaries and stay inside of it during your entire hunt.
- Ensure you are utilizing the most current Hunting Area Map to identify your Hunting Area, parking, and access-ways.
- Shoot only inside of your area. Shooting out into fields and/or other hunting areas that border the area is not authorized.
- Do not cut across farmer's fields, to get to your hunting area.
- Follow all State Regulation Fire Arm Ordinances regarding weapons discharge distances from buildings, dwellings, places of worship, roadways, streets, public land/public areas, etc. In addition to statewide requirements, ensure to comply with any locality (Virginia Beach, Chesapeake, and Currituck Co., as appropriate) requirements that are identified in the associated State Hunting Regulations.

X. SCOUTING:

1. Preseason scouting will follow the end of the previous hunting season and end two weeks prior to the pending hunting season.
2. During this time, you are allowed to scout any area that you would like to hunt.
3. You must use the exact same check out and check in process as is required during the normal hunting season.
4. This is the time to hang your lock on, chain on and ladder stands if you desire. Reminder, putting a stand in an area does NOT guarantee you being able to hunt that particular area. It is on a first come first served basis.
5. Scouting during the hunting season on Sundays is allowed. All area bases are closed to hunting on Sundays.
6. Scouting and Hunting can be secured at anytime (Sunrise to Sunset) during the preseason or regular season, depending on base operations. Secured areas will be marked with a black tag and access will NOT be authorized.

XI. QUALITY DEER MANAGEMENT (QDM):

1. QDM is voluntary and **HIGHLY encouraged** at NASO, DNA, NALFF, and NWA.
2. For those that would like to participate in QDM, the QDM program recommends criteria on Buck takes (mature buck takes only) and encourages the take of does or antlerless deer. If archery hunting, a Buck should have antlers outside the ears and be at least 6 points. If Black Powder hunting, a buck should have antlers outside the ears and be at least 8 points. Take as many does as possible (utilize all antlerless deer tags available).
3. NASO is part of the State Deer Population Control Program (DPOP). This program is an integral part of deer management on NASO. This program extends the hunting season for an additional two Months (Jan & Feb). This program emphasizes the take of does through the use of State issued tags to each base. These tags are 1st come 1st served. These tags allow you to save your State Issued tag for that special buck, while enabling you to collect deer meat. You are not limited to 1 DPOP tag. If you take a doe, but do not want the meat please obtain a DPOP tag for the doe & notify the Conservation Law-enforcement Officer (a.k.a. CLEO or Game Warden) for meat donation options (i.e., hunters for the hungry, other soldiers in need, etc.). Follow proper check in/out procedures. Do **NOT** put your personal State Issued Deer tag on a doe, as you are required to use the Base DPOP tags until they run out.
4. The Deer Management Assistance Program (DMAP) applies to DNA, NALFF, and NWA. This program stresses the take of does through the use of State issued tags to each base. These tags are 1st come 1st served. These tags allow you to save your State Issued tag for that special buck, while enabling you to collect deer meat. You are not limited to 1 DMAP tag. If you take a doe, but do not want the meat please obtain a DMAP tag for the doe & notify the CLEO/Game Warden for meat donation options (i.e., hunters for the hungry, other soldiers in need, etc.). Follow proper check in/out procedures. Do **NOT** put your personal State Issued Deer tag on a doe, as you are required to use the Base DMAP tags until they run out.

XII. DRESSING & STORAGE OF DEER:

1. Deer Temporary Storage: The NASO Natural Resources Center (NRC), Building 78, has a walk in cooler where hunters can hang their deer if they desire.
   - If there is room in the cooler, place your name, phone number and confirmation number on the label provided and secure it to the deer.
   - Cost is $1 a day and must be paid when you pick up your deer.
   - Deer may be hung for 10 days only and then must be removed for processing.
   - Call the NRC to arrange a time to pick up your deer from the cooler.
   - All deer must be field dressed prior to hanging in the cooler.
2. Deer cleaning/dressing and disposal: Facilities are available at the NASO NRC/Checkstation (Building 78) and NWA Checkstation (Building 295).
   - NWA hunters:
     a. May either field dress in the woods; or
        - (Note: No field-dressing is permitted within 200YDs of occupied buildings, roads, trails, or agricultural areas.)
     b. Bring their animals to the NWA checkstation (Building 295) for dressing. Remains must be disposed of properly in the Building 295 dumpster.
   - DNA hunters:
     a. May either field dress; or
        - (Note: No field-dressing is permitted within 200YDs of occupied buildings, roads, or trails.)
     b. Bring their animals to the NASO NRC (Building 78) for dressing. Remains must be disposed of properly in the Building 78 Parking lot dumpster.
   - NASO and NALFF Hunters:
     a. MUST either field dress and <u>bury the remains</u> in the woods; or
        - (Note: No field-dressing is permitted within 200YDs of occupied buildings, roads, trails, agricultural areas, or within Airfield Clear Zone Boundaries.)
     b. Haul out the entire deer and bring it to the NASO NRC (Building 78) to dress. Remains must be disposed of properly in the Building 78 Parking lot dumpster.
   - Disposal of Remains in authorized dumpsters (NASO Bldg 78 parking lot dumpster; NWA Bldg 295 dumpster):
     a. Remains should be bagged and secured in a black/non-transparent plastic/garbage bag and placed in the dumpster.
     b. Dumpster doors must be shut and secured after each deposit.
     c. Dumping of animal remains without bagging and securing is not authorized.
     d. Dumping of animal remains without proper permits and tags is not authorized.
     e. Dumping of animal remains harvested from a location other than NASO, DNA, NALFF, or NWA is not authorized.
     f. Violation of the dumpster rules can result in the issuance of a federal and/or state ticket and hunting privilege suspension.
3. Garden/Water Hose Utilization:
   - The water hose at NASO Building 78 comes from a non-potable well water source (do not drink water that comes from this hose).
   - The water hose at NWA Building 295 is potable water.
   - Anyone utilizing the hoses at either of these sites must roll the hoses back up and shut off the water after each use.

XIII. GUEST HUNTERS:

1. Guest hunters must go through the exact same qualification process as active duty, retired military or current DoD civilian hunting members.
2. Guest hunters must sign in and out with a sponsor and they must hunt the same area as their sponsor.

XIV. VIOLATIONS OF GAME LAWS AND BASE REGULATIONS:

1. A hunter who violates any State or Base regulation is subject to proper disciplinary action (see references for more details). Depending on the type of infraction the Sportsman's Quality Management Board (SQMB) may be requested to review and make disciplinary recommendations to the Conservation Law-enforcement Officer (CLEO). The CLEO will then submit these recommendations as appropriate for approval to the Natural Resources Manager and/or Base Commanding Officer. The SQMB is made up of active duty & retired military personnel assisting the Base Natural Resources Recreation Program.
2. Should a violation be committed, the CLEO has the authority to confiscate your base hunting pass and weaponry (depending on the violation). The CLEO will notify the SQMB if there is an infraction for them to review and provide their recommendation.
3. The SQMB will conduct Violation Assessments, as requested by the CLEO, every Saturday at 1200 hours throughout the season.
4. The SQMB will make disciplinary recommendations, as requested, to the CLEO for approval.
5. Discipline (in addition to any State or Federally issued tickets by the CLEO) ranges from 15 days of no hunting to a total loss of all base hunting privileges.
6. Major weapons violations i.e. hunting on base with a high-powered rifle, unauthorized weapons on base, etc. carry the same, if not harsher, consequences as breaking the law in the civilian sector.
   - Deer is the only Big Game allowed to be shot. No other big game can be harvested even if there is an open season for it.
   - Foxes are allowed to be taken during regular state fox hunting season.
   - Do not shoot bears.
   - Coyotes may be shot at NASO in accordance with State Laws.
   - Loss of an access key to a hunting area constitutes a breach of base security and the offense will be processed by the Federal CLEO.
   - In addition to Penalties Listed above and in the CNRMA Instruction:
     a. Parking in unauthorized areas = Lose hunting privileges for Ten-days.
     b. Leaving an animal in the cooler longer than 10 days = Lose hunting privileges for 30 days.
     c. Under certain conditions a Lifetime Hunting Banishment can be issued.

XV. BLAZE ORANGE REQUIREMENTS:

1. Blaze orange is required to be worn while transiting to and from your hunting area or tree stand.
2. 100 square inches (roughly the size of a baseball cap) of blaze orange is required to be worn. The Board recommends that you wear a blaze orange vest as well as a cap when transiting to and from your hunting area.
3. Once in your tree stand, you may remove your blaze orange but it must be within one arm length and visible from a 360 degree view for other hunters to see.

XVI. ARCHERY RANGE UTILIZATION:

1. Bow targets (hay bales) are for the use of all personnel that have purchased a base hunting pass and have appropriately registered their firearms with Security or placed their name and weapons information on the weapons qualification list (see section IV. of this document for details).
2. Safety is the number one priority while practicing archery and as such, no one is allowed down range while another member is shooting arrows at a target.
3. Field tips are authorized for use at the NRC bow range. **Broad Heads are not to be shot in the hay bales**.
4. You may bring your own targets and use broad heads from the A Platform **ONLY**.

XVII. POINTS OF CONTACT AND WEBSITES:

- Conservation Law-enforcement Officer (Game Warden), NRC, Building 78: (757-433-2151)
- NASO/DNA Security/Game Check-in, Building 320: (757-433-3103)
- NALFF Quarterdeck, Building 100: (757-433-2259)
- NWA Security/Quarterdeck, Building 145: (757-421-8000)
- Websites:

Requirements to Validate Hunting and Fishing Permits

1. **Hunting Permits** for NAS Oceana, NALF Fentress, NASO Dam Neck Annex and NSA Hampton Roads, Northwest Annex can be purchased from NAS Oceana MWR ITT Bldg 430. Permits are $20 and can be purchased on Monday-Friday 0900-1700. **THERE ARE NO REFUNDS – PURCHASING A PERMIT AND SUBSEQUENT FAILURE TO COMPLETE A PROFICIENCY QUALIFICATION OR ATTEND REQUIRED INDOCTRINATION WILL RESULT IN YOUR INABILITY TO HUNT.**

2. Purchase of permit **does not** give authority to hunt until you complete the following in accordance with COMNAVREG MIDLANT INSTRUCTION 11015.2:
   - Hunter Indoctrination
   - Bow, Black Powder or Shotgun Slug Qualifications
   - Approved Hunter Safety Course and IBEP(for bowhunters)

3. The NAS Oceana Natural Resources Bldg. 78 at 800 Oceana Boulevard has a calendar of event times/dates posted. Additional information may be obtained from: the NASO Natural Resources Website, http://www.cnic.navy.mil/Oceana/About/Departments/NaturalResources/index.htm; or the NAVFAC Regional Website, https://portal.navfac.navy.mil/portal/page/portal/navfac/navfac_ww_pp/navfac_navfacmidlant_pp/midlant_ps/environmental_norfolk/tabnr.

4. DO **NOT** FILL IN PERMIT! LEAVE PERMIT BLANK UNTIL YOU COMPLETE A HUNTING APPLICATION! Applications may be obtained at any scheduled required event (qualification, indoctrination, IBEP) or by setting up an appointment with Natural Resources personnel at the Natural Resources Bldg. 78:

5. In order to validate your permit at the above location you must provide the following items:
   A. Appropriate VA State hunting or fishing licenses
   B. Approved State Hunter Safety Card
   C. IBEP Card (Bowhunters only)
   D. Identification
   E. Proof of completion of NAS Oceana Hunter Indoctrination and Qualification

4. If you have any questions about the hunting program, please call the Natural Resource Center (NRC) Building 78 @ (757) 433-2151. MWR personnel do not have information on the hunting or fishing programs.

Fishing Permits for NAS Oceana, NASO Dam Neck Annex, JEB Little Creek and Fort Story, and WPNSTA Yorktown can be purchased from: NAS Oceana MWR ITT Bldg 430, Monday-Friday 0900-1700. Permits are $8. Fishing must be in accordance with COMNAVREG MIDLANT INSTRUCTION 11015.1. **THERE ARE NO REFUNDS!**

1. Call Natural Resource Center (NRC) Building 78 @ (757) 433-2151 to complete an application. **This MUST be done before fishing!**
2. Provide valid VA State fishing license.

APPLICATION FOR: ***NAS OCEANA / NASO DAM NECK ANNEX / NALF FENTRESS / NSAHR NORTHWEST ANNEX / JEB LITTLE CREEK / JEBLC FORT STORY***

I, the undersigned understand that hunting, fishing, trapping, and archery are inherently dangerous sports and I voluntarily assume the risks associated with hunting, fishing, trapping or archery onboard: Naval Air Station Oceana (NASO), Virginia Beach, Virginia; NASO Dam Neck Annex, Virginia Beach, Virginia; Joint Expeditionary Base Little Creek (JEBLC), Virginia Beach, Virginia; and JEBLC Fort Story, Virginia Beach, Virginia; Naval Auxiliary Landing Field (NALF) Fentress, Chesapeake, Virginia; and Naval Support Activity Hampton Roads (NSAHR) Northwest Annex, Chesapeake, Virginia and Currituck County, North Carolina. I hereby release, indemnify and will hold harmless, acquit, and discharge, the United States of America, the United States Navy, all officers, organizations, military and civilian personnel, and activities of the United States or the United States Navy and any other individual or organization connected with the United States or the United States Navy from any and all cause or causes of action, including personal injury, illness, death, property damage, costs charges, claims, demands and liabilities of whatever kind, name, or nature in any manner arising out of use or enjoyment of said permit or any control exercised over said use, participation, property, facilities, equipment, or individual in the use of enjoyment of any permit. I have read and I understand the provisions of COMNAVREG MIDLANT INST 11015.2 and 11015.1. I am aware that a violation of the above notice will result in revocation of my permit and civil prosecution.

PRIVACY ACT STATEMENT

This statement is provided in compliance with the provisions of the Privacy Act of 1974 (Public Law 93-579) which requires that Federal agencies must inform individuals who are requested to furnish personal information about themselves as to certain facts regarding the information requested below.

1. Authority. 5 U.S.C. § 301; 10 U.S.C. §§ 972 (5), 1201-1222, 2733, 2734-2734b, 2737, 5947, 6148, 7205, 7622-7623; 28 U.S.C. §§ 1346, 2671-2680; 31 U.S.C. §§ 71-75, 82a, 89-92, 95a, 240-243, 951-953; 37 U.S.C. § 802; 38 U.S.C. § 105; 42 U.S.C. §§ 2651-2653; 44 U.S.C. § 3101; 49 U.S.C. § 1901.

2. Principal Purposes. The primary use of this information is personal identification verification and to approve and record licensing data.

3. Mandatory/Voluntary Disclosure, Consequences of Disclosure. Disclosure is voluntary. Failure to provide information may result in denial of base fishing/boating privileges.

4. COMNAVREG MIDLANT INST 11015.2 ; COMNAVREG MIDLANT INST 11015.1

Comment [WMFCNMPO1]: Recommend to updating this form to include: a check box indicating if this is a Guest Application, and if so need to provide sponsor information and signature line; and checkboxes to tell us what type of hunting or trapping will be conducted.

This document was first vetted and approved 10/95 and has received minimal changes since then, except to update Installation Name Changes and the addition of the Recreation Fishing and Archery Activities.

Comment [WMFCNMPO2]: Why doesn't this include the following statement: "I consent to inspection at any time by duly authorized personnel (Navy, Federal, and State), for purposes of safety, security, or compliance with said instruction. Subject to penalties provided by law, I attest that I am not prohibited by Chapter 44 of title 18, U.S. Code, from possessing firearms or ammunition; and that the possession of firearms or ammunition will not violate a statute of the Commonwealth of Virginia or an ordinance applicable to the locality in which I reside. I agree that this release not only binds me, but also my family, heirs, assigns, administrators, and executors."

Recommend adding this information to this form.

Comment [WMFCNMPO3]: Need to add hunting, trapping, and archery (not just fishing/boating).

COMNAVREG MIDLANT INSTRUCTION 11015.1

From: Commander, Navy Region, Mid-Atlantic

Subj: FISHING

Ref: (a) 32 C.F.R. Section 190
(b) DODINST 4715.3
(c) OPNAVINST 5090.1B
(d) P.L. 105-85 (Sikes Act Improvement Amendments of 1997)
(e) NAVFAC P-73, Vol. II
(f) E.O. 12962
(g) Virginia Freshwater and Saltwater Fishing (Current) Regulations
(h) COMNAVREGMIDLANT/SOPA(ADMIN) HRINST 5400.1

Encl: (1) Station Permit Suspension/Revocation
(2) COMNAVREG MIDLANT Fresh Water Fishing Areas

1. Purpose. To establish procedures for fishing on board COMNAVREG MIDLANT installations including: Naval Weapons Station (WPNSTA), Yorktown, including Cheatham Annex; Naval Amphibious Base (NAVPHIBASE), Little Creek; Naval Air Station (NAS), Oceana, including Dam Neck Annex; and Naval Support Activity (NAVSUPPACT), Norfolk, Northwest Annex. No freshwater fishing is permitted on Pennsylvania installations. References (a) through (h) pertain.

2. Cancellation. COMNAVBASENORVAINST 11015.1; CAXINST 11015.20; NAVPHIBASELCREEKINST 10570.1I; DAMNECKBASEINST 11015.1G; WPNSTAYORKTOWNINST 1710.3; and NASOCEANAINST 11015.3B. Due to numerous changes, instruction should be read in its entirety.

3. Policy

a. References (b) through (e) allow for recreational fisheries management on military installations, consistent with mission requirements.

b. Violations of reference (g) and this instruction may result in suspension or revocation of fishing privileges. See enclosure (1).

c. The Regional Comptroller Office will prescribe operating and accounting procedures for handling funds. Permit fees will be expended solely for management, protection, and harvesting of fish and wildlife resources per reference (a).

4. Definitions

a. Tidal Waters (Saltwater). Tidal waters include the shorelines of the Atlantic Ocean and the York and James Rivers and their tributaries.

b. Non-tidal Waters (Freshwater). Non-tidal waters include all freshwater ponds and lakes open to fishing, as noted in this instruction. This does not include closed bodies of water located on certain golf courses or within sensitive or restricted areas.

c. Fishing. Fishing refers to the harvest or attempted harvest of finfish species for sport or self-consumption.

5. Responsibilities

a. Environmental Program Director. The Regional Environmental Program Director is responsible for managing the fishing program at the installations to which this instruction applies. This authority may be delegated to a properly trained Regional Natural Resources Program Manager.

(1) Natural Resources Managers. Natural Resources Managers, under the direction of the Regional Natural Resources Program Manager, manage fishing and freshwater fish resources at NAS Oceana, NAVPHIBASE Little Creek, and WPNSTA Yorktown. Natural Resources Managers enforce fish and wildlife laws and regulations, and this instruction.

(2) Conservation Officers. Under the direction of the Regional Natural Resources Program Manager, Conservation Officers enforce fish and wildlife laws and regulations and this instruction. Conservation Officers are authorized to conduct creel inspections.

b. Installation Security Officers. Security Officers also enforce fish and wildlife laws, regulations, and this instruction, and review and make recommendations to Installation Commanders on proposals to conduct fishing tournaments and other special events. Security Officers are an after-hours emergency contact point for Natural Resources Managers and Conservation Officers.

c. Fishermen. Fishermen shall comply with this instruction and applicable fish and wildlife laws and regulations.

6. Authorized Patrons

a. Authorized Patrons. The following persons are authorized to fish at the installations to which this instruction applies:

(1) Active duty military personnel and their dependents are given priority access to all fishing programs, activities, and events.

(2) Retired military personnel and their dependents.

(3) Federal civilian employees of COMNAVREG MIDLANT installations and their dependents.

(4) Reservists and their dependents.

(5) If allowable under existing Force Protection Condition (FPCON) constraints, authorized patrons may be accompanied by two guests. All guests must adhere to applicable fish and wildlife laws and regulations, and this instruction. Sponsors are responsible for their guests and must accompany them at all times.

7. Licenses/Permits

a. Fishing Licenses. Authorized patrons and guests between the ages 16 and 65 must obtain, if they do not already possess, Virginia (state or county) freshwater fishing licenses and station fishing permits. Reference (g) exempts persons who are legally blind. Virginia Saltwater fishing licenses are required for anyone attempting saltwater fishing except when fishing from MWR piers that maintain pier licenses (see enclosure (2)).

(1) Dependents and guests under the age of 12 must be directly supervised by an adult, 18 years of age or older, who holds valid fishing licenses and station permits.

b. Station Permits. Station fishing permits are valid at all installations to which this instruction applies. Annual permits are valid concurrent with the Virginia fishing licenses (1 January - 31 December). A full season permit costs $8; a one-week permit costs $4. Saltwater fishing does not require a station permit.

(1) WPNSTA Yorktown and Cheatham Annex. Fishing permits are available at the Morale, Welfare and Recreation (MWR), Building 2006 and Cheatham Annex MWR, Building 284.

(2) NAVPHIBASE Little Creek. Fishing permits are available at the Environmental Compliance Department, Building 3165.

(3) NAS Oceana and Dam Neck Annex. Freshwater fishing permits are available at the NAS Oceana Natural Resources Center, Building 78.

(4) Station permits are issued upon assumption of risk, and authorized patrons and guests shall be required to sign a statement acknowledging risk. The statement shall also release the United States of liability, in case of accident or injury, to the extent allowed by law.

(5) Possession of a station fishing permit does not authorize access to an installation, grant permission to use other MWR facilities, or convey or bestow any other rights or privileges.

8. Regulations

a. General

(1) Unless approved under reference (h) consumption of alcoholic beverages is prohibited during any fishing activity or event to which this instruction applies.

(2) Fish may be taken only within the limits, seasons, and times, and by the methods prescribed by Federal and State regulation.

(3) No more than two treble hooks are permitted on any fishing lure. In catch-and-release waters, barbed hooks are discouraged and treble hooks are prohibited.

(4) Fishing shall be conducted only by angling with a hook and line or rod and reel, held in hand. A hand-held landing net may also be used to remove legally hooked fish.

(5) Use of live bait fish (minnows, eels, etc.) is discussed in enclosure (2). Use of crickets, grubs, worms, and other non-fish baits is permitted as noted.

(6) Unless otherwise specified, fishing hours are sunrise to sunset.

(7) Use of trotlines, fish traps, or chemicals in ponds are prohibited except under direction of the Natural Resources Manager.

(8) Boats and canoes are permitted on certain freshwater ponds and lakes as discussed in specific regulations. To prevent introduction or spread of invasive aquatic species, the following precautions should be taken:

(a) Drain water from live wells, bilges, and other containers before leaving the launch area;

(b) Remove plant parts and animals from the boat, trailer, and accessory equipment. Dispose of the removed materials in the garbage at the launch area or at home;

(c) Do not release live bait or aquarium pets into any waters; and

(d) Wash boat and trailer thoroughly at home. Flush water through the motor's cooling system, live wells, and other areas that hold water or dry your boat and equipment for five days in a sunny location before transferring it to a new body of water.

(9) If boat use is permitted at an approved fishing location, boats and canoes may not be stored on ponds or surrounding banks. A life jacket is required for each person fishing from boats. Additionally, persons under the age of 10 years shall wear life jackets while on boats.

(10) Littering on station is prohibited. All refuse shall be placed in designated trash containers. This includes all refuse generated from fishing activities (i.e., monofilament line, hooks, etc.).

(12) Natural Resources Managers or Security Officers may close specific fishing areas at any time. Such announcements will be posted at the respective Security Command Building or Natural Resources Office. Personnel may not use freshwater areas not listed in enclosure (2) of this instruction without specific authorization by the appropriate Natural Resources Manager.

(13) The Installation Natural Resources Manager, the Installation Security Officer and the Installation Commander must approve fishing tournaments and other special events.

9. Enforcement. Fish and wildlife laws and regulations, and this instruction, are enforced at the installations to which this instruction applies by Conservation Officers and Installation Security Officers by authority of Installation Commanders. Fully-trained, properly-qualified, and duly-certified Conservation Officers have power to apprehend and arrest violators for violations occurring at places over which the Navy may exercise law enforcement jurisdiction. Military and civilian personnel who observe or acquire credible information concerning violations of fish and wildlife laws and regulations, and this instruction, shall report same to Natural Resources Managers, Conservation Officers, or Installation Security Officers at the installation where the violation allegedly occurred.

10. Review Authority. The Regional Natural Resources Program Manager is responsible for review and update of this instruction.

S. A. TURCOTTE

Distribution: www.cnrma.navy.mil

STATION PERMIT SUSPENSION/REVOCATION

1. Policy. Access to, and fishing at, the installations to which this instruction applies is a privilege granted by the Installation Commander.

2. Authority. The authority of Installation Security Officers, Natural Resources Managers, and Conservation Officers to enforce this instruction includes the power to summarily suspend or revoke fishing privileges, for good cause.

3. Violations. The following is a list, for illustrative purposes only, of common violations and administrative actions that may be taken, independently or in connection with other administrative or judicial remedies, against persons who violate fish and wildlife laws and regulations, and this instruction. Repeat offenders are likely to suffer permanent revocation of fishing privileges.

SUSPENSION	VIOLATION
30 Days	Violation of any state statute.
30 Days	Patron does not hold a station fishing permit.
30 Days	Operation of gasoline motor or boat in unauthorized area.
30 Days	Digging for bait in the vicinity of ponds.
60 Days	Fishing with live bait fish in unauthorized area.
30 Days	Unauthorized vehicle parking.
1 Year	Fishing with trotlines, fish traps or chemicals.
60 Days	Violation of station limit, but not state limit.
Reinstatement of Fishing Privileges at discretion of Installation Commanding Officer.	Defacing or destroying government property and littering.
Reinstatement of fishing privileges at discretion of Installation Commanding Officer.	Alcoholic Beverages

COMNAVREG MIDLANT FISHING AREAS

1. NAS Oceana/Dam Neck Annex

a. Oceana Pond:

(1) Size/Location. Approximately 9 acres. Located on NAS Oceana, approximately one-half mile southeast of the intersection of Oceana Boulevard and Bells Road. Access restricted to a maintained gravel road bisecting an agricultural field.

(2) Parking. Parking permitted in designated cul-de-sac area between inner and outer gates.

(3) Facilities. Picnic facilities available. No open fires without permission of Natural Resources Manager. A boat launch is available. An interpretive nature trail loops the lake.

(4) License/Permit. In addition to the Virginia license and station permit, a parking permit will be issued with the station fishing permit and must be displayed on the vehicle dashboard in plain view.

(5) Size/Possession Limits. Catch and release encouraged.

(a) Largemouth Bass. Possession authorized from 16 June to 28 February only. Between 9 to 11 inches total length: two per day per person during season. Greater than 15 inches total length: one per day per person during season. For all other sizes, possession is prohibited.

(b) Catfish. Daily limit of three per person with a 10-inch minimum size.

(c) Panfish and Other Species. Virginia limits apply.

(6) Boats. Hand-propelled or electric motor boats and canoes are permitted. Gasoline motors are prohibited.

(7) Bait. No live bait fish.

(8) Special Regulations. Daytime use only unless approved by Natural Resources Manager. No other restrictions unless previously stated.

b. Lake Tecumseh:

(1) Size/Location. Located on Dam Neck Annex, south of Dam Neck Road and west of Regulus Avenue.

(2) Parking. Limited parking is available off Dove Street.

(3) Facilities. Bank-fishing only. A fishing pier is located at the end of Dove Street.

(4) License/Permit. In addition to the Virginia license and station permit, a parking permit will be issued with the station fishing permit and must be displayed on the vehicle dashboard in plain view.

(5) Size/Possession Limits. Virginia limits apply for all species.

(6) Boats. None permitted.

(7) Bait. Must adhere to state regulations.

(8) Special Regulations. The Navy does not own Lake Tecumseh, only portions of the land around it. Therefore, the Navy does not authorize fishing from boats launched from Navy property. Anglers encouraged to catch and remove all carp, shad, and other rough fish.

c. Saltwater Fishing - Dam Neck Fishing Beach:

(1) Location. Located on Atlantic Ocean across the dune from Seamist RV Park off Regulus Avenue.

(2) Parking. Limited parking is available after hours and on weekends in the Naval Marine Intelligence Center parking lot.

(3) Facilities. None. Trash cans are located at the walkovers.

(4) License/Permit. Virginia Saltwater fishing license.

(5) Size/Possession Limits. Virginia or Federal regulations apply.

(6) Boats. Boats are not permitted to be launched or retrieved on any recreational beaches.

(7) Bait. Virginia or Federal regulations apply.

(8) Special Regulations. Fishing may occur on the beach 24 hours a day. During dusk and evening hours, fishermen are required to have a light or lantern at their fishing location.

2. NAVPHIBASE Little Creek

a. Lake Bradford and Chubb Lake:

(1) Size/Location. Approximately 134 acres. Located on NAVPHIBASE Little Creek, off D Street.

(2) Parking. Seal Park, off D Street.

(3) Facilities. Boat ramp and picnic facilities are available.

(4) License/Permit. Virginia license and station permit.

(5) Size/Possession Limits. Catch and release encouraged.

(a) Largemouth Bass. Possession authorized from 16 June to 28 February only. Between 9 to 11 inches total length: two per day, per person, during season. Greater than 15 inches total length: one per day, per person, during season. For all other sizes, possession is prohibited.

(b) Walleye. Daily limit of two per person.

(c) Pan fish and other Species. Virginia limits apply.

(6) Boats. Boats with gasoline engines (10-hp limit) or electric motors are allowed. "No wake" limitations are in effect over the entire lake.

(7) Bait. Must adhere to Virginia regulations.

(8) Special Regulations. The eastern shoreline of Lake Bradford is privately owned. Anglers encouraged to catch and remove all carp, shad, and other rough fish.

b. Lake Varian and Bigelow Hall Lake:

(1) Size/Location. Located on NAVPHIBASE Little Creek. Small ponds located at end of D Street near Rifle Range and at the intersection of 10th and 11th Streets, respectively.

(2) Parking. For Lake Varian, use parking area for Lake Bradford. For Bigelow Hall Lake use barracks parking.

(3) Facilities. None.

(4) License/Permit. Virginia license and station permit.

(5) Size/Possession Limits. Catch and release encouraged.

(a) Largemouth Bass. Possession authorized from 16 June to 28 February only. Between 9 to 11 inches total length: two per day per person during season. Greater than 15 inches total length: one per day per person during season. For all other sizes, possession is prohibited.

(b) Catfish. Daily limit of three per person with a 10-inch minimum size limit.

(c) Panfish and other Species. Virginia limits apply.

(6) Boats. None permitted.

(7) Bait. No live bait fish.

(8) Special regulations. None.

c. Saltwater Fishing Areas:

(1) Location. Fishing is only allowed on the beaches of the all hands beach.

(2) Parking. Parking available at end of Hewitt Drive.

(3) Facilities. Bathhouse available on site.

(4) License/Permit. Virginia Saltwater Fishing License.

(5) Size/Possession Limits. Virginia or Federal regulations apply.

(6) Boats. Boats are not allowed to be launched or retrieved at any time from the beach.

(7) Bait. Virginia or Federal regulations apply.

(8) Special Regulations. Fishing is permitted from after Labor Day until Memorial Day from sunrise to sunset.

3. WPNSTA Yorktown/Cheatham Annex

a. Jones Pond:

(1) Size/Location. 63 acres on WPNSTA Yorktown, Cheatham Annex.

(2) Parking. Designated parking lot only.

(3) Facilities. Floating pier and picnic area.

(4) License/Permit. Virginia license and station permit.

(5) Size/Possession Limits. Catch and release encouraged.

(a) Striped Bass. One fish per day, minimum 20 inches.

(b) All Other Species. Virginia limits apply.

(6) Boats. To prevent introduction of invasive or exotic species, all boats used on this lake must be rented from MWR.

(7) Bait. To prevent introduction of invasive or exotic species, any live bait fish must be purchased from MWR.

(8) Special Regulations. No bank fishing permitted.

b. Cheatham Pond:

(1) Size/Location. 108 acres on WPNSTA Yorktown, Cheatham Annex.

(2) Parking. Designated parking at boat landing area.

(3) Facilities. Boat pier.

(4) License/Permit. Virginia license and station permit.

(5) Size/Possession Limits. Catch and release encouraged.

(a) Striped Bass. One fish per day, minimum 20 inches.

(b) All Other Species. Virginia limits apply.

(6) Boats. To prevent introduction of invasive or exotic species, all boats used on this lake must be rented from MWR.

(7) Bait. To prevent introduction of invasive or exotic species, any live bait fish must be purchased from MWR.

(8) Special Regulations. No bank fishing permitted.

c. Penniman Lake:

(1) Size/Location. 48 acres on WPNSTA Yorktown, Cheatham Annex.

(2) Parking. Designated parking lot at boat landing, behind Galley.

(3) Facilities. Picnic facilities located on lake.

(4) License/Permit. Virginia license and station permit.

(5) Size/Possession Limits. Catch and release only.

(6) Boats. To prevent introduction of invasive or exotic species, all boats used on this lake must be rented from MWR.

(7) Bait. To prevent introduction of invasive or exotic species, any live bait fish must be purchased from MWR.

(8) Special Regulations. Bank fishing permitted from two designated areas.

d. Feurer Youth Pond:

(1) Size/Location. 2 acres on WPNSTA Yorktown, Cheatham Annex.

(2) Parking. Designated parking lot only.

(3) Facilities. Fishing pier, restrooms, and picnic area available.

(4) License/Permit. None required.

(5) Size/Possession Limits. Catch and release only.

(6) Boats. None permitted.

(7) Bait. To prevent introduction of invasive or exotic species, any live bait fish must be purchased from MWR.

(8) Special Regulations. Youth only, 15 years of age and younger. Bank and pier fishing only.

e. Roosevelt Pond:

(1) Size/Location. 21 acres on WPNSTA Yorktown.

(2) Parking. Designated parking area at boat landing.

(3) Facilities. Pier and shoreline boardwalk.

(4) License/Permit. Virginia license and station permit.

(5) Size/Possession Limits. Virginia limits apply for all species.

(6) Boats. To prevent introduction of invasive or exotic species, all boats used on this lake must be rented from MWR.

(7) Bait. No live bait fish.

(8) Special Regulations. Bank fishing permitted from two locations. Pond closed to fishing during explosive loading operations at ordnance pier.

f. WPNSTA Yorktown Ponds 10, 11, and 12:

(1) Size/Location. Pond 10 (4.5 acres), Pond 11 (23 acres), and Pond 12 (15 acres) on WPNSTA Yorktown.

(2) Parking. Designated parking adjacent to boat pier.

(3) Facilities. Floating pier.

(4) License/Permit. Virginia license and station permit.

(5) Size/Possession Limits. Virginia limits apply for all species.

(6) Boats. To prevent introduction of invasive or exotic species, all boats used on this lake must be rented from MWR.

(7) Bait. No live bait fish.

(8) Special Regulations. Must possess a valid WPNSTA Yorktown Restricted Area ID. Must check in at MWR Outdoor Recreation/Rental Equipment office and receive a daily fishing pass before entering Restricted Area. The fishing pass shall be prominently displayed in the front window of vehicle. Ponds 11 and 12 may at times be closed due to Explosive Ordnance Detachment (EOD) operations.

g. Saltwater Fishing: Only authorized saltwater fishing is from the Cheatham Annex Pier.

(1) Location. Cheatham Annex Pier at the end of Sanda Avenue.

(2) Parking. Limited parking available at the pier.

(3) Facilities. None.

(4) Licenses/Permits. A current Virginia Saltwater License is required. A pier pass is required and available for purchase from MWR, Building 284. Military fee is $10 per year, civilian fee is $20 per year.

(5) Size/Possession Limits. Virginia and Federal regulations apply.

(6) Boats. None authorized.

(7) Bait. Virginia and Federal regulations apply.

(8) Special Regulations. Times: 1600-0600 Monday - Friday; 24 hours a day Saturdays, Sundays, and Holidays.

4. NAVSTA Norfolk

a. Naval Station Fishing Pier:

(1) Location. Located next to Salt Marsh Park, next to the Q Area ballfields off Admiral Massey Hughes Drive.

(2) Parking. Adequate parking is available at pier.

(3) Facilities. Port-a-toilet available.

(4) License/Permit. None required.

(5) Size/Possession Limits. Virginia and Federal regulations apply.

(6) Boats. Boats may not be launched or retrieved at this location.

(7) Bait. Virginia and Federal regulations apply.

(8) Special Regulations. Times: 24 hours a day; 7 days a week.

b. Other areas:

(1) Size/Location. Fishing is authorized from the following locations:

(a) The bulkhead extending eastward from the Deperming Station tower along the waters edge parallel to Admiral Massey Hughes Drive to the first picnic gazebo at Salt Marsh Park.

(b) From the westward end of Salt Marsh park to Iowa Point just west of the Sailing Center.

(c) Along the sea wall from the eastern side of the Bousch Creek culvert to the Mason Creek bridge.

(d) From the Mason Creek outfall on the sea wall (Building SP-263) along the sea wall not further than 10th Avenue.

(e) In the waters of Mason Creek.

(f) For Willoughby Bay Housing residents only: along the sand beach to the fence at the dredge spoil deposit site.

(2) Parking. Limited at all areas.

(3) Facilities. None.

(4) License/Permit. Virginia Saltwater Fishing License.

(5) Size/Possession Limits. Virginia and Federal regulations apply.

(6) Boats. None allowed.

(7) Bait. Virginia and Federal regulations apply.

(8) Special Regulations. None.

Enclosure 11. Pollinator Management

ACQUISITION,
TECHNOLOGY
AND LOGISTICS

OFFICE OF THE UNDER SECRETARY OF DEFENSE
3000 DEFENSE PENTAGON
WASHINGTON, DC 20301-3000

SEP 0 5 2014

MEMORANDUM FOR ASSISTANT SECRETARY OF THE ARMY
(INSTALLATIONS, ENERGY AND ENVIRONMENT)
ASSISTANT SECRETARY OF THE NAVY
(ENERGY, INSTALLATIONS AND ENVIRONMENT)
ASSISTANT SECRETARY OF THE AIR FORCE
(INSTALLATIONS, ENVIRONMENT AND LOGISTICS)
STAFF DIRECTOR, DEFENSE LOGISTICS AGENCY (DSS-E)

SUBJECT: Department of Defense (DoD) Policy to Use Pollinator-Friendly Management Prescriptions

This memorandum expands DoD policy to use current best management practices, as appropriate, specifically to protect pollinators (e.g., bees, birds, bats, butterflies, moths) and their habitats, and establishes policy to coordinate with partners on pollinator issues.

In accordance with DoD Instruction 4150.07 "DoD Pest Management Program" (May 2008) and DoD Instruction 4715.03 "Natural Resources Conservation Program" (March 2011), it is DoD policy to, when possible and to the extent practicable, use native landscaping and minimize the use of pesticides, to include herbicides, in sensitive habitats (e.g., in wetlands or where listed species may occur).

Further, it is DoD policy for Military Departments to coordinate, when appropriate and to the extent feasible, with other agencies (e.g., U.S. Fish and Wildlife Service, Bureau of Land Management, and Environmental Protection Agency) and non-governmental organizations (e.g., Bat Conservation International, and Pollinator Partnership) on habitat and pollinator issues. This policy is not intended to, and does not create, expand, or diminish any legally enforceable substantive or procedural responsibilities.

My point of contact is Mr. Peter Boice at 571-372-6905 or l.p.boice.civ@mail.mil.

John Conger
Acting Deputy Under Secretary of Defense
(Installations and Environment)

Pollinator Friendly Pesticide Applicator Best Management Practices

October 2014

Background

Pollinators, such as bees, bats, birds, and butterflies, are essential to the majority of the flowering plants in our environment and to the production of more than 130 different food crops. Pollinators are highly sensitive to many pesticides, especially insecticides. Your help as pest management personnel is critical to the continued safety of our food supply and environment. Proper pesticide use avoids harm to pollinators and their food sources, water, and habitats.

Use an integrated pest management (IPM) approach:

- Monitor and assess pest populations to determine if levels warrant control.
- Select the best combination of pest control options that minimizes risks to pollinators.

Read and Follow the Pesticide Label

On pesticide labels, look under the "Environmental Hazards" and "Directions for Use" headings for important information on protecting pollinators. Some labels warn against use of the product on blooming crops by stating, "Do not apply to blooming crops or weeds if bees are visiting in the treatment area." Some labels limit at-bloom applications to times when bees are not actively visiting, such as late evening. Apply the product in a manner consistent with the label directions.

Be Alert to Bloom

Presence of bloom is the key factor in pollinator exposure to pesticides. Honey bees and other pollinators are most at risk of poisoning when bee-toxic pesticides are applied to weeds or other vegetation that is blooming. Avoid applying any bee-toxic pesticides on blooming plants that attract bees. Keep pesticide drift from nearby blooming weeds that are attracting bees.

Timing of Pesticide Application

The time of pesticide application is very important. Apply pesticides that are toxic to bees in the evening when most honeybees have stopped foraging and returned to their hives. This allows the maximum time for the pesticide to decompose before the bees come into contact with it the next day.

Avoid Residual Toxicity

Use insecticides with short residuals. Do not apply insecticides having a long residual to blooming crops.

Check the Weather

Environmental conditions affect pesticide persistence. Daytime applications at low temperatures may cause some classes of pesticides to remain toxic much longer than during warm weather. Cloud cover also may prolong toxicity due to lower levels of ultraviolet light which breaks down many pesticides. Do not apply bee-toxic pesticides with extended residual toxicity on nights when dew is forecast. Dew may re-wet pesticides and increase bee exposure. Environmental conditions also affect bee activity. When high daytime temperatures encourage bees to begin foraging earlier or continue later than usual, adjust application times of bee-toxic pesticides accordingly. Experience shows that when bee-toxic pesticides are applied before or during cold nights, followed by warm summer days, the incidence of bee kills greatly increases.

Use Less Hazardous Pesticides

Neonicotinoid pesticides (i.e. pesticides with the active ingredient clothianidin, dinotefuron, imidacloprid, and thiamethoxam) may potentially cause adverse effects to pollinators. The EPA is taking steps to change these pesticide labels so they better protect bees by being clearer and more precise in their directions for pesticide application.

Use of neonicotinoid pesticides should be avoided in areas where pollinators may be present. Also avoid using them on any flowering plants. Use on flowering plants may result in exposure to bees even if applied when the plant is not flowering because they are taken up systemically and have a long residual.

Use the Least Hazardous Pesticide Formulation

Granular formulations are the least hazardous when bees are present because they are the least likely to drift. Dust and microencapsulated formulations are most hazardous to bees because they are similar in size to pollen and tend to stick to bee hairs. Dusts almost always drift more than other formulations. Emulsifiable concentrate formulations are usually less hazardous to bees than wettable powders because the powders remain toxic in the field longer. Spray formulations are usually safer to bees than dusts, but there are differences among spray types. Generally, water soluble formulations are safer than emulsifiable formulations, and fine sprays are less dangerous than coarse sprays. Sprays of undiluted pesticides may be more dangerous than diluted sprays.

Minimize Drift

Honey bees will visit the blooms of crops and/or weeds near target crops and be unintentionally impacted there by drift and pesticide residues. Keep the product on the intended area and apply pesticides with equipment that has been calibrated for the particular application. When appropriate, use ground applications instead of aerial applications to reduce risk of drift out of the target area.

Communicate with Beekeepers

Cooperation and communication among applicators and beekeepers greatly increases the likelihood of success in protecting pollinators and their habitats. Take the initiative to establish good relations and communication with commercial and local beekeepers. Notify beekeepers of future pesticide applications planned in the area so that they may attempt to protect their bees.

Learn about Local Regulations/Programs

Check for specific local ordinances pertaining to pollinators, especially beehive locations or designated preserves (if applicable). Some regions require that commercial beehive operations register the location where hives are being kept. Many states have regulations intended to reduce the hazard of insecticide applications to bees.

Enclosure 12 Avian Protection Recommendations

REDUCING BIRD COLLISIONS WITH BUILDINGS AND BUILDING GLASS BEST PRACTICES

US FISH AND WILDLIFE SERVICE
DIVISION OF MIGRATORY BIRD MANAGEMENT
FALLS CHURCH, VIRGINIA

JANUARY 2016

A Special Thanks to Our Contributors!

U.S. Fish & Wildlife Service would like to extend a special note of appreciation to the number of highly knowledgeable experts and authorities on bird interactions with building, glass and lighting infrastructure that contributed to the content and review of this document. This product is a true representation of the power of partnerships and coordination across agencies and institutions. This document will continue to be updated with the best available information, and our partnerships with experts in the field will be critical in making that happen. Thanks to all of you for the important work you do for bird conservation!

Table of Contents

OVERVIEW

The U.S. Fish and Wildlife Service (Service) has responsibility to protect and conserve migratory birds as part of four international treaties (Mexico, Japan, Canada, and Russia) and the Migratory Bird Treaty Act. As part of this mission, the Service is working to address human-caused sources of mortality by developing and providing information on options for reducing hazards to migratory birds. Bird collisions associated with building glass and building lighting are hazards where a variety of potential avoidance and minimization options exist. This document is intended to provide straight-forward options for reducing bird collisions with buildings by offering recommendations for simple, no cost building occupant best practices; low cost avoidance and minimization actions; and strategies for new buildings, building renovations, and building retro-fits.

THE ISSUE

Birds generally do not see clear or reflective glass (Klem and Saenger 2013). Glass reflectivity and transparency create a lethal illusion of clear airspace that birds do not see as a barrier. During the daytime, birds collide with windows because they see reflections of the landscape in the glass (e.g., clouds, sky, vegetation, or the ground); or they see through glass to perceived habitat (including potted plants or vegetation inside buildings) or to the sky on the other side. At night, during spring and fall bird migrations when inclement weather occurs, birds can be attracted to lighted structures resulting in collisions, entrapment, excess energy expenditure, and exhaustion (Manville 2009). This phenomenon has resulted in a number of concentrated avian mortality events. These mass events are less common at city, office or residential buildings, but still a possibility under the right weather and lighting conditions. The majority of collisions with both residential and urban buildings happen during the day, as birds fly around looking for food. Large avian mortalities at night more frequently occur at communication towers, offshore drilling platforms and in other situations where there is a bright light source in a dark area, especially during inclement weather.

Annual bird mortality resulting from window collisions in the U.S. is estimated to be between 365-988 million birds (Loss et al. 2014). While most people consider bird/glass collisions an urban phenomenon involving tall, mirrored-glass skyscrapers, the reality is that 56% of collision mortality occurs at low-rise (i.e., one to three story) buildings, 44% at urban and rural residences, and <1% at high-rises (Loss et al. 2014).

In an effort to reduce bird collisions with building glass, the Service's Division of Migratory Bird Management has compiled the following list of best practices and best available technologies. These best practices are grouped into measures that can be implemented at residences and office buildings, and provides options for both new buildings, and for existing building renovations and retro-fits. Many of these measures not only provide protection to birds, but also provide energy and cost savings to building owners.

THE AVOIDANCE/MINIMIZATION OPTIONS

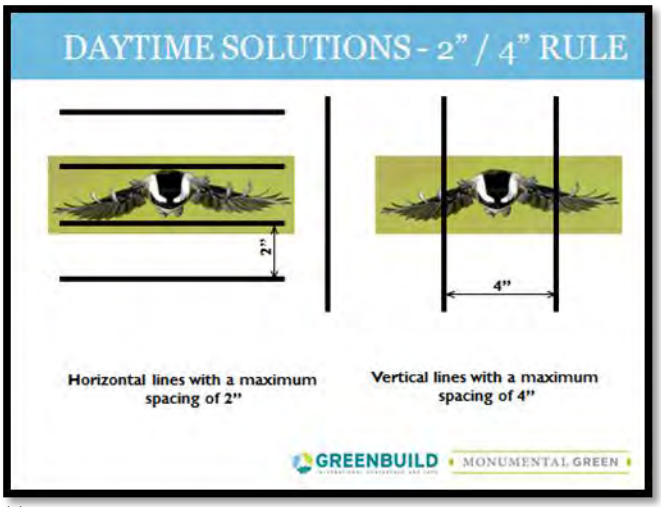
The Service recommends the following options to avoid and minimize bird/glass collisions. Any mention of trade names or commercial products in this document or the documents or websites referenced within does not constitute endorsement or recommendation by the Federal government. Readers should be aware that each product has benefits and limitations. Users of these products should work with technical experts to determine which specific product may work best for a particular application.

GLASS OPTIONS

There are a variety of glass and window design options that can be integrated into building designs to reduce mortality from bird collisions. The goal of these glass options is to create a visual signal or cue to help birds detect and avoid glass. To make an effective virtual cue, all window treatment should be applied to at least the first two to three stories or the height of the adjacent vegetation. However, applying treatments to just the first story windows or known problem windows can be helpful as well.

Create Your Own Pattern

The key to creating bird-friendly glass is to increase visual noise on the surface of the glass. Visual noise is a visible pattern that breaks up transparent or reflective areas of glass enough that birds perceive they cannot fit through the transparent or reflective areas. There is still research needed to determine the most effective dimensions of various visual patterns on glass for bird strike prevention. However, in general, vertical stripes that are at least ¼ inch wide with a maximum spacing of 4 inches, and horizontal stripes that are at least ¼ inch wide with a maximum spacing of 2 inches have been effective at preventing strikes of most birds (Sheppard 2011; Klem 2009). Because hummingbirds are so much smaller than other birds, closer spacing of the elements of any pattern (striped or otherwise) will be necessary. Also, when using patterns other than stripes, closer spacing of elements is recommended because a series of smaller images like dots will not break up the glass as much as stripes using the 2" X 4" spacing rules.



The image shows how pattern spacing on glass can work to deter birds. Images by ABC and Roy Hancliff

Pattern color contrast is important as well. Use colors that contrast well against the background or reflections (e.g., white stripes may be more effective than black stripes if there is a consistent reflection of dark color on the glass surface). The image to the right depicts the importance of the contrast between the color of the window pattern and the background. Notice that the white stripes are significantly more visible than the black stripes with the dark reflections on this window.

Photos by Christine Sheppard, ABC

Applying a product to the outer surface (surface #1) of the glass is always most effective. Applying a product to surface #2 or #3 (inner surfaces) can be effective if surface #1 is not so reflective that the pattern beneath is not visible to birds(see Fig. 1).

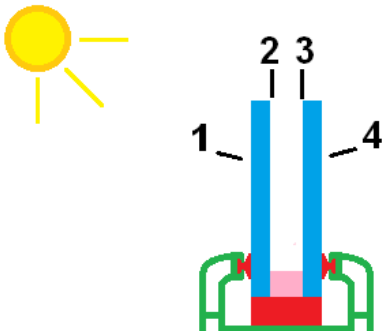


Image by NcLean/CC BY

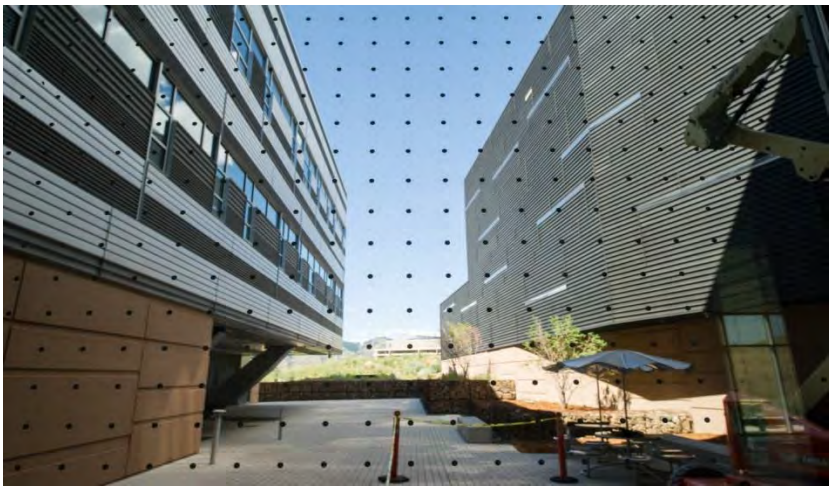
Fig 1: Window Surface Diagram – Depicts surface #1 (outside facing pane), surface #2 (inside of outside facing pane), surface #3 (inside of inside facing pane and) and surface #4 (inside facing pane).

This image shows an example of a striped glass pattern that can be effective for preventing strikes of most birds (smaller spacing may be needed for hummingbirds). This particular pattern has been applied to the exterior surface (surface #1) of the window.

Striped glass pattern. Photo by Christine Sheppard, ABC

This image shows an example of non-striped pattern that can be effective for preventing strikes of most birds (smaller spacing may be needed for hummingbirds). This pattern has also been applied to the exterior surface (surface #1) of the window.



Dot pattern applied to the exterior of a National Renewable Energy Laboratory (NREL) building to help prevent bird collisions. Dots are approximately 1/2" in diameter spaced 2" vertically and horizontally. Photo by Dennis Schroeder, NREL 31193

There are several ways you can create your own patterns on glass. To see recommendations for creating your own patterns on glass, visit the ***Solutions and Materials*** section of the Bird-Safe Glass Foundation resources webpage (http://www.birdsafeglassfoundation.org/contact-us/resources/).

Install a Special Film, Glass or Covering

External Films and Coverings

There are several effective external film and glass covering options. Some options are more expensive, but are highly effective. Films are good for retrofit applications. A drawback, however, is that they only have a guarantee lifetime of 5 to 7 years, although they may last longer. To see a list of the latest recommendations in external films and covering products, visit the ***Solutions and Materials*** section of the Bird-Safe Glass Foundation resources webpage (http://www.birdsafeglassfoundation.org/contact-us/resources/).

A bird friendly film was applied at the entrance of the Ding Darling Education Center at the J. N. "Ding" Darling National Wildlife Refuge. Photo shows entrance before (left) and after (right) application. Photos by USFWS

Fritted Glass

Fritting is the use of ceramic lines, dots or patterns that are most often placed on the #1 surface (outside-facing pane) or #2 or #3 (interior panes) (see Fig. 1) of insulated glass. Fritting is a commonly used measure, but is more expensive than other types of window coverings. This technique allows humans to see through the glass while reducing the transparency of the glass. It also provides energy savings by reducing heat gain, while still allowing day-lighting of buildings (Sheppard 2011). To see a list of the latest recommendations in fritted glass products, visit the ***Solutions and Materials*** section of the Bird-Safe Glass Foundation resources webpage

Fritted glass on window. Photo by Christine Sheppard, ABC

(http://www.birdsafeglassfoundation.org/contact-us/resources/).

Ultraviolet Patterned Glass

Birds see in the ultraviolet (UV) spectrum so using glass that reflects UV light in a pattern can reduce bird collisions. While this glass is typically more expensive than other treatments, it is comparable in price to other energy-efficient glass (Eisenberg 2010). As of 2015, few UV patterned products are available. However, this option may be desired when seeking a product that is generally not visible to humans, but provides some benefit to birds. To see a list of the latest recommendations in ultraviolet patterned glass products, visit the ***Solutions and Materials*** section of the Bird-Safe Glass Foundation resources webpage (http://www.birdsafeglassfoundation.org/contact-us/resources/).

Screens and Netting

Installing external screens or netting on windows is an effective and relatively inexpensive treatment. Screens reduce reflection and injury by providing a cushion between the bird and the window. This treatment can be installed on individual panes or attached to a façade. To be effective, the netting must be placed far enough in front of the window that a bird hitting it will not collide into the glass behind. The netting should have openings no larger than ½ inch. Several companies sell screens or other barriers that can be attached with suction cups or eye hooks. These treatments can be used on new construction, renovations, and retro-fits. To see a list of the latest recommendations in screen and netting products, visit the ***Solutions and Materials*** section of the Bird-Safe Glass Foundation resources webpage (http://www.birdsafeglassfoundation.org/contact-us/resources/).

Architectural Features

Building designers can use features such as overhangs, shutters, louvers, mesh and awnings to reduce glass reflections or reduce visibility into transparent areas.

Shading was applied around the windows on the exterior of the Research Support Facility (RSF) at the National Renewable Energy Laboratory (NREL) to reduce glare and overheating of the building interior. These windows are also bird friendly. Photo by Dennis Schroeder, NREL 19798

LIGHTING OPTIONS

Eliminating or reducing unnecessary lighting is one of the easiest ways to reduce collisions while also saving energy and reducing costs to building owners. Note that these measures will not eliminate collisions, and their effectiveness is highly dependent on local conditions, including the degree of bird friendly design and practices of neighboring buildings.

Photo by Eddypoon/CC BY

Lighting Design

a. Avoid unnecessary lighting, including perimeter lighting.
b. Install motion sensors on all lights (both interior and exterior) that activate only when people are present. Motion sensors are fairly inexpensive and save energy. This is especially important during the bird migration periods (early April through late May and mid-August through early November), and periods of inclement weather.
c. Ensure all exterior lighting is "fully shielded" so that light is prevented from being directed skyward. "Fully shielded" light fixtures are defined as those with an opaque shield so that all light is emitted below the lowest light emitting part of the fixture. "Fully shielded" is the same as "zero up light" and "dark sky compliant". See Appendix A for examples of acceptable fixtures.
d. Comply with all Federal Aviation Administration obstruction and marking guidelines by ensuring that required obstruction lighting is comprised of only L-864 strobe lights with appropriate flash rates and extinguish all steady burning L-810 lights (FAA 2007, Patterson 2012).

Lighting Operation

a. Ensure that any lights that are not motion-activated are turned off at night; especially architectural lighting, upper story interior lighting, and lobby or atrium lighting.
b. Eliminate the use of decorative/vanity lighting during the bird migration periods (early-April through late May and mid-August through early November). This includes upward directed spot- and flood-lights, and roof-top lighting.
c. "Lights Out" programs exist throughout major cities across the country to encourage buildings to reduce light pollution during migration. For more information visit Audubon's Existing Lights Outs Programs webpage (https://www.audubon.org/conservation/existing-lights-out-programs).
d. Install window coverings to prevent light spill.

LANDSCAPING OPTIONS

Exterior

- Where habitat is adjacent to, seen through or reflected in any glass structures (e.g., windows, bus shelters, guard rails, glass walls, etc.), treat the glass using one of the Glass Options listed above. Avoid creating an effect where landscaping funnels birds towards glass panes (e.g., walkways, passageways, edges) or where approaches to a building (vehicles or people) flush birds towards windows.

An example of where trees and shrubs are reflected in the glass and create a type of funnel effect near the entrance of a building. Photo by USFWS

- Avoid using glass in supplemental structures (e.g., bus shelters, guard rails, glass walls, etc.). When it is not possible to avoid using glass for these structures, use only highly effective Glass Options to treat these structures (see the Birdsafe Glass Foundation website's (http://www.birdsafeglassfoundation.org/contact-us/resources/) list of tested materials for information on product effectiveness).

Interior

- If you have indoor plants, trees or shrubs, either treat the adjacent glass or move all plants away from clear glass windows far enough that they can't be seen from the outside by birds. If you were at window level looking in, could you see the plant? If the answer is "yes", then birds can probably see it too.

An example of where a potential bird hazard has been created by placing plants inside of a building near the window. Photo by USFWS

Measures for a Residence

Assess your home's risk for bird collisions

Not all windows are equally hazardous. The most hazardous windows are likely those that are most reflective of bird habitat (e.g., trees, shrubs, flowers, sky), and closest to areas where you see birds when they are active.

Professional assistance is available to assess your home's risk for bird impacts, and to identify specific problem areas and apply avoidance/minimization measures. However, these services are likely at a cost to the homeowner. One example of this type of service is the Fatal Light Awareness Program (FLAP), which offers a risk assessment service for this purpose. To learn more about this service, visit the FLAP BirdSafe Building Risk Assessment website (http://www.flap.org/bird-safe-consulting.php) and contact their assessment team to see if a local assessment can be arranged. You can also pinpoint problem areas by conducting regular monitoring around your home for dead or injured birds, or noting where you observe collisions.

You can also do your own assessment by conducting regular monitoring around your home, especially in areas that are potentially problematic. Monitoring can identify problem areas and tell you how frequent collisions occur. Monitoring is recommended even after collision prevention measures have been applied to ensure treatments are working. To monitor around your house, follow these basic steps in the early morning (around 8am or before) at least a few times a week and daily, if possible, during bird migration periods (early April through late May and mid-August through early November):

1. Walk around your house looking at the ground below windows for dead birds;
2. Inspect each window for feather spots or bird imprints; inspect windows daily when bird feeders are in use;
3. If you find a dead or injured bird, per 50CFR 21.31(a), you may pick it up only if you intent to take it immediately to a rehabilitator. If you do not intend to take the bird to a rehabilitator, you should not attempt to handle the bird, unless you are permitted to do so. If the bird is still alive and you would like to try to help it and/or you need to move the bird, locate a licensed wildlife rehabilitator where you can take the bird, or contact a wildlife official or agency or local licensed wildlife pest control company that is permitted for the possession, handling, transport, and disposal of migratory birds.
4. If helpful, maintain a personal log of information about any dead or injured birds you find during your searches including the species and locations were the birds were found. Logs can be useful for helping you remember where collisions occur and revealing recurring problem areas over time.

Basic guidance for monitoring can be found in the ***Monitoring*** section of the Bird Safe Glass Foundation resources webpage (http://www.birdsafeglassfoundation.org/contact-us/resources/).

Implement Measures

After you have identified which windows may be causing bird collisions, you should follow the steps below to reduce the risk of collision.

1. Ensure proper operation of window covers

Proper operation of window covers can help reduce bird collisions, but should be paired with a window treatment using one of the Glass Options listed above for optimal results.

- **If you have blinds**, keep them partially opened during the daytime when birds are concentrated, especially during bird migration periods (early April through late May and mid-August through early November), and closed completely at night. A partially open blind during the day will appear as a striped pattern that can break up reflections.
- If, during the day, you notice birds are still colliding, it may mean a reflection is still occurring, and you should consider an exterior window treatment.

Photo by Elf/ WC PD

- **If you have shades,** apply a pattern to the shade on the window side and keep them closed as much as possible during the day, particularly when the room is not in use. Use strong contrasting colors in the design so the bird can see it through the window and any reflection. At night, close them completely to keep the escape of indoor lighting to a minimum.

2. Apply a window treatment

Exterior treatments applied on the outside of see-through windows and reflective glass is the most effective action to prevent bird-glass collisions. However, applying treatments on the inside can also be helpful. If you can see the markings from the outside of the window from window level, birds probably can too. Check this several times during the day, as reflections may only occur during certain light conditions. See options under Glass Options for a list of window treatment options for existing structures.

3. Distance bird feeders appropriately

Once you have treated your glass, be sure to place your bird feeder 3-feet or less from your windows; the closer, the better. If your feeders cannot be placed within 3 feet of a window, they should be placed at least 30 feet away.

4. Reduce light trespass

You can reduce light trespass into the environment with appropriate lighting structures and operation (refer to items under Lighting Options).

5. Follow landscaping best practices

Following landscaping best practices will ensure a hazardous condition is not created (refer to items under Landscaping Options).

Measures for Commercial and Institutional Buildings

Avoiding or reducing bird collisions with windows for commercial and institutional buildings can be challenging. First, office buildings have a wide range of architectural styles, floor levels, size, type and configuration of windows. All of these factors influence the risk of bird collisions. Second, occupants of commercial and institutional buildings may not own the building, making actions to reduce collisions more difficult. However, whether you own the building or are simply a building occupant, there are a number of measures you can take to make your building more bird friendly.

The following measures will help reduce bird attraction to your building, and many of them will save in overall building maintenance and energy costs.

Assess your building's risk for bird collisions

Professional assessments are available to assess your building's risk for bird impacts and for identifying specific problem areas (note: this is likely at a cost). The Fatal Light Awareness Program (FLAP) offers a risk assessment service for this purpose. To learn more about this service, visit the FLAP BirdSafe Building Risk Assessment website (http://www.flap.org/bird-safe-consulting.php) and contact their assessment team to see if a local assessment can be arranged. There are also several ways to conduct your own assessment to identify potential problem areas. Not all windows are equally hazardous. Check to see which of your windows are most reflective of bird habitat (e.g., trees, shrubs, flowers, sky), and closest to areas where you see birds when they are active. You can also use direct observations of collisions (e.g., dead birds, feather prints on windows, etc.) to pinpoint problem areas.

An effective and recommended way to identify and verify problem areas is by monitoring regularly around your building for dead or injured birds, especially in areas that are potentially problematic. Monitoring can help you track and confirm where regular collisions are occurring and help you influence changes in these areas (e.g., moving plants away from windows) or open a dialogue with building management for where collision prevention measures may be necessary. Monitoring is recommended even after collision prevention measures are applied to ensure treatments are working properly. When establishing your monitoring program, follow these basics steps:

- Consider establishing a standardized monitoring plan that all employees helping with the monitoring effort can follow. Assign people to certain days and times, and map out the route to follow. It is suggested monitoring be done at least once in the early morning (around 8am or before) a few times a week and daily, if possible, during bird migration periods (early April through late May and mid-August through early November).

- Collect information about any dead or injured birds that employees report or find during building searches in a personal log. Logs can be useful for revealing recurring problem areas over time, and can help communicate and support why and where avoidance and minimization measures may be necessary to those who will need to assist in implementing these measures (e.g. building managers, building tenants).

- If you find a dead or injured bird, per 50CFR 21.31(a), you may pick it up only if you intent to take it immediately to a rehabilitator. If you do not intent to take the bird to a rehabilitator, you should not attempt to handle the bird, unless you are permitted to do s. If the bird is still alive and you would like to try to help it and/or you need to move the bird, locate a licensed wildlife rehabilitator where you can take the bird, or contact a wildlife official or agency or local licensed wildlife pest control company that is permitted for the possession, handling, transport, and disposal of migratory birds.

Basic guidance for monitoring, including suggested fields to be included in a tracking spreadsheet can be found in the ***Monitoring*** section of the Bird Safe Glass Foundation resources webpage (http://www.birdsafeglassfoundation.org/contact-us/resources/).

Implement Measures

After you have identified which windows may be causing bird collisions, you should follow the steps below to reduce the risk of collision.

Use Window Covers (Blinds and Shades)

Window covers should be paired with a window treatment using one of the Glass Options listed above for optimal results in helping reduce bird collisions.

- **If you have blinds**, keep them partially opened during the daytime when birds are concentrated, especially during bird migration periods (early April through late May and mid-August through early November), and close them completely at night. A partially open blind during the day will appear as a striped pattern that can break up reflections. If, during the day you notice birds are still colliding, it may mean reflection is still occurring, and you should consider an outside window treatment.
- **If you have shades (and it is OK with building management to do so),** apply a pattern to the shade on the window side and keep them closed as much as possible during the day, particularly when the room is not in use. Use strong contrasting colors in the design so the bird can see it through the window and any reflection. At night, close them completely to keep the escape of indoor lighting to a minimum.

Avoid or Minimize Evening Lighting

- **Building Occupants –** If the lights are on when you are leaving for the evening, turn the lights off, especially in windowed offices, and encourage others to do the same.
- **Building Owners –** Conduct building cleaning during the daytime. This will reduce bird incidents at night and provide energy and cost savings. Daytime cleaning may also result in salary savings by eliminating nighttime overtime cleaning costs.

Avoid or Minimize Interior Landscaping

If you have indoor plants, trees and shrubs, move them away from clear glass windows far enough that they can't be seen from outside by birds. If you can see the plant standing at window level and looking in, then birds can probably see it too.

Apply a Window Treatment or Barrier
If you are a building occupant, this is something you will likely have to work with building management to approve and implement since it requires modification of the building windows. However, if it is an option, exterior treatments applied on the outside of see-through windows and reflective glass is the most effective action to prevent bird-glass collisions. If exterior treatments are not an option, applying treatments on the inside can also be helpful. If you can see the markings from the outside of the window at window level, birds probably can too. Check this several times during the day, as reflections may only occur during certain light conditions See items under Glass Options for a list of window treatment options for existing structures.

Educate Others
Take steps to educate building owners and occupants about the risk of bird collisions and the simple steps that can be taken to reduce collisions such as turning off lights and closing window coverings at night.

Measures for New Buildings, Building Renovations and Retro-fits

Building Design
- Follow the LEED Pilot Credit 55: Bird Collision Deterrence recommendations for new construction (http://www.usgbc.org/Docs/Archive/General/Docs10402.pdf).
- Minimize the number of, or co-locate roof-top antennas. Make all antennas free standing (i.e., no guy wires).
- Use architectural features to reduce the amount, reflectivity, and transparency of glass.
- If clear glass corridors, skyways, walkways, or courtyards are proposed it is imperative to use bird collision mitigation measures.

Glass Design/Pattern
- Avoid over-use of glass: keep the percentage of total glass below American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE) standard of 40% of surface area (ANSI/ASHRAE/IES Standard 90.1 2013).
- Use smaller pane sizes – less than 2.5 square meters - when possible.
- Do not use reflective glass. Use opaque, etched, or patterned glass that meets the suggested pattern dimensions, or has a Materials Threat Score of less than 30 (see LEED Pilot Credit 55: Bird Collision Deterrence; U.S. Green Building Council 2011). Refer to items 1-6 under Glass Options for glass and window design and treatment recommendations.

Lighting
- Refer to items under Lighting Options for best practice recommendations for lighting design and operation.

Landscaping
- Refer to items under Landscaping Options for landscaping best practices.

All ERL3 requirements are considered as manageable or acceptable risk and therefore are not approved for POM-12. Regions should first execute ERL4 requirements and then accommodate ERL3 requirements with any remaining funds. Update: Going to request development of a contract SOW and request FY13 EOY funds.
N60191	POM-12	FY12-17	60191NR226	MA NAS Oceana - INRMP Updates and Planning	Plan Updates, 1.2, 1.4.1, 5.2	E, F, G	$8,464.72		CNO FM Review (APPROVED) (FUNDED-FY12)	Contract Awarded.
N60191	POM-12	FY12-17	60191NR227	MA Oceana - Resources Protection Agreement (NASO & NALFF)- Establish & Maintain	1.4.2	D, E, F			CNO FM Review (APPROVED) (NOT FUNDED-FY12)	Moved from NR Chapter 12 to CR Chapter 14, since the project supports both programs. Awaiting Updated Navy Instructions related to CLEO support. Develop agreement with either Installation Security, USFWS, or VDGIF and request EOY funding. Notes: USFWS LE in 2009 indicated that they may not be able to provide assistance; initial discussion with VDGIF in FY2009 indicated that they were interested, but FY12 discussions indicated that they are apprehensive about development of such an agreement; and discussions with Base security is pending Naval Instruction Updates. Need to reengage USFWS, and VDGIF after discussions with Base Security. Going to request development of a MOA or Cooperative Agreement and request FY13 EOY funds.

POM 18 Project Justification and Cost Estimates

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 15 July 2015

Project Number: 60191NR238; 32442NR238; 4275ANR238
Project Title: MSFCA MA NASO/NALFF – Climate Change Assessments; MSFCA MA NASO DNA – Climate Change Assessments; MSFCA MA NSA NWA –Climate Change Assessments
Guidebook & Chapter: 12101
Legal Drivers:
Primary: MSFCM
Secondary: ESA
Tertiary: SIKES
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* FY2018-FY2022, Split Quarters 2nd (85%) & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana – Dam Neck Annex (NASO DNA); and Naval Support Activity Hampton Roads – Northwest Annex (NSA NWA).

Project Duration: *(Estimated length of time and Start & End Dates)* ~1 year, 5 months for each 10 year assessment. Time estimates are subject to change due to project delays (i.e. weather conditions and mission training precluding scheduled surveys) and will be handled on a case by case basis. Frequency of assessments may be increased due to mission changes or major landscape changes (man-made or natural).

Project Description: *(What does this project entail?)* Conduct research and analyses to produce a report to be incorporated into the INRMP on the history of climate change, the predictions for future climate change, and the associated impacts of this climate change in association with installation properties. Produce maps, timeline, etc., to depict the predicted climate change impacts. Identify military mission vulnerabilities and recommendations associated with predicted planning for climate change impacts (include, changes in property boundaries, sea level rise and impacts to infrastructure, etc.). Identify potential habitat and species of concern impacts associated with predicted planning for climate change impacts. Work/Coordinate with the South and Mid/North Atlantic Landscape Conservation Cooperative (SALCC, MALCC), USGS, and other Navy partners working on Climate Change initiatives to ensure consistency amongst climate change terminology and estimations. Indentify potential climate change initiatives the Navy can support within the installation's contributing ecosystems (e.g., watersheds, joint venture boundaries, SALCC, bird conservation regions, etc.). Climate change assessment should be completed every 10 years, sooner if a major land alteration or climatic condition change occurs.

Project Purpose: *(Why is this project needed?)*
Project need was identified in 2010 via the INRMP metrics annual review, indicating that the INRMP does not sufficiently address climate change. INRMP update list and project lists were updated to include this need.

Currently, these bases do not have a climate change assessment that will allow them to plan for future climate change concerns. This lack of information puts the Navy at risk for violating several federal and state laws. In addition to federally mandated requirements, Navy and State Policies and Plans dictate that we should have a working knowledge of our impacts to wildlife. This EPR exhibit works to get the Navy in compliance with these requirements.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Assessments of Climate Change associated with bases are necessary to understand how mission requirements will affect species and habitats of concern and vice versa (how impact to species, habitats, and landscapes will impact the military mission). Various laws and regulations will be impacted by climate change (endangered species act, soil conservation act, clean water act, marine mammal protection act, essential fish habitat, etc.). The Sikes Act, National Environmental Policy Act, and Navy & DoD Policy (OPNAVINS M-5090.1, 4715.03, etc.) requires installations with INRMPs to have a working knowledge of climate change and near shore environments, which are to be included in the INRMPs. Knowing in advance what potential concerns there are would allow the command to plan around avoiding potential impacts and to plan for permitting and mitigation requirements, which may be needed to meet military training requirements.

Not having sufficient biological information related to Climate Change leaves the Navy vulnerable to lawsuits when this insufficient information is produced in NEPA documentation associated with military action projects. Obtaining sufficient information will help to avoid these situations or at least help the Navy to win or have such accusations overturned in a court of law.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* Project need was identified in 2010 via the INRMP metrics annual review, indicating that the INRMP does not sufficiently address climate change. INRMP update list and project lists were updated to include this need. Exhibit was approved without funding for FYs 2014 & 2015. No Climate change assessments have been funded to date. POM 16/17 Acceptable Risk, approved without funding. Project was originally part of the associated installation's NR231EPR; however in POM18 a request was made to split it out for better tracking purposes.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) or Contract & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report and Geodatabase
5	PreFinal Report and Geodatabase
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices) and Geodatabase
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., photographs, etc.)
9	Maps
10	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA/Contract. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. In general the data will be utilized to identify any trends in impact to bird species of concern given the various military missions, it will be used to identify potential habitat modification requirements to minimize bird strikes, it will be used to

update Bird Depredation Permits where required, and it will be used to help in conducting planning level reviews of proposed projects and activities with consideration for impacts to wildlife and the mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Cost estimation was derived utilizing the FY2015 Negotiated Nearshore Assessment Projects since this type of information and surveys are utilized in developing climate change assessments with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%.
  - If similar projects for 60191NR238, 32442NR238 and 4275ANR238 are not funded at the same time the overall cost will likely be more expensive due to additional coordination, inhouse fees, and equipment mobilization requirements.
  - Project was originally part of the associated installation's NR231EPRs; however in POM18 a request was made to split it out for better tracking purposes.

BASE	2015 Near Shore Contract Award	2015 Near Shore Inhouse Fees	~2015 Climate Change (Inhouse Fees included)
NASO DNA	$404,904.84	3,277.71	$76,250.00
NSA NWA	$0.00	0.00	$51,250.00
NASO/NALFF	$65,000.00	0.00	$76,250.00

Project Requested Funding: (Non-Annual Recurring Funds Project within a given POM Cycle)

- FY18 is for the Initial/Baseline Climate Change Assessments (Recurring assessment due every 10 years after initial baseline).

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$80,758.45	$0.00	$0.00	$0.00	$0.00
NSA NWA	$54,280.27	$0.00	$0.00	$0.00	$0.00
NASO/NALFF	$80,758.45	$0.00	$0.00	$0.00	$0.00

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 07 July 2015

Project Number: 60191NR235; 32442NR236; 4275ANR235
Project Title: 3 S MA NASO/NALFF - Threatened & Endangered Species Survey – Monarch Butterfly Habitat; 3 S MA NASO DNA - Threatened & Endangered Species Survey – Monarch Butterfly Habitat; 3 S MA NSA NWA - Threatened & Endangered Species Survey – Monarch Butterfly Habitat;
Guidebook & Chapter: 12104
Legal Drivers:
Primary: Endangered Species Act
Secondary: Sikes Act
Tertiary: Fish & Wildlife Conservation Act, 16 USC 2901-2911
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Non-Annual Recurring, FY2018-2022 Split Quarters 1st (85%) & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO)/ Naval Auxiliary Landing Field (NALFF); NASO Dam Neck Annex (DNA); and Naval Support Activity Hampton Roads Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* 1 year, 6 months… subject to change due to project delays (i.e. weather conditions and mission training precluding scheduled surveys).

Project Description: *(What does this project entail?)* Conduct a mapping effort of stands of milkweed, a plant directly linked to the livelihood of Monarch Butterflies, on the installation. In 2015, a petition was submitted to USFW to list Monarch butterflies under the Endangered Species Act. USFWS has not yet made a determination if the petition is warranted. Monarch butterflies and milkweed are known to occur on the installation. Of the mapped milkweed locations, identify potentially significant stands of the plant for proper management to support the conservation of the butterfly. Survey effort will utilize a combination of desktop analysis to focus efforts based off of existing installation GIS data and meandering in-field surveys. Once a milkweed stand is identified the stand is to be mapped utilizing GPS technology that meets or exceeds Navy GIS EV-Model established requirements. Mapped stands will be characterized and ranked based on potential significance to local/migrant monarch butterfly populations. Enhancement/restoration recommendations will be provided for stands of milkweed that would provide an elevated benefit to the local/migrant monarch butterfly populations.

Project Purpose, Project Impact/Benefit to Military Mission: *(Why is this project needed?)* Monarch butterflies are known to migrate through SE VA/NE NC. Migrating butterfly swarms have been documented at NALF Fentress (a Naval Facility in Chesapeake, VA) through the use of radar and field observation (Natural Resources Staff assisting with the operation of radar for BASH survey work confirmed the observation). Monarch butterflies have been observed on most Naval installations in SE VA/NE NC, as has milkweed. Literature research indicates that there is a direct tie to monarch survival and milkweed populations. Research also indicates that pesticide utilization is killing milkweed, which in turn is negatively impacting the reproductive success of Monarch butterflies.

Funding of this project would show a proactive effort to conserving habitat for the monarch butterfly and could be utilized to avoid receiving a critical habitat designation on the installation. Not properly managing for species of concern could: open the Navy and the Base to Lawsuits from the public; result in very costly mitigation and permitting requirements; and could stop or at least restrict military mission operations (resulting in loss of required military training and the associated costs with such a situation).

Ensuring that critical habitat designation does not occur on the installation helps to reduce potential restrictions and regulatory oversight that could be placed on the installation which could greatly reduce military mission and training activities, and increase costs to general operations on the installation.

Also, Data from this project can be utilized to support listing comment period datacall taskers. It is recommended that this project receive funding in either 2016 or 2017 and not wait until 2018 in order to help with such datacall requests.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* NA. Project is Non-Annual Recurring, every 5 years. However, project may be required more frequently if laws change, species are added to the Endangered Species List, or if a catastrophic event causes major change on base or within the habitat.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) or Contract & Support Documentation
3	Monthly Project Status Reports
4	Draft Final Report and Geodatabase
5	PreFinal Report and Geodatabase
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices) and Geodatabase
7	Draft and Final GIS Data Layers/Geodatabase (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., photographs, etc.)
9	Maps
10	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA or conduct contract proposal bidding process. Grantee will provide monthly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports and GIS data will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS geodatabase, photographs, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. (Grantee will also notify the Navy immediately if a species of concern is identified providing species name, GPS location, installation name, and photograph, if a camera is available and authorized for use.)

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Estimate was derived from other habitat mapping efforts awarded in 2012 for installations in SE VA/NE NC and their requested Inhouse fees with the following applied annual inflation rates and rounded up to the nearest dollar: years prior-2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0% .

Project Requested Funding: (Non-Annual Recurring Funds Project)*...highlighted column is the requested funding year for POM18, out years are shown in the event that project is funded earlier or later than scheduled.*

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$37,069.45	$37,810.84	$38,567.06	$39,338.40	$40,125.17
NSA NWA	$47,078.20	$48,019.77	$48,980.16	$49,959.77	$50,958.96
NASO/NALFF	$59,311.12	$60,497.35	$61,707.29	$62,941.44	$64,200.27

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 07 July 2015

Project Number: 60191NR234; 32442NR235; 4275ANR234
Project Title: 1 S MA NASO/NALFF - Listed and SAR Bat Species Surveys and Tracking - NLEB; 1 S MA NASO DNA - Listed and SAR Bat Species Surveys and Tracking - NLEB t; 1 S MA NSA NWA - Listed and SAR Bat Species Surveys and Tracking - NLEB;
Guidebook & Chapter: 12104
Legal Drivers:
Primary: Endangered Species Act
Secondary: Sikes Act
Tertiary: Fish & Wildlife Conservation Act, 16 USC 2901-2911
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Non-Annual Recurring, FY2019 and FY2022 Split Quarters 1st (85%) & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO)/ Naval Auxiliary Landing Field (NALFF); NASO Dam Neck Annex (DNA); and Naval Support Activity Hampton Roads Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* 1 year, 6 months… subject to change due to project delays (i.e. weather conditions and mission training precluding scheduled surveys).

Project Description: *(What does this project entail?)* Conduct basewide monitoring/roost/hibernacula tracking/identification surveys for the Northern long-eared bat. Conduct mist-netting, radio tracking, and acoustic monitoring efforts in accordance with current USFWS and State Guidance every 3 years from the baseline survey effort. Radio track 5-10 female bats (reproductively active, preferred) at each installation. Identify known roosting sites/habitat, and hibernacula on the installation. Establish the extant of use by this species on the installation (what habitats does the species utilize, where, when, and for what purpose). As the species is a short distance migrant species establish anticipated species arrival and departure dates for the installation (if applicable).

If tracking is scheduled and targeted species (NLEB) is not captured, the use of purchased radio tags on other SAR bat species is acceptable, as long as proper State/Federal permitting is obtained and coordination/approvals with/from both Navy CTR and ITR has completed/obtained.

Project Purpose Project Impact/Benefit to Military Mission: *(Why is this project needed?)* The Northern long-eared bat was listed in 2015 under the Endangered Species Act. Little is known about this species in Southeastern VA/Northeastern NC. The species was 1st document in SE VA/NE NC in 2013 on a Naval Installation located both in Chesapeake VA and Currituck Co. NC (NSA NWA) while conducting surveys for a State Listed Bat species. No prior bat survey work at Naval Installations in this area had previously documented this species. Additional bat work conduct in 2014 and 2015 identified the species on additional Naval properties further north along the east coast (NALFF and NWSYT). At 2 installations, NSA NWA and NALFF maternity colonies have been identified roosting on the installation and on adjacent landowner property.

Information on bat utilization of the installation will help in developing or enhancing existing INRMP goals and objectives that support this species, aiding the installation in avoiding potential future critical habitat designation on the installation.

There are several other bat species of concern that are currently not listed, but are anticipated to be proposed for listing under the ESA and are highly likely to become listed, in addition to State Listed Species. This project will also capture information on many of these species, which will help support future datacall taskers related to the listing of these other species.

Not funding this program would put the Navy at risk for being negligent to properly managing for ESA species of concern on their bases. Not funding increases the potential for violations of various Federal Laws to occur, including but not limited to the Endangered Species Act and the Sikes Act. Not properly managing for species of concern could: open the Navy and the Base to Lawsuits from the public; result in very costly mitigation and permitting requirements; and could stop or at least restrict military mission operations (resulting in loss of required military training and the associated costs with such a situation).

Funding this project would allow the Navy to better assess risks to military mission and allow the military to address the concerns accordingly and stop the need for an issuance of a military mission stopping violation. Also, funding a project will allow the base to manage on property, and develop off property partnerships to increase stability of species populations in an attempt to get species delisted or keep them from becoming listed (A GREAT Benefit to the Military Mission).

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)*

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) or Contract & Support Documentation
3	Monthly Project Status Reports
4	Draft Final Report and Geodatabase
5	PreFinal Report and Geodatabase
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices) and Geodatabase.
7	Draft and Final GIS Data Layers/Geodatabase (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., photographs, permits, etc.)
9	Maps
10	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA or conduct contract proposal bidding process. Grantee will provide monthly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports and GIS data will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS geodatabase, photographs, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. (Grantee will also notify the Navy immediately if a species of concern is identified providing species name, GPS location, installation name, and photograph, if a camera is available and authorized for use.)

Cost Estimations:

Project was initially funded via EPRs 32442NR205, 60191NR205, and 4275ANR205 as the bat had not been officially listed when 1st confirmed to be present in SE VA. POM18 is the 1st POM cycle to occur in the 3 year survey timeline since baseline survey work was initiated.

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Estimate was derived from taking the FY2014 awarded contract final costs and requested Inhouse fees with the following applied annual inflation rates and rounded up to the nearest dollar: years prior-2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0% .
    - FY14 Awarded Contract N62470-13-D-8016-WE07 NLEB Survey:
      - PMs = Emmett Carawan; Thad McDonald
        - Task 3 NSA NWA presence/absence survey $61,574.00
        - Option 2 NSA NWA presence/absence survey $44,886.45
        - Option 4 NASO presence/absence survey $44,886.45
        - Option 5 NALFF presence/absence survey $44,886.45
        - Option 6 NSA NWA baseline acoustic/netting $36,091.25
        - Option 8 NASO DNA baseline acoustic/netting $36,091.25

BASE	~2015 Baseline (Acoustic Monitoring/Netting)	~2015 Presence/Absence Roosting Locations (Netting/Tracking)	~2015 Inhouse Fees	Total:
NASO DNA	$44,886.45	$36,091.25	$5,000.00	$85,977.70
NSA NWA	$106,460.45	$36,091.25	$5,000.00	$147,551.70
NASO/NALFF	$89,772.90	$72,182.50	$5,000.00	$166,955.40

Project Requested Funding: (Non-Annual Recurring Funds Project)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$91,061.32	$0.00	$0.00	$96,635.00	$0.00
NSA NWA	$156,276.02	$0.00	$0.00	$165,841.36	$0.00
NASO/NALFF	$0.00	$180,363.55	$0.00	$0.00	$191,403.24

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 7 July 2015

Project Number: 32442NR234; 60191NR233; 427ANR233
Project Title: BAGEPA MA NASO DNA – Nesting Bald Eagle Surveys and Habitat Suitability Assessment; BAGEPA MA NSA NWA – Nesting Bald Eagle Surveys and Habitat Suitability Assessment; and BAGEPA MA NASO/NALFF – Nesting Bald Eagle Surveys and Habitat Suitability Assessment
Guidebook & Chapter: 12101
Legal Drivers:
Primary: Bald and Golden Eagle Protection Act
Secondary: Migratory Bird Treaty Act
Tertiary: Sikes Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* FY2018-FY2022, Split Quarters 2nd (85%) & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana - Dam Neck Annex (NASO DNA)

Project Duration: *(Estimated length of time and Start & End Dates)* 1 year, 5 months for each 5th year more detailed reporting cycle. Time estimates are subject to change due to project delays (i.e. weather conditions and mission training precluding scheduled surveys) and will be handled on a case by case basis.

Project Description, Purpose, and Utilization: *(What does this project entail?)* With the confirmation of an active eagle nest on NAS Oceana and nests that are relatively close to each of the 4 installations (within <5 miles), coupled with the fact that the state no longer surveys all suitable eagle nesting habitat, a CESU package to conduct Winter Eagle Nest Surveys and Fledgling Eagle Tracking associated with the nests located these Navy properties is recommended. This is particularly critical installations with an aviation mission (especially, for identifying problematic nests for potential removal).

NAS Oceana (NASO) has one confirmed eagle nest, as of fall 2014, along the Owl's Creek waterway, that may have gone unidentified in the previous year. Eagles have been observed on the NASO Airfield and flying over the NASO Golf Course. NASO maintains an USFWS eagle depredation permit, which allows us to harass eagles off of the airfield. NASO is located within several watersheds and is less than a mile from multiple water sources (Atlantic Ocean, Lynnhaven River Tributaries, Golf Course Ponds, etc.) within Virginia Beach, VA. No formal basewide eagle nest surveys have been completed since the VDGIF & CCB stopped surveying all suitable nesting habitat in VA.

NASO Dam Neck Annex (DNA) has confirmed eagle nests located less than 600ft away from its border, but has not confirmed an active nest on property. It is rumored that there may be a

nest or even a possible roost site on the southwest corner of the installation off of Lake Tecumseh. NASO DNA is also located within Virginia Beach, VA and is less than a mile from multiple water sources (Lake Tecumseh, Redwing Lake, Atlantic Oceana, Golf Course Ponds, etc.). No formal basewide eagle nest surveys have been completed since the VDGIF & CCB stopped surveying all suitable nesting habitat in VA.

NALF Fentress (NALFF) has confirmed eagle nests located within 1.25 kilometers of the installation border. Eagles have been documented on the airfield. NALFF is located between branches of the North Landing River and Pocaty Creek in Chesapeake, VA. No formal basewide eagle nest surveys have been completed since the VDGIF & CCB stopped surveying all suitable nesting habitat in VA.

NSAHR Northwest Annex (NWA) has confirmed eagle nests located within 3 kilometers of the installation border. Eagles have been documented loafing and flying over the property but not nesting on site. NSAHR NWA is located in close proximity to the Northwest River and has an open body of water on the property referred to as Lunker Lake . 2/3rds of NASHR NWA is located in Chesapeake, VA. The remaining 1/3rd of the installation is located in Currituck Co., NC. No formal basewide eagle nest surveys have been completed since the VDGIF & CCB stopped surveying all suitable nesting habitat in VA.

Task one of this agreement is to develop a GIS layer depicting suitable nesting habitat polygons for the 4 installations and within 2,640ft of each installation's boundary. The total acreages (~14,000acres) of owned Navy property (does not include the referenced buffer) considered under this agreement are: NASO =5846; NASO DNA =1900; NALFF =2556; and NSAHR NWA =3661. Partner will conduct a desktop analysis utilizing Navy supplied GIS data (boundary layers, vegetation classification data, water source/wetland data, etc.) and available other data (Public Domain/Google Images/Etc., State, Partner, USFWS, USGS, etc. data/imagery) to identify suitable habitat on the installation and within the 2,640ft installation boundary buffer. This suitable habitat layer will be utilized to establish the survey location/paths/routes (this layer should be developed prior to 01 Oct 2015) to be utilized in association with task two of this agreement.

Task two of the agreement is to complete annual winter Eagle Nest and Roost Surveys of all suitable eagle nesting habitat for all 4 installations and if possible suitable habitat within 2,640ft on the installation borders. We suspect the best and most time efficient way to accomplish this task is via aerial survey methodologies. Survey routes/locations should be tracked and delivered utilizing GIS/GPS technologies (point, line, and or polygon geometry). Nest and roost locations will be collected via GPS as point geometry.

Task three of the agreement is to observe identified nests to determine status (active, failed, abandoned, etc.) . This should be recorded as part of the GIS attributes of the nest locations identified in task 3. Access will be granted on Navy property to access nest locations for ground based survey efforts.

Task four of the agreement is for active successful nests to track eaglets associated with tasks 2 and 3's findings. Because food is abundant it is possible to have more than one eagle nest on each of these installations. At this time we are only budgeting for 6 eagle nests with 2 chicks per

nest. For a total of 12 tracking devices. (This budget can be altered depending on available funds.)

GIS Deliverables would need to be compliant with NAVFAC ML Geodatabase SDFIE Environmental Module Requirements. We expect this project's Geodatabase to populate the follow 3 EV Model Feature Types: "NaturalResourceSurvey;" "SpecialStatusSpeciesHabitat;" “LandManagementZone ;” and "SpecialStatusSpeciesObs." The "NaturalResourcesSurvey" layer will include polygon, line, or point data of the actual areas/locations surveyed within the installation and buffered distance of the installation's boundary. The "SpecialStatusSpeciesHabitat" layer will include polygons of the extent of the suitable eagle nesting habitat within the installation and buffered distance of the installation's boundary. The “LandMangementZone” layer will include the USFWS specified distance buffers from known nest specified distances (330', 660', 1000', and 2640'). The "SpecialStatusSpeciesObs" layer will include point locations of identified eagle nests, roosts and eagles. The established EV Model Layers possess the Navy required attribution, this does not mean that all attribution required for this project is prepopulated in the established Geodatabase layer. The established EV Model attribution must be populated; however, if data to be collected does not fit into the pre-established attributions additional attribution can be added into the geodatabase or joinable tables can be created to link to the appropriate GIS files.

All data will be collected and reported to the installation Natural Resources Manager (iNRM). All access requests will be coordinated through the iNRM.

This is a data collection effort and we currently only anticipate receiving the data within a Geodatabase, within either an Access Database or Excel Spreadsheet, and via digital copies of any datasheets. The submittal of the Access Database or Excel Spreadsheet is to ensure we have two different ways to obtain and view pertinent data (nest, roost, and eagle locations) . As we all know, sometime our GIS systems and our Microsoft office systems, are not always available when needed, so it is best to have both media available. The Access or Excel deliverable should include the GIS feature identifier, a point location Lat/Long or UTM, and any attribution/data collected. In addition a copy of any hardcopy and/or electronic datasheets and photographs should be provided to the iNRM. Hardcopies can be scanned and provided digitally. All Final deliverables should be submitted on either a DVD or CDR, as appropriate. Draft deliverables can be submitted via the AMRDEC SAFE system.

This data can be utilized to aide with eagle nest research; however, it's inclusion in publications, presentations, and other media should be coordinated with the associated iNRM to obtain appropriate Navy authorizations for release. Prior to nests being added to public viewable sites, such as the State Eagle NestLocator website, Navy authorization should be obtained. At this time we do not want the tracked eagle locations to be available for public viewing, unless we can provide a public accessible location for people to view the nest. We cannot encourage people to want to come onto certain areas of the installation to view these animals as many areas of the installation are closed to unauthorized individuals (safety/military mission issues). The data not authorized by the Navy to be posted on publicly viewable sites can be made available upon request for official business, but not for recreational/personal use.

This data will be utilized to update 3 Installation Natural Resources Management Plans, associated with identified survey properties. Data will also be utilized by the iNRM and

installation planners to advise appropriate parties regarding changes to the installation's landscape and military operations (e.g., project planning, master planning, NEPA, etc.).

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Eagle nest locations are needed to ensure that we are adequately protecting these species in accordance with the Bald and Golden Eagle Protection Act (BAGEPA) and the Migratory Bird Treaty Act. This species is a former Endangered Species Act listed species. Not knowing the locations of nesting eagles could result in unintended take, and Notice of Violation, and law-enforcement actions/penalties, which could put a stop, and/or delay military mission projects. Knowing in advance what potential concerns there are would allow the command to plan around avoiding potential impacts and to plan for permitting and mitigation requirements, which may be needed to meet military training requirements.

Installation Aviation, Firing Range, Boat-launch and other military training and construction activities can be considered take of an eagle if an eagle abandon's a nest due to these actions; however, if these actions were routinely occurring on the installation prior to the bird nesting within the recommended USFWS nest buffer distance for the type of activity a pre-existing conditions argument can be applied which has the potential to exempt the actions from further restrictions or violations.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)*

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) or Contract & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report
5	PreFinal Report
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., etc.)
9	Maps
10	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. In general the data will be utilized to identify any trends in impact to bird species of concern given the various military missions, it will be used to identify potential habitat modification requirements to minimize bird strikes, it will be used to update Bird Depredation Permits where required, and it will be used to help in conducting planning level reviews of proposed projects and activities with consideration for impacts to wildlife and the mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
    - Cost estimation was derived from the FY2015 GCE for the development of a CESU with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%
    - Annual recurring eagle habitat assessments and nesting activity surveys have been reclassified under a this new EPR Number for Better Tracking purposes since the surveys are tied to a specific Federal Law (BAGEPA). Project was funded in 2015 in association with funding from EPRs 32442NR205, 60191NR205, and 4275ANR205. Project could also have been tied to EPRS 32442NR204, 60191NR204, and 4275ANR204.

- **Estimate #1:**

BASE	2015 CESU GCE	2015 CESU Inhouse Fee	~2015 CESU Total
NASO DNA	$22,940.00	$1,250.00	$24,190.00
NSA NWA	$10,194.00	$1,250.00	$11,444.00
NASO/NALFF	$32,523.00	$2,500.00	$35,023.00

Project Requested Funding: (Recurring Funds Project)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$25,620.29	$26,132.69	$26,655.35	$27,188.45	$27,732.22
NSA NWA	$12,120.65	$12,363.06	$12,610.33	$12,862.53	$13,119.78
NASO/NALFF	$37,093.81	$37,835.69	$38,592.40	$39,364.25	$40,151.53

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 7 July 2015

Project Numbers: 60191NR232; 32442NR232; 4275ANR232
Project Title: SIKES MA NASO/NALFF - Resource Protection Agreement; SIKES MA NASO DNA - Resource Protection Agreement; SIKES MA NSA NWA - Resource Protection Agreement
Guidebook & Chapter: 12101
Legal Drivers:
Primary: Sikes Act
Secondary: Endangered Species Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual , Split Quarters 1st, 2nd , 3rd, & 4th (or all at the 1st quarter, as funds are to be MIPR'd to another agency for a full year's service)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual.

Project Description: *(What does this project entail?)* Create and maintain a cooperative agreement with the US Fish & Wildlife Service, the VA Department of Game & Inland Fisheries, and/or installation Security to supply Conservation Law-enforcement protection over the natural resources on Navy Property.

Project Purpose: *(Why is this project needed?)* Protection of Natural Resources via adequately staffed and trained Conservation Law-enforcement Officers (CLEOs) is required under the Sikes Act. The CLEO's would enforce a wide number of legal and policy requirements at these installations: CWA; CZMA; EO 11990 (Protection of Wetlands); ESA (e.g., enforcing/executing existing Biological Opinions for such species as the Federally Threatened Loggerhead Sea Turtle); MBTA (e.g., ensuring Migratory Bird depredation work is being carried out in accordance with permit requirements); SWCA; 32 CFR 190 (Natural Resources Management Program); DoDI 4715.03 (Environmental Conservation Program); OPNAVINST M-5090.1; Chesapeake Bay Preservation Act and Federal Agreement; DoD Instruction 4150.7 (Pest Management); EO 13751 (Invasive Species/ Exotic Organisms); and various other Federal and State laws (particularly related to hunting and fishing regulations, and state T&E listed species), regulations, policies, and conservation agreements (MMPA, NMFA, EFH, State Wildlife Action Plan, USFWS Strategic Plan, etc.).

Neither NR staff nor military police currently have the staffing and training levels too sufficiently and legally process and investigate natural resources legal actions. NASO, NALFF, NASO DNA, and NSA NWA all require conservation law-enforcement officer (CLEO) support. Each of these facilities is located within a highly urbanized area and receives a high amount of authorized and unauthorized human access (bases are not 100% fenced in, majority of natural areas are found outside of "secured" compounds). Each of these bases support species of concern, habitats of concern, and hunting &

fishing programs. There have been known and suspected negative impacts to natural resources on each of these bases (i.e., vandalism, killing, filling wetlands, planting of non-native invasive species, harassment of Endangered Species and Migratory Birds, poaching, etc.).

Conservation Law-enforcement is a dangerous job (diseased animals, aggressive animals, hunters with loaded weapons, etc.) and should be done in such a manner that when an officer responds to an emergency situation or a situation where they think they may need to use force (i.e., weapons) they should have adequately trained back-up or someone to attend/investigate with them for safety purposes. Also, staffing should be at a level in order to avoid a situation where a single person is working or on call 24 hours 7 days a week. It is recommended that at a minimum the cooperative agreement or Navy staffing levels provide for 3 adequately trained individuals to provide conservation law-enforcement support to NASO/NALFF, NASO DNA, and NSA-NWA. This way there is the ability to safely work emergency situations and to allow for at least one CLEO to have official time-off on a rotational basis.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project aides the Navy in maintaining compliance with laws, regs., and policies and reduces the potential for incurring Notices of Violations. NOVs could be issued for knowingly and unknowingly allowing the occurrence of negative impacts to resources. It has been identified that current staffing levels and training/cert. levels are not adequate for implementing conservation law-enforcement actions, across all four bases, regarding natural resources. In effect one may draw the conclusion the Navy is knowingly allowing negative impacts to occur to resources based on the lack of providing enough adequately trained conservation law-enforcement professionals.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* Projects has been requested for funding since 2012. Funding was received in 2015 to complete a programmatic assessment. POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

Conservation Law-enforcement Support: Federal, State, and Navy Regulation Enforcement, Patrols, Investigation, Ticketing, other Law-enforcement Legal Support, Nuisance Wildlife Response, Emergency Wildlife Response, Hunting Program Support, Fishing Program Support, etc.

Costs are based off of 2015 OPM Payscales for Law-enforcement:

- 2015 Awarded Assessment may identify a need for additional manpower support; since the assessment has not been completed a minimum number of officers required was estimated. The assessment will also identify training, certification, and equipment support in the event that a Cooperative Agreement Cannot be established that would provide training and equipment.
- Utilized Step 10 for each pay series
- Anticipate a 1st 40 work schedule
- Estimate Night-time Differential and Hazardous Duty Pay May Also Apply and are factory as an overhead % estimate.
- Estimated 8 Hours of Overtime/Week/Person as CLEO work is subject to on Call Services and OT.

Personnel	Qty	Mths	# wks	Hrs/ week	$/hr	$OT/ hr	45% Overhead	Total:	Comments
CLEO (GS 7)	2	12	52	40	$24.65	$36.98	$59,990.11	$193,301.47	
CLEO Team Lead (GS 11)	1	12	52	40	$36.48	$38.31	$41,316.91	$133,132.27	
CLEO Supervisor									To be supplied by CA partner.
Training									To be supplied by CA partner.
Equipment									To be supplied by CA partner.
Benefits									To be supplied by CA partner.

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report
5	Final Report (Breakdown of types of investigations, locations, results, hours spent on each case, etc.)
6	GPS location of infraction concerns (In Navy Standard Format, i.e. WGS84)
7	Frequent correspondence with base Natural Resources Manager
8	Permit Acquisitions (as required)
9	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee(s) staff to develop and obtain approvals of SOW and CA. Navy staff will work with grantee Partners and the CLEOs to identify and report problems. CLEOs will also be available to support other NR related missions if time allows such as prescribed burning, nuisance wildlife and emergency wildlife calls. The submittal of draft a final report will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a document that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: track what types and frequencies of conservation legal infractions are occurring on the bases; update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Cost estimate was derived from minimum estimated need requirements and the 2015 OPM pay-scale for Law-enforcement with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%
  - Pending the outcome of the final Cooperative Agreement results, there may be an increase in the amount of funding required to come to a resolution regarding training, equipment, benefits, etc.

- It is recommended that an interagency cooperative agreement with USFWS, VA Department of Game and Inland Fisheries and/or NC Wildlife Commission, or installation Security be developed as these agencies have trained Conservation Law-enforcement Officers and have established programs specifically for conservation law enforcement. USFWS would be the primary choice as they are Federal Government and can cross state jurisdictional boundaries without conflict in regards to conservation law-enforcement actions.
- This estimate has been split between each of the Oceana NR AOR bases, which cover 3 INRMPs (NASO/NALFF, NASO DNA, and NSA NWA), because the CLEOs would service all 4 sites.

Project Requested Funding: (Recurring Funds Project within a given POM Cycle),

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$48,402.88	$49,370.94	$50,358.36	$51,365.52	$52,392.83
NSA NWA	$93,348.41	$95,215.38	$97,119.69	$99,062.08	$101,043.32
NASO/NALFF	$207,440.91	$211,589.73	$215,821.53	$220,137.96	$224,540.72

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 15 July 2015

Project Number: 60191NR231; 32442NR231; 4275ANR231
Project Title: MSFCA MA NASO – Nearshore Environment Assessment; MSFCA MA NASO DNA – Nearshore Environment Assessment; MSFCA MA NSA NWA – Nearshore Environment Assessment
Guidebook & Chapter: 12101
Legal Drivers:
Primary: MSFCM
Secondary: ESA
Tertiary: SIKES
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* FY2018-FY2022, Split Quarters 2nd (85%) & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana – Dam Neck Annex (NASO DNA); and Naval Support Activity Hampton Roads – Northwest Annex (NSA NWA).

Project Duration: *(Estimated length of time and Start & End Dates)* ~1 year, 5 months for each 5 year assessment. Time estimates are subject to change due to project delays (i.e. weather conditions and mission training precluding scheduled surveys) and will be handled on a case by case basis. Frequency of assessments may be increased due to mission changes or major landscape changes (man-made or natural).

Project Description: *(What does this project entail?)* Conduct research and analyses to produce a report to be incorporated into the INRMP on the detailed analysis/assessment of near shore environment associated with shore installations for inclusion in the INRMP. Identify and map (providing GIS layers and metadata) boundary of near shore environment. Provide property ownership information on the near shore environment lands and agreements between the property owner and the Navy. Provide species and habitat data information within the near shore environment. Provide near shore environment topography and tidal fluctuation information. Identify military training that currently impacts the near shore environment and how the environment is impacted. Identify potential conflicts with the military mission and the near shore environment. Indentify potential habitat conservation initiatives the Navy can support associated with the near shore environment. Due to natural weather events the nearshore environment is dynamic and like dune systems can change drastically in a relatively short amount of time. In addition at these installations man-made actions also impact the nearshore environment such as military training, pile driving, dredging, beach replenishment operations, and general recreation (fishing, swimming, boating, etc.). Given the dynamic nature of this environment Nearshore Assessments should recur every 5 years, sooner if a major land alteration or climatic condition change occurs.

Project Purpose: *(Why is this project needed?)*
Project need was identified in 2010 via the INRMP metrics annual review, indicating that the INRMP does not sufficiently address nearshore environments. INRMP update list and project lists were updated to include this need.

Currently, these bases do not have sufficient biological information to determine if they are negatively impacting species and habitats within the nearshore environment. This lack of information puts the Navy at risk for violating several federal and state laws. In addition to federally mandated requirements, Navy and

State Policies and Plans dictate that we should have a working knowledge of our impacts to wildlife. This EPR exhibit works to get the Navy in compliance with these requirements.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Assessments of nearshore environments associated with bases are necessary to understand how mission requirements will affect species and habitats of concern and vice versa (how impact to species, habitats, and landscapes will impact the military mission). Various laws and regulations will be impacted by climate change (endangered species act, soil conservation act, clean water act, marine mammal protection act, essential fish habitat, etc.). The Sikes Act, National Environmental Policy Act, and Navy & DoD Policy (OPNAVINS M-5090.1, 4715.03, etc.) requires installations with INRMPs to have a working knowledge of climate change and near shore environments, which are to be included in the INRMPs. Knowing in advance what potential concerns there are would allow the command to plan around avoiding potential impacts and to plan for permitting and mitigation requirements, which may be needed to meet military training requirements.

Not having sufficient biological information related to Nearshore environments leaves the Navy vulnerable to lawsuits when this insufficient information is produced in NEPA documentation associated with military action projects. Obtaining sufficient information will help to avoid these situations or at least help the Navy to win or have such accusations overturned in a court of law.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* Project need was identified in 2010 via the INRMP metrics annual review, indicating that the INRMP does not sufficiently address nearshore environments. INRMP update list and project lists were updated to include this need. Exhibit was approved without funding for FYs 2014 & 2015. Partial funding was received for Nearshore Assessments in 2015 under a separate EPR (32442MH103) that covered NASO and NASO DNA. POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) or Contract & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report and Geodatabase
5	PreFinal Report and Geodatabase
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices) and Geodatabase
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., photographs, etc.)
9	Maps
10	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA/Contract. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. In general the data will be utilized to identify any trends in impact to bird species of concern given the various military missions, it will

be used to identify potential habitat modification requirements to minimize bird strikes, it will be used to update Bird Depredation Permits where required, and it will be used to help in conducting planning level reviews of proposed projects and activities with consideration for impacts to wildlife and the mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Cost estimation was derived utilizing the FY2015 Negotiated Nearshore Assessment Projects with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%. Due to how contract execution funding documentation was prepared EV22 Marine Resources SME recommended utilizing $65,000.00 as the FY15 GCE for the Oceana nearshore assessment cost (a.k.a,., Owls Creek).
  - If projects the following projects 60191NR231, 32442NR231, and 4274ANR231 are not funded at the same time the overall cost will likely be more expensive due to additional coordination, inhouse fees, and equipment mobilization requirements.

BASE	2015 Near Shore Contract Award	2015 Near Shore Inhouse Fees
NASO DNA	$404,904.84	3,277.71
NSA NWA	$0.00	0.00
NASO/NALFF	$65,000.00	0.00

Project Requested Funding: (Non-Annual Recurring Funds Project within a given POM Cycle)

- FY21 is for the Recurring Nearshore Environment Assessment following the Baseline Assessment (Recurring assessment due every 5 years after initial baseline).

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$0.00	$0.00	$0.00	$458,778.51	$0.00
NSA NWA	$0.00	$0.00	$0.00	$0.00	$0.00
NASO/NALFF	$0.00	$0.00	$0.00	$73,057.03	$0.00

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 7 July 2015

Project Numbers: 60191NR228
Project Title: SIKES MA NASO/NALFF **-** Natural Resources Staff Certification Requirements;

Guidebook & Chapter: 12110

Primary: SIKES Act
Secondary: ESA
Tertiary: FIFRA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual.

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); and Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual.

Project Description: *(What does this project entail?)*
Certification and re-certification requirements for maintaining key training for properly implementing INRMP identified program areas. This EPR is specifically for training required to obtain professional certifications in support of implementing INRMP program areas. Additional training, conferences, or meetings that are not required in support of a certification are not listed in this EPR exhibit, but should be identified in the individual's professional development plan and should be funded through a different funding pool.

Project Purpose: *(Why is this project needed?)* Adequately train personnel and maintain certifications that will allow staff to conduct INRMP identified projects in accordance with Federal and State Laws and Policies.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Not funding this exhibit could delay or prevent staff from receiving the training/certification required to legally implement INRMP program areas. As such this could delay mission critical operations until adequately trained personnel are hired to complete the various requirements.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Training, Travel & Certification

Navy Utilization of Deliverables:
Navy staff will utilize their certifications to legally and safely implement INRMP identified projects.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Cost estimates were derived based on historic certification cost/tuition fee requirements with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%
  - Required training/certifications were derived based off of the type of work required to implement INRMP identified program areas and as dictated via the Sike's Act, OPNAVINST M-5090.1, NAVFAC Community Management Plan, INRMP, etc.
  - Since the Natural Resources Staff Servicing NASO/NALFF, NASO DNA, and NSA NWA are supervised by the NASO IEPD and the training requirements are the same for each base, only one EPR (60191NR228) will be utilized to track funding for NR training for these installations vice 3 from previous POM cycles. As such POM18 requirements for EPR 32442NR228 and EPR 4275ANR228 were not submitted.
  - Note: The current Conservation Law-enforcement Officer (CLEO) was grand-fathered into the program before the FLETC training requirement was established. The current CLEO now exceeds the recommended age to send to Basic FLETC training. FLETC training is included in the table below as an identified requirement, if a new CLEO were to come on staff; however, no new NR staff CLEO GOV positions are anticipated to be funded in POM 18. As such, the FLETC CLEO training is not included in the overall cost requested during the POM 18 cycle.

- **Estimate #1:**
  - **Historic and Typical Cost Estimates:**

Training and Certification Requirement (as of 2013):

Course:	# of Staff:	# of Staff Requiring/ Year:	Frequency:	Unit Tuition Cost:	Minimum Annual Tuition Cost:	Maximum Annual Tuition Cost:	CECOS/Safety Center Avail.:	Anticipated Vendor:
EPR Exhibit Training/Certification Requirements:								
Airport Biologist Certification/ Recertification	1	1	Bi-Annual	400	400	500	NA	USDA/USA BASH COMMITTEE
Professional Wildlife Biologist Certification	1	1	Annual	400	400	400	NA	NMFWA
Professional Wildlife Biologist Certification	1	1	Bi-Annual	600	600	600	NA	TWS
Nuisance Wildlife Control Certification	3	2	As Needed, Tri-Annual	50-1000	50	1000	NA	NCTC
Wetland Identification/ Refresher Training	3	1	As Needed	50-1000	50	1000	NA	NCTC
BASH Training/ Certification	3	2	Tri-Annual	400	400	500	NA	USDA/USA BASH COMMITTEE
Species Specific Certifications	3	1	As Needed	50-1000	50	1000	NA	NCTC

Course:	# of Staff:	# of Staff Requiring/ Year:	Frequency :	Unit Tuition Cost:	Minimum Annual Tuition Cost:	Maximum Annual Tuition Cost:	CECOS/Safety Center Avail.:	Anticipated Vendor:
Equipment Operation Certifications	3	2	As Needed	50-1000	50	1000	NA	NCTC

Federal Conservation Law-Enforcement Certification (Advanced) - BTTTP, COPTP, ASTTP, AFTCSI, AFTCSII, AILEITP AILEITP M, Defensive Tactics	1	1	Once, per course				NA	FLETC
Federal Conservation Law-Enforcement Certification (Refresher)	1	1	Annual - As Needed				NA	NCTC/Other
TOTAL with FLETC:					**25,800**	**36,500**		
TOTAL minus FLETC:					**$17,000**	**$9,400.00**		

Additional Training, Certifications, Meetings:	
Pesticide/Herbicide Applicator Initial Cert.	Pesticide/Herbicide Applicator Re-Cert.
Weapons Qualifications Certifications	Weapons Qualifications Refreshers
Sikes Act Certification	1st Responder/CPR Training/Certification
VA & NC Wildlife Society Meetings	PIF State & Regional Meetings
Additional Training, Certifications, Meetings:	
Sustaining Military Readiness Conference	Pollution Prevention Program Operations & Management

	(AFIT ENV 022) or CECOS web conference version
DoD Partners in Flight Representative	Buying Green: A Multifunctional Approach to Pollution Prevention (DCPSO00R750)
Deer Study Group Meetings	Environmental Management Systems 101
GIS Refresher Training	Water Quality Management (AFIT ENV 541)
Equipment Operation Certification - Tractor	Air Quality Management (AFIT ENV 531)
Equipment Operation Certification – Chain-saw	Natural Resources Compliance (A-4A-0087)
Equipment Operation Certification - ATV	Ecological Risk Assessment (A-4A-0081)
Invasive Species Training	Historic Preservation Law and Section 106 Compliance (A-4A-0073)
Advanced Environmental Management (A-4A-0063)	Human Health Risk Assessment (A-4A-0078)
Basic Environmental Law (A-4A-0058)	Environmental Quality Sampling (A-4A-0026)
Advanced Environmental Law (A-4A-0068)	DOD ICRMP course (DENIX)
Environmental Negotiation Workshop (A-4A-0067)	Incident Action Plan (IAP) A-493-2400
Health and Environmental Risk Communication Workshop (A-4A-0072)	Munitions Response Site Management (A-4A-0093)
NEPA Application (A-4A-0077)	Environmental Management Systems 101
Introduction to Cultural Resources Management Laws and Regulations (A-4A-0070)	Incident Command System 300 (ICS 300) (A-493-2300)
Navy Environmental Restoration Program (A-4A-0069)	Incident Command System 200 (ICS 200) (A-493-2200)
Environmental Geographic Information Systems (GIS)/Geostatistics (A-4A-0084)	Hazardous Substance Incident Response Management (A-493-0077) or Hazardous
Natural and Cultural Resources Management (Web U)	Introduction to Hazardous Waste Generation and Handling (A-4A-0080)
Native American Traditions and Cultures: Implementing DOD Native American Policy (A- 4A-0085)	Uniform Federal Policy for Quality Assurance Plans (A-4A-0095) for Environmental Restoration Program personnel
DOD Migratory Bird Act Training (DENIX)	Environmental Protection (within 1 year of initial assignment) (A-4A-0036)

Project Requested Funding: (Recurring Funds Project within a given POM Cycle)

FY2018	FY2019	FY2020	FY2021	FY2022
$9,955.80	$10,154.91	$10,358.01	$10,565.17	$10,776.47

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 7 July 2015

Project Numbers: 60191NR226; 32442NR226; 4275ANR226
Project Title: CHS MA NASO/NALFF - INRMP Updates and Planning; CHS MA NASO DNA - INRMP Updates and Planning; CHS MA NSA NWA - INRMP Updates and Planning
Guidebook & Chapter: 12103
Legal Drivers:
Primary: ESA
Secondary: Sikes Act
Tertiary: CWA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual, Split Quarters 2nd (85%) and 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual.

Project Description: *(What does this project entail?)* Acquire equipment and support necessary to keep INRMPs updated. Each INRMP requires annual updating to reflect project needs, survey/inventory results, species status changes, metrics updates, site boundary mapping, map updates, statistical modeling/analysis updates, etc. If staffing levels are insufficient to allow for incorporation of annual updates (pen and ink changes) to be added to the physical document, if significant mission changes occur, if significant property alterations occur, if it is determined that existing INRMP NEPA is insufficient, etc. additional support may be needed every 4 years to ensure INRMPs are compliant with Federal, State, and Navy Policies, prior to their 5 year Sike's Act required review for Operation & Effect Concurrence. If the significance level is high enough to warrant an INRMP Revision vice an Update, additional funding will be required to conduct appropriate survey/inventory baseline data needs/analyses, consultations, and NEPA updates. At this time, no Revisions are anticipated for the POM 18 planning effort.

NASO/NALFF INRMP: Compliant INRMP dated 9 June 2015.

NASO DNA INRMP: Compliant INRMP dated 9 June 2015.

NSA NWA INRMP: Compliant INRMP dated 18 June 2015.

Project Purpose: *(Why is this project needed?)* Existing equipment does not allow the functionality to properly update and produce planning level analyses for the INRMP. As such, equipment is needed that does not connect to the network; therefore not requiring some of the restrictions that interrupt and prevent completion of detailed analyses and mapping efforts. Additionally, the equipment that is issued does not possess the speed and storage capabilities necessary for data processing and storage.

Support to maintain and utilize the equipment and keep INRMP data updated in accordance with various Navy and INRMP identified requirements (e.g., Geographic Information System collection and metadata requirements, map updates, data updates, analyses, modeling, etc.).

Update physical and digital versions of INRMPs to ensure all agreed upon metrics items and annual update needs have been appropriately addressed/placed into the INRMP in order to obtain 5 year Operation and Effect Concurrences to maintain a legally compliant document.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project will aide in making sure the bases are keeping in compliance with various Federal and State laws, regulations, policies, and conservation agreements (ESA, MBTA, MMPA, NMFA, Invasive and Pest Control, Sikes Act, INRMP, OPNAVINST M-5090.1, ADA, State Wildlife Action Plan, USFWS Strategic Plan, etc.).

INRMPs have a number of updates that are listed and approved by the annual INRMP metrics review teams (Navy, USFWS, and State Wildlife Agency representatives) as needed to be made to the INRMP plan, but current staffing levels and equipment are insufficient to accomplish the required updates. Many updates require research, analysis, and data modeling to accomplish the completed desired results for the official INRMP document.

Funding this project ensure the installation has accurate planning level data to make educated decisions related to military training and readiness activities. A fully compliant and implemented INRMP helps to ensure that Natural Resources are managed appropriately ensuring both conservation objectives and realistic training opportunities exist for our active duty and civilian workforce. A fully compliant and implemented INRMP also helps to ensure that natural resources and associated activities (nature trails, hunting, fishing, etc.) are maintained that support the Morale and Welfare of our active duty and civilian workforces, in addition to and as authorized retired, veteran, disabled, contractors and general public individuals.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)*

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Purchase Computer
2	Purchase ESRI and Trimble Software Maintenance/Update Packages
3	Purchase SPSS
4	Acquire FRAGSTATS
5	Purchase External Hard-drive
6	Purchase Surge protectors (2)
7	Maintenance (as needed)
8	Itemized Purchase Receipts
9	Analysis, GIS support, data management, GPS work, and document update support
10	Annually Updated INRMP document (Pen & Ink Changes, minimum)
11	Every 4 Years, if needed, Consolidated Pen & Ink Changes or Major Update Requirement to Digital and Hardcopy INRMP and/or Initiate INRMP NEPA Update.

**Pathfinder and Active Sync Acquisition Requirements have been completed.*

Navy Utilization of Deliverables:

Navy staff will utilize this equipment to more efficiently and expeditiously perform updates and analyses associated with maintaining current INRMPs.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Cost estimate was derived from FY2012 and FY2015 funded projects associated with this EPR with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%.
  - Note: As INRMP Compliance was obtained later than originally planned during the POM16 cycle, the 2017 POM'd funds should be utilized to reassess/obtain new NEPA documentation or provide an overhaul to the Migratory Bird and Endangered Species sections of the INRMPs.

Base	FY2012 4-5 year Consolidated Plan Updates (Includes an Inhouse Fee of $1,545.45 ea)	FY2015 GIS and GPS Support for Annual Plan Updates (Inhouse Support)
NASO DNA	$24,687.89	$8,333.00
NSA NWA	$24,687.89	$8,333.00
NASO/NALFF	$24,687.89*	$8,333.00

*This Estimate was adjusted to match estimates for other INRMPs. The cost was artificially lower in 2012 due to age of INRMP. There were actually more updates needed to the document than were made during the contracted update.

Project Requested Funding: (Recurring funds project with Non-Annual Recurring component within a given POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$8,825.71	$37,056.24	$9,182.63	$9,366.28	$9,553.61
NSA NWA	$8,825.71	$37,056.24	$9,182.63	$9,366.28	$9,553.61
NASO/NALFF	$8,825.71	$37,056.24	$9,182.63	$9,366.28	$9,553.61

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 7 July 2015

Project Numbers: 60191NR224; 32442NR224; 4275ANR224
Project Title: SIKES MA NASO/NALFF - Equipment Maintenance & Repair; SIKES MA NASO DNA - Equipment Maintenance & Repair; SIKES MA NSA NWA - Equipment Maintenance & Repair
Guidebook & Chapter: 12999
Legal Drivers:
Primary: EO_Invasive Species
Secondary: Sikes Ac t
Tertiary: SWCA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual, Split Quarters 1st, 2nd, 3rd & 4th

---

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); and Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual, as needed.

Project Description: *(What does this project entail?)*
Maintain and repair equipment to keep them in working order to complete projects required under the Integrated Natural Resources Management Plan (INRMP). INRMP projects support Species and Habitats of Concern management, invasive species management, outdoor recreation, etc.

Project Purpose: *(Why is this project needed?)* Some equipment requires annual maintenance checks and repairs as needed. Other equipment may break while in use and will need repairs. This equipment is needed to support INRMP identified projects and maintain compliance with Federal, State, and Navy laws, regulations, and policies. Without working equipment the Navy cannot accomplish their INRMP and Permit requirements, and will be labeled non-compliant and possibly be issued Notices of Violation.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)*
Equipment repairs and maintenance are needed to maintain compliance with the: Sikes Act; Endangered Species Act; EO_Invasive Species; Migratory Bird Treaty Act; OPNAVINT M-5090.1; Clean Water Act; Soil & Water Conservation Act; American with Disabilities Act; etc.

The equipment needing to be properly maintained and repaired is utilized for various projects that support requirements under federal and state law and Navy policy. This equipment performs functions in support of Endangered Species work (issued biological opinion), Migratory Bird work, invasive species work, nuisance wildlife work, erosion control work, habitat enhancement work, the Sikes Act, outdoor recreation, environmental compliance inspection access, etc.

Maintaining this equipment enables the Navy to continue supporting these efforts and help to keep the bases in compliance with these laws and regulations; as such, reducing the potential for NOVs to be issued. This helps to save time and money enabling the military to continue training without interruption.

Proper maintenance and repair of the equipment extends the life of the equipment and delays the need for more costly repairs or even new equipment purchasing.

Without equipment the Natural Resources managed outdoor recreation program would likely have to shut down due to access and safety issues, thus reducing military morale and welfare.

Without this equipment the Military will have to pay additional funding to maintain areas (at a much greater cost) they utilize for training purposes because Natural Resources will not be able to maintain their dual purpose land management objectives.

Without this equipment the facilities will be endangered of wildfire intrusion because the Natural Resources program will not be able to maintain their firebreaks.

Without this equipment the facilities will be more likely to flood because invasive plant species management, which block the ditches and create security breaches, will have to be stopped until funding can be obtained.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* If equipment does not get repaired, projects do not get completed, and the Navy becomes non-compliant with established requirements. POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Equipment Annual Maintenance Checks
2	Equipment Repair
3	Work estimates for repair and maintenance activities
4	Itemized Work Receipts

Navy Utilization of Deliverables:

Navy staff will continue to utilize equipment to maintain INRMP identified requirements, and new regulatory permit requirements.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Cost estimates were derived via an internet search and vendor supplied quotes of items and shipping costs, and known labor costs from prior Navy support equipment maintenance and repair and FY15 PWD Inhouse Fees. Estimate 1 is a worst case scenario, were all equipment requires repair and maintenance.
  - This estimate has been split between each of the Oceana NR AOR bases, which cover 3 INRMPs (NASO/NALFF, NASO DNA, and NSA NWA) because the equipment services all 4 sites.
  - The following inflation rates were applied and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%

Estimate #1:

- **Internet Costs & Labor Research & Vendor Quotes & Previous Cost History:**

2015 Equipment Maintenance & Repairs Needs:

Items:	Year	Total Cost:
Tractor (4)	Annual	12,000.00
ATV (2)	Annual	2,000.00
Gator (1)	As Needed	1,000.00
Chainsaw (3)	As Needed	1,500.00
Weapons (6)	As Needed	3,000.00
Vehicle Tow Hitches (2)	As Needed	2,000.00
Vehicle Wench (2)	As Needed	6,000.00
Vehicle Lift-Gate (2)	As Needed	2,000.00
Vehicle Accessory Lights (3)	As Needed	500.00
Lawn Mower (1)	As Needed	500.00
Hedge Trimmers (2)	As Needed	500.00
Weed whackers (3)	As Needed	500.00
Augers (5)	As Needed	1,500.00
Sprayer (4)	As Needed	3,000.00
Tow Trailer (2)	As Needed	2,000.00
Fire Trailer (1)	As Needed	1,000.00
Walk-in Cooler (1)	As Needed	3,000.00
Hand Held Radios (6)	As Needed	2,400.00
Digital Cameras (5)	As Needed	1,000.00
Truck Radios (2)	As Needed	2,000.00
Trimble GPS (3)	As Needed	3,000.00
Garmin GPS (5)	As Needed	1,000.00
Annual Requirement	Annual	14,000.00
Non-Annual Potential Emergency Repair Funds	As Needed	37,000.00
Annual Requested Emergency Repair Funds	Annual	11,000.00
Total Annual Request		**24,000.00**

Project Requested Funding: (Recurring Funds Project within a given POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$3,558.67	$3,629.84	$3,702.44	$3,776.49	$3,852.02
NSA NWA	$6,863.14	$7,000.41	$7,140.42	$7,283.22	$7,428.89
NASO/NALFF	$15,251.43	$15,556.46	$15,867.59	$16,184.94	$16,508.64

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 7 July 2015

Project Numbers: 60191NR223; 32442NR223; 4275ANR223
Project Title: SIKES MA NASO/NALFF - Equipment Storage Structures; SIKES MA NASO DNA - Equipment Storage Structures; SIKES MA NSA NWA - Equipment Storage Structures
Guidebook & Chapter: 12999
Legal Drivers:
Primary: Sikes Act
Secondary: CWA
Tertiary: SWCA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* FY2014-19, Split Quarters 2nd (85%) & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads – Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual as needed.

Project Description: *(What does this project entail?)*
- Demolish metal temporary storage structure that is rusting and collapsing at the Natural Resources Center on NASO. Replace storage structure. (2019)
- Construct new equipment storage shed capable of housing tractors and associated equipment parts at NASO. (2020)
- Repair storm damaged tractor storage shed at NASO. (2018)
- Repair storm damaged tractor storage shed at NSA NWA. (2018)
- Maintain equipment storage structures. (annually)

Project Purpose: *(Why is this project needed?)* Existing storage structures are in disrepair and are not being utilized for their intended purposes. One structure is a safety hazard and needs to be demolished (needs to be replaced with a secure locking concrete storage shelter, vandals have been known to steal items from the Natural Resources Center). One structure is leaking during storm events and damaging equipment. One structure lost its doors during a storm event and now items can not be securely stored (due to location of this structure with out doors nothing can be stored in this structure). Even with the repair and replacement of these structures there is still not enough storage to properly store equipment from elemental damage. As such a new structure must be constructed to protect hundreds of thousands of dollars of equipment and extend the life cycle of this equipment.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* The equipment needing to be properly stored is utilized for various projects that support requirements under federal and state law and Navy policy. This equipment performs functions in support of Endangered Species work, Migratory Bird work, invasive species work, nuisance wildlife work, erosion control work, habitat enhancement work, the Sikes Act, etc.

Maintaining this equipment enables the Navy to continue supporting these efforts and help to keep the bases in compliance with these laws and regulations; as such, reducing the potential for NOVs to be issued. This helps to save time and money enabling the military to continue training without interruption.

Protecting the equipment extends the life of the equipment and delays the need for costly repairs or even new equipment purchasing.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* Project scheduled in 2012 and 2013, but unfunded. POM 14 only annual maintenance funding received, no construction $ received. POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Storage Structure Demolition
2	Storage Structure Repairs
3	Storage Structure Purchasing
4	Storage Structure Construction
5	Quarterly Reports of Project Status
6	Copies of Operation Manuals
7	Placement of Qualifying Structures on the Base Facility Inventory List
8	Itemized Receipts for all work completed and items purchased

Navy Utilization of Deliverables:

Navy staff will utilize these structures to store equipment out of the elements to extend the life expectancy of vital programmatic equipment. Placement of qualifying equipment on the base facility inventory list will allow those structures to receive maintenance from the Public Works maintenance funding, instead of through the ENV program. Please note that many of these structures will not qualify for designation on the facilities list and will continue to require EV funds for maintenance as needed.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
    - Cost estimates were derived via an internet search and vendor supplied quotes of items and shipping costs, and known labor costs for Navy support construction and demolition work. Structure repair, maintenance, and construction needs were established based off of equipment and storage structure inventories.
    - This estimate has been split between each of the Oceana NR AOR bases, which cover 3 INRMPs (NASO/NALFF, NASO DNA, and NSA NWA) because the equipment services all 4 sites.
    - The following inflation rates were applied and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%

- **Estimate #1:**
  - **Internet Costs & Labor Research & Vendor Quotes:**

Storage Structure Needs:

Items:	Year	2015 Unit Cost:	2015 Labor Rate:	2015 Total Cost:
Pre-fabricated Storage Shed (Concrete structure), NASO	2019	$16,000.00	20%	$19,200.00
Facilitiy Demo (metal shed), NASO	2019	$4,000.00	20%	$4,800.00
Fabric Tractor Shed (with foundation), NASO	2020	$45,000.00	20%	$54,000.00
Tractor Shed Door Installation	2018	$30,000.00	20%	$36,000.00
Structure Maintenance, NASO-DNA-NWA	Annual	$4,000.00	20%	$4,800.00

Project Requested Funding: (Recurring Funds Projects with Non-Recurring Components within a given POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$711.73	$725.97	$740.49	$755.30	$770.40
NSA NWA	$1,372.63	$1,400.08	$1,428.08	$1,456.64	$1,485.78
NASO/NALFF	$38,128.58	$25,927.43	$59,503.46	$3,236.99	$3,301.73

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 7 July 2014

Guidebook & Chapter: 12109
Legal Drivers:
Primary: Sikes Act
Secondary: MSFCA (originally planned to be Primary; however EPRweb does not provide that option)
Tertiary: M-5090.1
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual, Split Quarters 1st, 2nd, 3rd, & 4th

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual, as needed

Project Description: *(What does this project entail?)* Maintain hunting, fishing, and nature: trails; boardwalks; fishing stations picnic shelters; ranges; elevated shooting stands/platforms; check-station; walk-in cooler; freezer; and brochures (i.e. mass production of rules & regulations pamphlets, maps, archery training materials, permits, etc.).

Project Purpose: *(Why is this project needed?)* Maintenance of these items is required: to allow people to safely recreate on these bases; to allow people with physical disabilities to recreate; to ensure people have written documentation or rules/regs./procedures; to promote education opportunities; and to allow proper processing and checking of wildlife taken during recreational activities. Implementation of this project is conducted under the guides of the Sike's Act and in accordance with Navy, USFWS and State mandated policies regarding wildlife population management. The outdoor recreation program also supports objectives linked to the Endangered Species Act, Migratory Bird Treaty Act, Americans with Disabilities Act, NAVFAC OPNAVINST M-5090.1, and numerous other laws and policies linked to invasive species, water quality, and nuisance wildlife control.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project maintains upkeep of the arteries of the Natural Resources (NR) Outdoor Recreation program (ORP). The NR ORP supports a number of wildlife population management objectives, including but not limited to: deer herd population reduction; nuisance wildlife removal; invasive species removal; and bird aircraft strike hazard (BASH) reduction.

Outdoor *Recreation Accessibility Guidelines,* Outdoor Recreation

Accessibility Guidelines Draft 2004
USDA Forest Service Trail Accessibility Guidelines,
http://www.fs.fed.us/recreation/programs/accessibility/

This program supports the military mission in 3 primary ways: 1. increasing Morale and Welfare by allowing outdoor recreation; 2. educating military regarding NR concerns and how they contribute; and 3. ensuring safety to allow military training to continue (BASH reduction).

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	STATUS:	~2015 COST:
Printer (For Recreation Program)	Non-Recurring	$2,000.00
Chain Saw and Weed-whacker Parts	Recurring	$400.00
Lumber	Recurring	$1,000.00
Nuts & Bolts	Recurring	$250.00
water Hose	Non-Recurring	$50.00
Weighing station supplies	Non-Recurring	$500.00
POWER STOP ARCHERY TARGET	Recurring	$1,600.00
Spray Paint	Recurring	$200.00
Brochures	Non-Recurring	$1,500.00
Misc.	Recurring	$1,300.00
TOTAL RECURRING:	**Recurring**	**$4,750.00**
TOTAL NON-RECURRING:	**Non-Recurring**	**$4,050.00**

Navy Utilization of Deliverables:

Navy staff will utilize purchased items to maintain ORP as indicated above.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Cost estimate was derived from known need requirements, 2015 executed purchase requests, and a 2015 internet search of cost estimates from online vendors.
  - This estimate has been split between each of the Oceana NR AOR bases, which cover 3 INRMPs (NASO/NALFF, NASO DNA, and NSA NWA because the Natural Resources staff service all 4 sites.
  - The following inflation rates were applied and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%
  -

Project Requested Funding: (Recurring Funds required within the POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$704.32	$718.41	$732.77	$747.43	$762.38
NSA NWA	$1,358.33	$1,385.50	$1,413.21	$1,441.47	$1,470.30
NASO/NALFF	$5,018.51	$3,078.88	$3,140.46	$3,203.27	$3,267.34

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 6 July 2015

Project Numbers: 60191NR221; 32442NR221; 4275ANR221
Project Title: EFH MA NASO/NALFF - Fisheries, Ditches & Streams; EFH MA NASO DNA - Fisheries, Ditches & Streams; EFH MA NSA NWA - Fisheries, Ditches & Streams
Guidebook & Chapter: 12101
Legal Drivers:
Primary: Magnuson-Stevens Fishery Conservation and Management Act
Secondary: Clean Water Act
Tertiary: EFH
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual Split Quarters 2nd (85%) and 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); NASO Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* 15 months for baseline inventories/assessments/management plan (every 5 years or as deemed necessary due to major land or mission changes); annual implementation and monitoring of implemented management plan requirements.

Project Description: *(What does this project entail?)* Conduct an inventory and assessment of ditch, stream, pond, and lake functions (this includes wildlife that live in and contribute to the functionality of the water resource, i.e. fish population assessments) and hydrology. Develop a Habitat enhancement plan for these water resources. Purchase equipment, supplies, fish, plants, etc. to assist with this project.

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Project allows the base to maintain compliance with: the Sustainable Fisheries Act Amendment to the Magnuson-Stevens Fishery Conservation and Management Act in 1996; the Chesapeake Bay Preservation Act; the Clean Water Act; Coastal Zone Management Act; Essential Fish Habitat protection; OPNAVINST M-5090.1; base INRMPs; Sikes Act; and numerous other plans Southern Watershed Area Management Plan (SWAMP); Lynnhaven River Watershed Restoration Plan (sub of Chesapeake); Back Bay Watershed Restoration Plan (sub of southern).

The waterways of NASO, NALFF, NASO DNA, and NSA NWA connect to several watersheds which all have the potential to influence Essential Fish Habitat (EFH) within the Atlantic Ocean, and/or Chesapeake Bay.

The fish stocking is intended to produce breeding populations of native fish to increase water resources and functionality (as appropriate). Since several of the water resources where fish are anticipated to need to be stocked are areas where recreational fishing is allowed this project also

benefits the military community by allowing additional outdoor recreation opportunities, thus potentially increasing Morale and Welfare.

In addition the data is utilized to make more informed NEPA property management decisions in associated with DoD/military mission changes.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report
5	PreFinal Report
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., etc.)
9	Maps
10	Ground-truthing
11	Purchase, stocking, planting, installation, etc. of fish, plants, equipment etc.
12	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Estimates have been derived from the contracted FY2012-2014 funded projects with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%

	Inhouse	Contracted
Golf Course	$10,000.00	$0.00
NW-Stell	$5,000.00	$39,942.54
OC & DN TT	$5,000.00	$171,804.83
FN	$5,000.00	$70,276.83

- Partial Funding may be available via Sikes Act, Agricultural, or Forestry Funds. It is unlikely Ag or Forestry Funds will be available. Sikes Act funds will be minimal at best.

Base	FY12-14 Baseline Inventory Costs	~FY2015 Costs (monitoring, stocking, etc.)	~FY2015 Costs (monitoring, stocking, etc.)
NASO/NALFF	$217,880.45	$4,952.00	$4,952.00
NASO DNA	$44,201.21	$3,597.00	$3,597.00
NSA NWA	$44,942.54	$8,439.00	$8,439.00

Project Requested Funding: (Recurring Funds Project within a given POM Cycle)…highlighted funds include assessment and annual recurring fee. Note for NASO and NALFF their assessment fall on different years from one another.

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$3,809.68	$49,388.33	$3,963.59	$4,042.86	$4,123.72
NSA NWA	$50,068.96	$5,349.69	$5,456.69	$5,565.82	$5,677.14
NASO/NALFF	$8,937.97	$159,338.51	$84,358.87	$9,485.05	$9,674.75

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 5 July 2015

Project Numbers: 60191NR220; 32442NR220; 4275ANR220
Project Title: 4 SAR MA NASO/NALFF – Nuisance Wildlife Inventory, Assess & Remove; 4 SAR MA NASO DNA – Nuisance Wildlife Inventory, Assess & Remove; 4 SAR MA NSA NWA – Nuisance Wildlife Inventory, Assess & Remove
Guidebook & Chapter: 12101
Legal Drivers:
Primary: Sikes Act
Secondary: Endangered Species Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual (as needed), Split Quarters 2nd , 3rd, & 4th

---

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual (as needed) for control and monitoring. 15 Months for baseline inventory and assessment (to be repeated every 5 years).

Project Description: *(What does this project entail?)* Develop a nuisance wildlife assessment and management plan (revised every 5 years); remove nuisance wildlife, and conduct pre, during and post nuisance wildlife removal effort monitoring (annually).

Project Purpose: *(Why is this project needed?)* NASO, NALFF, NASO DNA, and NSA NWA all have nuisance wildlife issues that are killing species of concern, damaging habitat of species of concern, and damaging ditch and stream banks (promoting erosion and sediment control problems).

This project is needed to maintain compliance with a variety of Federal, State, and Navy laws, regs., and policies.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project aides the Navy in maintaining compliance with laws, regs., and policies reduces the potential for incurring Notices of Violations. NOVs could be issued for a number of reasons to include, but not limited to: knowingly allowing nuisance wildlife to negatively impact species of concern; and failing water quality testing, due to lack of proper erosion and sediment control.

Allowing nuisance wildlife to damage ditches and streams also poses health and safety threats to the base in that the damage by nuisance wildlife can collapse and clog vital storm water run-off structures. Damage of these water structures could cause flood and damage to the base, waste water treatment facilities, training facilities, homes, etc. Such devastation could make the base or portions of the base unusable for military training and displace people who live on or adjacent to the base. In addition pooling water creates ideal breeding habitats for a variety of mosquito species (some of which are classified as invasive species), which increase the threat of wildlife borne disease which can spread to humans and other wildlife.

In addition controlling wildlife species in support of species of concern, water quality, human health & safety, and training land functionality there are also some residual beneficial side effect. Such benefits may include: increasing agricultural crop yields; reduction of emergency wildlife calls; and reduction of potential BASH concerns.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report
5	PreFinal Report
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., etc.)
9	Maps
10	Nuisance Wildlife Removal
11	Permit Acquisitions (if required, typically Navy acquires)
12	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Cost estimate was derived from: discussions with USDA personnel in the VA regional field office; similar work conducted on installations in VA and the known nuisance wildlife concerns and acreages of the bases (NASO, NALFF, NASO DNA, & NSA NWA); and final cost estimates obtained from the FY2012 nuisance wildlife inventory.
  - Due to the nature of this project it is likely that the cost will fluctuate up or down due to removal success, new species, changes in species population levels, etc.
  - It is recommended that an interagency cooperative agreement with USDA Wildlife Services (WS) for nuisance wildlife control is developed. USDA WS is specialized in this area of work. As a sister agency overhead cost are lower than many outside contractors. Previous MIPR agreements have been made with USDA for similar services. USDA currently works on other installations across DoD and has conducted some previous work on Hampton Roads, VA bases.
  - Funds requested are for WS support only. Navy support is in-house. WS will be responsible for: the development of existing conditions assessment, complete listing of onsite nuisance wildlife, and

management plans; some monitoring; and take and removal of designated nuisance wildlife species. Navy personnel will: acquire and maintain appropriate depredation permits; will assist where needed to conduct wildlife surveys for monitoring efforts; and will coordinate USDA access for project completion.

- The following inflation rates were applied and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%.

Estimate #1:

BASE	FY2012 Actual Cost Inventory	FY2012 Inhouse Fee (Inventory)	FY12 Unfunded Est. Control	FY2012 Unfunded Inhouse Fee (Control)
NASO DNA	$24,696.74	$1,545.45	$49,393.48	$1,545.45
NSA NWA	$23,179.36	$1,545.45	$46,358.72	$1,545.45
NASO/NALFF	$37,816.05	$1,545.45	$75,632.10	$1,545.45

Project Requested Funding: (Recurring Funds Project with Non-Annual Recurring Component within a given POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$56,749.34	$29,820.25	$30,416.65	$31,024.98	$31,645.48
NSA NWA	$53,368.41	$28,095.98	$28,657.89	$29,231.05	$29,815.67
NASO/NALFF	$85,980.90	$44,728.34	$45,622.91	$46,535.37	$47,466.07

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 5 July 2015

Project Numbers: 60191NR219; 32442NR219; 4275ANR219
Project Title: SIKES MA NASO/NALFF - Wildlife Emergency Response; SIKES MA NASO DNA - Wildlife Emergency Response; SIKES MA NSA NWA - Wildlife Emergency Response
Guidebook & Chapter: 12999
Legal Drivers:
Primary: SIKES Act
Secondary: Endangered Species Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual, Split Quarters 1st, 2nd , 3rd, & 4th

---

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual (on call: 24 hours, 7 days a week).

Project Description: *(What does this project entail?)*
Purchase of wildlife control equipment and supplies to support emergency wildlife calls supported by the Base and Region Natural Resources Program Staff. Refresher training/cert. for NR staff in support of Emergency Wildlife control calls is covered under a separate training EPR.

Project Purpose: *(Why is this project needed?)* NASO, NALFF, NASO DNA, and NSA NWA are all located with in the Hampton Roads Region of VA. Hampton Roads is a mix of urban, rural, and natural areas. This land fragmentation, coupled with urban sprawl, puts wildlife and humans in direct competition for the same limited resources and results in human-wildlife conflicts. In an attempt to minimize impacts to humans and wildlife the base Natural Resources staff, in coordination with USFWS and State & Local Wildlife Agencies, respond to emergency wildlife calls.

People who respond to these calls need to be supplied with appropriate equipment to safely and efficiently address these concerns.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project promotes safety of NR personnel, military, civilians, and wildlife. This project minimizes impacts to military training in two primary manners by: 1. expeditiously and safely addressing wildlife concerns; and 2. protecting species of concern, preventing potential Notices of Violation and mitigation costs/requirements. There is a number of Federal and State listed species of concern that either live or seasonally visit bases in the Hampton Roads Area. As such this project allows the Navy to maintain compliance with various Federal and State laws, regulations, policies, and conservation agreements (ESA, MBTA, MMPA, NMFA, Invasive and Pest Control, Sikes Act, INRMP, OPNAVINST M-5090.1, State Wildlife Action Plan, USFWS Strategic Plan, etc.).

Any call that can not be safely and efficiently handled by base NR staff will be turned over to State Wildlife Agency officials to address.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

Equipment list with 2009 cost estimates.

Item	Qty.	Unit	Cost/ unit	Subtotal	Shipping	Total Cost	Status
Tow Straps	8	ea	17.00	136.00	34.00	170.00	Non-recurring

Navy Utilization of Deliverables:

Navy staff will utilize this equipment to safely and expeditiously resolve the majority of the emergency wildlife calls/concerns to which their assistance is requested.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)* See Proposed deliverables section for a detailed purchase list.
  - 2009 Cost estimates were derived via an internet search and vendor supplied quotes of items and shipping costs.
  - Equipment need was based off of a 2008 and 2012 internal equipment inventory and assessment of types of response calls to which staff typically respond.
  - Equipment list status and cost estimates per item are provided under proposed deliverables.
  - This estimate has been split between each of the Oceana NR AOR bases, which cover 3 INRMPs (NASO/NALFF, NASO DNA, and NSA NWA) because the equipment services all 4 sites.
  - The following inflation rates were applied and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%

Project Requested Funding: (Recurring Funds Project within a given POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$1,391.72	$1,419.56	$1,447.95	$1,476.91	$1,506.44
NSA NWA	$1,391.72	$1,419.56	$1,447.95	$1,476.91	$1,506.44
NASO/NALFF	$2,783.43	$2,839.10	$2,895.88	$2,953.80	$3,012.88

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 6 July 2015

Project Numbers: 60191NR218; 32442NR218; 4275ANR218
Project Title: EO 13751 MA NASO/NALFF - Invasive Species; EO 13751 MA NASO DNA - Invasive Species; EO 13751 MA NSA NWA - Invasive Species
Guidebook & Chapter: 12106
Legal Drivers:
Primary: EO 13751 Invasive Species
Secondary: National Invasive Species Act or Plant Protect Act (sup. Fed Nox. Weed Act)
Tertiary: Soil and Water Conservation Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual, Split Quarters 2nd (85%), & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual monitoring with a more detailed baseline assessment every 5 years (Jan-Dec). Annual control application of herbicide (Sept-Nov, unless otherwise stipulated).

Project Description: *(What does this project entail?)* Develop an invasive species assessment and management plan (to be updated every 5 years); remove/control invasive species (as plan recommends upon approval), and conduct pre, during and post invasive species control monitoring (annually).

Assessment plans at a minimum will include: surveying for invasive species (flora and fauna); providing a prioritized list of invasive species on base for removal; developing population estimates; mapping extent of species on base; providing management techniques and plan for the control/removal of the invasive species from the base; production of GIS layers associated with species distribution and management.

Annual Monitoring will be an assessment of implemented control techniques. This may include water quality testing; vegetation sampling or surveying; mapping of control area application boundaries prior to treatment; mapping of control area after treatment; etc.

Implemented control/removal techniques may involve pesticides, prescribed burning, mechanical removal, biological controls (for uncontrolled biologics, only native species are authorized) or other habitat alterations (e.g., managing for vegetation height to shade out the non-native).

A Non-native Flora Inventory was Awarded in 2012 that Identified 38 targeted species. Of those species 5 are currently being controlled utilizing a combination of herbicide and manual treatment: kudzu, phragmites, alligator weed, golden bamboo and parrotfeather milfoil.

A Non-native Fauna Inventory has not been awarded for these installations; however several non-native faunal species have been identified on the installations that pose a potential threat to native species.

Project Purpose: *(Why is this project needed?)*
To obtain compliance with and contribute to the goals of the: National Invasive Species Act, EO 13751 Invasive Species, Soil and Water Conservation Act, Clean Water Act, OPNAVINST M-5090.1, Integrated Natural Resources Management Plan, Integrated Pest Management Plan, Endangered Species Act, Migratory Bird Treaty Act, Essential Fish Habitat, etc.

Neither NR Staffing Levels nor training/certifications are adequate to handle the severity of the invasive species problem on these 4 bases. NASO, NALFF, NASO DNA, and NSA NWA all have known invasive species issues that are or could potentially kill species of concern, damage habitats of concern, damage ditch and stream banks (promoting erosion and sediment control problems), and threaten base and military mission security. This project is needed to maintain compliance with a variety of Federal, State, and Navy laws, regulations, and policies.

Between the 4 bases: 38 invasive plant species have been identified to occur on base (prior to 2013 only 23 invasive plant species had been confirmed); and 7 known vertebrate/invertebrate invasive species are known to occur with an additional 2 suspected to occur (no formal inventory for invasive fauna has been completed). There is undoubtedly additional species that should be added to the list of invasive species.

The 2006 EA associated with this EPR for the control of phragmites and kudzu indicates that in addition to the aerial herbicide application that manual ground herbicide treatments will be used for treatment of stands that are not accessible by aircraft and prescribed burning will be used as a follow-up treatment for the control of this species. Unfortunately, adequately trained staffing levels and weather conditions have made it almost impossible to both conduct the manual spraying or conduct prescribed burns (prescribed fire is covered under a different EPR) on the frequency needed to control these species.

Due to security requirements along fence and building perimeters there is an annual mowing contract which cuts the vegetation away from the fence line out to 30ft. This mowing stops some invasive species. Unfortunately, this mowing is also spreading and increasing the threat of other invasive species such as Phragmites. Phragmites grows quickly and forms dense tall stands which: block the view of the security perimeter; chokes out the native plant and animal species; and clogs ditches vital to keep the base from flooding during storm events.

NR staff is observing similar levels of destruction occurring due to other species such as Kudzu, Wisteria, Tree-of-Heaven, Bamboo, and Sericea lespedeza.

Several of these species have invaded wetland mitigation sites and are threatening the integrity and the success of the wetland. If adequate control can not be maintained the site may fail to be approved by the permit/mitigation regulating agencies and may require renegotiations and additional mitigation to be conducted elsewhere.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project aides the Navy in maintaining compliance with laws, regs., and policies reduces the potential for incurring Notices of Violations. NOVs could be issued for a number of reasons to include, but not limited to: knowingly allowing invasive species to negatively impact species of concern; and failing water quality testing, due to lack of proper erosion and sediment control. Internal to the navy additional NOVs can be issued for fire and security hazards.

Proper management of invasive species provides multiple benefits to species, the ecosystem and the military. This project: supports the reduction of Bird-Animal Aircraft Strike Hazards (BASH) concerns by altering vegetation structure to reduce site desirability for species that would or have posed BASH threats; reduces height obstructions associated with various military equipment requirements (i.e., Antenna arrays, Flight Ops, etc.); reduces the risk of facilities being overrun by uncontrollable “wildfires” or flooding; and reduces disease outbreaks.

Allowing invasive species to damage ditches and streams also poses health and safety threats to the base in that the damage by these species can clog vital storm water run-off structures. Damage of these water structures

could cause flood and damage to the base, waste water treatment facilities, training facilities, homes, etc. Such devastation could make the base or portions of the base unusable for military training and displace people who live on or adjacent to the base. In addition pooling water creates ideal breeding habitats for a variety of mosquito species (some of which are classified as invasive species), which increase the threat of wildlife borne disease which can spread to humans and other wildlife.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* POM 16/17 Partially approved, only approved survey/inventory funds, did not approve control/management funds. Invasive fauna surveys have not been funded.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA), Contract, Project Order, Work Order & Support Documentation
3	Quarterly/Monthly Project Status Reports
4	Draft Flora Inventory Final Report and Geodatabase
5	PreFinal Flora Inventory Report and Geodatabase
6	Final Flora Inventory Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices) and Geodatabase
7	Draft Fauna Inventory Final Report and Geodatabase
8	PreFinal Fauna Inventory Report and Geodatabase
9	Final Fauna Inventory Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices) and Geodatabase
10	Draft Control/Monitoring Final Report and Geodatabase
11	PreFinal Control/Monitoring Report and Geodatabase
12	Final Control/Monitoring Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices) and Geodatabase
13	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
14	Copies of All Associated Data Collected (Datasheets, sample collection info., photographs etc.)
15	Maps
16	Invasive Species Removal/Control
17	Permit Acquisitions (as required)
18	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA/Contract. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
    - Cost estimate was derived from FY2012 contracted invasive species inventory project costs and FY2008-2015 invasive species control project costs with the following applied annual inflation rates

and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%.

- Due to the nature of this project it is likely that the cost will fluctuate up or down due to removal success, new species, changes in species population levels, etc.
- There is the potential to develop a cooperative agreement with USFWS regarding this project, because there are 2 US National Wildlife Refuges adjacent or within the same regional management unit as these 4 Navy bases, which are also working similar invasive species concerns. It is typically cheaper to group projects into a single larger project than to conduct smaller individual projects. USFWS has written the majority of the invasive species best management practices. USFWS is also one of the signatories on our INRMPs.

- **Estimate #1:**
  - **Contract Vendor and Previous History Estimates:**

Base	FY2012 Cost for Plan, Inventory & Map (Flora)	FY12 Inhouse Fee Inventory (Flora)	FY2014-2015 Cost Monitor & Control (Flora)	FY14-15 Inhouse Fee Control (Flora)	~FY15 Cost for Plan, Inventory & Map (Fauna)	~FY15 Inhouse Fee Plan (Fauna)	~FY15 Cost Monitor & Control (Fauna)	~FY15 Inhouse Fee Control (Fauna)
NASO/NALFF	$113,990.21	$3,000.00	$17,706.76	2500	$119,903.10	$3,155.62	$17,706.76	2500
NASO DNA	$26,597.72	$3,000.00	$34,148.75	1250	$27,977.39	$3,155.62	$34,148.75	1250
NSA NWA	$51,295.59	$3,000.00	$75,886.12	1250	$53,956.39	$3,155.62	$75,886.12	1250

Project Requested Funding: (Recurring Funds Project with Non-Annual Recurring Component within a given POM Cycle)…*highlighted are the years with both control and inventory requirements.*

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$53,438.93	$54,507.70	$21,291.90	$21,717.74	$22,152.09
NSA NWA	$98,664.19	$100,637.47	$39,717.59	$40,511.95	$41,322.19
NASO/NALFF	$214,859.40	$219,156.58	$87,939.36	$89,698.15	$91,492.11

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 5 July 2015

Project Numbers: 60191NR219; 32442NR219; 4275ANR219
Project Title: SIKES MA NASO/NALFF - Wildlife Emergency Response; SIKES MA NASO DNA - Wildlife Emergency Response; SIKES MA NSA NWA - Wildlife Emergency Response
Guidebook & Chapter: 12999
Legal Drivers:
Primary: SIKES Act
Secondary: Endangered Species Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual, Split Quarters 1st, 2nd , 3rd, & 4th

---

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual (on call: 24 hours, 7 days a week).

Project Description: *(What does this project entail?)*
Purchase of wildlife control equipment and supplies to support emergency wildlife calls supported by the Base and Region Natural Resources Program Staff. Refresher training/cert. for NR staff in support of Emergency Wildlife control calls is covered under a separate training EPR.

Project Purpose: *(Why is this project needed?)* NASO, NALFF, NASO DNA, and NSA NWA are all located with in the Hampton Roads Region of VA. Hampton Roads is a mix of urban, rural, and natural areas. This land fragmentation, coupled with urban sprawl, puts wildlife and humans in direct competition for the same limited resources and results in human-wildlife conflicts. In an attempt to minimize impacts to humans and wildlife the base Natural Resources staff, in coordination with USFWS and State & Local Wildlife Agencies, respond to emergency wildlife calls.

People who respond to these calls need to be supplied with appropriate equipment to safely and efficiently address these concerns.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project promotes safety of NR personnel, military, civilians, and wildlife. This project minimizes impacts to military training in two primary manners by: 1. expeditiously and safely addressing wildlife concerns; and 2. protecting species of concern, preventing potential Notices of Violation and mitigation costs/requirements. There is a number of Federal and State listed species of concern that either live or seasonally visit bases in the Hampton Roads Area. As such this project allows the Navy to maintain compliance with various Federal and State laws, regulations, policies, and conservation agreements (ESA, MBTA, MMPA, NMFA, Invasive and Pest Control, Sikes Act, INRMP, OPNAVINST M-5090.1, State Wildlife Action Plan, USFWS Strategic Plan, etc.).

Any call that can not be safely and efficiently handled by base NR staff will be turned over to State Wildlife Agency officials to address.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

Equipment list with 2009 cost estimates.

Item	Qty.	Unit	Cost/ unit	Subtotal	Shipping	Total Cost	Status
Tow Straps	8	ea	17.00	136.00	34.00	170.00	Non-recurring

Navy Utilization of Deliverables:

Navy staff will utilize this equipment to safely and expeditiously resolve the majority of the emergency wildlife calls/concerns to which their assistance is requested.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)* See Proposed deliverables section for a detailed purchase list.
  - 2009 Cost estimates were derived via an internet search and vendor supplied quotes of items and shipping costs.
  - Equipment need was based off of a 2008 and 2012 internal equipment inventory and assessment of types of response calls to which staff typically respond.
  - Equipment list status and cost estimates per item are provided under proposed deliverables.
  - This estimate has been split between each of the Oceana NR AOR bases, which cover 3 INRMPs (NASO/NALFF, NASO DNA, and NSA NWA) because the equipment services all 4 sites.
  - The following inflation rates were applied and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%

Project Requested Funding: (Recurring Funds Project within a given POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$1,391.72	$1,419.56	$1,447.95	$1,476.91	$1,506.44
NSA NWA	$1,391.72	$1,419.56	$1,447.95	$1,476.91	$1,506.44
NASO/NALFF	$2,783.43	$2,839.10	$2,895.88	$2,953.80	$3,012.88

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA/Contract. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
    - Cost estimate was derived from FY2012 contracted invasive species inventory project costs and FY2008-2015 invasive species control project costs with the following applied annual inflation rates

and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%.

- Due to the nature of this project it is likely that the cost will fluctuate up or down due to removal success, new species, changes in species population levels, etc.
- There is the potential to develop a cooperative agreement with USFWS regarding this project, because there are 2 US National Wildlife Refuges adjacent or within the same regional management unit as these 4 Navy bases, which are also working similar invasive species concerns. It is typically cheaper to group projects into a single larger project than to conduct smaller individual projects. USFWS has written the majority of the invasive species best management practices. USFWS is also one of the signatories on our INRMPs.

- **Estimate #1:**
  - **Contract Vendor and Previous History Estimates:**

Base	FY2012 Cost for Plan, Inventory & Map (Flora)	FY12 Inhouse Fee Inventory (Flora)	FY2014-2015 Cost Monitor & Control (Flora)	FY14-15 Inhouse Fee Control (Flora)	~FY15 Cost for Plan, Inventory & Map (Fauna)	~FY15 Inhouse Fee Plan (Fauna)	~FY15 Cost Monitor & Control (Fauna)	~FY15 Inhouse Fee Control (Fauna)
NASO/NALFF	$113,990.21	$3,000.00	$17,706.76	2500	$119,903.10	$3,155.62	$17,706.76	2500
NASO DNA	$26,597.72	$3,000.00	$34,148.75	1250	$27,977.39	$3,155.62	$34,148.75	1250
NSA NWA	$51,295.59	$3,000.00	$75,886.12	1250	$53,956.39	$3,155.62	$75,886.12	1250

Project Requested Funding: (Recurring Funds Project with Non-Annual Recurring Component within a given POM Cycle)…*highlighted are the years with both control and inventory requirements.*

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$53,438.93	$54,507.70	$21,291.90	$21,717.74	$22,152.09
NSA NWA	$98,664.19	$100,637.47	$39,717.59	$40,511.95	$41,322.19
NASO/NALFF	$214,859.40	$219,156.58	$87,939.36	$89,698.15	$91,492.11

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 6 July 2015

Project Numbers: 60191NR216; 32442NR216; 4275ANR216
Project Title: EO 13751 MA NASO/NALFF - Habitat Management - Prescribed Fire; EO 13751 MA NASO DNA - Habitat Management - Prescribed Fire; EO 13751 MA NSA NWA - Habitat Management - Prescribed Fire

Guidebook & Chapter: 12101
Legal Drivers:
Primary: EO 13751 Invasive Species
Secondary: Migratory Bird Treaty Act
Tertiary: Endangered Species Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual, Split Quarters 1st (85%), & 2nd (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual.

Project Description: *(What does this project entail?)* Develop an updated Prescribed Burning, Wildfire and Smoke Management Plan for each installation. The following should be utilize to develop the plans: existing INRMP data, site visits, and coordination with appropriate Navy, USFWS, and State Agency Prescribed-burn/Wildfire, Natural Resources, and Safety experts.

Create and implement a cooperative agreement with appropriate agencies to supply Prescribed Burning and Wildfire Control for NASO, NALFF, NASO DNA, and NSA NWA. If a cooperative agreement cannot be developed to implement the plans, then a contract should be pursued. Current Navy staffing and training levels do not allow for inhouse support of prescribed burning and wildfire control.

Project Purpose: *(Why is this project needed?)*
Prescribed burning is utilized for habitat management/restoration and invasive species control. This management and control technique is designed to address species of concern needs and requirements.

Existing prescribed burning, wildfire and smoke management plans need to be re-assessed for current validity and updated accordingly to meet current INRMP habitat and species management goals and objectives. Plans need to include appropriate pre-application evaluations, control prescriptions and techniques, goals & objectives, firebreak installation requirements and locations, burn area boundaries, post application monitoring, etc.

Current Navy staffing and training levels in the NAVFAC MIDLANT Hampton Roads area are inadequate to SAFELY accomplish desired prescribed burning and wildfire control. The last NASO,

NALFF, NASO DNA, and NSA NWA Prescribed Burning and Smoke Management Plans were prepared in 2010. In recent years 0% of the desired and planned burn areas have been treated due to weather conditions, inadequate staffing levels, and needed baseline habitat and species data-collection.

Project would adequately staff the Prescribed Fire program to implement the updated Prescribed Burning, Wildfire and Smoke Management Plans. Implementation would include site preparation, pre and post monitoring and reporting requirements, in addition to the physical prescribed burning and/or wildfire control actions.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project aides the Navy in maintaining compliance with Federal and State laws, regs., and policies and reduces the potential for incurring Notices of Violations (NOV). Improper management of known threats to species of concern, such as habitat degradation, can lead to potential NOV situations.

The prescribed burning program provides multiple benefits to species, the ecosystem and the military. In addition to the aforementioned species of concern benefits, prescribed burning: is considered to be more ecologically friendly particularly for nutrient recycling and plant regeneration; supports the reduction of Bird-Animal Aircraft Strike Hazards (BASH) concerns by altering vegetation structure to reduce site desirability for species that would or have posed BASH threats; reduces height obstructions associated with various military equipment requirements (i.e., Antenna arrays, Flight Ops, etc.); and reduces the risk of facilities being overrun by uncontrollable "wildfires."

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* A contract to develop these plans is expected to be awarded in FY2015. 2 Different Cooperative Agreements with State and USFWS experts were pursued from 2013 to 2015, but were unable to be executed. POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA), Contract, Project Order, Work Order, & Support Documentation
3	Quarterly/Monthly Project Status Reports
4	Draft Prescribed Burning, Wildfire, and Smoke Management Plan and Geodatabase
5	PreFinal Draft Prescribed Burning, Wildfire, and Smoke Management Plan and Geodatabase
6	Final Draft Prescribed Burning, Wildfire, and Smoke Management Plan and Geodatabase
7	Draft Final Implementation Reports and Geodatabases
8	Final Implementation Reports (Breakdown of burning accomplished, summary of monitoring results, etc.) and Geodatabases
9	GPS Mapping of burn units and areas burned (In Navy Standard Format, i.e. WGS84)
10	Frequent correspondence with base Natural Resources Manager
11	Pre-burn site preparation and unit assessments
12	Conduct Prescribed Burns & Respond to Wildfire Concerns
13	Conduct after burn site evaluations and monitoring.
14	Permit Acquisitions (as required)
15	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee(s) staff to develop and obtain approvals of SOW and CA or Contract. Navy staff will work with grantee Partners and the prescribed burners to identify and report problems. The submittal of draft reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a document that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: track frequencies of burns; track habitat conditions pre and post burns; update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Cost estimate was derived from NAVFAC LANT FY2015 GCE, known need requirements, historic equipment purchases costs, and the 2015 OPM pay-scale for personnel.
  - Pending the outcome of the final Cooperative Agreement/Contract results, there may be an increase in the amount of funding required to come to a resolution regarding training, equipment, benefits, etc.
  - It is recommended that a cooperative agreement with USFWS, VA Department of Forestry, NC Forestry Commission and/or contractors supplying such services, which have obtained adequate National and State training, be developed as these agencies have established prescribed burning teams and are considered experts in the field of Prescribed Burning and Wildfire Control. Navy personnel that have obtained appropriate training and equipment will be available to support burning efforts. The base natural resources specialist has the lead with regards to prescribed burning objectives and the overall program on Navy lands.
  - This estimate has been split between each of the Oceana NR AOR bases, which cover 3 INRMPs (NASO/NALFF, NASO DNA, and NSA NWA), because the Prescribed Burning Fire Fighters would service all 4 sites.
  - The following inflation rates were applied and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%

Personnel:	Qty:	Mths:	# wks:	Hrs/ week:	$/hr:	$OT/ hr:	Total:	Comments
Prescribed Burning, Wildfire, and Smoke Management Plan	4	15	--	--	--	NA	$121,925.04	Programmatic Re-evaluation Every 5 years, based off of NAVFAC LANT FY15 GCE. Utilized 60% NASO/NALFF, 14% NASO DNA, 27% NSA NWA Allocations.
Incident Commander (GS 11)	1	6	24	24.00	36.48	38.31	$21,012.48	Adjusted for Hazard pay estimates. OT is the responsibility of the Partnering Agency.
Burn Boss (GS 9)	2	6	24	24.00	30.15	38.31	$34,732.80	Adjusted for Hazard pay estimates. OT is the responsibility of the Partnering Agency.
Burn Technician (GS 7)	7	6	24	24.00	24.65	36.98	$99,388.80	Adjusted for Hazard pay estimates. OT is the responsibility of the Partnering Agency.

Benefits								To be supplied by CA partner.
Training								To be supplied by CA partner. Training for Navy staff is included in a separate EPR for training.
Non-Navy Staff Equipment								To be supplied by CA partner.
Inhouse Fees							3,000.00	Contract Management
Navy Staff Equipment							2,103.74	See base INRMP for detailed equipment list.

Project Requested Funding: (Recurring Funds Project with Non-Annual Recurring component within a given POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$23,759.71	$24,234.91	$24,719.61	$44,399.34	$25,718.28
NSA NWA	$45,822.30	$46,738.75	$47,673.52	$85,627.30	$49,599.53
NASO/NALFF	$101,827.34	$103,863.89	$105,941.16	$190,282.89	$110,221.19

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 6 July 2015

Project Numbers: 60191NR213; 4275ANR213
Project Title: CWA MA NASO/NALFF – Agricultural Management; CWA MA NSA NWA – Agricultural Management
Guidebook & Chapter: 12107
Legal Drivers:
Primary: Clean Water Act
Secondary: Soil & Water Conservation Act
Tertiary: Farmland Protection Act (FAIRA)
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* FY2018-2022, Split Quarters 2nd (85%) and 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Every 5 years, for total baseline agricultural field and run-off assessments/monitoring or as deemed necessary due to major land or mission changes. Annually, for agricultural field run-off monitoring.

Project Description: *(What does this project entail?)* Develop Soil and Water Conservation Management Plans for each Agricultural Lease Parcel, Prepare and Implement Agricultural Lease Agreements and Associated Modifications, Conduct Annual Lease Inspections to Ensure Soil and Water Conservation Management Plans are being properly implemented, Take Appropriate Actions with Real-estate Agent to Enforce Violations of Lease/Plan requirements, Process and Report Pesticide Utilization Documentation.

Conduct assessment of ditches, soil quality, water quality, erosion & sedimentation, etc. and determine if these fields meet the requirements to be classified as Prime &/or Unique (submittal of documentation to USDA-NRCS for concurrence is recommended).

Develop a primary agricultural ditch/run-off management protocol including needed ditch clearing, ditch planting, ditch buffering requirements, and/or sediment control structure construction. Assessments (monitoring of run-off) should be conducted prior to ditch alterations (plan would establish ditch alteration requirements), during ditch alteration events (would monitor water quality and success of erosion control structures), and post ditch alteration events (would monitor water quality and sedimentation rates post ditch work and would establish a success rate of implementing the project). This protocol should be incorporated into the next Soil and Water Conservation Management Plan to be enforced as part of the Real-estate lease agreement. Develop a Government Cost Estimate of to fully implement either establishing properly vegetated ditches and buffers, or install erosion and sediment control structures, or a combination of both as appropriate.

Individual developing/completing the run-off management protocols and assessments should utilize a combination of existing Navy Data and Field work to develop these guidance documents. The current INRMP Appendices provide copies of completed surveys (e.g., erosion control plan, nuisance wildlife, vegetation community, etc.). GIS data associated with the completed INRMP surveys can be acquired thru coordination with the installation natural resources manager and the NAVFAC ML environmental business line GIS coordinator.

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)*
Farmland Protection Act, Sikes Act, CWA, CZMA, EO 11990 (Protection of Wetlands), 32 CFR 190 (Natural Resources Management Program), DoDI 4715.3 (Environmental Conservation Program), OPNAVINST M-5090.1, Chesapeake Bay Preservation Act and Federal Agreement, regional effort - Southern & Dismal Swamp watershed protection plans (SWAMP).

The Agricultural (Ag) lease program is one of very few profit generating program areas which brings in funding specifically for environmental program usage. The Ag lease program also saves the military hundreds of thousands of dollars annually in land maintenance costs (i.e., reducing mowing contract requirements). In the long run it is more cost efficient to the Navy to make sure that the ag leases are functioning properly and regulatory requirements are being met. Portions of the NASO AG program falls within the Chesapeake Bay Watershed and has the potential to negatively impact the restoration of the bay if proper land management is not implemented. The remaining portion of NASO and all of NALFF's and NSA NWA's ag fields fall within the Southern Watershed Protection Plan Area and these fields have the potential to negatively impact these watersheds as well.

Annually the big problem with the ag program is that they are not properly maintaining vegetated ditches and vegetated conservation buffers from the top of the bank out towards the crops (currently a 3 foot buffer) as dictated in the Soil and Water Conservation portion of the lease agreements. The only enforcement action we have is to deny contract renewal because there is nothing specified as an actual penalty in the lease agreement. Also due to current economic constraints, and decline in farming interest it is estimated that we may lose the ag lease program all together. Because of the decreasing interest in farmers bidding on properties in this region it makes it hard to deny the few farmers that bid the right to farm the land.

In an effort to prevent farmers from breaking the ditch buffer regulation the base NR specialist has recommended that ditches be brought up to "code" (clean the ditches, properly vegetate the ditches, and ditch buffers or install multiple run-off and sediment control structures to minimize buffer requirements and maximize farmable land). If these rec recommendations are accomplished then the farmers would have no excuses for not properly implementing the requirements of the Soil and Water conservation agreement. This project requests the assessment of the field to develop a plan of action to implement one or more of these recommendations as appropriate.

In order to assess the success of implementing such an action pre (which would include ditch buffering/restoration plan of action), during (assessments during ditch upgrade), and post ditch and buffering upgrade and run-off control structure assessments should be conducted.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* Soil and Conservation Plan Development, Real-estate Contract Coordination/Oversight, Pesticide Application Reporting, and Agricultural Site Inspections have been being funded via ag-outlease funds. No assessments or monitoring have been funded to date.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA), Contract, Lease, Project Work Order, Purchase Request & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report
5	PreFinal Report
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., photgraphs, etc.)
9	Maps
10	Ground-truthing
11	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA/Contract/Etc. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. Results of assessments will be utilized to develop future POM submission requirements related to agricultural leased properties.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
    - The below cost estimates have been derived from past NAVFAC ML Ag-Outlease program management oversight funding, agricultural projects completed at smaller scales and from past larger sediment and runoff control structure construction and monitoring for other purposes such as fuel and oil runoff concerns with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%.

Item:	~2015 Cost Est. NASO & NALFF	~2015 Cost Est. NSA NWA	Comments:
General Agricultural Program Management	$16,666.66	$8,333.33	Develop Soil and Water Conservation Management Plans for each Agricultural Lease Parcel, Prepare and Implement Agricultural Lease Agreements and Associated Modifications, Conduct Annual Lease Inspections to Ensure Soil and Water Conservation Management Plans are being properly implemented, Take Appropriate Actions with Real-estate Agent to Enforce Violations of Lease/Plan requirements, Process and Report Pesticide Utilization Documentation. It is expected that Litigation and associated fees pertaining to Agricultural Leases would be being funded by the activity that has resulted in the litigation action.
Agricultural Field Quality and Run-off	$90,480.00	$44,520.00	NASO/NALFF = 1,508 acres; NSA NWA = 742 acres. Determine soil quality and obtain confirmation of if the

Assessment ($60.00/acre)			agricultural fields would meet the requirements to be classified as Prime & Unique. Provide data and analysis of data to quantify erosion rates, sedimentation rates, and chemical run-off rates. Provide recommendations to minimize the erosion, sedimentation, and chemical run-off rates. One recommendation should include identify proper placement and number of run-off and sediment control structures to install to enhance water quality entering into the local watersheds. Agricultural program manager has not been successful in getting the farmers to maintain the 3 foot vegetative buffers around all ditches identified in the lease agreements. Ag mngr does not think we have the demand and presence of farmers in the area to enforce this requirement (no one to take over a lease that gets terminated). Mission impacts would be substantial without the agricultural fields being maintained due to height obstruction issues and a lack of funding to maintain these large tracts of land at desired heights. Assessments should be completed every 5 years.
Installation of Test Run-off Control Structures	$200,000.00	$100,000.00	1 control structure constructed at the most impaired agriculture associated main ditch at NASO, NALFF, and NSA NWA. 3 Total test initial structures. Additional structures to be added at later dates pending monitoring results from test structure installations. Should not retain water for more than 48 hours unless covered, due to BASH concerns. Funding of control structure construction will be entered into separate EPRs (...NR214) from these assessment and monitoring EPRs (...NR213).
Maintenance of Run-off Control Structures	$0.00	$0.00	Maintenance of Structures will be added to farmer leases to complete annually.
Annual Run-off Monitoring	$4,000.00	$2,000.00	Water sample testing. Sediment, depth measurements, etc.
TOTAL:	107,146.66	52,853.33	

Comment [MFW1]: On hold, pending assessment results.

Comment [MFW2]: On hold, pending assessment results.

Comment [MFW3]: On hold, pending assessment results.

Project Requested Funding: (Recurring Funds Project, with a Non-Annual Recurring Requirement within a given POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO/NALFF	$119,368.47	$18,939.12	$19,317.90	$19,704.26	$20,098.34
NSA NWA	$58,882.11	$9,469.56	$9,658.95	$9,852.13	$10,049.17

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 6 July 2015

Project Numbers: 60191NR211; 32442NR211; 4275ANR211
Project Title: CHS MA NASO/NALFF - Landcover Mapping; CHS MA NASO DNA - Landcover Mapping; CHS MA NSA NWA - Landcover Mapping

Guidebook & Chapter: 12101
Legal Drivers:
Primary: Endangered Species Act
Secondary: Migratory Bird Treaty Act
Tertiary: EO_ (Invasive Species or Pest Control)
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* FY2018, Split Quarters 2nd (85%) and 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* 15 months, once every 5 years or as deemed necessary due to major land or mission changes.

Project Description: *(What does this project entail?)* Produce an updated Vegetation Community Classification Raster Landcover Layer. Acquire updated high resolution satellite imagery in an effort to produce a raster landcover layer of vegetative community types; analyze imagery; conduct ground-truthing surveys; and provide maps, data, and final report. Utilize existing leaf-on and leaf-off Navy Imagery and Acquire Newer Imagery as necessary to meet project's 85% or greater accuracy level.

Project at a minimum should be equivalent to work completed for the FY2012 Awarded Vegetation Community Classification project; however, this project was not funded to allow for 85% or greater accuracy levels. Project should create layers that can be properly analyzed with and compared to the FY2012 Awarded project.

The intent of the project is to create scientifically suitable layers that can be used to analyze change over time, for which the data can be utilized to support a wide variety of INRMP goals and objectives.

Final products will include complete geodatabase, with linked datasheets, tables, photos, and metadata. Final products will include 2 maps of each installation (NASO, NALFF, NASO DNA, and NSA NWA) on photo-quality paper that have been laminated with dry-erase marker utilization quality laminate.

Project Purpose: *(Why is this project needed?)* Vegetation community layers are needed to identify specific community types on base which may be important to species of concern and thus warrant protection and possibly enhancement. Landcover vegetation community level layers should be updated at least every 5 years to identify changes in communities and to capture landcover changes

due to military training, development, forestry actions, natural vegetation successional changes, other ecosystem changes due to environmental factors such as disease outbreaks, storm damage, forestry actions, etc.

Utilizing GIS and satellite imagery to create landcover layers are time and funding efficient. These layers allow biologists to obtain a better understanding of their base's resources, by providing a view/analysis of areas of the base that are not easily accessible on foot. The other option to mapping these communities is to conduct a 100% on the ground physical mapping of the entire base, which requires a 10 fold field work effort and still some GIS data processing in the office.

Data created from this project will help the installation answer annual INRMP metrics questions related to ecosystems as well as maintaining INRMPs sufficient enough to obtain concurrence from regulatory partners during reviews for Operation and Effect.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project promotes protection of wildlife species and vegetation communities of concern. There is a number of Federal and State listed species of concern that either live or seasonally visit bases in the Hampton Roads Area. As such this project allows the Navy to maintain compliance with various Federal and State laws, regulations, policies, and conservation agreements (ESA, MBTA, MMPA, NMFA, Invasive and Pest Control, Sikes Act, INRMP, OPNAVINST M-5090.1, State Wildlife Action Plan, USFWS Strategic Plan, etc.).

Funding this project not only helps to keep the base from receiving NOVs related to species of concern, it also provides a better understanding of the layout of the base, which can prove beneficial for military planners designing field training requirements and for development and placement of potential construction sites.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)*
Projects received funding in FY2012, but were only funded to utilize existing imagery and not the desired new imagery. Also, not enough funding was provided for ground truthing efforts to obtain an 85% or greater accuracy level. POM16 request was not promoted as originally requested.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA), Contract, Purchase Order, &/or Work Order and Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report and Geodatabase
5	PreFinal Report and Geodatabase
6	Final Report and Geodatabase (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., photographs etc.)
9	Maps, Photo Quality Paper, Heavy Duty Laminate (for use with Dry Erase Markers)
10	Ground-truthing
11	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; to identify potential impacts to the military mission; and to reduce errors in existing and future natural resources predictive modeling efforts.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
    - Cost estimate was derived from utilizing the FY2012 funded similar projects, plus contractor quote adjustment for new imagery acquisition, plus anticipated inhouse fees with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0% .
    - There is the potential to develop a cooperative agreement with other adjacent land owners (i.e., USFWS, VDGIF, Local GOV, etc.). The cost of acquiring imagery is typically cheaper for one large solid landmass, vs. conduct smaller individual imagery acquisitions.
    - This estimate has been split between each of the Oceana NR AOR bases, which cover 3 INRMPs (NASO/NALFF, NASO DNA, and NSA NWA) because the equipment services all 4 sites.
    - Due to equipment activation, imagery acquisition, field work, and computer analysis requirement, it is most cost effective to conduct the work for these bases at the same time.

Item	~2012 Cost Estimate
FY12 Contract Award (Equipment, Analyst, Field Crews, overhead, etc.)	$260,586.00
Inhouse Fees	$5,000.00
Estimated Unfunded Field-work to meet >85% Accuracy	$26,059.00
Imagery to meet >85% Accuracy	$104,025.00
TOTAL:	**$395,670.00**

Project Requested Funding: (Non-Recurring Funds Project within a given POM Cycle), *highlighted fund request is for the POM18 desired funding date, if not funded the out years are to provide an estimate of cost if to be funded at a later date.*

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$61,712.36	$62,946.60	$64,205.54	$65,489.65	$66,799.44
NSA NWA	$119,016.69	$121,397.02	$123,824.96	$126,301.46	$128,827.49
NASO/NALFF	$264,481.53	$269,771.16	$275,166.59	$280,669.92	$286,283.32

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 6 July 2015

Project Numbers: 60191NR209; 32442NR209; 4275ANR209
Project Title: CWA MA NASO/NALFF - Soil & Water Conservation - Erosion Control; CWA MA NASO DNA - Soil & Water Conservation - Erosion Control; CWA MA NSA NWA - Soil & Water Conservation - Erosion Control
Guidebook & Chapter: 12107
Legal Drivers:
Primary: Clean Water Act
Secondary: EO Wetlands Protection
Tertiary: Soil & Water Conservation Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual, Split Quarters 2nd (85%) and 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); NASO Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Assessments every 5 years, repairs as needed.

Project Description: *(What does this project entail?)* Conduct base wide erosion and sediment control assessment every 5 years as deemed necessary due to major land or mission changes. Identify areas in need of repair due to erosion. Identify causes for the erosion. Stop and repair the erosion problems.

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Projects allows the base to maintain compliance with the: Clean Water Act, the Chesapeake Bay Preservation Act; Essential Fish Habitat protection; OPNAVINST M-5090.1; base INRMPs; Sikes Act; and numerous other plans and policies.

Erosion can lead to Notices of Violation associated with water quality testing. Erosion can damage wetland habitats, essential fish habitats, and other species of concern habitats. Erosion can create ideal habitat suitable for invasive species to grow. Erosion can also cause security and safety concerns. All of these concerns pose negative impacts to military training, which could lead to loss of land on which the military can train.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables: (Also see cost estimate section.)

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report
5	PreFinal Report
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., etc.)
9	Maps
10	Ground-truthing
11	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. Navy staff will implement those portions of this EPR exhibit inhouse as identified (see cost estimate).

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
    - Estimates have been based off of contract vendor supplied quotes, and past costs of similar work. Basewide Assessments are planned to be completed every 5 years with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0% . Next Scheduled Assessment Due 2018.
        - 2012 Awarded Project (Field Work & Final Assessment 2013)
            - Award + Inhouse Fee (~$1K/base)
                - NASO DNA = $27,377.19
                - NSA NWA = $15,589.07
                - NASO/NALFF = $64,000.00
    - The FY12 funded Erosion Control Plan for these installations identified several erosion issues to repair at each site. Due to the costs of repair a ranking system will be used to identify which project to Fund each year. A summary table of erosion control repair projects and estimated cost is below. The detailed cost estimates may be obtained from viewing the Final Erosion Control Plan completed in 2013. Since Erosion Control Repair Projects associated with this plan have not been funded to date and have received POM16/17 acceptable risk approved status the results from the 2012 Awarded project were utilized to estimate projected costs from 2019-2022. An estimated $1K/installation has been added for potential inhouse fees associated with contract oversight.

- Basewide Assessments are scheduled to occur every 5-10 years to identify new erosion sources.
- Warranties and Monitoring should be factored into any erosion repair action/project's SOW. In the event that the repair work fails, the entity hired to fix the issue (unless completed inhouse), should have to rectify the situation at no additional cost to the government.

Site	2013 Cost Estimate
NALFF Site 1	$116,225.00
NALFF Site 2	$30,627.00
NALFF Site 3	$267,068.00
NASO DNA Site 1	(2019) $9,211.00
NASO DNA Site 2	(2021) $950-7,500.00
NASO DNA Site 3	(2020) $7,000.00
NASO Site 1	$21,000.00
NASO Site 2	$950-7,500.00
NASO Site 3	$950-7,500.00
NASO Site 4	$17,000.00
NASO Site 5	$8,100.00
NASO Site 6	(2020) $74,000.00
NASO Site 7	$11,000.00
NASO Site 8	$28,000.00
NASO Site 9	$4,000.00
NASO Site 10	(2021) $63,000.00
NASO Site 11	$950-7,500.00
NASO Site 12	$950-7,500.00
NASO Site 13	$4,000.00
NASO Site 14	$950-7,500.00
NASO Site 15	$950-7,500.00
NASO Site 16	$16,000.00
NASO Site 17	(2019) $390,182.00
NASO Site 18	$950-7,500.00
NASO Site 19	$950-7,500.00
NASO Site 20	(2022) $33,662.00
NSA NWA Site 1	(2022) $7,067.00
NSA NWA Site 2	(2021) $6,000.00
NSA NWA Site 3	(2019) $91,000.00
NSA NWA Site 4	(2020) $4,100.00
NSA NWA Site 5	$9,300.00
NSA NWA Site 6	$4,100.00

Project Requested Funding: (Non-Annual Recurring Funds Project)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$30,500.00	$11,409.29	$9,117.60	$9,881.19	$0.00
NSA NWA	$17,367.26	$102,796.43	$5,812.47	$8,137.45	$9,565.39
NASO/NALFF	$71,300.23	$447,144.35	$85,477.47	$74,399.59	$41,100.24

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 06 July 2015

Project Numbers: 60191NR206; 32442NR206; 4275ANR206
Project Title: FRC MA NASO/NALFF - Forest Management; FRC MA NASO DNA - Forest Management; FRC MA NSA NWA - Forest Management
Guidebook & Chapter: 12108
Legal Drivers:
Primary: USC1215:32 U.S.C 1251 et seq (forestry) Forest and Rangeland Renewable Resources Planning Act
Secondary: FRCSRA620 Forest Resources Conservation and Shortage Relief Act
Tertiary: Endangered Species Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* FY2018-2022, Split Quarters 2nd (85%) and 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* 15 months for baseline forest inventories (once every 5 years for baseline inventories or as deemed necessary due to major land or mission changes); annually/seasonally for disease and storm damage inspections and general forest management requirements.

Project Description: *(What does this project entail?)* Conduct an inventory and assessment of urban, natural, and timber harvest forest conditions every 5 - 10 years or sooner as deemed necessary due to major land or mission changes. Conduct annual inspections and assessments of forest habitats to identify potential disease and insect outbreaks, and storm damage concerns. Utilize the inventories and assessments and inspections as guides to: establish and conduct routine pre-commercial thinning and maintenance; provide guidance to appropriate commands for hazard tree removal; and implement arboricultural treatments as recommended and appropriate.

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Proper management of forest resources aides the military mission in multiple ways, to include but not limited to: creating realistic conditions for in field military training; creating noise buffers around ranges; creating visual and access buffers around sensitive training facilities; reducing/removing height obstructions associated with various mission requirements; reducing the potential for species of concern to become listed under the Endangered Species Act; etc.

Land changes include: timber harvests; building construction; severe weather conditions (drought, lightening fires, ice storms, hurricanes, tornadoes, etc.); disease outbreaks; etc. Stand condition analyses are needed to determine hazardous conditions, commercial value, and value to species of concern.

SIKES ACT, 10 USC 2665, DoDINST 7310.5 AND OPNAVINST M-5090.1 requires that Naval bases manage appropriate forested areas for multiple use and optimum sustainable yield of forest products consistent with other Natural Resources programs. Forest stand improvement methods are required at NASO, NALFF, NASO DNA, and NSA NWA to maintain existing forested stands. If project is not funded the bases will be out of compliance with one or more of the following: DoD and Navy policies, the 1990 Forest Suppression Memorandum of Agreement between Dept. of Agriculture and DoD, the Chesapeake Bay 2000 Agreement, the Clean Water Act phase II program, the Sikes Act, the Soil and Water Conservation Act, the Forest Resource Conservation and Shortage Relief Act, and/or the Forest and Rangeland Renewable Resources Planning Act of 1974 (or RPA).

.

Preservation of existing urban resources and proper management of natural and commercial forest stands is important to meeting the nutrient reduction and non-point source pollution control objectives of the Chesapeake Bay Agreement, the Clean Water Act and other Federal and State plans, and policies. Proper management also promotes thermal protection of waterways, and benefits to morale and welfare.

Trees are natural energy efficiency promoters/increasers. Trees provide shading/cooling and insulating benefits to structures and people working outside. Properly managing trees and landscaping in the Urban areas of the bases additionally supports the Navy's Policy and Goals towards energy efficiency and the 26 Apr 1994 Presidential Memorandum regarding "environmentally economically beneficial practices on Federal landscaped grounds," which also requires use of native plants for federally landscaped grounds.

Additionally, protection of urban forest environments is a continuing requirement that is exacerbated by hurricanes and coastal storms. Urban forest management involves the removal and trimming of trees that pose safety threats, property damage, and disease outbreak. An update of the Urban forest hazard trees will allow the base to address these threats to human safety and property assets.

Proper natural and commercial forest management is: beneficial to a variety of species by providing various phases of vegetation succession; and improves the value of the timber, thus making them commercially more profitable. Timber harvesting activities promote these changes in succession, which mimics natural events that caused succession changes. Wildfires are an example of these natural events, which would clear areas of vegetation and create open areas. A variety of species require these conditions to survive, including species of concern (i.e., Endangered Species Act and Migratory Bird Treaty Act listed species). On many Military base, due to threat to human health, safety, equipment, and training, wildfires are typically suppressed and not allowed to create open areas. Urban development around and training missions on NASO, NALFF, NASO DNA, and NSA NWA require such suppression. Conducting timber harvests in addition to prescribed fire (where authorized…under separate EPR) allows these bases to provide this habitat conversion in support of species of concern initiatives.

In order to identify annual forest health conditions (disease outbreak, weather damage, unreported fire damage, etc.) field work is needed by qualified forestry technicians to visit the various stands and determine if there are potential forest health threats that require immediate or future management actions. In ability to conduct these surveys could result in a lack of proper forest management that could negatively impact legally protected or other species of concern on the installation.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* Funding for projects of this nature has typically been funded through the Forestry Reserve and other Forestry Program budgets. Unfortunately, due to current economic situations the funds available to the forestry program from commercial timber harvest and firewood salvage efforts has decreased and it is predicted that funds may not be available to fund these projects via these forestry programs. A baseline commercial forest inventory was completed in 2013/2014 for all 4 sites and urban forest inventories are anticipated to be completed 2015/2016. Despite requests, no forestry technicians or certified professional forester have been hired to directly support the installation's annual Forestry Program Management. POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA), Contract, Project Order, Work Order & Support Documentation
3	Quarterly Project Status Reports
4	Emergency/Immediate Action Notifications
5	Draft Final Report and Geodatabase
6	PreFinal Report and Geodatabase
7	Final Report and Geodatabase (Introduction, Study Area, Methods, Results, Conclusion,

	Recommendations, Literature Cited/References, Appendices)
8	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
9	Copies of All Associated Data Collected (Datasheets, sample collection info., photographs, etc.)
10	Maps
11	Ground-truthing
12	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA or other work requirement documentation. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Estimates have been based off of FY2012-2015 awarded projects and 2015 OPM Salary/Location Pay Charts with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%.
  - POM18 does not have a requirement for the 10 year Non-Urban Forest Inventory baseline. This is not required until 2023. Costs for the year will increase by approximately 67% in 2023 to support contracting this baseline inventory, assuming there is no inhouse Navy support that can accomplish this requirement.
  - If technicians and certified forester support are not hired to annually conduct forestry program efforts, there is an additional requirement in 2021 for the POM 18 cycle to fund the 5yr, re-evaluation of the Urban Forest Inventory. If acceptable risk is determined for the EPR, it is requested that at a minimum year 2021 be funded.

Item:	~2015Cost Est. NASO & NALFF	~2015 Cost Est. NASO DNA	~2015 Cost Est. NSA NWA	Comments:
Forest Program Mngt.*	61,557.68	13,920.45	27,298.73	NAVFAC ML Core or LANT support for program management (contract mngt., applying for Forestry Reserve Funding, conducting as needed assessments, etc.). Also, could be used to hire certified professional forester to support the installation's forestry program management. Estimated at a GS11 Step 10 level. Funds split amongst the 3 INRMPs by installation size.
Arboricultural Treatments	13,310.39	3,957.14	7,200.06	Primarily focused on Urban Trees and Urban-Non-Urban Forest interface tree maintenance needs, to maintain healthy trees. Estimate derived from previous similar work.
Hazard Tree Removal	0.00	0.00	0.00	It has been recommended that the ENV program no longer fund Hazard Tree Removal in the Urban Areas of the base. It has been recommended that this cost should be provided by a combination of funds from Safety and Public Works. 2012 Original estimated cost was $113,704.00, but fluctuates annually. The EV program will fund the inventory of urban trees which would identify hazard trees. Hazard Tree Removals and Costs should be included in the Annual Urban Forest Inventory Assessment Updates.

Item:	~2015Cost Est. NASO & NALFF	~2015 Cost Est. NASO DNA	~2015 Cost Est. NSA NWA	Comments:
Forest Quality-Health Surveys/Inspections*	67,160.30	15,187.40	29,783.30	Disease, pest, and storm damage inspections. Fund 2 equivalent GS-5 Forestry Technicians (Forestry Technician Series, 0462). Technicians will conduct field work determining health conditions of both non-urban and urban forest resources throughout the year. Technician will update the Urban Forest Inventories annually after initial 2015 awarded baseline is completed. Amount based on OPM Forestry Technician funding at the GS 5 level. Funds split amongst the 3 INRMPs by installation size.
Non-Urban Forest Inventory	100,040.04	22,622.72	44,364.34	Occurs every 10 years or more frequently depending on mission changes and extent of storm damage, as a total forest baseline inventory and verification of Annual Forest Quality Surveys/Inspections. 2013 Baseline Awarded: Initial Contract Award $151,655.54; DN/FN UXO Mod. of $8,409.70; $5,000.00 Inhouse costs. Total Costs were, extrapolated out to each INRMP by acreage. Note, next required inventory not required until 2023.
Urban Forest Inventory	58,899.63	13,319.36	26,119.97	If technicians are not hired to conduct annual forest quality/health assessments, after initial baseline urban forest inventory a 5 year re-evaluation and consolidation of actions that have occurred over the 5 years (new construction, arbor day celebration planting, hazard tree removals, etc.) should be completed. 2015 Baseline GCE $97,088.97. 2015 Inhouse Fee $1,250. Total Costs were, extrapolated out to each INRMP by acreage.
TOTAL:	**92,160.00**	**27,395.43**	**49,850.10**	

*Forestry Program Navy Manpower Requests have been denied. Since these requests have been denied, a decision was made to reflect these costs in the EPR exhibit. If Navy billets are not established the intent is to contract or create a CA to implement these requirements. Past POM cycle amounts were more attributed to equipment/supply needs for the program and the amount of reach-back support that NAVFAC ML Core might be able to supply to the program. Given this information the POM 18 EPR funding levels are higher than past POMing funding requests.

Project Requested Funding: (Recurring Funds Project with Non-Annual Recurring components within a given POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$35,020.03	$35,720.43	$36,434.84	$37,163.54	$37,906.81
NSA NWA	$68,082.91	$69,444.57	$70,833.46	$72,250.13	$73,695.13
NASO & NALFF	$150,426.11	$153,434.63	$156,503.32	$159,633.39	$162,826.06

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 06 July 2015

Project Numbers: 60191NR205; 32442NR205; 4275ANR205
Project Title: 4 SAR MA NASO/NALFF - Species and Habitat of Concern Protection; 4 SAR MA NASO DNA - Species and Habitat of Concern Protection; 4 SAR MA NSA NWA - Species and Habitat of Concern Protection
Guidebook & Chapter: 12104
Legal Drivers:
Primary: Endangered Species Act
Secondary: Clean Water Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Annual, Split Quarters 2nd (85%) and 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* Annual as needed.

Project Description: *(What does this project entail?)*
Implement various habitat enhancement and restoration projects in support of Species of Concern and Habitats of Concern in accordance with the resource's management plan. Obtain appropriate surveys and assessments and monitoring of project areas.

Develop plans that benefit multiple species of concern.

(See project justification and cost estimate documents current proposed project details).

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Projects allows the base to maintain compliance with the: Endangered Species Act; Migratory Bird Treaty Act; Sustainable Fisheries Act Amendment to the Magnuson-Stevens Fishery Conservation and Management Act in 1996; the Chesapeake Bay Preservation Act; the Clean Water Act; Essential Fish Habitat protection; OPNAVINST M-5090.1; base INRMPs; Sikes Act; and numerous other plans including but not limited to the: Southern Watershed Area Management Plan (SWAMP); Lynnhaven River Watershed Restoration Plan (sub of Chesapeake); and Back Bay Watershed Restoration Plan (sub of southern).

The waterways of NASO, NALFF, NASO DNA, and NSA NWA connect to several watersheds which all have the potential to influence Essential Fish Habitat (EFH) within the Atlantic Ocean, and Chesapeake Bay.

These projects support wetland enhancement & protection, T&E species & habitat protection, soil and water protection, and recreational opportunity enhancement and protection.

Installations provide a unique mix of urban, suburban, and rural interfaces that provide both beneficial and detrimental habitat conditions to various species. For example, the installation's utility infrastructure provides nesting, perching, and roosting structures ideal to some species. This same infrastructure creates obstacles that kill some species (fires that burn nests, electrocution, "clothes-ligning"/direct impacts, etc.). Typically, when the is a negative encounter such as a fire there is a resulting loss of utility service. The loss in service negatively impacts the military mission by interrupting training and readiness activities, daily business, and security measures. Measures can be put into place to minimize negative wildlife interactions with utility infrastructure and minimize and avoid power outages.

Maintaining compliance with Federal and State Laws, Regs, and Conservation Goals, helps to ensure that DoD Lands will not be further restricted from military utilization, and helps to ease permitting requirements when new military actions are proposed.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)*

Proposed Deliverables: (Also see cost estimate section.)

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) Contract, Purchase Order, and/or Work Order & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report
5	PreFinal Report
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., etc.)
9	Maps
10	Ground-truthing
11	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. Navy staff will implement those portions of this EPR exhibit inhouse as identified (see cost estimate).

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Estimates have been based off of contract vendor supplied quotes provided during the revision of the NASO/NALFF INRMP in 2008 and FY2012 - FY2015 funded projects with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0%.

Project:	2015 Est Cost:	Comments:
SIAs (NASO, NALFF, NASO DNA & NSA NWA)	0.00	Internal assessment, other projects will provide necessary information for management (invasives, erosion, nuisance, etc.)
Continue protection of potential Dismal Swamp southeastern shrew habitat. (NALFF & NSA NWA)	0.00	Internal assessment, other projects will provide necessary information for management (invasives, erosion, nuisance, etc.)
Control pine, sweetgum, and other competing species around the South out parcel Long-leaf pine area (NASO DNA and NASO)	0.00	Internal assessment, other projects will provide necessary information for management (invasives, erosion, nuisance, prescribed burn, etc.)
OC Pond Access Rd Repairs 5 year rotation with gravel (consult with regulators to see if we should just pave)…protect wetlands and other habitats and resources. (NASO)	0.00	Requested under separate EPR under erosion control. Actual Road Repairs are now FMD responsibility, CN worked to get funding for initial repairs in 2006/2007, once that was completed FMD was to take on maintenance requirements.
Evaluate restoring Mill Stream to restore floodplain function by installation of a water control structure above the Wilderness Road bridge. (NSA NWA)	0.00	On hold. Need to wait until after the Correctional facility is completed to identify structure placement and potential effects. Also, in the process of re-evaluating this as the most beneficial option…2012 and 2013 field work results from Erosion Control and Stream Assessments are being compared with the prior control structure finding to determine the most appropriate and beneficial restoration to be completed.
Landscape Parking lot on Regulus Ave. across from Build. 127 (NASO DNA)	0.00	After discussions with planning there are some future plans for this area to include a potential parking garage. Will coordinate to make this a "green structure."
Signs (Canebrakes, Dunes Wetland Mitigation, Interpretive Signs, Nesting Keep Out, etc.) (NASO, NALFF, NASO DNA, & NSA NWA)	10,000.00	As needed.
Posts (NASO, NALFF, NASO DNA, & NSA NWA)	3,500.00	As needed. Metal and Wood varying sizes.
Nuts & Bolds (NASO, NALFF, NASO DNA, & NSA NWA)	250.00	As needed. Varying sizes and types.
Shelving (NASO, NALFF, NASO DNA, & NSA NWA)	5,000.00	For storage of Signs and equipment associated with these projects.
Post hole pounder (NASO, NALFF, NASO DNA, & NSA NWA)	2,000.00	Custom Made, anticipate Shops or Brig to construct. Market research did not produce the size pounder required.

Project:	2015 Est Cost:	Comments:
Canebrake Study Habitat Enhancement.	10,000.00	Survey work and habitat enhancement projects. Survey work has been relocated under another EPR for NALFF due to State Listing tracking for ESA purposes. NWA surveys are no longer being funded, project has run its course. Habitat Enhancement still falls under this EPR due to mult. Species benefit.
Atlantic White cedar, Control pine, sweetgum, and other competing species at: the Coast Guard complex stand (NSA NWA); and the south runway stand. (NALFF)	2,000.00	Internal assessment, other projects will provide necessary information for management (invasives, erosion, nuisance, etc.). Planting is the only funding requirement
Brochures (Wetland Habitat, Dune Habitat, Fishing, Hunting, Trapping, Archery, Snakes, Bears, Feral Cats, Birding Checklists, Nature Trails, Invasive Species, etc.)	1,500.00	Printing & shipping costs.
Convert Mowed areas to "Natural Areas" (Warm season grass plots, wildflower plots, Bobwhite Quail Habitat, etc.)	8,000.00	Seed and equipment rental. Mngt covered under other EPRs and inhouse work.
Golf Course Ponds	8,000.00	Habitat alterations pending results from FY13 assessment. FY13 Project has been realigned under NR221 series EPRs. This EPR will address implementation of habitat alterations due to multi-species benefits.
Fish habitat enhancement (Lunker Lake, Sadler ponds, OC pond, Redwing Lake)	15,000.00	Assessment handled under separate EPR. This EPR is for implementation.
Maintain Access ways and protection corridors for Species of Concern and Habitat Restoration Sites.	2,000.00	
Develop Avian/Flying Mammal Protection Plans	141,400.00	NASO, NALFF, NASO DNA , and NSAHR NWA Contract ~$35,000ea; Inhouse ~$3,500ea. Every 5 years. Will work with Utility Departments to develop plans for Utilities to Implement. Request first year to fund 2018, if not sooner. Utilize USFWS and State Wildlife Agency(ies) guidance for development. Also, utilize other DOD plans for reference.
Conduct Dune Delineations	35,000	DNA Only. Every 5 years. Next years to funded 2017 and 2022.
Write in Rain Paper	100.00	Annual Recurring
Write in Rain Notebook	30.00	Annual Recurring
Write in Rain Pens	40.00	Annual Recurring
Camera Photo Download Docking Station	500.00	As needed.
Flagging	100.00	As needed, Possibly Annual Recurring.
Flags	400.00	As needed, Possibly Annual Recurring.
Unplanned Species and/or Habitat Projects that support the INRMP and that have INRM, and appropriate other signatory Agency(ies) concurrence as such…typically discussed during INRMP metrics annual reviews.	Unk.	Funding for this EPR can be utilized to fund other Species or Habitat Projects for NASO, NASO DNA, NALFF and/or NSA NWA that have been deemed to take precedence over the scheduled funding plan.

Project Requested Funding: (Recurring Funds Project within a given POM Cycle)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO/NALFF	$130,922.38	$46,567.31	$47,598.66	$48,448.63	$49,417.60
NASO DNA	$53,215.60	$10,530.57	$10,741.19	$10,956.01	$52,175.72
NSA NWA	$62,890.28	$20,651.01	$21,064.03	$21,485.31	$21,915.02

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 2 July 2015

Project Number: 60191NR204
Project Title: MBTA MA NASO/NALFF - Migratory & Breeding Bird Surveys
Guidebook & Chapter: 12101
Legal Drivers:
Primary: Migratory Bird Treaty Act
Secondary: Bald and Golden Eagle Protection Act
Tertiary: Sikes Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* FY2016-FY2020, Split Quarters 2nd (85%) & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); and Naval Auxiliary Landing Field (NALFF)

Project Duration: *(Estimated length of time and Start & End Dates)* 1 year, 2 months for each standard annual reporting cycle. 1 year, 5 months for each 5th year more detailed reporting cycle. Time estimates are subject to change due to project delays (i.e. weather conditions and mission training precluding scheduled surveys) and will be handled on a case by case basis.

Project originally requested to conduct the detailed reporting cycle every 3 years after further coordination with NAVFAC MIDLANT CORE Conservation Division staff the frequency was changed to every 5 years unless something occurs that would warrant an evaluation sooner, such as major landuse changes, major ecosystem impacts from storm damage, new/update species survey requirements, etc.

Project Description: *(What does this project entail?)* Conduct migratory and breeding bird surveys to establish bird population, activity (Feeding, Breeding, Stop-over, Flight Pattern, etc.), frequency and habitat utilization data.

Conduct seasonal (Winter, Spring, Summer, and Fall) bird surveys to determine use by migrating, breeding, and wintering birds in each habitat type (open grasslands, upland hardwood forest, pine forest, bottomland hardwood forest, etc.) and the airfield clear zones at NASO and NALFF. Migratory and breeding bird surveys should be repeated in 5 year intervals to show bird utilization trends and impacts to bird populations from military land use for those areas inside and outside of the airfield clearzone. Project should consist of day and night time surveys. In addition to traditional surveys data collection (population size estimates, species ID, habitat location, etc.) should included assessment of flight patterns (types of flocking/migrating species, numbers in flocks, flight directions, etc.).

The airfield clearzone areas should be surveyed annually and should also include a comprehensive night time component for bird utilization data of the airfield clearzone areas. This data will be used to analyze Bird Aircraft Strike Hazard (BASH) concerns, to determine what habitat management techniques should be implemented to reduce those concerns. Currently these annual surveys are being conducted under the AIROPS USDA BASH support agreement. Survey routes, techniques, etc. are

coordinated with the installation Natural Resources Manager (NRM) and all data is provided quarterly or upon request to the installation NRM. If this were to be removed from the AIROPS USDA Agreement, then this project would be an annually recurring project with an increased estimated budget of $30k+ annually.

Project may identify additional survey need requirements particularly if species with additional warranted protection requirements are identified (including: Federally Listed Species under various acts; and non-Federal T&E listed species that are federally and State recognized Species of Concern, which pose a mission threat or are in danger of potentially becoming a candidate for listing under the Endangered Species Act). If these needs are identified, then additional Projects will be requested at that time.

Project Survey Methodologies will be developed in coordination with the Installation Natural Resources Manager, DoD Coordinated Bird Monitoring Program, and INRMP signatory partners (USFWS and appropriate VA State Wildlife Agency).

Project Purpose: *(Why is this project needed?)* Currently, these bases do not have sufficient biological information to determine if they are negatively impacting bird species of concern. This lack of information puts the Navy at risk for violating several federal and state laws. In addition to federally mandated requirements, Navy and State Policies and Plans dictate that we should have a working knowledge of our impacts to wildlife. This EPR exhibit works to get the Navy in compliance with these requirements.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Surveys of bird utilization on the bases are necessary to understand how mission requirements will affect bird species of concern. MBTA, ESA, and BAGEPA listed species all utilize these bases and have the potential to have negative impacts on the mission. Not knowing the potential impacts to the species by military mission projects and training could cause a violation of anyone of these federal laws and result in a NOV, which would be costly and put additional restrictions on military training property. Knowing in advance what potential concerns there are would allow the command to plan around avoiding potential impacts and to plan for permitting and mitigation requirements, which may be needed to meet military training requirements.

Although BASH is a primary mission concern at NASO and NALFF, multi-year comprehensive bird surveys or bird utilization studies have not been conducted. Understanding usage and annual migration patterns in the various habitat types, including the airfield clear zones, is a vital step to reducing BASH hazard on the stations. Data to quantify and qualify potential take are required for obtaining and maintaining a bird depredation permit for clear zone management (BASH reduction efforts). Permits are managed through the Natural Resources program.

This is not just a Natural Resources wildlife concern this is a Safety Concern.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) or Contract & Support Documentation
3	Quarterly Project Status Reports

4	Draft Final Report
5	PreFinal Report
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., etc.)
9	Maps
10	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. In general the data will be utilized to identify any trends in impact to bird species of concern given the various military missions, it will be used to identify potential habitat modification requirements to minimize bird strikes, it will be used to update Bird Depredation Permits where required, and it will be used to help in conducting planning level reviews of proposed projects and activities with consideration for impacts to wildlife and the mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
    - Cost estimation was derived from the FY2012 contracted previous surveys of a similar nature for each installation with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0% .
        - 2012 Contract Award = $64,163.00
        - 2012 Inhouse Fee = $1,546.00
        - See Execution documents for details.

Project Requested Funding: (Non-Annual Recurring Funds Project)

BASE	FY2017	FY2018	FY2019	FY2020	FY2021	FY2022
NASO/NALFF	$71,769.00	$73,204.00	$0.00	$0.00	$0.00	$79,239.00

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 2 July 2015

Project Number: 60191NR203; 32442NR203; 475ANR209
Project Title: CWA MA NASO/NALFF - Mitigation Site Monitoring; CWA MA NASO DNA - Mitigation Site Monitoring; CWA MA NSA NWA - Mitigation Site Monitoring

Guidebook & Chapter: 12105
Legal Drivers:
Primary: Clean Water Act
Secondary: Coastal Zone Management Act
Tertiary: EO 11990
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* FY2016-2020, Split Quarters 2nd (85%) & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field (NALFF); NASO Dam Neck Annex (DNA); and Naval Support Activity Hampton Roads Northwest Annex (NSA NWA).

Project Duration: *(Estimated length of time and Start & End Dates)* Annual.

Project Description: *(What does this project entail?)* Conduct wetland mitigation site and project site wetland monitoring in accordance with issued legally mandated permit requirements. Surveys include but are not limited to: flora and fauna density, diversity and abundance assessments; hydrology assessments; etc. Any ground disturbing techniques will have prior coordination with base planning and environmental to ensure no threats to resources, utilities, and surveyor safety.

Project Purpose: *(Why is this project needed?)*
There have been several areas on base that have resulted in mitigation monitoring requirements due to Notices of Violations (NOVs) and new Construction permit requirements. The permits associated with the NOVs and Construction required wetland mitigation projects to be established.

There are several mitigation sites on NASO and NALFF; however currently, there is only 1 outstanding project (Aeropines), funded by the Navy, which has not completed the monitoring requirements established under its permit. Required to evaluate hydrology and vegetation at 1- (2006), 2- (2007), 3- (2008), 5- (2010), 7-(2012), and 10- (2015) years. Aeropines is slated to meet its permitted requirements in FY 2016.

There is one additional project (Wherry Housing) which has met its monitoring requirement, but has not yet received concurrence of completion by the state regulatory office.

There are several wetland mitigation sites at NASO DNA. We have not yet received a letter of concurrence by the state or USACE regulatory offices indicating that the Lovett's Marsh Mitigation

site has met its mitigation requirements; however monitoring of the site has been completed in accordance with permit requirements.

There are several mitigation sites on NSA NWA. One site, MOUS-P-131, has not received a letter of concurrence that the site has met the mitigation criteria. Quarterly photos of the site are taken and reporting continues until notice of compliance is received.

Annually, each installation has projects that require wetland site monitoring, remarking of wetland boundaries, and many time coordination with regulatory agencies regarding permits and mitigation requirements. The wetlands media manager at NAVFAC MIDLANT CORE who handles wetland permitting and mitigation is reimbursable and requires funding annually for these services.

Also, existing mitigation sites that have met there permitted requirements, need to be revisited to ensure that the sites are functioning as planned. If they are not functioning as planned conservation recommendations should be developed to make the sites functioning wetlands. (Unless it is specified directly as permit requirement, successional changes will not be considered a functioning wetland concern that would warrant additional conservation recommendation development, such as conversion of forested wetland to emergent wetland.)

Additional funding may be requested in future POM cycles as additional mitigation site monitoring becomes required. The Navy will first pursue obtaining mitigation banking credits or creating wetland off base in lieu of further restricting training property by constructing new wetlands on base. In some cases this is not possible and mitigation will be required on base. It is anticipated that there may be some wetland mitigation monitoring requirements established due to implementing the Clear Zone Management Plan (CZMP). The CZMP is in draft form and has an EA in development. Wetland impacts and mitigation requirements have not yet been finalized.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Not funding this exhibit may result in the issuance of another Notice of Violation and additional mitigation requirements may be issued. Additional funds may have to be redirected from some other mission requirement to fund this project. Additionally, additional land may have to be encumbered and removed from being utilized for military training.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:
Itemized list below is for a standard mitigation site monitoring project. For general wetland monitoring and coordination with regulatory agencies, that effort will be documented via multiple avenues such as consultation coordination documentation, permits, emails, etc.

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) or Contract & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report
5	PreFinal Report
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)

7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., etc.)
9	Maps
10	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. Final report will be submitted to the permit issuing regulatory agency in accordance with the wetland mitigation agreement.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Estimate was derived based on previous site mitigation monitoring conducted by GeoMarine Inc. (GMI) contracted and NAVFAC MIDLANT CORE Wetlands Media Manager inhouse support with the following applied annual inflation rates and rounded up to the nearest dollar: years 2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0% .
  - Estimate does not include unknown/potential site mitigation requirements.

- **Estimate #1 (From POM16):**
  - **Contract Vendor & Inhouse Support Estimate (Previous Similar Project):**

BASE	~2012 TOTAL COST	~2015 COST (1.7% annual inflation est.)	~2016 COST (1.9% annual inflation est.)
NASO/NALFF	$9,411.00	$9,957.91	$2000.00
NASO DNA	$0.00	$0.00	$2000.00
NSA NWA	$0.00	$0.00	$2000.00

POM 18 Project Requested Funding: (Annual Recurring Funds Project)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO/NALFF	$2,080.80	$2,122.42	$2,164.86	$2,208.16	$2,252.32
NASO DNA	$2,080.80	$2,122.42	$2,164.86	$2,208.16	$2,252.32
NSA NWA	$2,080.80	$2,122.42	$2,164.86	$2,208.16	$2,252.32
TOTAL:	$6000.00	$6,114.00	$6,230.16	$6,348.54	$6,469.17

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 2 July 2015

Project Number: 60191NR202; 32442NR202; 4275ANR202
Project Title: CWA MA NASO/NALFF - Wetland Mapping Inventory; CWA MA NASO DNA - Wetland Mapping Inventory; CWA MA NSA NWA - Wetland Mapping Inventory
Guidebook & Chapter: 12105
Legal Drivers:
Primary: Clean Water Act
Secondary: Coastal Zone Management Act
Tertiary: EO 11990
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* FY2015 & 2016, Split Quarters 2nd (85%) & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO) & Naval Auxiliary Landing Field (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); and Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* …subject to change due to project delays (i.e. weather conditions and mission training precluding scheduled surveys).

Re-evaluations of Existing Baseline Inventory, every 5 years:
NASO = 6 months. (01 May 2015 – 01 Nov 2015)
NALFF = 6 months. (01 May 2016 – 01 Nov 2016)
NASO DNA = 6 months. (01 May 2016 – 01 Nov 2016)
NSA NWA = 6 months. (01 May 2016 – 01 Nov 2016)

Baseline inventory, every 10 years:
NASO = 6 months. (01 May 2021 – 01 Nov 2021)
NALFF = 6 months. (01 May 2022 – 01 Nov 2022)
NASO DNA = 6 months. (01 May 2022 – 01 Nov 2022)
NSA NWA = 6 months. (01 May 2022 – 01 Nov 2022)

Project Description: *(What does this project entail?)* Conduct the "5 year" baseline wetland inventory re-evaluation (finalized re-evaluation due 6 months prior to every 5 year baseline or re-evaluation completion date) and new "10 year" baseline wetland delineations. Re-evaluation includes verification of previous inventory boundaries and updating the boundaries as necessary to reflect changes in the wetland property boundaries. Baseline wetland delineations reassess the existing boundaries, identify new wetland areas, and remove new upland areas from within the boundaries of previously delineated wetland areas. Surveyors must map all parcels utilizing updated USACE standard wetland mapping protocols. The people who conduct these surveys should have experience in conducting wetland delineations in Southeastern VA and Northeastern NC as this area is notoriously difficult to survey accurately for wetlands, even for trained professionals conducting wetland delineations in other regions of the US. Any ground disturbing techniques will have prior coordination with base planning and environmental to ensure no threats to resources, utilities, and surveyor safety.

Note: If 5 year re-evaluations are not completed 6 months prior to existing wetland delineation's 5 year USACE expiration date, then a new baseline inventory/wetland delineation may be required, which will substantially increase the costs associated with that 5 year wetland delineation re-evaluation.

Only areas on bases that are not scheduled to be mapped under the baseline wetland mapping efforts, and thus not subject to 5 /10 year re-evaluations, are those properties that fall within agricultural leases. If the property is to be removed from agricultural production the property will then be evaluated for wetlands. Note: Main Base stormwater ditches that run through agricultural fields will be or have been assessed for inclusion in baseline wetlands inventories (shallow agricultural ditches have not been assessed).

Project Purpose: *(Why is this project needed?)* Substantial land alterations both natural and man-made can occur in a 5 and 10 year time spans. These alterations impact land classifications from wetland to upland and vice versa within this 5 year period. The changing classification potential warrants an updated mapping effort. USACE guidance and permitting requirements indicate that wetland inventories should be re-evaluated every 5 years for accuracy and adjusted accordingly.

Updating the data layers will provide the base staff with better information for reporting, protecting, and species of concern modeling purposes. This updated information should also help base staff, Navy HQ staff, DoD staff, etc. to make more informed property management decisions.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this program would allow the base to better plan projects and mission training assignments. Besides construction threats to wetlands and water quality there are also temporary training exercises which threaten the integrity of wetland habitats. Impacts to these habitats could result in Notices of Violation and costly regulatory mitigation requirements.

Providing a better map of known wetland areas will allow planners: to attempt to avoid wetland impacts; to plan for funding and conducting jurisdictional determinations; to plan for funding and processing required permits; to plan for and fund mitigation requirements; and to plan for and fund NEPA documentation and surveying requirements. Being able to better plan around potential wetland concerns will save time and money because there will be fewer unplanned delays and interruptions to contract awarded projects and military training exercises.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* Each installation has conducted an initial basewide wetland inventory between 2011 and 2012 with the exception of the agricultural parcels. Costly delays can occur if evaluations are not conducted 6 months prior to the established USACE Wetland Delineation expiration dates for each installation. POM 16/17 Acceptable Risk, approved without funding.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) or Contract & Support Documentation
3	Quarterly Project Status Reports
4	Draft Final Report
5	PreFinal Report
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)
7	GIS Data Layers (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., etc.)
9	Maps

10	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA. Grantee will provide quarterly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS layers, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Estimate number one was provided by US Army Corps of Engineers (USACE) for re-evaluating an existing jurisdictionally determined baseline wetland inventory, rounded to the nearest dollar value. USACE is considered the federal technical expert in this field, but is not always available to provide such extensive in-field services. Original cost estimate was provided in accordance with how many man hours USACE thought they would spend on a given base re-evaluating lines. The Cost/acre estimate was derived given the provided man-hours cost estimate.
  - Estimate number two was provided by GeoMarine Inc. (GMI) for the re-evaluation of an existing jurisdictionally determined baseline wetland inventory. GMI is a current Navy contracted service provider, and has conducted wetlands mapping on these bases in previous years. This quote is a gross over-estimate of what the cost would be for a typical 5 year re-evaluation. This quote is more directed towards completing a totally new baseline survey, which may be required every 10 years.
  - Estimate number three was based off of a quote provide by the NAVFAC MIDLANT Regional Natural Resources office for the re-evaluation of an existing jurisdictionally determined baseline wetland inventory to be conducted by a contracted certified wetlands biologist. Both a 5yr re-evaluation and 10yr baseline estimate was provided.
  - POM 18 Estimates were derived utilizing estimate number three and it's associated FY2007-2012 awarded contract final costs and requested Inhouse fees with the following applied annual inflation rates and rounded up to the nearest dollar: years prior-2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0% .

- **Estimate #1 (From POM16):**
  - **US Army Corps of Engineers Estimate (5yr re-evaluation):**

BASE	ACREAGE	~COST/ACRE	~2011 TOTAL COST	~2015 or 2016 Cost
NASO/NALFF	5732/2601	$3.00	$24,999.00	$27,373.91
NASO DNA	1764	$3.00	$5,292.00	$5,794.74
NSA NWA	3665	$3.00	$10,995.00	$12,039.53

- **Estimate #2 (From POM16):**
  - **Contract Vendor Estimate (~10yr baseline):**

BASE	ACREAGE	~COST/ACRE	~2011 TOTAL COST	~2015 or 2016 Cost
NASO/NALFF	5732/2601	$87.00	$724,971.00	$793,843.25
NASO DNA	1764	$ 87.00	$153,468.00	$168,047.46
NSA NWA	3665	$ 87.00	$318,855	$349,146.23

- **Estimate #3 (From POM16):**
  - **NAVFAC MIDLANT Estimate (5yr re-evaluation):**

BASE	ACREAGE	~COST/ACRE	~2011 TOTAL COST	~2015 or 2016 Cost
NASO	5732	$5.00	$28,660.00	$31,383.00
NALFF	2601	$5.00	$13,005.00	$14,511.00
NASO DNA	1764	$ 5.00	$8,820.00	$9,842.00
NSA NWA	3665	$ 5.00	$18,325.00	$20,447.00

  - **NAVFAC MIDLANT Estimate (~10yr baseline):**

BASE	ACREAGE	~COST/ACRE	~2011 TOTAL COST	~2020 Cost
NASO/NALFF	5732	$95.00	$544,540.00	$648,002.60
NASO/NALFF	2601	$95.00	$247,095.00	$294,043.05
NASO DNA	1764	$95.00	$165,000.00	$180,675.00
NSA NWA	3665	$ 95.00	$348,175.00	$381,251.63

POM18 Project Requested Funding: (Non-Annual Recurring Funds Project)…note, FY2016 and FY2017 are provided as place holders in the event that funding

BASE	FY2015	FY2016	FY2017	FY2018	FY2019	FY2020	FY2021	FY2022
NASO/NALFF	$30,146.65	$13,925.83	$0.00	$0.00	$0.00	$0.00	$643,785.64	$297,972.12
NASO DNA	$0.00	$9,633.00	$0.00	$0.00	$0.00	$0.00	$0.00	$198,973.67
NSA NWA	$0.00	$20,014.96	$0.00	$0.00	$0.00	$0.00	$0.00	$419,864.59

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 02 July 2015

Project Number: 60191NR201; 32442NR201; 4275ANR201
Project Title: 1 S MA NASO/NALFF - Threatened & Endangered Species Inventory; 1 S MA NASO DNA - Threatened & Endangered Species Inventory; 1 S MA NSA NWA - Threatened & Endangered Species Inventory;
Guidebook & Chapter: 12104
Legal Drivers:
Primary: Endangered Species Act
Secondary: Sikes Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Non-Annual Recurring, FY2019 and FY2022 Split Quarters 1st (85%) & 4th (15%)

Project Location: *(Base)* Naval Air Station Oceana (NASO)/ Naval Auxiliary Landing Field (NALFF); NASO Dam Neck Annex (DNA); and Naval Support Activity Hampton Roads Northwest Annex (NSA NWA)

Project Duration: *(Estimated length of time and Start & End Dates)* 1 year, 6 months… subject to change due to project delays (i.e. weather conditions and mission training precluding scheduled surveys).

Project Description: *(What does this project entail?)* Conduct Presence/Absence Inventory of Federal and State Threatened and Endangered Species, Species At Risk (SAR) and Vegetation Communities of Concern. A complete updated list of known, potential T&E species (under all taxonomic groups), and SAR or watchlist species and vegetation communities will be developed and used to focus inventory surveying efforts. Surveys will be conducted utilizing standard techniques approved by USFWS, State Wildlife Programs, and DoD. Any ground disturbing techniques will have prior coordination with base planning and environmental to ensure no threats to resources, utilities, and surveyor safety.

Surveys will not be conducted for species that are covered by a more frequently conducted surveying effort that has already documented the presence of the species on the installation (e.g., sea turtle nesting surveys). Results from frequently conducted surveying efforts will be summarized and referenced in this report.

Project Purpose: *(Why is this project needed?)* Federal and State T&E/SAR species and community lists are not static. Species statuses change on those lists. Since most T&E inventories are focused towards looking for the specific species of concern listed at the time of the inventory surveys may not have been conducted which would have picked up species listed after the last inventory. Also, species themselves are generally not static: species move as landuse changes occur (human and wildlife competition for limited resources); weather & land conditions change and become favorable for certain species to "re-appear" (species lay dormant until that special trigger/niche is met); other wildlife bring in and establish a population of species of concern (raptors dropping fish into a water source, animals eating plants and dropping seeds, etc.); etc. Surveys are recommended to be conducted every 5 years. During this time frame, substantial land alterations both natural and man-made as well as species behavior/movement and inhabitation can change, all of which warrant an updated inventory.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Not funding this program would put the Navy at risk for being negligent to properly managing for species of concern on their bases. Not funding increases the

potential for violations of various Federal Laws to occur, including but not limited to the Endangered Species Act and the Sikes Act. Not properly managing for species of concern could: open the Navy and the Base to Lawsuits from the public; result in very costly mitigation and permitting requirements; and could stop or at least restrict military mission operations (resulting in loss of required military training and the associated costs with such a situation).

Funding this project could prevent most of the not-funding concerns. Funding this project would identify which species of concern are located on base and allow the Navy to better assess risks to military mission and allow the military to address the concerns accordingly and stop the need for an issuance of a military mission stopping violation. Also, funding a project which looks for both listed and species of concern for listing species will allow the base to manage on property, and develop off property partnerships to increase stability of species populations in an attempt to get species delisted or keep them from becoming listed (A GREAT Benefit to the Military Mission).

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)* NA. Project was last funded in FY2012 for NASO/NALFF and NSA NWA and FY2014 for NASO DNA. Project is Non-Annual Recurring, every 5 years. However, project may be required more frequently if laws change, species are added to the Endangered Species List, or if a catastrophic event causes major change on base or within the ecosystem.

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW)
2	Cooperative Agreement (CA) or Contract & Support Documentation
3	Monthly Project Status Reports
4	Draft Final Report
5	PreFinal Report
6	Final Report (Introduction, Study Area, Methods, Results, Conclusion, Recommendations, Literature Cited/References, Appendices)
7	Draft and Final GIS Data Layers/Geodatabase (In Navy Standard Format, i.e. WGS84)
8	Copies of All Associated Data Collected (Datasheets, sample collection info., photographs, etc.)
9	Maps
10	Expenditure/Financial Reports (SF-269 or SF-271)

Navy Utilization of Deliverables:

Navy staff will work with appropriate grantee staff to develop and obtain approvals of SOW and CA or conduct contract proposal bidding process. Grantee will provide monthly status reports and financial reports, which the Navy will utilize to track project status, and identify & address accordingly potential concerns. The submittal of draft and pre-final reports and GIS data will allow the Navy to ensure that they are receiving a product that meets the approved SOW requirements (a quality assurance check) prior to receiving a project that may or may not meet the needs of the Navy. The final product with the additional support data (GIS geodatabase, photographs, data sheets, etc.) will be utilized to: update the INRMP; update the GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; and to identify potential impacts to the military mission. (Grantee will also notify the Navy immediately if a species of concern is identified providing species name, GPS location, installation name, and photograph, if a camera is available and authorized for use.)

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
    - Estimate was derived from taking the FY2012, FY2013, and FY2014 awarded contract final costs and requested Inhouse fees with the following applied annual inflation rates and rounded up to the nearest dollar: years prior-2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0% .
        - 2012-2014 Awarded Project:
            - PM = Emmett Carawan; Thad McDonald
            - Contract Awarded Amounts:
                - NASO/NALFF = $249,273.00
                - NASO DNA = $121,404.00
                - NSA NWA = $203,499.86
            - Inhouse Requested Fees:
                - NASO/NALFF (Carawan) = $10,974.00
                - NASO DNA (Carawan) = Details not provided to INRM.
                - NSA NWA (McDonald) = $5,000.00
            - See Contract Award Documentation and Inhouse Fee Request documentation for details.

"The costs vary widely between Bases due to a number of factors including 1) the number of possible species, 2) the amount of available habitat, and 3) the known diversity of the sites. Our costs are generally lower than most because we can draw on a diverse, experienced staff and we have relatively low overhead. We rarely subcontract work, having a team of botanists, zoologists, and ecologist that regularly conduct inventories for almost all groups of animals and plants." (VNHP)

Project Requested Funding: (Non-Annual Recurring Funds Project)

BASE	FY2018	FY2019	FY2020	FY2021	FY2022
NASO DNA	$0.00	$133,383.54	$0.00	$0.00	$0.00
NSA NWA	$0.00	$0.00	$0.00	$0.00	$250,860.99
NASO/NALFF	$0.00	$0.00	$0.00	$0.00	$313,832.13

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 02 July 2015

Project Number: 32442NR001
Project Title: 1 CR MA NASO DNA Threatened & Endangered Species Survey – Sea Turtle Lighting Assessments
Guidebook & Chapter: 12104
Legal Drivers:
Primary: Endangered Species Act
Secondary: SIKES Act
Tertiary: CZMA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN
Funding Need Date: *(What year & quarter will funding be needed?)* Non-Annual Recurring, FY2018, Split Quarters 1st (85%) & 4th (15%)

Comment [MFW1]: Likely to change to 2 BO. Current BO does not require this assessment; however to complete our BA for our programmatic BO it was required and hinted that this would be a recurring requirement. Frequency of recurring survey effort may also change upon issuing of the final programmatic BO.

Project Location: *(Base)* Naval Air Station Oceana - Dam Neck Annex (NASO DNA)

Project Duration: *(Estimated length of time and Start & End Dates)* Non-Annual Recurring (Recurring every 5 years). 10 months (01 March 2018 – 31 Dec 2018)…subject to change due to project delays (i.e. weather conditions and mission training precluding scheduled surveys).

Project Description: *(What does this project entail?)* Conduct lighting assessments associated with the following Threatened and Endangered species: Sea Turtles. Utilize the most current USFWS and VDGIF issued guidance regarding completing these assessments. See 2015 NASO DNA Sea Turtle Lighting Assessment as a reference/example. Assessments should be completed at a minimum every 5 years.

Between 5 year assessments, offending light sources identified during an assessment should be retrofitted, replaced with a more appropriate lighting source, or other management action (timing and frequency of light use altered) taken to minimize the potential negative impacts from artificial lighting to sea turtles. This action is considered replacement, retrofitting, or modification of equipment associated with the operation and/or maintenance of real property. Given this information per CNIC POM-18 Programming Guidance, lighting remediation would not be funded by the Environmental Program.

During an informal consultation in 2014 with USFWS, VDGIF and the NAVY regarding the installation's Sea Turtle Management Program it was determined that as part of the installation's Biological Assessment a Lighting Survey would be required. It was also indicated that lighting Assessments should be routinely completed to determine if there are artificial light sources that could negatively impact sea turtles and to determine if lighting remediation actions have sufficiently addressed previously identified offending light sources.

Compliant INRMP Dated: 9 June 2015.

Project Purpose: *(Why is this project needed?)* Conduct Lighting Assessments to support conservation of and provide guidance to be implemented on how to avoid negative impacts to nesting and hatching sea turtles protected under the Endangered Species Act. In accordance with the INRMP and USFWS and VDGIF Informal Consultations to minimize negative impacts to this T&E species.

Sea Turtles are confirmed to successfully nest and hatch on NASO DNA. Nesting period is typically from May-August. Hatching period is typically from July-October. Current guidance is that some sea turtles utilize instinct associated with natural lighting (the moon) to determine suitable nesting locations and to orient them to the water after hatching. Artificial lighting sources (non-moon lighting sources) have been shown to disorient sea turtles and lead them away from suitable nesting locations and lead them away from water after hatching resulting in death due to increased predator exposure and dehydration.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Maintains compliance with the Endangered Species Act and helps to prevents potential Notices of Violation and associated penalties, thus allowing those authorized military training and Morale and Welfare activities to continue on the beaches of NASO DNA.

Note, if no action is taken on remediation activities identified during assessment this could result in an NOV and be subject to legal penalties.

Project Delay: *(Project was POM'd for, approved, and funding was not received as scheduled? If so, how many years has project been delayed?)*

Proposed Deliverables:

ITEM:	DESCRIPTION:
1	Statement of Work (SOW).
2	Contract or Cooperative Agreement Award (CA).
3	Meetings, Monthly Updates, etc.
4	Equipment, Materials, and Supplies.
5	Services/Field Work/Assessments
6	Draft and Final Reports
8	Copies of all completed data sheets, photographs, spreadsheets, etc.
9	Draft and Final GIS Data Layers (In Navy Standard Format, i.e. WGS84) /GEODATABASE

Navy Utilization of Deliverables:
Navy staff will work with appropriate grantee staff/contractors to develop and obtain approvals of SOW and CA. Grantee will provide immediate notification of any nests and/or strandings to the NASO Navy Natural Resources Specialist upon observation. Assessment Grantee will document any offending light sources, provide type of light source/lighting structure/fixture, provide recommended retrofit or replacement solution of the offending light source, provide photographic documentation of the offending light source, and provide GPS information on the offending light source. Lighting Remediation Grantee will implement to the maximum extent practicable the recommendations identified during the lighting assessment(s) and coordinate these efforts with the installation Natural Resources Manager. The Navy will utilize this information to: update the INRMP; update the

GeoReadiness Center Files; develop appropriate survey and habitat restoration or protection requirements; report to appropriate regulatory agencies, and to identify potential impacts to the military mission or any other concerns.

Cost Estimations:

- **How was estimate derived?** *(Past Similar Project Costs; Contractor Estimate; Regulatory Agency Estimates; etc.)*
  - Cost estimate number for lighting assessment was based off of 2015 Lighting Assessment project Award and requested Inhouse fees with the following applied annual inflation rates and rounded up to the nearest dollar: years prior-2015 = 1.7%; year 2016 = 1.8%; and years 2017-2022 = 2.0% .
    - 2015 Awarded Project:
      - PM = Jessica Bassi
      - EPR Submitter = Jessica Bassi
      - Original EPR Title = Beachfront Lighting Survey and Biological Assessment for Sea Turtle Nest Management
      - Contract Awarded Amount = $54,001.00
      - Inhouse Requested Fees (Jessica Bassi) = $5,000.00
      - See Contract Award Documentation and Inhouse Fee Request documentation for details.

Project Requested Funding: (Recurring Funds Project within a given POM Cycle)

FY2018	FY2019	FY2020	FY2021	FY2022
0.00	$0.00	$65,014.14	$0.00	$0.00

Note: Recommend prior to each POM cycle obtaining a new cost estimate as the inflation rates and advances in technology change. This change can result in cost fluctuations well above or well below projected cost estimates.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 30 July 2013

Project Number: 60161NR201; 32442NR201; 4275ANR201
Project Title: 1 S MA NASO/NALFF - Threatened & Endangered Species Inventory; 1 S MA NASO DNA - Threatened & Endangered Species Inventory; 1 S MA NSA NWA - Threatened & Endangered Species Inventory;
Guidebook & Chapter: 12104
Legal Drivers:
Primary: Endangered Species Act
Secondary: Sikes Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO)/ Naval Auxiliary Landing Field (NALFF); NASO Dam Neck Annex; and Naval Support Activity Hampton Roads Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Conduct Presence/Absence Inventory of Federal and State Threatened and Endangered Species. A complete updated list of known and potential T&E species (under all taxonomic groups) will be developed and used to focus inventory surveying efforts. BASE	FY2014	FY2019	FY2024	FY2029	FY2034	FY2039
NASO DNA	$105,840.00	$120,298.80	$131,727.19	$144,241.27	$157,944.19	$172,948.89
TOTAL:	$105,840.00	$120,298.80	$131,727.19	$144,241.27	$157,944.19	$172,948.89

POM18 Region Requested Support Information for Manpower Justifications:

Heavy

Complex NR/Mission Conflict

- NAS Oceana Bird/Animal Aircraft Strike Hazards
- NALFF Bird/Animal Aircraft Strike Hazards
- NASO Airfield Vegetation Height Obstruction Management
- NALFF Airfield Vegetation Height Obstruction Management
- Nesting Sea Turtle and Marine Animal Stranding Response (Ranges sometimes have to interrupt training to allow for sea turtle or stranding response)
- Zoonotic Disease, Human Health & Safety Concerns
- Venomous & Poisonous Wildlife, Human Health & Safety Concerns
- Coastal Dune Management, Facility Protection, and Military Training Needs
- Pier Management and protected marine species
- Invasive Plant Species Creating Security Hazards

Complex or Multiple Installation/Region or Consolidated INRMP/EA

- NAS Oceana and NALFF are part of a Consolidated INRMP and associated EA
- NASO Dam Neck Annex has a standalone INRMP and associated EA
- There are NOSCs (9) and other Special Areas to which either NASO ICO &/or NASO PWD Oceana have some level of facility oversight that is not included in the aforementioned INRMPs and EAs. The NOSCs are currently undergoing Natural Resources assessments by NAVFAC LANT to determine if significant Natural Resources exist that warrant an INRMP to be developed for that facility. At least 1 of 3 NOSCs that are not Navy Owned property, but leased, is covered under an existing Air Force INRMP and EA. The Navy also leases additional acreage from the Air Force at Dare County Bombing Range in NC, covered under another existing Air Force INRMP and EA.
- Project review for potential natural resources concerns oversight covers properties in multiple states: Virginia, North Carolina, Maryland, New Jersey and Deleware.

Multiple /Complex EPRs/INRMP Projects (>$750,000 a Year Total)

- Currently Maintains 52 EPRs between 2 INRMPs:
    - Annual Recurring Budgeted Costs = ~$975,416.00
    - Non-Annual Recurring Budgeted Costs = ~$6,038,000.00 (Per POM Cycle)

Large/Complex Habitat Management Program with Monitoring

- 1 Large Ecological Reserve Area
- We are reassessing the installation's prescribed fire program to aide with proper habitat management for multiple purposes: forest stand improvement, vegetation height/successional stage goals, species habitat improvements (canebrake rattlesnake, northern long-eared bat,

monarch butterfly, etc.). Prescribed fire program has a monitoring component as does species specific related actions.

- Actively enhancing Oceana Pond and other recreational fishing locations to be native self-sustainable recreational fishing areas.
- Managing over 15 Special Interest Areas on the installation identified during Natural Heritage-T&E Species and Vegetation Communities of Concern Inventories.
- Agricultural Outlease Program has an annual monitoring component.
- Forest Resources Program has both a commercial forest and urban forest management component which both require monitoring; however, this is not implemented on an annual basis as would be the ideal.

Large/Complex Mitigation Sites

- Currently maintain on installation (Associated with a Regulatory Action)
    - Wetland Mitigation Sites = 14+ sites
    - Dune Mitigation Sites = 4 sites
    - Forest = 1 site
- Currently maintained on installation (not associated with a permit driven regulatory action)
    - 3 Atlantic White Cedar Study/Restoration Sites
    - 2 Long-leaf Pine Study/Restoration Sites

Medium /Heavy and Recurring Soil Erosion Control Requirements

- Every 10 years the water resources of the installation are assessed for Erosion Control concerns that could negatively impact Natural Resources. The 2013 plan identified 26 sites recommended for repair. Estimated total cost of repairs = ~$1,167,575.00.
- Agricultural Outlease Program Requires the implementation of multiple Soil Conservation Plans.

100+ Plant & 50+ Wildlife Species Managed

- Flora = 247+
- Fauna = 401+
    - 171+ bird species confirmed of potential 275+
    - 44+ fish species
    - 46+ herp species
    - 40+ mammal species
    - 100+ invertebrate species

Large/Complex Invasive/Nuisance Species Program

- Invasive/Nuisance Flora Species Inventoried
    - Non-native species Actively Being Managed = 4 (Alligator weed, Golden bamboo, kudzu and phragmites)

    - Non-native species Pending Funding for Control = 31
- Invasive/Nuisance Fauna Species Actively Managed (Additional Species Likely pending completion of comprehensive non-native invasive fauna inventory):
    - Non-native species = 3 (Nutria, Feral swine, and Feral cats)
    - Native species = 9+ (coyote, raccoon, deer, beaver, fox, Canada geese, bear, squirrel, opossum, etc.)

5+ Listed Species and/or Critical Habitat

- Federal Listed Species of Concern
    - 10 Endangered/Threatened: Northern long-eared bat, breeding; Piping plover, migrant/potential breeder; Red knot, migrant; Loggerhead sea turtle, breeding; Kemps ridley sea turtle, breending; green sea turtle, potential breeder; loggerhead sea turtle, strandings; hawksbill sea turtle, strandings; Atlantic sturgeon, strandings; Shortnose sturgeon stranding; etc.)
    - 2 Proposed or Candidate for Listing (American eel, and Monarch Butterfly)
- State Listed Only Species of Concern
    - 4 Endangered/Threatened (Southeastern dismal swamp shrew, Rafinesque's big-eared bat, Canebrake rattlesnake, and long beach seedbox)
    - 5 Watchlist Species (Atlantic white-cedar, viviparous spikerush, baldwin's spikerush, mud plantain, and longleaf pine)

100+ Acres of Wetland Areas and Recurring Impacts

- ~3154 Acres of wetlands (Does not cover nearshore environment for which the installation may have influence but does not have ownership)
- Annually there are requests to covert wetlands for military mission requirements (permits and in some cases mitigation required)

Large/Complex Near Shore Management Requirements (10+ Miles of Shoreline)

- NASO DNA = ~4 miles of shoreline to the Atlantic Ocean
- NASO = ~2.3 miles of shoreline to Rudee Inlet/Owls Creek, with direct connection to Atlantic Ocean
- NALFF = ~1.3 miles Forested Submerged Banks of the North Landing River, directly connected to the River, but not immediately adjacent to the open water (unforested).

Large/Complex Forestry and/or Ag. Outlease Programs

- Forestry
    - There is over 3137 acres of potential commercial forest quality forest and over 500 acres of urban forest area. The installation currently does not actively manage forests specific for the purpose of timber sale. Most forest is managed specific to wildlife requirements and left in a more natural state. With this said there is a proposal to

convert over 1,200 acres of the aforementioned commercial forest quality forested area into a more traditional Timber Sale Management regime in order to better meet Airfield Height Obstruction Requirements and to minimize BASH concerns.
    - There have been a number of projects that required timber clearing and timber values to be assessed for monetary contribution to the Forestry Reserve Account over the years.
- Agriculture
    - 1562.2 acres of agricultural land managed via 5 real-estate lease agreements. Each lease has an associated soil conservation plan that must be implemented and monitored.

Established/Complex Outdoor Recreation Opportunities Including Hunting and Fishing

- Yes. (Involves Sikes Act Account, partnership with MWR)
    - Fishing (~500 fishermen)
        - 1 Mile of Saltwater Fishing Area at NASO DNA
        - Several Freshwater Fishing Locations at NASO and NASO DNA
    - Hunting Available at NASO, NASO DNA and NALFF (~500 Hunters, 11 Small Game Hunting Areas, 121 Big Game Hunting Areas)
        - Big Game, furbearer, small game, dove and waterfowl hunting.
        - Installation Hunter Indoctrination training required, and weapons qualifications required.
        - Bow, fire-arm, and trapping authorized.
    - 3 Educational Trails/Platforms over 2 miles total (2 at NASO DNA, 1 at NASO)
    - 2 Miles of Wildlife Viewing Beaches
    - 1 Watchable Wildlife Designated Area (Partnership with Virginia Aquarium and Marine Science Center)

Complex/Involved BASH Requirements

- Yes.
    - 2 Airfields are covered under the INRMP. Very active BASH program with Instruction/Plan. USDA-WS BASH support. Requires permitting, land management, wildlife management, etc.
    - 1 Aerial Bombing Range (Leased Property at DCBR)
    - 1 Drone Target Launch Facility (NASO DNA)
    - Multiple Helicopter Landing Sites are also found at 4 of the larger parcels for which PWD Oceana has oversight (e.g., NASO, NALFF, NASO DNA, and DCBR).

Large/Complex NEPA Support

- INRMP Associated NEPA Documents:
    - 2 INRMP EAs
    - 1 Aerial Spraying Invasive Plant Species EA with Mult Addendums/Supplemental EAs

    - 2 Airfield Obstruction Management Plan EAs (Not an NR driven EA; however encompasses a large amount of NR oversight with Timber Harvests & Mngt, Agriculture, Ditch Maintenance, Wetlands Permitting, Endangered Species, etc.)
    - Multiple CATEXs
- Average Number of non-NR Projects Reviewed for NR/EV concerns/year
    - Environmental Checklists = ~55
    - Site Work Induction Board = ~365
    - Work Permits = ~365
- Average Number of NEPA Documents Processed or Coordinated/year
    - CATEX = ~50
    - EA = >5 (currently coordinating on 8)
    - EIS = <1 (currently coordinating on 2)

Complex/Intense and Recurring Interaction with FWS and State Fish and Game Offices

- Yes, throughout the year. Annual INRMP Metrics, various partnership meetings, ecosystem management meetings, LCC meetings, feral animal meetings, conducting survey efforts, obtaining permits, general information sharing, training opportunities, NMFWA meetings, DoD PIF meetings, Bird Strike Committee Meetings, etc. (USFWS Region 5; VDGIF; USDA-WS; VDEQ; VDOF; City of Chesapeake; City of Virginia Beach; USACE; Back Bay NWR; Great Dismal Swamp NWR; Alligator River NWR; VAST; NOAA-NMFS; etc.)
    - INRMP Operation & Effect Signature Coordination
    - Maintain a USFWS Migratory Bird Depredation Permit for Multiple Properties
    - Maintain a USFWS Eagle Harassment Permit
    - Maintain a VDGIF Kill Permit
    - Maintain Recreational Hunting Program Deer Population Control Programs via VDGIF approved extended hunting seasons and additional deer harvest tags/limits (beyond State established seasons and limits).
    - Maintain a NOAA-NMFS Sturgeon Collection Permit
    - Preparing Sea Turtle Management USFWS/VDGIF Permit Package
    - Wetland Permitting & Mitigation Consultations
    - Coordinating Sea Turtle Management BA/BO
    - NLEB Consultations & Training Opportunities
    - Osprey Nest Removal Consultations
    - Prescribed Fire Planning
    - Urban Forestry Planning
    - USFWS Consultation Process Training
    - VDGIF State Listed Species Joint Survey Efforts
    - USFWS, VDGIF and Navy Conservation Law-Enforcement Coordination
    - Etc.

POM 16 Project Justification and Cost Estimates

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 30 July 2013

Project Number: 60161NR202; 32442NR202; 4275ANR202
Project Title: CWA MA NASO/NALFF - Wetland Mapping Inventory; CWA MA NASO DNA - Wetland Mapping Inventory; CWA MA NSA NWA - Wetland Mapping Inventory
Guidebook & Chapter: 12105
Legal Drivers:
Primary: Clean Water Act
Secondary: Coastal Zone Management Act
Tertiary: EO 11990
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO) & Naval Auxiliary Landing Field (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); and Naval Support Activity Norfolk - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Conduct the "5 year" baseline wetland inventory re-evaluation (finalized re-evaluation due 6 months prior to every 5 year baseline or re-evaluation completion date) and new "10 year" baseline wetland delineations. Re-evaluation includes verification of previous inventory boundaries and updating the boundaries as necessary to reflect changes in the wetland property boundaries. Baseline wetland delineations reassess the existing boundaries, identify new wetland areas, and remove new upland areas from within the boundaries of previously delineated wetland areas. Surveyors must map all parcels utilizing updated USACE standard wetland mapping protocols. The people who conduct these surveys should have experience in conducting wetland delineations in Southeastern VA and Northeastern NC as this area is notoriously difficult to survey accurately for wetlands, even for trained professionals conducting wetland delineations in other regions of the US. Any ground disturbing techniques will have prior coordination with base planning and environmental to ensure no threats to resources, utilities, and surveyor safety.

Note: If 5 year re-evaluations are not completed 6 months prior to existing wetland delineation's 5 year USACE expiration date, then a new baseline inventory/wetland delineation may be required, which will substantially increase the costs associated with that 5 year wetland delineation re-evaluation.

Only areas on bases that are not scheduled to be mapped under the baseline wetland mapping efforts, and thus not subject to 5 /10 year re-evaluations, are those properties that fall within agricultural leases. If the property is to be removed from agricultural production the property will then be evaluated for wetlands. Note: Main Base stormwater ditches that run through agricultural fields will be or have been assessed for inclusion in baseline wetlands inventories (shallow agricultural ditches have not been assessed).

Project Purpose: *(Why is this project needed?)* Substantial land alterations both natural and man-made can occur in a 5 and 10 year time spans. These alterations impact land classifications from wetland to upland and vice versa within this 5 year period. The changing classification potential warrants an updated mapping effort. USACE guidance and permitting requirements indicate that wetland inventories should be re-evaluated every 5 years for accuracy and adjusted accordingly.

Updating the data layers will provide the base staff with better information for reporting, protecting, and species of concern modeling purposes. This updated information should also help base staff, Navy HQ staff, DoD staff, etc. to make more informed property management decisions.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this program would allow the base to better plan projects and mission training assignments. Besides construction threats to wetlands and water quality there are also temporary training exercises which threaten the integrity of wetland habitats. Impacts to these habitats could result in Notices of Violation and costly regulatory mitigation requirements.

Providing a better map of known wetland areas will allow planners: to attempt to avoid wetland impacts; to plan for funding and conducting jurisdictional determinations; to plan for funding and processing required permits; to plan for and fund mitigation requirements; and to plan for and fund NEPA documentation and surveying requirements. Being able to better plan around potential wetland concerns will save time and money because there will be fewer unplanned delays and interruptions to contract awarded projects and military training exercises.

Cost Estimations:

BASE	FY2015	FY2016	FY2017	FY2018	FY2019	FY2020
NASO	$31,383.00	$0.00	$0.00	$0.00	$0.00	$648,002.60
NALFF	$0.00	$14,511.00	$0.00	$0.00	$0.00	$0.00
NASO DNA	$0.00	$9,842.00	$0.00	$0.00	$0.00	$0.00
NSA NWA	$0.00	$20,447.00	$0.00	$0.00	$0.00	$0.00
TOTAL:	$31,383.00	$44,800.00	$0.00	$0.00	$0.00	$648,002.60

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 30 July 2013

Project Number: 60161NR203; 32442NR203; 475ANR209
Project Title: CWA MA NASO/NALFF - Mitigation Site Monitoring; CWA MA NASO DNA - Mitigation Site Monitoring; CWA MA NSA NWA - Mitigation Site Monitoring

Guidebook & Chapter: 12105
Legal Drivers:
Primary: Clean Water Act
Secondary: Coastal Zone Management Act
Tertiary: EO 11990
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field (NALFF); NASO Dam Neck Annex (DNA); and Naval Support Activity Hampton Roads Northwest Annex (NSA NWA).

Project Description: *(What does this project entail?)* Conduct wetland mitigation site and project site wetland monitoring in accordance with issued legally mandated permit requirements. Surveys include but are not limited to: flora and fauna density, diversity and abundance assessments; hydrology assessments; etc. Any ground disturbing techniques will have prior coordination with base planning and environmental to ensure no threats to resources, utilities, and surveyor safety.

Project Purpose: *(Why is this project needed?)*
There have been several areas on base that have resulted in mitigation monitoring requirements due to Notices of Violations (NOVs) and new Construction permit requirements. The permits associated with the NOVs and Construction required wetland mitigation projects to be established.

There are several mitigation sites on NASO and NALFF; however currently, there is only 1 outstanding project (Aeropines), funded by the Navy, which has not completed the monitoring requirements established under its permit. Required to evaluate hydrology and vegetation at 1- (2006), 2- (2007), 3- (2008), 5- (2010), 7-(2012), and 10- (2015) years. Aeropines is slated to meet its permitted requirements in FY 2016.

There is one additional project (Wherry Housing) which has met its monitoring requirement, but has not yet received concurrence of completion by the state regulatory office.

There are several wetland mitigation sites at NASO DNA. We have not yet received a letter of concurrence by the state or USACE regulatory offices indicating that the Lovett's Marsh Mitigation site has met its mitigation requirements; however monitoring of the site has been completed is accordance with permit requirements.

There are several mitigation sites on NSA NWA. One site, MOUS-P-131, has not received a letter of concurrence that the site has met the mitigation criteria. Quarterly photos of the site are taken and reporting continues until notice of compliance is received.

Annually, each installation has projects that require wetland site monitoring, remarking of wetland boundaries, and many time coordination with regulatory agencies regarding permits and mitigation requirements. The wetlands media manager at NAVFAC MIDLANT CORE who handles wetland permitting and mitigation is reimbursable and requires funding annually for these services.

Additional funding may be requested in future POM cycles as additional mitigation site monitoring becomes required. The Navy will first pursue obtaining mitigation banking credits or creating wetland off base in lieu of further restricting training property by constructing new wetlands on base. In some cases this is not possible and mitigation will be required on base. It is anticipated that there may be some wetland mitigation monitoring requirements established due to implementing the Clear Zone Management Plan (CZMP). The CZMP is in draft form and has an EA in development. Wetland impacts and mitigation requirements have not yet been finalized.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Not funding this exhibit may result in the issuance of another Notice of Violation and additional mitigation requirements may be issued. Additional funds may have to be redirected from some other mission requirement to fund this project. Additionally, additional land may have to be encumbered and removed from being utilized for military training.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$2000.00	$2,038.00	$2,076.72	$2,116.18	$2,156.39
NASO DNA	$2000.00	$2,038.00	$2,076.72	$2,116.18	$2,156.39
NSA NWA	$2000.00	$2,038.00	$2,076.72	$2,116.18	$2,156.39
TOTAL:	$6000.00	$6,114.00	$6,230.16	$6,348.54	$6,469.17

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 30 July 2013

Project Number: 60161NR204
Project Title: MBTA MA NASO/NALFF - Migratory & Breeding Bird Surveys
Guidebook & Chapter: 12101
Legal Drivers:
Primary: Migratory Bird Treaty Act
Secondary: Bald and Golden Eagle Protection Act
Tertiary: Sikes Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); and Naval Auxiliary Landing Field (NALFF)

Project Description: *(What does this project entail?)* Conduct migratory and breeding bird surveys to establish bird population, activity (Feeding, Breeding, Stop-over, Flight Pattern, etc.), frequency and habitat utilization data.

Conduct seasonal (Winter, Spring, Summer, and Fall) bird surveys to determine use by migrating, breeding, and wintering birds in each habitat type (open grasslands, upland hardwood forest, pine forest, bottomland hardwood forest, etc.) and the airfield clear zones at NASO and NALFF. Migratory and breeding bird surveys should be repeated in 5 year intervals to show bird utilization trends and impacts to bird populations from military land use for those areas inside and outside of the airfield clearzone. Project should consist of day and night time surveys. In addition to traditional surveys data collection (population size estimates, species ID, habitat location, etc.) should included assessment of flight patterns (types of flocking/migrating species, numbers in flocks, flight directions, etc.).

The airfield clearzone areas should be surveyed annually and should also include a comprehensive night time component for bird utilization data of the airfield clearzone areas. This data will be used to analyze Bird Aircraft Strike Hazard (BASH) concerns, to determine what habitat management techniques should be implemented to reduce those concerns. Currently these annual surveys are being conducted under the AIROPS USDA BASH support agreement. Survey routes, techniques, etc. are coordinated with the installation Natural Resources Manager (NRM) and all data is provided quarterly or upon request to the installation NRM. If this were to be removed from the AIROPS USDA Agreement, then this project would be an annually recurring project with an increased estimated budget of $20k+ annually.

Project may identify additional survey need requirements particularly if species with additional warranted protection requirements are identified (including: Federally Listed Species under various acts; and non-Federal T&E listed species that are federally and State recognized Species of Concern, which pose a mission threat or are in danger of potentially becoming a candidate for listing under the Endangered Species Act). If these needs are identified, then additional Projects will be requested at that time.

Project Survey Methodologies will be developed in coordination with the Installation Natural Resources Manager, DoD Coordinated Bird Monitoring Program, and INRMP signatory partners (USFWS and appropriate VA State Wildlife Agency).

Project Purpose: *(Why is this project needed?)* Currently, these bases do not have sufficient biological information to determine if they are negatively impacting bird species of concern. This lack of information puts the Navy at risk for violating several federal and state laws. In addition to federally mandated requirements, Navy and State Policies and Plans dictate that we should have a working knowledge of our impacts to wildlife. This EPR exhibit works to get the Navy in compliance with these requirements.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Surveys of bird utilization on the bases are necessary to understand how mission requirements will affect bird species of concern. MBTA, ESA, and BAGEPA listed species all utilize these bases and have the potential to have negative impacts on the mission. Not knowing the potential impacts to the species by military mission projects and training could cause a violation of anyone of these federal laws and result in a NOV, which would be costly and put additional restrictions on military training property. Knowing in advance what potential concerns there are would allow the command to plan around avoiding potential impacts and to plan for permitting and mitigation requirements, which may be needed to meet military training requirements.

Although BASH is a primary mission concern at NASO and NALFF, comprehensive bird surveys or bird utilization studies have not been conducted. Understanding usage and annual migration patterns in the various habitat types, including the airfield clear zones, is a vital step to reducing BASH hazard on the stations. Data to quantify and qualify potential take are required for obtaining and maintaining a bird depredation permit for clear zone management (BASH reduction efforts). Permits are managed through the Natural Resources program.

This is not just a Natural Resources wildlife concern this is a Safety Concern.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$0.00	$99,505.00	$0.00	$0.00	$0.00
TOTAL:	$0.00	$99,505.00	$0.00	$0.00	$0.00

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 30 July 2013

Project Numbers: 60161NR205; 32442NR205; 4275ANR205
Project Title: 4 SAR MA NASO/NALFF - Species and Habitat of Concern Protection; 4 SAR MA NASO DNA - Species and Habitat of Concern Protection; 4 SAR MA NSA NWA - Species and Habitat of Concern Protection
Guidebook & Chapter: 12104
Legal Drivers:
Primary: Endangered Species Act
Secondary: Clean Water Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Norfolk - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Implement various habitat enhancement and restoration projects in support of Species of Concern and Habitats of Concern in accordance with resources management plans. Obtain appropriate surveys and assessments and monitoring of project areas. (see cost estimate section for the exact projects).

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Projects allows the base to maintain compliance with the: Endangered Species Act; Migratory Bird Treaty Act; Sustainable Fisheries Act Amendment to the Magnuson-Stevens Fishery Conservation and Management Act in 1996; the Chesapeake Bay Preservation Act; the Clean Water Act; Essential Fish Habitat protection; OPNAVINST 5090.1C; base INRMPs; Sikes Act; and numerous other plans including but not limited to the: Southern Watershed Area Management Plan (SWAMP); Lynnhaven River Watershed Restoration Plan (sub of Chesapeake); and Back Bay Watershed Restoration Plan (sub of southern).

The waterways of NASO, NALFF, NASO DNA, and NSA NWA connect to several watersheds which all have the potential to influence Essential Fish Habitat (EFH) within the Atlantic Ocean, and Chesapeake Bay.

These projects support wetland enhancement & protection, T&E species & habitat protection, soil and water protection, and recreational opportunity enhancement and protection.

Maintaining compliance with Federal and State Laws, Regs, and Conservation Goals, helps to ensure that DoD Lands will not be further restricted from military utilization, and helps to ease permitting requirements when new military actions are proposed.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$23,072.12	$23,510.49	$23,957.19	$24,412.38	$24,876.21
NASO DNA	$19,329.36	$19,696.62	$20,070.85	$20,452.20	$20,840.79
NSA NWA	$14,185.98	$14,455.52	$14,730.17	$15,010.05	$15,295.24
TOTAL:	$56,587.46	$57,662.62	$58,758.21	$59,874.62	$61,012.24

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 30 July 2013

Project Numbers: 60161NR206; 32442NR206; 4275ANR206
Project Title: SIKES MA NASO/NALFF - Forest Management; SIKES MA NASO DNA - Forest Management; SIKES MA NSA NWA - Forest Management
Guidebook & Chapter: 12108
Legal Drivers:
Primary: Forest and Rangeland Renewable Resources Planning Act
Secondary: Soil & Water Conservation Act
Tertiary: Sikes Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Norfolk - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Conduct an inventory and assessment of urban, natural, and timber harvest forest conditions every 5 years or sooner as deemed necessary due to major land or mission changes. Conduct annual inspections and assessments of forest habitats to identify potential disease and insect outbreaks, and storm damage concerns. Utilize the inventories and assessments and inspections as guides to: establish and conduct routine pre-commercial thinning and maintenance; provide guidance to appropriate commands for hazard tree removal; and implement arboricultural treatments as recommended and appropriate.

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Proper management of forest resources aides the military mission in multiple ways, to include but not limited to: creating realistic conditions for in field military training; creating noise buffers around ranges; creating visual and access buffers around sensitive training facilities; reducing/removing height obstructions associated with various mission requirements; reducing the potential for species of concern to become listed under the Endangered Species Act; etc.

Existing forest inventories are over 10 years old and there have been substantial changes to the land/forests since that survey. Land changes include: timber harvests; building construction; severe weather conditions (drought, lightening fires, ice storms, hurricanes, tornadoes, etc.); disease outbreaks; etc. Stand condition analyses are needed to determine hazardous conditions, commercial value, and value to species of concern.

SIKES ACT, 10 USC 2665, DoDINST 7310.5 AND OPNAVINST 5090.1C requires that Naval bases manage appropriate forested areas for multiple use and optimum sustainable yield of forest products consistent with other Natural Resources programs. Forest stand improvement methods are required at NASO, NALFF, NASO DNA, and NSA NWA to maintain existing forested stands. If project is not funded the bases will be out of compliance with one or more of the following: DoD and Navy policies, the 1990 Forest Suppression Memorandum of Agreement between Dept. of Agriculture and DoD, the Chesapeake Bay 2000 Agreement, the Clean Water Act phase II program, the Sikes Act, the Soil and Water Conservation Act, the Forest Resource Conservation and Shortage Relief Act, and/or the Forest and Rangeland Renewable Resources Planning Act of 1974 (or RPA).
.

Preservation of existing urban resources and proper management of commercial forest stands is important to meeting the nutrient reduction and non-point source pollution control objectives of the Chesapeake Bay Agreement, the Clean

Water Act and other Federal and State plans, and policies. Proper management also promotes thermal protection of waterways, and benefits to morale and welfare.

Trees are natural energy efficiency promoters/increasers. Trees provide shading/cooling and insulating benefits to structures and people working outside. Properly managing trees and landscaping in the Urban areas of the bases additionally supports the Navy's Policy and Goals towards energy efficiency and the 26 Apr 1994 Presidential Memorandum regarding "environmentally economically beneficial practices on Federal landscaped grounds," which also requires use of native plants for federally landscaped grounds.

Additionally, protection of urban forest environments is a continuing requirement that is exacerbated by hurricanes and coastal storms. Urban forest management involves the removal and trimming of trees that pose safety threats, and property damage. An update of the Urban forest hazard trees will allow the base to address these threats to human safety and property assets.

Proper commercial forest management is: beneficial to a variety of species by providing various phases of vegetation succession; and improves the value of the timber, thus making them commercially more profitable. Timber harvesting activities promote these changes in succession, which mimics natural events that caused succession changes. Wildfires are an example of these natural events, which would clear areas of vegetation and create open areas. A variety of species require these conditions to survive, including species of concern (i.e., Endangered Species Act and Migratory Bird Treaty Act listed species). On many Military base, due to threat to human health, safety, equipment, and training, wildfires are typically suppressed and not allowed to create open areas. Urban development around and training missions on NASO, NALFF, NASO DNA, and NSA NWA require such suppression. Conducting timber harvests allows these bases to provide this habitat conversion in support of species of concern initiatives.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	
NASO & NALFF	$45,099.92	$45,956.82	$46,830.00	$104,375.48	$48,609.54
NASO DNA	$13,405.96	$13,660.68	$13,920.23	$31,026.60	$14,449.20
NSA NWA	$24,394.86	$24,858.36	$25,330.67	$56,457.55	$26,293.24
TOTAL:	$82,900.75	$84,475.86	$86,080.90	$191,859.63	$89,351.97

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 30 July 2013

Project Numbers: 60161NR209; 32442NR209; 4275ANR209
Project Title: CWA MA NASO/NALFF - Soil & Water Conservation - Erosion Control; CWA MA NASO DNA - Soil & Water Conservation - Erosion Control; CWA MA NSA NWA - Soil & Water Conservation - Erosion Control
Guidebook & Chapter: 12107
Legal Drivers:
Primary: Clean Water Act
Secondary: EO Wetlands Protection
Tertiary: Soil & Water Conservation Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); NASO Dam Neck Annex (NASO DNA); NSA Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Conduct base wide erosion and sediment control assessment every 5 years as deemed necessary due to major land or mission changes. Identify areas in need of repair due to erosion. Identify causes for the erosion. Stop and repair the erosion problems.

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Projects allows the base to maintain compliance with the: Clean Water Act, the Chesapeake Bay Preservation Act; Essential Fish Habitat protection; OPNAVINST 5090.1C; base INRMPs; Sikes Act; and numerous other plans and policies.

Erosion can lead to Notices of Violation associated with water quality testing. Erosion can damage wetland habitats, essential fish habitats, and other species of concern habitats. Erosion can create ideal habitat suitable for invasive species to grow. Erosion can also cause security and safety concerns. All of these concerns pose negative impacts to military training, which could lead to loss of land on which the military can train.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO & NALFF	$412,422.00	$70,074.00	$292,439.00	$129,475.00	$83,842.00

Project Title: CHS MA NASO/NALFF - Landcover Mapping; CHS MA NASO DNA - Landcover Mapping; CHS MA NSA NWA - Landcover Mapping

Guidebook & Chapter: 12101
Legal Drivers:
Primary: Sikes Act
Secondary: Migratory Bird Treaty Act
Tertiary: EO_ (Invasive Species or Pest Control)
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Norfolk - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Acquire updated high resolution satellite imagery in an effort to produce a raster landcover layer of vegetative community types; analyze imagery; conduct ground-truthing surveys; and provide maps, data, and final report.

Project Purpose: *(Why is this project needed?)* Vegetation community layers are needed to identify specific community types on base which may be important to species of concern and thus warrant protection and possibly enhancement. Landcover vegetation community level layers should be updated at least every 5 years to identify changes in communities and to capture landcover changes due to military training and development and other ecosystem changes due to environmental factors such as disease outbreaks, storm damage, etc .

Utilizing GIS and satellite imagery to create landcover layers are time and funding efficient. These layers allow biologists to obtain a better understanding of their base's resources, by providing a view/analysis of areas of the base that are not easily accessible on foot. The other option to mapping these communities is to conduct a 100% on the ground physical mapping of the entire base, which requires a 10 fold field work effort and still some GIS data processing in the office.

Data created from this project will help the installation answer annual INRMP metrics questions related to ecosystems as well as maintaining INRMPs sufficient enough to obtain concurrence from regulatory partners during reviews for Operation and Effect.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project promotes protection of wildlife species and vegetation communities of concern. There is a number of Federal and State listed species of concern that either live or seasonally visit bases in the Hampton Roads Area. As such this project allows the Navy to maintain compliance with various Federal and State laws, regulations, policies, and conservation agreements (ESA, MBTA, MMPA, NMFA, Invasive and Pest Control, Sikes Act, INRMP, 5090.1C, State Wildlife Action Plan, USFWS Strategic Plan, etc.).

Funding this project not only helps to keep the base from receiving NOVs related to species of concern, it also provides a better understanding of the layout of the base, which can prove beneficial for military planners designing field training requirements and for development and placement of potential construction sites.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$0.00	$191,698.00	$0.00	$0.00	$0.00
NASO DNA	$0.00	$88,827.00	$0.00	$0.00	$0.00
NSA NWA	$0.00	$108,842.00	$0.00	$0.00	$0.00
TOTAL:	$0.00	**$389,367.00**	$0.00	$0.00	$0.00

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR213; 4275ANR213
Project Title: CWA MA NASO/NALFF – Agricultural Monitoring; CWA MA NSA NWA – Agricultural Monitoring
Guidebook & Chapter: 12107
Legal Drivers:
Primary: Clean Water Act
Secondary: Soil & Water Conservation Act
Tertiary: Sikes Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Support Activity Norfolk - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)*
Conduct assessment of ditches, soil quality, water quality, erosion & sedimentation, etc. and determine if these fields meet the requirements to be classified as Prime & Unique. Develop a primary agricultural ditch/run-off management protocol including needed ditch clearing, ditch planting, ditch buffering requirements, and/or sediment control structure construction. Assessments should be conducted prior to ditch alterations (plan would establish ditch alteration requirements), during ditch alteration events (would monitor water quality and success of erosion control structures), and post ditch alteration events (would monitor water quality and sedimentation rates post ditch work and would establish a success rate of implementing the project).

Monitor run-off to assess impacts (success rate) of implementing the recommended ditch restoration and buffering plan.

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)*
Sikes Act, CWA, CZMA, EO 11990 (Protection of Wetlands), 32 CFR 190 (Natural Resources Management Program), DoDI 4715.3 (Environmental Conservation Program), OPNAVINST 5090.1C, Chesapeake Bay Preservation Act and Federal Agreement, regional effort - Southern & Dismal Swamp watershed protection plans (SWAMP).

The Agricultural (Ag) lease program is one of very few profit generating program areas which brings in funding specifically for environmental program usage. The Ag lease program also saves the military hundreds of thousands of dollars annually in land maintenance costs (i.e., reducing mowing contract requirements). In the long run it is more cost efficient to the Navy to make sure that the ag leases are functioning properly and regulatory requirements are being met. Portions of the NASO AG program falls within the Chesapeake Bay Watershed and has the potential to negatively impact the restoration of the bay if proper land management is not implemented. The remaining portion of NASO and all of NALFF's and NSA NWA's ag fields fall within the Southern Watershed Protection Plan Area and these fields have the potential to negatively impact these watersheds as well.

Annually the big problem with the ag program is that they are not properly maintaining the 3 foot buffers from the top of the bank as dictated in the Soil and Water Conservation portion of the lease agreements. The only enforcement action we have is to deny contract renewal because there is nothing specified as an actual penalty in the lease agreement. Also due to current economic constraints, and decline in farming interest it is estimated that we may lose the ag lease program all together. Because of the decreasing interest in farmers bidding on properties in this region it makes it hard to deny the few farmers that bid the right to farm the land.

In an effort to prevent farmers from breaking the ditch buffer regulation the base NR specialist has recommended that ditches be brought up to "code" (clean the ditches, properly vegetate the ditches, and ditch buffers and installation of

run-off and sediment control structures to minimize buffer requirements and maximize farmable land). Once this recommendation is accomplished then the farmers will have no excuses for not properly implementing the requirements of the Soil and Water conservation agreement.

In order to assess the success of implementing such an action pre (which would include ditch buffering/restoration plan of action), during (assessments during ditch upgrade), and post ditch and buffering upgrade and run-off control structure assessments should be conducted.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/ NALFF	$98,789.96	$4,441.61	$4,526.00	$4,612.00	$4,699.63
NSA NWA	$48,608.85	$2,220.81	$2,263.01	$2,306.00	$2,349.82
TOTAL:	$147,398.81	$6,662.42	$6,789.01	$6,918.00	$7,049.44

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR214; 4275ANR214
Project Title: CWA MA NASO/NALFF – Agricultural Run-off Control Structures; CWA MA NSA NWA – Agricultural Run-off Control Structures
Guidebook & Chapter: 12107
Legal Drivers:
Primary: Clean Water Act
Secondary: Soil & Water Conservation Act
Tertiary: Sikes Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Support Activity Norfolk - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)*
Construct sediment and run-off control structures test sites recommended in the Agricultural Assessment and Management Plan. Sediment and run-off control structures should only hold water up to 48 hours in order to avoid and minimize potential Bird Aircraft Strike Hazards. 3 test sites are to be installed (1 at NASO; 1 at NALFF; and 1 at NSA NWA) in the main agricultural run-off/stormwater ditch of the most highly impaired agricultural field.

Assessments and monitoring should be conducted prior to ditch/agricultural alterations (plan would establish ditch alteration requirements), during ditch alteration events (would monitor water quality and success of erosion control structures), and post ditch alteration events (would monitor water quality and sedimentation rates post ditch work and would establish a success rate of implementing the project). Assessments/monitoring are covered under a separate EPR (...NR213).

Results from assessments/monitoring will be analyzed to determine the cost benefits to installing control structures for each of the agricultural field main run-off/stormwater ditches.

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)*
Sikes Act, CWA, CZMA, EO 11990 (Protection of Wetlands), 32 CFR 190 (Natural Resources Management Program), DoDI 4715.3 (Environmental Conservation Program), OPNAVINST 5090.1C, Chesapeake Bay Preservation Act and Federal Agreement, regional effort - Southern & Dismal Swamp watershed protection plans (SWAMP).

The Agricultural (Ag) lease program is one of very few profit generating program areas which brings in funding specifically for environmental program usage. The Ag lease program also saves the military hundreds of thousands of dollars annually in land maintenance costs (i.e., reducing mowing contract requirements). In the long run it is more cost efficient to the Navy to make sure that the ag leases are functioning properly and regulatory requirements are being met. Portions of the NASO AG program falls within the Chesapeake Bay Watershed and has the potential to negatively impact the restoration of the bay if proper land management is not implemented. The remaining portion of NASO and all of NALFF's and NSA NWA's ag fields fall within the Southern Watershed Protection Plan Area and these fields have the potential to negatively impact these watersheds as well.

Annually the big problem with the ag program is that they are not properly maintaining the 3 foot buffers from the top of the bank as dictated in the Soil and Water Conservation portion of the lease agreements. The only enforcement action we have is to deny contract renewal because there is nothing specified as an actual penalty in the lease agreement. Also due to current economic constraints, and decline in farming interest it is estimated that we may lose

the ag lease program all together. Because of the decreasing interest in farmers bidding on properties in this region it makes it hard to deny the few farmers that bid the right to farm the land.

In an effort to prevent farmers from breaking the ditch buffer regulation the base NR specialist has recommended that ditches be brought up to "code" (clean the ditches, properly vegetate the ditches, and ditch buffers and installation of run-off and sediment control structures to minimize buffer requirements and maximize farmable land). Once this recommendation is accomplished then the farmers will have no excuses for not properly implementing the requirements of the Soil and Water conservation agreement.

In order to assess the success of implementing such an action pre (which would include ditch buffering/restoration plan of action), during (assessments during ditch upgrade), and post ditch and buffering upgrade and run-off control structure assessments should be conducted.

Structure installation should provide positive results to the Navy's overall stormwater monitoring and CWA permit reporting requirements and may allow for additional training opportunities to come on board in the future, or lift some restrictions that the bases currently have due to testing levels. Water quality should be increased, providing benefits on base and off (including the Chesapeake Bay and Southern Watersheds), thus meeting one of the Navy's Ecosystem Conservation Goals.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/ NALFF	$0.00	$230,520.00	$0.00	$0.00	$0.00
NSA NWA	$0.00	$115,260.00	$0.00	$0.00	$0.00
TOTAL:	$0.00	$345,780.00	$0.00	$0.00	

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR216; 32442NR216; 4275ANR216
Project Title: EO 13751 MA NASO/NALFF - Habitat Management - Prescribed Fire; EO 13751 MA NASO DNA - Habitat Management - Prescribed Fire; EO 13751 MA NSA NWA - Habitat Management - Prescribed Fire

Guidebook & Chapter: 12101
Legal Drivers:
Primary: EO 13751 Invasive Species
Secondary: Migratory Bird Treaty Act
Tertiary: Endangered Species Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Create and implement a cooperative agreement with appropriate agencies to supply Prescribed Burning and Wildfire Control for NASO, NALFF, NASO DNA, and NSA NWA.

Project Purpose: *(Why is this project needed?)* Current Navy staffing and training levels in the NAVFAC MIDLANT Hampton Roads area are inadequate to SAFELY accomplish desired prescribed burning and wildfire control. Prescribed burning is utilized for habitat management/restoration and invasive species control. This management and control technique is designed to address species of concern needs and requirements. NASO, NALFF, NASO DNA, and NSA NWA all have annual Prescribed Burning and Smoke Management Plans prepared by the base Natural Resources Specialist and approved by the base Commanding Officer to address species and habitat management objectives identified in the INRMP. In recent years 0% of the desired and planned burn areas have been treated due to weather conditions and inadequate staffing levels.

Existing prescribed burning plans need to be re-assessed for current validity and updated accordingly to meet current habitat management goals and objectives.

Project would adequately staff the Prescribed Fire program to complete prescribed burning and wildfire control goals and objectives and provide support complete field work for assessing and updating the base Prescribed Burning and Smoke Management Plans.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project aides the Navy in maintaining compliance with Federal and State laws, regs., and policies and reduces the potential for incurring Notices of Violations (NOV). Improper management of known threats to species of concern, such as habitat degradation, can lead to potential NOV situations.

The prescribed burning program provides multiple benefits to species, the ecosystem and the military. In addition to the aforementioned species of concern benefits, prescribed burning: is considered to be more ecologically friendly particularly for nutrient recycling and plant regeneration; supports the reduction of Bird-Animal Aircraft Strike Hazards (BASH) concerns by altering vegetation structure to reduce site desirability for species that would or have posed BASH threats; reduces height obstructions associated with various military equipment requirements (i.e., Antenna arrays, Flight Ops, etc.); and reduces the risk of facilities being overrun by uncontrollable "wildfires."

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$70,774.65	$72,119.36	$73,489.63	$74,885.93	$76,308.77
NASO DNA	$35,386.81	$36,059.16	$36,744.29	$37,442.43	$38,153.83
NSA NWA	$35,386.81	$36,059.16	$36,744.29	$37,442.43	$38,153.83
TOTAL:	$141,548.27	$144,237.69	$146,978.20	$149,770.79	$152,616.44

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR218; 32442NR218; 4275ANR218
Project Title: EO 13751 MA NASO/NALFF - Invasive Species; EO 13751 MA NASO DNA - Invasive Species; EO 13751 MA NSA NWA - Invasive Species
Guidebook & Chapter: 12106
Legal Drivers:
Primary: EO 13751 Invasive Species
Secondary: National Invasive Species Act **Tertiary:** Soil and Water Conservation
ERL: 4 Act
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Develop an invasive species assessment and management plan (to be updated every 5 years); remove/control invasive species (as plan recommends upon approval), and conduct pre, during and post invasive species control monitoring (annually).

Assessment plans at a minimum will include: surveying for invasive species; providing a prioritized list of invasive species on base for removal; developing population estimates; mapping extent of species on base; providing management techniques and plan for the control/removal of the invasive species from the base; production of GIS layers associated with species distribution and management.

Annual Monitoring will be an assessment of implemented control techniques. This may include water quality testing; vegetation sampling or surveying; mapping of control area application boundaries prior to treatment; mapping of control area after treatment; etc.

Existing control treatments via herbicide and prescribed burning have already obtained environmental approval via a 2006 Environmental Assessment for the control of Phragmites and Kudzu. Currently, herbicide treatment for these species is the only control treatment option associated with this EPR. Prescribed burning is covered under a different EPR. Additional control treatments for other invasive species may be added at later dates upon the results of the comprehensive baseline assessment and monitoring plans.

Project Purpose: *(Why is this project needed?)*
To obtain compliance with and contribute to the goals of the: National Invasive Species Act, EO 13751 Invasive Species, Soil and Water Conservation Act, Clean Water Act, 5090.1C, Integrated Natural Resources Management Plan, Integrated Pest Management Plan, Endangered Species Act, Migratory Bird Treaty Act, Essential Fish Habitat, etc.

Neither NR Staffing Levels nor training/certifications are adequate to handle the severity of the invasive species problem on these 4 bases. NASO, NALFF, NASO DNA, and NSA NWA all have known invasive species issues that are or could potentially kill species of concern, damage habitats of concern, damage ditch and stream banks (promoting erosion and sediment control problems), and threaten base and military mission security. This project is needed to maintain compliance with a variety of Federal, State, and Navy laws, regulations, and policies.

Between the 4 bases 23 invasive plant species have been identified to occur on base. 7 known vertebrate/invertebrate invasive species are known to occur with an additional 2 suspected to occur. There is undoubtedly additional species that should be added to the list of invasive species. A project was funded in FY2012 that will provide us the updated species list, locations, and recommended control techniques. The final product is due 1st quarter FY2014.

The 2006 EA associated with this EPR for the control of phragmites and kudzu indicates that in addition to the aerial herbicide application that manual ground herbicide treatments will be used for treatment of stands that are not accessible by aircraft and prescribed burning will be used as a follow-up treatment for the control of this species. Unfortunately, adequately trained staffing levels and weather conditions have made it almost impossible to both conduct the manual spraying or conduct prescribed burns (prescribed fire is covered under a different EPR) on the frequency needed to control these species.

Due to security requirements along fence and building perimeters there is an annual mowing contract which cuts the vegetation away from the fence line out to 30ft. This mowing stops some invasive species. Unfortunately, this mowing is also spreading and increasing the threat of other invasive species such as Phragmites. Phragmites grows quickly and forms dense tall stands which: block the view of the security perimeter; chokes out the native plant and animal species; and clogs ditches vital to keep the base from flooding during storm events.

NR staff is observing similar levels of destruction occurring due to other species such as Kudzu, Wisteria, Tree-of-Heaven, Bamboo, and Sericea lespedeza.

Several of these species have invaded wetland mitigation sites and are threatening the integrity and the success of the wetland. If adequate control can not be maintained the site may fail to be approved by the permit/mitigation regulating agencies and may require renegotiations and additional mitigation to be conducted elsewhere.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project aides the Navy in maintaining compliance with laws, regs., and policies reduces the potential for incurring Notices of Violations. NOVs could be issued for a number of reasons to include, but not limited to: knowingly allowing invasive species to negatively impact species of concern; and failing water quality testing, due to lack of proper erosion and sediment control. Internal to the navy additional NOVs can be issued for fire and security hazards.

Proper management of invasive species provides multiple benefits to species, the ecosystem and the military. This project: supports the reduction of Bird-Animal Aircraft Strike Hazards (BASH) concerns by altering vegetation structure to reduce site desirability for species that would or have posed BASH threats; reduces height obstructions associated with various military equipment requirements (i.e., Antenna arrays, Flight Ops, etc.); reduces the risk of facilities being overrun by uncontrollable “wildfires” or flooding; and reduces disease outbreaks.

Allowing invasive species to damage ditches and streams also poses health and safety threats to the base in that the damage by these species can clog vital storm water run-off structures. Damage of these water structures could cause flood and damage to the base, waste water treatment facilities, training facilities, homes, etc. Such devastation could make the base or portions of the base unusable for military training and displace people who live on or adjacent to the base. In addition pooling water creates ideal breeding habitats for a variety of mosquito species (some of which are classified as invasive species), which increase the threat of wildlife borne disease which can spread to humans and other wildlife.

Cost Estimations:

BASE	FY2015	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$88,381.95	$132,035.47	$91,677.84	$93,419.72	$95,194.69
NASO DNA	$18,709.86	$27,605.39	$19,407.58	$19,776.32	$20,152.07
NSA NWA	$38,871.79	$58,246.27	$40,321.38	$41,087.49	$41,868.15
TOTAL:	$145,963.60	$217,887.13	$151,406.79	$154,283.52	$157,214.91

Project Justification & Cost Estimate Information

Project Title: SIKES MA NASO/NALFF - Wildlife Emergency Response; SIKES MA NASO DNA - Wildlife Emergency Response; SIKES MA NSA NWA - Wildlife Emergency Response
Guidebook & Chapter: 12999
Legal Drivers:
Primary: SIKES Act
Secondary: Endangered Species Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)*
Purchase of wildlife control equipment and supplies to support emergency wildlife calls supported by the Base and Region Natural Resources Program Staff. Refresher training/cert. for NR staff in support of Emergency Wildlife control calls is covered under a separate training EPR.

Project Purpose: *(Why is this project needed?)* NASO, NALFF, NASO DNA, and NSA NWA are all located with in the Hampton Roads Region of VA. Hampton Roads is a mix of urban, rural, and natural areas. This land fragmentation, coupled with urban sprawl, puts wildlife and humans in direct competition for the same limited resources and results in human-wildlife conflicts. In an attempt to minimize impacts to humans and wildlife the base Natural Resources staff, in coordination with USFWS and State & Local Wildlife Agencies, respond to emergency wildlife calls.

People who respond to these calls need to be supplied with appropriate equipment to safely and efficiently address these concerns.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project promotes safety of NR personnel, military, civilians, and wildlife. This project minimizes impacts to military training in two primary manners by: 1. expeditiously and safely addressing wildlife concerns; and 2. protecting species of concern, preventing potential Notices of Violation and mitigation costs/requirements. There is a number of Federal and State listed species of concern that either live or seasonally visit bases in the Hampton Roads Area. As such this project allows the Navy to maintain compliance with various Federal and State laws, regulations, policies, and conservation agreements (ESA, MBTA, MMPA, NMFA, Invasive and Pest Control, Sikes Act, INRMP, 5090.1C, State Wildlife Action Plan, USFWS Strategic Plan, etc.).

Any call that can not be safely and efficiently handled by base NR staff will be turned over to State Wildlife Agency officials to address.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO & NALFF	$2,675.35	$2,726.19	$2,777.98	$2,830.76	$2,884.55
NASO DNA	$1,337.68	$1,363.10	$1,389.00	$1,415.39	$1,442.28
NSA NWA	$1,337.68	$1,363.10	$1,389.00	$1,415.39	$1,442.28
TOTAL:	$5,350.72	$5,452.38	$5,555.98	$5,661.54	$5,769.11

Guidebook & Chapter: 12101
Legal Drivers:
Primary: Sikes Act
Secondary: Endangered Species Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Develop a nuisance wildlife assessment and management plan (revised every 5 years); remove nuisance wildlife, and conduct pre, during and post nuisance wildlife removal effort monitoring (annually).

Project Purpose: *(Why is this project needed?)* NASO, NALFF, NASO DNA, and NSA NWA all have nuisance wildlife issues that are killing species of concern, damaging habitat of species of concern, and damaging ditch and stream banks (promoting erosion and sediment control problems).

This project is needed to maintain compliance with a variety of Federal, State, and Navy laws, regs., and policies.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project aides the Navy in maintaining compliance with laws, regs., and policies reduces the potential for incurring Notices of Violations. NOVs could be issued for a number of reasons to include, but not limited to: knowingly allowing nuisance wildlife to negatively impact species of concern; and failing water quality testing, due to lack of proper erosion and sediment control.

Allowing nuisance wildlife to damage ditches and streams also poses health and safety threats to the base in that the damage by nuisance wildlife can collapse and clog vital storm water run-off structures. Damage of these water structures could cause flood and damage to the base, waste water treatment facilities, training facilities, homes, etc. Such devastation could make the base or portions of the base unusable for military training and displace people who live on or adjacent to the base. In addition pooling water creates ideal breeding habitats for a variety of mosquito species (some of which are classified as invasive species), which increase the threat of wildlife borne disease which can spread to humans and other wildlife.

In addition controlling wildlife species in support of species of concern, water quality, human health & safety, and training land functionality there are also some residual beneficial side effect. Such benefits may include: increasing agricultural crop yields; reduction of emergency wildlife calls; and reduction of potential BASH concerns.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$60,552.04	$84,523.77	$62,853.01	$64,047.22	$65,264.12

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR221; 32442NR221; 4275ANR221
Project Title: EFH MA NASO/NALFF - Fisheries, Ditches & Streams; EFH MA NASO DNA - Fisheries, Ditches & Streams; EFH MA NSA NWA - Fisheries, Ditches & Streams
Guidebook & Chapter: 12101
Legal Drivers:
Primary: Magnuson-Stevens Fishery Conservation and Management Act
Secondary: Clean Water Act
Tertiary: EFH
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); NASO Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Conduct an inventory and assessment of ditch, stream, pond, and lake functions (this includes wildlife that live in and contribute to the functionality of the water resource, i.e. fish population assessments) and hydrology. Develop a Habitat enhancement plan for these water resources. Purchase equipment, supplies, fish, plants, etc. to assist with this project.

Project Purpose & Impact/Benefit to Military Mission: *(Why is this project needed? How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Project allows the base to maintain compliance with: the Sustainable Fisheries Act Amendment to the Magnuson-Stevens Fishery Conservation and Management Act in 1996; the Chesapeake Bay Preservation Act; the Clean Water Act; Coastal Zone Management Act; Essential Fish Habitat protection; OPNAVINST 5090.1C; base INRMPs; Sikes Act; and numerous other plans Southern Watershed Area Management Plan (SWAMP); Lynnhaven River Watershed Restoration Plan (sub of Chesapeake); Back Bay Watershed Restoration Plan (sub of southern).

The waterways of NASO, NALFF, NASO DNA, and NSA NWA connect to several watersheds which all have the potential to influence Essential Fish Habitat (EFH) within the Atlantic Ocean, and Chesapeake Bay.

The fish stocking is intended to produce breeding populations of native fish to increase water resources and functionality (as appropriate). Since several of the water resources where fish are anticipated to need to be stocked are areas where recreational fishing is allowed this project also benefits the military community by allowing additional outdoor recreation opportunities, thus potentially increasing Morale and Welfare.

In addition the data is utilized to make more informed NEPA property management decisions in associated with DoD/military mission changes.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$17,411.65	$17,742.47	$133,533.94	$18,416.69	$18,766.61
NASO DNA	$5,046.09	$5,141.96	$31,017.41	$5,337.36	$5,438.77
NSA NWA	$8,599.34	$63,478.25	$8,926.12	$9,095.71	$9,268.53
TOTAL:	$31,057.08	$86,362.68	$173,477.46	$32,849.76	$33,473.90

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR222; 32442NR222; 4275ANR222
Project Title: MSFCA MA NASO/NALFF - Outdoor Recreation Program Requirements; MSFCA MA NASO DNA - Outdoor Recreation Program Requirements; MSFCA MA NSA NWA - Outdoor Recreation Program Requirements
Guidebook & Chapter: 12109
Legal Drivers:
Primary: Sikes Act
Secondary: MSFCA (originally planned to be Primary; however EPRweb does provide that option)
Tertiary: 5090.1C
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Maintain hunting, fishing, and nature: trails; boardwalks; fishing stations picnic shelters; ranges; elevated shooting stands/platforms; check-station; walk-in cooler; freezer; and brochures (i.e. mass production of rules & regulations pamphlets, maps, etc.).

Project Purpose: *(Why is this project needed?)* Maintenance of these items is required: to allow people to safely recreate on these bases; to allow people with physical disabilities to recreate; to ensure people have written documentation or rules/regs./procedures; to promote education opportunities; and to allow proper processing and checking of wildlife taken during recreational activities. Implementation of this project is conducted under the guides of the Sike's Act and in accordance with Navy, USFWS and State mandated policies regarding wildlife population management. The outdoor recreation program also supports objectives linked to the Endangered Species Act, Migratory Bird Treaty Act, an numerous other laws and policies linked to invasive species, water quality, and nuisance wildlife control.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project maintains upkeep of the arteries of the Natural Resources (NR) Outdoor Recreation program (ORP). The NR ORP supports a number of wildlife population management objectives, including but not limited to: deer herd population reduction; nuisance wildlife removal; invasive species removal; and bird aircraft strike hazard (BASH) reduction.

This program supports the military mission in 3 primary ways: 1. increasing Morale and Welfare by allowing outdoor recreation; 2. educating military regarding NR concerns and how they contribute; and 3. ensuring safety to allow military training to continue (BASH reduction).

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO & NALFF	$4,626.93	$1,577.73	$1,607.71	$1,638.25	$1,669.38
NASO DNA	$2,313.46	$788.88	$803.87	$819.14	$834.71
NSA NWA	$2,313.46	$788.87	$803.86	$819.13	$834.69
TOTAL:	$9,253.85	$3,155.48	$3,215.43	$3,276.53	$3,338.78

.

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR223; 32442NR223; 4275ANR223
Project Title: SIKES MA NASO/NALFF - Equipment Storage Structures; SIKES MA NASO DNA - Equipment Storage Structures; SIKES MA NSA NWA - Equipment Storage Structures
Guidebook & Chapter: 12999
Legal Drivers:
Primary: Sikes Act
Secondary: CWA
Tertiary: SWCA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads – Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)*

- Demolish metal temporary storage structure that is rusting and collapsing at the Natural Resources Center on NASO. Replace storage structure. (2014)
- Construct new equipment storage shed capable of housing tractors and associated equipment parts at NASO. (2015)
- Repair storm damaged tractor storage shed at NASO. (2014)
- Repair storm damaged tractor storage shed at NSA NWA. (2014)
- Maintain equipment storage structures. (annually)

Project Purpose: *(Why is this project needed?)* Existing storage structures are in disrepair and are not being utilized for their intended purposes. One structure is a safety hazard and needs to be demolished (needs to be replaced with a secure locking concrete storage shelter, vandals have been known to steal items from the Natural Resources Center). One structure is leaking during storm events and damaging equipment. One structure lost its doors during a storm event and now items can not be securely stored (due to location of this structure with out doors nothing can be stored in this structure). Even with the repair and replacement of these structures there is still not enough storage to properly store equipment from elemental damage. As such a new structure must be constructed to protect hundreds of thousands of dollars of equipment and extend the life cycle of this equipment.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* The equipment needing to be properly stored is utilized for various projects that support requirements under federal and state law and Navy policy. This equipment performs functions in support of Endangered Species work, Migratory Bird work, invasive species work, nuisance wildlife work, erosion control work, habitat enhancement work, the Sikes Act, etc.

Maintaining this equipment enables the Navy to continue supporting these efforts and help to keep the bases in compliance with these laws and regulations; as such, reducing the potential for NOVs to be

issued. This helps to save time and money enabling the military to continue training without interruption.

Protecting the equipment extends the life of the equipment and delays the need for costly repairs or even new equipment purchasing.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO & NALFF	$46,074.67	$918.63	$936.08	$953.87	$971.99
NASO DNA	$903.06	$918.63	$936.08	$953.87	$971.99
NSA NWA	$903.06	$918.63	$936.08	$953.87	$971.99
TOTAL:	$51,043.14	$2,755.89	$2,808.25	$2,861.61	$2,915.98

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR224; 32442NR224; 4275ANR224
Project Title: SIKES MA NASO/NALFF - Equipment Maintenance & Repair; SIKES MA NASO DNA - Equipment Maintenance & Repair; SIKES MA NSA NWA - Equipment Maintenance & Repair
Guidebook & Chapter: 12999
Legal Drivers:
Primary: Sikes Ac t
Secondary: EO_Invasive Species
Tertiary: SWCA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); and Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)*
Maintain and repair equipment to keep them in working in order to complete projects required under the Integrated Natural Resources Management Plan (INRMP). INRMP projects support Species and Habitats of Concern management, invasive species management, outdoor recreation, etc.

Project Purpose: *(Why is this project needed?)* Some equipment requires annual maintenance checks and repairs as needed. Other equipment may break while in use and will need repairs. This equipment is needed to support INRMP identified projects and maintain compliance with Federal, State, and Navy laws, regulations, and policies. Without working equipment the Navy cannot accomplish their INRMP and Permit requirements, and will be labeled non-compliant and possibly be issued Notices of Violation.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)*
Equipment repairs and maintenance are needed to maintain compliance with the: Sikes Act; Endangered Species Act; EO_Invasive Species; Migratory Bird Treaty Act; OPNAVINT 5090.1C; Clean Water Act; Soil & Water Conservation Act; etc.

The equipment needing to be properly maintained and repaired is utilized for various projects that support requirements under federal and state law and Navy policy. This equipment performs functions in support of Endangered Species work (issued biological opinion), Migratory Bird work, invasive species work, nuisance wildlife work, erosion control work, habitat enhancement work, the Sikes Act, outdoor recreation, environmental compliance inspection access, etc.

Maintaining this equipment enables the Navy to continue supporting these efforts and help to keep the bases in compliance with these laws and regulations; as such, reducing the potential for NOVs to be issued. This helps to save time and money enabling the military to continue training without interruption.

Proper maintenance and repair of the equipment extends the life of the equipment and delays the need for more costly repairs or even new equipment purchasing.

Without equipment the Natural Resources managed outdoor recreation program would likely have to shut down due to access and safety issues, thus reducing military morale and welfare.

Without this equipment the Military will have to pay additional funding to maintain areas (at a much greater cost) they utilize for training purposes because Natural Resources will not be able to maintain their dual purpose land management objectives.

Without this equipment the facilities will be endangered of wildfire intrusion because the Natural Resources program will not be able to maintain their firebreaks.

Without this equipment the facilities will be more likely to flood because invasive plant species management, which block the ditches and create security breaches, will have to be stopped until funding can be obtained.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/ NALFF	$12,288.12	$12,521.60	$12,759.51	$13,001.94	$13,248.97
NASO DNA	$2,601.51	$2,650.94	$2,701.30	$2,752.63	$2,804.93
NSA NWA	$5,404.78	$5,507.47	$5,612.11	$5,718.74	$5,827.39
TOTAL:	$20,294.40	$20,680.00	$21,072.92	$21,473.30	$21,881.30

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR225; 32442NR225; 4275ANR225
Project Title: SIKES MA NASO/NALFF - Conservation Law-enforcement Vehicle
Guidebook & Chapter: 12999
Legal Drivers:
Primary: SIKES Act
Secondary: ESA
Tertiary: CWA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* NAVFAC MIDLANT Installations throughout Hampton Roads IPT (11 installations)

Project Description: *(What does this project entail?)*
Fund Funding Shortfall to maintain current Conservation Law-enforcement Vehicle.

Project Purpose: *(Why is this project needed?)* The conservation law-enforcement vehicle services 11 installations in the Hampton Roads IPT; however, the vehicle is maintained under NAS Oceana's Transportation department. During the 2012/2013 fleet vehicle reduction NASO was only allotted so much money, which would have left the Natural Resources program without an adequate Conservation Law-enforcement vehicle. As such Oceana PWD reached back to NAVFAC MIDLANT Region Environmental Business Line to fund the remaining rental cost to maintain the existing vehicle as the vehicle services Oceana Command and Non-Oceana Command installations. Funds were allocated to meet the shortfalls in FY 2013 and the installation Natural Resources Manager was requested to submit an EPR for out years.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* There are key safety concerns associated with transporting equipment via an undersized truck. One mishap could harm personnel or others, could delay project implementation, and could delay military training missions. The truck is used to perform functions in support of Endangered Species work, Migratory Bird work, invasive species work, nuisance wildlife work, erosion control work, habitat enhancement work, the Sikes Act, etc. Without being able to properly transport equipment or gain access into off-road areas there could be delays in project implementation which could have potential negative impacts on species of concern.

Cost Estimations:

FY2016	FY2017	FY2018	FY2019	FY2020
$5,827.96	$5,938.69	$6,051.53	$6,166.50	$6,283.67

Project Justification & Cost Estimate Information

Date Prepared: 31 July 2013

Project Numbers: 60161NR226; 32442NR226; 4275ANR226
Project Title: CHS MA NASO/NALFF - INRMP Updates and Planning; CHS MA NASO DNA - INRMP Updates and Planning; CHS MA NSA NWA - INRMP Updates and Planning
Guidebook & Chapter: 12103
Legal Drivers:
Primary: Sikes Act
Secondary: ESA
Tertiary: CWA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Acquire equipment and support necessary to keep INRMPs updated.

NASO/NALFF INRMP: Final Hard Copy Draft Aug 2008, pen and ink changes through 2012; Review for Operation and Effect Obtained Sept 2012. Project was funded in FY2012 to incorporate all pen and ink changes into the hard copy version of the INRMP.

NASO DNA INRMP: Final Hard Copy Draft Nov 2006, pen and ink changes through 2012; Review for Operation and Effect requested in 2007 and 2012. State Wildlife Agency reviewed in 2007, USFWS concurred if State concurred. State reviewed in 2012; however USFWS refused to review until the hard copy had been updated to incorporate the pen and ink changes within the document, since the original hard-copy was from 2006. Project was funded in FY2012 to incorporate all pen and ink changes into the hard copy version of the INRMP.

NSA NWA INRMP: Final Hard Copy Draft Nov 2006, pen and ink changes through 2012; Review for Operation and Effect requested in 2007 and 2012. State Wildlife Agency reviewed in 2007, USFWS concurred if State concurred. State reviewed in 2012; however USFWS refused to review until the hard copy had been updated to incorporate the pen and ink changes within the document, since the original hard-copy was from 2006. Project was funded in FY2012 to incorporate all pen and ink changes into the hard copy version of the INRMP.

Project Purpose: *(Why is this project needed?)* Existing equipment does not allow the functionality to properly update and produce planning level analyses for the INRMP. As such, equipment is needed that does not connect to the network; therefore not requiring some of the restrictions that interrupt and prevent completion of detailed analyses and mapping efforts. Additionally, the equipment that is issued does not possess the speed and storage capabilities necessary for data processing and storage.

Support to maintain and utilize the equipment and keep INRMP data updated in accordance with various Navy and INRMP identified requirements (e.g., Geographic Information System collection and metadata requirements, map updates, data updates, analyses, modeling, etc.).

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project will aide in making sure the bases are keeping in compliance with various Federal and State laws, regulations, policies, and conservation agreements (ESA, MBTA, MMPA, NMFA, Invasive and Pest Control, Sikes Act, INRMP, 5090.1C, State Wildlife Action Plan, USFWS Strategic Plan, etc.).

INRMPs have a number of updates that are listed and approved by the annual INRMP metrics review teams (Navy, USFWS, and State Wildlife Agency representatives) as needed to be made to the INRMP plan, but current staffing levels and equipment are insufficient to accomplish the required updates. Update requirements have been building up since 2007 and have not been incorporated into a complete digital document. A running list of required updates and an updated project list have been made and are provided when copies of the INRMP are requested for review. Many updates require research, analysis, and data modeling to accomplish the completed desired results for the official INRMP document.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$8,464.719	$83,310.70	$8,789.434	$8,956.433	$9,126.605
NASO DNA	$4,232.359	$17,418.23	$4,394.717	$4,478.217	$4,563.303
NSA NWA	$4,232.359	$36,751.77	$4,394.717	$4,478.217	$4,563.303
TOTAL:	$16,929.438	$137,480.70	$17,578.868	$17,912.866	$18,253.211

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR228
Project Title: SIKES MA NASO/NALFF - Natural Resources Staff Certification Requirements;

Guidebook & Chapter: 12110
Legal Drivers:
Primary: SIKES Act
Secondary: ESA
Tertiary: FIFRA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); and Naval Support Activity Norfolk - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)*
Certification and re-certification requirements for maintaining key training for properly implementing INRMP identified program areas. This EPR is specifically for training required to obtain professional certifications in support of implementing INRMP program areas. Additional training, conferences, or meetings that are not required in support of a certification are not listed in this EPR exhibit, but should be identified in the individual's professional development plan and should be funded through a different funding pool.

Project Purpose: *(Why is this project needed?)* Adequately train personnel and maintain certifications that will allow staff to conduct INRMP identified projects in accordance with Federal and State Laws and Policies.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Not funding this exhibit could delay or prevent staff from receiving the training/certification required to legally implement INRMP program areas. As such this could delay mission critical operations until adequately trained personnel are hired to complete the various requirements.

Cost Estimations:

FY2016	FY2017	FY2018	FY2019	FY2020
$6,333.86	$6,677.58	$6,576.68	$6,933.50	$6,828.81

Project Justification & Cost Estimate Information

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Number: 60161NR231; 32442NR231; 4275ANR231
Project Title: CHS MA NASO/NALFF – Nearshore Environment and Climate Change Assessments; CHS MA NASO DNA – Nearshore Environment Assessment and Climate Change Assessments; CHS MA NSA NWA – Nearshore Environment Assessment and Climate Change Assessments
Guidebook & Chapter: 12101
Legal Drivers:
Primary: Sikes Act
Secondary: NEPA
Tertiary: EFH/ESA/MMPA/MBTA
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana – Dam Neck Annex (NASO DNA); and Naval Support Activity Hampton Roads – Northwest Annex (NSA NWA).

Project Description: *(What does this project entail?)* Conduct research and analyses to produce a report to be incorporated into the INRMP on the history of climate change, the predictions for future climate change, and the associated impacts of this climate change in association with installation properties. Produce maps, timeline, etc., to depict the predicted climate change impacts. Identify military mission vulnerabilities and recommendations associated with predicted planning for climate change impacts (include, changes in property boundaries, sea level rise and impacts to infrastructure, etc.). Identify potential habitat and species of concern impacts associated with predicted planning for climate change impacts. Work/Coordinate with the South Atlantic Landscape Conservation Cooperative (SALCC), USGS, and other Navy partners working on Climate Change initiatives to ensure consistency amongst climate change terminology and estimations. Indentify potential climate change initiatives the Navy can support within the installation's contributing ecosystems (e.g., watersheds, joint venture boundaries, SALCC, bird conservation regions, etc.).

Where appropriate (currently, NASO and NASO DNA are the only installations with identified near shore environments) conduct a more detailed analysis/assessment of near shore environment associated with shore installations for inclusion in the INRMP. Identify and map (providing GIS layers and metadata) boundary of near shore environment. Provide property ownership information on the near shore environment lands and agreements between the property owner and the Navy. Provide species and habitat data information within the near shore environment. Provide near shore environment topography and tidal fluctuation information. Identify military training that currently impacts the near shore environment and how the environment is impacted. Identify potential conflicts with the military mission and the near shore environment. Indentify potential habitat conservation initiatives the Navy can support associated with the near shore environment.

Project recurs every 5 years unless a major change in mission or landuse/cover occurs.

Project Purpose: *(Why is this project needed?)*
Project need was identified in 2010 via the INRMP metrics annual review, indicating that the INRMP does not sufficiently address climate change or near shore environments. INRMP update list and project lists were updated to include this need.

Currently, these bases do not have sufficient biological information to determine if they are negatively impacting species and habitats within the near shore environment. Currently, these bases do not have a climate

change assessment that will allow them to plan for future climate change concerns. This lack of information puts the Navy at risk for violating several federal and state laws. In addition to federally mandated requirements, Navy and State Policies and Plans dictate that we should have a working knowledge of our impacts to wildlife. This EPR exhibit works to get the Navy in compliance with these requirements.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Assessments of Climate Change and near shore environments associated with bases are necessary to understand how mission requirements will affect species and habitats of concern and vice versa (how impact to species, habitats, and landscapes will impact the military mission). Various laws and regulations will be impacted by climate change (endangered species act, soil conservation act, clean water act, marine mammal protection act, essential fish habitat, etc.). The Sikes Act, National Environmental Policy Act, and Navy & DoD Policy (5090.1C, 4715.03, etc.) requires installations with INRMPs to have a working knowledge of climate change and near shore environments, which are to be included in the INRMPs. Knowing in advance what potential concerns there are would allow the command to plan around avoiding potential impacts and to plan for permitting and mitigation requirements, which may be needed to meet military training requirements.

Not having sufficient biological information related to Climate Change and Near shore environments levels the Navy vulnerable to lawsuits when this insufficient information is produced in NEPA documentation associated with military action projects. Obtaining sufficient information will help to avoid these situations or at least help the Navy to win or have such accusations overturned in a court of law.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$109,007.90	$0.00	$0.00	$0.00	$0.00
NASO DNA	$190,763.83	$0.00	$0.00	$0.00	$0.00
NSA NWA	$43,603.16	$0.00	$0.00	$0.00	$0.00
TOTAL:	$343,374.90	$0.00	$0.00	$0.00	$0.00

Prepared By: Michael Wright, Installation Natural Resources Specialist
Date Prepared: 31 July 2013

Project Numbers: 60161NR232; 32442NR232; 4275ANR232
Project Title: SIKES MA NASO/NALFF - Resource Protection Agreement; SIKES MA NASO DNA - Resource Protection Agreement; SIKES MA NSA NWA - Resource Protection Agreement
Guidebook & Chapter: 12101
Legal Drivers:
Primary: Sikes Act
Secondary: Endangered Species Act
Tertiary: Migratory Bird Treaty Act
ERL: 4
Navy Level: 1
Funding Sources: *(OM&N, 19G, Forestry, Legacy, Sikes, etc.)* O&MN

Project Location: *(Base)* Naval Air Station Oceana (NASO); Naval Auxiliary Landing Field Fentress (NALFF); Naval Air Station Oceana - Dam Neck Annex (NASO DNA); Naval Support Activity Hampton Roads - Northwest Annex (NSA NWA)

Project Description: *(What does this project entail?)* Create and maintain a cooperative agreement with the US Fish & Wildlife Service, the VA Department of Game & Inland Fisheries, and/or installation Security to supply Conservation Law-enforcement protection over the natural resources on Navy Property.

Project Purpose: *(Why is this project needed?)* Protection of Natural Resources via adequately staffed and trained Conservation Law-enforcement Officers (CLEOs) is required under the Sikes Act. The CLEO's would enforce a wide number of legal and policy requirements at these installations: CWA; CZMA; EO 11990 (Protection of Wetlands); ESA (e.g., enforcing/executing existing Biological Opinions for such species as the Federally Threatened Loggerhead Sea Turtle); MBTA (e.g., ensuring Migratory Bird depredation work is being carried out in accordance with permit requirements); SWCA; 32 CFR 190 (Natural Resources Management Program); DoDI 4715.03 (Environmental Conservation Program); OPNAVINST 5090.1C; Chesapeake Bay Preservation Act and Federal Agreement; DoD Instruction 4150.7 (Pest Management); EO 13751 (Invasive Species/ Exotic Organisms); and various other Federal and State laws (particularly related to hunting and fishing regulations, and state T&E listed species), regulations, policies, and conservation agreements (MMPA, NMFA, EFH, State Wildlife Action Plan, USFWS Strategic Plan, etc.).

Neither NR staff nor military police currently have the staffing and training levels too sufficiently and legally process and investigate natural resources legal actions. NASO, NALFF, NASO DNA, and NSA NWA all require conservation law-enforcement officer (CLEO) support. Each of these facilities is located within a highly urbanized area and receives a high amount of authorized and unauthorized human access (bases are not 100% fenced in, majority of natural areas are found outside of "secured" compounds). Each of these bases support species of concern, habitats of concern, and hunting & fishing programs. There have been known and suspected negative impacts to natural resources on each of these bases (i.e., vandalism, killing, filling wetlands, planting of non-native invasive species, harassment of Endangered Species and Migratory Birds, poaching, etc.).

Conservation Law-enforcement is a dangerous job (diseased animals, aggressive animals, hunters with loaded weapons, etc.) and should be done in such a manner that when an officer responds to an emergency situation or a situation where they think they may need to use force (i.e., weapons) they should have adequately trained back-up or someone to attend/investigate with them for safety purposes. Also, staffing should be at a level in order to avoid a situation where a single person is working or on call 24 hours 7 days a week. It is recommended that at a minimum the cooperative agreement provide for 3 adequately trained individuals to provide conservation law-enforcement support to NASO/NALFF, NASO DNA, and NSA-NWA. This way there is the ability to safely work emergency situations and to allow for at least one CLEO to have official time-off on a rotational basis.

Project Impact/Benefit to Military Mission: *(How would not funding this project affect the mission? What benefits does funding this project have to the mission?)* Funding this project aides the Navy in maintaining compliance with laws, regs., and policies and reduces the potential for incurring Notices of Violations. NOVs could be issued for knowingly and unknowingly allowing the occurrence of negative impacts to resources. It has been identified that current staffing levels and training/cert. levels are not adequate for implementing conservation law-enforcement actions, across all four bases, regarding natural resources. In effect one may draw the conclusion the Navy is knowingly allowing negative impacts to occur to resources based on the lack of providing enough adequately trained conservation law-enforcement professionals.

Cost Estimations:

BASE	FY2016	FY2017	FY2018	FY2019	FY2020
NASO/NALFF	$99,355.56	$101,243.31	$103,166.94	$105,127.11	$107,124.52
NASO DNA	$21,032.16	$21,431.77	$21,838.97	$22,253.92	$22,676.74
NSA NWA	$43,697.78	$44,528.03	$45,374.07	$46,236.17	$47,114.66
TOTAL:	$164,085.49	$167,203.12	$170,379.98	$173,617.20	$176,915.92

4	N	N	C	D	A	$102,993	$104,950	$106,944	$108,975	$111,046	100	GS 11-12, Forester. Professional Position. Duty Stationed either at region or PWD Oceana EV. Neither region nor installations have a certified forester on staff. OPNAVINST 5090.1C stipulates that "All Navy installations with commercial forestry programs shall employ or use a professional forester to manage forest resources." NAS Oceana, NASO Dam Neck Annex, NALF Fentress, and NSA Norfolk-Northwest Annex all have INRMP identified forestry programs, and due to the nature of various activity initiate projects require commercial forestry management (i.e., timber sales, and timber value assessments, etc.).

Richmond, VA 23230-3916

Dear Mr. Duncan:

SUBJECT: FISCAL YEAR (FY) 2016 NATURAL RESOURCES/INTEGRATED NATURAL RESOURCES MANAGEMENT PLAN (INRMP) METRICS SUMMARY REPORT

Per the Chief of Naval Operations Instruction 5090.1D and associated Environmental Readiness Manual M-5090.1, naval installations are required to submit annual reports summarizing recent Natural Resources/INRMP Metrics meeting updates along with the status of the INRMP.

The FY 2016 Naval Air Station (NAS) Oceana/Naval Auxiliary Landing Field (NALF) Fentress and NAS Oceana Dam Neck Annex (DNA) Natural Resources/INRMP Metric meetings were held on October 12-13, 2016. A copy of the invitations to this meeting is located in Enclosure (1). Enclosures (2) and (3) represent summaries of our annual Natural Resources/INRMP Metrics results for the past year and include the following:

a. A list of meeting participants.

b. The final responses to the INRMP Metrics questions.

c. INRMP actions or projects implemented in FY 2016.

d. A list of federally listed and/or species proposed for listing and/or candidate species found or having potential to be found on our installation with a description of benefits INRMP implementation has provided to these species and/or habitats.

e. Proposed updates to the INRMP discussed during our recent Natural Resources/INRMP Metrics meeting.

f. A summary of the 7 INRMP Metrics focus area scores.

Enclosures (4) and (5) provide copies of each INRMP's current signature page and a summary list of the physical updates made to each INRMP since 2014.

Thank you for your participation in the NAS Oceana Natural Resources Program. My point of contact for this matter is the NAS Oceana Natural Resources Manager, Michael Wright, and she can be reached at (757) 433-3461 or via e-mail at michael.f.wright@navy.mil.

Sincerely,

C. P. VINCELETTE

Mr. Brian Hopper
Section 7 Biologist
National Oceanic and Atmospheric Administration
177 Admiral Cochrane Dr.
Annapolis, MD 21401-7307

Dear Mr. Hopper:

SUBJECT: FISCAL YEAR (FY) 2016 NATURAL RESOURCES/INTEGRATED NATURAL RESOURCES MANAGEMENT PLAN (INRMP) METRICS SUMMARY REPORT

Per the Chief of Naval Operations Instruction 5090.1D and associated Environmental Readiness Manual M-5090.1, naval installations are required to submit annual reports summarizing recent Natural Resources/INRMP Metrics meeting updates along with the status of the INRMP.

The FY 2016 Naval Air Station (NAS) Oceana/Naval Auxiliary Landing Field (NALF) Fentress and NAS Oceana Dam Neck Annex (DNA) Natural Resources/INRMP Metric meetings were held on October 12-13, 2016. A copy of the invitations to this meeting is located in Enclosure (1). Enclosures (2) and (3) represent summaries of our annual Natural Resources/INRMP Metrics results for the past year and include the following:

a. A list of meeting participants.

b. The final responses to the INRMP Metrics questions.

c. INRMP actions or projects implemented in FY 2016.

d. A list of federally listed and/or species proposed for listing and/or candidate species found or having potential to be found on our installation with a description of benefits INRMP implementation has provided to these species and/or habitats.

e. Proposed updates to the INRMP discussed during our recent Natural Resources/INRMP Metrics meeting.

f. A summary of the 7 INRMP Metrics focus area scores.

Enclosures (4) and (5) provide copies of each INRMP's current signature page and a summary list of the physical updates made to each INRMP since 2014.

Thank you for your participation in the NAS Oceana Natural Resources Program. My point of contact for this matter is the NAS Oceana Natural Resources Manager, Michael Wright, and she can be reached at (757) 433-3461 or via e-mail at michael.f.wright@navy.mil.

Sincerely,

C. P. VINCELETTE
Captain, U.S. Navy
By direction
Executive Officer

Subject: 2016 Navy Natural Resouces Annual Metrics Meeting Request
When: Wednesday, October 12, 2016 9:00-14:00 (UTC-05:00) Eastern Time (US & Canada).
Where: NAS Oceana, VA Beach, VA Bldg 820, 2nd Floor, FEAD Conference Room

Hello Everyone,
It is that time again, to schedule our annual Integrated Natural Resources Management Plan (INRMP) metrics meeting for Naval Installations in the Hampton Roads/Tidewater Area of Virginia & North Carolina. The US Navy developed a standard method for the collection and reporting of business metric information for its installation natural resources programs. These metrics are used to keep the INRMPs current and inform stakeholders of new information since the previous year's review. The Navy's Mid-Atlantic Region is now in the process of generating annual metrics for its installations in Hampton Roads for 2016 and we are requesting your participation and feedback in this exercise.

Over the years our INRMP Metrics Team/Partnership has grown and evolved. Our meetings meet the basic requirement to come to mutual agreements on the Navy Natural Resources metrics questions' answers and provide findings and recommendations associated with the questions. Our meetings also go beyond this basic requirement and include discussions on: hot topic items of concern within our region's ecosystems/watersheds; partnering opportunities; updates being made to and updates needing to be made to the existing INRMPs; and other items of interest brought to the table.

We are planning this year's meeting to occur 12 Oct 2016. This meeting will involve reviewing Navy's 2016 assessments for its bases around Hampton Roads, that currently have Sikes Act Required INRMPs, including: NAS Oceana, NALF Fentress, NASO Dam Neck Annex, NWS Yorktown, NWSY Cheatham Annex, NSAHR Northwest Annex, JEB Little Creek and JEBLC Ft. Story.

The focus of the meeting is to: 1. come to mutual agreements on the responses to the questions in the attached guide for each INRMP; 2. allow the Navy and each Partner Agency to share programmatic updates; 3. provide an opportunity for partnership development and networking; and 4. provide a forum to share important conservation opportunities and information. Closer to the meeting date we will send out documentation to help familiarize everyone with the

INRMP Metrics Database and Associated Questions. For those of you that have attended these meetings in the past you will notice some slight differences as information/questions have been added, removed and updated to the INRMP Metrics Datacall. Also, the presentation will be slightly different because the Navy transitioned the INRMP Metrics to a new, still web-based, data call-station.

The meeting is expected to be held at NAS Oceana, Public Works Building 820, 953 Hornet Dr. Virginia Beach VA 23460-2190 between 9:00 am and 4:00 pm. We do not expect the meeting to last the entire scheduled 7 hours. We scheduled the full day in the event that someone would like to tour/conduct an infield site visit of one or more of the associated installations. Often we work through lunch to try and attempt to finish the meeting by 1300 or 1400 hours. The group will take a vote to either break for lunch or work thru lunch. I recommend packing a lunch to be safe.

We have established a conference call-in line for individuals that cannot meet in person, but would like to participate in the group's discussions: Call-in 1-877-718-5284; and Participant code 5430144. If you are unable to attend in person we can email you the metrics and you can respond with comments, concerns or questions via email. We hope you or one of your staff members will be able to participate. (If you are wondering why you are on this mailing list, one of your State Wildlife, USFWS, NOAA-NMFS or Navy cohorts recommended that you be invited to this meeting.)

Directions: [Take Interstate 64 to interstate 264 east; take the 1st Colonial BLVD exit; turn right onto 1st Colonial Blvd, which turns into Oceana Blvd; continue along Oceana Blvd, after the Horse stables turn right onto Tom Cat Blvd (if you end up at General Booth Blvd you've gone too far). Go to the main gate off of Tomcat Blvd to gain access. A list of Non-Navy attendees will be kept at this gate. Once you have gone through the gate, you will drive down Tomcat to the roundabout and turn left onto Hornet Drive, continue on Hornet Dr. past the softball fields to Building 820, parking is adjacent to the building. If there is no parking in the front of the building, drive around the block, there is a large parking area off of D Ave with a walkway that leads to Bldg 820. Visitor Parking in front of the building is 1st come 1st served.]

Please confirm within the next couple of weeks if you plan to attend this meeting and if you are interested in conducting an in-field site visit. Please let us know which installation you'd like to visit and what you'd like to accomplish on that site visit (specific natural resources item of interest).

If you have any trouble accessing the installation or calling in please call me, Michael Wright, on my cell phone at 757-373-8531 so that we can resolve the issue.

We are looking forward to sharing our updates, hearing your updates, and planning for the future.

Sincerely,
Mike

Subject: RE: 2016 Navy Natural Resouces Annual Metrics Meeting Request

Hello Everyone:

I have had several requests for additional information in association with next week's meeting.

Attached for your reference in preparation for next week's meeting:

1. Reporting Unit Report Example, FY2016: These are essentially the questions that the Navy must answer and from which reports to Congress are created regarding INRMP signatory Agency(s) compliance with the Sike's Act. Many of these questions are the same or similar to questions we have answered during previous INRMP Metrics reviews. With this said, there are some new questions and some questions have been further clarified.

2. NASO/NALFF & NASO DNA, and NSAHR NWA 2015 Annual INRMP Metrics Packages Submittals: For these installations most questions will be answered similarly from 2015 to 2016; however, there will be additional clarification on a few of the focus areas (e.g.,: Ecosystem Integrity, updated information allows us to sub-divided acreages not reported under a National Vegetation Classification (NVC) associated ecological system into the appropriate NVC ecological system; project funding updates; etc.).

3. FY2016 ESOH Data Call, Attachment #8 – Natural Resources, Specific to the INRMP Metrics: Helps to clarify the reporting requirements and processes. Provides an understanding of how the 7 INRMP Metrics focus areas are scored.

<<...>> <<...>> <<...>>

If you would like to have copies of the FY2015 INRMP Metrics Packages for any of the other installation's in Hampton Roads we can get those out to you as well.

Sincerely,

Mike

Reporting Unit Metrics Q&A Report: NAS OCEANA

Introduction

Reporting Unit Metrics Q&A Report: NAS OCEANA

Welcome to the Annual Navy Natural Resources Conservation Metrics!

This site has been designed to help guide you step-by step through a series of questions that will inform decision- makers on the status of your Natural Resources program. Data is being collected for fiscal year 2016. Questions followed by an asterisk * are mandatory and must be completed before the data call can be approved and forwarded to DoD. The User Guide and Training Brief can be found here. The FY16 DoD Environmental Data call memorandum can be found here.

Note:

Please click "Save" located at the bottom of each page to add your draft answers to the database. After you save if you leave or are logged out of the system, your answers will be retained the next time you log in. Click on the buttons at the top to jump to a different section.

Getting Started...

Please add all participants and attendees that were involved in the Annual Navy Natural Resources Conservation Metrics. The drop down list includes all people currently using the CN Web system and those entered using the blue 'Add Personnel to List' button. If the person you need to add is not in the pull down list, click the blue 'Add Personnel to List' button and fill out the required fields, indicated by an asterisk.

Note: The Navy Lead is the Navy POC responsible for the completion of the Metrics for this installation/site.

INRMP Status

Navy INRMP Status Check

Objective: This purpose of this section of the Natural Resources Conservation Metrics data call is to gather required information associated with the Natural Resources program, specifically the status of Integrated Natural Resources Management Plans (INRMP). These questions have been added here to collect information that will support the Defense Environmental Program Annual Report to Congress (DEPARC) and Office of the Secretary of Defense Environmental Management Review (EMR). By combining these questions with responses to the Metric's seven (7) focus areas, Natural Resources Managers are faced with fewer annual data calls. Questions followed by an asterisk * are mandatory and must be completed before the data call can be approved and forwarded to DoD.

1. Is an INRMP necessary for this installation/site(s)? *

X Yes
_____ No

2. Is there currently a compliant INRMP that covers this/these installation/site(s)? *

X Yes
_____ No
_____ INRMP - Under Revision
_____ INRMP Under Development (First Version)

2.a. Enter the name of First Compliant INRMP

Integrated Natural Resources Management Plan Naval Air Station Oceana and Naval Auxiliary Landing Field Fentress

2.b. Date of First Compliant INRMP (Usually Dated 2001/2002) Format: MM/DD/YYYY

11/15/2001

2.c. What type of NEPA Documentation was done for the first compliant INRMP?

X EA / FONSI

_____ EIS / ROD

_____ NEPA document is currently under development

2.d. When was the NEPA completed for the first compliant INRMP? Format: MM/DD/YYYY

11/16/2001

2.e Name of the most current INRMP that covers this/these installation/site(s) *

Integrated Natural Resources Management Plan Naval Air Station Oceana and Naval Auxiliary Landing Field Fentress

2.e.1 Date of the most current INRMP that covers this/these installation/site(s). Format: MM/DD/YYYY

This date records when the Regional Commander/Commanding Officer endorsed (signed) the most recent INRMP (with valid NEPA coverage) and/or completed a review for operation and effect.
*

6/9/2015

2.f. Select the species where the INRMP was used to exempt critical habitat designation under ESA Section 4(a)(3)(B)(i) on this/these site(s). Select all that apply. Leave blank if not applicable. See i-note for bug work around. Please gauge your responses for this reporting period only.

3. Has a 5-year INRMP review for operation and effect been completed for the most recent INRMP?

Comment: There were two different 5 year review time periods: USFWS reviewed 12//19/2012 and NMFS, VDGIF, & Navy last reviewed between 02/11 - 06/09/2015. USFWS will receive INRMP for 5 year O&E review post 2016 INRMP Metrics Briefing.

X Yes
____ No
____ N/A
____ In Progress

Enter the date that the 5-year INRMP review was completed. Format: MM/DD/YYYY

6/9/2015

3.a. If a 5-year INRMP review for operation and effect been completed, did the review result in an addendum/appendix, update or revision of the INRMP?

____ Addendum / Amendment
X Update
____ Revision

3.b. What is the expected completion date of the Addendum/Amendment, Update, Revision? Format: MM/DD/YYYY

8/25/2015

3.c. If a 5-year INRMP review for operation and effect has not been completed; please explain why a review for operation and effect has not been completed?

3.d. Was the Mutual DoD & USFWS Guidelines for Streamlined Review of INRMP Updates to secure FWS approval and state approval for updated INRMPs used?

Comment: They guidelines came out after the reviews were completed; however, the basic concepts refelected in the guidelines were followed.

_____ Yes

__X__ No

3.d.1 Did using the guidelines expedite the process?

_____ Yes

_____ No

3.d.2. Why not?

IF IT HAS BEEN MORE THAN 3 YEARS SINCE A REVIEW FOR OPERATION AND EFFECT, ADMINISTRATIVE PROCESS SHOULD BE UNDERWAY IN CASE THE INRMP NEEDS TO BE UPDATED/REVISED.

Reporting Unit Metrics Q&A Report: NAS OCEANA

4. Has USFWS concurrence been received on the most recent INRMP or review for operation and effect?

X Yes
____ No
____ In Progress

4.a. If question 4. is "Yes" or "In Progress", which USFWS Region(s) are applicable? (Choose all that apply)

X Northeast

4.b List the Field Office, if applicable, that did or will sign concurrence documentation

X Virginia Field Office - Gloucester, VA

4.c.If question 4. is "Yes", what is the date of concurrence? Format: MM/DD/YYYY

12/19/2012

4.d. If question 4. is "No", what is the reason for the delay?

4.e Was an ESA Section 7 Consultation completed with USFWS for the INRMP?

Comment: Via their Online Application (IPAC system). At time of their review there were no Federal T&E species known to breed on the installation. We will be submitting a new USFWS O&E request this year and a T&E consultation may be required as the NLEB was documented on the installation in 2015.

X Yes
____ No
____ N/A
____ In Progress

4.f. Which USFWS field office do you regularly conduct ESA Section 7 consultations with typically?

X Virginia Field Office - Gloucester, VA

4.g. Did the Threatened and Endangered Species Listing and Recovery personnel participate in the INRMP review, update or revisions?

X Yes
____ No
____ N/A

5. Has NOAA Fisheries (NMFS) concurrence been received on the most recent INRMP or review for operation and effect?

X Yes
____ No
____ N/A

5.a. If question 5. is "Yes", which NOAA Fisheries (NMFS) Region(s) are involved? (Choose all that apply)

X Greater Atlantic

5.b Select the Local Office, if applicable, that did or will sign concurrence documentation.

X Virginia Field Office - Gloucester Point, VA

5.c. If question 5. is "Yes", what is the date of concurrence? Format: MM/DD/YYYY

5/29/2015

5.d. If question 5. is "No", what is the reason for the delay?

5.e Was an ESA Section 7 Consultation completed with NOAA Fisheries (NMFS) for the INRMP?

Yes

X No

N/A

5.f. Did the Threatened and Endangered Species Listing and Recovery personnel participate in the INRMP review, update or revisions?

X Yes

No

N/A

Reporting Unit Metrics Q&A Report: NAS OCEANA

6. Has State fish and wildlife agency(ies) concurrence been received on the most recent INRMP or review for operation and effect?

X Yes
_____ No
_____ In Progress
_____ N/A

6.a. If question 6. is "Yes", which State fish and wildlife agency(ies)? (Choose all that apply)

X Virginia Department of Game and Inland Fisheries - Henrico, VA

6.a. If question 6. is "In Process", which State fish and wildlife agency(ies)? (Choose all that apply)

6.b. If question 6. is "Yes", what is the date of concurrence? Format: MM/DD/YYYY

2/26/2015

6.c. If question 6. is "No", what is the reason for the delay?

7. If this/these site(s) is/are located on lands affected by tribal treaty rights or other known rights; were Federally-recognized Tribe(s) consulted with to develop or revise the Integrated Natural Resource Management Plan?

Comment: We have coordinated the INRMP with the NAVFAC MIDLANT Cultural Resources Manager. A Cultural affiliations study was awarded in 2013 for the MIDLANT installations to determine which tribes may have an affiliation interests over MIDLANT Naval Property (excluding NOSCs). The 1st Federally recognized tribe in VA is located in New Kent County, the Pamunkey. There are at least 11 tribes in VA, many of which are seeking and may receive Federal Recognition. There are 40+ tribes with interest in MIDLANT installations, many are not federally recognized, but are state recognized. Once tribes are identified with interest over this installation's property, coordination will be conducted regarding the INRMP with those tribes and will be coordinated thru the NAVFAC MIDLANT EV2 Cultural Resources program manager.

	Yes
X	No
	N/A

8. Are migratory birds, specifically birds of conservation concern, adequately addressed in the INRMP for this installation to support the mission and needed NEPA analyses?

Comment: In the INRMP, we: discuss Migratory Birds as they pertain to the MBTA; discuss Birds of Conservation Concern (BCC) in a more general manner; identify which known species occur on the installation; identify potential species that could occur on the installation; identify if species are on BCC or other special status lists; provide more detailed information on individual ESA/SAR species; and provide Best Management Practices to minimize and avoid potential impacts to Migratory Birds. In the INRMP we do not provide installation specific nor greater landscape population level detailed information on each of the confirmed present BCC species nor do we provide population specific information on the remaining potential to occur species of the 36 BCC with a potential to occur on the installation. The INRMP provides links to USFWS, State Wildlife, and other NGO National databases/information sources as references to obtain greater landscape level information on specific BCC species. To obtain more installation specific population level information would require additional funding for surveys, monitoring, and analysis. The installation monitors the status of species and seeks funding to conduct additional survey efforts and provides more specific data in the INRMP on ESA-Endangered, Threatened, Candidate, and Watchlist species at both Federal and State levels.

	Yes
X	No

9. If the INRMP was updated/revised did the INRMP require new or supplementation NEPA?

Comment: Each INRMP project undergoes environmental review to ensure compliance with updates to EV laws and regulations. No new or supplementation EAs or EISs have been completed since the 2008 revision of the INRMP. The NAVFAC MIDLANT NEPA department has determined that these projects are covered by the NEPA documentation already in existance. Discussions have been initiated regarding NEPA and newly designated federally listed species that do or have the potential to occur on the installation.

	Yes
X	No

9.a. If so, what was the type of NEPA?

_____ CATEX
_____ EA / FONSI
_____ EIS / ROD

9.b. When was the NEPA completed? Format: MM/DD/YYYY

10. Has the Regional Commander / Installation Commanding Officer concurrence been received on the most recent INRMP or review for operation and effect?

X Yes
_____ No
_____ In Progress

10.a. If question 10. is "Yes", what is the date of concurrence? Format: MM/DD/YYYY

6/9/2015

10.b. If question 10. is "No", what is the reason for the delay?

Reporting Unit Metrics Q&A Report: NAS OCEANA

11. If the Regional Commander has final authority over whether this/these site(s)' INRMP is compliant has the Regional Commander concurred with/signed the most recent INRMP or review for operation and effect?

_____	Yes
_____	No
X	N/A

11.a. If question 11. is "Yes", what is the date of concurrence? Format: MM/DD/YYYY

11.b. If question 11. is "No", what is the reason for the delay?

Goals and Objectives

Please enter all Goals and Objectives as listed in the INRMP for this/these site(s). Enter Goals in the Goals Tab and the Objectives in the Objective tab. Enter Goals first so they can be linked to recommendations.

Please enter a short or abbreviated Goal and Objective name when creating them. To create a new Goal or Objective, click on the appropriate tab button and then click the blue 'Manage Goals' and 'Manage Objectives' buttons. You will be able to add the full text of the Goal or Objective later by clicking on the row with the shore name.

Goals

Enter or review, as appropriate, the Reporting Unit's Goals as documented in the current INRMP.

1. Implement an ecosystem based natural resources program that provides for conservation of natural resources in a manner that is consistent with the military mission; integrates and coordinates all natural resources management activities; provides for sustainable multipurpose uses of natural resources; and provides for public access for use of natural resources subject to safety and military security considerations.

Please enter the full description of the Goal:

Please describe any Key Considerations or Issues associated with this Goal.

2. Implement an adaptive management based natural resources program that provides for the identification and assessment of military mission operations and facility requirements, analysis and assessment of risks to natural resources, completion of needs assessment surveys, monitoring and preparation of the needs assessment results, updating natural resources inventories to ensure information is current, reanalysis and reassessment of risks to natural resources, and incorporation of adjustments into the overall NRP, as necessary (DoD 2013).

Please enter the full description of the Goal:

Please describe any Key Considerations or Issues associated with this Goal.

3. Implement an ecosystem management program that maintains and improves the sustainability and native biodiversity of ecosystems, considers ecological units and timeframes, supports sustainable human activities, develops a vision of ecosystem health, develops priorities and reconciling conflicts, developscoordinated approaches to work toward ecosystem health, relys on the best science and data available, uses goals and objectives to monitor and evaluate outcomes, uses adaptive management, and implements activities through existing installation plans and programs.

Please enter the full description of the Goal:

Please describe any Key Considerations or Issues associated with this Goal.

4. Utilize existing tools to assess the potential impacts of climate change to natural resources. Identify significant natural resources that are likely to remain on DoD lands or that may in the future occur on DoD lands due to climate change. When not in conflict with mission objectives, take steps to implement adaptive management to ensure the long-term sustainability of those resources that are anticipated to be impacted by climate change.

Please enter the full description of the Goal:

Please describe any Key Considerations or Issues associated with this Goal.

5. Interact with the surrounding community to develop positive and productive community involvement, participation, and educational opportunities. Develop partnerships with state and federal natural resources agencies, local colleges and universities, and local conservation groups.

Please enter the full description of the Goal:

Please describe any Key Considerations or Issues associated with this Goal.

6. Maintain sufficient number of and training of professional NR management and NR law enforcement presonnel.

Please enter the full description of the Goal:

Please describe any Key Considerations or Issues associated with this Goal.

Objectives

Enter or review, as appropriate, the Installation/site(s) Objectives as documented in the current INRMP. Associate Objectives with goals as appropriate.

1. Integrate management of forests, fish & wildlife, land and outdoor recreation opportunities, as practicable and consistent with the militaty mission and established land uses.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

2. Utilize planting techniques that encourages root growth.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

3. Reduce deer herd size.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

4. Removal of feral animals from the environment

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

5. Silvicultural systems that produce stand structures that approach the complexity and diversity of natural forests

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

6. avoid or minimize impacts to wetlands to the greatest extent practicable, to mitigate any unavoidable impacts in accordance with state and federal regulations, and to enhance wetland habitats where feasible

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

7. reducing nutrients and toxins, protecting stream corridors, enhancing and protecting wetlands, protecting priority watersheds, identifying and controlling invasive species on priority sites, and expanding conservation landscaping on federal facilities

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

8. establishing or enhancing riparian forest buffers along unprotected waterways and enforcing the buffer zones in which building is prohibited; and enhancing and protecting wetlands on degraded sites

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

9. incorporating LID and LEED concepts that reduce the rate of runoff, filter out pollutants, and facilitate the infiltration of water into the ground. Features such as filter strips, rain gardens, dry wells, bayscapes, and water quality treatment wetlands should be incorporated into all new development plans, and existing development should be assessed to determine if retrofitting is feasible

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

10. maintain and enhance landscaped areas and urban forests, while minimizing the use of energy, water, chemical herbicides, and fertilizers

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

11. minimize BASH potential around Installation airfields

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

12. conserve and promote conservation of game and nongame fish, wildlife and their habitats; particularly habitats of state or federally listed rare, threatened, or endangered fish or wildlife species

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

13. maintain and enhance habitat for resident and migratory bird species in areas that do not conflict with the BASH Program

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

14. balance wildlife population levels with habitat-carrying capacity

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

15. provide recreational opportunities for the military community and personnel

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

16. maintaining a diversity of ecological communities and enhancing habitat value where practicable

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

17. support the conservation of migratory birds through habitat conservation and enhancement, and to avoid the incidental take of migratory birds through military readiness actions in accordance with the MBTA to the greatest extent practicable

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

18. reduce the attractiveness to birds and wildlife by minimizing food sources, nesting sites, androosting habitat within the airfield operations area

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

19. protect all known and potentially occurring federally listed species in compliance with the federal ESA, and to give special consideration to state-listed species and other rare species

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

20. maintain the health and integrity of a diversity of healthy and productive natural forested ecosystems that support a full complement of native wildlife species

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

21. provide for sustained multipurpose uses to the extent consistent with the mission and ecosystem management

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

22. protect unique and sensitive natural areas and habitats

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

23. protect soil and water resources

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

24. foster understanding and awareness of the environment through educational conservation programs

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

25. Review plans and proposed actions to ensure consistency with the Virginia CZM Program and help obtain a federal CCD as required by the CZMA

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

26. Continue to maintain partnerships with DoD SERDP and the South Atlantic LCC to identify potential climate change impacts to the Installation and adaptive management techniques that can be implemented to ensure the long-term stability of Installation natural resources

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

27. Continue to implement management measures that support watershed protection in accordance with the Chesapeake Bay agreements and goals of the Chesapeake Bay Program, and initiatives that establish or enhance riparian forest buffers along unprotected waterways

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

28. Coordinate with appropriate Installation and NAVFAC departments to identify additional areas to enhance or establish riparian buffers. Establish reduced mowing and no mowing zones along selected ditches and wetlands, and plant appropriate native trees and shrubs where practicable

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

29. Review plans for projects that have the potential to impact wetlands and/or water quality against Installation wetland delineation and water resources maps, and assist the proponent of an action in applying for, reviewing, and obtaining all required federal, state, interstate, and local certifications and permits required by point and nonpoint pollution control, groundwater protection, dredge and fill operations, stormwater management programs and wetlands protection permits for any actions that may impact water quality or wetlands

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

30. Update Installation wetland delineations every five years

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

31. Review erosion and sediment control plans and SWP3 for construction projects and actions that disturb 10,000 ft2 (929 m2) or one or more ac (0.4 or more ha), respectively

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

32. Conduct frequent site visits during construction to ensure compliance with sediment erosion and control plans and to ensure BMPs are being implemented

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

33. Implement LID and LEED practices and other sustainable development into planned projects to the extent practicable

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

34. Assist ERP RPM to identify potential impacts to natural resources caused by the release of contaminants, participate in the ERP decision-making process as appropriate, attend Restoration Advisory Board meetings, review and comment on ERP documents, and ensure response actions are undertaken in a manner that minimizes impacts to natural resources on the Installation

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

35. Manage oil and hazardous substances to protect water quality and other natural resources

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

36. Development and implement plans for removal of cattails and control of grass carp within wetland mitigation areas of the Installation where these species are impacting postrestoration success

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

37. Review all plans where tree removal is proposed to ensure compliance with this INRMP and associated instructions. Develop recommendations for tree protection measures or mitigation for lost trees, or assist with the selection of alternate sites

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

38. Review new and revised landscaping plans and contracts (including plant species lists) to ensure conformance with EO 13148, EO 13112, and Navy policy on beneficial landscaping. Promote the use of beneficial landscaping practices and the importance of using native species

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

39. Assist with hazardous tree recognition and removal

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

40. Participate in National Arbor Day Foundation’s Tree City USA program. Submit a recertification application, forest work plan, and proclamation in support of Arbor Day to the VDOF by 31 December each year

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

41. Coordinate an annual, joint Arbor Day–Earth Day celebration event. Utilize opportunities such as Earth Day and Arbor Day to plant additional native species at Installation sites identified by the NR personnel

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

42. Review all development plans and actions where tree removal and pruning is proposed and provide recommendations for tree protection, mitigation for lost trees, or selection of alternate sites.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

43. Continue to coordinate with VDOF to provide pruning and tree care instruction for the FEAD, Disaster Preparation Team, and others concerned with tree care. Offer training sessions on an as-needed basis.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

44. Continue to coordinate with MWR personnel on natural resources issues such as tree care and reducing nonpoint pollution at recreational facilities on an as needed-basis.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

45. Conduct a habitat assessment and species inventory of the nearshore environment at NASO.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

46. Manage SIAs and other habitats to support pollinators, and rare, threatened, and endangered plant and animal species known or with the potential to occur at the Installation.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

47. Manage airfield clear zones, and adjacent habitats, and agricultural outlease lands to minimize BASH risk.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

48. Arrange a consultation with the VDCR-DNH if changes in land use or management practices are proposed for any of the Installation SIAs to obtain recommendations for minimizing impacts to these resources.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

49. Assist with the removal of invasive plants and/or noxious weeds in identified infestation areas.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

50. Conduct a targeted field assessment to identify and treat all invasive species that currently occur at the SIAs, especially in locations where rare plants species have been observed to protect the continued existence of these plants.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

51. Oversee agricultural ditch maintenance practices to ensure adequate vegetative cover and 3-ft (1-m) buffers are maintained.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

52. Coordinate with NAVFAC Mid-Atlantic environmental staff on enforcement of conservation measures on agricultural outlease parcels, and provide oversight of agricultural outlease agreements.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

53. Complete ongoing forest inventories

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

54. Assist Cultural Resources Manager in resource protection management of cultural resources.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

55. Complete the Environmental Checklist (see Appendix A), as needed, for those natural resources management actions that may affect a regulated resource, or other Navy managed environmental resource. Conduct associated consultations and required mitigations, and acquire associated permits in coordination with the appropriate Navy environmental media manager.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

56. Conserve and promote conservation of game and nongame fish, wildlife and their habitats; particularly habitats of state or federally listed rare, threatened, or endangered fish or wildlife species known to occur at the Installation.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

57. Continue to implement natural resources management strategies and recommendations that also satisfy the goals and objectives of the Virginia SWAP in conserving the state's natural resources.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

58. Coordinate with the USFWS, NOAA NMFS, and/or VDGIF as required, when actions have the potential to affect federal or state listed fish and wildlife species.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

59. Maintain and enhance habitat for resident and migratory bird species and other wildlife in areas that do not conflict with the BASH Program.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

60. NR staff will coordinate with and obtain required permits from the appropriate state and federal agencies for any Installation activities that have the potential to impact terrestrial and marine resources.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

61. NR personnel will continue to maintain a database of all marine animal sightings and strandings (dead or live) that occur on NASO.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

62. NR personnel will receive training in the identification of marine mammals and sea turtles, and be available to assist other personnel in identification of these species when needed.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

63. Conduct period surveys to document changes in fish and wildlife species occurrences at the Installation, and to include surveys for newly listed (state and federal ESAs) species.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

64. Develop an inventory and monitoring program for any federally listed fish or wildlife species that are observed at the Installation.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

65. Implement protective measures for rare, threatened, and endangered wildlife species known to occur at the Installation, in consideration of military mission and BASH Program requirements.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

66. Implement protective measures for rare, threatened, and endangered migratory bird species that are identified at the Installation, including maintaining at least a ¼-mi (0.4-km) buffer around nesting sites, establishing fenced or posted wildlife protection areas, keeping pets leashed and cats indoors, controlling predators, managing native vegetation and controlling invasive vegetation at nest sites, providing artificial nest sites, implementing mowing restrictions for protection of ground-nesting species, and establishing and maintaining an emergency response plan for oil and chemical spills.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

67. Conduct annual inspections and maintenance of bird and bat nest boxes during the fall.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

68. Monitor nesting/roosting activity at bird and bat boxes throughout the nesting/roosting season.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

69. Implement management techniques established in the Installation BASH Program Plan (Appendix K) including CZ management and ensuring compatible land use in the vicinity of airfields on the Installation.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

70. Continue to work with Navy staff and USDA APHIS WS biologists to reduce the BASH potential around Installation airfields, and to conduct control and surveys for birds and white-tail deer in support of the BASH Program as needed.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

71. Continue to maintain USFWS migratory bird depredation and eagle take permits, and VDGIF kill permits for control of birds and mammals in support of the BASH Program.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

72. Implement mowing restrictions along forest edge habitat for protection of timber (canebrake) rattlesnake Coastal Plain population as recommended by VDGIF, and provide training to all mowing contractors for identification of this species. Observations of timber (canebrake) rattlesnake should be reported to the NRM.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

73. Develop and distribute an information sheet on conservation measures for protection of timber (canebrake) rattlesnake to all mowing contractors working at the Installation.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

74. Implement controlled burns to reduce fuel loads and enhance wildlife habitat in accordance with the Installation Prescribed Burn and Smoke Management Plan and the Installation BASH Program.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

75. Update the Prescribed Burn and Smoke Management Plan (2010) annually to reflect accomplishments and set new goals.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

76. Arrange a consultation with the VDCR-DNH if changes in land use or management practices are proposed for any of the Installation SIAs to obtain recommendations for minimizing impacts to these resources and the rare, threatened, and endangered species associated with these areas.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

77. Conduct a habitat assessment and species inventory of the nearshore environment at NASO.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

78. Balance wildlife population levels with habitat-carrying capacity, including cooperating with VDGIF to set annual hunting seasons and bag limits at the Installation.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

79. Continue to collect, summarize, and report deer harvest data annually to VDGIF to help assess deer population levels and herd condition.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

80. Assist with the removal of nuisance and invasive wildlife as needed.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

81. Implement management strategies developed upon results of the nutria and coyote surveys and the nuisance wildlife management plan that is currently being prepared for the Installation.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

82. Continue to provide recreational opportunities for the military community and NASO and NALFF personnel through implementation of the fishing and hunting programs, and other outdoor recreational activities.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

83. Have appropriate NR staff attend annual CLE refresher courses.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

84. Review all plans where tree removal is proposed to ensure compliance with this INRMP and associated instructions. Develop recommendations for tree protection measures or mitigation for lost trees, or assist with the selection of alternate sites.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

85. Review new and revised landscaping plans and contracts (including plant species lists) to ensure conformance with EO 13148, EO 13112, and Navy policy on beneficial landscaping.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

86. Promote the use of beneficial landscaping practices and the importance of using native species.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

87. Assist with hazardous tree recognition and removal.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

88. Conduct fire effects monitoring subsequent to each prescribed burn to assess whether objectives are being met.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

89. Maintain firebreaks and fire lines for each burn unit as needed.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

90. Coordinate timber harvesting or salvage operations with the NAVFAC Regional Forester as required.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

91. Coordinate with the NAVFAC Regional Forester to assess impacts of any proposed MILCON projects on forest and, where practicable, arrange timber sales.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

92. Monitor forest stands to control southern pine beetle and other insect and disease outbreaks.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

93. Continue to provide outdoor recreation opportunities for Installation personnel and their authorized guests to the maximum extent possible within the constraints of the military mission and capability of available natural resources.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

94. Continue to foster understanding and awareness of the environment through educational conservation programs and distribution of environmental education pamphlets and brochures, and posting notices and information on Navy websites and social media, including notices about relevant notices of disease outbreaks that may affect NASO and NALFF personnel and guests, and promotion of preventative measures to limit their spread and transmission.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

95. Assess the potential for providing adaptive equipment for disabled military personnel authorized to participate in hunting and fishing activities at the Installation.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

96. Evaluate the potential to develop a recreational fishery at Dump Pond, within the concrete disposal site north of Southern Boulevard.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

97. Participate in DoD Fish and Wildlife Law Enforcement training and Federal Phase 1 Law Enforcement training.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

98. Routinely patrol fishing and hunting areas of the Installation to ensure people recreating are complying with natural resources regulations and policies.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

99. Continue to pursue partnerships with local, state, and federal agencies and NGOs to offer recreational and research use of the Installation as appropriate.

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

100. enforcement of natural resources laws and regulations

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

101. no net loss in the capability of military lands to support the military mission of the Installation. Conserve the environment for the purpose of the military mission (no net loss in the capability of military installation lands to support the military mission of the installation).

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

102. limit or stabilize the population of deer on the installation

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

103. support the conservation of migratory birds through a number of measures including conservation objectives identified by PIF for the Mid-Atlantic Coastal Plain region

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

104. identifying and maintaining significant blocks of mixed upland forest, and considering the value of hardwood-dominated forests in management decisions;

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

105. preventing loss of forested wetlands

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

106. avoiding conversion of mixed forests or hardwood-dominated forests to pine monocultures

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

107. sing open spacing for plantings and conducting multiple thinnings in pine plantations to delay canopy closure and to promote growth of understory vegetation

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

108. shifting management of early successional habitats greater than 20 ac (8 ha) in size to grassland habitat, and converting smaller early successional parcels to shrubland

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

109. monitoring and controlling infestations of invasive species within freshwater, estuarine, and wetland habitats

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

110. identifying sensitive habitats in oil spill response plans

Select the INRMP Goal that this Objective applies to.

Enter full description of Objective.

Enter Key Considerations if applicable.

1 - Ecosystem Integrity

Focus Area Score 0.88

Per DoD Instruction 4715 and OPNAV Manual 5090 the goal of ecosystem management is to ensure that military lands support present and future training and testing requirements while preserving, improving, and enhancing ecosystem integrity. Ecosystems are functioning units of nature consisting of complex networks of relationships between land, water, and living resources and are subjected to various stressors ranging from human impacts to climate change, and as such, need to be managed in a way that allows for mitigation, adaptation, and long-term sustainability on a regional basis. The intent of this module is to define the ecosystems that occur on the installation/sites. The information will assess the integrity of these ecosystems and inform the annual Navy Natural Resource Conservation Metrics and reporting requirements.

Ecosystem classifications have been preloaded under the Ecosystem Integrity button. The list of ecosystems is comprised of (1) terrestrial ecosystems identified in Nature Serve's, "Ecological Systems of the United States: A Working Classification of US Terrestrial Systems" and (2) marine ecosystems identified in NOAA's Coastal and Marine Ecological Classification Standard. For additional information on these classification schemes, go directly to the Nature Serve's ecosystem online reference or view a list of terrestrial ecosystems by Land Cover Classes, Biogeographic Divisions, and Ecological Systems. Additionally, go directly to the CMECS Catalogue of Units, view their Standard or view a list of marine ecosystems, which only includes the Benthic Biotic, Surface Geology, and Water Column components of the classification scheme. Locally-defined ecosystems may be added to capture specific INRMP details and program management.

All questions followed by an asterisk * are mandatory and must be completed before the datacall can be approved and forwarded to DoD.

To start populating ecosystem information, click the gray 'Ecosystem' button on the upper right side of the screen.

Ecosystems

Focus Area Score 0.76

Please validate (add/delete) the list of ecosystems below, add as necessary if none are listed, and ensure that they are correct. To **ADD** an ecosystem to the site/installation click the blue 'Select EcoSystems' button in the upper left. If you need an ecosystem that is not listed contact Tom Mayes (tom.mayes@navy.mil) or Tammy Conkle (Tamara.Conkle@navy.mil). Click on an Ecosystem row to view or update answers about each Ecosystem.

1. Agricultural Land

1.1. Has the ecosystem been identified in the INRMP? *

- X Yes
- ____ No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

- ____ Fully Achieved
- X Somewhat Achieved
- ____ Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

- X Actions have had a positive effect on conditions
- ____ Actions have had a limited effect on conditions
- ____ Actions have not been effective

Reporting Unit Metrics Q&A Report: NAS OCEANA

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

- [X] Ecosystem fragmentation is the result of five (5) of the phenomena
- [ ] Ecosystem fragmentation is the result of four (4) of the phenomena
- [ ] Ecosystem fragmentation is the result of three (3) of the phenomena
- [ ] Ecosystem fragmentation is the result of two (2) of the phenomena
- [ ] Ecosystem fragmentation is the result of one (1) of the phenomena
- [ ] No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

- [ ] Completely Vulnerable
- [ ] Severely Vulnerable to Stress
- [ ] Highly Vulnerable to Stress
- [X] Moderately Vulnerable to Stress
- [ ] Slightly Vulnerable to Stress
- [ ] Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

- [ ] Not effectively managed
- [ ] Minimally effective management
- [X] Moderately effective management
- [ ] Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

- [ ] Condition is worse on the site(s)
- [X] Condition is similar both on and off the site(s)
- [ ] Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

1402.85

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

2. Altered Vegetation and Conifer Plantation

1.1. Has the ecosystem been identified in the INRMP? *

X Yes
____ No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

____ Fully Achieved
X Somewhat Achieved
____ Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

X Actions have had a positive effect on conditions
____ Actions have had a limited effect on conditions
____ Actions have not been effective

Reporting Unit Metrics Q&A Report: NAS OCEANA

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
	Severely Vulnerable to Stress
X	Highly Vulnerable to Stress
	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
	Condition is similar both on and off the site(s)
X	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

432.8

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

3. Atlantic Coastal Plain Embayed Region Tidal Salt & Brackish Marsh

1.1. Has the ecosystem been identified in the INRMP? *

X Yes
____ No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

____ Fully Achieved
X Somewhat Achieved
____ Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

X Actions have had a positive effect on conditions
____ Actions have had a limited effect on conditions
____ Actions have not been effective

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

- ____ Ecosystem fragmentation is the result of five (5) of the phenomena
- ____ Ecosystem fragmentation is the result of four (4) of the phenomena
- ____ Ecosystem fragmentation is the result of three (3) of the phenomena
- ____ Ecosystem fragmentation is the result of two (2) of the phenomena
- ____ Ecosystem fragmentation is the result of one (1) of the phenomena
- X No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

- X Completely Vulnerable
- ____ Severely Vulnerable to Stress
- ____ Highly Vulnerable to Stress
- ____ Moderately Vulnerable to Stress
- ____ Slightly Vulnerable to Stress
- ____ Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

- ____ Not effectively managed
- ____ Minimally effective management
- X Moderately effective management
- ____ Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

- ____ Condition is worse on the site(s)
- ____ Condition is similar both on and off the site(s)
- X Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

9.86

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

4. Atlantic Coastal Plain Small Brownwater River Floodplain Forest

1.1. Has the ecosystem been identified in the INRMP? *

- [X] Yes
- [ ] No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

- [ ] Fully Achieved
- [X] Somewhat Achieved
- [ ] Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

- [X] Actions have had a positive effect on conditions
- [ ] Actions have had a limited effect on conditions
- [ ] Actions have not been effective

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
	Severely Vulnerable to Stress
X	Highly Vulnerable to Stress
	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
	Condition is similar both on and off the site(s)
X	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

426.8

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

5. Estuarine Shallow Water

1.1. Has the ecosystem been identified in the INRMP? *

- [X] Yes
- [ ] No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

- [ ] Fully Achieved
- [X] Somewhat Achieved
- [ ] Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

- [X] Actions have had a positive effect on conditions
- [ ] Actions have had a limited effect on conditions
- [ ] Actions have not been effective

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

- ____ Ecosystem fragmentation is the result of five (5) of the phenomena
- ____ Ecosystem fragmentation is the result of four (4) of the phenomena
- ____ Ecosystem fragmentation is the result of three (3) of the phenomena
- ____ Ecosystem fragmentation is the result of two (2) of the phenomena
- ____ Ecosystem fragmentation is the result of one (1) of the phenomena
- X No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

- X Completely Vulnerable
- ____ Severely Vulnerable to Stress
- ____ Highly Vulnerable to Stress
- ____ Moderately Vulnerable to Stress
- ____ Slightly Vulnerable to Stress
- ____ Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

- ____ Not effectively managed
- ____ Minimally effective management
- X Moderately effective management
- ____ Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

- ____ Condition is worse on the site(s)
- X Condition is similar both on and off the site(s)
- ____ Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

70.73

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

6. Forest

1.1. Has the ecosystem been identified in the INRMP? *

X Yes
____ No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

____ Fully Achieved
X Somewhat Achieved
____ Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

X Actions have had a positive effect on conditions
____ Actions have had a limited effect on conditions
____ Actions have not been effective

Reporting Unit Metrics Q&A Report: NAS OCEANA

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
X	Severely Vulnerable to Stress
	Highly Vulnerable to Stress
	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
	Condition is similar both on and off the site(s)
X	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

123.36

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

7. Freshwater Ponds and Lakes

1.1. Has the ecosystem been identified in the INRMP? *

X Yes
____ No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

____ Fully Achieved
X Somewhat Achieved
____ Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

X Actions have had a positive effect on conditions
____ Actions have had a limited effect on conditions
____ Actions have not been effective

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
X	Severely Vulnerable to Stress
	Highly Vulnerable to Stress
	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
	Condition is similar both on and off the site(s)
X	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

46.24

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

8. Northern Atlantic Coastal Plain Basin Swamp & Wet Hardwood Forest

1.1. Has the ecosystem been identified in the INRMP? *

X Yes
____ No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

____ Fully Achieved
X Somewhat Achieved
____ Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

X Actions have had a positive effect on conditions
____ Actions have had a limited effect on conditions
____ Actions have not been effective

Reporting Unit Metrics Q&A Report: NAS OCEANA

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
X	Severely Vulnerable to Stress
	Highly Vulnerable to Stress
	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
	Condition is similar both on and off the site(s)
X	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

25.69

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

9. Northern Atlantic Coastal Plain Stream & River

1.1. Has the ecosystem been identified in the INRMP? *

X Yes

_____ No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

_____ Fully Achieved

X Somewhat Achieved

_____ Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

X Actions have had a positive effect on conditions

_____ Actions have had a limited effect on conditions

_____ Actions have not been effective

Reporting Unit Metrics Q&A Report: NAS OCEANA

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

- ____ Ecosystem fragmentation is the result of five (5) of the phenomena
- ____ Ecosystem fragmentation is the result of four (4) of the phenomena
- ____ Ecosystem fragmentation is the result of three (3) of the phenomena
- ____ Ecosystem fragmentation is the result of two (2) of the phenomena
- ____ Ecosystem fragmentation is the result of one (1) of the phenomena
- X No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

- X Completely Vulnerable
- ____ Severely Vulnerable to Stress
- ____ Highly Vulnerable to Stress
- ____ Moderately Vulnerable to Stress
- ____ Slightly Vulnerable to Stress
- ____ Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

- ____ Not effectively managed
- ____ Minimally effective management
- X Moderately effective management
- ____ Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

- ____ Condition is worse on the site(s)
- ____ Condition is similar both on and off the site(s)
- X Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

54.88

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

10. Scrubland

1.1. Has the ecosystem been identified in the INRMP? *

X Yes

_____ No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

_____ Fully Achieved

X Somewhat Achieved

_____ Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

X Actions have had a positive effect on conditions

_____ Actions have had a limited effect on conditions

_____ Actions have not been effective

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
	Severely Vulnerable to Stress
	Highly Vulnerable to Stress
X	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
X	Condition is similar both on and off the site(s)
	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

426.13

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

11. South-Central Interior Small Stream & Riparian

1.1. Has the ecosystem been identified in the INRMP? *

- [X] Yes
- [ ] No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

- [ ] Fully Achieved
- [X] Somewhat Achieved
- [ ] Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

- [X] Actions have had a positive effect on conditions
- [ ] Actions have had a limited effect on conditions
- [ ] Actions have not been effective

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
X	Severely Vulnerable to Stress
	Highly Vulnerable to Stress
	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
	Condition is similar both on and off the site(s)
X	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

1.57

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

12. Southern Atlantic Coastal Plain Depression Pondshore

1.1. Has the ecosystem been identified in the INRMP? *

X Yes

_____ No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

_____ Fully Achieved

X Somewhat Achieved

_____ Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

X Actions have had a positive effect on conditions

_____ Actions have had a limited effect on conditions

_____ Actions have not been effective

Reporting Unit Metrics Q&A Report: NAS OCEANA

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

- ____ Ecosystem fragmentation is the result of five (5) of the phenomena
- ____ Ecosystem fragmentation is the result of four (4) of the phenomena
- ____ Ecosystem fragmentation is the result of three (3) of the phenomena
- ____ Ecosystem fragmentation is the result of two (2) of the phenomena
- ____ Ecosystem fragmentation is the result of one (1) of the phenomena
- X No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

- X Completely Vulnerable
- ____ Severely Vulnerable to Stress
- ____ Highly Vulnerable to Stress
- ____ Moderately Vulnerable to Stress
- ____ Slightly Vulnerable to Stress
- ____ Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

- ____ Not effectively managed
- ____ Minimally effective management
- X Moderately effective management
- ____ Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

- ____ Condition is worse on the site(s)
- ____ Condition is similar both on and off the site(s)
- X Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

1.12

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

13. Southern Atlantic Coastal Plain Mesic Hardwood Forest

1.1. Has the ecosystem been identified in the INRMP? *

X Yes

_____ No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

_____ Fully Achieved

X Somewhat Achieved

_____ Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

X Actions have had a positive effect on conditions

_____ Actions have had a limited effect on conditions

_____ Actions have not been effective

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
	Severely Vulnerable to Stress
X	Highly Vulnerable to Stress
	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
	Condition is similar both on and off the site(s)
X	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

59.18

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

14. Southern Atlantic Coastal Plain Nonriverine Swamp & Wet Hardwood Forest

1.1. Has the ecosystem been identified in the INRMP? *

- [X] Yes
- [ ] No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

- [ ] Fully Achieved
- [X] Somewhat Achieved
- [ ] Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

- [X] Actions have had a positive effect on conditions
- [ ] Actions have had a limited effect on conditions
- [ ] Actions have not been effective

Reporting Unit Metrics Q&A Report: NAS OCEANA

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
X	Severely Vulnerable to Stress
	Highly Vulnerable to Stress
	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
	Condition is similar both on and off the site(s)
X	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

1688.66

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

15. Urban, High Density

1.1. Has the ecosystem been identified in the INRMP? *

- [X] Yes
- [ ] No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

- [ ] Fully Achieved
- [X] Somewhat Achieved
- [ ] Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

- [X] Actions have had a positive effect on conditions
- [ ] Actions have had a limited effect on conditions
- [ ] Actions have not been effective

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
	Severely Vulnerable to Stress
	Highly Vulnerable to Stress
X	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
X	Condition is similar both on and off the site(s)
	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

1485.75

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

16. Herbaceous

1.1. Has the ecosystem been identified in the INRMP? *

- [X] Yes
- [ ] No

1.2. If the ecosystem has been identified in the INRMP, to what degree are the INRMP goals and objectives being achieved? *

- [ ] Fully Achieved
- [X] Somewhat Achieved
- [ ] Not Achieved

1.3. What is the level of effect Natural Resources management actions have had on desired outcomes within the installation/site? *

- [X] Actions have had a positive effect on conditions
- [ ] Actions have had a limited effect on conditions
- [ ] Actions have not been effective

1.4. To what extent is the ecological system on the site(s) fragmented due to land or water conversion during the reporting period? *

	Ecosystem fragmentation is the result of five (5) of the phenomena
	Ecosystem fragmentation is the result of four (4) of the phenomena
	Ecosystem fragmentation is the result of three (3) of the phenomena
	Ecosystem fragmentation is the result of two (2) of the phenomena
	Ecosystem fragmentation is the result of one (1) of the phenomena
X	No fragmentation

1.5. To what degree is the ecological system vulnerable to stressors? *

	Completely Vulnerable
	Severely Vulnerable to Stress
	Highly Vulnerable to Stress
X	Moderately Vulnerable to Stress
	Slightly Vulnerable to Stress
	Not Vulnerable to Stress

1.6. Is the ecosystem effectively managed to sustain viable populations of species? *

	Not effectively managed
	Minimally effective management
X	Moderately effective management
	Effectively managed

1.7. How does the ecosystem's condition within the site(s) compare to the condition outside the site(s)? *

	Condition is worse on the site(s)
X	Condition is similar both on and off the site(s)
	Condition is better on the site(s)

1.8. How many acres of this ecosystem have been identified on the installation?

2044.98

Reporting Unit Metrics Q&A Report: NAS OCEANA

1.9. How many acres of this ecosystem were conserved, enhanced or restored this past fiscal year?

0

Encroachment

Focus Area Score 1.00

An Encroachment Action Plan (EAP) is the primary tool and process which results in the identification, quantification, mitigation, and prevention of the potential encroachment challenges to an installation or a range. NAVFAC provides planning, environmental, legal, real estate support, and program management oversight for the Commander, Navy Installations Command (CNIC) Encroachment Management program. Per OPNAVINST 11010.40, Navy natural resources managers shall coordinate with mission component commands, COs of Navy installations, range COs, range complex coordinators, enhanced readiness teams, community plans and liaison officers and others with roles and responsibilities for encroachment identification, quantification, mitigation, and prevention.

1.10. Are conservation easements, or buffers, in place to provide an ecosystem integrity benefit on the site(s)? *

Comment: We do have established wetland and stream buffers on base. There are easement and buffers that could be pursued that would benefit the ecosystem integrity requirement of the INRMP; however no EAP easements were added in FY2016. There are existing easements and buffers that already do this, but they are not considered conservation easements/buffers they are AICUZ. We are actively participating in encroachment and easement discussions and looking into how we can add a conservation component.

	No = opportunity exists, but easements/buffers have not been pursued
X	Yes
	N/A = no opportunity, development is immediately adjacent to installation

1.11. How many miles of shoreline habitat are conserved, enhanced or restored this fiscal year? (miles)

0

1.12. How many acres of aquatic habitat are conserved, enhanced or restored this fiscal year? (acres)

0

Reporting Unit Metrics Q&A Report: NAS OCEANA

Please enter Findings and Recommendations. Findings and Recommendations serve as additional clarification to the answers provided for this Focus Area, and they are encouraged in order to provide a better understanding of existing activities, issues to be addressed, and unique circumstances.

1. Findings

In a review of the FY15 final report that either some NASO DNA INRMP ecosystems mistakenly got reported with the NASO/NALFF INRMP ecosystems or some ecosystems identified during a desktop analysis in preparation for the final vegetation community analysis mistakenly was entered into the Metrics . The FY16 Metrics were updated to reflect the FY15 received Final Vegetation Classification applicable ecosystems.

Several Ecosystems will be altered in upcoming years to support mission requirements to reduce frequency interference due to vegetation height obstructions. An updated Prescribed and Wildland Fire Management Plan is being developed in support of enhancing Ecosystem integrity, supporting military mission & safety requirements, and supporting species of concern conservation. INRMP does not specifically discuss each of these ecosystems, INRMP just supplies a map identifying these ecosystems. INRMP does not identify stressors and threats to these ecosystems.

1. Recommendations

Continue efforts to document and enhance ecosystem integrity, ensuring to document ecosystem conversions that occur due to military mission requirements. Obtain new/updated Vegetation Community Layers after conversion requirements have been implemented. Prior to implementation of Ecosystem conversion and Prescribed/Wildland Fire Management Plan Implementation ensure coordination has been completed with USFWS, State Wildlife Agencies, and USACE. INRMP needs to be updated to discuss each of these ecosystems. INRMP needs to identify stressors and threats to these ecosystems. INRMP needs to identify health indicators for these ecosystems (in FY14, USFWS recommended utilizing Dead or Stressed Trees as an indicator of Wetland Forest Health). INRMP needs to identify the level of importance of each ecosystem within the Ecoregion (need to clearly define, is this watershed, or other scale designation) and how the installation's portion of this community/ecosystem contributes to the overall community (is this a noncontiguous/isolated parcel less than 10% of the total community type in the ecoregion; is this the only known occurrence of this community type in the ecoregion; etc.). Utilize the most current Vegetation Community/Ecosystem layers for the installation to target species specific surveying efforts.

2 - Listed Species Critical Habitat

Focus Area Score 0.82

Listed Species & Critical Habitat

Focus Area Purpose: Evaluates the extent to which federally listed species have been identified and the INRMP provides conservation benefits to these species and their habitats.

Supplemental Information: The intent of this Focus Area is to identify the federally listed species that occur on a Navy installation, as well as assess if an INRMP provides the conservation benefits necessary to preclude designation of critical habitat for a particular species. In addition, information is collected about Proposed and Candidate Species and also about State, Local and other Species of interest. The USFWS has defined criteria to determine if an INRMP provides adequate special management or protection. These criteria must be detailed in the INRMP to demonstrate that designation of critical habitat is not necessary and that the installation is implementing the necessary measures to protect and conserve the habitat. The list of available species is derived from USFWS and NMFS data sources tracking the status of species worldwide plus those entered by navy users. Species are automatically placed into the correct table based upon species population code and its status. If a species status changes over the year users will not need to manually move the species from one type of table to the other, i.e. Threatened and Endangered, Proposed and Candidate, and State, Local, and other.

Instructions: Please create and or review the site(s) list of species for each of the three groups of species statuses and ensure that they are correct. To **ADD** a species to the site select a species status tab button, click the blue 'Select Species button', type the filters you wish to filter on and click the blue 'Filter Results' button for the filtered species list. Clicking the blue Common Name of a species will take you to ECOS's web site for the selected species. Clicking the row of the species population applicable to the site(s) and pressing the blue 'Save Selected Species' button will add the species to the site(s) list of species. Note you do not need to be in any specific species status tab, the system will automatically place the species correctly. Also from the blue 'Select Species' button on each of the three specific species status tabs you can view more about the species, delete it from the site(s) and also manage which sites the species resides using the blue 'Manage' button.

Select the name of the preloaded species to answer the questions for the current reporting period. To propose adding a species that is not in the database list or to propose a change or delete a species from the list click the main menu 'Species' then the submenu 'Search / Update'; from there you can propose all the above.

Please answer the questions for each of the species selected from the preloaded list for each of the three species status tab buttons. Questions are tailored to the species status. Last, please answer the questions in the 'Unoccupied Critical Habitat' tab button.

Questions followed by an asterisk * are mandatory and must be completed before the datacall can be approved and forwarded to DoD.

Federal Status Codes

(E) Endangered. A species in danger of extinction throughout all or a significant portion of its range.

(T) Threatened. A species likely to become endangered within the foreseeable future throughout all or a significant portion of its range.

(C) Candidate. A species under consideration for official listing for which there is sufficient information to support listing.

SAE, E(S/A) Endangered due to similarity of appearance. A species that is endangered due to similarity of appearance with another listed species and is listed for its protection. Species listed as E(S/A) are not biologically endangered or threatened and are not subject to Section 7 consultation.

SAT, T(S/A) = threatened due to similarity of appearance. A species that is threatened due to similarity of appearance with another listed species and is listed for its protection. Species listed as T(S/A) are not biologically endangered or threatened and are not subject to Section 7 consultation.

(EXPE, XE) Experimental essential population. A species listed as experimental and essential.

(EXPN, XN) Experimental non-essential population. A species listed as experimental and non-essential. Experimental, nonessential populations of endangered species (e.g., red wolf) are treated as threatened species on public land, for consultation purposes, and as species proposed for listing on

private land.

(PE) Proposed endangered. Species proposed for official listing as endangered.

(PT) Proposed threatened. Species proposed for official listing as threatened.

(PEXPE, PXE) Proposed experimental population, essential. Species proposed for official listing as experimental and essential.

(PEXPN, PXN) Proposed experimental population, non-essential. Species proposed for official listing as experimental and non-essential.

PSAE, PE (S/A) Proposed endangered, due to similarity of appearance. Species proposed for official listing as endangered due to similarity of appearance with another listed species.

PSAT, PT (S/A) Proposed threatened, due to similarity of appearance. Species proposed for official listing as threatened due to similarity of appearance with another listed species.

(EE) Emergency Endangered - A temporary (240) day listing for emergency purposes when species is at significant, immediate risk.

(SC) Species of Concern - Species that have not been petitioned or been given E, T, or C status but have been identified as important to monitor.

(RT) Resolved Taxon - Species that have been petitioned for listing and for which a Not Warranted 12 month finding or Not Substantial 90-day finding has been published in the Federal Register. Also includes species that have been removed from the candidate list.

(UR) Under Review - Species that have been petitioned for listing and for which a 90 day finding has not been published or for which a 90 day substantial has been published but a 12 Month finding have not yet been published in the Federal Register. Also includes species that are being reviewed through the candidate process, but the CNOR has not yet been signed.
(NL) Not Listed.

State Codes

(SE) State listed as Endangered – Species is in imminent danger of extinction within the state.

(ST) State listed as Threatened - State population listed as Threatened

(StC) State Candidate – Candidate species for listing at the state level

(SCD) State Candidate (Delisting) - Candidate species for de-listing at the state level

(SSC) State Species of Special Concern - Species identified by any state that have not been petitioned or been given E, T, or C status but have been identified as important to monitor.

Other Codes

(TER-E) Territory listed as Endangered – Species is in imminent danger of extinction within the territory.

(TER-T) Territory listed as Threatened – Species population is listed as threatened within the territory.

(TER-C) Territory Candidate – Species population is listed as a Candidate species for listing within the territory.

(TER-D) Territory Candidate (Delisting) – Species population is listed as a candidate species for De-listing within the territory.

(TER-SC) Territory Species of Special Concern – Species identified by any territory that have not been petitioned or been given E, T, or C status but have been identified as important to monitor.

(BCC) Birds of Conservation Concern

IUCN Red List

Threatened and Endangered Species

Focus Area Score **0.63**

Please validate (add/delete) the list of species below, add as necessary if none are listed, and ensure that they are correct. To **ADD** a species to the site/installation, select a species tab button, then click the blue 'Select Species' button in the upper left. Click on a species row to view or update answers about each species.

1. Northern Long-Eared Bat :: Myotis septentrionalis

2.1. Have surveys been completed for this species on the site(s)? *

- [X] Yes
- [ ] No
- [ ] Extirpated
- [ ] Not Warranted

2.1.a. What is date when surveys were completed? Format: (MM/DD/YYYY)

5/26/2016

2.1.b. Why are surveys not required for this species?

- [ ] Only transits nearshore waters
- [ ] Only transits migratory flyway
- [ ] Occasional sighting during migration
- [ ] Occasional sighting based on seasonal conditions
- [ ] Other

2.2. Do existing surveys provide adequate data on habitat conditions on the site(s)? *

- X Yes
- ___ No
- ___ Not Warranted

2.3. Do existing surveys provide adequate data on population presence and numbers on the site(s)? *

- ___ Yes
- X No
- ___ Not Warranted

2.4. To what extent are quantifiable goals, objectives, and monitoring requirements in place to address the conservation needs of the species? *

- ___ None
- ___ Minimal
- X Moderate
- ___ Good
- ___ Excellent
- ___ N/A

PLEASE GAUGE YOUR RESPONSES FOR THIS REPORTING PERIOD ONLY.

2.5. Has critical habitat been proposed for the species during the reporting period on the site(s) (per Federal Register [FR] Final Rule)? *

- ___ Yes
- ___ No
- X N/A (Critical habitat designation was not proposed)
- ___ CH determination currently under review

2.5.a. Did the Navy respond?

_____ Yes
_____ No

2.5.b. Please upload response to document library.

2.6. Has the critical habitat been designated for this species during the reporting period on the site(s)? *

_____ Yes
_____ No
__X__ N/A (Critical habitat has not been designated)

2.6.a. If critical habitat was proposed for this species but has not been designated during the reporting period on the site(s), under which provision of the ESA (Sec. 4) was exemption/exclusion granted? *

_____ National Security (Exclusion) (4(b)(2))
_____ INRMP (Exemption) (4(a)(3)(B))
_____ N/A (Critical habitat designation was not proposed)

2.6.b. Why not? *

_____ National Security (Exclusion)
_____ INRMP (Exemption)
_____ N/A (Critical habitat designation was not proposed)

2.6.c. Date critical habitat was designated? Format: (MM/DD/YYYY)

2.6.d. Effective date of critical habitat? Format: (MM/DD/YYYY)

2.6.e. Acreage of critical habitat designated?

2.7. If a previously designated critical habitat exemption/exclusion exists for this species on the site(s), are critical habitat management projects clearly identified in the INRMP? *

_____ Yes
_____ No
__X__ N/A

2.8. If a previously designated critical habitat exemption/exclusion exists for this species on the site(s), are critical habitat management projects clearly identified in the EPRWeb? *

_____ Yes
_____ No
__X__ N/A

2.9. Have any conservation recommendations pertaining to this species been identified during the reporting period that should be considered for incorporation in the INRMP?

Comment: No Tree Removal in the months of June & July. This is already part of the INRMP.

X Yes

_____ No

2.10. Provide a location status for this species from the choices provided below. See i-Note if your selection window clips the choices. *

Comment: Species has been confirmed on NALFF. We are consulting with Contractors that completed the acoustic survey efforts regarding if the species was confirmed present at NASO or if it just had an increased potential to occur. The species was confirmed west of NASO at NALFF (mist net) and east of NASO at NASO DNA (acoustic).

X Confirmed

_____ Potentially

_____ Offsite within 5 mi of installation

_____ Offsite not within 5 mi of installation

_____ Confirmed in nearshore waters

_____ Within 5 miles nearshore waters

Proposed and Candidate Species

Please validate (add/delete) the list of species below, add as necessary if none are listed, and ensure that they are correct. To **ADD** a species to the site/installation, select a species tab button, then click the blue 'Select Species' button in the upper left. Click on a species row to view or update answers about each species.

State, Local, and other Species

Please validate (add/delete) the list of species below, add as necessary if none are listed, and ensure that they are correct. _____ IUCN Red List
_____ SAE, E(S/A) Endangered due to similarity of appearance
_____ SAT, T(S/A) = threatened due to similarity of appearance
_____ (EXPE, XE) Experimental essential population
_____ (EXPN, XN) Experimental non-essential population
_____ (PEXPE, PXE) Proposed experimental population, essential
_____ (PEXPN, PXN) Proposed experimental population, non-essential
_____ PSAE, PE (S/A) Proposed endangered, due to similarity of appearance
_____ PSAT, PT (S/A) Proposed threatened, due to similarity of appearance
_____ (EE) Emergency Endangered
_____ (SC) Species of Concern
_____ (RT) Resolved Taxon
_____ (UR) Under Review
_____ (NL) Not Listed
_____ Other (add to comments)

2.18. Does the Navy manage 95% or more of this species population?

_____ Yes
__X__ No

2.19. Estimate this installation's total management responsibility for the population of this species.

0

2.20. Have surveys been completed for this species on the site(s)?

X Yes
____ No

2.21. Do existing surveys provide adequate data on habitat conditions on the installation?

X Yes
____ No

2.22. Do existing surveys provide adequate data on population presence and numbers on the installation?

____ Yes
X No

2.23. To what extent are quantifiable goals, objectives, and monitoring requirements in place to address the conservation needs of the species?

____ None
____ Minimal
X Moderate
____ Good
____ Excellent
____ N/A

2.24. Have any conservation recommendations pertaining to this species been identified during the reporting period that should be considered for incorporation in the INRMP?

	Yes
X	No
	N/A

2.25. What is the level of concern with regard to impacts to military readiness/mission capabilities with the management of the species?

	High
	Medium
X	Low

2.26. Provide a location status for this species from the choices provided below. See i-Note if your selection window clips the choices.

	Confirmed
	Potentially
X	Offsite within 5 mi of installation
	Offsite not within 5 mi of installation
	Confirmed in nearshore waters
	Within 5 miles nearshore waters

- ____ (TER-C) Territory Candidate
- ____ (TER-D) Territory Candidate (Delisting)
- ____ (TER-SC) Territory Species of Special Concern
- ____ (BCC) Birds of Conservation Concern
- ____ IUCN Red List
- ____ SAE, E(S/A) Endangered due to similarity of appearance
- ____ SAT, T(S/A) = threatened due to similarity of appearance
- ____ (EXPE, XE) Experimental essential population
- ____ (EXPN, XN) Experimental non-essential population
- ____ (PEXPE, PXE) Proposed experimental population, essential
- ____ (PEXPN, PXN) Proposed experimental population, non-essential
- ____ PSAE, PE (S/A) Proposed endangered, due to similarity of appearance
- ____ PSAT, PT (S/A) Proposed threatened, due to similarity of appearance
- ____ (EE) Emergency Endangered
- ____ (SC) Species of Concern
- ____ (RT) Resolved Taxon
- ____ (UR) Under Review
- ____ (NL) Not Listed
- ____ Other (add to comments)

2.18. Does the Navy manage 95% or more of this species population?

- ____ Yes
- X No

2.19. Estimate this installation's total management responsibility for the population of this species.

2.20. Have surveys been completed for this species on the site(s)?

X Yes
_____ No

2.21. Do existing surveys provide adequate data on habitat conditions on the installation?

X Yes
_____ No

2.22. Do existing surveys provide adequate data on population presence and numbers on the installation?

X Yes
_____ No

2.23. To what extent are quantifiable goals, objectives, and monitoring requirements in place to address the conservation needs of the species?

_____ None
_____ Minimal
X Moderate
_____ Good
_____ Excellent
_____ N/A

2.24. Have any conservation recommendations pertaining to this species been identified during the reporting period that should be considered for incorporation in the INRMP?

_____ Yes
__X__ No
_____ N/A

2.25. What is the level of concern with regard to impacts to military readiness/mission capabilities with the management of the species?

_____ High
_____ Medium
__X__ Low

2.26. Provide a location status for this species from the choices provided below. See i-Note if your selection window clips the choices.

__X__ Confirmed
_____ Potentially
_____ Offsite within 5 mi of installation
_____ Offsite not within 5 mi of installation
_____ Confirmed in nearshore waters
_____ Within 5 miles nearshore waters

2.27. Provide any other comments below:

5. Black-crowned Night-Heron :: Nycticorax nycticorax

2.17. What is the current status of the species?

- ____ (SE) State listed as Endangered
- ____ (ST) State listed as Threatened
- ____ (StC) State Candidate
- ____ (SCD) State Candidate (Delisting)
- X (SCC) State Species of Special Concern
- ____ (TER-E) Territory listed as Endangered
- ____ (TER-T) Territory listed as Threatened
- ____ (TER-C) Territory Candidate
- ____ (TER-D) Territory Candidate (Delisting)
- ____ (TER-SC) Territory Species of Special Concern
- ____ (BCC) Birds of Conservation Concern
- ____ IUCN Red List

____ Excellent
____ N/A

2.24. Have any conservation recommendations pertaining to this species been identified during the reporting period that should be considered for incorporation in the INRMP?

_____ Yes
__X__ No
_____ N/A

2.25. What is the level of concern with regard to impacts to military readiness/mission capabilities with the management of the species?

_____ High
_____ Medium
__X__ Low

2.26. Provide a location status for this species from the choices provided below. See i-Note if your selection window clips the choices.

__X__ Confirmed
_____ Potentially
_____ Offsite within 5 mi of installation
_____ Offsite not within 5 mi of installation
_____ Confirmed in nearshore waters
_____ Within 5 miles nearshore waters

2.27. Provide any other comments below:

15. Longleaf pine :: Pinus palustris

2.17. What is the current status of the species?

- ____ (SE) State listed as Endangered
- ____ (ST) State listed as Threatened
- ____ (StC) State Candidate
- ____ (SCD) State Candidate (Delisting)
- X (SCC) State Species of Special Concern
- ____ (TER-E) Territory listed as Endangered
- ____ (TER-T) Territory listed as Threatened
- ____ (TER-C) Territory Candidate
- ____ (TER-D) Territory Candidate (Delisting)
- ____ (TER-SC) Territory Species of Special Concern
- ____ (BCC) Birds of Conservation Concern
- ____ IUCN Red List
- ____ SAE, E(S/A) Endangered due to similarity of appearance
- ____ SAT, T(S/A) = threatened due to similarity of appearance
- ____ (EXPE, XE) Experimental essential population
- ____ (EXPN, XN) Experimental non-essential population
- ____ (PEXPE, PXE) Proposed experimental population, essential
- ____ (PEXPN, PXN) Proposed experimental population, non-essential
- ____ PSAE, PE (S/A) Proposed endangered, due to similarity of appearance
- ____ PSAT, PT (S/A) Proposed threatened, due to similarity of appearance
- ____ (EE) Emergency Endangered
- ____ (SC) Species of Concern
- ____ (RT) Resolved Taxon
- ____ (UR) Under Review
- ____ (NL) Not Listed
- ____ Other (add to comments)

2.18. Does the Navy manage 95% or more of this species population?

- ____ Yes
- X No

2.19. Estimate this installation's total management responsibility for the population of this species.

2.20. Have surveys been completed for this species on the site(s)?

X Yes
____ No

2.21. Do existing surveys provide adequate data on habitat conditions on the installation?

X Yes
____ No

2.22. Do existing surveys provide adequate data on population presence and numbers on the installation?

____ Yes
X No

2.23. To what extent are quantifiable goals, objectives, and monitoring requirements in place to address the conservation needs of the species?

____ None
____ Minimal
X Moderate
____ Good
____ Excellent
____ N/A

2.24. Have any conservation recommendations pertaining to this species been identified during the reporting period that should be considered for incorporation in the INRMP?

_____ Yes
__X__ No
_____ N/A

2.25. What is the level of concern with regard to impacts to military readiness/mission capabilities with the management of the species?

_____ High
__X__ Medium
_____ Low

2.26. Provide a location status for this species from the choices provided below. See i-Note if your selection window clips the choices.

__X__ Confirmed
_____ Potentially
_____ Offsite within 5 mi of installation
_____ Offsite not within 5 mi of installation
_____ Confirmed in nearshore waters
_____ Within 5 miles nearshore waters

2.27. Provide any other comments below:

Moderate Concern as trees may one day intersect with the Airfield Obstruction zone and may need to be cut or require additional consultations if listed.

16. Monarch butterfly :: Danaus plexippus plexippus

2.17. What is the current status of the species?

_____ (SE) State listed as Endangered
_____ (ST) State listed as Threatened
_____ (StC) State Candidate
_____ (SCD) State Candidate (Delisting)
_____ (SCC) State Species of Special Concern
_____ (TER-E) Territory listed as Endangered
_____ (TER-T) Territory listed as Threatened
_____ (TER-C) Territory Candidate

2.18. Does the Navy manage 95% or more of this species population?

- [ ] Yes
- [X] No

2.19. Estimate this installation's total management responsibility for the population of this species.

2.20. Have surveys been completed for this species on the site(s)?

X Yes
____ No

2.21. Do existing surveys provide adequate data on habitat conditions on the installation?

X Yes
____ No

2.22. Do existing surveys provide adequate data on population presence and numbers on the installation?

____ Yes
X No

2.23. To what extent are quantifiable goals, objectives, and monitoring requirements in place to address the conservation needs of the species?

____ None
____ Minimal
____ Moderate
X Good
____ Excellent
____ N/A

2.24. Have any conservation recommendations pertaining to this species been identified during the reporting period that should be considered for incorporation in the INRMP?

_____ Yes
__X__ No
_____ N/A

2.25. What is the level of concern with regard to impacts to military readiness/mission capabilities with the management of the species?

_____ High
__X__ Medium
_____ Low

2.26. Provide a location status for this species from the choices provided below. See i-Note if your selection window clips the choices.

__X__ Confirmed
_____ Potentially
_____ Offsite within 5 mi of installation
_____ Offsite not within 5 mi of installation
_____ Confirmed in nearshore waters
_____ Within 5 miles nearshore waters

2.27. Provide any other comments below:

Hunting Program prohibits take of squirrels to minimize impacts to Canebrake rattlesnakes. Confirmed at NALFF, not at NASO.

26. tri-colored bat :: Perimyotis subflavus

2.17. What is the current status of the species?

_____ (SE) State listed as Endangered
_____ (ST) State listed as Threatened
_____ (StC) State Candidate
_____ (SCD) State Candidate (Delisting)
__X__ (SCC) State Species of Special Concern
_____ (TER-E) Territory listed as Endangered
_____ (TER-T) Territory listed as Threatened
_____ (TER-C) Territory Candidate
_____ (TER-D) Territory Candidate (Delisting)
_____ (TER-SC) Territory Species of Special Concern

2.27. Provide any other comments below:

Unoccupied Critical Habitat

Focus Area Score 1.00

2.28. Has unoccupied critical habitat for any federally listed species been designated on the site(s)? *

_____ Yes
__X__ No
_____ N/A (Critical habitat designation was not proposed)

2.28.a. For which species?

2.29. Have management projects/actions addressing unoccupied critical habitat been clearly identified in the INRMP? *

_____ Yes
_____ No
__X__ N/A

2.30. Have management projects/actions addressing unoccupied critical habitat been clearly identified in the EPRWeb? *

_____ Yes
_____ No
__X__ N/A

Please enter Findings and Recommendations. Findings and Recommendations serve as additional clarification to the answers provided for this Focus Area, and they are encouraged in order to provide a better understanding of existing activities, issues to be addressed, and unique circumstances.

2. Findings

INRMP information regarding the above referenced species is dated. Other Federally listed species (e.g. sea turtles, manatee, sturgeon, etc.) are known to occur in the nearshore environment of NASO; however, they have not been documented to occur on installation property (the Navy conducts after storm event surveys to see if any of these species have stranded on Navy property). Upland Sandpiper was identified via a BASH Strike Report associated with NASO. It is unclear if the bird actually occurred on the installation or was struck within the airspace adjacent to the installation. The species is not known to nest on site and is a potential for migratory occurrence.

2. Recommendations

Update INRMP with better goals, objectives and conservation criteria. Many of the goals, objectives, and conservation criteria are currently located in reference documents within the INRMP appendices. These should be clearly implemented into the INRMP.

3 - Recreation Use and Access

Focus Area Score 0.88

Focus Area Purpose: Evaluate the availability and adequacy of public recreational use opportunities, such as fishing and hunting, and access for handicapped and disabled persons, given security and safety requirements for the installation.

Comment on this Focus Area and associated Questions: Select this link below each question if you would like to elaborate on the answer provided. This is also a good way to document the assumptions made by all partners that contributed to the answer.

3. Are there Natural Resources related recreational opportunities on the reporting unit?

- [X] Yes
- [ ] No: Landscape doesn't support recreational opportunities
- [ ] N/A: Not available due to mission, security, safety, or environmental constraints

3.1. Does the INRMP adequately identify outdoor recreational activities? *

- [ ] Not Adequately Addressed
- [ ] Minimally Addressed
- [ ] Moderately Addressed
- [X] Completely Addressed

3.1.a. Please indicate the type(s) of outdoor recreation activities addressed in the INRMP and offered on the installation.

- [X] Hunting
- [X] Fishing
- [X] Trapping
- [X] Hiking
- [X] Archery
- [X] Wildlife watching
- [X] Fresh watersports
- [ ] Marine watersports
- [X] Day use-picnic
- [X] Camping

3.1.b. Where mission, security, safety, and environmental constraints allow, the INRMP indicates use and access areas on the installation. *

X Yes
_____ No
_____ N/A

3.2. If recreational opportunities are available, are they offered to the public? *

X Yes
_____ No
_____ N/A (recreational opportunities are not available due to landscape or security constraints)

3.3. If recreational opportunities are available, are they offered to military or DoD civilian personnel? *

X Yes
_____ No
_____ N/A (recreational opportunities are not available due to landscape or security constraints)

3.4. If recreational opportunities are available, are they accessible by disabled veterans/Americans? *

X Yes
_____ No
_____ N/A (recreational opportunities are not available due to landscape or security constraints)

3.5. Are fees collected for outdoor recreational opportunities? *

X Yes
_____ No
_____ N/A (recreational opportunities do not include hunting and fishing, and/or the collection of fees)

3.5.a. How much was collected during the reporting period?

Comment: Hunting & Fishing Awaiting FY16 report from MWR to populate this question, reported is from FY15. FY16 is estimated to be about the same amount of funding. Program Permits and Permit sales apply to the following installations: NASO, NASO DNA, NALFF, NSAHR NWA, JEBLC, and JEBLC-FS.

8399

3.6. Are recreational facilities in good condition? *

- X Yes
- ____ No
- ____ N/A (recreational opportunities are not available due to landscape or security constraints)

3.7. Are sustainable harvest goals in the INRMP effective for the management of the species' population? *

- ____ Not Effective
- ____ Minimal Effectiveness
- X Moderate Effectiveness
- ____ Effective
- ____ Highly Effective
- ____ N/A = (recreational opportunities do not include hunting and fishing)

3.8. To what extent did the installation develop and provide public outreach/educational awareness, e.g. environmental educational opportunities, natural resource field trips/tours, pamphlets? *

- ____ No Public Outreach Provided
- ____ Low Outreach
- X Moderate Outreach
- ____ Good Outreach
- ____ Excellent Outreach
- ____ N/A

3.9. Is there an active conservation law enforcement program (CLEP) on the installation? *

Comment: A Conservation Law-Enforcement Program Assessment has been completed for the following installations: NASO, NASO DNA, NALFF, and NSAHR NWA. The results from this report are on hold for release and inclusion/updates to the INRMP until appropriate briefings have been provided installation Commanding Officers.

- [X] Yes
- [ ] No
- [ ] N/A (INRMP or Natural Resources Program does NOT identify Conservation Law Enforcement as part of the program. Recreational opportunities do not include hunting and fishing)

3.10. How many total work-hours per year are dedicated to law enforcement? (Includes full-time and part-time personnel)

Comment: We have a single regional individual servicing 11 installations. 1 billet. He puts in a lot of overtime. See Findings for additional information.

2503

3.11. Does the law enforcement program include federal (Non-Navy Civilian), state, or local or contractor personnel? (Select all that apply)

- [X] Federal (Non-Navy Civilian)
- [X] State
- [X] Local
- [ ] Contractor
- [X] Military

3.12. Please describe the funding sources used by the Law Enforcement Program.

- [X] O&MN
- [ ] O&MNR
- [ ] MIS
- [ ] GWOT
- [ ] OPN
- [ ] ER,N
- [ ] RDT&EN
- [ ] Other

3.13. Are Law Enforcement personnel routinely supporting other programs? (Ex. Cultural Resources)

X Yes
_____ No

3.14. Do you have any inter-jurisdictional agreements for conservation law enforcement with other military departments, Federal, tribal, state or local law enforcement, or land management agencies?

_____ Yes
X No

3.15 Have conservation law enforcement officers completed the FLETC Land Management Police Training Program or equivalent?

Comment: Unsure how to answer this question. What is considered an equivalent? Our current CLEO has not taken FLETC LMPT ; however, he has taken NEC 9545 Navy Law Enforcement Specialist Phase I (Base Police Law-enforcement training), NEC 9545 Navy Law Enforcement Specialist Phase II (Comman Specific Law-enforcement training, NEC 9575 Correctional Custody Specialist Ashore, has completed 3/4 ths of the City of Chesapeake's Police Academy, has taken MBTA training for DoD, has taken a variety of CECOS and ECATTS environmental courses, and has taken the NMFWA Conservation Officer Refresher Training, when offered and travel approved, and qualifies on his weapons biannually with the Navy Security department. Our current CLEO has been woking in law-enforcement for 16 years (between military police and the Natural Resource CLEP), 13 of which have been as a CLEO.

X Yes
_____ No
_____ N/A

3.16. Is a Conservation Law Enforcement Plan included in your INRMP and/or ICRMP?

Comment: his is a Yes & No Answer. Conservation law-enforcement is identified in the INRMP, but the region has not provided a regional CLEP plan for inclusion in the document, that identifies CLEO training requirements and specific CLEP obligations (roles & responsibilities). We have updated the INRMP to include a copy of the DoDI 5525.17 regarding the DoD CLEP dated 17 Oct 2013. We also on occassion reference the US Marine Corps CLEP instructions.

X Yes
_____ No

3.17. Please provide a brief description of the installation's Conservation Law Enforcement Program.

One NAVFAC Mid-Atlantic Conservation Officer, who also serves as the regional BST, is currently responsible for conservation law enforcement for the Hampton Roads Navy installations including NAS Oceana, NALF Fentress, NSAHR Northwest, NASO Dam Neck Annex, JEB Little Creek, JEBLC Fort Story, NWS Yorktown, Cheatham Annex, NS Norfolk, NSA Hampton Roads, and Lafeyette River Annex. The Regional Conservation Officer serves as game warden and has arrest authority at these installations. Law enforcement is solely the responsibility of the Navy; however, Navy enforcement personnel cooperate with federal and state game wardens as needed to enforce federal and state wildlife laws. The Conservation Officer is required to be trained in law enforcement and federal and state wildlife regulations, and must attend annual wildlife law enforcement refresher training in order to stay abreast of changes in regulations and enforcement policies. The conservation officer occassionally identifies and works law-enforcement issues associated with the cultural resources program and other environmental programs outside of the natural resources program.

Please enter Findings and Recommendations. Findings and Recommendations serve as additional clarification to the answers provided for this Focus Area, and they are encouraged in order to provide a better understanding of existing activities, issues to be addressed, and unique circumstances.

3. Findings

Currently there is no educational outreach coordinator. Outreach is subject to limited availability of Natural Resources Staff. Outreach was supplied through classroom training, public speaking, phone conversation, and handouts. (i.e., hunting, fishing, wildlife interactions, snakes, etc.).

The regional conservation law enforcement program is understaffed to adequately cover the needs of 11+ installations with regards to Natural, Cultural, and other Environmental Resources Law enforcement Coverage/Protection/Management/etc. At 2013 INRMP Metrics review the VDGIF biologist associated with the NWS Yorktown INRMP provided a real life example on an Army installation in VA where he, installation security, state and federal wildlife agents conducted an intense study to determine the level of conservation law enforcement infractions occurring on the base, within one month. They found that in one month they observed and addressed numerous conservation law enforcement infractions on just a portion In 2014 USFWS indicated that there is no way 1 officer can adequately service a range of resources that covers 11+ installations. The Navy did indicate that resource specialists in Natural and Cultural resources (though limited as well in numbers) are cross trained to identify issues and when issues are observed the Conservation Officer is notified and he responds.

The Virginia Feral Hog Action Team is coordinated by VDGIF and the Navy NRM is an active member of the team. Feral Swine are not a recreational hunting program species in VA. A single report of a potential feral hog at NALFF was submitted in FY15; however, no evidence was found to confirm the sighting. In FY16, a single potential trail camera sighting of a feral hog was submitted near the FY15 sighting at NALFF. Unfortunately, confirmation of the species was still unable to be confirmed.

The following was documented during the FY15 INRMP Metrics Review: In reference to State Endangered Canebrake rattlesnake, VDGIF meeting participant indicated that on an adjacent State Owned VDGIF managed property (Caviler WMA) they are being required when mowing hunting trails to have a scout ahead of the mower, the mower, and then a scout behind the mower identifying if a snake was struck. If a single snake is taken, then the mowing actions are no longer permitted, until further approvals are obtained. This is the 1st year VDGIF will be implementing this practice at this site.

3. Recommendations

Continue to support hunting, fishing and educational outreach programs.
Hire an Outreach Coordinator for the region.
Create an adequately staffed and more robust Conservation Law Enforcement Program.
Consider funding a project to determine the level of Conservation Law Enforcement infractions occurring on the installation.
Update recreational fishing program management practices.
Create joint installation Hunting and Fishing instructions for NAS Oceana, NASO Dam Neck Annex, NALF Fentress, and NSAHR Northwest Annex.
Continue to stay active in CWD management and avoidance.
Continue to stay active in Feral Swine Management and Removal.
Follow up with VDGIF regarding hunting trail maintenance program.

4 - Sikes Act Cooperation

Focus Area Score 0.81

Focus Area Purpose: Determine to what degree USFWS, State Fish and Wildlife Agency and, when appropriate, NOAA Fisheries Service (NMFS), partnerships are cooperative and result in effective INRMP development, review for operation and effect, and mutual agreement.

Comment on this Focus Area and associated Questions Select this link below each question if you would like to elaborate on the answer provided. This is also a good way to document the assumptions made by all partners that contributed to the answer.

4. Select which Sikes Act parterns work with this installation/site(s)? *

- [X] USFWS
- [X] State
- [X] NOAA Fisheries Service

4.1. Was USFWS invited to participate in the annual INRMP/Natural Resources Program review? *

- [X] Yes
- [ ] No

4.1.a. By what method was the agency invited to participate in the annual INRMP/Natural Resources Program review?

- [X] Telephone call
- [X] Electronic mail
- [ ] Official letter
- [ ] Other

4.1.b. Did the agency respond to the invitation to participate in the annual INRMP/Natural Resources Program review? *

- [X] Yes
- [ ] No

4.1.c. How many attempts were made to invite the agency to participate in the annual INRMP/Natural Resources Program review?

_____ 0-3
__X__ 4-6
_____ 7-10
_____ >10

4.1.d. Did the agency participate in the annual INRMP/Natural Resources Program review? *

__X__ Yes
_____ No

4.1.e. If the agency participated in the annual INRMP/Natural Resources Program review, was it recognized as a review for operation and effect? *

_____ Yes
__X__ No

4.1.f. If the agency did not participate in the annual review, what type of correspondence was received from the agency to inform the site(s) that they were not able to participate?

_____ Telephone call
_____ Electronic mail
_____ Official letter
_____ Other

4.1.g. If the agency did not participate in the annual INRMP/Natural Resources Program review, was a separate meeting held/correspondence sent as a review for operation and effect?

_____ Yes
_____ No

4.1.g.a. What date? Format: MM/DD/YYYY

4.1.h. Was a report of the previous year's annual INRMP/Natural Resources Program review submitted to the agency during this reporting period? *

- [X] Yes
- [ ] No

4.2. Was the state invited to participate in the annual INRMP/Natural Resources Program review? *

- [X] Yes
- [ ] No

4.2.a. By what method was the agency invited to participate in the annual INRMP/Natural Resources Program review?

- [ ] Telephone call
- [X] Electronic mail
- [ ] Official letter
- [ ] Other

4.2.b. Did the agency respond to the invitation to participate in the annual INRMP/Natural Resources Program review? *

- [X] Yes
- [ ] No

4.2.c. How many attempts were made to invite the agency to participate in the annual INRMP/Natural Resources Program review?

- [X] 0-3
- [ ] 4-6
- [ ] 7-10
- [ ] >10

4.2.d. Did the agency participate in the annual INRMP/Natural Resources Program review? *

- [X] Yes
- [ ] No

4.2.e. If the agency participated in the annual INRMP/Natural Resources Program review, was it recognized as a review for operation and effect? *

- [ ] Yes
- [X] No

4.2.f. If the agency did not participate in the annual review, what type of correspondence was received from the agency to inform the site(s) that they were not able to participate?

- [ ] Telephone call
- [ ] Electronic mail
- [ ] Official letter
- [ ] Other

4.2.g. If the agency did not participate in the annual INRMP/Natural Resources Program review, was a separate meeting held/correspondence sent as a review for operation and effect?

- [ ] Yes
- [ ] No

4.2.g.1. What date? Format: MM/DD/YYYY

4.2.h. Was a report of the previous year's annual INRMP/Natural Resources Program review submitted to the agency during this reporting period? *

X Yes
_____ No

4.3. Was the NOAA Fisheries Service invited to participate in the annual INRMP/Natural Resources Program review? *

X Yes
_____ No

4.3.a. By what method was the agency invited to participate in the annual INRMP/Natural Resources Program review?

_____ Telephone call
X Electronic mail
_____ Official letter
_____ Other

4.3.b. Did the agency respond to the invitation to participate in the annual INRMP/Natural Resources Program review? *

X Yes
_____ No

4.3.c. How many attempts were made to invite the agency to participate in the annual INRMP/Natural Resources Program review?

- [X] 0-3
- [ ] 4-6
- [ ] 7-10
- [ ] >10

4.3.d. Did the agency participate in the annual INRMP/Natural Resources Program review? *

- [X] Yes
- [ ] No

4.3.e. If the agency participated in the annual INRMP/Natural Resources Program review, was it recognized as a review for operation and effect? *

- [ ] Yes
- [X] No

4.3.f. If the agency did not participate in the annual review, what type of correspondence was received from the agency to inform the site(s) that they were not able to participate?

- [ ] Telephone call
- [ ] Electronic mail
- [ ] Official letter
- [ ] Other

4.3.g. If the agency did not participate in the annual INRMP/Natural Resources Program review, was a separate meeting held/correspondence sent as a review for operation and effect?

- [ ] Yes
- [ ] No

4.3.g.1. What date? Format: MM/DD/YYYY

4.3.h. Was a report of the previous year's annual INRMP/Natural Resources Program review submitted to the agency during this reporting period? *

- [X] Yes
- [ ] No

4.4. The USFWS, state fish and wildlife agency, and when appropriate NOAA Fisheries Service, are familiar with and have reviewed the INRMP. *

- [X] Yes (All that apply) - These partners are familiar with and have reviewed the site(s)' INRMP.
- [ ] Two or more partners are familiar with and have reviewed the site(s)' INRMP.
- [ ] One or more partners are familiar with and have reviewed the site(s)' INRMP.
- [ ] No - Partners did not review the site(s)' INRMPs or INRMP updates, nor did they participate in other regular communications.

4.5. The USFWS, state fish and wildlife agency and, when appropriate, NOAA Fisheries Service are engaged in the INRMP development and implementation. *

- [X] The sites(s) engaged the USFWS, state fish and wildlife agency and, when appropriate, NOAA Fisheries Service and these efforts are well documented.
- [ ] The site(s) engaged the USFWS, state fish and wildlife agency and, when appropriate, NOAA Fisheries Service and these efforts are not documented.
- [ ] Partners were non-responsive to site(s) communications and/or are not familiar with the INRMP.
- [ ] The site(s) did not engage the USFWS, state fish and wildlife agency or NOAA Fisheries Service; therefore these partners did not review INRMPs or INRMP updates, nor did they participate in other regular communications.

4.6. What is the level of collaboration/cooperation between Sikes Act partners? *

- [ ] None
- [ ] Minimal collaboration/cooperation
- [ ] Satisfactory collaboration/cooperation
- [X] Effective collaboration/cooperation
- [ ] Highly effective collaboration/cooperation

4.7. How well are site(s) natural resource management goals and objectives aligned with conservation goals of Sikes Act partners, e.g. USFWS/NOAA Fisheries Service regional goals and State Fish and Wildlife Agency reginal goals (e.g. State Wildlife Action Plans (SWAPs)? *

_____	Not aligned
_____	Somewhat aligned
X	Completely aligned

Please enter Findings and Recommendations. Findings and Recommendations serve as additional clarification to the answers provided for this Focus Area, and they are encouraged in order to provide a better understanding of existing activities, issues to be addressed, and unique circumstances.

4. Findings

INRMP was made compliant in June 2015 having received all required agency signatures. INRMP does require an updated USFWS Operation and Effect Signature by 19 Dec 2017.

Coordination was maintained throughout the year with USFWS Region 5, VDGIF and NOAA-NMFS. The team (VDGIF, USFWS, NOAA-NMFS and NAVY) attempts to meet at least once a year to discuss Natural Resources Management concerns, updates, and opportunities. For the 2nd year USDA-WS was invited as an active participate in this coordinate meeting effort. For the 1st year State Fisheries Biologists, Sea Turtle Program Coordinator, and Foresters were also invited to participate. For the 1st time the USFWS Wildland Fire Coordinator was invited to participate. The USFWS Fisheries biologist that used to coordinate with the installation has retired and a new person had not been selected as of the INRMP Metrics meeting invitation.

During FY16 Partners Meeting a number of partnership opportunities and recommendations were discussed.

VDGIF would like to see the installation participate in the State's the 2018 Colonial Waterbird Survey Effort, and possibly the State's Breeding Bird Atlas program. VDGIF announced that the Agency Strategic Plan will be coming out for review and recommends the Navy participate in that process. VDGIF reports that hunting program has been loosing about 3-3.5% of the hunting population since 1980s, which is resulting in resources and population control reductions. VDGIF would like to see the Navy promote and further participation in the State's Hunter Apprentice Programs. VDGIF would like the Navy to continue is efforts to control nutria and mentioned that VDGIF now has a conservation canine that is trained to find and remove nutria (they also obtain additional trained dogs via contract).

VDOF would like to see the installation increase efforts for invasive species monitoring and control along forest edges and within forest. Japanese stilt grass was identified as a target invasive species for control. Another species of particular concern was the Emerald Ash Bore, it is likely in our are, but not confirmed (targets bottom-land areas).

NMFS Final Critical habitat determination for Atlantic Sturgeon estimated to be announced June 2017; however, it is not anticipated that this installation will be impacted by this determination.

USFWS staff is down to 2 people in Permits from 6. Rusty patched bumble bee is proposed for listing and may pop up in iPAC as a historical record for our area, but it is not currently known to occur on installation. USFWS would like the installation to promote positive pollinator projects and partnerships. A fairly substantial list of invertebrate/pollinator species is anticipated to be issued for USFWS T&E listing review (petitioned and USFWS Initiated species

4. Recommendations

VDOF recommends treating Emerald Ashe Bore beetle infestations immediately upon observation, as an infestation will be 100% fatal to the bottomland forest trees.

Increase efforts and better promote existing projects that support pollinator species.

Continue Partnership Efforts.

In addition to the required INRMP signatory agency partners, continue to invite the VDOF, USDA, and other partners that contribute to the success of the INRMP.

Reporting Unit Metrics Q&A Report: NAS OCEANA

5 - Team Adequacy

Focus Area Score 0.82

Focus Area Purpose: Assess the adequacy of the natural resources team (professionally trained natural resources management and/or installation support personnel) in accomplishing INRMP/Natural Resources Program goals and objectives at each installation.

Comment on this Focus Area and associated Questions Select this link below each question if you would like to elaborate on the answer provided. This is also a good way to document the assumptions made by all partners that contributed to the answer.

5.1. Is there a Navy professional Natural Resources Manager designated by the Regional Commander/Installation Commanding Officer? *

X Yes

_____ No

5.2. Is there an on-site Navy professional Natural Resources Manager? *

X Yes

_____ No

5.3. Is there adequate installation staff assigned or available to properly implement the INRMP/Natural Resources Program goals and objectives? *

Comment: Installation has to reach back to NAVFAC MIDLANT and in some cases to LANT. Navy is currently having to contract our work that could be completed by Navy personnel, if adequately staffed. We need someone well versed in developing cooperative agreements, grants, and associated acquisitions.

_____ Sufficient

X Insufficient

_____ None

5.3.a. How many staff members are available?

3

5.3.b. How many staff members are required?

5

5.4. How well do higher echelon offices support the installation natural resources program? (e.g. reach back support for execution, policy support, etc.) *

Comment: Would like all higher echelon offices to keep the installation in the loop and have them participate in the review of contract documents before accepting/awarding a contractor's proposal. Would like all higher echelon offices to cross coordinate contractor product and proposal reviews with appropriate media experts/program managers before accepting/awarding a contractor's proposal or accepting a contactor's "final" product. (The same coordination should also be made on Cooperative Agreements and other such documents.) Forestry and Agricultral Program coordination is a particular concern.

- ____ No Support
- ____ Minimal Support
- X Satisfactory Support
- ____ Well Supported
- ____ Very Well Supported

5.5. The team is enhanced by the use of contractors. *

- ____ Disagree
- ____ Somewhat Agree
- ____ Neutral
- X Agree
- ____ Strongly Agree
- ____ N/A (no contractor support)

5.6. The team is enhanced by the use of volunteers. *

	Disagree
	Somewhat Agree
	Neutral
	Agree
X	Strongly Agree
	N/A (No volunteer support)

5.7. The Natural Resources team is adequately trained to implement the goals and objectives of the INRMP.

X	Professionals received adequate supplemental training
	Professionals have not received adequate training
	Professionals have not received any training

Please enter Findings and Recommendations. Findings and Recommendations serve as additional clarification to the answers provided for this Focus Area, and they are encouraged in order to provide a better understanding of existing activities, issues to be addressed, and unique circumstances.

5. Findings

When staff have not been adequately trained to cover a subject matter of concern, if a question arises regarding compliance concerns then other Navy, USFWS, State or other agency subject matter experts are consulted.
NASO Installation natural resources (NR) staff are aiding to support short staffing at the regional level and other local installations. Note: NAS Oceana NR personnel (1 Natural Resources Specialist and 2 Biological Science Technicians) help support the Hampton Roads area bases and are assigned to specifically handle (Oceana, Dam Neck Annex, Fentress, and Northwest Annex). One of these technicians is dual hatted supporting the region as a conservation law-enforcement officer and BST at ~11 installations.
Because of staffing levels at the installation and an attempt to maintain consistence of the programs throughout the region, NAVFAC MIDLANT CORE EV22 manages the Agricultural and Forestry programs for the installation. Regional staffing levels are not adequate to cover needs such as a professional forester, outreach coordinator, and individuals well versed in developing cooperative agreements, grants, and associated contracts.
Installation program enlists the support of over 20 regular gratuitous service program (GSP) supporters in order to accomplish its INRMP goals and objectives. At times the base signs upwards of 100 GSPs in a given year.
NAVFAC MIDLANT EV22 is attempting to implement previous recommendations to staff their program with multiple media specialist with the hiring of: 1 Natural Resources and Cultural Resources Supervisor; 1 Agriculture & Forestry Program Manager; 1 Marine Environment Program Manager; 1 T&E/INRMP Program Manager; 1 BASH/Nuisance Wildlife Program Manager and 1 Wetlands Program Manager. NAVFAC MIDLANT EV22, NAVFAC MIDLANT EV4 and Installation Staff do not agree on some INRMP identified projects/program management criteria (e.g., Agricultural mngt, Forest mngt., Vegetation Community Layer update frequency, nuisance wildlife inventory frequency, etc.) .
Proper coordination amongst varying levels of Navy Staff could improve.

5. Recommendations

Need to ensure installation Forestry Management Team includes at least one staff member that meets the OPNAVINST M-5090.1 standard to be designated as a professional certified forester (either meets and has obtained Society of American Forester Certification requirements or has received a professional forester certification by the State in which work is being conducted). Need to hire or train current staff to be well versed in cooperative agreement, grant, and contract development/acquisitions processes.
Need to adequately staff the region and installations for Conservation Law Enforcement, Biological Science Technician, and Natural Resources Manager Support.
Hire NR staff to sit at the Region that specialize in each of the program areas relevant to INRMPs (i.e. forestry, agriculture, T&E species, wetlands, permits, fire, invasive species, BASH, etc.) and better define the roles and responsibilities between region and installation staff (keeping in mind existing Position Descriptions). Need to coordinate staffing and roles & responsibilities planning and implementation with NAVFAC MIDLANT EV2 and installation environmental program directors and installation natural resources managers prior to execution of such plans.
Need to develop an official/formalized conservation law-enforcement program either via cooperative agreement with USFWS or State Wildlife Agency or develop a service request for support with the Navy Installation Security Office. Obtain from NAVFAC MILDANT EV22 a detailed agricultural program management plan and a detailed forestry program management plan to be inserted into the INRMP and to clarify what support will be provided and how/when it will be provided by the region to the installation in relationship to these programs.
Improve coordination within the various levels of the navy and with agency partners.

6 - INRMP Implementation

Focus Area Score 0.37

Focus Area Purpose: Evaluates the execution of actions, to include projects, taken to meet goals/objectives outlined in the INRMP.

Supplemental Information: The intent of this Focus Area is to assess how well actions are being implemented to execute the goals and objectives of the INRMP. Actions can include projects submitted via EPRWeb, as well as activities executed with alternative funds, not programmed through EPRWeb, or carried out by the use of volunteers or cooperative partnerships with other entities.

For each project or action executed, or partnership forged, or initiative engaged with, during the reporting period for the installation, the following questions are asked to evaluate INRMP action implementation. Note: For EPRWeb projects, the data such as project number, project title, funding source, and total obligated are pre-populated with data from EPRWeb. The user has the ability to edit the percentage applicable to this Reporting Unit (RU) if less than 100%.

Questions followed by an asterisk * are mandatory and must be completed before the datacall can be approved and forwarded to DoD.

FY16 Projects

Focus Area Score **0.37**

Instructions: This section is for projects planned in the installations/site(s) INRMP for award or emergent in **FY16 only**. Select a project from the list below (created in the Action Builder) to begin answering questions. To Add new projects, delete existing projects or modify the percentage allocated (share of the project) to this Reporting Unit (RU), click the Blue 'Add/Manage Projects' button. Select the red '**X**' to delete a project, if a project doesn't apply to the Reporting Unit or is not a project that occurred during the current reporting period. If this is an incomplete list, use the filters to find any missing projects, check the appropriate check boxes, and click the Blue 'Add Projects' to add additional INRMP actions (projects), e.g. emergent projects, unfunded efforts, or actions that do not require funding, and begin answering questions. Users can also create non-EPRWeb projects by clicking the Green 'Create Project' button.

FY15 Projects

Instructions: This section is for projects planned in the installations/site(s) INRMP for award or emergent in **FY15 only**. Projects completed in FY15 and reported as complete in FY15 do not need to be entered. Select a project from the list below (created in the Action Builder) to begin answering questions. To Add new projects, delete existing projects or modify the percentage allocated (share of the project) to this Reporting Unit (RU), click the Blue 'Add/Manage Projects' button. Select the red '**X**' to delete a project, if a project doesn't apply to the Reporting Unit or is not a project that occurred during the current reporting period. If this is an incomplete list, change the 'Action Plan Year' to "2015", use the filters to find any missing projects, check the appropriate check boxes, and click the Blue 'Add Projects' to add additional INRMP actions (projects), e.g. emergent projects, unfunded efforts, or actions that do not require funding, and begin answering questions. Users can also create non-EPRWeb projects by clicking the Green 'Create Project' button.

(FY15) 6.7. If the INRMP action provided an ecosystem integrity benefit, select the ecosystem benefitted.

FY14 Projects

Instructions: This section is for projects planned in the installations/site(s) INRMP for award or emergent in **FY14 only**. Projects completed in FY14 and reported as complete in FY14 do not need to be entered. Select a project from the list below (created in the Action Builder) to begin answering questions. To Add new projects, delete existing projects or modify the percentage allocated (share of the project) to this Reporting Unit (RU), click the Blue 'Add/Manage Projects' button. Select the red '**X**' to delete a project, if a project doesn't apply to the Reporting Unit or is not a project that occurred during the current reporting period. If this is an incomplete list, change the 'Action Plan Year' to "2014", use the filters to find any missing projects, check the appropriate check boxes, and click the Blue 'Add Projects' to add additional INRMP actions (projects), e.g. emergent projects, unfunded efforts, or actions that do not require funding, and begin answering questions. Users can also create non-EPRWeb projects by clicking the Green 'Create Project' button.

1. 60191NR205 : 4 SAR MA NASO/NALFF - Species and Habitat of Concern Protection

FY14 EPRWeb Total Spent

$106,620.90

FY13 Projects

Instructions: This section is for projects planned in the installations/site(s) INRMP for award or emergent in **FY13 only**. Projects completed in FY13 and reported as complete in FY13 do not need to be entered. Select a project from the list below (created in the Action Builder) to begin answering questions. To Add new projects, delete existing projects or modify the percentage allocated (share of the project) to this Reporting Unit (RU), click the Blue 'Add/Manage Projects' button. Select the red '**X**' to delete a project, if a project doesn't apply to the Reporting Unit or is not a project that occurred during the current reporting period. If this is an incomplete list, change the 'Action Plan Year' to "2013", use the filters to find any missing projects, check the appropriate check boxes, and click the Blue 'Add Projects' to add additional INRMP actions (projects), e.g. emergent projects, unfunded efforts, or actions that do not require funding, and begin answering questions. Users can also create non-EPRWeb projects by clicking the Green 'Create Project' button.

Satisfaction Index

Focus Area Score 0.80

Please answer the following general questions associated with INRMP Actions. Questions followed by an asterisk * are mandatory and must be completed before the datacall can be approved and submitted to DoD.

6.8. Do the goals and objectives of the INRMP/Natural Resources Program support other conservation partnerships/initiatives? *

- [X] Yes
- [ ] No

6.9. Which conservation partnerships/initiatives are supported?

- [ ] American Land Trust
- [X] Chesapeake Bay Initiative
- [ ] Coastal America
- [ ] Environmental Security Technology Certification Program (ESTCP)
- [ ] Flat-tailed Horned Lizard Rangewide (sic) Management Strategy
- [ ] Gulf of Coastal Plain Ecosystem Partnership
- [ ] Gulf of Mexico Initiative
- [X] Joint Ventures
- [X] Land Conservation Cooperatives (LCCs)
- [X] Longleaf Pine Initiative
- [X] Longleaf Alliance
- [ ] Mojave Desert Initiative
- [X] National Military Fish and Wildlife Association (NMFWA)
- [X] National Ocean Council (NOC) Regional Planning Bodies
- [ ] Oahu Conservation Partnership
- [X] Partners in Amphibian and Reptile Conservation (PARC)
- [X] Partners in Flight
- [ ] Other, please list

6.10. To what level does the Natural Resources Program/INRMP meet or exceed USFWS expectations? *

- ____ Dissatisfied
- ____ Minimally satisfied
- ____ Somewhat satisfied
- X Completely satisfied
- ____ More than satisfied

6.11. To what level are Natural Resources Program executions meeting State Fish and Wildlife Agency conservation management expectations? *

- ____ Dissatisfied
- ____ Minimally satisfied
- ____ Somewhat satisfied
- X Completely satisfied
- ____ More than satisfied

6.12. To what level are Natural Resource program executions meeting NOAA/NMFS conservation management expectations, if applicable? *

- ____ N/A Does not apply
- ____ Dissatisfied
- ____ Minimally satisfied
- ____ Somewhat satisfied
- X Completely satisfied
- ____ More than satisfied

6.13. To what extent has the INRMP/Natural Resources program successfully supported other mission areas? *

- ____ Not supported
- ____ Minimally supported
- ____ Satisfactorily supported
- X Well supported
- ____ Very well supported

6.14. Are Cooperative Agreements used to execute natural resources program requirements?

Comment: Old Dominion University Tick Study; Christopher Newport University Snake Study; William & Mary College Center for Conservation Biology Bald Eagle Research and Osprey Banding; etc.

- X Yes
- ____ No

6.15. Describe any obstacles to INRMP implementation.

Inadequate field support staffing levels. Inability to acquire ammunition and other explosive devices associated with animal control activities. Lack of funding. Acceptable Risk determinations to not promote, not fund, re-assign funding, or not pursue funding for installation/activity identified projects (POM/EPRweb submitted funds requests). Government Vehicle Reductions causing: an inability for staff to respond or conduct field work in remote areas of the installations requiring 4x4 vehicles for safe and efficient travel and hauling (staff will now either not be able to accomplish certain tasks as usual or they will have less time to accomplish tasks because people are going to have to be shuttled to and from work sites); and an inability to haul equipment to work sites (CN funding is now required to pay to have PWD transportation haul equipment from one site to another so NR can accomplish INRMP required work).

Please enter Findings and Recommendations. Findings and Recommendations serve as additional clarification to the answers provided for this Focus Area, and they are encouraged in order to provide a better understanding of existing activities, issues to be addressed, and unique circumstances.

6. Findings

Obligated = Total Reported Obligated Funds to support the project in the line item FY.
Spent = Total Reported Spent Funds to support the project in the current FY.
Not all inhouse fees utilized by NAVFAC MIDLANT Core EV2/CNRMA EV staff to support Projects identified in this datacall have been reported.
Per NAVFAC MIDLANT Core EV2/CNRMA they fund the majority of their in-house labor with excess funds throughout the region. Also, CNRMA would not issue project orders which complicated the FY funding reporting process. At this time NAVFAC MIDLANT CORE EV2/CNRMA does not specifically tie in-house cost to a specific EPR #. As such, guidance from NAVFAC MIDLANT EV2/CNRMA regarding reporting in the INRMP Metrics datacall, is that for contracts managed by MIDLANT/CNRMA EV2 staff, only contract award amount is to be reported.

NAVFAC LANT provided inhouse funding spent in FY15 on projects and contracts they managed for the FY15 INRMP Metrics Datacall.

Not all conservation initiatives submitted by the installation into EPRweb in POMs 14, 16 and 18 were promoted past the NAVFAC MIDLANT Core/CNRMA to NAVFAC HQ and CNIC (e.g., Agriculture and Forestry Program EPRs). In some cases project frequencies or budgets were altered from what the installation submitted without further justification and detailed updated budget. Budget reductions for the projects resulted in the inability to implement the programs as originally intended.

6. Recommendations

Need to find other funding sources that can help fund projects that do not receive CNIC funding.
Need to utilize end of year funds to fund unfunded projects, which will require SOWs and other paperwork to be prepared in advance of end of year funding availability.
Need to resolve Ammunition Purchasing issues.
CNRMA should authorize project purchase orders to help with tracking of total project (cradle to grave) costs. Better tracking of project costs will help to ensure accuracy of future planning budgets.
If an EPR submission/exhibit is proposed to be altered from what the installation originally entered, then a detailed budget and project justification should be submitted to the installation to ensure that the proposed changes meet the installation's intended purpose for the exhibit before the exhibit is adjusted.

Provide Government vehicles that allow the Natural Resources (NR) program to conduct full range of services. All vehicles should be 4wheel drive and have a minimum engine size of 8 cylinders. At least one vehicle must be capable of safely hauling a large trailer and tractor (several thousand pounds).

7 - Support of Installation Mission

Focus Area Score 0.87

Focus Area Purpose: Evaluate the level to which existing natural resources requirements support the installation's ability to sustain the current operational mission, ensuring no net loss of mission capability.

NOTE: As always, this focus area is to be completed by the Regional Commander/Commanding Officer (CO) or his/her designee with the responsibility for Title 10 installation assets and resources. Natural Resource Manager(s) are available to facilitate and support this process.

Comment on this Focus Area and associated Questions Select this link below each question if you would like to elaborate on the answer provided. This is also a good way to document the assumptions made by all partners that contributed to the answer.

7.1. To what level do natural resources program support the installation's operational mission? *

- [X] The installation is fully mission-capable because the NR Program fully supports current and future missions.
- [ ] Partially mission-capable
- [ ] Not mission-capable

7.2. The Natural Resource program effectively considers current and potential future mission sustainment. *

- [ ] Strongly disagree
- [ ] Disagree
- [ ] Neutral
- [X] Agree
- [ ] Strongly Agree

7.3. What is the level of coordination between natural resources staff and other site(s) departments and military staff? *

- [ ] No coordination
- [ ] Minimal coordination
- [ ] Satisfactory coordination
- [X] Effective coordination
- [ ] Highly effective and successful coordination

7.4. To what extent has the INRMP successfully supported other mission areas? *

	Mission not supported
	Mission minimally supported
	Mission satisfactorily supported
X	Mission well supported and fully capable
	Mission enhanced, well supported and fully capable

7.5. To what extent does the NR Program and INRMP minimize possible contraints imposed by natural resources regulatory requirements?

X	Effectly minimizes mission constraints
	Partially minimizes
	Has not minimized constraints
	Does not address constraints

7.6. To what extent has there been a net loss of training lands or mission-related operational/training activities? *

	Mission is fully impeded; training activities cannot be conducted due to regulatory requirements
	Mission/Training activities are somewhat impeded with workarounds due to regulatory requirements
	Neutral
	No loss occurred
X	Mission has seen benefits

7.7. Please provide examples of how the INRMP or Natural Resources program has resulted in any mission impacts

Due to NR Survey findings confirming the presence of protected species on the installation projects and mission requirements have been delayed or had to be reschedule for a time that was not as convenient to the military mission schedule to avoid and/or minimize impacts to protected resources. Airfield Height Obstruction Tree Clearing delayed due to Northern long-eared bat confirmed presence and wetland permitting & mitigation requirements. These are more a funding and time issue than a lack of programmatic support.

7.8. Please provide examples of how the INRMP or Natural Resources program actions have resulted in mission benefits.

The INRMP has provided sufficient information to aid the installation planners to make more informed decisions regarding proposed activities on the installation. The Natural Resources Program has provided substantial benefits to the moral and welfare of the military and non-military tenants, staff, and community associated with the installation through the hunting and educational trail programs. The Natural Resources program has increased awareness of threats to human health and safety (venomous snakes, poisonous plants, bear safety, etc.) thru the creation and distribution of wildlife brochures and providing training upon request to staff and tenant commands. The Natural Resources program worked with AirOps and Real-estate to update the Agricultural Lease agreements to help support the BASH program.

Regional Commander / Commanding Officer Signature

In the Regional Commander / Commanding Officer Section, this is a simple form to track who your Regional Commander / Commanding Officer is and that they have seen your results. It is not required that they physically type in their name and rank below.

Enter then name of your Regional Commander / Commanding Officer.

Richard J. Meadows

Enter then rank of your Regional Commander / Commanding Officer.

Captiain

Please enter Findings and Recommendations. Findings and Recommendations serve as additional clarification to the answers provided for this Focus Area, and they are encouraged in order to provide a better understanding of existing activities, issues to be addressed, and unique circumstances.

7. Findings

The Natural Resources (NR) program has benefited the mission by ensuring compliance with appropriate Federal and State Requirements. The NR program has coordinated with the appropriate authorities and commands to identify requirements and has actively pursued and obtained permits such as USFWS Migratory Bird and Eagle Harassment, VDGIF Kill, VDEQ Wetland, and USACE Wetland Permits. They have also coordinated all mitigation requirement oversights to keep the military mission in full operation. They have conducted various other projects such as nuisance wildlife and invasive species control that reduces blockages and damage to our stormwater infrastructure which helps to minimize the installation's flooding issues, which also contributes to human health and safety as well as continued military operations. The NR program has continued to restore Dune Habitat which has promoted conservation initiatives, and has ensured realistic training environments for our military personnel. The NR program has provided recreational opportunities to our military (active and retired), staff, spouses/family, and friends that have

boosted the morale and welfare of our warfighters, families and supporters, while managing wildlife populations for mission safety, disease control and conservation. The NR program has also provided Conservation Law-enforcement support to the installation. The NR team's efforts to educate the tenants on the installation and in the public (outside the installation boundaries) has led to a superior crew of 100+ volunteers supporting the NR program to ensure conservation and mission readiness (dune restoration, hunting and fishing area maintenance, etc.). The NR manager has taken the lead in collecting information from tenants and installation support personnel to submit consolidated NAS Oceana responses to datacalls, permit reporting, and to apply for awards & grants. These datacalls and permit reports are not always NR program datacalls, but NR has a component to the information collection. The NR manager is recognized for her leadership and technical expertise not only on the installation but within the entire Conservation Community. She routinely helps to support regional and other installation NR managers and she supports National DoD programs and NGO programs (DoD Partners in Flight Steering Committee Representative, DoD Partners in Flight BASH Working Group Member, National Military Fish & Wildlife Service BASH Working Group Immediate Past-Chairman, and SE Hampton Roads Invasive Species Management Partnership Coordinator).
The NR team utilizes staff, contractors, volunteers, partnerships, and reach-back support to implement the INRMP. Even though all current Navy NR billets (FTEs) are filled, there appears to be a bona fide need for one additional Natural Resources and one additional Conservation Law Enforcement FTEs to fully implement the INRMP to meet all laws, regulations, and policies (see focus areas 3 and 5 of these INRMP metrics for additional details). One program area associated with the INRMP showing the largest staffing deficiency and lacking clear programmatic
details/instruction is the Conservation Law Enforcement Program. Scores in the team adequacy focus area will not improve until the team is adequately staffed.
The Conservation law-enforcement program needs to be better defined and staffed in accordance with DoD Instruction for the Conservation Law-enforcement Program and the Sikes Act. The installation has documented actual and/or attempted wildlife poaching, wildlife killing, illegal introduction of non-native species, baiting, hunting without proper approvals, and cultural resources damage and/or theft. The installation has an active hunting program and is considering implementing an active fishing program. 1 Conservation Law-enforcement officer is not adequate to cover 11+ installations. Cross trained NR, EC, and CR staff is not law-enforcement and all they can do is identify and notify. Installation security officers are not trained to accomplish conservation law-enforcement; however, they do assist upon request. In FY15, the installation planned and awarded, with contract support from NAVFAC MIDLANT EV22 staff, a Conservation Law enforcement Program Needs Assessment. The assessment was finalized in FY16 and is undergoing installation internal coordination prior to further escalation. The integrated BASH program with USDA, Air Operations, and Natural Resources continues to implement wildlife population and habitat management, which provides for improved operations and safety.
The installation staff works with INRMP partners to identify natural resources programmatic needs for the installation. The installation staff develops project justifications, estimated costs to implement the programmatic needs, and enters this information into the appropriate systems for DoD budgeting purposes. Various installation submitted projects identified during the POM funding planning cycles, which are critical to both Natural Resources and Military Mission requirements, were not approved/funded and should be approved/funded. For Example, the Installation identified funding requirements to install BMPs and monitoring needs associated with agricultural leases to support conservation initiatives to reduce run-off of pesticides and soil erosion/sedimentation into waterways and stormwater systems; however, region project reviewers determined the requirement was not needed/did not have a regulatory requirement and did not promote the projects in previous years (POMs 12-14), and reduced the funding (POM16-18) in current and future years to the point that these initiatives cannot be implemented with the revised CNIC budgeted request. CNRMA Instructions for hunting and fishing programs were dated and cancelled last quarter FY16 and 1st quarter FY17. Installation instructions are now needed.
The Natural Resources program demonstrates good overall sensitivity to and awareness of mission needs and environmental issues and strives to improve communication with the command and associated tenants.

The efforts of the NR team have not gone unrecognized. The installation won the Tree City USA award for the 22nd consecutive year for employing superior Urban Forestry management. InFY16 the installation NR team also won the Team, CNO Environmental Award for Natural Resources Conservation.

7. Recommendations

Natural Resources program staffing levels continue to be a limiting factor to completing/complying with INRMP objectives and requirements. Scores in the team adequacy focus area will not improve until the team is adequately staffed.
CNRMA, Hire a full time Natural Resources Specialist and a full time Biological Science Technician to support the mission of NW Annex and its tenant commands.
CNRMA. Hire a full time GS-11 Natural Resources Specialist to support the PWD Oceana Natural Resources Program. CNRMA, Stand up an official Conservation Law-enforcement Program that provides the requirements (Personnel, equipment, training, etc.) identified in the FY15 funded Conservation Law Enforcement Program Assessment of Need documentation. The Conservation Officers should coordinate directly with the installation Natural and Cultural Resources Managers.
Various projects identified during the POM 14, POM 16 & POM 18 funding planning cycles, which are critical to both Natural Resources and military mission requirements or provide a substantial conservation benefit to the installation and surrounding ecosystems, were not approved and/or funded as the installation requested and should be approved/funded should resources become available.
NAVFAC MIDLANT CORE/CNRMA, approve installation/activity submitted POM Conservation Exhibits that are submitted into the EPR system
(including those that are not a regulatory requirement). If NAVFAC MIDLANT
CORE/CNRMA reviewers do not agree with installation submitted estimated costs, methodologies, or frequencies of occurrence; then NAVFAC MIDLANT CORE should submit a revised detailed estimate of cost, methodologies or frequency of occurrence with justification and explanation for the recommended changes to the installation for consideration and verification that it meets the installation's intended purpose and need.
CNIC & CNRMA, fund approved EPR projects. If CNIC funding is not initially vailable/budgeted for an approved project, provide assistance to the installation in locating funds to implement the projects from other sources (Ag., Forestry, QRP, Legacy, inkind services, range funds, end of year funds, funded projects that can't be executed, other sources, etc.).
Installation/NAVFAC MIDLANT PWD Oceana and CNRMA/NAVFAC MIDLANT CORE, continue to coordinate with the appropriate military and civilian personnel at all levels (installation, MIDLANT, LANT, regulatory, etc.) to accomplish mission goals. Strive to improve coordination and information sharing at all levels (both up and down the chain of command).
Installation, create an installation level instruction to cover the hunting and fishing programs for the installation. Due to current staffing shortages consider creating a single instruction that is jointly signed by the NASO and NSAHR COs, since the programs for both commands are currently managed by the same Installation Natural Resources Manager. Remove reference in the INRMP to the CNRMA Hunting and Fishing Instructions once an installation instruction is finalized, since the CNRMA instruction has been cancelled.

Background discussion.

The objective of the study is to investigate the color variation of garter snakes at several locations across southern Virginia. Color variation can be utilized to determine species differences that could result in new or sub-class species identifications.

Enter summary of the success.

Project is still on going. Results from the Study are provided to the Navy at no cost to the Navy other than access coordination. Project provides data necessary to maintain INRMP object to maintain species inventory data and INRMP goals for ecosystem management and partnerships.

Reporting Unit Metrics Q&A Report: NAS OCEANA

Background discussion.

Bald Eagle has been delisted from the ESA, but is still protected under the BAGEPA and the MBTA. The installation has never had a nesting or roosting eagle survey nor a suitable nesting habitat evaluation completed. In FY15 the installation entered into a CESU Partnership with the College of William & Mary's Center for Conservation Biology to conduct such work. Survey and mapping efforts began in FY16.

Enter summary of the success.

Project is still ongoing but is already contributing to data gaps used for Installation, State, and National data repositories. Data is being utilized for project planning on and off the installation.

Background discussion.

Installation helped to coordinate and host the Navy Funded USFWS Migratory Bird Conservation Training Course. At NASO a field trip was completed that demonstrated the Aviation and Construction Military Missions in conjunction with Migratory Bird Management Implementation Requirements.

Enter summary of the success.

Event pulled together regulators, natural resources managers, NEPA planners, lawyers, etc. from a variety of agencies and branches of DoD. Event provided a mechanism to clarify requirements, allow open candid discussions and answer questions regarding Migratory Bird management requirements. The most important this was that the course provided real-time opportunities for individuals to observe actual military missions and how migratory bird management in needed and being conducted to all military missions to continue without a net loss in training & operations.

Background discussion.

Partnership with Old Dominion University to identify tick species in the region and associated zoonotic diseases.

Enter summary of the success.

Project is still ongoing but is already contributing to data gaps used for Installation, State, and National data repositories. Data is being utilized for project planning on and off the installation. Study has already identified at least one previously unknown species to the area, it has confirmed the expansion of a species territory from previously know boundaries, it has also confirmed the likely miss identification of one zoonotic disease for another in the local medical facilities.

Summary

List the top three accomplishments for the Natural Resources Program during this reporting period. Please include a statement regarding how these accomplishments support the mission of the installation or other activities. This information may be used to brief program successes up to leadership. See detailed examples provided, here.

1. As a result of this year's annual review, have any additional actions, such as management recommendations related to regulatory drivers (ACOE permits, EFH Issues, etc.), been identified that should be considered for incorporation into the INRMP? *

X Yes

_____ No

1.a. Please explain in detail.

Northern Long Eared Bat Vegetation Management. No Tree Removal During Pupping Season (Jun-Jul).

2. In addition to any findings submitted in the previous 7 Focus Areas, please provide any additional or general findings.

3. In addition to any recommendations submitted in the previous 7 Focus Areas, please provide any additional or general recommendations.

Reporting Unit Metrics Q&A Report: NAS OCEANA

4. List the top accomplishment for the Natural Resources Program during this reporting period. *

Providing real-time/life military mission and migratory bird management requirements experiences for students and instructors attending the multi-agency migratory bird conservation training course. (Via a collaboration with the installation and HQ NR programs, installation Air Ops program, USDA-WS, USACE and USFWS.

5. List the second accomplishment for the Natural Resources Program during this reporting period. *

Completing the 1st Nesting Eagle Survey of the installations and associated buffer via a partnership with the College of William and Mary's Center for Conservation Biology.

6. List the third accomplishment for the Natural Resources Program during this reporting period. *

Supporting disease vector research via partnerships with Old Dominion University and City of Virginia Beach.

Agriculture

Agriculture Program Status

Objective: This purpose of this section of the Natural Resources Conservation Metrics data call is to gather required information associated with the status of the Agriculture Program. Responses to the questions in this section are not scored as a part of the Natural Resources Conservation Metrics data call. These questions have been added here to collect information that will support the Defense Environmental Program Annual Report to Congress (DEPARC) and Office of the Secretary of Defense Environmental Management Review (EMR). By combining these questions with responses to the Metric's seven (7) focus areas, Natural Resources Managers are faced with fewer annual data calls.

Is there an active agriculture out-lease program on this site? *

X Yes

_____ No

What are the driving factors for having an Ag Lease on this site?

Airfield Vegetation Height Management. Bird/Animal Aircraft Strike Hazard Minimization. Conservation Funding Revenue. Local Community Economic Benefits.

1. How many active leases are currently associated with this site?

Comment: NASO = 2; NALFF = 3. The NR program manages 5 Ag leased properties. There are technically 7 ag-leases with the additional 2 sites being located in NC. These 2 sites are managed strictly by Real-estate and have not been coordinated with Natural Resources for managment. One property was purchased with the desire to create a new OLF several years ago. The other lease was associated with a tower communication site's land maintenance. Both sites are going through the property disposal process.

5

Reporting Unit Metrics Q&A Report: NAS OCEANA

2. What is the total number # of leased acres?

Comment: Acres were reduced partially thru the year by approximately 93 acres. Removed from 1 NASO lease for a Solar PV Array Renewable Energy Project.

1409

3. What is the Annual lease income?

Comment: Reduced by $6,841.25 for the lease reduction for the PV Array Project at NASO. NRM was not notified of any additional lease reductions that may have occured.

156350

4. What are the Annual expenses?

Comment: NAVFAC MIDLANT Support for minimum requirements.

38,000

5. Do any leases involve in-kind payments?

X Yes

_____ No

5.a What are the number of in-kind leases?

Comment: Leases include maintaining major ditches and security perimeters which reduces the installation's ground-maintenance costs.

5

6. What are the leases for?

- [X] Crop Production
- [ ] Hay
- [ ] Grazing
- [ ] Other
- [ ] Honey Production
- [ ] Honey Bee Rearing

7. What is the primary land use where agriculture out-leasing occurs? Select all that apply.

- [X] Airfield clear/buffer zone
- [ ] Antenna area
- [ ] ESQD Arc
- [ ] Outlying landing field
- [ ] Weapons storage
- [ ] Other, please list

8. Are additional lands available for AG out-leasing?

- [X] Yes
- [ ] No

8.a What is the number of additional acres available?

Comment: Final Acreage is pending implementation of Airfield Obstruction Management Plan Vegetation Conversions and Permitting. Estimated from 5 to 100+.

100

9. Is there an apiary program?

Comment: Our farmer do and are authorized to utilize beens to pollinate their crops; however, we do not specifically have an apiary for bee, wax, or honey production. We are interested in learning more about this process and if it would be feasible on our lands.

- [ ] Yes
- [X] No

9.a Is the apiary activity part of the AG out-lease program?

_____ Yes
_____ No

10. How many personnel are funded through agriculture out-lease funds?

1

11. Primary installation agriculture program POC.

Markham, Jack - jack.markham@navy.mil

Forestry

Forestry Program Status

Objective: This purpose of this section of the Natural Resources Conservation Metrics data call is to gather required information associated with the status of the Forestry Program. Responses to the questions in this section are not scored as a part of the Natural Resources Conservation Metrics data call. These questions have been added here to collect information that will support the Defense Environmental Program Annual Report to Congress (DEPARC) and Office of the Secretary of Defense Environmental Management Review (EMR). By combining these questions with responses to the Metric's seven (7) focus areas, Natural Resources Managers are faced with fewer annual data calls.

1. Does the site have forest cover? *

X Yes

_____ No

1.a What is the total number of forested acres on this site?

3575

2. Is there an active forestry program on this site?

Comment: Currently, no actively managed commercial forest program, but the program was managed decades earlier in such a manner. We conduct select timber harvests and allow the timber to regenerate naturally. There is a proposal to reinitiate a more traditional commercial forest program in support of the Airfield Obstruction Management Plan; however, given the listing of the NLEB and potential Wetland Conversion requirements we are pending an Updated EA and Regulatory Consultations with USFWS and USACE. The Commercial Forestry Program currently consists of Commercial Value and Urban Forest Inventories, Disease Inspections, After Storm Inspections, and Firewood Program. OC = ~2275; FN = ~1300. This will decrease and increase given the status of implementing the Airfield Obstruction Management Plan.

_____ Yes
__X__ No

3. What is the total number of acres currently under active forest management?

4. Is there a commercial forest program?

_____ Yes
_____ No

5. What was the annual program revenue over the past fiscal year?

6. Where any trees harvested during the past fiscal year?

_____ Yes
_____ No

6.a How many acres of forest were harvested during the past fiscal year?

6.b What was the method of harvest?

_____ Clearcut
_____ Seed Tree Cut
_____ Shelterwood Cut
_____ Select Cutting
_____ Group Selection
_____ Single Tree Selection
_____ Commercial Thinning

7. What were the annual program expenses during the past fiscal year?

8. Was there a planting during the past fiscal year?

_____ Yes
_____ No

8.a What were the number of acres regenerated through planting over the past fiscal year?

8.b What species were planted?

9. Did natural regeneration occur last fiscal year?

X Yes

_____ No

9.a How many acres are naturally regenerated?

Comment: 99%. We are assuming this question means cleared areas not currently considered forest but is naturally being allowed to become forest? If not 99% of our forest is currently managed for natural regeneration (not active planting). Decades earlier when the program was managed as a commercial forestry program a mix of planting and natural regeneration. Currently, natural regeneration is the primary method utilized; however, the program does conduct regeneration via planting in several mitigation sites (~150 acres), and also trees are planted in association with our urban forest management program. The installation used to maintain it's own tree nursery; however that program was shut down (apparently due to fare market concerns).

400

10. Does the site have longleaf pine (Pinus palustris)?

X Yes

_____ No

10.a What is the number of acres of longleaf pine (Pinus palustris)?

Comment: Our Stands of Long-leaf Pine are not monocultures, so providing an exact estimate of acreage is a little difficult. NAS Oceana: Non-Urban/Commercial Forest Inventory = ~17.15 Acres mixed species stands (1117-1451 longleaf pine trees, saw-timber) reported; Metrics Originally = Reported 2 acres; and Urban Forest Inventory = TBD. In the past two FYs we have only spent funding on: identifying the presence of this species of concern on the installations via our Natural Heritage and Non-Urban Forest Inventories; and controlling invasive plant species (kudzu and phragmites) on or adjacent to the sites. We have not taken any specific management actions to manage specifically for longleaf pine, except to avoid clearing of such sites. In FY15, we awarded a project to update our prescribed and wildland fire management plan and our urban forest inventory. The fire plan will include some options to specifically benefit the regeneration of Longleaf pine, if we can obtain fire prescriptions that will allow us to burn, then we will implement management action in future years (not anticipated to occur until FY17 or later). Until we are in a position to apply prescribed fire our management of these sites will continue to be natural regeneration, control Invasive Species, control disease outbreaks, and advise planning to avoid conducting longleaf pine tree clearing activities . We have obligated between 2012 and 2015 over $746K on the following contracts: Non-Urban/Commercial Forest Inventories, Invasive Plant Species Inventory, Invasive Plant Control, Natural Heritage Inventories, Prescribed/Wildland Fire Plan Updates, and Urban Forest Inventories? Each of these contracts were associated with ~10,302 acres of Navy Property (Oceana, Dam Neck Annex, and Fentress), of which it appears only 20-30 acres (Oceana and Dam Neck Annex) included long-leaf pine.

17

11. What are the primary commercial species managed?

12. Is prescribed burning used?

_____ Yes

_____ No

12.a What is the number of acres burned in the past year?

13. How many personnel are funded through forestry funds?

14. Primary site forestry program POC.

Summary Score

1 - Ecosystem Integrity	0.88
Ecosystems	0.76
Encroachment	1.00

Migratory Birds

Birds are protected by the Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act.

Any activity that results in the take of migratory birds or eagles is prohibited unless authorized by the U.S. Fish & Wildlife Service.[1] There are no provisions for allowing the take of migratory birds that are unintentionally killed or injured.

Any person or organization who plans or conducts activities that may result in the take of migratory birds is responsible for complying with the appropriate regulations and implementing appropriate conservation measures.

Season: Breeding

Yellow Rail Coturnicops noveboracensis — Bird of conservation concern
Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0JG

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

DATA LIMITATIONS

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

DATA EXCLUSIONS

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

DATA PRECAUTIONS

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Wetland data is unavailable at this time.
